## Courses of Study

2000 - 2001

# Cornell University Calendar

## Fall Semester

Residence halls open  
Freshman orientation begins  
New-student orientation begins  
Registration—course exchange  
Instruction begins  
Physical education classes begin  
Fall break: instruction suspended  
Instruction resumes  
Pre-course enrollment for spring  
Family Weekend  
Homecoming  
Thanksgiving recess:  
instruction suspended, 1:10 p.m.  
Instruction resumes  
Instruction ends  
Study period  
Final examinations begin  
Final examinations end  
Residence halls close

## Winter Session Period Begins

Three-week classes begin  
Winter session period ends

## Spring Semester

Residence halls open  
Registration—course exchange  
Instruction begins  
Physical education classes begin  
Spring break: instruction suspended  
Instruction resumes  
Pre-course enrollment for fall  
Instruction ends  
Study period  
Final examinations begin  
Final examinations end  
Residence halls close (students who are graduating  
may stay through Commencement Day)  
Senior Week  
Commencement

## Summer Session

Three-week session  
Eight-week session  
Six-week session

## 2000-01

Friday, August 18  
Friday, August 18

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

**This catalog was produced by Media and Technology Services at Cornell University.**

## Courses of Study

2000 - 2001

**Cornell University**  
**(USPS 132-860)**

Volume 92 of the series "Cornell University" consists of ten catalogs, of which this is number seven, dated August 3, 2000. Issued once in January, twice in February, twice in June, once in July, once in August, once in September, once in October, and once in November. Published by Media and Technology Services, Cornell University, Comstock Hall, Ithaca, NY 14853-0901. Periodicals postage paid at Ithaca, New York.

*Postmaster:* Send address changes to Cornell University, University Registrar, 222 Day Hall, Ithaca, NY 14853-2801.

## CORNELL UNIVERSITY—GENERAL INFORMATION

### INTRODUCTION

*Courses of study* ([cuinfo.cornell.edu/Academic/Courses/](http://cuinfo.cornell.edu/Academic/Courses/)), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Additionally, a student handbook, distributed to all incoming students, describes life at Cornell. *The Policy Notebook* ([www.univco.cornell.edu/policy/library.html](http://www.univco.cornell.edu/policy/library.html)), also distributed to each new student, summarizes pertinent university policies, including the campus Code of Conduct and the Code of Academic Integrity. Students should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs, and requirements.

All these publications are also available for viewing on CUINFO the university's electronic information system, and in print at the various university libraries, the Office of the Dean of Students, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

The following are offices and sources of information about admission to Cornell University.

**Undergraduate Admissions Office.** 410 Thurston Avenue, Ithaca, NY 14850-2488, 607-255-5241.

**Graduate School.** B2 Caldwell Hall, Ithaca, NY 14853-2602, 607-255-4884.

**Law School.** Myron Taylor Hall, Ithaca, NY 14853-4901, 607-255-5141.

**Samuel Curtis Johnson Graduate School of Management.** Office of Admissions, Sage Hall, Ithaca, NY 14853-4201, 607-255-4526.

**College of Veterinary Medicine.** Admissions Office, Cornell University, Schurman Hall, Ithaca, NY 14853-6401, 607-253-7000.

**Medical College and Graduate School of Medical Sciences.** Office of Admissions, 1300 York Avenue, New York, NY 10021, 212-746-1067.

### CUINFO ON THE WEB

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO, Cornell's electronic information source, and in the *Course and Time Roster* and the *Course and Room Roster*, published each semester by the Office of the University Registrar. You may access CUINFO through the web. The URL is: [www.cornell.edu](http://www.cornell.edu).

Students are also advised to consult individual college and department offices for up-to-date course information.

### EXPLANATION OF COURSE NUMBERING SYSTEMS

**The course levels have been assigned as follows:**

100-level course—introductory course, no prerequisites, open to all qualified students

200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites

300-level course—upper-division course, open to juniors and seniors, prerequisites

400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent

500-level course—professional level (e.g., management, law, veterinary medicine)

600-level course—graduate-level course, open to upper-division students

700-level course—graduate-level course

800-level course—master's level, thesis, research

900-level course—doctoral level, thesis, research

**The list of courses that follows is arranged in two broad groups.**

**Group 1:** Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences

Architecture, Art, and Planning

Arts and Sciences

Engineering

Hotel Administration

Human Ecology

Industrial and Labor Relations

Nutritional Sciences

Officer Education

**Group 2:** Graduate professional divisions

Law

Management

Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses, 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

### ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. A copy of the most recent reaffirmation of Cornell's accreditation can be found at [www.ipr.cornell.edu/Accreditation/Status](http://www.ipr.cornell.edu/Accreditation/Status). Requests to review additional documentation supporting Cornell's accreditation should be addressed to Michael Matier, Director, Institutional Research and Planning, Cornell University, 440 Day Hall, Ithaca, NY 14853-2801, [mwm5@cornell.edu](mailto:mwm5@cornell.edu).

### Advanced Placement

#### CREDIT FOR ADVANCED PLACEMENT

##### Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen. Students may use credit they receive for advanced placement to satisfy degree requirements only as specified by the individual college at Cornell. Although such credit counts toward the bachelor's degree, its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate curricula.

##### Sources of Advanced Placement Credit

Advanced placement credit may be earned from one of the following:

- Achieving the requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, NJ. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on page 7. Some departments at Cornell offer departmental exams (usually during orientation), for placement and advanced placement credit.
- Passing a regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.
- See below for international credentials.

**Please note:** Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, earn credit by taking an appropriate exam as described in paragraph *a* above.

The final decision for awarding advanced placement credit at Cornell rests with each individual college. The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject, and recommends AP credit for those who meet the standards. For policies governing advanced placement in a specific college, see the academic information section for that college. Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.

#### **Advanced placement examinations.**

Entering freshmen should have their scores from CEEB Advanced Placement Examinations sent to their college or school office (see below, "Forwarding of scores and transcripts").

**Departmental advanced standing examinations.** In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations will appear in the orientation booklet that will be mailed to entering students in late summer. The departments that award advanced placement and credit on the basis of departmental examinations are shown on page 7.

**Transfer of credit.** Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course descriptions to their college or school office (see the list at the end of this section). The award of credit or placement for such courses is determined by the appropriate departments according to individual school and college guidelines. Because policy for using advanced placement credit varies according to each college or school's professional and academic goals, students should consult their college or school office to determine how they may use such credit.

**Written inquiries.** Students can address questions to departments, schools, or college offices by adding Ithaca, New York 14853 to the addresses given in the following sections.

#### **Forwarding of scores and transcripts.**

Entering freshmen should have their advanced placement test scores sent to their school or college registrar's office.

*College of Agriculture and Life Sciences*  
140 Roberts Hall

*College of Architecture, Art, and Planning*  
B30 West Sibley Hall

*College of Arts and Sciences*  
61 Goldwin Smith Hall

*College of Engineering*  
158 Olin Hall

*School of Hotel Administration*  
174B Statler Hall

*College of Human Ecology*  
N145 Van Rensselaer Hall

*School of Industrial and Labor Relations*  
101 Ives Hall

## DETERMINATION OF CREDIT AND PLACEMENT

The table on page 7 provides information on how credit and placement are determined for most subjects. Supplementary information for subjects requiring additional explanation is provided below.

### **Biological Sciences**

Any student who earns a score of 5 on the CEEB Advanced Placement Examination in biology may elect to receive eight credits and be exempted from all introductory biology courses.

Students not majoring in biological sciences who score a 4 or 5 may earn, respectively, six or eight advanced placement credits. This will satisfy the distribution requirement in biological sciences for students in the College of Human Ecology and a portion of the group B distribution requirement for students in the College of Agriculture and Life Sciences. For students in the College of Arts and Sciences, credits may be applied toward distribution in science and quantitative reasoning as stipulated by the college.

Biological sciences majors who receive a score of 5 may receive eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4. The student receiving a score of 4 must fulfill the introductory biology requirement by taking BIO G 101-102, 101/103, 102/104, or 103-104 or 105 or 106 (Biological Sciences, Lectures and Laboratory). These students should consult information available in the BIO G 101-104 course office (1140 Comstock Hall) and in the Office of Undergraduate Biology (216 Stimson Hall) to determine which semester to complete the introductory biology requirement. For students in doubt, BIO G 101/103 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

### **Chemistry**

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207-208, an eight-credit sequence that includes qualitative analysis, and Chemistry 215-216, a nine-credit sequence that includes qualitative and quantitative analysis.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination in chemistry or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand in 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to Dr. Stanley Marcus, associate director of undergraduate studies, in 138 Baker Laboratory. Students receiving advanced placement who

are interested in a major in chemistry or a related science should consider taking Chemistry 215-216 and should consult the Chemistry 215 instructor or Dr. Stanley Marcus.

### **Classics**

For advanced placement and credit in Latin and ancient and modern Greek, students should consult the Department of Classics, 120 Goldwin Smith Hall. Credit and placement are determined on the basis of a departmental examination. A student who is permitted to register in a 300-level course (or for Modern Greek, determined to be at an advanced level) will be given six advanced placement credits.

### **Computer Science**

Students who receive a score of 4 or 5 on the CEEB Advanced Placement Examination in computer science will receive four advanced placement credits and may take Computer Science 211, 212, or 222 (provided, in the case of Computer Science 222, the mathematics prerequisites are met). These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering or part of the distribution requirement in science and quantitative reasoning for students in the College of Arts and Sciences.

Freshmen may also earn four credits by suitable performance on a departmental examination to be given during orientation week. Students who receive a score of 3 on the CEEB Advanced Placement Examination may choose, at their own risk and in consultation with their advisers, to go directly into a 200-level course without receiving credit for Computer Science 100. These students are strongly urged to take the departmental placement test. To take the departmental examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

### **English**

The English department will grant 3 credits to students who score 5 on the CEEB Advanced Placement Examination in English. The credits are granted automatically: no application to the department is required.

Students who receive scores of 700 or better on the CEEB SAT II examination in English composition, 700 or better on the CEEB SAT II examination in literature, or 4 or 5 on the CEEB Advanced Placement Examination in English are eligible to enroll, space permitting, in the following English freshman writing seminars: 270, 271, 272.

Advanced placement credits may not be used to fulfill requirements of the English major or distribution requirements of the College of Arts and Sciences.

### **Mathematics and Statistics**

The Cornell calculus sequences discussed below are described under "Basic Sequences" in the Department of Mathematics section of this catalog.

The regular freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of

## Summary of Credit and Placement

Subject	Score	Advanced Placement Credit	Placement
Arabic	Department of Near Eastern Studies determines	credit and placement based on departmental examination.	
Biology	5 (majors) .. 8 credits or 4 credits	Placement out of all introductory courses. Students may choose to accept only 4 credits and follow the guidelines for majors with a score of 4.	
	4 (majors) .. 4 credits	4 AP credits awarded after completion of any combination of 4 credits from 101–104 or 105 or 106. Consult department to determine which semester to take to complete introductory biology.	
	5 (nonmajors) .. 8 credits	Placement out of all introductory courses.	
	4 (nonmajors) .. 6 credits	Placement out of 109–110. Does not always satisfy the prerequisite for second- and third-level courses in biology.	
Chemistry	5 .. 4 credits	Department determines placement. No advanced placement credit for students who take 206, 207, or 211, but students may choose to accept 4 AP credits if they take 215. Department offers placement exam during fall orientation.	
Computer science	4,5 .. 4 credits	Placement out of C.S. 100.	
Economics, micro	4,5 .. 3 credits	Placement out of Economics 101.	
Economics, macro	4,5 .. 3 credits	Placement out of Economics 102.	
English	5 .. 3 credits	Placement out of one Freshman Writing Seminar	
(all except A&S)	4 .. 3 credits		
French language	4,5 .. 3 credits	Department of Romance Studies determines placement. Students may earn additional credit by taking CASE examination.†	
French literature	4,5 .. 3 credits (and proficiency)	Department of Romance Studies determines placement.	
German	4,5 .. 3 credits (and proficiency)	Department of German Studies determines placement. Students may earn additional credit by taking the CASE examination.†	
Government and politics, U.S.	4,5 .. 3 credits	Placement out of Government 111.	
Government and politics, comparative	4,5 .. 3 credits	Placement out of Government 131.	
Greek, Ancient and Modern	Department of Classics determines credit and placement based on departmental examination.		
Hebrew	4,5 .. 3 credits	Department of Near Eastern Studies determines placement based on departmental examination.	
American history	4,5 .. 4 credits		
European history	4,5 .. 4 credits		
History of art	4,5 .. 3 credits		
Italian language	4,5 .. 3 credits	Department of Romance Studies determines placement. Students may earn additional credit by taking the CASE examination.†	
Italian literature	4,5 .. 3 credits (and proficiency)	Department of Romance Studies determines placement.	
Latin	Department of Classics determines credit and placement based on departmental examination.		
Mathematics BC (excluding engineering students see following page for more details)	4,5 .. 8 credits	Placement out of all 1st- and 2nd-semester calculus courses (Math 106, 111–112, 121–122, 191–192, 193). Permission to take any 3rd-semester calculus course (Math 221, 223, 293, or 213).	
	2 or 3 .. 4 credits	Placement out of all 1st-semester calculus courses (Math 106, 111, 121, 191, 193). Permission to take any 2nd-semester calculus course (Math 112, 122, or 192).	
Mathematics AB (excluding engineering students see following page for more details)	3,4,5 .. 4 credits	Placement out of all 1st-semester calculus courses (Math 106, 111, 121, 191, 193). Permission to take any 2nd-semester calculus course (Math 112, 122, or 192).	
	2 .. none	Students are strongly urged to take the mathematics placement examination.	
Music	Department determines credit and placement based on departmental examination.		
Persian	Department of Near Eastern Studies determines credit and placement based on departmental examination.		
Physics B	5 .. 8 credits	Placement out of Physics 101–102. Students with a score of 4 or 5 on Mathematics BC may choose placement out of Physics 112 or 207 (4 credits).	
	4 .. 8 credits	Placement out of Physics 101–102.	
	3 .. 4 credits	Placement out of Physics 101.	
Physics C—Mechanics	4,5 .. 4 credits	Student may choose placement out of Physics 112 or 207, or placement into Physics 116 with no AP credit. For more information, contact department representative.	
Physics C—Electricity/Magnetism	5 .. 4 credits	Placement out of Physics 213.	
Psychology	4,5 .. 3 credits	Placement out of Psychology 101.	
Sociology	Department determines credit and placement.		
Spanish language	4,5 .. 3 credits	Department of Romance Studies determines placement. Students may earn additional credit by taking the CASE examination.†	
Spanish literature	4,5 .. 3 credits (and proficiency)	Department of Romance Studies determines placement.	
Statistics (excluding engineering students)	4,5 .. 3 credits	Placement out of Biometry 200, ILRST 210 or Mathematics 171.	
Turkish	Department of Near Eastern Studies determines credit and placement based on departmental examination.		

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Marguerite Mizelle, 183 Goldwin Smith Hall, for German.

analytic geometry and calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (calculus AB or calculus BC) during their senior year.

Students who have been awarded Advanced Placement credit by their colleges for calculus or statistics may not also receive academic credit at Cornell for similar courses. In particular, students who have been awarded AP credit for 1 semester of calculus (4 academic credits) may not also receive academic credit for any first-semester calculus course (Math 106, 111, 121, 191, 193). Students who have been awarded AP credit for 2 semesters of calculus (8 academic credits) may not also receive academic credit for any first-semester calculus course (Math 106, 111, 121, 191, 193) or any second-semester calculus course (Math 112, 122, 192). Finally, students who have been awarded AP credit for statistics (3 academic credits) may not also receive academic credit for any of the introductory statistics courses Biometry 200, ILRST 210, or Math 171.

The following rules apply to students being admitted to all colleges except the College of Engineering.

Students with a grade of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 213, 221, 223 or 293), but students entering Mathematics 293 may have to make up some material on vectors and multivariable calculus. Students with a 2 or 3 on the BC examination or a 3, 4, or 5 on the AB examination may take the appropriate second-semester course (Mathematics 112, 122, or 192). However, students who receive the borderline passing scores of 2 on the BC examination or 3 on the AB examination are strongly advised to take 112 rather than the more demanding courses 122 or 192. Advanced placement credit will be awarded appropriately; however, no credit will be granted for a grade of 1 on the BC or 1 or 2 on the AB examination.

A placement examination in mathematics is offered at Cornell only during orientation week and should be taken by students who

- 1) have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination;
- 2) believe that the placement assigned on the strength of the CEEB Advanced Placement Examination is not high enough in their case.

Students are strongly urged to take the departmental placement test even if they feel that their grasp of the material is uncertain. The grade on this test does not become part of a student's record. No advance registration for the departmental examination is necessary.

For the policies of the College of Engineering regarding advanced placement and credit, please consult the college's section of this catalog.

### Modern Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See "Placement Tests and Advanced Placement Credit" under "Foreign Language Requirements" in the Arts and Sciences section of this catalog. Students who have had a year of formal study or substantial informal study since they last took

a placement test should take the examination again during orientation week if they plan to continue course work.

Advanced standing credit may be entered on a student's record as follows:

- 1) Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, earn three credits, and are eligible to take Cornell's Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.
- 2) Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take Cornell's Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.
- 3) For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student's Cornell record.
- 4) Native speakers of languages other than English may, on examination by the appropriate professor, be granted a maximum of six credits if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be considered only for those who pursue advanced work in their native language. Students may not receive both advanced placement credit for competence in their native language and Cornell credit for English as a second language.

Information about times and places to take placement tests is available in the orientation booklet and from Academic and Career Counseling Services on the web at [dml.cornell.edu/html/place/testschedule.html](http://dml.cornell.edu/html/place/testschedule.html). For more information, see the College of Arts and Sciences section on language course placement, or contact Callean Hile, 303 Morrill Hall for French, Italian, and Spanish; Marguerite Mizelle, 183 Goldwin Smith Hall, for German; Jenka Fyfe, Morrill Hall, for Russian; Kim Robinson, 388 Rockefeller Hall, for Asian languages.

### Music

Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during orientation week. If special arrangements are made, the examination may be administered at other times during the academic year. Inquiries may be directed to the Department of Music (telephone: 607-255-4097).

### Physics

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (which may be taken during orientation week or at other times as arranged). For information about the departmental examination, students should consult the director of undergraduate studies, 101 Clark Hall, or the department chair, 109 Clark Hall.

Physics B: Students earning a score of 4 or 5 may receive eight credits for noncalculus-

based Physics 101 and 102. Those earning a score of 5 in physics B and a score of 4 or 5 in calculus BC may choose to accept four credits in calculus-based Physics 112 or 207 instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive four credits for Physics 112 or 207, or placement into Physics 116, a first-semester honors course, with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive four credits for Physics 213.

A student planning a major in Physics or Applied and Engineering Physics and who is eligible for AP credit should consult with his/her adviser or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from the director of undergraduate studies, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

## ADVANCED PLACEMENT AND CREDIT FOR INTERNATIONAL CREDENTIALS

Following are the policies currently in effect for G.C.E. "A" Level Examinations and International Baccalaureate Higher Level Examinations. Students may submit results of the French *Baccalaureat* or German *Abitur* for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during orientation week.

**General Certificate of Education (GCE) Advanced ("A") Level Examination** passes are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate in order to receive credit.

Following is a list of subjects and the marks for which credit will be awarded:

Subject	Marks	Credit
Biology	A or B	8 credits
Chemistry	A	8 credits (Chem 207 and 208)
	B	4 credits (Chem 207)
Economics	A	6 credits (Econ 101 and 102)
English Literature	A	6 credits
	B	3 credits
History	A, B, or C	4 credits
Mathematics	A or B	8 credits (Math 111 and 112)
	C	4 credits (Math 111)
Music		subject to departmental review

Philosophy	A or B	3 credits
Physics	A or B	4 credits for Physics 101, 112, or 207 4 additional credits for Physics 213 are granted for a combination of grades of A or B and a minimum of 8 Advanced Placement or Advanced Standing credits in Mathematics. Students planning to major in physics are encouraged to enroll in Physics 116.

**International Baccalaureate (IB) Higher Level Examination** passes are awarded advanced standing and credit on receipt of the original or a certified copy of the examination results.

Subject	Marks	Credit
Anthropology		subject to departmental review
Biology	7	8 credits
	6	6 credits
Chemistry	6 or 7	4 credits (Chem 207)
Computer Science	6 or 7	4 credits (CS 100))
Economics	6 or 7	6 credits
English Literature	7	6 credits and placement out of one freshman writing seminar
	6	3 credits
History	6 or 7	4 credits
Mathematics	6 or 7	8 credits (prospective math, science, and engineering majors must consult with math department to determine prerequisite for placement in third-semester math courses)
Music		subject to departmental review
Philosophy	7	3 credits
Physical Science	6 or 7	8 credits (4 credits, Chemistry 103; 4 credits, Physics 101)
Physics	6 or 7	4 credits (Phys 101, 112, or 207)

## University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that

New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;
- have no holds from the college, the office of the Judicial Administrator, Gannett Clinic, or the Bursar.

Individuals must become registered students by the end of the third week of the semester.

Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

## COURSE ENROLLMENT

Pre-course enrollment for each semester at Cornell takes place partway through the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

## COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. A form is completed by the student and signed by both the student's adviser and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

## Late Course Enrollment and Late Add/Drop/Change Fees

Academic Unit	Late Course Enrollment Fee	Late Course Add/Drop/Change Fee
Continuing Education and Summer Sessions	†	†
Johnson Graduate School of Management	\$100	\$100
Law School	No fee	No fee
Physical education	\$30	\$20*
Veterinary medicine	\$30*	\$30*

\*Consult the college office for special considerations and requirements.

†Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.

## AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

## LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return.

A student may withdraw from the university at the student's discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Medical leaves are granted and processed through University Health Services.

## Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they've been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and

essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

## Bursar Information

### TUITION, FEES, AND EXPENSES

#### Tuition for Academic Year 2000-2001

##### Endowed Divisions

###### Undergraduate

Architecture, Art, and Planning	
Arts and Sciences	
Engineering	
Hotel Administration	\$24,760

###### Graduate

Graduate School (with major chair in an endowed division)	24,760
---	--------

###### Professional

Law School	
First year	27,300
Continuing	26,800
Management	
First year	27,600
Continuing	26,900

##### Statutory Divisions

###### Undergraduate

Agriculture and Life Sciences	
Human Ecology	
Industrial and Labor Relations	
New York resident*	\$10,830
Nonresident*	20,900

###### Graduate

Graduate School (with major chair in agriculture, human ecology, or industrial and labor relations)	12,700
Graduate School—Veterinary Medicine	13,000

###### Professional

Veterinary Medicine	
New York resident*	15,400
Nonresident*	21,100

##### Summer Session (1999)

Per credit	\$600 (estimated)
------------	-------------------

##### Other Tuition and Fees

In absentia fees	
Graduate	\$200 per term
Undergraduate	15 per term
Law and Management	75 per term

*The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.*

\*Residency status is determined at the time of admission by the college. Change in residency status is determined by the bursar.

### Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable \$65 application fee when submitting an application for admission. The graduate application fee is \$65. Application to the Johnson Graduate School of Management costs \$90 (domestic), \$120 (international).

### Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Previously matriculated students who terminate their registration with the university during a fall or spring semester in this manner will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week to the end of the semester, 100 percent.

First-time matriculants will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second and third weeks, 20 percent; fourth week, 30 percent; fifth and sixth weeks, 40 percent; seventh week, 50 percent; eighth and ninth weeks, 60 percent; tenth week to the end of the semester, 100 percent.

Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

### Proration Schedule for Withdrawals and Leaves of Absence

#### Fall 2000 and Spring 2001

##### Previously Matriculated Students

Percentage	Fall 2000	Spring 2001
No charge	8/22-8/27	1/18-1/23
10% charge	8/28	1/24
20% charge	8/29-9/4	1/25-1/31
30% charge	9/5-9/11	2/1-2/7
40% charge	9/12-9/18	2/8-2/14
60% charge	9/19-9/25	2/15-2/21
80% charge	9/26-10/2	2/22-2/28
100% charge	10/3	3/1

### First-Time Matriculated Students

No charge	8/22-8/27	1/18-1/23
10% charge	8/28	1/24
20% charge	8/29-9/11	1/25-2/7
30% charge	9/12-9/18	2/8-2/14
40% charge	9/19-10/2	2/15-2/28
50% charge	10/3-10/9	3/1-3/7
60% charge	10/10-10/23	3/8-3/21
100% charge	10/24	3/22

## BILLING AND PAYMENT

### Billing

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to registration day. All other charges, credits, and payments will appear on monthly statements mailed before the twenty-fifth of every month.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. *A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.*

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

Please inform the Office of the Bursar of any change in billing address. *Address changes made at other offices will not change the billing address.* The address initially used on billing statements will be the home address as listed on each student's application for admission.

### Payments

An individual who has outstanding indebtedness to the university will not be allowed to register\* or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. *Since the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.*

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall, Ithaca, New York 14853-2801 (telephone: 607-255-2336; fax: 607-255-6442). E-mail UCO-Bursar@cornell.edu

## STUDENT HEALTH INSURANCE

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student (including students registered in absentia and nondegree students) must have health insurance coverage. You have two options:

1. enroll in the Student Health Insurance Plan (SHIP); or
2. waive the SHIP if you have *comparable* health insurance that meets Cornell's requirements.

The Student Health Insurance Plan is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and an enrollment/waiver form will be mailed to each student with the July bursar bill.

To ensure that you are covered by an active and adequate health insurance plan, each year *you will be enrolled automatically* in the SHIP *unless* you submit a waiver form that affirms you have comparable insurance in place, from the day you become a registered student, and agree to maintain that coverage while a student at Cornell. If you have adequate health insurance coverage and plan to waive the Student Health Insurance Plan, *you must submit the waiver form each year* by the deadline to avoid a charge.

Fall entrants: you will receive an enrollment/waiver form for the SHIP with your July bursar bill that you must return by 8/25/00.

Spring entrants: you will receive the form after you arrive at Cornell; deadline is 2/23/01.

Late registrants: the form is due no later than 30 days after the initial bill for the insurance charge.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Students graduating mid-year may be eligible to purchase a five-month plan. Students enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 29). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 29. Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

For more information, contact the:

## Class Attendance, Meeting Times, and Examinations

### CLASS ATTENDANCE AND ABSENCES

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

**Absences because of religious beliefs.** In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

#### Class Meeting Times

Monday/Wednesday

	Start Times	End Times
50 MIN	08:00 AM	08:50 AM
75 MIN	08:40 AM	09:55 AM

No classes or laboratory exercises are to be held between the hours of 4:25 P.M. and 7:30 P.M. Monday through Thursday, after 4:25 P.M. on Friday, after 12:20 P.M. on Saturday, and all day Sunday.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 P.M. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each term.

Evening academic activities commencing at 7:30 P.M. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (athletic, musical, theatrical, employment, etc.).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

### FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the *Course and Time Roster* and the *Course and Room Roster*, both of which are published through the Office of the University Registrar each semester. Examinations not listed in the registrar's examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by permission of the dean of the faculty in accordance with existing faculty legislation.

### General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the university registrar's office without prior written permission of the dean of the faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the dean of the faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

### The university policies governing study period and final examinations are:

- a) Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.
- b) Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, i.e., illness, death in the family, etc.
- c) Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

## EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M.

An alternative time to take the examination *must* be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in *Courses of Study* and *must* notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

## Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

A+ =4.3	B+ =3.3	C+ =2.3	D+ =1.3
A =4.0	B =3.0	C =2.0	D =1.0
A- =3.7	B- =2.7	C- =1.7	D- =0.7
			F =0.0

This is how a term average is computed:

Course	Grade	Points	Quality Credits	Product
Chemistry 103	B+	3.3	x 3	= 9.9
English 151	C-	1.7	x 3	= 5.1
DEA 145	B	3.0	x 4	= 12.0
CEH 100	B	3.0	x 3	= 9.0
DEA 111	C	2.0	x 3	= 6.0
<b>Total</b>			<b>16</b>	<b>42.0</b>

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

## S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

- A. the S-U system have symbol equivalents which are uniform within the university: "S" means C- or above; "U" means D+, D, D-, or failure.

- B. S-U options be chosen by the student during the first three weeks of the term.
- C. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the term.
- D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."

The rules for the S-U option are further defined by each of the academic units. They are as follows:

**Agriculture and Life Sciences.** (a) Must have 100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.

**Architecture, Art, and Planning.** (a) All courses specifically required for a degree excluded. Various departments may designate specific required courses where S-U will be permitted. (b) In a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

**Arts and Sciences.** (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (b) Permission of instructor. (c) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

**Engineering.** (a) May take one Humanities and Social Sciences, Approved, or Free Elective per term after completing first semester. (b) This option may be elected during Pre-Course Enrollment or with the written permission of the instructor and adviser on an add/drop form in the first 3 weeks of classes. (c) Decision is irrevocable after first three weeks of term.

**Graduate School.** (a) Seminars and Thesis Research courses are usually graded S-U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.

**Hotel.** (a) Maximum of four free-elective credit hours per term. (b) Exceptions are by petition only.

**Human Ecology.** (a) Not part of student's major. (b) May be used in the 19 hours required outside the major in Human Ecology courses. (c) Not part of hours required in humanities, natural sciences, and social sciences. (d) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (e) Freshmen enrolled in English 137 and 138, which are only offered for S-U credit, are permitted to apply these courses to the freshman seminar requirements. (f) Total of 12 credits in S-U

courses (not counting PE) may be counted towards degree requirements during a student's college career.

**Industrial and Labor Relations.** (a) This option may be elected, if available in I&LR electives, or in out-of-college electives but not including directed studies. (b) Degree requirements include a minimum of 105 lettergrade (A + to D -) credits. (c) Student must also be in good academic standing. (d) A "U" is considered the equivalent of an "F" in determining a student's academic status. (e) Limited to two courses per term, not to exceed four hours in any one course.

**Internal Transfer.** (a) S-U grades permitted only when it is the only option or (b) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

**Veterinary Medicine.** (a) There are four courses in the veterinary core curriculum that are offered on an S-U basis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on an S-U basis at the option of the professor.

## INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:

- 1) the student has a substantial equity at a passing level in the course with respect to work completed, and
- 2) the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

## CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

## OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the

student. Transcripts can be obtained through the Office of the University Registrar, B7 Day Hall.

## University Requirements for Graduation

The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

## PHYSICAL EDUCATION

### Classes

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours a week). The Gannett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

### Swim Test

The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the

swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

## STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

## Student Records Policy

Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell University is required to advise students of their rights concerning their education records. Education records include records directly related to a student and maintained by an educational institution or party acting on its behalf. The law gives students the right to

- a) inspect and review their education records;
- b) challenge contents of education records;
- c) a hearing if the challenge is unsatisfactory;
- d) include an explanatory statement in the education records if the outcome of the hearing is unsatisfactory;
- e) prevent disclosure of personally identifiable information\*;
- f) secure a copy of the institutional policy which includes the location of all education records\*\*;
- g) file complaints with the Department of Education concerning institutional failure to comply with the act.

\*Directory information is a category of personally identifiable information that includes name, home address, local address, local telephone listing, dates of attendance at Cornell, major field of study and college attended, previous educational agency or institution attended, participation in officially recognized activities (in athletics, the weight and height of members of athletic teams), degrees earned, and awards. Directory information may be released unless the student indicates otherwise at the time of registration. Students who wish no release of their directory information must inform the office of the university registrar in writing within 10 days of the date of official university registration. Students may rescind their no release request at any time in writing to the office of the university registrar.

\*\*\*Cornell University Policy on Access to and Release of Student Education Records" is available on the web at URL: [WWW.UNIVCO.CORNELL.EDU/policy/ASI.html](http://WWW.UNIVCO.CORNELL.EDU/policy/ASI.html).

## POLICY ON POSTING OF STUDENT INFORMATION

In compliance with the university's policy on student educational records, and the U.S. Department of Education's Family Educational Rights and Privacy Act of 1974 (FERPA), restricted student information may not be posted.

Accordingly, the following student information is considered restricted and therefore may not be posted:

Student social security number

Student identification number

Courses elected

Grades earned

Grade point average

Class rank

Date of birth

Place of birth

Home telephone listing

Academic and disciplinary actions

Student or administrative committees

The most recent student educational records from previous educational agency or institution

Financial arrangements between the student and the university

Any other education record containing personally identifiable information

For further information, please refer to the revised *Policy on Access to and Release of Student Education Records* on the web at [www.univco.cornell.edu/policy/asi.html](http://www.univco.cornell.edu/policy/asi.html).

## Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet entitled the *Code of Academic Integrity and Acknowledging the Work of Others* is distributed to new and transfer students and is also available from the office of the dean of faculty. The policy is published in the *Policy Notebook*, available free of charge from the office of the dean of students.

## PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects. Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects. Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review.

Inquiries, communications, and requests for guidelines should be directed to the committee's Executive Secretary, 120 Day Hall (255-2945). The guidelines are also available at the web address [www.osp.cornell.edu](http://www.osp.cornell.edu)

## USE OF ANIMALS FOR COURSES

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered.

### Guidelines for Faculty and Students with Respect to the Use of Animals in Instruction

**Background:** On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

#### Guidelines

1. For demonstrating certain principles and procedures the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.
2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in the Announcement "Courses of Study" should alert students to this fact.
3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.
4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.
5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor in the course.
6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.
7. When students object on ethical or other valid grounds, to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives, for learning the same material.

8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the Director of the Cornell Center for Research Animal Resources (253-3520).

## Interdisciplinary Centers, Programs, and Studies

### ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0832)

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for a six-year term and are full members of the faculty when in residence.

#### Term Ending in 2001

Pingree, David, historian of science

#### Term Ending in 2002

Chartier, Roger, cultural historian  
Ernst, Richard R., physical chemist  
Goodall, Jane, primatologist  
Tobias, Phillip V., paleoanthropologist

#### Term Ending in 2003

Morrison, Toni, novelist  
Rabinovich, Itamar, historian of the Middle East, diplomat

#### Term Ending in 2004

Bal, Mieke, cultural analyst  
Cleese, John, writer and actor  
MacDonald, David W., mamalogist and behavioral ecologist  
Silajdzic, Haris, political leader, historian of the Middle East

#### Term Ending in 2005

Jemison, Mae, astronaut  
McDonough, William, architect  
O'Brien, Stephen J., geneticist  
Schechner, Richard, director of performance studies

#### Term Ending in 2006

Andy Goldsworthy, sculptor  
Oliver Sacks, physician and writer

## CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255-4335)

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of

the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments.

## Selected Applied Mathematics Courses

### Basic Graduate Courses in Mathematics and Applied Mathematics

Math 413-414 Introduction to Analysis  
Math 433-434 Introduction to Algebra  
Math 436 Applications of Abstract Algebra  
Math 611-612 Real and Complex Analysis  
Math 615-616 Mathematical Methods in Physics  
Math 621 Measure Theory and Lebesgue Integration  
Math 622 Applied Functional Analysis  
Math 631-632, 634 Algebra  
Math 651 Introductory Algebraic Topology  
Math 661 Geometric Topology  
T&AM 612-613 Methods of Applied Mathematics  
T&AM 614-615 Topics in Applied Mathematics

### Analysis (and Differential Equations)

Math 427 Introduction to Ordinary Differential Equations  
Math 428 Introduction to Partial Differential Equations  
Math 617 Dynamical Systems  
Math 618 Smooth Ergodic Theory  
Math 619-620 Partial Differential Equations  
Math 652-653 Differentiable Manifolds  
Math 662 Riemannian Geometry  
Math 711-712 Seminar in Analysis  
Math 713 Functional Analysis  
Math 715 Fourier Analysis  
Math 722 Topics in Complex Analysis  
Math 728 Seminar in Partial Differential Equations

### Logic and Theory of Computing

CS 618 Principles of Distributed Computing  
CS 671 Introduction to Automated Reasoning  
CS 677 Reasoning about Knowledge  
CS 682 Theory of Computing  
CS 715 Seminar in Programming Refinement Logics  
Math 486 Applied Logic I  
Math 681 Logic  
Math 781-782 Seminar in Logic  
Math 783 Model Theory  
Math 784 Recursion Theory  
Math 785 Automata Theory  
Math 787 Set Theory  
Math 788 Topics in Applied Logic

### Numerical Mathematics and Operations Research

CS 522 Software for Scientific Computing  
CS 621 Matrix Computations  
CS 622 Numerical Optimization and Nonlinear Algebraic Equations  
CS 624 Numerical Methods for Differential Equations  
CS 664 Machine Vision  
CS 681 Analysis of Algorithms  
CS 722 Topics in Numerical Analysis  
CS 729 Seminar in Numerical Analysis  
EE 423 Computer Methods in Digital Signal Processing  
Math 425 Numerical Solution of Differential Equations  
Math 728 Seminar in Partial Differential Equations  
OR&IE 625 Scheduling Theory  
OR&IE 630 Mathematical Programming  
OR&IE 632 Nonlinear Programming  
OR&IE 635 Interior-Point Methods for Mathematical Programming

### Discrete Mathematics and Geometry

Math 441-442 Introduction to Combinatorics  
Math 455 Applicable Geometry  
OR&IE 633 Graph Theory and Network Flows  
OR&IE 636 Integer Programming  
OR&IE 639 Polyhedral Convexity

### Information Communication and Control Theory

EE 411 Random Signals in Communications and Signal Processing  
EE 425 Digital Signal Processing  
EE 467-468 Communication Systems I and II  
EE 471/MAE 478 Feedback Control Systems  
EE 521 Theory of Linear Systems  
EE 522 Theory of Nonlinear Systems  
EE 525 Adaptive Filtering in Communication Systems  
EE 526 Signal Representation and Modeling  
EE 561 Error Control Codes  
EE 562 Fundamental Information Theory  
EE 563 Communication Networks  
EE 565 Statistical Signal Processing  
EE 567 Digital Communication  
EE 577 Artificial Neural Networks  
MAE 677 Robust and Optimal Control

### Mathematical Biology

BTRY 451 Mathematical Modeling of Populations  
BTRY 662 Mathematical Ecology (also STBTRY 662)  
Stat & Biom 651 Mathematical Population Studies and Modeling  
Stat 697 & Biom 760 Special Topics in Theoretical and Computational Biology

### Mathematical Economics

Econ 619 Econometrics I  
Econ 620 Econometrics II  
Econ 710 Stochastic Economics: Concepts and Techniques  
Econ 717-718 Mathematical Economics  
Econ 719-720 Advanced Topics in Econometrics

### Mechanics and Dynamics

Chem E 731 Advanced Fluid Mechanics and Heat Transfer  
Chem E 732 Diffusion and Mass Transfer  
Chem E 751 Mathematical Methods of Chemical Engineering Analysis  
Chem E 753 Applied Analysis of Nonlinear Systems: Studies in Stability and Bifurcation  
M&AE 601 Foundations of Fluid Dynamics and Aerodynamics

M&AE 602 Fluid Dynamics at High Reynolds Numbers  
M&AE 732 Analysis of Turbulent Flows  
M&AE 733 Stability of Fluid Flow  
M&AE 734 Turbulence and Turbulent Flow  
M&AE 736 Computational Aerodynamics  
M&AE 737 Computational Fluid Mechanics and Heat Transfer  
T&AM 570 Intermediate Dynamics  
T&AM 578 Nonlinear Dynamics and Chaos  
T&AM 666 Finite Element Analysis  
T&AM 671 Advanced Dynamics  
T&AM 672 Celestial Mechanics (also Astro 579)  
T&AM 673 Mechanics of the Solar System (also Astro 571)  
T&AM 675 Nonlinear Vibrations  
T&AM 678 Complex Systems  
T&AM 751 Continuum Mechanics and Thermodynamics  
T&AM 752 Nonlinear Elasticity  
T&AM 776 Applied Dynamical Systems

### Probability and Statistics

EE 562 Fundamental Information Theory  
EE 563 Communication Networks  
EE 565 Statistical Signal Processing  
EE 566 Wireless Networks  
EE 664 Foundations of Inference and Decision Making  
Math 671-672 Probability Theory  
Math 674 Introduction to Mathematical Statistics

## CORNELL CENTER FOR THE ENVIRONMENT

Rice Hall (255-7535)

The Cornell Center for the Environment (CfE) coordinates interdisciplinary research, teaching, and outreach programs on environmental issues. CfE's overarching goal is to continuously advance an intellectual community for the environment at Cornell University,

with the objective of promoting a sustainable future. To meet this goal CfE:

- initiates environmental courses and curricula at both the graduate and undergraduate levels;
- facilitates interdisciplinary environmental research;
- coordinates outreach programs that assist federal, state, and local government, international agencies, private organizations, businesses, and individuals in analyzing and solving environmental problems;
- organizes environmental events, lectures, festivals, and seminars; and
- serves as a clearinghouse for environmental information.

The CfE web page ([www.cfe.cornell.edu](http://www.cfe.cornell.edu)) is the principal source of environmental information for the Cornell students, faculty, and staff. Check it frequently for the latest updates on funding, seminars, courses, lectures, events, research opportunities, and new educational programs.

## EDUCATION

Undergraduates and graduates can study the environment through programs in Cornell departments, centers, and institutes. Cornell has a strong tradition in environmental studies, with over 200 faculty across campus from the natural, biological, and social sciences working on various environmental issues.

### Undergraduate Education

For undergraduate students, a listing of environmental course offerings is posted on the CfE web page ([www.cfe.cornell.edu](http://www.cfe.cornell.edu)) along with a listing of majors for students interested in the environment. Students are also encouraged to review the *Courses of Study* section on "Cornell's Undergraduate Environmental Programs."

### Graduate Study

Graduate level environmental concentrations are found in many of Cornell's "Major Fields of Study," from Agricultural and Biological Engineering to Zoology. Similarly, there are opportunities for further study through several graduate minors. The Center for the Environment administers several graduate programs, including the Master of Professional Studies—Environmental Management Concentration, the Environmental Toxicology Graduate Field, and the Conservation and Sustainable Development minor.

**Master of Professional Studies—Environmental Management Program (MPS-EM).** Resolving complex environmental problems requires more than technological solutions and technical expertise. Environmental professionals also need broad-based administrative, analytical, and managerial skills to make cost effective decisions, perform impact analyses, effectively engage stakeholders, and work in a fluctuating legal, political, and regulatory arena. The MPS-EM Concentration is organized with these demands in mind. The program prepares graduates to work as multidisciplinary team members in the environmental management professions.

Students take common core courses including: Science and Technology of Environmental Management (ABEN 425); Managing Local

Environmental Systems: Social Perspectives and Research Bases (Rural Sociology 560); Legal Aspects of Environmental Management (CRP 551 or NTRES 408); and Environmental and Resource Economics (ARME 651). An interdisciplinary problem-solving project and 15–18 additional credit hours round out the program. For more information, contact CfE's education coordinator (607-255-7535 or [cucfe@cornell.edu](mailto:cucfe@cornell.edu)).

**Environmental Toxicology.** CfE is the administrative home of the Environmental Toxicology Graduate Field. The field offers a multidisciplinary science program leading to an M.S. or Ph.D. degree. The three major areas of concentration in the program are cellular and molecular toxicology; food and nutritional toxicology; and ecotoxicology and environmental chemistry. The graduate program prepares students for professional opportunities in academia, industry, private research institutes, and governmental agencies.

**Conservation and Sustainable Development Minor (CSD).** The minor was formed in response to the challenges facing society to provide for the health, safety, and welfare of people while maintaining the ecological integrity of natural ecosystems and the long-term sustainability of food, forage, and fiber production systems. Solutions to today's conservation and sustainable development problems will continue to elude a single disciplinary approach. These challenges must be met by a new kind of specialist that has holistic perspectives and is capable of working on interdisciplinary research and development teams. Hence, the Conservation and Sustainable Development Minor is oriented to graduate students desiring interdisciplinary approaches to real world problems.

Requirements for the minor include: (1) the CSD core course, Critical Issues in Conservation and Sustainable Development (NTRES 618); (2) at least two electives in subject areas outside the student's primary academic focus; and (3) an interdisciplinary problem-solving research or development project. Elective courses are chosen in consultation with the student's graduate committee that includes one representative from the CSD minor.

## BEYOND THE CLASSROOM

Students interested in the environment will find many organizations, resources, and activities beyond the classroom setting, both on campus and in the regional area. CfE sponsors guest lectures and co-hosts conferences with groups from across the campus. In addition, CfE organizes the annual Cornell Environmental Film Festival and the Jill and Ken Iscol Distinguished Environmental Lectures.

## RESEARCH AND OUTREACH

CfE is home for several environmental institutes offering students opportunities for study, project work, research, and outreach. These programs are focused on a variety of issues from watershed management to sustainable economic development to environmental risks. CfE programs include:

- Water Resources Institute (WRI)
- Institute for Comparative and Environmental Toxicology (ICET)

- Waste Management Institute (WMI)
- Institute for Resource Information Systems (Cornell IRIS)
- Program for Environment and Community (PEC)
- Program on Breast Cancer and Environmental Risk Factors in New York State (BCERF)
- Work and Environment Initiative (WEI)
- Environmental Inquiry (EI)
- Environmental Risk Analysis Program (ERAP)
- CfE Watersheds Program.

Several other programs affiliated with the Center include:

- Superfund Basic Research and Education Program (SBREP)
- Ocean Resources and Ecosystems Program (OREP)
- Cornell Institute for Research in Chemical Ecology (CIRCE)
- Program in Biogeochemistry and Environmental Change (PBEC)
- Environmental Outreach Council.

## THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies, established in 1961 to encourage and support comparative and interdisciplinary research on international subjects, is one of the largest and most diverse centers of its kind in the United States. Currently, it includes four U.S. Department of Education Title VI National Resource Centers and 18 other area, development, topical, and educational programs. More than 500 faculty members voluntarily collaborate in the center's programs with well over 300 graduate students involved directly in its international programs. Undergraduate students may choose concentrations in International Relations, Latin American Studies, Modern European Studies, South Asian Studies, or Southeast Asian Studies. (See also African Studies and Research Center, Asian Studies, and International Agriculture for related majors and concentrations.)

As the world changes, Cornell's international programs are poised to anticipate and respond to those developments. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. As programs gain momentum and recognition to attract their own resources, the center applies its resources to new pilot

activities that bring faculty and students together across traditional disciplines and departmental boundaries.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty and students. Together with the Peace Studies Program, the center hosts a Current Events Roundtable each June that attracts a large number of Cornell alumni to join faculty in discussion of key world events.

Besides the educational and research opportunities the center makes available on the Ithaca campus, it also provides foreign study options for undergraduate students through the Cornell Abroad Program and encourages graduate students' overseas field research by hosting an annual competition for travel grants and administering the Fulbright fellowship program. The center also is the administrative home of the International Students and Scholars Office, the principal campus resource serving Cornell's large international community.

Cornell is committed to the study of the global community in all its complexity—through a faculty of preeminent scholars and teachers, outstanding research facilities, instruction in more than 40 languages, and a library system with 2,500,000 volumes related to international and comparative studies.

**COGNITIVE STUDIES**

282 Uris Hall (255-6431) ([cogst@cornell.edu](mailto:cogst@cornell.edu))

Cognitive Studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies is primarily represented by faculty in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Human Development, Linguistics, Mathematics, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

**Undergraduate Programs**

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Concentration" in the College of Arts and Sciences section. Contact Linda LeVan (255-6431 or [cogst@cornell.edu](mailto:cogst@cornell.edu)).

**Graduate Programs**

Cornell offers a graduate field minor in cognitive studies. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as Philosophy, Computer Science, Linguistics, Psychology, or Neurobiology and Behavior on common committees. For further information on the graduate Field of Cognitive Studies, contact Joe Halpern and Ron Hoy, directors of graduate studies, (255-9562 or 254-4318, [halpern@cs.cornell.edu](mailto:halpern@cs.cornell.edu) or [rrh3@cornell.edu](mailto:rrh3@cornell.edu)), or Linda LeVan, executive staff assistant, 282 Uris Hall, Office of Cognitive Studies (255-6431, [cogst@cornell.edu](mailto:cogst@cornell.edu)).

**Courses**

Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section "Special Programs and Interdisciplinary Studies."

**CORNELL ABROAD**

474 Uris Hall 607/255-6224, fax 607/255-8700,  
e-mail: [CUAbroad@cornell.edu](mailto:CUAbroad@cornell.edu)  
web homepage: [www.einaudi.cornell.edu/cuabroad](http://www.einaudi.cornell.edu/cuabroad)

Study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. In all cases, students must apply through Cornell Abroad, whose staff services the planning and application process.

**LOCATIONS ABROAD**

Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in more than 40 countries. The

following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (\*) are programs run directly by Cornell.

#### AFRICA

Botswana, Cameroon, Kenya, Madagascar, Tanzania, Uganda: School for International Training;

Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE);

Kenya: Wildlife Management (School for Field Studies);

South Africa: Universities of Cape Town and Natal

#### ASIA

China: Chinese University of Hong Kong; Inter-University Program for Chinese Language Studies at Tsinghua University; Peking, and Nanjing Universities (CIEE); International Chinese Language Program at National Taiwan University; IES Beijing

India: School for International Training;

Indonesia: Institut Keguruan Dan Ilmu Pendidikan (IKIP) in Malang (CIEE);

Japan: \*Kyoto Center for Japanese Studies; various university programs;

Korea: Yonsei University;

Nepal: \*Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University;

Thailand: Khon Kaen University (CIEE);

Vietnam: University of Hanoi (CIEE);

#### AUSTRALIA AND NEW ZEALAND

Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of New England, Armidale; University of Queensland, Brisbane; University of Western Australia, Perth; School for International Training; Sydney Internship (Boston University); Otago and Lincoln Universities in New Zealand;

#### EUROPE

Denmark: \*Denmark's International Study Program (DiS);

France: \*EDUCO (Cornell, Duke, and Emony in Paris) at Université de Paris VII, Paris I, Institut d'Études Politiques de Paris ("Sciences Po"); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University); IES Dijon Business Program

Germany: Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg;

Greece: College Year in Athens;

Ireland: Trinity College Dublin and University Colleges of Dublin, Galway, and Cork;

Italy: Cornell College of Art, Architecture, and Planning Program in Rome; Bologna Cooperative Studies Program; Intercollegiate Center for Classical Studies in Rome; Syracuse University program in Florence;

Netherlands: Leiden University; University of Maastricht, Center for European Studies;

Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian);

Spain: \*Cornell-Michigan-Penn program at the University of Seville; various language and culture programs;

Sweden: \*Swedish Child Care and Family Policy Internship at the University of Göteborg; The Swedish Program at the University of Stockholm;

United Kingdom: \*Direct enrollment at: University of Bristol; Cambridge University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Manchester; University of Nottingham; Oxford University; University of Reading; University of St. Andrews; University of Sussex; University of Warwick; University of London: King's College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, and the London School of Economics and Political Science, School of Oriental and African Studies.

Students studying at these 17 British universities enjoy admissions, advising, and counseling services, as well as an array of cultural activities, provided by the Cornell-Brown-Penn UK Centre. Externally sponsored programs in the UK include the British American Drama Academy, the Beaver College, Boston, and Rochester University internships, and the Marymount College Program at the London College of Fashion.

#### LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN

Argentina and Chile: various university-based study abroad programs, such as COPA, through Butler University and the University of Illinois;

Belize, Brazil, Chile, Ecuador: School for International Training;

Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Abroad in tropical biology; School for Field Study; Universidad Nacional (Heredia);

Ecuador and Jamaica: Partnership for Service Learning;

Honduras: Escuela Agrícola Panamericana (Zamorano);

Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM); Universidad de las Américas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California;

#### MIDDLE EAST AND NORTH AFRICA

Egypt: American University in Cairo;

Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University;

Morocco: School for International Training

#### Other Locations

Cornell students are by no means limited to the locations listed above. In recent years, they have also studied in Austria, Czech Republic, Dominican Republic, Finland, the Philippines, Poland, Portugal, Switzerland, Turkey, Venezuela, and elsewhere.

#### Who Studies Abroad

Students from all seven undergraduate colleges and from all major fields study abroad; they are generally expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.

#### When Students Study Abroad and for How Long

Students may study abroad their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad in the freshman year. Although semester-long programs are usually available, academic year programs are highly recommended.

#### Application Process

Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials, talk with staff, and attend information meetings. The Cornell Abroad web site is a good place to browse through program offerings and to explore links to universities and programs worldwide. Students meet with the study abroad advisers in their colleges to choose programs that fit the needs of their degree programs. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty adviser and the college study abroad adviser. Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities as necessary. *All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.*

The application deadline for study abroad in the fall 2001 semester and the 2001–2002 academic year is February 15, 2001, for all programs except Oxford and Cambridge, for

which the deadline to study at those universities for the full year in 2001–2002 is November 1. Many universities and programs admit on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

## Registration, Credit Transfer, and Grades

Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the institution or program overseas, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review coursework taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the *transcript* will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. *The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.*

## Foreign Language Requirements

Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require at least two years, or the equivalent, of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Indonesia, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Cornell students who participate in programs in a non-English-speaking country with English-language course work are required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad advisers about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, prior to study abroad.

## Housing Arrangements

Study abroad programs generally provide housing in the homes of local residents, in university halls of residence, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

## Costs

Students studying abroad on Cornell programs in Berlin, Copenhagen, Göteborg, Nepal, Paris, Seville, and the United Kingdom in 2000–2001 pay a uniform study abroad tuition of \$15,300 per semester, which covers, tuition, housing, orientation, some field trips, and

excursions. Meals and airfare may also be included. The study abroad tuition for the Kyoto Center for Japanese studies is \$18,025, covering the same expenses.

Students studying abroad on all other programs in 2000–2001 pay the tuitions and other costs charged by their programs, and a Cornell international program tuition of \$3,550 per semester. The international program tuition covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students.

## Financial Aid

Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for financial aid, consistent with general university policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships.

## Security Abroad and Related Issues

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions' policies regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

## Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (474 Uris Hall): Richard Gaulton Ph.D., director; Beatrice B. Szekely Ph.D., associate director; Libby Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course

syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site which incorporates linkages to universities, programs, and resources worldwide. In the early weeks of every semester, faculty, students, and staff discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad web homepage ([www.einaudi.cornell.edu/cuabroad](http://www.einaudi.cornell.edu/cuabroad)).

## College Study Abroad Advisers

*Agriculture and Life Sciences:* Bonnie Shelley, 140 Roberts Hall; *Architecture, Art, and Planning:* Donna Kuhar, 129 Sibley; *Arts and Sciences:* TBA, 55 Goldwin Smith Hall; *Engineering:* Dan Maloney Hahn, 167 Olin Hall; *Hotel Administration:* Cheryl Farrell, 174B Statler Hall; *Human Ecology:* Paul Fisher, 172 Martha Van Rensselaer; *Industrial and Labor Relations:* Laura Lewis, 101 Ives Hall.

## CORNELL-IN-WASHINGTON PROGRAM

311 Caldwell Hall (255–4090)

Cornell-in-Washington is a program that offers students from all colleges in the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation's political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries, offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition. The Cornell-in-Washington Program offers two study options: (1) studies in public policy; and (2) studies in the American experience. Students take courses from Cornell faculty, conduct individual research projects, and work as externs in the Washington community.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students and faculty are on the upper floors.

The Cornell-in-Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

## Tuition

Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

## Housing

Apartments are rented at the Cornell Center during the academic year. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of \$150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the Center and street parking is not available.

## Applications

Application forms are available from the Cornell-in-Washington office at 311 Caldwell Hall. Applications should be submitted the semester prior to participation.

## Information

The Cornell-in-Washington website is located at [ciw.cornell.edu](http://ciw.cornell.edu). Regular information meetings are held on campus in early October and March. These meetings are advertised in the *Cornell Daily Sun* and on campus bulletin boards. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell-in-Washington office at 311 Caldwell Hall (607) 255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

## CORNELL INSTITUTE FOR PUBLIC AFFAIRS

473 Hollister Hall (255-8018)

The Cornell Institute for Public Affairs (CIPA) is a university-wide institute that offers a two-year graduate professional program leading to a Master of Public Administration. Our mission is to develop professionals who can be effective, ethical, and creative leaders in government and in the private sector's interface with government.

CIPA emphasizes the interactions between public and private interests for the benefit of all sectors of society. At CIPA, we utilize Cornell's cutting-edge strengths as a major research university to understand rapidly evolving public interests, technological opportunities, ecological constraints, individual aspirations, and political possibilities. Examples of Cornell's extraordinary breadth of policy-related specialties include science and technology; health, education, and social services administration; agricultural, food, and nutrition policy; international development; environmental studies; peace studies; labor relations; city and regional planning; and ethics in public life. These areas of expertise provide a diverse base for the CIPA Fellows (our students) to pursue the study of public affairs. Thus, CIPA Fellows take courses and work with faculty from all of

Cornell's Colleges as well as the Cornell Law School, with whom a joint M.P.A./J.D. degree is offered, and the Johnson Graduate School of Management.

The CIPA program has been developed to offer both a sound foundation in the principles, tools and techniques for a career and leadership in public policy either in the public or private sector. CIPA also offers the flexibility to accommodate and encourage the specialized policy-related interests of our students.

The two-year curriculum is structured into three parts: five interdisciplinary core courses taken by all CIPA Fellows; "competency" area requirements to develop the wide variety of skills and professional perspectives necessary for the practice of public policy; and sectoral specialization through additional courses and the completion of a thesis in the area of the fellow's policy focus.

### *The Core Courses*

These courses have been developed specially for CIPA Fellows to provide a common, hands-on experience in employing the latest analytical techniques to guide the formulation of programs, their supporting institutions, and their effective administration. They will also provide strategies for implementing change in complex heterogeneous societies.

### **CIPA I: Quantitative Techniques for Policy Analysis and Program Management (CRP 621)**

Provides students with the basic management tools essential for the contemporary career in public affairs. It includes hands-on practice with formal management techniques, including investment analysis and linear and dynamic programming.

**CIPA II: Public Political Economy (ECON 539)** Uses techniques of economic analysis to understand the need for various public programs, to estimate the value of new programs and policies, to forge desirable institutional structures for service delivery, and to anticipate and evaluate outcomes.

**CIPA III: Administration, Politics, and Public Affairs (GOVT 621)** Explores the processes and institutional context of public affairs and analyzes the political and administrative structure and dynamics of policy development and implementation.

**CIPA IV: Social Policy (526)** Integrates a variety of analytic methods, especially statistics and simulation models, to explore the structure of public programs and to assess their direct and indirect consequences.

**CIPA V: Models and Quantitative Methods (CRP 528)** Demonstrates the use and limits of models and quantitative techniques in forming and administering policy.

### *The Area Requirements*

In addition to the five core courses, fellows must also complete satisfactorily a series of foundation subject or "competency" area requirements that are essential to the training of public policy professionals. These competency areas are: administration, politics, and policy; economics; math and statistics; finance; regulation; and ethics and public law.

### *The Sectoral Specialty*

At least three courses taken by individual fellows will be in their sectoral specialty or "concentrations." These are widely divergent

and depend on the unique interests and background of the individual student.

### *The CIPA Thesis*

Each fellow must complete a thesis, which applies the conceptual tools, theories, and analytical techniques to a problem in the fellow's area of sectoral expertise. As the culmination of each M.P.A. course of study, this thesis must be both critical and creative, reflecting the fellow's ability to identify, analyze, and generate supportable solutions to important public policy questions.

### *Additional Requirements*

All M.P.A. candidates must spend four semesters in residence to complete the degree.

### *The Faculty*

In addition to our five core faculty members (Richard E. Schuler, director, economics and civil and environmental engineering; Steven Caldwell, sociology; Arch Dotson, government; David Lewis, city and regional planning; and Peter Stein, physics) who offer the five core courses and advise the fellows in the development of their programs of study, over 100 faculty members at Cornell participate in the graduate field of public affairs and policy. All field faculty members are available to supervise the theses of individual Fellows whose policy interests coincide with faculty expertise.

### *Special Programs*

The combined four-year M.P.A./J.D. and M.P.A./M.B.A. degree programs are available for interested applicants. For selected Cornell undergraduates who are accepted by the end of their junior year, a combined five-year bachelor's/M.P.A. program can be arranged.

### *Student Organization*

The Cornell Public Affairs Society, governed by the fellows, conducts a weekly colloquium with guest speakers, a bi-weekly television program, "Point-Of-View", aired on the local public access channel, and publishes, edits, and sponsors student authors for its annual public policy journal, "The Current," as well as arranging regular social events.

**Application.** Applicants are required to submit GRE general test scores. CIPA has a policy of rolling admissions. Students requesting aid, however, must submit applications by February 15 for consideration. For an application or more information, contact Cornell Institute for Public Affairs, 472 Hollister Hall (phone: 607 255-8018; fax: 607 255-5240; e-mail: [cipa@cornell.edu](mailto:cipa@cornell.edu); web site: [www.cipa.cornell.edu](http://www.cipa.cornell.edu)).

**Financial Support.** As a professional program, the financial aid resources of CIPA are extremely limited. Students of unusual merit and documented need will be considered for support, but CIPA is unable to provide any one student full support. Therefore, applicants are encouraged to explore and take advantage of all available sources of external funding.

For an application or more information, contact Cornell Institute for Public Affairs, 472 Hollister Hall (phone: 607-255-8018; fax: 607-255-5240; e-mail: [cipa@cornell.edu](mailto:cipa@cornell.edu)).

## CORNELL PLANTATIONS

One Plantations Road (255-3020)  
Internet homepage:  
www.plantations.cornell.edu  
e-mail: plantations@cornell.edu

A place of exceptional diversity and learning opportunities, Cornell Plantations comprises the university's botanical garden, arboretum, and natural areas. Its 3,000+ acres include the woodlands and gorges on and around campus, as well as specialized gardens and a 150-acre arboretum that features a field flower meadow and trees and shrubs hardy in central New York State. Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines such as ecology and systematics, floriculture, ornamental horticulture, and bioengineering. While many of Cornell Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these areas for classes and research can be made by calling Cornell Plantations.

Cornell Plantations also offers relaxation, rejuvenation, and inspiration. The vast open spaces provide room to breathe; while the intimate gardens provide respite from the busy campus. Visitors always discover surprises and learn something new in the gardens, which feature herbs, flowers, vegetables, international crops, rock garden plants, peonies, poisonous plants, ground covers, rhododendrons, wildflowers, and a winter garden.

Students are encouraged to volunteer as photographers, authors, tour guides, computer assistants and gardeners.\* Maps, information, publications, and class brochures (for noncredit classes and workshops) are available in the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Noncredit courses in horticulture, landscape design, botanical arts, and natural history are offered throughout the year. A one-credit seminar series (HORT 480) is offered each fall; a three-credit Public Garden Management course, (HORT 485) is offered every other spring semester. \*A number of student internships are also offered each summer.

## PROGRAM ON ETHICS AND PUBLIC LIFE

119 Stimson Hall (255-8515)

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a

conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL does not intend to create either an undergraduate major or a graduate field in Ethics and Public Life. On the contrary, we seek to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under "Special Programs and Interdisciplinary Studies").

### EPL Core Courses

PHIL 194/GOVT 294 Global Thinking @  
PHIL 246 Ethics and the World Environment  
PHIL 247 Ethics and Public Life  
PHIL 342 Law, Society, and Morality  
PHIL 343 Political Obligation and Civil Disobedience  
GOVT 469/Phil 369 Limiting War: The Morality of Modern State Violence  
GOVT 412 Voting and Political Participation  
GOVT 466/Womns 466/Law 648 Feminism and Gender Discrimination  
GOVT 468/Phil 368 Global Climate and Global Justice  
GOVT 491/691 Normative Elements of International Relations

## PROGRAM IN REAL ESTATE

114 West Sibley Hall (255-7110)

The two-year Master of Professional Studies (M.P.S.) degree in Real Estate is an interdisciplinary degree program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide support for the degree program. The *Program in Real Estate* exists at Cornell University to serve as the integrating organizational unit for financial management and administration of academic real estate activities on and off campus. The *Field of Real Estate* is a committee of faculty members from several different colleges that is directly involved in the design and administration of the real estate curriculum.

The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professionals also bring an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, real estate development process, advanced real estate, managerial finance, residential development, real estate law, construction planning and operations, and real estate marketing and management, along with elective courses in their chosen areas of concentration. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., an international real estate concentration).

### Admissions

Admissions procedures for the M.P.S. (Real Estate) program are supervised by the Graduate School and Real Estate Field. Applicants to the program must have completed a bachelor's degree with a good academic record. They must achieve Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE) scores that are at the level required in other Cornell graduate professional degree programs; and at least two letters of recommendation from undergraduate college faculty members (and if appropriate, from employers) familiar with the student's academic and professional work must be submitted. There is no work experience requirement for admission (although work experience is preferred). Foreign students, for whom English is a second language, will need to achieve acceptable TOEFL scores.

For more information, contact C. Bradley Olson, director of the Program in Real Estate (607-255-7110) or Professor Matthew Drennan, director of graduate studies (607-255-7436) or e-mail real\_estate@cornell.edu.

## SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- Graduate work leading to the M.S. and/or Ph.D. in any of the earth science sub-disciplines (e.g., atmospheric science, geology/geophysics, bio-geochemistry, hydrology, oceanography).
- Employment in environmentally-oriented careers in both the private and public sector at the B.S. or B.A. level.
- Advanced degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.
- Advanced degree in teaching, for example, earth science at the middle or high school level.
- Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.

The SES major is available for students in the College of Agriculture and Life Sciences and the College of Arts and Sciences. In the College of Engineering, the SES curriculum may be completed by choosing the SES option in the Department of Earth and Atmospheric Sciences. The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

### The SES Curriculum

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

#### (1) Basic Math and Sciences

- a. MATH 111 and 112, or MATH 191 and 192, or MATH 190 and 192

- b. PHYSICS 207 and 208, or PHYSICS 112 and 213, if PHYSICS 214 will also be taken (see below)
- c. CHEM 207 and 208
- d. BIOLOGY 101/103 and 102/104 (or 105-106) or BIOLOGY 109 and 110
- e. THREE ADDITIONAL 3-4 credit courses in basic science and math, generally 100- and 200-level classes. At least one of the following must be included in the selection:
  - EAS 201 Physics and Chemistry of the Earth
  - BIOES 261 Ecology and the Environment

Other examples are MATH 293 and MATH 294, biochemistry, organic chemistry, PHYS 214, and introductory statistics. With the exception of an introductory statistics course, the additional basic courses should require at least one of the classes listed in a-d above as a prerequisite.

- (2) Science of Earth Systems Core Courses
  - EAS 302 Evolution of the Earth System
  - EAS 331/ASTRO 331 Climate Dynamics
  - EAS 321/NATRES 321 Introduction to Biogeochemistry
- (3) Concentration Courses

Four intermediate to advanced-level courses (300-level and up) that build on the core courses and have prerequisites in the "Basic Math and Sciences" courses listed in (1). These classes build depth and provide the student with a specific expertise in some facet of earth system science. Possible areas of concentration include Climate Dynamics, Biogeochemistry, Ecological Systems, Environmental Geology, Ocean Sciences, Environmental Biophysics, Hydrological Systems, and Soil Science

For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Science, khc6@cornell.edu and visit the web site: [www.geo.cornell.edu/ses/](http://www.geo.cornell.edu/ses/)

## DEPARTMENT OF STATISTICAL SCIENCE

301 Malott Hall (255-8066)

B. W. Turnbull (chair); M. T. Wells (director of graduate studies); J. A. Bunge (director of professional programs); N. Altman, T. Berger, G. Casella, C. Castillo-Chavez, M. Contreras, T. DiCiccio, R. Durrett, E. Dynkin, T. Fine, A. Hadi, Y. Hong, J. T. G. Hwang, H. Kesten, N. Kiefer, M. Nussbaum, S. Resnick, D. Ruppert, G. Samorodnitsky, E. Slate, V. Veeravalli, P. Velleman, T. Vogelsang.

The university-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

Students interested in graduate study in statistics and probability can apply to the Graduate Field of Statistics or to one of the other graduate fields of study that offer related course work. Students in the Field of Statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for

graduate study, students should contact the Director of Graduate Studies, 301 Malott Hall.

The department also offers an undergraduate program through the Biometrics Unit in the College of Agriculture and Life Sciences and an Engineering Statistics minor in the College of Engineering. Undergraduate majors and certificate programs are currently under development for other colleges. For information, contact the Undergraduate Coordinator, (301 Malott Hall, 255-8066). Statistics courses offered by the departments listed below will fill distribution requirements in many of the colleges.

A free consulting service is offered through the Biometrics Unit in the College of Agriculture and Life Sciences. Statistical computing consulting is available through the Office of Statistical Consulting, B21 Savage Hall, 255-1926.

The department is organized into four units: Biometrics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultural statistics, biostatistics, economic and social statistics, epidemiology, manufacturing statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

### Course designations

The following course identifiers are used to designate the courses offered by the separate units: Biometrics Unit (CALS), STBTRY; Engineering Statistics Unit (ENGR), STENGR; Mathematical Statistics Unit (ARTS), STMATH; Social Statistics Unit (ILR), STSOC. To enroll in one of the courses, see the listing for the appropriate college.

Descriptions of undergraduate and graduate courses are listed below.

## Department of Statistical Science

### ST 501-502 Applied Statistical Analysis

This is the two-semester core course for students in the Master of Professional Studies (M.P.S.) degree program in applied statistics in the Department of Statistical Science. Enrollment is limited to students enrolled in the M.P.S. program. The course consists of a series of modules on various topics in applied statistics. Some modules will include guest lectures from practitioners. Parallel with the course, students complete a year-long, in-depth data analysis project.

**ST 501: Applied Statistical Analysis.** Letter only. Topics include, but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.

**ST 502: Applied Statistical Analysis.** Letter only. Topics include, but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

## Biometrics Unit

STBTRY 100 Statistics and the World We Live In (enroll in BTRY 100)

STBTRY 261 Statistical Methods I (enroll in BTRY 261)

- STBTRY 302 Statistical Methods II (enroll in BTRY 302)  
 STBTRY 400 Biometry Seminar (enroll in BTRY 400)  
 STBTRY 408 Theory of Probability (enroll in BTRY 408)  
 STBTRY 409 Theory of Statistics (enroll in BTRY 409)  
 STBTRY 494 Undergraduate Special Topics in Biometry and Statistics (enroll in BTRY 494)  
 STBTRY 495 Statistical Consulting (enroll in BTRY 495)  
 STBTRY 497 Undergraduate Individual Study in Biometry and Statistics (enroll in BTRY 497)  
 STBTRY 498 Undergraduate Supervised Teaching (enroll in BTRY 498)  
 STBTRY 499 Undergraduate Research (enroll in BTRY 499)  
 STBTRY 600 Statistics Seminar (enroll in BTRY 600)  
 STBTRY 601 Statistical Methods I (enroll in BTRY 601)  
 STBTRY 602 Statistical Methods II (enroll in BTRY 602)  
 STBTRY 603 Statistical Methods III (enroll in BTRY 603)  
 [STBTRY 604 Statistical Methods IV: Applied Design (enroll in BTRY 604)]  
 [STBTRY 639 Epidemiology Seminar (enroll in BTRY 639)]  
 [STBTRY 662 Mathematical Ecology (enroll in BTRY 662)]  
 STBTRY 672 Topics in Environmental Statistics (BTRY 672)  
 [STBTRY 682 Statistical Methods for Molecular Biology (enroll in BTRY 682)]  
 STBTRY 694 Graduate Special Topics in Biometry and Statistics (enroll in BTRY 694)  
 STBTRY 697 Individual Graduate Study in Biometry and Statistics (enroll in BTRY 697)  
 [STBTRY 717 Linear and Generalized Linear Models (enroll in BTRY 717)]  
 STBTRY 795 Statistical Consulting (enroll in BTRY 795)  
 STBTRY 798 Graduate Supervised Teaching (enroll in BTRY 798)

### Engineering Statistics Unit

- STENGR 270 Basic Engineering Probability and Statistics (enroll in ENGRD 270 or OR&IE 270)  
 STENGR 310 Introduction to Probability and Random Signals (enroll in ELE E 310)  
 STENGR 360 Engineering Probability and Statistics II (enroll in OR&IE 360)  
 STENGR 361 Introductory Engineering Stochastic Processes I (enroll in OR&IE 361)  
 STENGR 411 Random Signals in Communications and Signal Processing (enroll in ELE E 411)  
 STENGR 467 Telecommunication Systems I (enroll in ELE E 467)  
 STENGR 473 Empirical Research Methods in Financial Engineering (enroll in OR&IE 473)  
 STENGR 474 Statistical Data Mining (enroll in OR&IE 474)  
 STENGR 476 Applied Linear Statistical Models (enroll in OR&IE 476)  
 STENGR 512 Fundamental Information Theory (enroll in ELE E 562)  
 STENGR 517 Artificial Neural Networks (enroll in ELE E 577)  
 STENGR 523 Introductory Engineering Stochastic Processes I (enroll in OR&IE 523)  
 STENGR 560 Engineering Probability and Statistics II (enroll in OR&IE 560)

- STENGR 561 Queuing Theory and Its Applications (enroll in OR&IE 561)  
 STENGR 577 Quality Control (enroll in OR&IE 577)  
 STENGR 581 Simulation Modeling (enroll in OR&IE 581)  
 STENGR 582 Simulation Analysis (enroll in OR&IE 582)  
 STENGR 650 Applied Stochastic Processes (enroll in OR&IE 650)  
 STENGR 651 Probability (enroll in OR&IE 651)  
 STENGR 670 Statistical Principles (enroll in OR&IE 670)  
 STENGR 671 Intermediate Applied Statistics (enroll in OR&IE 671)  
 STENGR 768 Selected Topics in Applied Probability (enroll in OR&IE 768)  
 STENGR 769 Selected Topics in Applied Probability (enroll in OR&IE 769)

### Mathematical Statistics and Probability Unit

- STMATH 171 Statistical Theory and Application in the Real World (enroll in MATH 171)  
 STMATH 411 Introduction to Analysis (enroll in MATH 411)  
 STMATH 471 Basic Probability (enroll in MATH 471)  
 STMATH 472 Statistics (enroll in MATH 472)  
 STMATH 474 Basic Stochastic Processes (enroll in MATH 474)  
 STMATH 621 Measure Theory and Lebesgue Integration (enroll in MATH 621)  
 STMATH 671-672 Probability Theory (enroll in MATH 671-672)  
 STMATH 674 Introduction to Mathematical Statistics (enroll in MATH 674)  
 STMATH 771-772 Seminar in Probability and Statistics (enroll in MATH 771-772)  
 STMATH 777-778 Stochastic Processes (enroll in MATH 777-778)

### Social Statistics Unit

 VETPM 665 Study Design

## PROGRAM IN COMPARATIVE AND ENVIRONMENTAL TOXICOLOGY

213 Rice Hall (255-8008)

The Cornell Program in Comparative and Environmental Toxicology is a broadly based inter-college program facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

### Graduate Studies

The graduate Field of Environmental Toxicology provides training leading to the M.S. or Ph.D. degrees. There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Concentrations include cellular and molecular toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and a minor concentration of risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated.

### Courses

Courses in environmental toxicology are cosponsored by the university's academic departments and are open to all graduate students and to undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below. Details of course content are provided in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the director of graduate studies, 213 Rice Hall, telephone: 255-8008, e-mail: envtox@cornell.edu.; www.cfe.cornell.edu/icet/.

Tox 320 Principles of Toxicology (Vet. Micro 320, Biological Sciences 320)  
 Tox 370 Pesticides and the Environment (Entomology 370)  
 Tox 437 Oncogenic Cancer Viruses (Biological Sciences 437)  
 Tox 490 Insect Toxicology and Insecticidal Chemistry (Entomology 490)  
 Tox 607 Ecotoxicology (Natural Resources 607)  
 Tox 610 Introductory Chemical and Environmental Toxicology (Natural Resources 610)

Tox 611 Molecular Toxicology  
 Tox 625 Nutritional Toxicology (Animal Science 625)  
 Tox 680 Hazardous Waste Toxicology  
 Tox 698 Current Topics in Environmental Toxicology (Nutritional Sciences 700, NatRes 698, Ag & Bio Eng 698)  
 Tox 702 Seminar in Toxicology  
 Tox 750 Cancer Cell Biology (Biological Sciences 750, Vet. Pathology 750)  
 Tox 751 Professional Responsibilities of Toxicologists (Biological Sciences 751)  
 Tox 899 Master's Thesis and Research  
 Tox 999 Doctoral Thesis and Research

## CORNELL'S UNDERGRADUATE ENVIRONMENTAL PROGRAMS

Exciting opportunities are available at Cornell University for students interested in environmental study and research. Environmental curricula and courses are found in many parts of the university including the biological, physical, and social sciences; engineering; the humanities; and the design professions. Each of the majors and concentrations/specializations listed below provide opportunities for environmental study. Information can be found in each department's *Courses of Study* section, on departmental web pages, or by contacting each department directly. The following information is also available on the Center for the Environment's web page (www.cfe.cornell.edu/cfe/education).

### College of Agriculture and Life Sciences

- **Agricultural and Biological Engineering** offers environmental study opportunities through a combination of engineering sciences, biology, and applications courses. In the ABEN major, there are several concentrations including, among others, environmental systems engineering and environmental systems technology.
- Students in the **Department of Agriculture, Resource, and Managerial Economics** can select a specialization in environmental and resource economics, which teaches the application of economic concepts to environmental and resource use problems.
- **Atmospheric sciences** is a major offered through the Department of Earth and Atmospheric Sciences. In this program, students study weather and climate, forecasting, and analysis of atmospheric behavior.
- **Biometry and Statistics** majors learn to use quantitative methods to solve problems in the biological, physical, and social sciences.
- **Communication** offers a curriculum for communication in the life sciences that deals with the effect of communication on environmental, health, science, and agricultural issues and with public perceptions of risk.
- **Crop and Soil Sciences** provides instruction in four specializations: agronomy, crop science, science of earth systems (see multi-college opportunities below), and soil science. The department also has strong programs in the environmental information sciences including geographic information systems and remote sensing.

- **Entomology** provides students with a basic background in biological and environmental sciences, with a special emphasis on the study of insects.
- **Environmental Science** is a new major being approved for the College of Agriculture and Life Sciences. For more information about this new major, contact the Center for the Environment (cucfe@cornell.edu or 607-255-7535).
- **Landscape Architecture** focuses on the art of landscape design as an expression of cultural values combined with the natural processes of the ambient environment. The program promotes interaction among the areas of horticulture, architecture, and city and regional planning.
- **Natural Resources** has four concentrations that focus on systems that yield renewable natural resources such as wildlife, forests, fish, and water.
- **Plant Sciences** students can specialize in plant biology, plant genetics and breeding, plant pathology, plant protection, or horticultural sciences including floriculture and ornamental horticulture, and fruit and vegetable science.
- **Rural Sociology** is a major that includes interrelated foci: (1) development sociology; (2) population, environment, and society; and (3) applied social data analysis.
- **General Studies** provides opportunities for motivated students—with their faculty adviser—to plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by existing programs.

### Office of Undergraduate Study in Biological Sciences

- **Biology** majors are enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Students can concentrate in a number of areas including biochemistry, ecology and evolutionary biology, marine biology and oceanography, general biology, microbiology, plant biology, plant biotechnology, and systematics and biotic diversity. Students can also enroll in the interdisciplinary biology and society major (see "Multi-College Majors" below).

### College of Architecture, Art, and Planning

- **Urban and Regional Studies** is offered by the Department of City and Regional Planning and is focused on the problems of human communities and regions.

### College of Arts and Sciences

- **Chemistry and Chemical Biology** offers a full range of courses in physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry.
- **Geological Sciences** is an interdisciplinary major that prepares students for advanced study in geology, geophysics, geochemistry, geobiology, and for careers in mineral and petroleum exploration or environmental geology.
- **Science and Technology Studies** is a major that focuses on the important roles of science and technology in society.

Students select a concentration that draws together a group of related courses. Current concentrations include science, technology, and public policy; technology, culture, and society; environment, science, and society; and history and philosophy of science. Science and Technology Studies also offers the biology and society major (see "Multi-College Majors" below).

### College of Engineering

- **Civil and Environmental Engineering** offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options leading to a Bachelor of Science degree, one of which is environmental engineering. This option emphasizes study of environmental engineering, water resource systems, and fluid mechanics and hydrology.

### College of Human Ecology

- **Design and Environmental Analysis** is concerned with planning, designing, and managing interior environments to satisfy human needs. The department offers concentrations in interior design, facility planning and management, and human factors and ergonomics.

### Multi-College Majors

- **Science of Earth Systems** is designed to educate students across the breadth of the earth sciences without sacrificing the depth of understanding that is needed to face the environmental challenges of the twenty-first century. Students can focus on environmental science, climate dynamics, oceanography, hydrological science, geophysics, and environmental biophysics. The Science of Earth Systems major is open to students in the Colleges of Agriculture and Life Sciences, Engineering, and Arts and Sciences.
- **Biology and Society** is offered as a major by both the College of Arts and Sciences and the College of Human Ecology. Additionally, students in the College of Agriculture and Life Sciences can develop an approved sequence of courses under the college's general studies option. Students in the biology and society major combine training in biology with exposure to perspectives from the social sciences and humanities on the social, political, and ethical aspects of modern biology.

### Extramural Opportunities

At Cornell environmental experiences are not limited to classroom work or studies in a major field. There are many other ways to learn about the environment including formal experiences like the Undergraduate Research Programs or environmental courses such as the annual Seminar on Sustainable Development. Another course, Environmental Stewardship in the Cornell Community, was organized by undergraduate students to address new strategies for improving the university's overall environmental performance.

Students can also study abroad in over 40 countries or gain valuable public policy experience by spending a semester in the Cornell-in-Washington program. To enhance their learning experience, students can connect with a variety of campus resources

including Cornell Plantations, Laboratory of Ornithology, Agricultural Experiment Station, Center for the Environment, Ecology House, or the Center for Religion, Ethics, and Social Policy.

Opportunities to associate with like-minded student colleagues can be found in many student-run organizations with environmental themes including the Cornell Greens, Cornell Students for Composting, Dillmun Hill Organic Farm, United Progressives, Entomaniac, Cornell Hookbill Association, Wildlife Society, and the International Association of Camel Breeders. Students also publish *Ursus*, a magazine forum for environmental issues at Cornell.

Environmental lectures, seminars, and conferences are a Cornell specialty. At Cornell a student might hear a lecture by one of the university's notable A. D. White Professors-at-Large, which include among others Jane Goodall, international expert on African primates, and William McDonough, a *Time Magazine* "Hero for the Planet." Also, in April each year, the Jill and Ken Iscol Distinguished Environmental Lecture features a prominent scientist or policymaker.

The surrounding Ithaca community offers Cornellians a range of environmental activities—from outdoor recreation to an organic farmers market to local activism—which most college towns cannot match. Local organizations like EcoVillage at Ithaca, Finger Lakes Land Trust, Cayuga Lake Watershed Network, and the various Finger Lakes State Parks are terrific local resources for the environmentally inclined. The area's unique natural beauty is a haven for outdoor enthusiasts and casual observers of nature.

## Business and Preprofessional Study

### UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, policy analysis and

management (College of Human Ecology), industrial and labor relations, and sociology.

**Applied economics and business management.** This program is designed to prepare students for a career in business or in public service. Emphasis is placed on the application of economic theory and management principles. Graduates of this program typically choose careers in investment banking or finance or with firms offering opportunities in sales, marketing, and consulting. Areas of specialization include business management and marketing, food industry management, agribusiness management, and farm business management and finance.

**Economics.** This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

**Engineering.** This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities; more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

**Hotel administration.** The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and allied fields. Instruction is provided in the areas of administration and general management, human-resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.

**Policy analysis and management.** Study in the department develops an understanding of the market economy from both buyers' and sellers' perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers' rights and responsibilities.

**Industrial and labor relations** focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of individual workers; negotiation and conflict resolution; and the economic and technological changes that affect the jobs that people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employee.

**Sociology.** The program provides disciplined understanding of society and social issues. The insights and analytical skills you will acquire are applicable to corporate, government, and nonprofit settings, and the department's focus on social organization and institutions will prepare you well for graduate or professional programs in business schools. (Also see the description of the Society and Economy Concentration in the Department of Sociology section of Arts and Sciences.)

### Related Areas

Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of Government and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the South Asia Program, and the Africana Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

### Combined Degree Programs

Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-registrant program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

## SELECTED BUSINESS AND MANAGEMENT COURSES

### Accounting

ARME 221 Financial Accounting  
ARME 323 Managerial Accounting  
H Adm 120 Survey of Financial Management  
JGSM NBA 500 Intermediate Accounting  
JGSM NBA 501 Advanced Accounting  
JGSM NBA 505 Auditing  
OR&IE 350 Cost Accounting Analysis and Control

### Communications

Comm 201 Oral Communication  
Comm 204 Effective Listening  
Comm 272 Principles of Public Relations and Advertising  
Comm 301 Business and Professional Speaking

Comm 372 Advanced Advertising  
H Adm 165 Managerial Communication: Writing Principles and Procedures  
H Adm 364 Advanced Business Writing

### Computing

ARME 412 Introduction to Mathematical Programming  
ABEN 204 Introduction to Computer Uses  
COMS 100 Introduction to Computer Programming  
COMS 101 The Computer Age  
COMS 102 Introduction to Microcomputer Applications

 SOC 222 Social Policy and Organization in Health, Education, and Welfare  
 SOC 245 Inequality in Industrial Societies  
 SOC 275 Women at Work  
 SOC 301 Evaluating Statistical Evidence  
 SOC 303 Design and Measurement  
 SOC 340 Health, Behavior, and Health Policy  
 SOC 345 Gender Inequality  
 SOC 351 Research Seminar on Organizations  
 SOC 354 Law and Social Order  
 SOC 366 Transitions from State Socialism  
 SOC 370 Different Walks of Life: Sociology of Careers  
 SOC 426 Social Policy

**Transportation**

- CEE 361 Introduction to Transportation Engineering  
 CEE 660 Transportation Planning and Policy

**PRELAW STUDY**

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. Freshman writing seminars, required of nearly all Cornell freshmen, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.
3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.
4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the

120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

**PREMEDICAL STUDY**

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a freshman writing seminar). In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

Exceptionally qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance to the Medical College through a double registration procedure arranged between Cornell University and Cornell's Weill Medical College in New York City. This procedure allows registered students to save one year in pursuit of the bachelor's and M.D. degrees. This is not a traditional "seven year program"; separate application to the Medical College is required. Further information about this procedure is available from the Health Careers Program office at Cornell Career Services, 103 Barnes Hall, Ithaca, New York, 14853-1601.

**PREVETERINARY STUDY**

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to

veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, *Admissions Information*, obtained by writing to the Office of DVM Admissions, College of Veterinary Medicine, Cornell University, S2-009 Schurman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

<sup>1</sup> Adopted by the Faculty Council of Representatives, May 24, 1976, Records, pp. 4525-27C, Appendix A; March 11, 1981, Records pp. 5298-5303C; May 12, 1982, Records, pp. 5505-06C; April 10, 1985, Records pp. 5991-6002C and May 15, 1985, Records, pp. 6073-84.

<sup>2</sup> "Arbitrary and Capricious" describes actions which have no sound basis in law, fact, or reason are grounded solely in bad faith or personal desires. A determination is arbitrary and capricious only if it is one no reasonable mind could reach.

<sup>3</sup> "Clear and convincing" as a standard of proof refers to a quantum of evidence beyond a mere preponderance but below that characterized as "beyond a reasonable doubt" and such that it will produce in the mind of the trier of fact a firm belief as to the facts sought to be established.

<sup>4</sup> See the definition at section II.B.4.c.

## COLLEGE OF AGRICULTURE AND LIFE SCIENCES

### ADMINISTRATION

Susan A. Henry, dean

Brian F. Chabot, associate dean

Michael P. Riley, acting assistant dean for public affairs

H. Dean Sutphin, associate dean and director of academic programs

Donald R. Viands, associate director of academic programs

W. Ronnie Coffman, associate dean and director of research

Anthony M. Shelton, associate director of research

Daniel J. Decker, associate director of research

D. Merrill Ewert, associate dean and director of cooperative extension

Edward D. Harwood, associate director of cooperative extension

Margaret E. Smith Einarson, associate director of cooperative extension

Theodore L. Hullar, director of the Center for the Environment

Norman T. Uphoff, director of international agriculture

James E. Haldeman, associate director of international agriculture

### Office of Academic Programs Staff

Counseling and advising: Lisa Ryan, Bonnie Shelley

Registrar: Randy Stewart, Mary Milks, Patricia Austic

Admissions: Jason Locke, Ann LaFave

Career development: William Alberta, Amy Benedict-Martin, Laurie Gillespie

Minority programs: Catherine Thompson

### Department Chairs

Agricultural and biological engineering: M. F. Walter, Riley-Robb Hall

Agricultural, resource, and managerial economics: A. M. Novakovic, Warren Hall

Animal science: A. W. Bell, Morrison Hall

Atmospheric science unit (part of earth and atmospheric sciences): S. J. Riha, Bradfield Hall

Biometrics: N. S. Altman, Warren Hall

Communication: R. E. Ostman, Kennedy Hall

Crop and soil sciences: S. D. DeGloria, Emerson Hall

Ecology and evolutionary biology: R. G. Harrison, Corson Hall

Education: D. E. Hedlund, Kennedy Hall

Entomology: D. A. Rutz, Comstock Hall

Food science: D. Miller, Stocking Hall

Horticultural science: H. C. Wien, Plant Science Building

Landscape architecture: H. W. Gottfried, Kennedy Hall

Microbiology: S. H. Zinder, Wing Hall

Molecular biology and genetics: D. I. Shalloway, Biotechnology Building

Natural resources: J. P. Lassoie, Fernow Hall

Neurobiology and behavior: C. Walcott, S. G. Mudd Hall

Plant breeding: E. D. Earle, Emerson Hall

Plant pathology: R. Loria, Plant Science Building

Rural sociology: P. D. McMichael, Warren Hall

Statistical sciences: B. W. Turnbull, Mallott Hall

### College Focus

The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills.

The college focuses on a broad-based education for its students, and on a problem-solving and basic research program. The program is geared to the discovery and dissemination of knowledge for the purpose of advancing the food system, agriculture, nutrition, biological sciences, environmental quality, and community and rural development throughout New York State, the nation, and the world.

There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences in their broadest and most dynamic meaning:

- Agriculture (production and marketing)
- Biological Sciences
- Community, Human, and Rural Resources
- Environment
- Food and Nutrition
- International

### Facilities

The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Minority Programs, and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

### DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Board and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

### Graduate Degrees

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture [M.P.S. (Agr.)]: H. D. Sutphin, Roberts Hall

Agricultural and Biological Engineering: D. J. Aneshansley, Riley-Robb Hall

Agricultural Economics: R. N. Boisvert, Warren Hall

Animal Breeding: E. J. Pollak, Morrison Hall

Animal Science: R. L. Quaas, Morrison Hall

\*Biochemistry, Molecular and Cell Biology: W. J. Brown, Biotechnology Building

Biometry: G. Casella, Warren Hall

Communication: M. A. Shapiro, Kennedy Hall

Crop and Soil Sciences: S. J. Colucci, Bradfield Hall

Development Sociology: C. C. Geisler, Warren Hall

Earth and Atmospheric Sciences: S. J. Colucci, Bradfield Hall

\*Ecology and Evolutionary Biology: D. W. Winkler, Corson Hall

Education [also M.A.T.]: D. J. Trumbull, Kennedy Hall

Entomology: E. Shields, Comstock Hall

Environmental Toxicology: A. Yen, Rice Hall

Floriculture and Ornamental Horticulture: N. L. Bassuk, Plant Science Building

Food Science and Technology: S. S. Rizvi, Stocking Hall

\*Genetics and Development: T. D. Fox, Biotechnology Building

International Agriculture and Rural Development [M.P.S. (Agr.)]: R. W. Blake, Morrison Hall

International Development: N. T. Uphoff, Caldwell Hall

Landscape Architecture [M.L.A.], R. T. Trancik, Kennedy Hall

M.P.S. Agriculture with Peace Corps Option (offered by most agriculture fields with M.P.S. programs): J. Haldeman, Warren Hall or see director of graduate studies for chosen field

\*Microbiology, S. C. Winans, Wing Hall

Natural Resources, M. E. Krasny, Fernow Hall

\*Neurobiology and Behavior, S. T. Emlen, Seeley-Mudd Hall

Nutritional Sciences, M. N. Kazarinoff, Martha Van Rensselaer Hall

\*Physiology, S. S. Suarez, Vet Research Tower

\*Plant Biology, T. G. Owens, Plant Science Building

Plant Breeding, M. E. Sorrells, Bradfield Hall

Plant Pathology, J. W. Lorbeer, Plant Science Building

Plant Protection [M.P.S. (Agr.)], W. E. Fry, Plant Science Building

Pomology, I. A. Merwin, Plant Science Building

Statistics, G. Casella, Warren Hall

Vegetable Crops, D. W. Wolfe, Plant Science Building

\*Zoology, J. W. Hermanson, Schurman Hall

\*Office of Undergraduate Biology

## Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 19 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major field.

Agricultural and Biological Engineering: Jim Bartsch, 314 Riley-Robb Hall

Agricultural, Resource, and Managerial Economics: Dale Grossman, 204 Warren Hall

Animal Sciences: E. John Pollak, B-47 Morrison Hall

Atmospheric Sciences: Dan Wilks, 1113 Bradfield Hall

Biological Sciences: Jeff Doyle, 200 Stimson Hall; Bonnie Comella, 216 Stimson

Biology and Society: Judith Reppy, 130A Uris Hall

Biometry and Statistics: Steve Schwager, 424 Warren Hall

Communication: Brian Earle, 332 Kennedy Hall

Crop and Soil Sciences: Ray Bryant, 705 Bradfield Hall

Education: George Posner, 416 Kennedy Hall

Entomology: Quentin Wheeler, 3136 Comstock Hall

Floriculture and Ornamental Horticulture: Ken Mudge, 20 Plant Science Building

Food Science: Janice Brown, 101 Stocking Hall

Landscape Architecture: Herb Gottfried, 443 Kennedy Hall

Natural Resources: Jim Fahey, 12 Fernow Hall

Nutrition, Food, and Agriculture: Carole Bisogni, 334 MVR Hall

Plant Science Units (Plant Biology, Genetics and Breeding, Pathology/Protection, Pomology, Vegetable Crops): George Hudler, 315 Plant Science

Rural Sociology: Linda Williams, 220 Warren Hall

Science of Earth Systems: Kerry Cook, 3114 Snee Hall

Special Programs in Agriculture and Life Sciences: Lisa Ryan, 140 Roberts Hall

## Summary of Basic College Requirements for Graduation

### 1. Credit Hours

- a. Minimum: 120

**Exception:** Credit for tutorial courses (Math 109, EDUC 005, and 00 level) **increase** the number of credits required for graduation by the number of credits in the course. The credits **do** count toward the minimum 12 credits for full-time status.

- b. Minimum at Cornell: **60**; Maximum transferred in (C- or higher): **60**
- c. Minimum from College of Agriculture and Life Sciences: **55** (includes credit used in the distribution and appropriate transfer credit)
- d. Maximum from endowed colleges (Arts and Sciences; Architecture, Art, and Planning; Engineering; and Hotel School) without additional charge: **55** (includes credit used in the distribution **AND** failed courses)
- e. Minimum with letter grade: 100; Maximum with S-U grade based on 120 credits: 20 (pro-rated for transfer students) with maximum of one course per semester
- f. Maximum independent study, teaching experience, internships based on 120 credits: **15** (pro-rated for transfer students)
- g. Credit for physical education **does not** count toward the 120 credits or the minimum 12 credits for full-time status (see #6).

### 2. Residence

- a. Students are entitled to enroll eight full-time semesters (prorated for transfer students). A full-time semester requires a minimum of 12 credits per semester, **not** counting physical education. Tutorial courses (see #1A) **are** counted.

- b. A minimum of seven semesters is required, with a GPA of 2.0 or greater.
- c. Internal transfer students must be enrolled in CALS for at least two semesters, **not** including residency in Internal Transfer Division.
- d. The final semester before graduation **must** be in residence at Cornell as a full-time student in good academic standing (see #3 B).

**Exception:** Students with eight or fewer credits remaining for graduation and with circumstances that prevent full-time study may petition for approval to complete remaining credits at another institution or part-time in CALS.

### 3. Grade-point Average (GPA)

- a. Cumulative GPA: **1.70** or above must be maintained. Includes only grades earned at Cornell after matriculating into the college.
- b. Final semester: **1.70** or above based on a minimum of 12 credits, or **2.00** or above if graduating in seven semesters.

### 4. Distribution

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe and through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Through development of written and oral expression skills, students master the essentials of effective communication.

Credits received for independent study, field, teaching, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline, such as Education 005, will not be counted.

**Group A: Physical Sciences.** 9 credits of 100- or 200- level courses, in at least two disciplines, including at least one course in chemistry or physics.

Chemistry  
Physics

\*Mathematics (excluding Education 005, Mathematics 101 and 109)

Education 115

Earth and Atmospheric Sciences (SCAS)  
131, 260

Crop and Soil Sciences (SCAS) 260

Astronomy

Geology

Statistics and Biometry (including ARME  
210, ILRST 210)

\*The college mathematics requirement is described below.

**Group B: Biological Sciences.** 9 credits, to include 6 of introductory biological science (introductory courses include BIO G 101-104, 105, 106, 109, 110.)

Biological Sciences (excluding 160, 200 [unless permission of the director of Undergraduate Biology is obtained], 209, or 367)

Animal Sciences 100, 221, 300, 301  
Entomology 212  
Nutritional Sciences 262  
Plant Breeding 201, 225  
Plant Pathology 309, 401

### Group C: Social Sciences and Humanities.

12 credits (6 in each of the following two categories):

Social Sciences. 100- through 400-level courses in the following departments (*excluding* Freshman Seminars):

American Indian Studies 401  
Anthropology  
Archaeology  
ARME 100, 416  
CEH 110/CEH 111 (cannot receive credit for these courses and Econ 101/Econ 102)  
Communication 116, 120, 410, 418, 420, 422  
Economics (excluding all ARME courses)  
Education 271, 311, 317, 370, 378  
Government  
HD 150 (cannot receive credit for this course and Soc 243)  
LA/CRP 261, 360, 363  
Psychology  
S & TS 324, 350, 390, 391, 400, 401, 402, 406, 407, 412, 425, 427, 431, 442, 467, 483  
Sociology (includes Rural Sociology except RS 100, 175, 318, 442)

Humanities. 100- through 400-level courses in the following departments (*excluding* Freshman Seminars and language courses):

Africana Studies (literature and history)  
Asian American Studies  
Asian and Near Eastern Studies (literature and history)  
Classics (literature and history)  
Comparative Literature  
English (*literature only*)  
French, German, Italian, Russian, and Spanish (*literature only*)  
History  
History of Art/History of Architecture  
LA 282  
Music and Theatre Arts (theory, literature, and history only)  
Natural Resources 407, 411  
Philosophy  
Religious Studies  
Rural Sociology 100, 175, 318, 442  
S & TS 205, 206, 233, 250, 281, 282, 286, 292, 358, 360, 381, 384, 389, 433, 444, 447, 472, 481, 490  
WOMNS/S&TS 444

**Group D: Written and Oral Expression.** 9 credits, of which at least 6 must be in written expression, selected from the following:

Freshman Seminars  
Communication 117, 201, 350, 352, 260 (was 360), 263 (was 363), 365  
English 280-281, 288-289, 382-385, 388-389

Students scoring 4 or 5 on the English advanced placement exam may be awarded three credits and are exempt from one freshman seminar course.

### 5. Math Requirement

Faculty legislation requires minimum competency in mathematics to complete a degree in the College of Agriculture and Life

Sciences. As a measure of competency in mathematics, all entering undergraduates, including those with advanced placement or transfer credit in calculus, must take the college math proficiency exam (administered during orientation). The exam score determines the college math graduation requirement, and provides placement information.

The exam has two components. Cutoff scores divide students into three groups, each with specific graduation requirements.

### Mathematics requirements and placement suggestions:

Group I Students in this group are considered proficient in math for college graduation requirements. If further math is needed for the major, placement score *suggests* calculus skill level (e.g., Math 111, 191, 193).

Group II Students in this group **MUST** complete a **math course at Cornell**.<sup>\*</sup> Placement score *suggests* pre-calculus skill level (e.g., EDUC 115, Math 105, Biometry 101).

Group III Students in this group must take EDUC 005, basic review math in their first semester. Students must **ALSO** complete an additional **math course at Cornell**.<sup>\*</sup>

Transfer and AP math credit (up to six) will be recorded in Group A of the college distribution requirements. Additional transfer credit in math will be recorded as general electives. Students scoring in Group II or Group III of the college math proficiency exam must take a **math course at Cornell**,<sup>\*</sup> regardless of transfer or AP math credit.

### \*Math courses at Cornell that may be used to fulfill math requirement:

All courses in the Mathematics department (except 101 and 109)

EDUC 115

Biometry 101

### 6. Physical Education

- Pass a required swim test, administered during orientation.
- Two courses with a satisfactory grade (courses do **not** count toward 120 credits for graduation or the minimum 12 credits for full-time study).
- Students are expected to complete the physical education requirement in their first two semesters at Cornell.
- Transfer students are credited with one course of physical education for each semester previously enrolled **full-time** (12 or more credits) at another college.

### Faculty Advising

- Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study of courses appropriate to the degree programs offered by the college.
- Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CoursEnroll, under courses, classes, and exams on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or adviser key, is provided to the student by

the faculty adviser after approval of the choice of courses.

- All academic plans, such as acceleration and graduate study, should be made in consultation with the student's faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

### Progress toward the Degree

- The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a *Summary of Record* form.
- Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters, but must notify the College Registrar of their intent to return for the eighth semester. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.
- Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by February 15th (for May graduates) or September 15th (for January graduates). The adviser signs the application after verifying that the requirements for the major have been completed. The college registrar signs after verifying that the college requirements will be fulfilled after successful completion of the student's final semester.

### Credit Earned While in High School

Transfer credit will *not* be accepted for the Syracuse Project Advance Program and similar programs. If a student is enrolled in a college/university course during his/her high school years, transfer credit will be given *only* if certain criteria are met:

- Course must be a standard course taught by a post-secondary institution.
- High school must be a satellite location, one of several options available to *all* students taking the course.
- Course syllabus, text, examinations, and evaluation process must be the same for *all* students at *all* sites.
- Students must be enrolled for college credit and pay college tuition.
- Instructor must be a faculty member (includes adjunct) at the offering college.

If one of these is not met, no transfer credit will be given. Written verification may be necessary.

## STUDENTS

Undergraduate enrollment is approximately 3,100, with about 56 percent in the upper division. Each year about 850 students are graduated, while 635 freshmen and 250 new transfer students are enrolled. Members of the faculty of the college serve as chairs of the special committees of roughly 1,100 graduate students.

## Admission

The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula.

Most students come from New York State, but about 30 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 22 percent are identified as members of minority ethnic groups.

## Transfer Students

Approximately 18 to 20 percent of the ALS undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.

A Cornell student in good standing may apply for intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 177 Roberts Hall. The procedure includes filing a transfer request, meeting with a faculty member in the proposed area of study and submitting a letter explaining reasons for the transfer.

Consideration is given to students who have demonstrated an interest in their intended field of study, by taking appropriate prerequisite courses and courses within this area of study. Academic achievement is also considered. Students are seldom allowed to transfer during their freshman year. In some cases a student may be referred to the Internal Transfer Division to study for one semester before entering the college. A second semester is considered under unusual circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

## Special Students

A limited number of non-degree candidates who want to take selected courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience, and a list of the courses they want to take. For more information and guidelines, students should contact the Admissions Office, 177 Roberts Hall.

## Off-Campus Students

Programs in which students study off campus but enroll for Cornell credit include SEA semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell-in-Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

## Off-Campus Courses

Students in CALS must be registered for at least 12 credits of course work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS.

Two exceptions to enrollment elsewhere while being a full-time student at Cornell would be the joint enrollment agreements between Cornell and Ithaca College and Wells College. Other exceptions must be reviewed by the Committee on Academic Achievement and Petitions. Students must petition *before* enrolling for a course elsewhere. The committee may approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell. Enrolling in a course at another college to avoid taking it at Cornell is not permitted.

## Leave of Absence

A student wishing a break from studies in a future semester, or those who find it necessary to leave the university before the end of a semester, should submit a written petition for a leave of absence. Such action is necessary to clear the record for the semester and if not taken may adversely affect the student's subsequent readmission to the university.

An approved leave is considered a voluntary interruption in study and holds the student's place in the college without requiring reapplication to the university. Voluntary leaves are issued two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave, activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Petitions Committee).

A database is maintained by the Counseling and Advising Office to assist participation in pre-course enrollment the semester before a student's return.

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

## Withdrawal

A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the Admissions Office.

## Graduation and Diplomas

Graduating seniors must complete the Application to Graduate (see the details in Part C of "Progress toward the Degree"). Diplomas are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field in May, graduates return to the Ag Quad to obtain their diplomas. For January and August graduates, diplomas are mailed.

## ADVISING AND COUNSELING SERVICES

Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while in college. They believe that personal contact is the best way to provide information and advice on both academic and personal matters; they consider advising to be an important and integral part of the

undergraduate program. Each student enrolled in the college is assigned to a faculty adviser in his or her major field of study for assistance and guidance in developing a program of study, and to enhance the student's academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, and offers personal counseling. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an expertise in college policies and guidelines. Counseling is framed as appropriate to each student's academic circumstances. The staff is available on a walk-in basis, as well as by appointment.

The Office of Minority Programs serves to recruit, admit, monitor, and influence policy on behalf of all minority students in the College of Agriculture and Life Sciences. This population is defined as encompassing all African American, Latin American, Asian American, and Native American students. In the past academic year, this population represented approximately 20 percent of the college's undergraduate population. In addition, we are charged with monitoring and programming for the Educational Opportunity Program (EOP) and Prehealth Collegiate Science and Technology Entry Program (CSTEP), and some involvement with the Academic Human Diversity and Resources Committee. EOP and CSTEP are state-supported programs intended to assist New York State students who meet economic and academic criteria set by the college, State Programs Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, the Office of Minority Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, the Learning Strategies Center, and the State Programs Office. Other university connections include the Undergraduate Admissions Office and the Office of Financial Aid regarding the concerns of the minority student population.

The duties of the Office of Minority Programs are primarily carried out by the director, assistant director, and 10 to 12 peer advisers. Together, the staff acts as a major advocacy and advising group, as well as informational and referral center. Its constituency includes students, faculty, and the public.

Given the college's policy on non-exclusionary programming, the Office of Minority Programs is also responsible for some functions that serve the college's entire population. Presently, that includes reviewing non-minority applicant folders, serving as the Prehealth Program adviser and liaison, and

providing ongoing support at all levels for the Office of Counseling and Advising.

The Office of Career Development offers a variety of helpful services in a friendly environment to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of 500 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as resume writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. An active on-campus recruiting program brings more than 80 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty members, assists students throughout their undergraduate years and beyond. For further information, students should contact Bill Alberta and the staff in 177 Roberts Hall.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations provide supplemental aid for students in the college who are eligible for financial aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall for students who have their financial aid package established through the university office in Day Hall. Grants are processed through the university's Office of Financial Aid.

### Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

- 1) Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.
- 2) Students are guilty of violating the code if they
  - knowingly represent the work of others as their own

- use or obtain unauthorized assistance in any academic work
  - give fraudulent assistance to another student
  - fabricate data in support of laboratory or field work
  - forge a signature to certify completion or approval
  - submit the same work for two different courses without advance permission
  - knowingly deprive other students of library resources, laboratory equipment, computer programs, and similar aids
  - in any other manner violate the principle of absolute integrity
- 3) Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.
  - 4) Faculty members fulfill their responsibility to
    - maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
    - make clear the conditions under which examinations are to be given
    - make clear the consequences of violating any aspects of the code
    - provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
    - state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
    - approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
    - monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students' submitted work must be their own and no one else's

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a non-voting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

## ACADEMIC POLICIES AND PROCEDURES

### Records

The college registrar maintains for each student a complete record of academic achievement. A permanent record is maintained for each matriculated student and updated as new information becomes available. The director of enrollment management and student records, registrar, and associate registrar are available to consult with students regarding the assignment of credit toward meeting distribution and elective requirements as listed on the *Summary of Record* form.

### Registration Procedures

All students must register with the university and "check-in" with this college at the beginning of each semester. Check-in materials are available in 140 Roberts Hall as announced each term by the university registrar.

### Course Enrollment Procedures

To enroll in courses, students will receive information from the university registrar; plan a schedule in consultation with their adviser; and pre-enroll by computer, through CoursEnroll in "Just the Facts" on the Bear Access menu. Pre-enrollment is not valid until the student enters the adviser key code into the computer. Adviser key codes are provided by faculty advisers after a discussion of selections and requirements takes place. The adviser key code changes each semester to ensure ongoing contact between student and faculty adviser.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar's Office, 140 Roberts Hall. Students who will be studying off campus should notify the Registrar's Office to ensure that proper registration will occur.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, the second time will be for no credit.

Students must *not* enroll again for a course in which they received an incomplete or NGR. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form to the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Students enrolled in a two-semester course will receive an R at the end of the first

semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the R grade.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student at the Registrar's Office, 140 Roberts Hall, on the official university course drop and add form. Approval and signature of the faculty adviser and course instructor are required to change course enrollment.

Students may add courses during the first three weeks of the term and change grading options or credit hours where applicable and may drop courses until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions (also see Petitions Procedures below). Petition forms are available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to the end of the seventh week of the semester. If a petition to drop a course is approved after the end of the seventh week of classes, the course remains on the student's record and a W (for "withdrawal") is recorded on the transcript.

### Petitions Procedures

The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements
- receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
- acts upon readmission requests from persons whose previous enrollment was terminated by the committee
- notifies the petitioner in writing of the action taken by the committee

A petition for exemption from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

A petition is usually prepared with the assistance of a student's faculty adviser, whose signature is required. The adviser's recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would

warrant an exemption or other action. Petitions for withdrawing from a course are discussed above.

### Academic Deficiency Policies

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing them on probation, granting them leaves of absence, advising them to withdraw, suspension, or expulsion.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 1.7
- cumulative GPA of at least 1.7
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C- (1.7) or higher are prima facie evidence of satisfactory progress and good academic standing.

### Grade Reports

Grade reports for the fall semester are available on "Just the Facts" in January; grade reports for the spring semester are mailed by the Office of the University Registrar to students at their home addresses unless alternative addresses are reported to the college or university registrar by mid-May.

### ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways:

**Dean's List.** Each semester, students are recognized for academic excellence by inclusion in the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:

- 1) a minimum course load for the semester of 12 letter-graded credits;
- 2) achievement of a semester GPA of at least 3.50; and
- 3) achievement of an 'S' grade, or a 'C-' or better grade in each course (including physical education), with no Incompletes. Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.

**Bachelor of Science with Honors.** Students receiving a cumulative GPA of 4.0 or greater (based on the last four full-time semesters of Cornell credits in residence, with a minimum

of 48 letter graded credits) will graduate "summa cum laude."

Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.0 (based on the last four full-time semesters of Cornell credits in residence, with a minimum of 48 letter graded credits) will graduate "magna cum laude."

Students receiving a cumulative GPA of greater than or equal to 3.5 and less than 3.75 (based on the last four full-time semesters of Cornell credits in residence, with a minimum of 48 letter graded credits) will graduate "cum laude."

### Bachelor of Science with Distinction in Research

Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Distinction in Research Honors Program.

**Ho-Nun-De-Kah**, founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 10 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community.

**Gamma Sigma Delta** is an honor society of faculty and students in the Colleges of Agriculture and Life Sciences, Human Ecology, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life as it relates to agriculture and the related sciences. The Cornell chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in the college are also nominated. Gamma Sigma Delta also promotes academic excellence through sponsorship of special programs in the three colleges.

**Golden Key** is a National Honor Society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors with a cumulative GPA of 3.66 or higher are eligible. Visit Golden Key's web site at [gknhs.gsu.edu/](http://gknhs.gsu.edu/)

### DISTINCTION IN RESEARCH HONORS PROGRAM

The Bachelor of Science degree with distinction in research will be conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

An undergraduate wishing to enroll in the honors program must have completed at least

55 credits, at least 30 of the 55 at Cornell. Also, the student must have attained a cumulative GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must make written application no later than the end of the sixth week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. An application form is available from the college registrar, 140 Roberts Hall, or from the area committee chair. (Biological sciences students should get applications at 200 Stimson Hall.)

Written approval of the faculty member who will direct the research and of the research program committee in the area is required. After the college registrar verifies the student's GPA, the student will be officially enrolled in the honors program.

Academic credit may also be earned by enrolling in an appropriate independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in doing the research.

The distinction in research honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with distinction in research.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the distinction in research program must be accepted in one of the program areas approved by the faculty. Students are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

### Animal Sciences

Faculty committee: W. B. Currie, chair; Y. R. Boisclair, S. M. Quirk, P. A. Johnson

The objective of the animal sciences distinction in research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a distinction in research project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year.

- Preregister during the spring semester for AS 496, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results (see exceptions under particular program areas).
- Submit a written thesis to the distinction in research honors committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the distinction in research committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor and the research committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 434 Morrison Hall.

### Biological Sciences

Students interested in the distinction in research honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors Program" in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall.

### Biology & Society

Faculty committee: D. Pimentel, chair

The distinction in research honors program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in Biology & Society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in biology and society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society Office, 275 Clark Hall. To qualify for the Biology & Society distinction in research honors project, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his/her adviser. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the distinction in research honors program only by permission of the Biology & Society program. Students must enroll for two semesters and may take three to five credits per semester up to a maximum of eight credits in B&Soc 498 and

499, Honors Project I and II. More information on the distinction in research honors program is available in the Biology and Society Office, 275 Clark Hall (255-6047).

### Important Deadlines

(NOTE: If the following dates fall on a weekend, the deadline is the prior Friday).

- Last week of second semester of the junior year: Application for distinction in research honors program submitted to 275 Clark Hall.
- April 15: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 29: Thesis defense accomplished.
- May 13: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

### Entomology

Faculty committee: B. L. Peckarsky, chair

A distinction in research honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences (see the requirements at the beginning of this section). The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for study in a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research honors study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

The research honors committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year, so that a research project can be carefully planned. The possibility of conducting some research during the junior year and/or summer should be discussed.
- Discuss the project with an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. (The faculty adviser will be of assistance in determining which faculty entomologist might be the best supervisor, the decision being based primarily on available faculty members' areas of expertise.)
- Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Present a completed application to the chair of the entomology research honors committee no later than the end of the sixth week of the first semester of the senior year. Earlier submission is encouraged.

- Submit a brief progress report, approved by the project supervisor, to the entomology research honors committee by midterm of the semester in which the student will complete his or her graduation requirements.
- Present a formal seminar reporting the significant findings of the research to the Department of Entomology (preferably as a *Jugatae* seminar) in the last semester of the senior year.
- Submit two copies of the final project report (honors thesis) to the chair of the entomology area research honors committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee selected by the chair of the honors committee. Referees will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the chair no later than the last day of classes.

### Natural Resources

Faculty committee: J. B. Yavitt, chair; B. A. Knuth, J. P. Lassoie, E. L. Mills

The research honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of (1) ecology and management of landscapes; (2) fish and wildlife biology and management; and (3) resource policy, management, human dimensions, and environmental education. The subject matter and nature of the research experience may be quite varied, but requires the guidance and supervision of a faculty member with substantial interest and expertise in the subject area chosen.

In addition to meeting requirements of the college, the student is expected to do the following:

- Register for the research honors program in the junior year or earlier.
- Select a faculty adviser who will help identify and formulate a research problem.
- Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Describe and summarize the work in the format of a conventional master's thesis or scientific paper ready for journal submission. About half of the theses have been published.
- Work closely with at least two faculty or staff members who will agree to serve as readers for the thesis. Provide readers with a copy of the guidelines for evaluation of research honors theses, available from the department's honors program committee.
- Take the lead role for meeting each of the above expectations.

### Nutritional Sciences

Faculty committee: M. N. Kazarinoff

The research honors program offers students a research experience structured to give them

the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread over both semesters of the junior and senior years.

Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for research honors, students need to consult with their academic advisers to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean's list. Although honors research credits for spring semester junior year and both semesters senior year are designated LET, individual mentors may choose the R grade for work in progress until the project has been fully completed.\* An outline of activities for both years is given below. Letters of invitation are sent to upcoming juniors during the summer.

#### Junior Year

**Fall Semester** Course No: NS 398 (1 credit, S-U): Students are oriented to the program, and provided material that summarizes the range of research activities in DNS. Students begin making arrangements with faculty members. When these arrangements have been completed, students will begin a literature search that focuses on their research problems.

**Spring Semester** Students register for NS 498 (1 credit, section 1). Additional faculty presentations of research opportunities are made, as well as orientation to supportive services available through DNS. Placements with faculty mentors should be completed by spring break. Each student may also register under the number NS 499 for a convenient number of credits, to be determined in consultation with the chosen adviser. Work carried out will have two objectives:

1. to become familiar with literature and/or research methods appropriate to the problem for the honors research,
2. to develop a research proposal.

The semester outcome will be written reports/discussions of the method(s) or literature searches and a short research proposal, evaluated by the research adviser.

#### Senior Year

**Fall Semester** Students will register under the number NS 499 (2-4 credits, LET, by arrangement with their mentors). They may begin their research earlier than fall, e.g., during the summer, or even earlier, but should be prepared to begin research **early in the fall semester at the latest**. The objective for the semester will be to conclude most of the hands-on research/data acquisition.

**Spring Semester** Students will again register under course number NS 499 for 2-4 credits LET, by arrangement with their research mentors. Much of the allotted time will be spent on data analysis and on writing the honors thesis.

Several important deadlines should be noted.

1. **Last week in March:** The names of thesis readers\*\* are to be in the hands of the research honors committee.

2. **Third to fourth week of April:** A final draft of the thesis is handed to the readers.
3. **First to second week of May:** Scheduled seminars for oral presentations of each student's research.
4. **Last day of classes:** Final form of the thesis is handed to the research honors chairman.

To help students meet these deadlines, students register for NS 498 (1 credit, section 2) class sessions will be held before spring break for guidance in thesis writing and/or informal reporting of preliminary data. After spring break the group will meet once or twice (depending on number of students) to practice oral presentations of completed research.

\*Grade is determined by each student's mentor.

\*\*Two readers knowledgeable in the area of the student's research topic to be chosen by the research honors committee and faculty advisers.

### Physical Sciences

Faculty committee: S. Colucci, chair; J.-Y. Parlange, S. S. H. Rizvi

The research honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the departments of Agricultural and Biological Engineering, Food Science, Earth and Atmospheric Sciences, or Biometrics.

In addition to meeting the requirements of the college, the student is expected to:

- Identify a thesis adviser and thesis topic before the end of junior year.
- Working with the thesis adviser, prepare a budget and application form (due by the sixth week of senior year).
- Enroll in the program for a minimum of two semesters.
- Enroll in the appropriate departmental undergraduate research course for a total of at least six credits.
- Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
- Submit a draft of the thesis to the thesis adviser with sufficient lead-time for a revision to be prepared.
- Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by three weeks before the end of classes in the semester in which graduation is expected.

There is no required format but the thesis is usually written in the form of a research journal article or a master's thesis.

Further details of the program can be obtained from the chair of the physical sciences research honors committee.

### Plant Sciences

Faculty committee: R. L. Obendorf, chair; I. A. Merwin, E. B. Nelson, F. S. Rossi

Students perform independent scientific research under the guidance of faculty members in fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics

and breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Honors Committee a project proposal (two to three pages) which includes a title; a brief background to the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible.

Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

## Social Sciences

Faculty committee: R. E. Ostman, S. Feldman, J. M. Conrad

Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the criteria described above, after evaluation of the student's written application, and on approval of a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following sections:

- **Research Topic:** State the problem to be studied or the topic of interest. Review the relevant literature and the background of the problem or topic; include a more extensive bibliography.

- **Research Questions/Empirical Hypotheses:** Specify the questions to be answered or hypotheses to be empirically tested via collection of data and some mode of analysis accepted in the social sciences.
- **Research Methods:** Discuss the models to be constructed, data collection procedures (including survey instruments or experiments, if appropriate), and methods of analysis.
- **Expected Significance:** State what new knowledge or information is likely to be forthcoming and why it is important.

Faculty advisers must be members of the graduate faculty. Exceptions to this rule will be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions will be granted pending petition to the social science honors committee. Students may register for honors credit directed by the faculty adviser in conjunction with a research honors project.

Distinction in research is awarded upon approval of the research honors thesis by the social science honors committee. The research should deal with a substantive issue in one of the fields in the social sciences. Both the results of the research and the methodology (or the argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal within the appropriate fields. Three copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the faculty member supervising the work also must be submitted. Approval of the thesis requires a majority vote of the honors committee.

## INTERCOLLEGE PROGRAMS

**The College of Veterinary Medicine** may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

**Students who have been offered admission to the S. C. Johnson Graduate School of Management** may take management courses in their senior year if approved by their college faculty adviser as part of their undergraduate program. These courses count toward the endowed college credits (maximum 55 without additional tuition charge). Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

**Students in the Field Program in Agricultural and Biological Engineering** are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years and jointly enrolled in this

college and the College of Engineering in the junior and senior years. Students pay the engineering college tuition during the senior year. The curriculum is accredited by the Accreditation Board for Engineering and Technology. The B.S. degree is awarded in cooperation with the College of Engineering.

**The Program in Landscape Architecture** offers a first professional degree curriculum in landscape architecture at both undergraduate and graduate levels, as well as a graduate second professional degree program. The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

**The Division of Nutritional Sciences** is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. The nutrition, food, and agriculture major offers students in the College of Agriculture and Life Sciences the opportunity to focus their studies in human nutrition while obtaining a strong background in courses related to agriculture and the life sciences. Students in the biological sciences major may also concentrate in nutrition. Courses offered by the Division of Nutritional Sciences support many undergraduate programs in the College of Agriculture and Life Sciences including animal science, biological sciences, communication, food science, international agriculture, plant sciences, and rural sociology. Nutritional sciences courses count toward the undergraduate degree requirement for 55 credit hours of courses in Agriculture and Life Sciences.

**The American Indian Program (AIP)** is a multidisciplinary intercollege program consisting of academic, research, extension, and student support components. Course work is intended to enhance students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereign rights of Indian nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses that focus on American Indian life from precontact times to the present, and feature the perspectives of Native American people.

Research areas among faculty active in the program include Indian education, social and economic development, agriculture, environmental issues, history, sociology, language, literature and the arts, and cultural preservation. Extension and outreach efforts in the program seek to develop solutions to problems identified by Indian communities and to facilitate the application of institutional resources, research, and expertise to community needs.

The American Indian Program's Akwe:kön Press publishes *Native Americas*, a multidisciplinary journal that covers issues across the western hemisphere and sponsors conferences, guest lectures, and forums on important local, national, and international issues. Akwe:kön, the American Indian residence house, offers undergraduate students a living environment that promotes intercultural exchange.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: American Indian Studies 100 (Indian America to 1890) and American Indian Studies 175 (Contemporary American Indian Issues), plus three other courses selected from the American Indian Studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 450 Caldwell.

AIP also offers a graduate minor. Students interested in choosing the minor should contact Daniel Usner, American Indian Program, 255-8402.

**Science of Earth Systems (SES)** major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell's strengths across a broad range of earth and environmental sciences have been brought together to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

The major is available to students in the College of Agriculture and Life Sciences as well as students in the Colleges of Arts and Sciences and, as an option, Engineering. The SES major has its home in the Department of Earth and Atmospheric Sciences, which spans all three colleges, but relies on the collaboration of several departments across the university.

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or inter-disciplinary courses that build on the basic sequences. Graduates of Cornell's SES program are well prepared for several career and advanced study options in the earth and environmental sciences.

See the Science of Earth Systems listing in the section on "Major Fields of Study" for complete information about the SES curriculum. For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Sciences, khc6@cornell.edu and visit the web site: [www.geo.cornell.edu/ses/](http://www.geo.cornell.edu/ses/)

**The Comparative and Environmental Toxicology Program** is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 213 Rice Hall or at [www.cfe.cornell.edu/icet](http://www.cfe.cornell.edu/icet). See also the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog.

**The Cornell Institute for Resource Information Systems** (Cornell IRIS) is an interdisciplinary, inter-college unit affiliated with the Center for the Environment. The

mission of Cornell IRIS is to advance the development and use of spectral and spatial information science and technology to benefit the environment. The Institute is comprised of three program areas in environmental resource inventory, remote sensing, and geographic information systems. A description of these programs and general information is available from the Institute director through the Cornell IRIS office in 302 Rice Hall.

## OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

### Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Three formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides a placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. The Albany Semester Program is available during the spring, summer, and fall semesters and provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor. Each program has an academic component as well. Check the individual folders in the internship files in the ALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the ALS Career Development Office, 177 Roberts Hall, in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least 12 credits must be carried to meet the residence requirement. Seniors should note that their last term average must be 1.7 or above. To receive academic credit for the internship, students enroll in ALS 400, for an S-U grade only.

Information and applications are available in the ALS Career Development Office, 177 Roberts Hall.

### Cornell-in-Washington

The Cornell-in-Washington Program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington Program offers two study options: (1) studies in public policy, and (2) studies in the American experience. Students take part in a public policy or humanities seminar which requires them to serve as externs in federal agencies, congressional offices, or nongovernmental organizations and to carry out individual research projects under the supervision of

Cornell faculty. The required externships and all course enrollments are arranged through, and approved by, the Cornell-in-Washington Program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 19, inquire at 311 Caldwell Hall, 255-4090, or visit the Cornell-in-Washington web site at [ciw.cornell.edu](http://ciw.cornell.edu).

### SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, the following six weeks are spent on either one of SEA's two sailing vessels: the R/V Westward or the R/V Corwith Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall (607-255-3717). ALS students should file the intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

### Shoals Marine Laboratory

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on the 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduate, beginning graduate students, and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," under the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717.

### Internships

Several departments in the college offer supervised internships for academic credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for planning the program of work and for evaluating student performance.

For internships not governed by an established internship course, the student must enroll in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreed-upon credits.

In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study, Research, Teaching, or Internship form, available in the Registrar's Office, 140 Roberts Hall.

A maximum of 15 (pro-rated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. No more than 6 of the

15 credits allowed for independent study may be awarded for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The six-credit allotment includes transfer credit and credit for internships in other colleges at Cornell. The six-credit limit does not apply to secondary, postsecondary, and cooperative extension teaching internships in the Department of Education.

The College of Agriculture and Life Sciences does not offer a field study option. In general, a rather narrow view is taken toward awarding academic credit for work experience, "life" experience, or apprenticeships. Credit will only be assigned or accepted in cases where a professor is directly involved in determining both the course content and in evaluating a student's work. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. All students enrolling for an internship must file an Independent Study, Research, Teaching, or Internship form with the Office of the College Registrar.

### International Exchange Programs in The College of Agriculture and Life Sciences

Any student whose grade point average is 2.75 or above and has completed one year of continuous study in CALS may apply to one of seven international student exchange programs—the Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM) in Monterrey, Mexico, the Agricultural College of Sweden at Uppsala, Nanyang Technological University in Singapore, the National University of Singapore (NUS), the University of Sydney in Australia, the University of Lausanne in Switzerland, or the University of Agricultural Sciences in Gödöllő, Hungary. (Please note that the Nanyang program is for Communication majors only, the NUS program for Plant Sciences majors only, and the Lausanne program for Food Science.) CALS students may take courses relevant to their major and graduation requirements by earning a maximum of 15 transfer credits per semester. There can be no duplication of credit, and grades received must be C- or better.

These undergraduate exchange opportunities are for **CALS students only**. Students who are interested in international study but not in one of the CALS programs must apply through **Cornell Abroad** in 474 Uris Hall. Please refer to the Cornell Abroad section of *Courses of Study*. For more information on programs and application process, see the CALS Study Abroad Adviser in 140 Roberts Hall or visit our web site [www.cals/oap/advising/international/index.html.cfm](http://www.cals/oap/advising/international/index.html.cfm).

## MAJOR FIELDS OF STUDY

The college curriculum consists of 18 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet minimum distribution requirements of the college.

### Agricultural and Biological Engineering

The Department of Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a Bachelor of Science degree, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in agricultural and biological engineering are offered: environmental engineering, biological engineering, and food production and process engineering. Students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select upper-level courses in the department in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that strengthen their program, such as environmental engineering or biomedical engineering. Students planning for medical school also take additional lab-based courses in biology and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills. Students in the engineering program may pursue minors and options in specialized areas as noted in the engineering section of this publication. **Specific course requirements and other information for the Agricultural and Biological Engineering joint program are in the College of Engineering section of this publication.**

The department also offers two technology programs: environmental systems technology and agricultural systems technology. The technology programs emphasize applied and technical aspects of agricultural, biological, and environmental sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies. The department also participates in a new interdisciplinary major, Science of Earth Systems (SES). Students in the joint engineer-

ing program may minor in SES by taking 18 credits of engineering and science electives as part of their engineering program. Students in the technology program may unofficially minor in SES by taking the prescribed courses as part of their technology program. Students may pursue the SES major through any one of the cooperating departments as noted in the SES description on page 51. The student develops his or her own program of advanced and elective courses in consultation with a faculty adviser, and may have an informal minor in an area such as communication, business, education, or international agriculture.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, and study abroad. Students in the Engineering program are also eligible to do Engineering Coop. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges.

Specific course requirements for the Accredited Engineering Programs are found in the College of Engineering section of this book. Specific course distribution requirements for the academic programs in environmental systems technology and agricultural systems technology include

A. Basic Subjects	Credits
1. Calculus	8
2. Chemistry	6
3. Physics	8
4. Introductory biological sciences	6
5. Computer applications	4
6. Statistics or probability	3
7. Written and oral expression	9
B. Advanced and Applied Subjects	
1. Five courses in the environmental, agricultural, or biological sciences	15
2. Five engineering or technology courses at the 300 level or above; at least 9 credits in agricultural and biological engineering	15
C. Electives	
Additional courses to complete college requirements	
D. Total (minimum)	120

For further details on the Agricultural and Biological Engineering and Technology Programs (including SES), see the department's Undergraduate Programs brochure, available at 207 Riley-Robb Hall; contact the advising coordinator, Professor Jim Bartsch, at 255-2800; or visit the department's web site at [www.aben.cornell.edu](http://www.aben.cornell.edu).

### Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Animal Science Department has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals at a campus location.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation. Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Upperclass students whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or for Honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a highly select group of students.

### Applied Economics and Business Management

The undergraduate program in applied economics and business management is based in the Department of Agricultural, Resource, and Managerial Economics. Courses in agricultural, resource, and managerial economics are supplemented with others in related areas such as computer science,

economics, sociology, history, government, industrial and labor relations, hotel administration, consumer economics, animal sciences, plant sciences, natural resources, mathematics, and statistics.

Six areas of specialization are offered:

**Agribusiness management** is designed for students who have a special interest in the economics and management of businesses that provide services for the agricultural sector of the economy.

**Agricultural and applied economics** provides a general program in the economics of the agricultural sector and of resource use. It is an appropriate major for those students who (1) are interested in applied economics; (2) want to survey offerings in agricultural, resource, and managerial economics, such as management, marketing, economic development, policy, and environmental and resource economics; and (3) want to prepare for graduate work in agricultural economics. It is an appropriate option for those interested in the application of the principles of economics to problems in both the public and private sectors.

**Business management and marketing** applies the principles of economics and the tools of management to prepare students for careers in business. Special emphasis is given to developing decision-making skills and to the study of the structure and practices of business institutions. This prepares students for careers in market analysis, sales, banking, merchandising, production management, and general business management.

**Environmental and resource economics** provides training for students interested in applying economic concepts to problems of the environment and resource use. This specialization is a good option for those wishing to take positions as analysts with agencies that have environmental responsibility or face environmental regulations.

**Farm business management and finance** is intended for students with farm experience who are interested in farming, farm management, or farm finance careers, in such positions as agricultural lenders, extension specialists, or consultants.

**Food-industry management** is designed for students interested in management or sales positions with the processing, manufacturing, or distribution segments of the food industry.

All of these areas of specialization can provide a strong foundation for graduate work. In planning a course schedule, students must work closely with their faculty adviser. Each area of specialization has its own set of required and recommended courses, yet all the areas have enough flexibility to satisfy the interests and abilities of individual students.

### Atmospheric Science

Atmospheric Science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum

of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). There are two options for the B.S. in Atmospheric Science through the College of Agriculture and Life Sciences:

#### Option A

1. Mathematics, Computer Science, and Statistics:
  - a. Math 190/191, 192, 293; or Math 111, 112, 213
  - b. Computer Sci. 100, or EAS 150
  - c. ARME 210 or BTRY 215 or equivalent
  - d. Math 294 or EAS 435
2. Basic Physical Sciences:
  - a. Physics 207, 208, or Physics 112, 213, 214
  - b. Chem 103, 207, or 211
3. Atmospheric Science:
  - a. EAS 131, 250, 341, 342, 352, 447, 451
  - b. At least two atmospheric science electives

#### Option B

1. Mathematics, Computer Science, and Statistics:
  - a. Math 190/191, 192, 293, 294; or Math 111, 112, 221, 222
  - b. Computer Sci. 100, or EAS 150
  - c. ARME 210, BTRY 215, or equivalent
  - d. Math 321, Math 420, or T&AM 310
2. Basic Physical Sciences:
  - a. Physics 112, 213, 214
  - b. Chem 207 or 211
3. Atmospheric Science:
  - a. EAS 341, 342, 352, 451

Option A is intended to meet the needs of students whose primary interests are in forecasting and operational meteorology. Upon graduation, a student who has completed Option A will have satisfied both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist. They will also be well qualified for positions in private-sector forecasting, environmental consulting firms, and in broadcast meteorology. In addition, Option A provides good preparation for graduate work in atmospheric science and closely related fields.

Option B is designed to focus on preparation for graduate study in atmospheric as well as other sciences, and includes somewhat stronger coursework in mathematics and physics than does Option A. The minimum coursework in Option B does not satisfy the National Weather Service requirements or American Meteorological Society guidelines for employment in operational meteorology, but may be more appropriate for students with academic or research career goals. It can also be an attractive option for students transferring into the program as juniors.

## Biological Sciences

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology provides student services which are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal physiology, biochemistry, ecology and evolutionary biology, general biology, genetics and development, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systematics and biotic diversity. Students interested in the marine sciences may consult the Shoals Marine Laboratory Office, G14 Stimson Hall, 255-3717, for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on Biological Sciences.

## Biology & Society

The Biology & Society program area is designed for students who wish to combine the study of biology with exposure to perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives to systematically confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see the section on Biology and Society under "Special Programs and Interdisciplinary Study" in this publication or visit the web site at [biosoc.sts.cornell.edu](http://biosoc.sts.cornell.edu).

Students who elect Biology & Society as their major field of study leave Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental

studies, anthropology, sociology, and other related fields.

## Admissions

Students must have completed a year of college-level biology and submit an application during their sophomore year. Students in the College of Agricultural and Life Sciences may be admitted directly into the field of study when they apply to the college; as with all students admitted prior to completing the biology prerequisite, the admission is provisional. It is the student's responsibility to assure that final acceptance is granted upon completion of the introductory biology sequence. Although only introductory biology is a prerequisite for acceptance, students will find it useful to have completed some of the other requirements (obtain course checklist in 275 Clark Hall) by the end of their sophomore year. Juniors are considered on a case-by-case basis. Upper-division applicants should realize the difficulties of completing the biology and society requirements in less than two years.

The application includes:

- A one- to two-page statement explaining your intellectual interests in Biology & Society and why it is consistent with your academic goals and interests
- A selected theme
- A tentative plan of courses fulfilling Biology & Society requirements, including courses you have taken and those you plan to take
- A transcript of work taken at Cornell University, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty adviser is assigned on admittance to the field. Approximately 50 faculty members from five colleges serve as advisers to Biology & Society students. The major program is coordinated for students in all colleges through the Biology and Society Office, 275 Clark Hall, where students can get information, specific course requirements, and application forms. Faculty and student advisers are available to discuss the Biology & Society requirements with you.

**Requirements for the program** are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 275 Clark Hall or on the web site at [biosoc.sts.cornell.edu](http://biosoc.sts.cornell.edu). Also refer to the section on biology and society under 'Special Programs and Interdisciplinary Study' in this publication.

## Biology and Society Requirements:

- Introductory biology (one year)
- College calculus (one course)
- Ethics (one course)
- Two social sciences/humanities foundation courses
- Three biology foundation courses
- One biology depth course
- Statistics (one course)
- Core course
- Five theme courses (a coherent group of five courses relevant to the student's special interest in Biology & Society,

including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of faculty is available in 275 Clark Hall. Further information may be obtained by calling (607) 255-6047 or sending an e-mail message to [msw8@cornell.edu](mailto:msw8@cornell.edu).

## I. First-Year Writing Seminars

Check the current FWS pamphlet for information.

## II. Foundation Courses

### A. Ethics (select one)

#### **B&SOC 205 Ethical Issues in Health and Medicine (also S&TS 205)**

Fall. 4 credits. Limited to 150 students. Staff.

For description, see B&SOC 205.

#### **B&SOC 206 Ethics and the Environment (also S&TS 206)**

Spring. 4 credits. Limited to 60 students. Staff.

For description, see B&SOC 206.

### **B. Social Sciences/Humanities Foundation** (2 courses, 1 from any 2 areas)

#### 1. History of Science

##### **BIOG 207 Evolution (also S&TS 287 and HIST 287)**

Fall or summer. 3 credits. W. Provine.

For description, see BIOG 207.

##### **S&TS 233 Agriculture, History, and Society: From Squanto to Biotechnology**

Fall. 3 credits. M. Rossiter.

For description, see S&TS 233.

##### **S&TS 282 Science in Western Civilization (also HIST 282) #**

Fall. 4 credits. M. Dennis.

For description, see HIST 282.

##### **S&TS 283 The Sciences in the Twentieth Century (also HIST 280)**

Spring. 4 credits. M. Dennis.

For description, see S&TS 283.

##### **[S&TS 355 Computers: From Babbage to Gates**

Fall. 4 credits. Not offered 2000-2001.

M. Dennis.

For description, see S&TS 355.]

##### **S&TS 390 Science in the American Polity: 1800-1960 (also GOVT 308, AM ST 388)**

Fall. 4 credits. M. Dennis.

For description, see S&TS 390.

##### **[S&TS 433 Comparative History of Science**

Spring. 4 credits. Not offered 2000-2001.

M. Rossiter.

For description, see S&TS 433.]

##### **[S&TS 444 Historical Issues of Gender and Science (also WOMNS 444)**

Fall. 4 credits. Not offered 2000-2001.

M. Rossiter.

For description, see S&TS 444.]

## 2. Philosophy of Science

##### **S&TS 201 What is Science? An Introduction to the Social Studies of Science and Technology**

Spring. 3 credits. J. Reppy.

For description, see S&TS 201.

**S&TS 286 Science and Human Nature (also PHIL 286)**

Spring. 4 credits. May be used to meet the philosophy of science requirement *if not* used to meet the core course requirement. For description, see PHIL 286.

**S&TS 381 Philosophy of Science: Knowledge and Objectivity (also PHIL 381)**

Fall. 4 credits. Limited to 30 students. R. Boyd.  
For description, see PHIL 381.

**3. Sociology of Science****B&SOC 301 Biology and Society: The Social Construction of Life (also S&TS 401)**

Fall. 4 credits. Limited to 75 students. May be used to meet the sociology of science requirement *if not* used to meet the core course requirement. M. Lynch.  
For description and prerequisites, see B&SOC 301.

**B&SOC 342 Sociology of Science (also S&TS 442, CRP 442 and SOC 442)**

Fall. 4 credits. H. Mialat.  
For description, see S&TS 442.

**[PAM 201 Determinants of Behavior**

Fall. 3 credits. Not offered 2000-2001. J. Mueller.  
For description, see PAM 201.]

**[R SOC 208 Technology and Society**

Fall. 3 credits. Not offered 2000-2001. C. Geisler.  
For description, see R SOC 208.]

**S&TS 201 What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210)**

Spring. 3 credits. J. Reppy.  
For description, see S&TS 201.

**S&TS 311 The Sociology of Medicine**

Spring. 4 credits. Staff.  
For description, see S&TS 311.

**S&TS 411 Knowledge, Technology, and Property**

Fall. 4 credits. Staff.  
For description, see S&TS 411.

**[SOC 434 The Sociology of Reproduction (also WOMNS 435)**

Spring. 4 credits. Not offered 2000-2001. Staff.]

**4. Politics of Science****[B&SOC 406 Biotechnology and the Law (also S&TS 406)**

Fall. 4 credits. Not offered 2000-2001. Staff.  
For description, see S&TS 406.]

**B&SOC 407 Law, Science, and Public Values (also GOVT 407 and S&TS 407)**

Spring. 4 credits. M. Lynch.  
For description, see S&TS 407.

**[S&TS 391 Science in the American Polity: 1960-Now (also GOVT 309 and AM ST 389)**

Spring. 4 credits. Not offered 2000-2001. M. Dennis.  
For description, see S&TS 391.]

**[S&TS 427 Politics of Environmental Protection in America (also GOVT 427)**

Fall. Not offered 2000-2001. 4 credits.  
For description, see S&TS 427.]

**5. Science Communication****COMM 260 Scientific Writing for Public Information**

Fall or spring. 3 credits. Limited to 25 non-freshman or graduate students per section. For description and prerequisites, see COMM 260.

**COMM 421 Communication and the Environment**

Spring. 3 credits. May be used in the foundation only *if not* taken as a senior seminar. J. Shannahan.  
For description, see COMM 421.

**S&TS 285 Communication in the Life Sciences (also COMM 285)**

Spring. 3 credits. B. Lewenstein.  
For description, see COMM 285.

**S&TS 352 Science Writing for the Mass Media (also COMM 352)**

Fall. 3 credits. Not open to freshmen. Limited to 25 students. B. Lewenstein.  
For description and prerequisites, see COMM 352.

**S&TS 466 Communication of Science and Technology (also COMM 466)**

Fall. 3 credits. May be used in the foundation only *if not* taken as a senior seminar. Limited to 15 students. Offered even fall semesters. B. Lewenstein.  
For description and prerequisites, see COMM 466.

**C. Biology Foundation** (breadth requirement): Three courses: one from three of the following subject areas:

**1. Biochemistry, Molecular and Cell Biology****BIOBM 330 Principles of Biochemistry, Individual Instruction**

Fall or spring. 4 credits. Staff.  
For description and prerequisites, see BIOBM 330.

**BIOBM 331 Principles of Biochemistry: Proteins and Metabolism**

Fall. 3 credits. G. Feigenson.  
For description and prerequisites, see BIOBM 331.

**BIOBM 333 Principles of Biochemistry, Lectures**

Summer. 4 credits. H. T. Nivison.  
For description and prerequisites, see BIOBM 333.

**NS 262 The Cell and the External World**

Spring. 3 credits. N. Noy.  
For description and prerequisites, see NS 262.

**NS 320 Introduction to Human Biochemistry**

Fall. 4 credits. W. Arion and P. Stover.  
For description and prerequisites, see NS 320.

**2. Ecology****BIOES 261 Ecology and the Environment**

Fall or summer. 4 credits. Not open to freshmen.  
For description and prerequisites, see BIOES 261.

**3. Genetics and Development****BIOGD 281 Genetics**

Fall, spring, or summer. 5 credits. Not open to freshmen fall semester. Limited to 200 students.  
For description and prerequisites, see BIOGD 281.

**BIOGD 282 Human Genetics**

Spring. 3 credits (2 cr. if taken after BIOGD 281). Limited to 25 per discussion group. M. L. Goldberg.  
For description and prerequisites, see BIOGD 282.

**4. Evolutionary Biology****BIOES 278 Evolutionary Biology**

Fall or spring. 3 or 4 credits. Limited to 300 students. M. A. Geber.  
For description, see BIOES 278.

**5. Microbiology****BIOMI 290 General Microbiology Lectures**

Fall, spring, or summer. 2 or 3 credits (2 credits if taken after BIOMI 192). Staff.  
For description and prerequisites, see BIOMI 290.

**6. Neurobiology and Behavior****BIONB 221 Neurobiology and Behavior I: Introduction to Behavior**

Fall. 3, 4, or 5 credits. Not open to freshmen. H. K. Reeve.  
For description and prerequisites, see BIONB 221.

**BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology**

Spring. 3 or 4 credits. Not open to freshmen. Each discussion limited to 20 students. R. Booker/Staff.  
For description and prerequisites, see BIONB 222.

**7. Botany****BIOPL 241 Introductory Botany**

Fall. 3 credits. K. J. Niklas.  
For description, see BIOPL 241.

**8. Physiology and Anatomy****BIOAP 311 Introductory Animal Physiology, Lectures (also VETMED 346)**

Fall. 3 credits. E. Loew and staff.  
For description and prerequisites, see BIOAP 311.

**NS 341 Human Anatomy and Physiology**

Spring. 4 credits. Permission only. Must preregister for lab in 309 MVR during CoursEnroll. V. Utemohlen.  
For description and prerequisites, see NS 341.

**D. Biology Foundation** (depth requirement): one course for which one of the above breadth requirement courses (2C) is a prerequisite.

**E. Statistics (select one)****ARME 210 Introductory Statistics**

Fall. 4 credits. C. van Es.  
For description and prerequisites, see ARME 210.

**BTRY 261/601 Statistical Methods I**

Fall or summer. 4 credits. Note: BTRY 261 is limited to undergraduates. BTRY 601 is limited to graduate students and others by permission. Staff.  
For description and prerequisites, see BTRY 261/601.

**CRP 223 Introduction to Statistical Reasoning for Urban and Regional Analysis**

Fall. 3 credits. Bhatta.  
For description, see CRP 223.

**ECON 319 Introduction to Statistics and Probability**

Fall. 4 credits. Y. Hong.

For description and prerequisites, see ECON 319.

**ILRST 210 Statistical Reasoning I**

Fall, spring, or summer. 3 credits.

J. Angellotti.

For description, see ILRST 210.

**MATH 171 Statistical Theory and Application in the Real World**

Fall, spring, or summer. 4 credits. Staff.

For description and prerequisites, see MATH 171.

**PSYCH 350 Statistics and Research Design**

Fall. 4 credits.

For description, see PSYCH 350.

**[SOC 301 Evaluating Statistical Evidence**

Fall. 3 credits. Not offered 2000–2001.

R. Breiger.

For description, see SOC 301.]

**III. Core Courses****B&SOC 301 Biology and Society: The Social Construction of Life (also S&TS 401)**

Fall. 4 credits. Limited to 75 students.

M. Lynch.

For description and prerequisites, see B&amp;SOC 301.

**S&TS 286 Science and Human Nature (also PHIL 286)**

Spring. 4 credits. R. Boyd and N. Sturgeon.

For description, see PHIL 286.

**IV. Themes**

**A. Natural Sciences Issues/Biology Elective** (two courses). Select from the following list of B&SOC approved Natural Science Issues courses or choose course(s) with intro biology as a prerequisite.

**[B&SOC 314 Biological Basis of Sex Differences (also BIOAP 214 and WOMNS 214)**

Fall. 3 credits. Not offered 2000–2001.

J. Fortune.

For description, see BIOAP 214.]

**B&SOC 347 Human Growth and Development: Biological and Behavioral Interactions (also HD 347 and NS 347)**

Spring. 3 credits. Offered alternate years.

J. Haas and S. Robertson.

For description and prerequisites, see HD 347.

**[BIOES 275 Human Biology and Evolution (also ANTHR 275 and NS 275)**

Fall. 3 credits. Not offered 2000–2001.

For description, see BIOES 275.]

**[BIOES 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)**

Fall. 3 credits. Offered alternate years.

For description, see BIOES 673.]

**BIOPL 247 Ethnobiology**

Fall. 3 credits. D. M. Bates.

For description, see BIOPL 247.

**HD 266 Emotional Functions of the Brain**

Fall. 3 credits. R. DePue.

For description, see HD 266.

**HD 344 Infant Behavior and Development**

Fall. 3 credits. Not open to freshmen.

S. Robertson.

For description and prerequisites, see HD 344.

**HD 370 Experimental Psychopathology**

Spring. 3 credits. Limited to sophomores, juniors, and seniors. C. Maxwell-Miller.

For description and prerequisites, see HD 370.

**HD 436 Language Development (also LING 436, PSYCH 436, and COGST 436)**

Spring. 4 credits. B. Lust.

For description, see HD 436.

**NS 222 Maternal and Child Nutrition**

Spring. 3 credits. Limited to 20. C. Garza.

For description and prerequisites, see NS 222.

**NS 331 Physiological and Biochemical Bases of Human Nutrition**

Spring. 4 credits. May be used to fulfill the

Biology Depth requirement. M. Stipanuk.

For description and prerequisites, see NS 331.

**[NS 361 Biology of Normal and Abnormal Behavior (also PSYCH 361)**

Fall. 3 credits. Not offered 2000–2001.

Limited to juniors and seniors only.

B. J. Strupp.

For description and prerequisites, see NS 361.]

**NS 475 Molecular Nutrition and Development**

Spring. 4 credits. May be used to fulfill the Biology Depth course requirement.

P. Stover and D. Noden.

For description and prerequisites, see NS 475.

**NTRES 201 Environmental Conservation**

Spring. 3 credits. T. Fahey.

For description, see NTRES 201.

**PSYCH 326 Evolution of Human Behavior**

Fall. 4 credits. R. E. Johnston.

For description and prerequisites, see PSYCH 326.

**Examples of biology electives****AN SCI 300 Animal Reproduction and Development**

Spring. 3 credits.

For description, see AN SCI 300.

**HD 366 Psychobiology of Temperament and Personality**

Spring. 3 credits.

For description, see HD 366.

**B. Humanities/Social Sciences Elective (two courses)**

Courses listed earlier as social science/humanities foundation courses (2.B.) are particularly appropriate as social science/humanities electives. A single course, however, cannot be used to meet both requirements. Additional courses that are recommended as social science or humanities electives are:

**Examples of humanities/social sciences electives****ARME 464 Economics of Agricultural Development**

Spring. 3 credits. For description, see ARME 464.

**ANTHR 211 Nature and Culture @**

Spring. 3 credits.

For description, see ANTHR 211.

**CRP 380 Environmental Politics**

Fall or spring. 4 credits.

For description, see CRP 380.

**CRP 451/551 Environmental Law**

Fall. 4 credits.

For description, see CRP 451/551.

**[HD 241 History of Childhood in the United States**

Spring. 3 credits. Not offered 2000–2001.

For description, see HD 241.]

**HD 251 Social Gerontology**

Spring. 3 credits.

For description, see HD 251.

**[HD 258 The Historical Development of Women as Professionals 1800 to Present (also AM ST 258, HIST 238, and WOMNS 238)**

Fall. 3 credits. Not offered 2000–2001.

For description, see HD 258.]

**NS 421 Nutrition and Exercise**

Spring. 3 credits.

For description, see NS 421.

**NS 450 Public Health Nutrition**

Spring. 3 credits.

For description, see NS 450.

**NS 650 Food and Nutrition Assessment in a Social Context**

Fall. 3 credits.

For description, see NS 650.

**NS 651 Food and Nutrition Assessment in a Social Context**

Spring. 3 credits.

For description, see NS 651.

**[NTRES 400 International Environmental Issues**

Fall. 4 credits. Not offered 2000–2001.

For description, see NTRES 400.]

**NTRES 407 Religion, Ethics, and the Environment**

Fall. 4 credits. R. Baer.

For description, see NTRES 407.

**PAM 303 Ecology and Epidemiology of Health**

Fall. 3 credits.

For description, see PAM 303.

**PAM 350 Contemporary Issues in Women's Health**

Fall. 3 credits.

For description, see PAM 350.

**PAM 380 Human Sexuality**

Spring. 3 credits.

For description, see PAM 380.

**[PAM 381 Health Care Services and the Consumer**

Fall. 3 credits. Offered alternate years. Not offered 2000–2001.

For description, see PAM 381.]

**PAM 435 U.S. Health Care Systems**

Spring. 3 credits.

For description, see PAM 435.

**[PAM 668 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems**

Fall. 3 credits. Not offered 2000–2001.

For description, see PAM 668.]

**PHIL 241 Ethics (by petition for breadth requirement)**

Spring. 4 credits.

For description, see PHIL 241.

**[PHIL 368 Global Climate and Global Justice (also GOVT 468)**

Fall. 4 credits. Not offered 2000–2001.

For description, see PHIL 368.]

**S&TS 681 Philosophy of Science (also PHIL 681)**

Spring. 4 credits. R. Boyd.  
For description, see PHIL 681.

**R SOC 201 Population Dynamics (also SOC 202)**

Spring. 3 credits.  
For description, see R SOC 201.

**R SOC 205 International Development (also SOC 206)**

Spring. 3 credits.  
For description, see R SOC 205.

**R SOC 220 Sociology of Health of Latinos and Ethnic Minorities (also LSP 220)**

Fall. 3 credits.  
For description, see R SOC 220.

**S&TS 324 Environment and Society (also R SOC 324 and SOC 324)**

Fall or summer. 3 credits.  
For description, see R SOC 324.

**[R SOC 490 Society and Survival**

Fall. 3 credits. Not offered 2000-2001.  
For description, see R SOC 490.]

**S&TS 453 Reflections on Scientific Personae: Visibility and Invisibility of the Body**

Spring. 4 credits. H. Mialet.  
For description, see S&TS 453.

**SOC 340 Health, Behavior, and Policy**

Spring. 4 credits.  
For description, see SOC 340.

**C. Senior Seminars****[BIOPL 442 Current Topics in Ethnobiology**

Fall. 2 or 4 credits. Must be taken for 4 credits to fulfill Biology & Society requirement. Offered alternate years. E. Rodriguez and D. M. Bates.  
For description and prerequisites, see BIOPL 442.]

**[B&SOC 404 Human Fertility in Developing Nations (also R SOC 408)**

Spring. 3 credits. Not offered 2000-2001.  
For description and prerequisites, see R SOC 408.]

**[B&SOC 406 Biotechnology and the Law (also S&TS 406)**

Fall. 4 credits. Not offered 2000-2001. Staff.  
For description, see S&TS 406.]

**B&SOC 407 Law, Science, and Public Values (also GOVT 407 and S&TS 407)**

Spring. 4 credits. M. Lynch.  
For description, see S&TS 407.

**[B&SOC 414 Population Policy (also R SOC 418)**

Spring. 3 credits. Not offered 2000-2001.  
For description, see R SOC 418.]

**[B&SOC 427 Politics of Environmental Protection (also GOVT 427 and S&TS 427)**

Fall. 4 credits. Not offered 2000-2001.  
For description, see S&TS 427.]

**B&SOC 447 Seminar in the History of Biology (also BIO G 467, HIST 415, and S&TS 447)**

Summer (6-week session). 4 credits. Limited to 18 students. W. Provine.  
For description, see BIO G 467.

**B&SOC 461 Environmental Policy (also BIOES 661 and S&TS 661)**

Fall and spring. 3 credits each term. Limited to 12 students. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term). D. Pimentel.  
For description, see BIOES 661.

**[B&SOC 469 Food, Agriculture, and Society (also BIO G 469 and S&TS 447)**

Spring. 3 credits. Limited to 20 students. Not offered 2000-2001; next offered spring 2002. A. G. Power.  
For description, see BIO G 469.]

**COMM 421 Communication and the Environment**

Spring. 3 credits. J. Shanahan.  
For description, see COMM 421.

**S&TS 466 Public Communication of Science and Technology (also COMM 466)**

Fall. 3 credits. Limited to 15 students. B. Lewenstein.  
For description and prerequisites, see COMM 466.

**[HD 366 Psychobiology of Temperament and Personality**

Fall. 3 credits. Not offered 2000-2001. R. A. DePue.  
For description and prerequisites, see HD 366.]

**HD 418 Psychology of Aging**

Spring. 3 credits. S. Cornelius.  
For description, see HD 418.

**[HD 610 Processes in Human Development**

Fall. 3 credits. Limited to 20 students. Not offered 2000-2001. U. Bronfenbrenner.  
For description and prerequisites, see HD 610.]

**[HD 660 Social Development**

Spring. 3 credits. Permission of the instructor required for undergraduates. Not offered 2000-2001. C. Raver.  
For description, see HD 660.]

**[PAM 575 Housing and Long Term Care for the Elderly**

Fall. 3 credits. Not offered 2000-2001. P. Chi.  
For description and prerequisites, see PAM 575.]

**PAM 652 Health Care Services: Consumer and Ethical Perspectives**

Fall. 3-4 credits. If using this course as a senior seminar, Biology & Society majors must take it for 4 credits. Enrollment limited; preference given to PAM students. A. Parrot.  
For description and prerequisites, see PAM 652.

**PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care**

Spring. 3 credits. For undergraduate seniors only by permission of instructor. R. Battistella.  
For description and prerequisites, see PAM 656.

**PAM 659 Epidemiology, Clinical Medicine, and Management Interface Issues**

Spring. 3 credits. E. Rodriguez.  
For description, see PAM 659.

**[PAM 680 Leadership in Human Service Organizations**

Fall. 3 credits. Not offered 2000-2001. J. Mueller.  
For description, see PAM 680.]

**[R SOC 408 Human Fertility in Developing Nations**

Spring. 3 credits. Not offered 2000-2001.  
For description, see R SOC 408.]

**[R SOC 410 Population and Environment**

Spring. 3 credits. Not offered 2000-2001.  
For description, see R SOC 410.]

**R SOC 438 Social Demography (also SOC 437)**

Fall. 3 credits. D. Gurak.  
For description, see R SOC 438.

**R SOC 495 Population, Environment, and Development in Sub-Saharan Africa**

Fall. 3 credits. P. Eloundou-Enyegue.  
For description, see R SOC 495.

**S&TS 411 Knowledge, Technology, and Property**

Fall. 4 credits. S. Hilgartner.  
For description and prerequisites, see S&TS 411.

**S&TS 466 Public Communication of Science and Technology (also COMM 466)**

Fall. 4 credits. Limited to 15 students. B. Lewenstein.  
For description and prerequisites, see COMM 466.

**[S&TS 490 Integrity of Scientific Practice**

Fall. 4 credits. Not offered 2000-2001. S. Hilgartner.  
For description, see S&TS 490.]

**[S&TS 645 Genetics: Politics and Society in Comparative Perspective (also GOVT 634)**

Spring. 4 credits. Not offered 2000-2001. S. Hilgartner.  
For description, see S&TS 645.]

**V. Other Courses****B&SOC 375 Independent Study**

Fall or spring. 1-4 credits.  
For description and prerequisites, see B&SOC 375.

**[B&SOC 400 Undergraduate Seminar**

Fall or spring. Variable credit. May be repeated for credit. Not offered 2000-2001.  
For description, see B&SOC 400.]

**B&SOC 498 Honors Project I**

Fall or spring. 3-5 credits. Staff.  
For description and requirements, see B&SOC 498.

**B&SOC 499 Honors Project II**

Fall or spring. 3-5 credits. Staff.  
For description and requirements, see B&SOC 499.

**Biometry and Statistics**

Biometry is the application of mathematical and statistical techniques to the life sciences. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and drawing conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of a statistician or biometrician can encompass research, teaching, consulting, and computing in almost any mix and in a wide variety of applications. Opportunities for employment are abundant in universities, government, and businesses ranging from large corporations to small consulting firms; salaries are usually excellent.

While satisfying course requirements for a major in biometry and statistics, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, economics, and the social sciences that involve numerical data and their interpretation.

Students majoring in this area are required to take a computer science course (e.g., Computer Science 100), mathematics courses (at least three semesters of calculus), Biometry and Statistics 100, 101, 102, 408–409, 417, 601–602, Industrial and Labor Relations 310, and Operations Research and Industrial Engineering 270. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. Students should contact Professor Steven J. Schwager for information.

## Communication

The single most important thing for you to learn in college is how to assess and manage constantly changing information. No longer are skills and knowledge enough. The amount of information the public receives and is expected to understand is increasing exponentially. Communication is taking a more central role in science, technology, business, and public policy. Increasingly, government, industry, and special interest groups rely on communication specialists to aid in managing information—collecting, sorting, interpreting or reinterpreting, summarizing, and making information understandable and accessible to the general public, to interest groups, and to decision makers in organizations. Effective information management requires a thorough understanding of the communication process.

When you graduate from our department, you will be better at the basic communication skills of speaking, writing, and listening. Equally important, as a communication major you will also understand:

- communication processes, such as how communication influences attitudes, opinions, and behaviors
- how communication systems work in our society and in others
- how to apply your understanding of communication to solving problems in science, government, industry, health, and education.

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice. Required freshman courses are:

### Fall semester:

Comm 120 Contemporary Mass Communication

Comm 121 Investigating Communication

### Spring semester:

Comm 116 Communication in Social Relationships

## Comm 117 Writing about Communication

This set of courses will provide you with a basic understanding of communication and the communication process. These courses also provide a unique opportunity to link practical application (such as writing and critical analysis) with up-to-date research and knowledge about communication.

During the sophomore year, you will take:

### Fall semester:

Comm 201 Oral Communication

Comm 282 Communication Industry Research

### Spring semester:

Comm 230 Visual Communication

After completing the courses in the core curriculum, all majors take an additional 12 credits in communication. You can choose to concentrate your advanced study in one of three focus areas:

- Communication in the Life Sciences. (Studies of the impact of communication on environmental, health, science, and agricultural issues, as well as public perceptions of risk.)
- Communication Planning and Evaluation. (Development of communication plans to solve problems for individuals or for organizations and evaluating the success of these plans.)
- Communication Systems and Technology. (Principles of how we use communication technologies and how we are influenced by these technologies.)

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has kept in mind the need for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large. Both are critical to successful careers and enlightened citizenship in the twenty-first century.

## Crop and Soil Sciences

The Department of Crop and Soil Sciences provides instruction in three specializations: agronomy, crop science, and soil science. Employment opportunities are increased with practical experience, and the faculty of the department and the Career Development Office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in these specializations.

**Agronomy** combines the study of crop production and soil management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service work, and farming. Graduate school is also possible after a well-planned program. Students should take at least 12 credits of crops and 12 credits of soils and design the remainder of their curriculum to meet specific interests and goals. Some students pursue a major in agronomy with a concentration in international agriculture.

**Crop science** is the application of basic biological and ecological science to the improvement and management of the world's

main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional study beyond the bachelor's degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics.

**Soil science** is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues in environmental and agriculture management related to soils. Students take 18 credits in soil science, including four credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as six credits of crop science to satisfy the major.

## Education

The focus of the Department of Education is on the improvement of teaching and learning in school and other settings, as well as on the role of education in society. Students study concepts and develop skills necessary to analyze educational situations critically and to plan, implement, and evaluate educational programs. Study at the undergraduate level is structured around a core curriculum:

- An introductory course in current educational issues (Education 101) (3 credits)
- Course work in the social, philosophical, psychological, and social foundations of education (e.g., Education 271, 311, 317, 370, 378, 472, 477) (12 credits)
- Supervised field experience (e.g., Education 240 for non-majors and Education 420 for majors) (1–4 credits)
- A capstone course to integrate the students' undergraduate experience (Education 495) (2 credits)

Three specializations and three certification programs are available within the department.

### Agricultural, extension, and adult

**education.** Agricultural, extension, and adult education is a program that combines preparation in both the agricultural and social sciences. The program prepares students for teaching careers in agriculture, science, and technology in public schools, the Cooperative Extension service, and extension and adult programs of agricultural businesses, government agencies, and a variety of private and not-for-profit organizations. The specialization involves courses in education and in a technical area of agriculture/biotechnology, community/economic development, natural resources, human ecology, or communication. Education courses prepare students to succeed as educators in a broad range of careers. Courses are selected to develop professional leadership and teaching competence. Students may elect to focus their study on agricultural education, extension education, and/or adult education. As an alternative, students may elect to major in one of the college's technical departments and develop a complementary program of study in one or more of the three areas of agricultural, extension, and adult

education. Further information is available from the agricultural, extension, and adult education coordinator, Kennedy Hall (Tel: 607-255-7381).

**Educational psychology.** Studies in educational psychology have traditionally focused on teaching and learning in schools, but schools are only one location in which learning and teaching take place. An undergraduate emphasis in educational psychology at Cornell applies principles of teaching and learning to educational enterprises broadly defined.

Although graduate study is required for many careers in psychology, an undergraduate emphasis in educational psychology provides excellent preparation for graduate work or for many post-baccalaureate positions. Educational psychologists develop or supervise training programs in business, industry, the military, and government; design and evaluate curriculum and instructional materials; develop tests for educational and professional associations; evaluate social programs; work in human resource management; and conduct applied research for educational research organizations.

Students interested in concentrating their studies in educational psychology complete a total of 20 to 25 hours in educational psychology and related courses. Working with a faculty adviser, a student may design a program in one of a variety of applied areas: Instructional Systems Design and Development; Human Relations; Individual and Social Development; or the Educational Psychology of Human Development.

Students interested in careers in educational psychology should apply for admission to the Department of Education. For more information regarding a concentration in educational psychology, contact: Coordinator, Educational Psychology Program, Education Department, Kennedy Hall (Tel: 607-255-6515).

**General education.** The concentration in general education is appropriate for students seeking a solid foundation in the disciplines underlying the education professions. Students take courses in areas such as the art of teaching, philosophy of education, social foundations of education, and curriculum studies. Graduates of the concentration in general education may continue their studies at the graduate level or pursue careers in educational and human resource areas in business and industry, the human services, or government agencies. Further information about the general undergraduate education is available from the undergraduate coordinator (Tel: 607-255-9269).

#### Teacher Education

Students at Cornell may pursue middle or secondary school teaching credentials in agricultural education, mathematics, biology, chemistry, physics, earth science, and general science.

**Agriculture.** Students completing the registered program as undergraduates in agriculture are eligible to teach agricultural subjects, introduction to occupations, occupational science or math, and introductory technology for grades 7 and 8. Passing scores on the National Teacher Examination (NTE) or New York State Teacher Certification Exam (NYSTCE) and one year of agricultural work experience are required for provisional certification, which is valid for five years. The

master's degree required for permanent certification is offered through graduate study at Cornell. Students who complete the required course work may also be dual-certified to teach selected science subjects and work as a work experience coordinator through direct application to the State Education Department. For more information, contact the fieldwork and certification coordinator (Tel: 607-255-9573).

**Science and Mathematics.** Students completing the registered program in science and mathematics may pursue secondary teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. Students can begin the program as Cornell juniors or seniors by completing an undergraduate major in a scientific field and up to five courses in education. Students from all Cornell colleges may apply. In a year of graduate study, students take additional math and/or science courses and a supervised student-teaching experience. Students may also begin their certification studies as graduate students and complete a Master of Arts in Teaching (M.A.T.) degree, typically in three semesters. Students who choose to earn certification and do a research project can complete a Master of Science degree (M.S.) in a minimum of four semesters. Either the M.A.T. or the M.S. can be used to satisfy state requirements for permanent certification. Students who complete either graduate program option and pass the New York State Teacher Certification Exam (NYSTCE) are eligible for New York State certification. For more information, contact the fieldwork and certification coordinator (Tel: 607-255-9573).

#### Administrator Certification

Graduate students at Cornell can pursue New York State certification as a school district administrator. This certificate is normally required of all candidates for a district-level position as a school administrator (e.g., superintendent, curriculum director, etc.). The certificate also makes its holder eligible for building-level positions as principal and vice principal. New York State certification as a school administrator is usually recognized in other states.

Cornell's certification program is unique in that it is specifically designed to prepare administrators for small and rural school districts. Course work, the internship, and the doctoral dissertation or Master of Professional Studies project are all oriented toward addressing the practical problems that characterize such districts and preparing candidates to assume a leadership position in them. To earn certification, students complete at least one year of full-time, on-campus study followed by a one-year, half-time administrative internship in a cooperating school district. To be eligible for the program, students should possess the equivalent of a master's degree and have a satisfactory graduate and undergraduate record and three years of teaching experience. For more information, contact the fieldwork and certification coordinator (Tel: 607-255-9573).

#### Entomology

The entomology curriculum provides students with a basic background in biological and environmental sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S.

degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes a common core of requirements allowing flexibility in electives selected by students in consultation with their advisers.

#### Specific requirements

##### Basic Sciences

One year of college mathematics, including a course in calculus, may substitute statistics and biometry  
One semester of physics  
Chemistry 206-208 or 207-208 (General Chemistry)  
Chemistry 257 (Organic and Biological Chemistry)

##### General Biology

Introductory Biology  
Biological Sciences 281 (Genetics)  
Biological Sciences 278 (Evolutionary Biology)  
A choice of one: Biological Sciences 261 (Ecology and the Environment) or Biological Sciences 330 or 331 (Principles of Biochemistry)

##### Entomology

Entomology 212 (Insect Biology)  
A choice of two:  
Entomology 322 (Insect Morphology)  
Entomology 331 (Insect Systematics)  
Entomology 483 (Insect Physiology)

Students must also enroll in at least two additional entomology courses offered at the 300-400 level on more specialized topics.

#### Food Science

The mission of the Food Science Program is to educate students for careers in food science and technology. Graduates are prepared for entry level positions in industry, government, and research organizations or for advanced study in food science and related disciplines. Food scientists qualify for satisfying careers which focus on ensuring the sustainable availability of a safe, nutritious, affordable, and high quality food supply for people throughout New York State, the nation, and the world.

Students choose one of five specialization options: (1) Basic Food Science, (2) Food Engineering, (3) Food Processing, (4) Food Industry Operations and Management, and (5) Food Biotechnology. The first three options meet minimum curriculum standards set by the Institute of Food Technologists, the premier professional society for food scientists. Students choose an option based on individual interests and career goals.

The first two years of the program are focused on establishing a solid background in the physical and biological sciences, math, and communication. Required courses include chemistry (intro and organic), biology, microbiology, calculus, physics, freshman seminar, food science, and nutrition. The second two years emphasize the application of basic science and technology to the processing, storage, distribution, marketing, and final preparation of foods. Required courses include Food Engineering Principles,

Unit Operations in Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, Food Microbiology, and Statistics. Students choose electives to satisfy college distribution requirements and individual interests.

Students are strongly encouraged to participate in research supervised by a faculty member and/or to work as an intern in a food company during summer breaks. Most faculty in the department have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Many food companies recruit on campus for their summer internship programs. These internships are excellent opportunities for students to gain experience and establish contacts for future employment.

A state-of-the art food processing and development laboratory, a full-scale dairy plant, and extensive laboratory facilities are available for training, research, and employment.

### Landscape Architecture

Landscape Architecture focuses on the art of landscape design as an expression of cultural values combined with the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students intellectually, technically, artistically, and ethically for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects range from garden design, parks, housing, historic preservation, environmental rehabilitation and urban design.

Landscape Architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences; a three-year Master of Landscape Architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of several parts: core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate concentration in the American Cultural Landscape is available for nonmajors.

### Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

### Study Abroad

The faculty encourages study abroad and has two formally structured programs. The *Denmark International Study* (DIS) program is available primarily to senior undergraduates and third year graduates in the fall semester and is administered through Cornell Abroad. The *Rome Program* is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

**Bachelor of Science Landscape Architecture Degree Sequence:** (Please note that each semester the studio classes require a supply and field trip fee and all landscape architecture majors are required to pay an annual technology fee.)

### First Year

<i>Fall Term</i>	<i>Credits</i>
*LA 141, Grounding in Landscape Architecture	4
†Biological sciences elective	3
†Physical sciences elective	3
†Social sciences or humanities elective	3
†Written or oral expression elective	3
	16

### Spring Term

*LA 142, Grounding in Landscape Architecture	4
†Biological sciences elective	3
†Social sciences or humanities elective	3
†Written or oral expression elective	3
†Physical sciences elective	3
	16

### Second Year

<i>Fall Term</i>	<i>Credits</i>
*LA 491, Creating the Urban Eden: Woody Plant Selection, Design and Landscape Establishment	4
*LA 201, Medium of the Landscape	5
†Biological Sciences elective	3
†Social Sciences or Humanities elective	3

**Master of Landscape Architecture Advanced Degree Program.**

The two-year Master of Landscape Architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants are therefore expected to hold a Bachelor's Degree in Landscape Architecture or Architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture. Students are permitted some flexibility in establishing programs that take full advantage of the teaching and research resources of the university.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, two courses in engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

**Undergraduate Concentration for Nonmajors**

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of four courses, two required and two electives. Students may petition to substitute one course in the electives list. Direct inquiries to professors H. Gottfried or S. Baugher.

Required.

**Visual Studies (choose one):**

Arch 11 Introduction to Architectural Design (4 cr)
Art 121 Introduction to Painting (3 cr)
Art 141 Introduction to Sculpture (3 cr)
Art 151 Introduction to Drawing (3 cr)
Art 158 Conceptual Drawing (3 cr)
Art 159 Life and Still-Life (3 cr)
Art 161 Photography I (3 cr)
DEA 101 Design I: Fundamentals (3 cr)
DEA 114 Drawing (3 cr)
LA 141 Grounding in Landscape Architecture (3 cr)

**The Landscape**

+LA 282 The American Landscape (3 cr)
---------------------------------------

**Electives (choose two):**

Arch 390 American Architecture and Building I (3 cr.)
Arch 391 American Architecture and Building II (3 cr.)
+LA 260 Pre-Industrial Cities and Towns of North America (3 cr) offered alternate years
+LA 261 Urban Archaeology (3 cr)
+LA 262 Laboratory in Landscape Archaeology
LA 263 American Indians, Planners, and Public Policy (3 cr)
LANAR 525 History of American Landscape Architecture (3 cr)
LA 569 Archeology in Preservation Planning and Design (3 cr) offered alternative years

+Distribution Elective

**Natural Resources**

The undergraduate curriculum in natural resources provides students with an integrated, broadly-based approach to understanding the relationships of organisms to their environment, and the ways in which humans affect those relationships. Natural resources are construed in the broad sense to include both the more traditional topics of renewable natural resources (e.g., wildlife, fisheries, forests) and the Earth's ecosystems of which those and other natural resources are a part. Students are encouraged to understand the scientific, ethical, and societal basis for protection and management of natural resources and environments through the application of ecological principles and knowledge of societal needs.

Students who wish to do so may specialize further in natural resource ecology and management (including wildlife, fishery, forest, and aquatic sciences), or natural resource policy, management, and human dimensions. The department has a limited number of faculty who also advise students in the area of environmental studies.

For details about core curricula in the Department of Natural Resources, consult our web site [www.dnr.cornell.edu](http://www.dnr.cornell.edu). This information is also available in the department's Undergraduate Program Office in 12 Fernow Hall.

Opportunities for field-oriented studies in natural resources are available nearby at Cornell's Arnot Teaching and Research Forest, the Cornell Biological Field Station on Oneida Lake near Syracuse, as well as at numerous natural areas near campus. A research honors program is available for qualified students. Students should seek relevant work experience to complement their academic studies.

**Nutrition, Food, and Agriculture**

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships of human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition and Health: Concepts and Controvers-

sies, NS 245 Social Science Perspectives on Food and Nutrition, NS 345 Nutritional and Physicochemical Aspects of Foods, NS 331 Physiological and Biochemical Bases of Nutrition, and NS 332 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the Division faculty members work in Savage-Kinzelberg Hall and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The nutritional sciences Learning Resource Center in MVR is used by students for study and small group discussion. The center contains class materials, computers, audiovisual aids, and supplementary books and periodicals for independent study and special projects.

For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607-255-2628.

## Plant Sciences

Plant sciences students can specialize in plant biology, plant genetics and breeding, plant pathology, plant protection, or horticultural sciences, including floriculture and ornamental horticulture, fruit science, or vegetable science. Students with well-defined interests upon arrival at Cornell can specialize in one of these programs in their freshman year. Others may prefer to start in the general plant sciences curriculum and specialize after exploring the program offerings.

Plant sciences is a multidepartmental program, sponsored by the Department of Plant Breeding in Emerson and Bradfield Halls, and the Departments of Floriculture and Ornamental Horticulture, Fruit and Vegetable Science,

Plant Pathology, and Plant Biology, all located in the Plant Science Building.

**General plant science** is intended for students whose interest in studying plants has not yet centered on any one of the specializations within the area. Students may continue with this option throughout their undergraduate years, particularly if they are likely to be interested in and qualified for advanced studies beyond the bachelor's degree. Students who plan to seek employment upon graduation may prefer to specialize. There are, however, excellent opportunities for general plant science graduates at the bachelor's degree level in the service and supply industries, as Cooperative Extension educators, as teachers, and as research technicians.

More than one hundred courses are offered that deal directly with some area of plant science. Other courses relating to plant science are offered in other departments. In addition, an interest in plant science may be combined with another specialization, such as agricultural and biological engineering, education, statistics, international agriculture, food science, or agricultural, resource, and business management.

Undergraduates are encouraged to obtain practical experience, which may involve internship and/or research under the direction of a faculty member or work in a commercial industry, research institute, botanical garden or arboretum, nursery, greenhouse, or farm operation. Departments will assist students in finding positions that will provide useful experience.

**Floriculture and ornamental horticulture** applies principles of plant science, business management, and many other disciplines to the production and marketing of greenhouse, nursery, and turfgrass crops, as well as to the selection and management of plants in both indoor and outdoor landscapes. Programs prepare students for careers at the professional and managerial levels in horticultural business, landscape management, botanical gardens and arboreta, research, teaching, communication, and extension and public education.

The core curriculum consists of the following courses:

- BIO G 109 and 110, Biological Principles or an equivalent course
- CHEM 206 or 207 and 208 or an equivalent course
- HORT 100, Introduction to Floriculture and Ornamental Horticulture
- HORT 102, General Horticulture
- HORT 230, Woody Plant Materials
- HORT 243, (BIO PL 243), Taxonomy of Cultivated Plants
- HORT 300 Herbaceous Plant Materials
- HORT 400, Principles of Plant Propagation
- BIOPL 241, Plant Biology (Introductory Botany)
- BIOPL 242, Plant Physiology (lecture)
- BIOPL 244, Plant Physiology (laboratory)
- CSS 260, Introduction to Soil Science
- ENTOM 241, Applied Entomology

PLPA 241, Plant Diseases and Disease Management or PL PA 401, Basic Plant Pathology

Although mastery of these subject areas is considered essential for students planning to enter a production or landscape horticulture career, justifiable exceptions to the core curriculum may be granted by the student's adviser.

With permission of the adviser, a transfer student may receive core curriculum credit for similar courses taken at other institutions provided that transfer credit is granted by the College of Agriculture and Life Sciences. In addition, all transfer students must complete a minimum of 12 credits in floriculture and ornamental horticulture courses at Cornell. No more than two of the following landscape architecture courses may be included in this 12-credit requirement: LA 141, 142, 282, 315, 316, 317, 318, 410, 480. No other landscape architecture or freehand drawing courses may be applied to the requirement because they do not contain horticultural subject matter.

Students may select an area of emphasis in either production or landscape horticulture, or they may study generally across the specialization. Concentration in production prepares students for careers in greenhouse and/or nursery management and wholesale- and retail-product marketing. Specialization in landscape horticulture trains students for careers in turfgrass management, golf course management, exterior and interior landscape contracting and service, retail- and wholesale-marketing of services, public and botanical garden and arboretum management, urban horticulture, agroforestry, arboriculture, and related areas. Some students choose to pursue a general program in production and landscape horticulture including courses in both areas. Similarly, programs in horticultural business management, research, teaching, extension and public education, and communications/journalism may be arranged across two specialization areas. Students wishing to prepare for graduate study may develop a program in basic sciences and their application in horticultural science. Lists of recommended courses for the areas of specialization are available from student advisers and from the undergraduate program coordinator.

Working with a faculty adviser, each student will tailor a program to achieve individual educational objectives in production horticulture, landscape horticulture, horticultural business management, or general horticultural science. A core of management courses also is strongly recommended for students planning horticultural business careers. Students are also encouraged to take courses in these areas: agricultural and biological engineering, soil science, computer science, ecology, entomology, geology, plant breeding, plant pathology, plant physiology, oral and written expression, plant taxonomy, and weed science. Use of electives to pursue study in the humanities and in other areas of special interest to the student is encouraged. Numerous opportunities to become familiar with the horticultural industries and professions are provided through field trips, guest lectures, undergraduate seminars, independent or small-group study, optional internships, and work-experience programs.

Questions concerning the undergraduate curriculum, advising, and related matters

should be addressed to Associate Professor Kenneth W. Mudge, Undergraduate Program Coordinator, Department of Floriculture and Ornamental Horticulture, 20 Plant Science Building, Ithaca, NY 14853-5908; telephone: 607-255-1794; e-mail: kwm2@cornell.edu.

The department's office is located at 20 Plant Science Building. Departmental facilities include classrooms and laboratories in the Plant Science Building, greenhouse and laboratory facilities at the Kenneth Post Laboratory, the Test Garden, the Turfgrass Research Field and Laboratory, the Long Island Horticultural Research Laboratory and freehand drawing studios in Mann Library.

**Plant Biology** provides undergraduates with preparation for graduate study or employment in the plant sciences in areas requiring basic knowledge of plant functioning, molecular genetics, or systematic relationships. In cooperation with an adviser, each student plans a curriculum built on the basic sciences, with courses in the applied plant sciences as appropriate. A core of courses encompasses biology, chemistry, botany, plant physiology, genetics, and statistics. Further options include biochemistry, molecular biology, cell biology, systematics and evolution, ecology, and ethnobotany, as well as courses in such topics as soil science, plant pathology, or entomology. The many different sub-specialties in plant biology afford a flexible curriculum. Research with faculty members is strongly encouraged.

**Plant genetics and breeding** provides undergraduates with (1) preparation for graduate study leading to advanced degrees in plant breeding and plant genetics and (2) preparation for work in producing and marketing plant varieties and making varietal recommendations; for positions in seed analysis, regulation, and quality control; and for work in biotechnology and genomics laboratories.

In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied fields best suited to his or her individual goals. Options include plant breeding; genetics and cytogenetics; statistics; organic chemistry and biochemistry; plant anatomy, ecology, taxonomy, and physiology; crop production; plant pathology; entomology; and molecular biology and biotechnology.

Students are encouraged to gain hands-on experience in plant genetics and breeding by conducting independent research under direction of a faculty adviser and/or by working for a faculty member on his/her research. Field, greenhouse, and laboratory facilities are available.

**Plant pathology** is the study of the causes of plant diseases, the mechanisms of the interactions of disease-causing agents and plants, and the methods of preventing or controlling plant diseases. For most students, a concentration in plant pathology as an undergraduate is preparation for graduate study in plant pathology or another field of plant science. However, this concentration also prepares students for careers as technical representatives for agribusiness, as Cooperative Extension agents, as state or federal regulatory agents, or as research technicians in laboratories of plant pathology, mycology, microbiology, and biotechnology.

Courses include chemistry, mathematics, introductory biology, botany, plant physiology, and introductory plant pathology. Additional plant pathology courses and other relevant courses from other fields are selected according to the particular interests of the student. Options include entomology, plant breeding, pomology, vegetable crops, floriculture and ornamental horticulture, crop and soil sciences, and atmospheric sciences.

**Plant protection** is offered for students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. This concentration can prepare students for careers in agribusiness, the agrichemical industry, Cooperative Extension, pest management consulting, state and federal regulatory work, and a variety of other technical positions. Although designed as a terminal program for students desiring a practical preparation in general plant protection, this specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

The following subjects are considered essential to the plant protection specialization: botany and plant physiology, general ecology, soils, crop science, and microbial ecology. Additional courses in introductory entomology, introductory plant pathology, plant disease control, weed science, and integrated pest management are recommended.

In addition, a number of other subjects pertinent to plant protection are recommended, depending on the student's interests: agricultural economics, agricultural and biological engineering, crop and soil sciences, atmospheric sciences, biochemistry, communication, pathology, entomology, general physics, genetics, meteorology, mycology, pesticides in the environment, and plant anatomy. Employment involving practical experience in plant protection between the junior and senior years is encouraged. The job may be on a farm, at an experimental station, with an agrichemical company, or with a regulatory agency.

**Pomology** (the science of fruit growing) provides students with knowledge of the scientific technology and the influence of environmental factors on the production, handling, and storage of deciduous fruit crops. New York is a national leader in fruit production.

Courses are selected by students in consultation with a faculty adviser. Flexibility in programs makes it possible to establish a course of study to fit the desired goals of individual students. The diverse pomology curriculum, complemented by courses in basic sciences and arts and electives in a student's area of interest, prepares pomology majors for a career in fruit production, agricultural business related to the fruit industry, storage and merchandising, or professional pomology. Job opportunities for graduates can be found in fruit production, marketing, sales and service, research, teaching, and extension.

**Vegetable crops** is offered for students with an interest in either applied or basic aspects of vegetable production. The high value of vegetables and their importance in the human diet assures a continued demand for trained personnel in all aspects of vegetable technology. A flexible curriculum is provided to

prepare undergraduates for careers in a diversity of fields, including: horticultural research, teaching, extension, production, processing, and marketing. A faculty adviser assists individual students in the selection of courses, which usually include: general horticulture, soils, botany, vegetable types and identification, vegetable production, and post-harvest handling or marketing. Additional course work depends upon the interest of the student, and may include: vegetable physiology, plant breeding, entomology, plant pathology, weed science, ecology, crop and soil sciences, atmospheric sciences, nutritional science, agricultural economics, international agriculture, and agricultural and biological engineering.

The vegetable industry is an economically important component of agriculture in New York and in the United States. Recently, there has been increased interest in growing vegetables in tropical countries. Exciting challenges are facing the industry. Greater awareness of environmental and health issues is driving farming practices to depend less on agricultural chemicals. New technologies are being developed and implemented to help growers make this change while remaining profitable. Among these technologies are: integrated pest management, genetic engineering, breeding for insect and disease resistance, low-input and organic cropping systems, and cultural practices that improve production efficiency and conserve agricultural resources.

The Department of Fruit and Vegetable Science has on-campus greenhouses and laboratories as well as two research farms in the Ithaca area that support our teaching program. Students are encouraged to gain hands-on experience growing vegetables and to pursue their individual interests through course work and by taking advantage of the many resources available in the College of Agriculture and Life Sciences.

## Rural Sociology

Technological, economic, demographic, and environmental changes are social processes, and each has major impacts on individuals, social groups, societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. Among the topic areas in which faculty members in the Department of Rural Sociology specialize are international agricultural and rural development, community and regional development and changes in the United States, environmental sociology, aging and the life course, sociology of agriculture, rural industrialization and labor markets, technology and social change, population and development, political economy, women in development, race and ethnic relations, and research methodology. Most courses provide background in both domestic and international aspects of the subject matter. Normally, students will develop a specialization with either a domestic or international emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology, and how to apply both to research and policy in their subject areas.

Recognizing that students are concerned with future career opportunities, the undergraduate program emphasizes acquisition of skills as

well as general knowledge in preparation for jobs or further study upon graduation. Accordingly, students are expected to become involved in the application of theory, methodology, principles, and concepts in the analysis of practical problems.

Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S., or Ph.D.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Development Sociology, both of which are located in Warren Hall. For many years, the department and graduate field have been recognized as among the top programs in the country, and both are known for innovative program orientations. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and other topics. Faculty members in this department are committed to both quality instruction and research programs. Being located in a college of agriculture, faculty members maintain strong ties to the technical fields within the college as well as with the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Community and Rural Development Institute, the Gender and Global Change Program, the Life Course Institute, the Rural Development Program, the Hispanic Studies Program, the Program on Science, Technology, and Society, and the Center for International Studies. Nearly half of the department faculty are associated with one or more area studies programs (the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, or the Institute for African Development). Department members also maintain working relations with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to supplement their course work by electing courses in these other departments and programs, thereby rounding out their educations with different perspectives.

The courses offered in rural sociology can be grouped into three broad categories: development sociology; population, environment, and society; and social data and policy analysis. All students majoring in rural sociology are required to take five core courses: an introductory course (R SOC 101), methods (R SOC 213), theory (R SOC 301), social stratification (R SOC 370), and a course in statistics. Four elective Rural Sociology courses are also required of all majors.

**The focus area in development sociology** provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. Courses provide background in the sociology of development in both the advanced and developing countries. Students normally select a set of elective courses in which either domestic or international development is emphasized. These courses provide background in several aspects of development sociology, including (1) an understanding of the processes of socioeconomic development in low-income or Third World countries and training in the formulation of strategies to enhance the socioeconomic well-being of citizens of those

countries, (2) analysis of the social structures and processes for development in nonmetropolitan settings in the United States, (3) analysis of the processes of agricultural change and development in industrialized and low-income countries, and (4) an understanding of the processes of technological development and change in agriculture and other rural industries in developed and developing countries.

Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

**Courses in the population, environment, and society focus area** provide an understanding of (1) the causes and consequences of the major components of population change—fertility, mortality, and migration; (2) the major patterns of population distribution and population characteristics in the United States and the developing world; (3) the relationships between social structure and the biophysical environment; (4) the relationships between population change and natural resource utilization in development; and (5) impacts of public policy interventions on population size, growth, and composition or on natural resource availability and environmental quality. Students normally select the elective courses for the major so as to stress either population studies or sociological aspects of natural resources and the environment.

Students are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and evolution, environmental studies, natural resources, and policy sciences.

**Courses in the social data and policy analysis focus area** provide (1) knowledge of research methodology, statistics, and computer applications, (2) an understanding of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organizations, communities, regions, and states, and (3) knowledge and practice in policy analysis. Students ordinarily select electives in order to specialize in either policy analysis or in a particular area of public policy (international development policy, domestic rural development policy, environmental policy, or population policy, etc.).

Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

### Science of Earth Systems (SES)

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Cornell's strengths across a broad range of earth and environmental sciences have been fused to provide students with the tools to engage in what will be the primary challenge of the twenty-first century. The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES curriculum includes a strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, Earth system evolution, and biogeochemistry. These classes emphasize the interconnectedness of the Earth system, and are team-taught by professors from different traditional disciplines. The selection of upper-level "concentration" courses allows the student to develop an area of expertise that complements the breadth of the introductory and SES core courses. Possible areas of concentration include climate dynamics, biogeochemistry, ecological systems, environmental geology, ocean sciences, environmental biophysics, hydrological system, and soil science.

The SES major provides a strong preparation for graduate school in any one of the Earth system sciences, such as atmospheric sciences, geology/geophysics, oceanography, hydrology, ecology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of environmentally oriented careers in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy. In addition, the emphasis on basic science makes the SES major excellent preparation for medical school.

The requirements for the major are as follows:

#### 1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

- a. MATH 191 or 193, and MATH 192 (or MATH 111, 112)
- b. PHYSICS 207 and 208 (or PHYSICS 112, 213)
- c. CHEM 207 and 208
- d. BIOLOGY 101/103–102/104 (or 105–106) or BIOLOGY 109/110
- e. Three additional 3–4 credit courses in basic science and math, generally 100 and 200-level classes. At least one of the following courses must be included in the selection:

GEOL 201 Physics and Chemistry of the Earth

BIOES 261 Ecology and the Environment

Other examples are MATH 293 and MATH 294, biochemistry, organic chemistry, PHYS 214, introductory

statistics. With the exception of the introductory statistics course, the additional basic courses will require at least one of the classes listed above as a prerequisite.

## 2. Science of Earth Systems Core Courses

Three 4-credit courses that emphasize the interconnectedness of the Earth system are required. These classes are founded on the most modern views of the planet as an interactive and ever-changing system, and each class crosses the traditional boundaries of disciplinary science.

EAS 302 Evolution of the Earth System

EAS 331/ASTRO 331 Climate Dynamics

EAS 321/NATRES 321 Biogeochemistry

## 3. Concentration Courses

Four intermediate to advanced-level courses (300-level and up) that build on the core courses and have prerequisites in the basic sciences and mathematics courses. These classes build depth and provide the student with a specific expertise in some facet of Earth system science. The concentration should be chosen before the junior year in consultation with an SES adviser whose interests match those of the student.

For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Science, khc6@cornell.edu and visit the web site: [www.geo.cornell.edu/ses/](http://www.geo.cornell.edu/ses/)

## Special Programs in Agriculture and Life Sciences

**General Studies.** The opportunity to develop an independent major in General Studies is available for students interested in pursuing a general education in Agriculture and Life Sciences. In consultation with a faculty adviser, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, the attitudes and the analytical ability that a general education fosters.

General Studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected in these and other areas of individual interest or career aspiration. A course of study for a special program must be planned with and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special

programs are available in the Counseling and Advising Office, 140 Roberts Hall.

**International Agriculture** provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture are designed to acquaint students with the socioeconomic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and the various world areas for which study programs exist. Study of a foreign language is required.

In addition to the college distribution requirements, students in International Agriculture must take a minimum of 30 credits toward the major. A minimum of seven credits in International Agriculture and eight credits in a modern foreign language are required. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

## DESCRIPTION OF COURSES

Undergraduate and graduate courses in the college are offered through the academic departments and units and also through the Biological Sciences undergraduate program and the Division of Nutritional Sciences.

Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

## INTERDEPARTMENTAL/INTERCOLLEGE COURSES

### American Indian Studies

American Indian Studies is the instructional component of the American Indian Program. It is a multidisciplinary program offering course work that enhances students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereignty rights of Indian nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses that focus on American Indian life from pre-contact times to the present and feature the perspectives of Native American people.

The American Indian Program offers a concentration in American Indian studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon

completion of five courses: American Indian Studies 100 and American Indian Studies 175, plus three other courses selected from the American Indian studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian studies should obtain application materials from the AIP office in 450 Caldwell. AIP also offers a graduate minor.

Students interested in choosing the minor should contact Daniel Usner, American Indian Program, 255-8402.

D. H. Usner, director; B. Baker, D. J. Barr, S. Baugher, K. Connelly, C. C. Geisler, D. J. Greenwood, J. Henderson, B. Lambert, J. Mt Pleasant, R. W. Venables, K. Walkingstick

### AIS 100 Indian America to 1890 (also R SOC 100)

Fall. 3 credits. W 7:30-10 P.M. plus sections. R. W. Venables.

Slide lectures survey the rich cultures and complex histories of the Indian nations north of Mexico. Indian arts and philosophies are compared and contrasted with those of Europe, Africa, Asia, Canada, and the United States. The origins of today's major legal issues involving American Indians are also discussed. The course begins with a survey of Indian America before Columbus and ends at Wounded Knee in 1890, the event which marks the end of the conquest of Indian America. Guest lecturers, including American Indian leaders, provide additional perspectives.

### AIS 110 Images of American Indians: Myths and Realities

Fall. 3 credits. Prerequisite: none. Letter grades only. Lec, T R 10:10-11:25. B. Baker.

Images of American Indians juxtapose myth and reality. Whether real or unreal, they have touched the lives of American Indians in profound ways. What are the origins of American Indian images and why do they continue to proliferate in American culture? Were the images designed to justify American colonialism or to facilitate the assimilation of American Indians? To what extent, in both negative and positive ways, have popular images affected the culture and identity of American Indians?

### AIS 111 Communicating with Our Ancestors

Spring. 3 credits. Prerequisite: none. Letter grades only. Lec, TBA. M. Doxtater.

The concept of ancestors and future generations is an important part of contemporary indigenous cultures. What did the ancestors want their future generations to know? What do contemporary generations want their future generations to know? Indigenography is the study of sacred texts, narrative history, songs, stories, paintings, and writings that are used by cultures to transmit tribal memory. We will explore Eastern Woodlands indigenography by studying the audio, visual, textual, and graphic signs and symbols that are used to communicate within the same culture.

### AIS 175 Indian America in the Twentieth Century (also R SOC 175)

Spring. 3 credits. M W 10:10-11:00 plus sections. B. Baker.

This course addresses major U.S. policies affecting American Indians in the twentieth century, and ways in which American Indians pursued strategies to sway the process of social change. American Indian political,

economic, and cultural issues are examined through history, literature, art, and film. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current trends are discussed, and the implications for American Indians in the twenty-first century are explored. Guest lecturers, including American Indian scholars and leaders, provide additional perspectives.

**[AIS 209 Political History of American Indians in the United States (also HIST 209)]**

4 credits. Seminar designed for underclassmen but open to all students. Enrollment limited to 15 students. Not offered 2000–2001. D. H. Usner

An investigation of political organization and change among Native American societies. Discussions and assignments examine forms of tribal government, diplomacy, and warfare, as well as political relations with European colonies and the United States. Specific topics include pan-Indian confederacies, Indian policy, struggles over sovereignty, and Indian strategies of autonomy and resistance.]

**[AIS 230 Cultures of Native North America (also ANTH 230)]**

Fall. 3 or 4 credits. M W F 1:25–2:15. B. Lambert.

A survey of the principal Inuit and American Indian culture areas north of Mexico. Selected cultures will be examined to bring out distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

**[AIS 260 Introduction to American Indian Literatures (also ENGL 260 and AM ST 260)]**

4 credits. Not offered 2000–2001. Staff.

An introduction to Native American literatures, we read a variety of genres—novels, short fiction, autobiography, poetry, oral traditions—spanning Indian publications through the last two centuries. Issues arising from the texts include aesthetics of orality and literacy; cultural change and survival; colonial identity politics; mythic histories; worldviews and ideologies; and contemporary tribal sovereignty. A goal of the course is to read historical American contexts through the eyes of Native American texts.]

**[AIS 261 Urban Archaeology (also LA 261 and CRP 261)]**

4 credits. Not offered 2000–2001. S. Baugher.

Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students will participate in a local archaeological excavation.]

**[AIS 276 American Indian History, 1500–1850 (also HIST 276 and AM ST 272)]**

Fall. 4 credits. M W 10:10–11:00 plus sections. D. H. Usner.

A survey of North American Indian history from the sixteenth century to the mid-nineteenth century. Relations between Indian nations and with European colonies will be explored. Different cultural groups and cross-cultural encounters will be compared, with

emphasis on resistance and adaptation to European colonialism. The formative years of U.S. Indian policy and the experiences of Indian people through the removal era will receive close attention.

**[AIS 277 American Indian History since 1850 (also HIST 277)]**

Spring. 4 credits. M W 10:10–11:00 plus sections. D. H. Usner.

A historical study of American Indians in the United States and Canada from the mid-nineteenth century to the present. The active and complex role played by Indian people in their responses to government policies and to socioeconomic changes will be emphasized. Challenges faced and initiatives taken by Indians will be traced from the early reservation years to the current era of self-determination. Cultural change and continuity in Indian communities will be closely examined.

**[AIS 318 Ethnohistory of the Northern Iroquois (also R SOC 318)]**

Spring. 3 credits. Enrollment limited to 20. M 7:30–10:30. R. W. Venables.

The development of Iroquois (Haudenosaunee) history and culture is traced to the present day.

**[AIS 329 Indians, Settlers, and Slaves in the Early South (also HIST 329)]**

4 credits. Not offered 2000–2001. D. H. Usner.

History of the American South from the sixteenth century to the early nineteenth century with an emphasis on intercultural relations. Topics include colonization of the region by Spain, England, France, and the United States. American Indian adaptation and resistance, the evolution of slavery, African American relations with Europeans and Indians, and the role of racial ideology and ethnic identity in the formation of the South as a distinct section of the United States.]

**[AIS 360 Preindustrial Cities and Towns of North America (also LA 260 and CRP 360)]**

Fall. 3 credits. T R 10:10–11:20. S. Baugher.

Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

**[AIS 361 Sociology of American Indians (also R SOC 360)]**

3 credits Prerequisite: R SOC 101/SOC 101 or approval of instructor. Enrollment limited to 20. Not offered 2000–2001. B. Baker.

This course is designed to emphasize the role of theory and research in our understanding of American Indians. Towards that end, the relationship between the nation-state and indigenous populations will be emphasized. Students will be exposed to the following theoretical perspectives: world systems and dependency, internal colonialism, social disintegration, the social construction of reality, political mobilization, and ethnic reorganization. The course is also historical and comparative, as students will study different Indian tribes located in the United States and Canada.]

**[AIS 363 American Indians, Planners, and Public Policy (also LA 263 and CRP 363)]**

3 credits. Not offered 2000–2001. S. Baugher.

Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.]

**[AIS 367 American Indian Politics and Policy (also R SOC 367)]**

Fall. 3 credits. Enrollment limited to 20. T R 2:55–4:10. B. Baker.

This course addresses the Constitutional basis of the Federal-Indian relationship through an examination of treaties, Supreme Court decisions, and congressional law-policy. The effects of European and American forms of governance on traditional American Indian political structures are detailed and contrasted with contemporary tribal governments and political organizations. Issues relating to sovereignty and self-governance with respect to American Indian tribal governments are addressed relative to state and federal governments.

**[AIS 394 Topics in American Indian Literature (also ENGL 394)]**

4 credits. Not offered 2000–2001. Staff.]

**[AIS 401 Anthropological Linguistics]**

Spring. 4 credits. Prerequisite: permission of instructor. S-U grades optional. Lec, M 2:30–4:25. K. Connelly.

We will investigate by linguistic comparison, core human differences in worldview, perception, and identity. This course focuses on Iroquoian thought and worldview as evidenced in culturally central forms of language use. We will focus on a published, native-language, text version of an epic oral narrative.

**[AIS 429 Undergraduate Seminar in Indians of Eastern North America (also HIST 429)]**

4 credits. Not offered 2000–2001. D. H. Usner.

A seminar examining the history of Native Americans in the eastern woodlands from colonial times to the present. The cultural and economic participation of Indians in the evolution of frontier societies will be examined. Major topics include fur-trade networks, political relations, removal, and the persistence of Indian communities in eastern states.]

**[AIS 440 The Social Impact of Resource Development (also R SOC 440)]**

3 credits. Not offered 2000–2001. C. C. Geisler.

Social impact assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies, and new technologies before they happen and a decision tool for mitigation. The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Students learn practical SIA skills and related theoretical/conceptual debates.]

**[AIS 442 American Indian Philosophies: Selected Topics (also R SOC 442)]**

Spring. 3 credits. Prerequisite: permission of instructor. Enrollment limited to 15. W 7:30–10:30. R. W. Venables.

This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

**ALS 600 American Indian Studies**

Spring. 4 credits. Prerequisite: permission of instructor. S-U grades optional. Lec, TBA. Staff.

This seminar surveys the field of American Indian Studies across different academic disciplines. Designed specifically for students considering the graduate minor in American Indian Studies, it offers some common intellectual ground beyond the more specialized avenues of scholarship. Various areas of study will be explored, with an emphasis on current methods, theories, and problems involved in researching Indian topics in Canada and the United States.

**[AIS 624 Graduate Seminar in American Indian History (also HIST 624)]**

4 credits. Not offered 2000-2001.  
D. H. Usner.

This seminar examines, through a selected series of major topics and problems, the historical study of North American Indians. Emphasis is placed on current interpretations and directions.]

**[AIS 665 Native American Contributions to Anthropological Thought (also ANTHR 665)]**

4 credits. Not offered 2000-2001.  
B. Lambert.]

**Department of Statistical Science**

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the "Interdisciplinary Centers, Studies, and Programs" section at the front of this catalog (see p. 22).

**NONDEPARTMENTAL COURSES****ALS 101 Transition and Success in Cornell**

Fall. 1 credit. Prerequisites: must be an entering student in CALS. Letter grade only. B. O. Earle (assisted by W. N. Alberta).

Discussion-oriented course to enable all new CALS students to enjoy their experience at and transition to Cornell. Lecture, discussion, guest speakers, and assignments that explore Cornell's history, services, and organizations will be used. Emphasis on role of Agriculture and Life Sciences in future of all related careers.

**ALS 134 Emergency Medical Technician**

Fall and spring. 3 credits. S-U grades optional. Prerequisite: none—but basic and advanced first aid recommended. Lec, M 1:30-5:00; lab, W 1:30-5:00.  
G. J. Conneman and A. E. Gantert.

E.M.T. is an intensive 140-hour course taught throughout the fall and spring semesters. Enrollment, therefore, will occur for the fall term only. Course includes training in C.P.R. for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, medical antishock trousers, and defibrillation. Students will qualify for the New York State E.M.T. Certification Exam upon successful completion of the course. Classes will be conducted in the Teagle Hall second-floor classroom.

**ALS 400 Internship**

Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only.

Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant's Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

**ALS 402 Agricultural Study Tour to Burgundy, France**

Spring. 2 credits. Prerequisite: a registered CALS student. S-U grades optional.  
L. A. Weston and P. Durand.

A two-week study tour held in the month of May in Burgundy, France. Students will experience French agriculture, history, and cuisine. Tour will include wine, fruit, vegetable, cheese dairy, beef and poultry production, and French university research facilities featuring modern agricultural research. Ten- to twenty-page paper requirement. Students will travel throughout Burgundy and Eastern France with Pascal Durand, professor at ENESAD in Dijon France.

**ALS 403 Internship Opportunities in Burgundy, France**

Spring. Variable 4 credits. Prerequisites: enrollment in the Agricultural Study Tour of Burgundy, France. Some French language experience preferred. S-U grades optional. L. A. Weston and P. Durand.

Six- to eight-week internship experiences in Burgundy, France in agriculturally related subject areas including viticulture, agribusiness, agronomy, food science, and biotechnology. Final paper documenting internship experience required.

**ALS 477 Environmental Stewardship in the Cornell Community**

Fall and spring. 2-4 variable credits. T R 11:40-1:10. J. M. Regenstein plus a faculty adviser.

Each student will undertake an original project to improve the environment at Cornell while working with a faculty adviser and the Cornell infrastructure (generally campus life and/or facilities). Through seminar discussions and presenters on environmental activism, students will learn how to be more effective at developing environmental programs in the future, both during and after college. The final written project report will also be presented orally at a public forum. (Note: If students prefer to take one or two credits of independent research in a department in the College of Agriculture, this can be arranged. Assistance in finding a faculty adviser will be provided. This course may be taken more than once.)

**ALS 480 Global Seminar: Sustainability of Environment and Food Systems**

Spring. 1-3 credits. Letter grade. Lec, R 9:00-11:00, lab, T 9:05-9:55. H. D. Sutphin, P. A. Arneson, and D. Lee.

A distance learning course involving Cornell and seven universities in Europe, Central America, India, and Australia. This seminar provides students the opportunity to explore and learn about the dynamic linkages between sustainable development, food security, population, the environment, and socio-economic progress from a global

perspective. Students across the various sites interact via Internet, satellite, and telecommunication technologies to analyze a series of inter-disciplinary case studies related to global sustainable development. At the end of the semester, international student teams prepare and present term projects using videoconferencing technologies.

**ALS 500 Politics and Policy: Theory, Research, and Practice (also HSS 404 and GOVT 500)**

Students in the College of Agriculture and Life Sciences must register for ALS 500.  
S. Jackson and staff.

This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell-in-Washington Program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Applications are made through the Cornell-in-Washington office, 311 Caldwell Hall.

**ALS 661 Environmental Policy (also Biology and Society 461 and BIOES 661)**

Fall and spring. 3 credits each term. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem R 2:30-4:30 P.M. D. Pimentel.

This course uses an interdisciplinary approach to focus on complex environmental and policy issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*.

**AGRICULTURAL AND BIOLOGICAL ENGINEERING**

M. F. Walter, chair; B. A. Ahner, L. D. Albright, D. J. Aneshansley, A. J. Baeumner, J. A. Bartsch, T. J. Cook, J. R. Cooke, A. K. Datta, K. G. Gebremedhin, W. W. Gunkel, D. A. Haith, P. E. Hillman, J. B. Hunter, L. H. Irwin, W. J. Jewell, D. B. Lund, C. D. Montemagno, J.-Y. Parlange, N. R. Scott, T. S. Steenhuis, M. B. Timmons, L. P. Walker

**Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

**ABEN 102 Introduction to Microcomputer Applications**

Fall or spring. 3 credits. S-U grades optional. PC or Mac labs available. All students, including those pre-enrolled, must attend the first lecture to guarantee admittance and to select a laboratory section. Lec, fall: T R 12:20-1:10, spring: M W 12:20-1:10, labs, M 1:25-4:25 or 7:30-

10:30 P.M. or T 1:25-4:25 or W 1:25-4:25 or 7:30-10:30 P.M., or R 1:25-4:25 P.M. Fee, \$15. P. E. Hillman.

Introduction to application packages on microcomputers. Laboratories provide experience with word processing, spreadsheets, database management, presentation graphics, and web page authoring. An independent project related to the student's major is required. PC or Mac labs cover the same software material. These packages and others such as desktop publishing, multimedia, statistical software, searching the Internet for information are discussed and demonstrated in the lectures, as well as computer hardware and operating systems.

#### **ABEN 110 Introduction to Metal Fabrication Techniques**

Spring. 3 credits. Each lab limited to 18 students. Lec, T R 9:05; labs M T or R 1:25-4:25, M or T 7-10. T. J. Cook.

Emphasis on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. To include both hand and machine tools, fasteners, strengths of materials, classification and identification of metals, soldering, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxy-acetylene cutting, and arc welding.

#### **ABEN 132 Introduction to Wood Construction**

Fall. 3 credits. Each lab limited to 15 students. Lec, T R 9:05; labs, T W or R 1:25-4:25, T or W 7-10. T. J. Cook.

Principles and practice of wood construction. To include site selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and block construction. Each student will plan and construct an approved carpentry project.

#### **ABEN 151 Introduction to Computing**

Fall. 4 credits. Lec, M W F 11:15-12:05; labs, W R 12:20-2:15, 2:30-4:25, F 1:25-2:30. Each lab and recitation section limited to 22 students. L. D. Albright.

An introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The structured programming language, JAVA, is used, implemented on interactive personal computers, and applied to problems of interest in agricultural and biological engineering. No previous programming experience is assumed.

#### **ABEN 152 Computer Applications for Engineers**

Spring. 1-3 credits variable (three 1-credit modules). A student can take any one, any two, or all three modules. Prerequisites: ABEN 151 or equivalent computer programming course and 1 semester calculus for the Matlab module. No prerequisites for the other two modules. Letter grades only. Lec, T R 2:30-3:20 P.M.; lab M W 1:25-4:25 P.M., or W 7:30-10:30 P.M. P. E. Hillman.

Major application packages useful to engineering and science students are covered in three modules. The first module introduces Matlab and explores the problem-solving capabilities of Matlab through examples. The second module investigates the data processing and graphing capabilities of spreadsheets.

The third module uses presentation graphics and word processing to create effective visual and written documents for professional presentations.

#### **Module 01 Matlab (weeks 1 to 5 of the spring semester)**

Tentative coverage to include matrix/vector manipulation, basic math functions, graphing of 2-D and 3-D plots, file I/O, string and numerical manipulation, problem solving of linear and nonlinear algebraic functions and ordinary differential integration, curve fitting, and data analysis and statistics. In lab, the students will learn Matlab through examples. Grading based on completion of lab assignments, lecture quizzes, and lecture attendance.

#### **Module 02 Spreadsheets (weeks 6 to 10 of the spring semester)**

Using Microsoft Excel to include built-in functions, lookup tables, graphs, Visual Basic macros, what-if analysis, and advantages and disadvantages compared to a programming language. Grading based on completion of lab assignments, lecture quizzes, and lecture attendance.

#### **Module 03 Presentation tools for the Professional Engineer (weeks 11 to 14 of the spring semester)**

Using Microsoft Word to create a written report and Microsoft PowerPoint to create slides for an oral presentation of engineering projects for professional presentations. Special attention will be given to the execution of quality presentations. Grading based on lab assignments, lecture quizzes, lecture participation, and an oral PowerPoint presentation and written report to be submitted as the final exam.

#### **ABEN 200 The ABEN Experience**

Spring. 1 credit. S-U grades optional.

Prerequisite: nonmajors by permission of instructor. Lec, T 1:25. J. A. Bartsch.

A required course for freshman majors in Agricultural and Biological Engineering. A forum to discuss the career opportunities for engineering students and the activities and curricula that will lead to these opportunities. A series of seminars are given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career offices, and students. Students develop personalized written career plans, do a web search for jobs and internships, and select future courses to meet their career goals.

#### **ABEN 250 Engineering Applications in Biological Systems (also Engineering Distribution 250)**

Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum, MATH 293 (coregistration permissible). Recommended for the sophomore year. Lec, M W F 12:20. B. A. Ahner.

Case studies of engineering problems in agricultural, biological and environmental systems, including bioremediation, crop production, environmental controls, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

#### **ABEN 299 Sustainable Development: A Web-Based Course**

Spring. 3 credits. Prerequisite: sophomore standing and above. S-U grades optional. N. R. Scott.

Sustainable development is the dominant economic, environmental, and social issue of the twenty-first century. This web-based course will develop the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include nature of ecosystems, global processes, sustainable communities, and industrial ecology and life cycle analysis.

#### **ABEN 300 Career Development**

Spring. 1 credit. S-U option. Prerequisites:

ABEN 200 or permission of instructors.

Lec, T 2:30-3:20. Staff.

Career development for juniors who are thinking about jobs, graduate or professional school, or anything else. Students will work on planning their options after graduation. Development of resumes and cover letters, contacts with potential employers or graduate schools, job and school searches on the web, professional engineering registration, entrepreneurial opportunities, career offices at Cornell, and practice interviews. Students are active participants. In addition to ABEN 300 sessions, attendance at four sessions of ABEN 200, selected by each student, is required.

#### **ABEN 301 Renewable Energy Systems**

Spring. 3 credits. Prerequisite: college physics. Lec, T R 10:10-11:25.

L. D. Albright.

Introduction to energy systems with emphasis on quantifying costs and designing renewable energy systems to convert environmental inputs into useful forms of energy. Course will cover solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances, and the public policy implications of alternatives. Use of spread sheets will be extensive.

#### **ABEN 305 Principles of Navigation (also Nav S 301)**

Fall. 4 credits. 4 classes each week (lecture-recitation-project work). Lec, M W F 8:00-8:50; lab, R 8:00 or 9:05.

J.-Y. Parlange.

An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides and currents. Electronic navigation systems are also briefly discussed. This course does not satisfy ABEN technical electives.

#### **ABEN 310 Advanced Metal Fabrication Techniques**

Spring. 1 credit (2-credit option available).

Prerequisite: ABEN 110 or permission of instructor. Lab, F 1:25-4:30. T. J. Cook.

Principles and practices extending beyond the scope of ABEN 110. To include out-of-position, high carbon steel and cast iron welding. Soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma-arc and oxy cutting of metals. Planning, development, and fabrication of a metal construction project for the two-credit option.

#### **ABEN 350 Biological and Environmental Transport Processes**

Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible). Lec, M W F 11:15-12:05; disc, W 2:30-3:20. 2 evening prelims. K. G. Gebremedhin.

Understanding the principles of heat and mass transfer in the context of biological and environmental systems. Emphasis is on physical understanding of transport processes and simple reaction rates with application examples from plant, animal and human biology, the environment (soil/water/air), and industrial processing of food and biomaterials.

#### **ABEN 365 Properties of Biological Materials**

Spring. 3 credits. Prerequisites: ENGRD 202 (coregistration permissible). Lec, T R 12:20-1:10; lab W 2:30-4:25, R 2:30-4:25, or F 2:30-4:25. J. A. Bartsch.

Mechanics and structural properties of biological materials. Mechanical testing of animal, plant, and food products. Laboratory exercises in quasi-static and dynamic testing of materials and interpretation of test results. Experimental techniques for determining engineering properties of these materials.

#### **ABEN 367 Introduction to Biological Engineering**

Fall. 3 credits. Prerequisites: one year each calculus and introductory biology; minimum one term each college chemistry and physics. Not open to freshmen. S-U grades optional. Lec, T R 10:10; lab M or T 1:25-4:25. J. B. Hunter.

Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, genetic engineering, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.

#### **ABEN 371 Hydrology and the Environment (also GEOL 204)**

Spring. 3 credits. Prerequisite: one course in calculus. 2 lecs, 1 lab. Lec, T R 9:05; lab, F 2:30-4:25. T. S. Steenhuis and L. Cathles.

Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, ground water, surface runoff, river meandering, floods, and droughts. Case studies, short field trips, and laboratories foster an understanding of concepts and principles of hydrologic processes.

#### **[ABEN 411 Biomass Processing: Modeling and Analysis]**

Spring. 3 credits. Prerequisites: ABEN 250; ABEN 350 (or any course in heat and mass transport); BIOBM 331, 332, or BIOMI 290. Lec, M W F 9:05. Not offered 2000-2001. L. P. Walker.

This course is designed to introduce students to how basic concepts from physical chemistry, enzyme and microbial kinetics, and transport phenomena are used to model biomass conversion and degradation processes. Examples of different agricultural and environmental processes are used to explore model development, solutions, and validation. There is a strong emphasis on the use of differential equations to model process dynamics.]

#### **ABEN 418 Introduction to Biotechnology**

Fall. 3 credits. Prerequisites: ABEN 350 (co-registration allowed), biochemistry, microbiology, fluid mechanics, or permission of instructor. Lec, T R 8:40-9:55; Disc. (8 weeks) M 3:35-4:25; Lab (6 weeks) M 1:25-4:25 or M 7:30-10:30. A. J. Baeumner.

This course will provide the students with an understanding of the scientific and engineering principles of biotechnology and their applications in agriculture, environmental and consumer protection, manufacturing, and processing. Topics include microbial synthesis, production and degradation, genetic engineering, immobilization, biosensor techniques, up- and down-stream processing, and fermentation techniques.

#### **ABEN 425 Science and Technology of Environmental Management**

Fall. 3 credits. Prerequisite: graduate or senior. Letter only. Lec, T R 2:55-4:10. W. J. Jewell.

Quantitative description of decline in environmental quality caused by human activities, and exploration of science and technology solutions to pollution and their limits. Tools used by engineers and scientists to understand the environment will be used to focus on water quality problems (two-thirds), air quality (one-sixth) and land quality (one-sixth).

#### **ABEN 427 Water Sampling and Measurement**

Fall. 3 credits. Prerequisites: fluids or a hydrology course and MATH 191. Lec, T 10:10-11:00; Lab, T 1:25-4:25.

L. D. Geohring and T. S. Steenhuis.

Get your feet wet and your hands busy with this course on water sampling methods where science and engineering technologies are integrated to quantify, characterize, and analyze environmental engineering problems. This field-based laboratory course focuses on quantification of surface and subsurface flow and quality, and includes sampling techniques of soils, sediment, and biological waste products. Quality assurance and control protocols and interpretation of watershed loading of contaminants will be addressed.

#### **ABEN 435 Principles of Aquaculture**

Spring. 3 credits. Prerequisite: junior standing and above. Lec, T R 1:25-2:15; lab, R 2:30-4:25. M. B. Timmons.

An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate's previous course background and interests. Supervised "hands-on" laboratory experiences.

#### **[ABEN 450 Bioinstrumentation]**

Fall. 4 credits. Prerequisites: MATH 294, ABEN 151, PHYS 213, or permission of instructor. Lec, M W 8:40-9:50; lab, M or W 2:30-4:25. Not offered 2000-2001. D. Aneshansley.

Biological and biomedical applications are emphasized in this laboratory-based course. The electronic instrument from sensor to computer is considered. Static and dynamic characteristics of components and systems are determined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. Course satisfies the capstone design requirement.]

#### **ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes**

Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or CS 100) and heat and mass transfer (ABEN 350 or equivalent). Lec, M W 11:15; computation disc/lab, F 11:15. A. K. Datta.

Introduction to simulation-based design as an alternative to prototype-based design. Analysis and optimization of complex real-life processes using an industry-standard physics-based computational software on a supercomputer or high end personal computers. Biomedical processes and industrial food processing applications of heat and mass transfer are covered. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project, which is the major part of the course (no final exam). The course satisfies the College of Engineering upper-level computing application requirement. It also satisfies the capstone design experience requirement for ABEN students.

#### **ABEN 454 Physiological Engineering**

Fall. 3 credits. Corequisite: fluid mechanics. Lec, T R 12:20-1:10; lab T R 1:25-4:25. D. J. Aneshansley.

Engineering analysis and design in the physiology of animals and humans. Use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: signal processing as related to neural conduction, sound processing, vision, and image processing; and systematics as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratories involve experiments, computing applications, field trips, and live animal demonstrations.

#### **ABEN 456 Biomechanics of Plants**

Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U or letter grade optional. Lec, T R 11:15-12:05; disc, W 2:30-3:20. J. R. Cooke and K. J. Niklas.

An engineering approach is taken to plant form and function following the text, *Plant Biomechanics*. Topics include: mechanical behavior of materials, effect of geometry on mechanical behavior, plant-water relations, plant cell walls, mechanical behavior of tissues, mechanical attributes of organs, the plant body, fluid mechanics and biomechanics and plant evolution.

#### **ABEN 471 Geohydrology (also Civil and Environmental Engineering 431 and Geology 445)**

Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202. 2 lecs, 1 disc, lecture, field trip. W. Brutsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

#### **ABEN 473 Watershed Engineering**

Fall. 3 credits. Prerequisite: fluid mechanics or hydrology. Lec, T R 9:05; disc, R 1:25-4:30. M. F. Walter.

Engineering principles are applied to the design of soil and water management

technologies aimed at solving natural resource problems in the context of watersheds. Emphasis will be placed on rural and countryside engineering and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, and water supply. This course satisfies the capstone design experience requirement.

**ABEN 474 Drainage and Irrigation Design**

Spring. 3 credits. Prerequisites: fluid mechanics or hydrology. Lects, M W F 12:20. T. S. Steenhuis and L. D. Geohring. This course will focus on design of drainage and irrigation systems for agriculture and nonagricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used wherever possible. One major design project is required of each student. This course satisfies the capstone design experience requirement.

**ABEN 475 Environmental Systems Analysis**

Fall. 3 credits. Prerequisites: Matlab and 2 years of calculus. Lects, M W F 10:10–11:00. L. P. Walker.

Systems analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of models into efficient computational algorithms, and use of computer simulation and optimization procedures (search techniques, linear programming, and dynamic programming) to evaluate management alternatives. Applications include water quality management, air pollution control, solid waste management, and industrial ecology.

**ABEN 476 Solid Waste Engineering**

Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry. Lects, T R 11:40–12:55. D. A. Haith.

Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling and materials recovery facilities; and hazardous waste management. Emphasis on quantitative analyses.

**ABEN 478 Ecological Engineering**

Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent. Lects, T R 2:30–3:45. W. J. Jewell.

Natural waste treatment systems are sustainable, driven by solar power, and generate useful and valuable by-products. Constructed wetlands, hydroponic applications of plants, wastewater farming, sludge and industrial residue application to land, soil restoration, bioremediation of toxics, and biofilters for air purification are examples of pollution control systems that depend on natural processes. Pollution control mechanisms in soils and plants are defined and used to design innovative treatment systems for agriculture, municipalities, and industry. This course satisfies the capstone design experience requirement.

**ABEN 481 LRFD-Based Engineering of Wood Structures**

Spring. 3 credits. Prerequisite: ENG 202. Lects, M W F 12:20 (Hollister Hall). K. G. Gebremedhin. Two evening prelims. Computer-aided and manual computation procedures of Load and Resistance Factor

Design (LRFD)–based engineering wood structures. Topics include national design codes and standards; estimation of design loads (dead, live, wind, snow, and seismic loads); determination of factored resistance and stiffness values; mechanical properties of wood and wood products; designs of beams, columns, trusses, frames, arches, bridges, and diaphragms; connections, and special wood structural members and systems. Engineering design judgment is also discussed as an integral component of the quantitative design procedure. ABEN students who wish to take the course to satisfy the capstone design requirement (optional) must sign up for an additional one credit hour of ABEN 496.

**ABEN 482 Biothermal Engineering**

Spring. 3 credits. Prerequisites: ABEN 250 and 350, or equivalent. Lects, T R 11:15; lab, W 1:25–4:25. N. R. Scott.

Analysis and design of the thermal and aerial environments of plants, animals, and humans. Thermal environmental requirements dictate the design of buildings to act as buffers between biological systems and weather. Heat flow, air flow, psychrometrics, energy balances, thermal biology, animal and plant models, thermal modeling, mechanical and natural ventilation, solar energy, and weather phenomena. This course satisfies the capstone design experience requirement.

**ABEN 493 Technical Writing for Engineers**

Fall. 1 credit. Prerequisites: co-registration with ABEN 454 or ABEN 473. Lec, M 7:30–9:25 (5 evenings in first half of semester). Staff.

This course meets the College of Engineering technical writing requirement when taken concurrently with ABEN 454 or ABEN 473. Class meets for five evening sessions during the fall semester and includes writing skills such as technical project reports, outlining, style, audience, and general writing mechanics.

**ABEN 494 Special Topics in Agricultural and Biological Engineering**

Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**ABEN 496 Senior Design in Agricultural and Biological Engineering**

Fall and spring. 1–3 credits. Prerequisite: senior standing in ABEN engineering program or permission of instructor. Note: completing an independent study form is required to register. Hours TBA. Staff.

Involves capstone design experience, including a team project, incorporating analysis, design, evaluation, synthesis, and a written report of the end-product. This course may be taken in conjunction with an approved ABEN course (for an approved ABEN course, see ABEN Undergraduate Program publication).

**ABEN 497 Individual Study in Agricultural and Biological Engineering**

Fall and spring. 1–4 credits. S-U option. Prerequisite: written permission of instructor and adequate ability and training

for the work proposed. Normally reserved for seniors in upper two-fifths of their class. Students must register with an independent study form (available in 140 Roberts Hall). Hours TBA. Staff.

Special work in any area of agricultural and biological engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

**ABEN 498 Undergraduate Teaching**

Fall and spring. 1–4 credits. Prerequisite: written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours TBA. Staff.

The student assists in teaching an agricultural and biological engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

**ABEN 499 Undergraduate Research**

Fall and spring. 1–3 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class. Adequate training for work proposed. Written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours TBA. Staff.

Research in any area of agricultural or biological engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

**ABEN 501–502 M.P.S. Project**

Fall and spring. 1–6 credits. Required of each M.P.S. candidate in the field. Hours TBA. ABEN graduate faculty.

A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

**ABEN 551–552 Agricultural and Biological Engineering Design Project**

Fall and spring. 3–6 credits. Prerequisite: admission to the M.Eng. (Agr.) degree program. Hours TBA. ABEN graduate faculty.

Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. However, there is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551–552 is required for the Master of Engineering degree. Students should register for 551 their first semester and complete any additional design project credits with 552. If more than six design project credits are desired in one semester, both 551 and 552 may be taken.

**ABEN 651 Bioremediation: Engineering Organisms to Clean Up the Environment**

Spring. 3 credits. Prerequisites: BIOMI 290 or BIOMI 398 or BIOBM 331 or permission. B. Ahner.

This course examines ways in which organisms may be used to remove or metabolize pollutants in the environment including bacterial degradation of organics and phytoremediation of heavy metals. Through lectures and current literature, we will evaluate the benefits as well as the current obstacles. We will examine the current efforts to genetically engineer organisms for bioremediation and the potential risks of releasing them into the environment.

**[ABEN 652 Instrumentation: Sensors and Transducers**

Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of the instructor. Not offered 2000-2001. D. J. Aneshansley.

Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers will be emphasized. Image processing techniques will be introduced. A final project is required.]

**ABEN 655 Thermodynamics and Its Applications**

Spring. 3 credits. Prerequisite: Mathematics 293 or equivalent. Lec, R 2:30-4:30. J.-Y. Parlange.

Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, structure of organizations).

**ABEN 671 Analysis of the Flow of Water and Chemicals in Soils**

Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics. Lec, R 3:35-4:50 (first meeting—TBA after that). J.-Y. Parlange.

The course encompasses a full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. Offered alternately with Civil and Environmental Engineering 633—a complementary, but not identical, course.

**ABEN 672 Drainage**

Spring. 4 credits. Prerequisites: ABEN 471 or ABEN 473. S-U grades optional. Offered alternate years. Lec, M W F 12:20; lab, T 1:25-4:25. T. S. Steenhuis and L. D. Geohring.

Theory of water and solute flow in aquifers, hillslopes, and the vadose zone as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landfills, and land application sites will be critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage waters is examined. Laboratories are used for hands-on experience with measuring soil parameters and for actual drainage design. This course satisfies the capstone design experience requirement.

**ABEN 673 Sustainable Development Seminar (also NBA 573)**

Spring. 1-3 credits. Prerequisites: upper division undergraduate and graduate students or permission of instructor. Lec, F 1:30-3:30. N. R. Scott.

Sustainable development is the most positive concept to come out of the environmental movement in years. However, the concept of a sustainable world is not a constant. There are many aspects of sustainability involving economics, environment, and political, social, scientific, and technological developments. This seminar will explore topics such as energy, agricultural and food systems, green buildings and ecological design, corporate sustainability, and other contemporary issues.

**ABEN 678 Nonpoint Source Models**

Spring. 3 credits. Prerequisites: computer programming and calculus. Lec, T R 8:40-9:55. D. A. Haith.

Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include watershed hydrology and sediment yield, urban and rural runoff, lake eutrophication, waste disposal sites, and pesticides, nutrients, and salts in drainage.

**ABEN 685 Biological Engineering Analysis**

Spring. 4 credits. Prerequisite: T&AM 310 or permission of instructor. Lec, M W F 11:15. J. R. Cooke.

Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

**ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering**

Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. ABEN graduate faculty.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering**

Fall or spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. ABEN graduate faculty.

Topics are arranged by the staff at the beginning of the term.

**ABEN 700 General Seminar**

Fall. 1 credit. S-U grades only. Staff. Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

**ABEN 750 Orientation to Graduate Study**

Fall. 1 credit. Limited to new graduate students. S-U grades only. Lec, first 7 weeks, M 3:35-4:25; remainder to be arranged. D. J. Aneshansley.

An introduction to ABEN research policy, programs, methodology, resources, and

degree candidates' responsibilities and opportunities.

**ABEN 754 Watershed Management**

Spring. 2-3 credits. Prerequisite: graduate standing or permission of instructors. Lec, M 12:20-2:40. T. S. Steenhuis and M. J. Pfeffer.

Traditional top-down approaches to watershed management have been challenged by advocates of public participation. These challenges have raised questions about how to effectively integrate science, policy, and public participation. In this course we will review different management approaches and evaluate their usefulness in dealing with different watershed management problems. We will consider case examples from watersheds in the United States and overseas.

**ABEN 771 Soil and Water Engineering Seminar**

Fall and spring. 1-3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional. Hours TBA. T. S. Steenhuis, J.-Y. Parlange and M. F. Walter.

Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

**ABEN 781 Structures and Related Topics Seminar**

Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. TBA. Staff.

Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations. Hours to be arranged.

**ABEN 785 Biological Engineering Seminar**

Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. TBA. J. R. Cooke.

The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

**ABEN 800 Master's-Level Thesis Research**

Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.

**ABEN 900 Graduate-Level Thesis Research**

Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty. Variable credit for Ph.D. research before the "A" exam is passed.

**ABEN 901 Doctoral-Level Thesis Research**

Fall and spring. 1-15 credits. Prerequisite: passing of Admission Candidacy Exam and permission of adviser. S-U grades. ABEN graduate faculty.

## AGRICULTURAL, RESOURCE, AND MANAGERIAL ECONOMICS

A. M. Novakovic, chair; D. J. Allee, B. L. Anderson, C. B. Barrett, N. L. Bills, R. N. Boisvert, L. D. Chapman, N. H. Chau, R. D. Christy, J. M. Conrad, H. de Gorter, G. A. German, B. A. Gloy, D. A. Grossman, J. M. Hagen, J. S. Hopkins, H. M. Kaiser, S. M. Kanbur, W. A. Knoblauch, S. C. Kyle, E. L. LaDue, D. R. Lee, W. H. Lesser, E. W. McLaughlin, M. G. Meloy, R. A. Milligan, T. D. Mount, T. Ng, G. L. Poe, J. E. Pratt, C. K. Ranney, W. D. Schulze, M. W. Stephenson, D. H. Streeter, L. W. Tauer, W. G. Tomek, C. L. van Es, S. Wang, G. B. White

### Courses by Subject

Farm management, finance, and production economics: 302, 402, 403, 404, 405, 406, 605, 608, 708

Statistics, quantitative methods, and price analysis: 210, 410, 411, 412, 415, 416, 417, 710, 711, 712, 713, 714, 717

Business management, law, and accounting: 220, 221, 320, 321, 323, 324, 325, 326, 327, 328, 422, 424, 425, 426, 427

Public policy: 230, 430, 431, 433, 630, 633, 634, 730, 735

Marketing and food distribution: 240, 340, 344, 346, 347, 443, 446, 447, 448, 449, 640, 641, 740

Environmental and resource economics: 250, 450, 451, 651, 652, 750, 751

Economics of development: 464, 665, 666, 667, 762, 763

Consumer economics: 670

General, contemporary issues, research, and other: 100, 380, 494, 497, 498, 499, 694, 698, 699, 700, 800, 900, 901

**Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

#### [ARME 100 Economics for Business in a Global Economy]

Fall. 3 credits. Priority given to CALS majors. There are additional limitations on non-CALS enrollments—pre-enrollment does not guarantee admission to the course. Prerequisite: past or concurrent enrollment in Economics 101, or the equivalent, required. Lec, M W F 11:15–12:05. Labs TBA. Not offered fall 2000. Staff. Understanding individual markets and the world economy is critical for business success. This course focuses on understanding economic theory useful for formulating business strategy, such as highly competitive markets, asset markets functioning, market power, government regulation, environmental policy, international trade, and macroeconomic policy. Students participate in eight laboratory market experiments.]

#### ARME 210 Introductory Statistics

Fall. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Lec, M W F 11:15–12:05; sec, M 7:30–9:25; T 10:10–12:05, 12:20–2:15 (2 sec), or 2:30–4:25 (2 sec); W 12:20–2:15 (2 sec), 2:30–4:25, or 7:30–9:25 P.M.; R 12:20–2:15 (2 sec), 2:30–4:25 (2 sec), or F 12:20–2:15 (2 sec). 2 evening prelims. C. van Es.

An introduction to statistical methods. Topics to be covered include the descriptive analysis

of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

#### ARME 220 Introduction to Business Management

Spring. 3 credits. Priority given to CALS majors. Lec, M W F 10:10–11:00.

J. M. Hagen.

This course provides an overview of management and business. Human resources, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as globalization, ethics, quality, and strategic alliances. Case studies and guest executives are an important part of the course.

#### ARME 221 Financial Accounting

Spring. 3 credits. Not open to freshmen. Priority given to CALS majors. Lec, M F 11:15–12:05 or 12:20–1:10; sec, T 10:10–12:05 (2 sec), 12:20–2:15, or 2:30–4:25; W 10:10–12:05, 12:20–2:15 (2 sec), 2:30–4:25 (2 sec), or 7:30–9:25 P.M. (2 sec); or R 10:10–12:05, 12:20–2:15, or 2:30–4:25.

2 evening prelims and a comprehensive final, weekly homework assignments, and 1 written case study and one project using an electronic spreadsheet. J. S. Hopkins.

A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and statements interpretation. Elements examined include inventory, depreciation, internal control of assets, time value of money, notes, stocks, bonds, and the statement of cash flows. Limited use of a financial data base of publicly held companies; introduction to financial information on the web.

#### ARME 230 International Trade and Finance (also ECON 230)

Spring. 3 credits. Prerequisites: ECON 101 or equivalent required; ECON 102 or equivalent recommended. Lec, T R 1:25–2:40; 1 hour weekly discussion to be arranged. 1 evening prelim. D. R. Lee.

This course provides a one-semester introduction to international economics principles and issues. The course first surveys key topics such as the elements of comparative advantage, tariff and non-tariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets are discussed throughout. This course is designed as a less technical introduction to concepts developed at a more advanced level in ARME 430 and ECON 361–362.

#### ARME 240 Marketing

Fall. 3 credits. No adds after first week of class. Lec, M W F 10:10–11. M. G. Meloy. This course provides a broad introduction to the fundamentals of marketing. We explore the components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services to people. Industry guest lectures and current marketing applications from various companies are presented and analyzed. In order to provide hands-on experience, students will work in teams with local not-for-profit organizations.

#### ARME 250 Environmental Economics

Spring. 3 credits. Lec, T R 2:55–4:10.

D. Chapman.

Concepts and methods used in the public and private analysis of environmental resources. Subjects include valuation, benefit-cost analysis, and ecological economics. Major current economic problems such as economic incentives in environmental policy, endangered species protection, forestry, energy use, world petroleum resources, and global warming. The growing world trade in resource-intensive manufactured products and the impact on income, employment, and pollution. Comparative resource use and environmental protection in industrialized and developing countries.

#### ARME 302 Farm Business Management

Fall. 4 credits. Not open to freshmen. This course is a prerequisite for ARME 402 and 405. Lec, M W F 9:05–9:55; sec, W or R 1:25–4:25. On days farms are visited, the section period is 1:25–6:00.

W. A. Knoblauch.

An intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings, and machinery.

#### ARME 320 Business Law I (also NBA 560)

Fall. 3 credits. Limited to juniors, seniors, and graduate students. Lec, M W F 9:05–9:55. 1 evening prelim. D. A. Grossman.

Consideration is given chiefly to legal problems of particular interest to persons who expect to engage in business. Emphasis is on the law pertaining to contracts, sales, agency, and property.

#### ARME 321 Business Law II (also NBA 561)

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a course in business law or permission of instructor. Lec, T R 8:40–9:55.

D. A. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course will review selected topics in business law, like employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

#### ARME 323 Managerial Accounting

Fall. 3 credits. Priority given to CALS majors. Prerequisite: ARME 221 or equivalent. Lec, M W 12:20–1:10; sec, R 10:10–12:05, 12:20–2:15 (2 sec), or 2:30–4:25 (2 sec); or F 10:10–12:05 or 12:20–2:15 (2 sec). 2 evening prelims, a third exam, weekly homework, one written case study, and one project using an electronic spreadsheet. J. S. Hopkins.

An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, inventory control, variance analysis, measuring divisional performance, and accounting systems in the manufacturing environment. Use of electronic spreadsheets is required.

**ARME 324 Financial Management**

Spring. 4 credits. Priority given to CALS majors. Prerequisite: ARME 220 or equivalent. Recommended: ARME 221 and 210 or equivalents. Lects, M W F 1:25-2:15; secs, T 2:30-4:25 or W 2:30-4:25 or R 10:10-12:05, 12:20-2:15, or 2:30-4:25, or F 10:10-12:05. 3 evening prelims. R. Curtis.

This course focuses on basic managerial, financial, and economic decisions, corporate financial policy, risk management, and investments. Topics include the time value of money, capital budgeting decisions, financing alternatives, short-term financial policy, the cost of capital and the capital structure decision, distribution policy, mergers and acquisitions, options, forward and futures contracts, market efficiency and market anomalies, and personal financial considerations.

**ARME 325 Personal Enterprise and Small Business Management**

Spring. 4 credits. Limited to juniors and seniors. Prerequisites: ARME 220 and 221 or permission of instructor. Absolutely no adds or drops after second class meeting. Term project work will amount to approximately \$100 per team. Lects, T R 12:20-1:10; sec, W 2:30-4:25. Two additional hours to be arranged. D. Streeter.

Course is focused on the activities involved in planning a start-up business, including the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real world entrepreneurs who discuss the start-up process and the challenges of managing growth in a small business. Term project is the development of a business plan, completed in teams no fewer than three.

**ARME 326 Human Resource Management in Small Businesses**

Fall. 3 credits. Prerequisite: ARME 220 or ARME 302 or equivalent. S-U grades optional. Lects, T R 10:10-11:25 or 11:40-12:55 or 2:55-4:10. 1 evening prelim. R. A. Milligan.

An introduction to the management of human resources in small businesses. The focus is on developing and using all of the capabilities of all small business personnel including owners, family members, and employees. Topics include recruitment, selection, compensation, training, empowerment, team building, leadership, performance management, and conflict resolution. Student involvement and active learning experiences are emphasized.

**[ARME 327 Accounting for Entrepreneurs]**

Spring. 3 credits. This course is intended for non-ARME majors. Students may not receive credit for this course in addition to credit for ARME 221 and/or ARME 323. Lects, T R 10:10-11:25; sec W 2:30-3:20 or R 1:25-2:15. Not offered spring 2001. Staff.

This course provides an introduction to the principles of accounting used by entrepreneurs who plan, direct, control, and make decisions about critical business activities in their companies. This course will provide future entrepreneurs with the requisite technical skills to accumulate, record, and communicate financial information about their businesses to internal and external parties of the firm. We will explore the principles of financial accounting (accounts receivable, inventory, fixed assets, liabilities, time value of money, investments, owners' equity) and managerial accounting (budgeting, product

costing, inventory management, break-even analysis) as they apply to small businesses. Use of accounting software and the Internet will be required. This course is intended for students who have no prior accounting courses and who are preparing for an entrepreneurial career path.]

**ARME 328 Innovation and Dynamic Management (also H ADM 418)**

Spring. 3 credits. Limited to juniors and seniors. Lects, T R 1:25-2:40. C. Enz.  
For description, see H ADM 418.

**ARME 340 Futures and Options Trading**

Spring. 3 credits. Limited to juniors and seniors. Priority given to CALS juniors and seniors, then out of college seniors. Prerequisites: ECON 101, EDUC 115, and ARME 210 or equivalent. S-U grades optional. Lects, T R 10:10-11:25. W. H. Lesser.

The focus of the course is on the use of futures and options as risk management tools. Commodities, exchange rate, and interest rate derivatives are covered from the perspective of the hedger, but those interested in arbitrage and speculation will get some insights as well. Students will participate in a simulated trading exercise in which they will use price and market information and input from industry experts to manage a hedge position.

**ARME 344 Consumer Behavior**

Fall. 3 credits. Prerequisites: ARME 240 or equivalent. Limited to 45 juniors and seniors. Priority given to CALS students. Lects, M W 2:55-4:10. M. G. Meloy.

This course introduces students to the psychological, sociological, and cultural theories of buyer behavior, with specific attention to consumer information processing and decision making. Class discussions, lectures, experiential exercises, and group projects will be used to illustrate behavioral concepts and their application to marketing practice. The role of research in understanding and explaining consumer behavior is emphasized. If a student has already taken NBA 626, they are not permitted to enroll in ARME 344. Students are not permitted to take both PAM 323 and ARME 344 or HADM 347 and ARME 344 due to overlap.

**ARME 346 Dairy Markets and Policy**

Spring, weeks 1-7. 1 credit. Limited to juniors and seniors. Prerequisites: ECON 101 or equivalent. S-U grades optional. Lects, R 2:30-4:25. M. Stephenson.

An introduction to dairy markets and policy. Major topics include: milk pricing, marketing channels, dairy trends and demographics, world trade for dairy products, and policy issues. Class participation is expected as topics and new ideas are explored.

**ARME 347 Strategic Marketing for Horticultural Firms**

Spring. 1 credit. Prerequisite: ARME 240. Lec, M 12:20-1:10. G. B. White.

This course will emphasize applications in strategic marketing. Lectures focus on practical aspects of the planning, implementation, and control phases of the strategic marketing process. Students will develop a long-range marketing plan for a fruit, vegetable, greenhouse, nursery, winery, or related horticultural firm.

**ARME 380 Independent Honors Research in Social Science**

Fall or spring. 1-6 credits. Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS section of this catalog. Provides qualified students an opportunity to conduct original research under supervision. Information available in ARME undergrad program office in Warren Hall.

**[ARME 402 Seminar in Farm Business Planning and Managerial Problem Solving]**

Fall. 3 credits. 4 half-day field trips. One all-day field trip. On days field trips are taken, class ends at 6:00. Prerequisite: ARME 302 or equivalent. Lects, T R 12:20-1:10; sec, R 1:25-4:25. Not offered fall 2000. Staff.

A capstone seminar/workshop designed for juniors and seniors who plan to return to the family business or home farm or to take positions in banking, credit, or agribusiness, as well as those who wish to establish entrepreneurial businesses. The objective of the course is to pull together interdisciplinary knowledge and apply it in a problem-solving/critical-thinking management context. Topics include managerial analysis and strategic planning, human resource management, and business and family arrangements.]

**ARME 403 Farm Management Study Trip**

Spring. 1 credit. Prerequisite: ARME 302. Open by application only. Secs, arranged. W. A. Knoblauch.

A special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.

**ARME 404 Advanced Agricultural Finance Seminar**

Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. W 2:30-4:25. E. L. LaDue.

A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall term, a two- to four-day trip to financial institutions in New York City, and an actual farm consulting and credit analysis experience in the spring term.

**ARME 405 Farm Finance**

Spring. 4 credits. Prerequisite: ARME 302 or equivalent. Lects, M W F 9:05-9:55; sec, T 2:30-4:25. E. L. LaDue.

The principles and practices used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

**[ARME 406 Farm and Rural Real Estate Appraisal]**

Spring, weeks 7-15. 2 credits. Limited to 40 students. Prerequisites: ARME 302 or equivalent and permission of instructor. Lec, R 11:15-12:05; sec R 1:25-4:25. 5 half-day field trips, 1 all-day field trip. On days field trips are taken, class ends at 6:00. Not offered spring 2001. Staff.

The basic concepts and principles involved in appraisal. Factors governing the price of farms and rural real estate and methods of valuation are studied. Practice in appraising farms and other rural properties.]

**ARME 410 Business Statistics**

Spring. 3 credits. Prerequisite: ARME 210 or equivalent. Lec, M W F 11:15-12:05. 2 evening prelims. C. van Es.

This course focuses on four major topics used to analyze data from marketing research, business, and economics. Topics studied are: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. A brief introduction to nonparametric methods is also included. The course will involve a research project designed to give experience in collecting and interpreting data.

**ARME 411 Introduction to Econometrics**

Fall. 3 credits. Prerequisite: ARME 210 and either ECON 313 or PAM 200, or equivalents. Lec, T R 1:25-2:40. Optional section TBA. C. B. Barrett.

The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression are discussed and simultaneous equation models, simulation, and forecasting techniques are introduced.

**ARME 412 Introduction to Mathematical Programming**

Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: ARME 210 or equivalent. Lec, T R 11:40-12:55; sec, T or W 1:25-2:15. J. E. Pratt.

This is a course in applied mathematical programming. The emphasis will be on formulation, specification, and interpretation of solutions to mathematical models of problems in economics and business. Standard problems such as blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management will be studied. Integer and nonlinear programming will be introduced.

**ARME 415 Price Analysis (also ECON 415)**

Fall. 3 credits. Prerequisites: ARME 210 or equivalent. ECON 313 or PAM 200 or equivalent. Lec, T R 8:40-9:55. C. Chung.

The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Special attention is paid to empirical analysis. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

**ARME 416 Demographic Analysis in Business and Government (also R SOC 331)**

Fall. 3 credits. Prerequisite: ARME 210 or equivalent. Lec, W F 1:25-2:15; sec, M 12:20-1:10 or M 1:25-2:15. W. Brown.

For description, see R SOC 331.

**ARME 417 Decision Models for Small and Large Businesses**

Spring. 3 credits. Limited to juniors and seniors. Preference given to ARME majors. Prerequisites: ARME 210 or equivalent. Lec, M W 2:30-3:20; lab W 7:30-9:25 or R 12:20-2:15 or R 2:30-4:25. C. L. van Es.

The course is focused on economic and statistical models of decision analysis and their application in large and small business settings. The course will demonstrate how use of models can improve the decision-making process by helping the decision maker: understand the structure of the decision, incorporate subjective probabilities as a way to portray risk, measure outcomes in a way that is consistent with attitudes toward risk, and understand the value of information. The importance of sensitivity analysis will be emphasized, as well as the need to combine both quantitative and qualitative considerations in decision making. Cases will be drawn from small business scenarios, the public policy arena, and corporate settings. Implementing decision models with computers will be the focus of lab sessions.

**ARME 422 Estate Planning (also NBA 562)**

Fall. 1 credit. Limited to juniors, seniors, and graduate students. S-U grades only. Lec, M 3:35-4:25. D. A. Grossman.

Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures are covered.

**ARME 424 Strategic Management**

Fall. 3 credits. Limited to seniors majoring in business management and marketing. T R 8:40-9:55, 10:10-11:25 or 1:25-2:40. B. L. Anderson.

This is a capstone course designed to integrate what students have learned in other ARME courses with an emphasis on strategic decision making. Issues will be approached from the standpoint of the board of directors, chief executive officer, and business unit managers. What should be considered and how strategic decisions should be made are the focus of the course. While the primary focus is on public corporations, not-for-profits, cooperatives, and small business strategic decisions will also be included. The course is built around several high-level guest executives and a series of case studies. Improving oral and written communication skills in a business context is emphasized.

**ARME 425 Small Business Management Workshop**

Fall. 4 credits. Limited to seniors. Prerequisite: ARME 325 or NBA 300 and permission of instructor. Term project work will amount to approximately \$100 per team. Lec, M W 2:30-4:25. D. Streeter.

Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff at arranged times during the semester.

**ARME 426 Cooperative Management and Strategies**

Spring. 3 credits. Recommended: ARME 220 or equivalent. Estimated cost of field trip, \$60. Lec, M W F 12:20-1:10. 2-day field trip required. B. L. Anderson.

Investigates the unique aspects of cooperative, membership, and not-for-profit organizations. Issues are approached from the point of view of management, the board of directors, and members. Topics include characteristics of various types of business organizations, cooperative principles, legislation, taxation, as well as the unique nature of strategies, management, financing, and marketing in cooperative, membership, and not-for-profit organizations. Primary focus is on operating cooperatives in agriculture, although alternative types of cooperative organizations are discussed, such as: credit unions, insurance cooperatives, employee stock ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations.

**ARME 427 Advanced Agribusiness Management**

Fall. 3 credits. Prerequisites: ARME 220 or ARME 302. Lec, T R 1:25-2:40. B. A. Gloy.

The course is intended for students with an interest in agribusiness and is designed to integrate previous coursework and enhance problem identification and solving skills. The focus is on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for agribusiness firms. The course covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategy development, organizational design and structure, and leadership for agribusiness firms. This course is designed as a capstone course for the agribusiness management specialization.

**ARME 430 International Trade Policy**

Spring. 3 credits. Prerequisites: ECON 101-102 or equivalents and intermediate microeconomics. Recommended: ARME 230. Lec, T R 1:25-2:40. Optional section TBA. N. H. Chau.

This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are also emphasized.

**ARME 431 Food and Agricultural Policies**

Spring. 3 credits. Prerequisite: intermediate microeconomics. Lec, T R 11:40-12:55; sec, R 2:30-3:20 or 3:35-4:25. H. de Gorter.

The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.

**ARME 433 Devolution, Privatization, and the New Public Management (also CRP 412)**

Fall. 3 credits. S-U grades optional. Lec, T 10:10-12:35. M. E. Warner.

For description, see CRP 412.

**ARME 443 Food-Industry Management**

Fall. 4 credits. Limited to juniors and seniors majoring in business management and marketing or food industry management and grad students. Prerequisite: ARME 240 or 448 or permission of instructor. Lec, T R 11:40-12:55; sec T 2:55-4:10. G. A. German.

A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday afternoon section.

**ARME 446 Food Marketing Colloquium**

Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of the instructor. S-U grades only. R 3:35-4:25. D. J. Perosio.

ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken. Students will participate in research topics on various aspects of the food industry.

**ARME 447 Food Marketing Colloquium**

Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of instructor. S-U grades only. R 1:25-2:15. D. J. Perosio.

ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken. Students will participate in research topics on various aspects of the food industry.

**ARME 448 Food Merchandising**

Spring. 3 credits. Limited to juniors and seniors. Prerequisite: ARME 240. Lec, T R 10:10-11:25. D. J. Perosio.

Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined in this course. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

**ARME 449 Global Marketing Strategy**

Spring. 3 credits. Prerequisite: previous marketing course. Limited to junior, seniors, and graduate students. M W 2:55-4:10. J. M. Hagen.

This course examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. The course includes case analysis and discussion.

**ARME 450 Resource Economics (also ECON 450)**

Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and a familiarity with EXCEL. Lec, M W F 2:30-3:20. J. M. Conrad.

Dynamic models of renewable, nonrenewable, and environmental resources will be constructed to examine market allocation and optimal resource management.

**[ARME 451 Environmental Economics and Policy (also ECON 409)]**

Spring. 3 credits. Prerequisites: ECON 313, or intermediate microeconomics course, and calculus. Limited to undergraduate students. S-U grades optional. Lec, T R 1:25-2:40. Not offered spring 2001. G. L. Poe.

This course explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasis is placed on the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, and the use of nonmarket valuation techniques. Property rights/institutional perspectives and ecological economic concepts will also be examined.]

**ARME 464 Economics of Agricultural Development (also ECON 464)**

Spring. 3 credits. Prerequisites: ECON 101-102, or permission of instructor. Lec, T R 11:40-12:55. R. D. Christy.

This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector will be covered to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries will be used to illustrate the basis for economic analysis.

**ARME 494 Undergraduate Special Topics in Agricultural, Resource, and Managerial Economics**

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department.

**ARME 497 Individual Study in Agricultural, Resource, and Managerial Economics**

Fall or spring. Variable credit. S-U grades optional. Students must register with an Independent Study form (available in 154 Warren Hall). Staff.

To be used for special projects designed by faculty members.

**ARME 498 Supervised Teaching Experience**

Fall or spring. 1-4 credits. Total of 4 credits maximum during undergraduate program. Students must register with an Independent Study form (available in 154 Warren Hall). Staff.

Designed to give qualified undergraduates experience through actual involvement in

planning and teaching courses under the supervision of department faculty. Students are expected to teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

**ARME 499 Undergraduate Research**

Fall, spring, or summer. 1-4 credits.

Limited to students with GPAs of at least 2.7. Students must register with an Independent Study form (available in 154 Warren Hall). S-U grades optional. Staff.

Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

**ARME 605 Agricultural Finance**

Fall. 3 credits. Prerequisite: ARME 324 or 405 or equivalent. T R 8:40-9:55.

B. A. Gloy.

Advanced topics on agricultural finance. Topics include investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.

**ARME 608 Production Economics (also ECON 408)**

Fall. 3 credits. Recommended: ECON 313 and MATH 111 or equivalents. Lec, M W F 10:10-11. L. W. Tauer.

The theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

**ARME 630 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 430)**

Spring. 4 credits. Prerequisites: ARME 608 or CE&H 603, ECON 313, or equivalent intermediate micro theory incorporating calculus. Lec, M W 12:20-2:15.

H. de Gorter.

The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

**ARME 633 Devolution, Privatization, and the New Public Management (also CRP 612)**

Fall. 3 credits. S-U grades optional. Lec, T 10:10-12:35. M. E. Warner.

For description, see CRP 612.

**ARME 634 Local Government Restructuring Workshop (also CRP 618)**

Spring. 4 credits. Prerequisite: ARME 633. S-U grades optional. Lec, F 9:05–12:25. M. E. Warner.

For description, see CRP 618.

**[ARME 640 Analysis of Agricultural Markets (also ECON 440)]**

Fall. 3 credits. Prerequisites: ARME 411 and 415 or equivalents. Lecs, T R 2:55–4:10. Not offered fall 2000. H. M. Kaiser.

This course focuses on the unique features of agricultural commodity markets. Focus is placed on government and private institutions impacting these markets, as well as on models of price behavior including marketing margins and imperfect competition. Empirical tools to evaluate market characteristics will also be covered.]

**ARME 641 Commodity Futures Markets (also ECON 441)**

Spring, weeks 8–14 (starts Mar. 13). 2 credits. Prerequisites: ARME 411 and 415 or equivalents. Recommended: ARME 640. Lecs, T R 12:20–2:15. W. G. Tomek.

This course is about markets for agricultural futures contracts. Emphasis is placed on models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

**ARME 651 Environmental and Resource Economics**

Spring. 4 credits. Limited to graduate students. Lecs, T R 10:10–11:25. L. D. Chapman.

A review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and cost—including property value and wage hedonic approaches, travel cost models, and contingent valuation—are covered. Survey/data collection methods are described in detail. Explore innovative market mechanisms for resolving public good, common property, and externality problems. Students will be required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. Open to graduate students outside of economics. ARME 651 is a core course for the Environmental Management concentration/option.

**ARME 652 Land Economics Problems (co-listed with CEE 529)**

Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. W 7:30–9:25 P.M. D. J. Allee.

Special work on any subject in the field of land and resource economics.

**ARME 665 Food and Nutrition Policy (also NS 685)**

Spring. 3 credits. Prerequisites: introductory microeconomics and intermediate statistics (i.e. through multiple regression), or permission of instructor. S-U grades optional. Lecs, M W 2:55–4:10. D. Sahn.

For description, see NS 685.

**[ARME 666 Economics of Development (also ECON 466)]**

Spring. 3 credits. Prerequisites: ECON 313 and 314 or permission of instructor. S-U grades optional. Lecs, T R 11:40–12:55. Not offered spring 2001. S. C. Kyle.

The course is designed as an introduction to the economics of development at the graduate level. The course will be split into two major sections, the first dealing with the microeconomics of households in developing countries and the second covering macroeconomic strategy and performance. A principal goal will be to illuminate the particular features of low-income countries which are important to economic analysis and policy. Special attention will be given to issues facing countries with important agricultural and resource sectors.]

**ARME 667 Topics in Economic Development (also ECON 770)**

Spring. 3 credits. Prerequisite: basic first-year courses in ECON or ARME, or instructor's permission. S-U grades optional. Lecs, T R 1:25–2:40. R. Kanbur.

This course is targeted to second-year graduate students. Topics covered will vary from year to year but may include: poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination will be by term paper.

**ARME 670 Economics of Consumer Demand (also PAM 608)**

Fall. 3 credits. Prerequisites: ECON 311 or 313 and 2 semesters of calculus. S-U grades optional. Lecs, T R 8:40–9:55. C. K. Ranney.

A graduate level introduction to theory and empirical research on household demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand will be introduced.

**ARME 694 Graduate Special Topics in Agricultural, Resource, and Managerial Economics**

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

**ARME 698 Supervised Graduate Teaching Experience**

Fall or spring. 1–4 credits. Total of 4 credits maximum during graduate program. Students must register with an Independent Study form (available in 154 Warren Hall). Open only to graduate students. Undergraduates should enroll in ARME 498. S-U grades optional. Prerequisite: permission of instructor. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

**ARME 699 M.P.S. Research**

1–6 credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report. Staff.

**ARME 700 Individual Study in Agricultural, Resource, and Managerial Economics**

Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff.

This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

**[ARME 708 Advanced Production Economics]**

Fall. 3 credits. Prerequisite: ARME 608, 710, or equivalents; ECON 609 is highly recommended. Offered alternate years. Not offered fall 2000 and 2002. Next offered fall 2001. Hours TBA. R. N. Boisvert.

Theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economies, technical change, factor substitution. Developments in flexible functional forms, duality, and dynamic adjustment models are emphasized. Discussions of other topics (risk, supply response, and household production functions) based on student interest.]

**ARME 710 Econometrics I**

Spring. 4 credits. Prerequisites: matrix algebra and statistics at the level of ILRST 311 or BTRY 409 and 417 or ECON 619 preferred. Undergraduates must have permission of instructor. Lecs, M W F 8:40–9:55. T. D. Mount.

This course together with ARME 711 provides a Ph.D.-level sequence in applied econometrics. 710 covers selected statistical models and associated estimators, including dynamic and other stochastic regressor models, seemingly unrelated regression and simultaneous equation models, and models with nonspherical error terms and specification errors.

**ARME 711 Econometrics II**

Fall. 4 credits. Prerequisite: ARME 710 or equivalent. BTRY 417 recommended. Lecs, M W 10:10–12:05. T. D. Mount.

Coverage beyond that of ARME 710 of linear regression models, including alternative methods of incorporating nonsample information and testing restrictions, diagnostic techniques for collinearity and influential observations, pooling data, stochastic coefficients, limited dependent variables, and latent variables.

**ARME 712 Quantitative Methods I**

Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended. Lecs, M W F 8:40–9:55. R. N. Boisvert.

A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

**ARME 713 Quantitative Methods II**

Spring. 3 credits. Prerequisite: ECON 609. S-U only. Lects, M W F 9:05-9:55. J. M. Conrad.

This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of optimization and numerical analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

**[ARME 714 Experimental Economics]**

Fall. 4 credits. Prerequisite: ECON 609. Offered alternate years. Not offered fall 2000 and 2002. Next offered fall 2001. Lects TBA. W. D. Schulze.

The course will survey both experimental economics methods and research as an approach to test economic theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation and performance; public goods; externalities, and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.]

**ARME 717 Research Methods in Agricultural Economics**

Spring. 2 credits. Limited to graduate students. M 2:30-4:25. R. N. Boisvert.

Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

**[ARME 730 Seminar on International Trade Policy: Agriculture, Resources and Development]**

Spring. 3 credits. Limited to graduate students. Prerequisites: ARME 630 or equivalent. Offered alternate years. Not offered spring 2001 and 2003. Next offered spring 2002. Hours TBA. D. R. Lee.

This course examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.]

**ARME 735 Public Finance: Resource Allocation and Fiscal Policy (also ECON 735)**

Spring. 4 credits. Time TBA. R. Kanbur. For description, see ECON 735.

**ARME 740 Agricultural Markets and Public Policy**

Spring, weeks 1-7. 2 credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the ARME 411 level or higher. Recommended: ARME 640. T R 12:20-2:15. W. H. Lesser. Develops the concepts and methodology for applying and analyzing the effects of public-

policy directives to the improvement of performance in the U.S. food marketing system. Prospective topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination systems in agriculture. Topics can be adjusted to students' interests.

**ARME 750 Resource Economics**

Fall. 3 credits. Prerequisites: ECON 609 and 618, or ARME 713. Lects, M W F 9:05-9:55. J. M. Conrad.

Optimal control and other methods of dynamic optimization will be used to study the allocation and management of natural resources.

**ARME 751 Environmental Economics**

Spring. 4 credits. Prerequisites: ECON 609 and 618, or ARME 713. S-U grades optional. Hours TBA. Offered alternate years. Offered spring 2001 and 2003. Not offered spring 2002. R. N. Boisvert and L. D. Chapman.

Economic theory will be applied to the problems of managing environmental quality. Static and dynamic models of externality, decisions to preserve or develop natural environments, and methods of valuation will be presented.

**ARME 762 Microeconomics of International Development**

Fall. 3 credits. Prerequisite: completion of first year Ph.D. course sequence in ARME or ECON, or instructor's permission. S-U grades optional. Lects, T R 11:40-12:55. C. B. Barrett.

This course focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics covered include agricultural land, labor and financial institutions, technology adoption, food security and nutrition, risk management, intra-household analysis, reciprocity networks, and product/factor markets analysis. Empirical investigation is emphasized.

**[ARME 763 Macro Policy in Developing Countries]**

Spring. 3 credits. Prerequisites: ECON 609, 610, 613 (may be taken concurrently), or permission of instructor. Offered alternate years. Not offered spring 2001 and 2003; next offered spring 2002. Lec, T 2-4:25. S. C. Kyle.

This course examines macroeconomic policies in developing countries and their interaction with economic growth, development, and stability. Theoretical models useful for analysis of macro policies will be covered as well as an examination of empirical studies. Emphasis will be on research topics of current interest to students and professionals in the field, particularly those relating to the interaction of macro policy with micro and sectoral analysis.]

**ARME 800 Master's-Level Thesis Research**

Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty.

For students admitted specifically to a master's program.

**ARME 900 Graduate-Level Thesis Research**

Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty.

For students in a Ph.D. program only before the "A" exam has been passed.

**ARME 901 Doctoral-Level Thesis Research**

Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

**ANIMAL SCIENCE**

A. W. Bell, chair; R. E. Austic, D. E. Bauman, D. H. Beermann, R. W. Blake, Y. R. Boisclair, D. L. Brown, W. R. Butler, L. E. Chase, G. F. Combs, W. B. Currie, H. N. Erb, R. W. Everett, D. G. Fox, D. M. Galton, R. C. Gorewit, H. F. Hintz, P. A. Johnson, K. Keshavarz, X. G. Lei, E. A. Oltenacu, P. A. Oltenacu, T. R. Overton, J. E. Parks, A. N. Pell, R. E. Pitt, E. J. Pollak, R. L. Quaas, S. M. Quirk, R. D. Smith, M. L. Thonney, M. E. Van Amburgh

**AN SC 100 Domestic Animal Biology I**

Fall. 4 credits. S-U grades optional. Lects, M W F 9:05; sec, T W or R 2-4:25. W. B. Currie.

An introduction to the biology of economically important species (morphology, anatomy, and physiology) and its application to the management of animals in major livestock industries. Topics covered include fundamentals of genetic selection and relevant biometry, anatomy, quantitative cell biology, regulatory mechanisms, public domain genetic databases, major life support systems, and digestion. Students undertake the care and management of a large colony of Japanese quail and conduct a genetic selection experiment. Nonselected birds are culled and used by students in laboratory exercises examining aspects of growth and development. In other laboratories, living farm animals are used noninvasively and fresh organs from dead animals are examined.

**AN SC 105 Contemporary Perspectives of Animal Science**

Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers. T 1:25 or W 12:20. R. C. Gorewit and D. J. Cherney.

A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

**AN SC 120 Animal Domestication and Behavior**

Fall. 3 credits. T R 8:40-9:55. E. A. Oltenacu.

This Freshman Writing Seminar will explore the relationship between humans and their domestic animals. Students will study the role of animal behavior in the domestication process, both historically and in modern attempts to domesticate new species, and in finding solutions to current issues related to animal welfare.

**AN SC 150 Domestic Animal Biology II**

Spring. 4 credits. S-U grades optional. Lec, M W F 9:05; lab/disc T W or R 2-4:25. W. R. Butler and staff.

Second of a two-semester sequence (100/150) applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the production and care of domestic animals. Fresh tissues and organs from dead animals along with preserved specimens will be used in laboratories, exercises, and demonstrations.

**AN SC 212 Animal Nutrition**

Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. Lects, M W F 10:10; lab, M T W R or F 1:25-4:25. A. W. Bell and D. J. R. Cherney. An introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

**AN SC 213 Nutrition of the Dog**

Spring, weeks 1-7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Next offered spring 2001, 2003; not offered spring 2002. Lects W 7:30-9:25 P.M. H. F. Hintz. Nutrition of the dog. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

**[AN SC 214 Nutrition of Exotic Animals**

Spring, weeks 1-7. 1 credit. Prerequisite: AN SC 212. Offered alternate years. Next offered spring 2002; not offered spring 2001, 2003. Lec, W 7:30-9:25 P.M. H. F. Hintz.

Principles of nutrition for exotic animals. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation will be discussed. Signs of nutrient deficiencies and excesses will be described.]

**AN SC 215 Exotic Avian Husbandry and Propagation**

Spring. 2 credits. Limited to 100 students. Prerequisites: AN SC 100, 150 or one year of introductory biology. Lec, M 2:30-4:30. J. Parks and D. Muscarella. Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Lectures, demonstrations, and local field trips.

**AN SC 216 Nutrition of the Cat**

Fall, weeks 1-7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Next offered fall 2000, 2002; not offered fall 2001. Lects, W 7:30-9:25 P.M. H. F. Hintz. Nutrition of the cat. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

**AN SC 221 Introductory Animal Genetics**

Spring. 3 credits. Prerequisite: a year of college biology. Lects, T R 9:05; sec, T W R or F 2-4:25. E. J. Pollak. An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

**AN SC 222 Introduction to Canine Genetics**

Summer. 1 credit. Prerequisites: introductory biology or permission of instructor. E. J. Pollak and P. A. Oltenacu. Introduction to basic Mendelian genetics and simply inherited characteristics in the dog. This distance-education course delivered by CD and web interaction for residents and nonresidents consists of lectures on basic genetic principles, probabilities, linkage and genetic testing, and seminars on genome mapping, inherited sexual disorders, bleeding

disorders, and eye defects. This course should not be taken for credit by students who have successfully completed AN SC 221.

**AN SC 250 Dairy Cattle Principles**

Fall. 3 credits. S-U grade optional. Lects, T R 10:10; lab, T 1:25-4:25. D. M. Galton and T. Batchelder. Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 251, 351, and AN SC 355.

**AN SC 251 Dairy Cattle Selection**

Fall. 2 credits. Prerequisite: AN SC 250 or equivalent. S-U grades optional. Lec, W 1:25-2:15; disc, W 2:15-4:25. D. M. Galton. Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis on economical traits to be used to improve genetic progress and herd profitability.

**AN SC 265 Horses**

Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lects, T R 9:05; lab, R 1:25-4:25. C. Collyer. Selection, management, feeding, breeding, and training of light horses.

**AN SC 280 Molecular Biology in Agriculture and Medicine**

Fall. 2 credits. Prerequisite: one year of introductory biology. Lec, T R 10:10. S. M. Quirk.

The applications of molecular biology to animal research, animal agriculture, industry, and medicine are discussed. An introduction of basic recombinant DNA techniques is followed by topics such as transgenic animal production, mammalian cloning, genome projects, gene therapy, and genetic screening. Ethical issues raised by use of these techniques will be discussed.

**AN SC 290 Meat Science (also FOOD 290)**

Fall. 2 or 3 credits. Lects, T R 11:15; lab, M or R 12:20-3:20. Lecture only, 2 credits; lecture plus lab, 3 credits; lab cannot be taken without lecture. Staff.

An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture, and quality control. An all-day field trip to commercial meat plant may be taken.

**AN SC 300 Animal Reproduction and Development**

Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and 1 year of introductory biology. Lects, M W F 10:10. J. E. Parks.

Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

**AN SC 301 Animal Reproduction and Development Lab**

Spring. 1 credit. Prerequisite: AN SC 100-150 or equivalent. Concurrent enrollment in or completion of AN SC 300 required to register. Labs, M W or F 1:25-4:25. Each lab limited to 30 students. J. E. Parks. Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals will be used in some demonstrations. Dissection and examination of tissues from vertebrate animals will be included in selected laboratories.

**AN SC 305 Farm Animal Behavior (also BIOAP 312)**

Spring. 2 credits. Prerequisites: introductory animal physiology (AN SC 100 and 150 or equivalent); at least 1 animal production course or equivalent experience is recommended. S-U grades optional. Lec, T R 11:15. E. A. Oltenacu and K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

**AN SC 314 Practice in Critical Thinking in the Biological Sciences**

Fall. 1 credit. M 12:20. A. van Tienhoven. The course will consist of four or five presentations by the instructor of the "scientific method." Each week the students will critically review a published paper in the biological sciences as if it were a manuscript and submit their typed review. Each week, a different student will be designated to collate these reviews and write an evaluation to the "editor-in-chief." This evaluation will be reported verbally and in writing. Students thus will learn to think, write, and speak critically. Enrollment is limited to 10 juniors and seniors. Preference will be given to transfer students.

**AN SC 321 Applied Animal Genetics Seminar**

Fall. 2 credits. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lec, M 12:20; disc, M 1:25. P. A. Oltenacu and E. J. Pollak.

Topics of interest related to the genetic definition and control of qualitative and quantitative traits in various species of animals are presented. Genetic conservation programs and current animal improvement strategies as well as challenges presented by new developments in reproductive biology and molecular genetics are addressed in a lecture discussion-type format.

**AN SC 323 Equine Genetics Seminar**

Fall. 1 credit. Prerequisite: AN SC 221 or equivalent. S-U grades only. Disc, T 1:25-2:15. P. A. Oltenacu and staff.

Topics of equine genetics will be presented and discussed. Independent library research, a short written paper, and an oral presentation will be important parts of this course. Lecture topics may include the genetic aspects of color, abnormalities, metabolic diseases, unsoundness, and performance.

**[AN SC 330 Poultry Biology, Nutrition, and Management]**

Spring. 2 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. Offered alternate years. Next offered spring 2002; not offered spring 2001, 2003. Lec, F 2-4 (occasional field trips run past 4 P.M.). K. Keshavarz.

The course focuses on anatomy and physiology of various organs of poultry. Principles of poultry nutrition, breeding and embryology are discussed with an emphasis on their practical application. The student becomes familiar with the concept of least-cost feed formulation for poultry. The course also is designed to provide an understanding of current technology involved in commercial poultry production.]

**[AN SC 341 Biology of Lactation]**

Spring. 2 credits. Prerequisite: AN SC 100-150 or Animal Physiology. Offered alternate years. Next offered spring 2001, 2003; not offered spring 2002. Lec, T R 9:05. Y. R. Boisclair and staff.

A comprehensive survey of the biology of the mammary gland. Lectures cover: (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context to the course, but examples from other mammals including humans will be used.

**[AN SC 351 Dairy Herd Management]**

Spring. 4 credits. Prerequisites: AN SC 250 or permission of instructor. Recommended: ARME 302. Lec, M W F 11:15; labs, M 1:25-4:25, and F (alternate weeks) 1:25-4:25. D. M. Galton and T. L. Batchelder.

Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

**[AN SC 355 Dairy Nutrition and Health]**

Spring. 3 credits. Prerequisite: AN SC 250 and permission of instructor. Letter only. Lec, T R 10:10; lab, W 1:25-4:25. D. M. Galton, L. E. Chase and T. L. Batchelder.

Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

**[AN SC 360 Beef Cattle]**

Spring. 3 credits. Lec, T R 10:10; sec, W 2:00-4:25. Offered alternate years. Next offered spring 2002; not offered spring 2001, 2003. M. L. Thonney.

Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with management skills through computerized simulations and working directly with cattle. Students spend several days during the semester feeding and caring for cows and their newborn calves.]

**[AN SC 365 Equine Nutrition]**

Fall. 3 credits. Prerequisites: AN SC 100, 212, and 265 or equivalent. S-U grades optional. Lec, M W F 9:05-9:55. H. F. Hintz.

The principles of nutrition for horses will be presented. Digestive physiology, sources of nutrients, feeding programs for various classes of horses and interactions of nutrition and diseases will be discussed.

**[AN SC 370 Swine Nutrition and Management]**

Fall. 3 credits. Recommended: AN SC 212. Lec, T R 11:15; lab, T 2-4:25. Offered alternate years. Next offered fall 2000, 2002; not offered fall 2001. X. G. Lei and K. Roneker.

This course focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine system including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, impact of swine nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnology. Laboratory practice, animal projects, and problem troubleshooting are offered.

**[AN SC 380 Sheep]**

Spring. 3 credits. Lec, T R 10:10; sec, W 2:00-4:25. Offered alternate years. Next offered spring 2001, 2003; not offered spring 2002. M. L. Thonney.

Emphasis is on the breeding, feeding, management, and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved management practices. Students work directly with sheep during laboratories and spend several days during the semester feeding and caring for ewes and their newborn lambs.

**[AN SC 400 Tropical Livestock Production]**

Spring. 3 credits. Prerequisite: upperclass standing. Lec, T R 9:05; disc W 1:25-3:20. Not offered spring 2001. R. W. Blake.

An analysis of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Principles, real examples, independent study projects, and classroom interactions will aid problem-solving efforts to improve food security.]

**[AN SC 401 Dairy Production Seminar]**

Spring. 1 credit. Limited to juniors and seniors. Disc, M 7:30 P.M. D. E. Bauman and T. R. Overton.

Capstone course where students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

**[AN SC 402 Seminar in Animal Sciences]**

Spring. 1 credit. Limited to juniors and seniors. May be repeated. S-U grades optional. Lec, M 4:30. W. B. Currie.

Review of literature pertinent to topics of animal science or reports of undergraduate research and Honors projects. Students present oral reports of their work for class discussion in addition to written reports.

**[AN SC 403 Tropical Forages]**

Spring. 2 credits. Limited to seniors and graduate students except by permission of instructor. Prerequisites: crop production and livestock nutrition. Offered alternate years. Next offered spring 2001, 2003; not offered spring 2002. Lec, T R 10:10. A. N. Pell.

An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value of forages and crop residues; physiology of digestion of ruminants that affects feeding behavior; problems of chemical inhibitors in plants; and preservation of tropical forages as hay or silage.

**[AN SC 410 Nutritional Physiology and Metabolism]**

Fall. 3 credits. Prerequisites: biochemistry and physiology. M W F 11:15. R. E. Austic and D. E. Bauman.

A fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

**[AN SC 411 Applied Cattle Nutrition]**

Fall. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent); AN SC 355 is encouraged. Lec, M W F 10:10; lab, M 1:25-4:25. M. E. Van Amburgh.

An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is discussed. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case study farms. Course is designed for juniors, seniors, and entering graduate students.

**[AN SC 412 Livestock and the Environment]**

Spring. 2 or 4 credits. No prerequisite for 2 credits (weeks 1-7). Students who have taken AN SC 411 (formerly 312) can sign up for 4 credits (full semester) for completing an independent project on whole-farm environmental planning. Lec, T R 11:15-12:05. D. G. Fox.

This course will explore controversial issues surrounding livestock and the environment, including competition with humans for food resources, impact of animal products on human health, and impact of livestock farms on environmental/community problems, including odor, pathogens, and excess nutrient effects on water quality. Those taking two additional credits will use computer software tools to evaluate aspects of whole-farm nutrient and environmental management on case study farms, with data collection and analysis continuing throughout the semester.

**[AN SC 414 Ethics and Animal Science]**

Fall. 2 credits. Enrollment limited to 20 students, juniors and seniors only. Lec, M 12:20; disc, W 12:20-1:10. One Saturday morning, required farm tour. D. J. R. Cherney.

Exploration of the place of humans in the biological world, origins of ethics and morality, speciesism, the use of animals for research and agricultural purposes, transgenic animals. A report on the farm tour or a book review, participation in discussion and a project of the student's choice will be used to evaluate the performance of each student.

**AN SC 420 Quantitative Animal Genetics**  
Spring. 2 credits. Prerequisite: AN SC 221 or equivalent. Limited to 30 students. Lec, M 12:20; sec, M 2-4:25. E. J. Pollak.

A consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra program for problem solving.

**[AN SC 425 Gamete Physiology and Fertilization]**

Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Next offered fall 2001; not offered fall 2000, 2002. Lecs, R 2:30-4:25. J. E. Parks.

Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and *in vitro* technologies such as cryopreservation, oocyte maturation, and fertilization.]

**AN SC 427 Fundamentals of Endocrinology**

Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs, M W F 9:05. P. A. Johnson.

Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

**AN SC 456 Dairy Management Fellowship**

Spring. 2 credits. Limited to seniors. Prerequisites: AN SC 351 and 355, and permission of instructor. S-U grades only. Hours TBA. D. M. Galton and T. Batchelder.

The program is designed for undergraduates who have a sincere interest in dairy farm management. Objectives are to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

**AN SC 494 Special Topics in Animal Science**

Fall or spring. 4 credits maximum. Prerequisite: undergraduate standing. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**AN SC 496 Introduction to Research**

Fall. 1 credit. S-U grades only. Required of students undertaking Honors in Animal Science. Open to Honors students in other programs and those planning to pursue research, by permission of the instructor. Disc, M 12:20-1:10. W. B. Currie.

An exposure to the world of scientific research; identifying problems; devising hypotheses, realistic research plans; scientific writings and other forms of communication, including the publicizing of science; finding and managing reference materials; cost of research, funding, and beneficiaries; obligations imposed on investigators by society and regulatory agencies; responsibilities and freedom in science; ethical issues that affect scientists—interactions between sponsors, investigators, professors, trainees, and others. Students make oral presentations and prepare brief items of technical writing.

**AN SC 497 Individual Study in Animal Science**

Fall or spring. 1-3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff.

May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

**AN SC 498 Undergraduate Teaching**

Fall or spring. 1, 2, or 3 credits; limited to 2 experiences during undergraduate career. Limited to students with a GPA of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall).

Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

**AN SC 499 Undergraduate Research**

Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with a GPA of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall).

Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

**[AN SC 601 Amino Acids (also NS 601)]**

Spring. 2 credits. Prerequisites: physiology, biochemistry, and nutrition. Lecs, W F 12:20. Offered alternate years. Next offered spring 2002; not offered spring 2001, 2003. R. E. Austic.

A course emphasizing the dynamic aspects of protein digestion and absorption, amino acid transport and amino acid and nitrogen metabolism, and their relationships to the nutritional requirements for amino acids.]

**AN SC 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603)**

Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition. Lec T 2:20-4:25. Offered alternate years. Next offered fall 2000, 2002; not offered fall 2001. X. G. Lei and G. F. Combs Jr.

This course focuses on the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Team-taught lectures include general biochemical and physiological aspects of mineral metabolism and specific mechanisms of gene expression, regulation, and mammal health disorders associated with individual elements.

**AN SC 604 Vitamins (also NS 604)**

Fall. 2 credits. Lec, T R 10:10. G. F. Combs, Jr.

Text-based discussion sessions on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

**[AN SC 606 Ruminant Nutrition: Microbial Ecology and Forage Chemistry]**

Spring. 4 credits. Prerequisites: Animal Science 212, Biochemistry. S-U grades optional. Lecs, M W F 9:05; disc, W 8:00. Offered alternate years. Next offered spring 2002; not offered spring 2001, 2003. A. N. Pell.

This course provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry, and rumen function.]

**AN SC 610 Seminar**

Fall and spring. 1 credit. S-U grades only.

Students attend a weekly seminar on topics related to animal science. The requirement for an S grade is to regularly attend seminars during the semester.

**AN SC 619 Field of Nutrition Seminar**

Fall and spring. No credit. No grades given.

Lectures on current research in nutrition.

**AN SC 620 Seminar in Animal Breeding**

Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours TBA.

**AN SC 621 Seminar: Endo/Reprod Biology**

Fall and spring. 1 credit. Prerequisites: permission of instructor. Registration limited to graduate students. S-U grades only. Lec, W 4:00. W. R. Butler and staff.

Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

**AN SC 625 Nutritional Toxicology (also TOX 625)**

Spring. 2 credits. Prerequisites: biochemistry and nutrition courses. S-U grades optional. Lec, W 1:25-2:15; lab/disc, W 2:30-4:25. D. L. Brown.

Exploration of toxicological principles and a selective survey of natural food and feed toxicants. At the end of this course, students will understand relationships between nutrition and toxicology; be prepared to conduct research concerning the effects of naturally occurring toxicants; and be able to use multimedia to present their understanding

of a class of toxicants. Occasionally, the class will take walking field trips. In addition, students will read printed and electronic communications and create STELLA simulation models and a system of web pages related to a specific family of toxicants.

#### **AN SC 630 Bioenergetics/Nutritional Physiology**

Spring. 3 credits. Prerequisites: AN SC 410 and biochemistry or physiology, or permission of instructor. S-U grades optional. Offered alternate years. Next offered spring 2001, 2003; not offered spring 2002. Lec, M W F 10:10. A. W. Bell and D. E. Bauman.

An integrated systems approach to the nutritional physiology and energy metabolism of productive animals. Emphasis on extracellular regulation of tissue and organ metabolism of specific nutrients in relation to pregnancy, lactation, and growth. Critical discussion of techniques and approaches to the study of animal bioenergetics.

#### **AN SC 640 Individual Study in Animal Science**

Fall or spring. 1 or more credits. S-U grades optional. Hours TBA. Staff.

Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

#### **[AN SC 650 Molecular Techniques for Animal Biologists]**

Spring. 4 credits. Prerequisites: BIOBM 330 or BIOBM 332 or BIOBM 333 or equivalents and permission of instructors. Enrollment limited to 15 students. Offered alternate years. Next offered spring 2002; not offered spring 2001, 2003. Lec, T 11:15; labs, T and R 1:25-4:25. Y. Boisclair and S. Quirk.

A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis will be on modern techniques used in conducting research in animal-related sciences such as nutrition, physiology, pharmacology, and immunology (e.g., subcloning, mutagenesis of DNA, RT-PCR, analysis of gene expression, protein expression). Lectures will introduce laboratory exercises and supplement laboratory topics. Students will perform an independent project requiring time outside scheduled laboratories and will give a scientific presentation.]

#### **AN SC 694 Special Topics in Animal Science**

Fall or spring. 4 credits maximum.

Prerequisite: graduate standing. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

#### **[AN SC 720 Advanced Quantitative Genetics]**

Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics. S-U grades optional. Offered alternate years. Next offered spring 2002; not offered spring 2001, 2003. Hours TBA. R. L. Quaas.

This course covers statistical methods used in a variety of problems in the quantitative genetics of animal populations. The initial

focus is the estimation of breeding values for purposes of ranking animals for selection. The core of the course is the mixed linear model; linear estimators and predictors are treated extensively. The importance of appropriate modeling is emphasized. Generalizations to nonlinear models, via Bayesian principles, are made, i.e., inferences from posterior distributions.]

#### **AN SC 800 Master's-Level Thesis Research**

Fall or spring. Credit TBA, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted specifically to a Master's program.

#### **AN SC 900 Graduate-Level Thesis Research**

Fall or spring. Credit TBA, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students in a Ph.D. program only before the "A" exam has been passed.

#### **AN SC 901 Doctoral-Level Thesis Research**

Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted to candidacy after the "A" exam has been passed.

## **BIOLOGICAL SCIENCES**

The program of study in biology is offered by the Office of Undergraduate Biology. For course descriptions, see the section on Biological Sciences.

## **BIOLOGY & SOCIETY**

The undergraduate major field of study in biology and society is offered through the Department of Science and Technology Studies. For a full description of courses which fulfill field requirements, see the Biology and Society listing under 'Special Programs and Interdisciplinary Studies' in this publication.

## **BIOMETRY AND STATISTICS**

N. S. Altman, chair, G. Casella, C. Castillo-Chavez, M. Contreras, R. Lloyd, R. Nielsen, S. J. Schwager

The Department of Biometrics in Statistical Science offers the following courses in Biometry and Statistics. Students need to

register under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

#### **BTRY 90 Introduction to Biomathematics**

Spring. 1 credit. S-U grades only. Prerequisite: 1 year of college-preparatory high school algebra.

An introductory course on the use of mathematics, computing, probability, and statistics in the biological sciences. Throughout the course, biological examples are used to develop quantitative ideas. Topics, which may change from semester to semester, will be selected from those covered in Biometry 101. Each semester, a selection of topics from a list that includes basic statistics and probability, curve fitting, elementary matrix algebra, differentiation, integration, and difference and differential equations, will be taught. The course will meet twice a week for 30 minutes. Each class will be followed by a computer laboratory for an hour and fifteen minutes, where the students will use Mathematica, a symbolic mathematics and graphics package, to illustrate and expand the concepts covered in class.

#### **BTRY 100 Statistics and the World We Live In (also STBTRY 100)**

Fall. 3 credits.

Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

#### **BTRY 101 Introduction to Biometry I**

Spring. 4 credits. S-U grades optional. Prerequisites: pre-calculus.

An introductory survey course in the use of mathematics, computing, and probability and statistics in the biological sciences. Case studies are used to develop the ideas of statistics, curve fitting, elementary matrix algebra, basic probability, and differentiation. Selected topics in differential and difference equations and integration will also be covered. A symbolic mathematics and graphics package (e.g., Maple or Mathematica) will be taught and used throughout the course.

#### **BTRY 102 Introduction to Biometry II**

Fall. 4 credits. S-U grades optional.

Prerequisite: BTRY 101 or 2 semesters of calculus.

This course is the continuation of Biometry 101. It provides a more in-depth view of the use of mathematics, computing, and probability and statistics in the biological sciences. Topics covered include discrete and continuous models, applications of differential and integral calculus, optimization methods, matrix algebra, and Markov models.

#### **BTRY 261 Statistical Methods I (also STBTRY 261)**

Fall. 4 credits. Letter only. Prerequisite: BTRY 100 [formerly 200] or prior experience in data collection and interpretation. Limited to undergraduates.

Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single

population, comparisons between two populations, one and two-way analysis of variance, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques. The lectures may co-meet with BTRY 601. Sections, homeworks, and exams are administered separately.

**BTRY 302 Statistical Methods II (also STBTRY 302)**

Spring. 4 credits. Letter only. Prerequisite: BTRY 261 or BTRY 601. Limited to undergraduates.

A continuation of BTRY 261. Emphasis is on the use of multiple regression analysis, analysis of variance and related techniques to analyze data in a variety of situations. Topics include least squares estimation, multiple regression, model selection techniques, detection of influential points, goodness-of-fit criteria, principles of experimental design, analysis of variance for a number of designs including multiway factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on the appropriate design of studies prior to data collection and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done using the SAS statistical package. The lectures co-meet with BTRY 602. Homeworks and exams are administered separately.

**BTRY 400 Biometry Seminar (also STBTRY 400)**

Fall and spring. 1 credit. S-U grades only. Prerequisite: BTRY 302, OR 409, or 602, or permission of instructor.

Students will attend a weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor. Students can only take course twice.

**BTRY 408 Theory of Probability (also STBTRY 408)**

Fall. 4 credits. Prerequisite: MATH 112, 122, or 192, or permission of instructor.

An introduction to probability theory: foundations, combinatorics, random variables and their probability distributions, expectations, generating functions, and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

**BTRY 409 Theory of Statistics (also STBTRY 409)**

Spring. 4 credits. Prerequisite: BTRY 408 or equivalent.

The concepts developed in BTRY 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression.

**BTRY 421 Matrix Computation**

Spring. 4 credits. Letter only. Prerequisite: pre-calculus. M. Contreras.

Introductory course in matrix computations that reviews linear algebra (vector spaces, linear independence) and emphasizes a matrix approach to solving systems (LU-factorization, QR-decomposition, SVD, Schur complements) and the role of the condition number of a matrix. Positive definite matrices, eigenvalues, and their applications in modeling will be

discussed. Weekly homework assignments and a course project design to teach numerical and statistical simulations in Matlab using the theory of matrices are required.

**[BTRY 451 Mathematical Modeling of Populations]**

Fall. 3 credits. S-U grades optional. Prerequisites: MATH 112, BTRY 408, or equivalent. Offered alternate years. Not offered 2000–2001.

This course will emphasize stochastic and deterministic models relevant to population genetics and population biology. Computer simulations and use of mathematical packages will be an integral part of the course.]

**BTRY 494 Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494)**

Fall or spring. 1–3 credits. S-U grades optional.

A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 495 Statistical Consulting (also STBTRY 495)**

Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or co-requisites: BTRY 302 or 602 and 409 and permission of instructor.

Participation in the Department of Biometrics consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

**BTRY 497 Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497)**

Fall and spring 1–3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 498 Undergraduate Supervised Teaching (also STBTRY 498)**

Fall and spring. 2 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**BTRY 499 Undergraduate Research (also STBTRY 499)**

Fall or spring. 1–3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research. Students must register with an Independent Study form (available in 140 Roberts Hall).

**BTRY 600 Statistics Seminar (also STBTRY 600)**

Fall and spring. 1 credit. S-U grades only. Prerequisite or corequisite: BTRY 409 or permission of instructor.

**BTRY 601 Statistical Methods I (also STBTRY 601)**

Fall and summer. 4 credits. Limited to graduate students; others by permission of

the instructor.

Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

**BTRY 602 Statistical Methods II (also STBTRY 602)**

Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent.

A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

**BTRY 603 Statistical Methods III (also STBTRY 603)**

Spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered spring 2002.

Categorical data analysis, including logistic regression, loglinear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

**[BTRY 604 Statistical Methods IV: Applied Design (also STBTRY 604)]**

Spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years. Next offered spring 2002.

Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.]

**[BTRY 639 Epidemiology Seminar (also STBTRY 639)]**

Spring. 1 credit, variable. S-U grades only. Permission of instructor. Not offered 2000–2001.

This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.]

**[BTRY 662 Mathematical Ecology (also STBTRY 662)]**

Fall. 3 credits. S-U grades optional. Prerequisites: a year of calculus and a course in statistics. Not offered 2000–2001.

Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.]

**BTRY 672 Topics in Environmental Statistics (also STBTRY 672)**

Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor.

This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

**[BTRY 682 Statistical Methods for Molecular Biology (also STBTRY 682)]**

Fall. 2 credits. S-U only. Prerequisite: permission of instructor. Not offered 2000-2001.

Statistical and mathematical topics of current interest in molecular biology: genetic mapping, physical mapping, DNA sequence analysis, phylogenetic inference, population modeling. Topics may vary.]

**BTRY 694 Graduate Special Topics in Biometry and Statistics (also STBTRY 694)**

Fall or spring. 1-3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 697 Individual Graduate Study in Biometry and Statistics (also STBTRY 697)**

Fall, spring, or summer. 1-3 credits. S-U grades optional.

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**[BTRY 717 Linear and Generalized Linear Models (also STBTRY 717)]**

Spring. 3 credits. S-U grades optional. Prerequisites: BTRY 409, BTRY 417, and 602 or equivalents. Offered alternate years. Not offered 2000-2001.

Statistical modeling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, quasi-likelihood and generalized estimating equations. The use of link functions and generalized linear models to accommodate nonlinear models and non-normally distributed data. The use of random effects to accommodate correlation structures in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.]

**BTRY 795 Statistical Consulting (also STBTRY 795)**

Spring. 2 credits. S-U grades only. Limited to graduate students. Prerequisite or corequisite: BTRY 602 and BTRY 409 or equivalent.

Participation in the Department of Biometrics consulting service: faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous

weeks. Since consultations usually change from semester to semester, the course may be repeated for credit.

**BTRY 798 Graduate Supervised Teaching (also STBTRY 798)**

Fall and spring. 2-4 credits. S-U only.

Permission of instructor and chair of special committee plus at least 2 advanced courses in statistics and biometry.

Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion section, prepare course materials, and assist in grading. Credit hours will be determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

**BTRY 800 Master's-Level Thesis Research**

Fall or spring. Credit TBA. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.

Research at the M.S. level.

**BTRY 900 Graduate-Level Dissertation Research**

Fall or spring. Credit TBA. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.

Research at the Ph.D. level.

**BTRY 901 Doctoral-Level Dissertation Research**

Fall or spring. Credit TBA. S-U grades only.

## COMMUNICATION

R. E. Ostman, chair; K. Berggren, M. Campo, A. P. Chan, R. D. Colle, L. Cowdery, B. O. Earle, G. Gay, D. A. Grossman, J. Hayman, D. Krikorian, B. Lewenstein, T. M. Russo, C. Scherer, D. Scheufele, J. Shanahan, M. A. Shapiro, P. Stepp, R. B. Thompson, L. VanBuskirk, W. B. Ward

**Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

**COMM 116 Communication in Social Relationships**

Spring or summer. 3 credits. Spring: lecs, M W F 1:25-2:15. D. Krikorian.

An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, organizations, and health care settings.

**COMM 117 Writing about Communication**

Spring. 3 credits. Concurrent enrollment in COMM 116 required. T R 10:10-11:25, 11:40-12:55, 1:25-2:40. L. VanBuskirk and staff.

Students develop skill in various writing styles and genres. The class explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, to analyze information, to integrate ideas about communication, and to express those ideas clearly and cogently.

**COMM 120 Contemporary Mass Communication**

Fall or summer. Lecs, M W F 12:20-1:10. J. Shanahan.

The processes and effects of communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues. Discussion sections relate the course topics to students' personal experience. Assignments include case studies, experiential learning exercises, and short papers.

**COMM 121 Investigating Communication**

Fall. 1 credit. Communication majors only. Students must be enrolled concurrently in COMM 120. Lecs, T 10:10-11:00. J. Shanahan.

An examination of research methods in communication, with particular emphasis on the mass communication process. Lectures and exercises will be linked to lectures from COMM 120, providing an introduction to how research about communication is done. This course is required for communication majors.

**COMM 191 Topics in Communication**

Summer. 1-3 credits. Hours TBA. Staff. Study of topics in communication at lower-division level. Special emphasis on topics reflecting the expertise of visiting faculty available in summer session and on topics suitable for entry-level college students.

**COMM 201 Oral Communication**

Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. K. Berggren, J. Hayman, T. Russo, R. Thompson, and staff.

Through theory and practice students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

**COMM 203 Argumentation and Debate**

Fall or summer. 3 credits. T R 10:10-11:25. P. Stepp.

The student will learn the principles of argumentation and the rules of debate. Classroom debates on the CEDA national topic will provide experience in critical thinking, rapid organization of thoughts, employment of research, and writing and speaking in a logical, persuasive manner.

**COMM 204 Effective Listening**

Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman students per section. No students accepted or allowed to drop after the second week of classes. Lec, M 2:55-4:10; sec, W 1:25-2:40, 2:55-4:10; R 1:25-2:40, 2:55-4:10. R. Thompson.

Lecture and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students' listening skills. Topics include audiology, cultural contexts, intercultural communication, linguistics, therapeutic listening, and critical analysis of information. Students are involved in skill-building exercises and in writing self-analytical papers, as well as attending seminars.

**COMM 230 Visual Communication**

Spring. 3 credits. Lec 01, T R 9:05–9:55; lab, T 2:30–4:25; W 10:10–12:05, 12:20–2:15 or 2:30–4:25. C. Scherer.

An introduction to visual communication theory. Course examines how visuals influence our attention, perspectives, and understanding. Examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print and interactive media are used to develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

**COMM 240 Communication Systems and Technologies**

Spring. 3 credits. Lec M W 2:55–4:10. A. P. Chan.

An exploration of the nature of communication systems and technologies. Topics include a brief history of communication and information technologies, descriptions of the uses, and impacts of technologies within the social system, and an introduction to electronic message design and construction.

**[COMM 250 Newswriting for Newspapers]**

Fall. 3 credits. Limited to 25 students. Keyboarding ability essential. Students missing first two classes without university excuse will be dropped. Prerequisite: college-level writing course. Lec, M W 9:05–9:55; lab, R 2:30–4:25 or F 9:05–11:00. Not offered 2000–2001. Staff.

Writing and analyzing news stories. A study of the elements that make news, sources of news, interviewing, writing style and structure, press problems, and press-society relations. Concentration on newswriting as it is practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.]

**COMM 260 Science Writing for Public Information**

Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Fall: Lec 01, M W F 9:05–9:55, Lec 02, M W F 10:10–11:00; Spring: Lec 01, M W F 9:05–9:55 or Lec 02, M W F 1:25–2:15. L. Cowdery.

An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis will be emphasized. Not oriented to the mass media.

**COMM 263 Organizational Writing**

Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Lec 01, M W F 10:10–11:00, Lec 02, M W F 11:15–12:05. L. VanBuskirk and staff.

Students write as members of different organizations, and as representatives of business, government, community, and other interests. Emphasis is on adapting tone to the audience and to the purpose of the message. Writing assignments include reports, memoranda, proposals, and letters. Assignments are based on cases developed from current web sites.

**COMM 272 Principles of Public Relations and Advertising**

Summer. 3 credits. Not open to freshmen. Staff.

Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society, the economic system, and organizations. Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

**COMM 282 Communication Industry Research**

Fall. 3 credits. Prerequisite: COMM 116, 120, 121. Lec, M W 12:20–1:10; lab, F 9:05–11:00, F 12:20–2:15, or R 9:05–11:00. D. Scheufele.

Public opinion polls, readership/viewership studies, audience segmentation techniques, and media and message effect evaluation are all widely used in communication industries. This course covers the use of basic research design, measurement, sampling, and simple descriptive statistics in conducting these studies.

**COMM 284 Sex, Gender, and Communication**

Fall. 3 credits. Not open to freshmen. T R 2:55–4:10. L. VanBuskirk.

The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

**COMM 285 Communication in Life Sciences (also S&TS 285)**

Spring. 3 credits. M W F 10:10–11:05. B. Lewenstein.

Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

**COMM 301 Business and Professional Speaking**

Fall, spring, or summer. 3 credits. Prerequisite: COMM 201. Limited to second term sophomores, juniors, and seniors during fall and spring. Lec, M W 11:15–12:05; sec, T 2:30–4:25; W 1:25–3:20; R 10:10–12:05. B. Earle.

The study and practice of written and oral communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentational skills needed in particular settings suited to their own business and professional careers.

**COMM 303 Speech and Debate Practicum**

Fall and spring. 2 credits. Limited to 10–15 Program in Speech and Debate members only; permission of instructor and completion of 1-year trial basis. Hours TBA. P. Stepp.

Students will learn preparation for practice in CEDA (Cross Examination Debate Association)

debate, Lincoln Douglas debate, or individual speaking events. The class will be divided into four groups according to level of experience; therefore it may be repeated to a maximum of eight credits.

**COMM 330 Communication Technologies and Management of Information**

Fall. 3 credits. Prerequisite: COMM 240. T R 10:10–11:25. A. P. Chan.

Appropriate use of communication and information technologies can facilitate the coordination, control, and management of information. This course surveys existing theories and practice of information management, integrating insights cutting across communication, economics, management science, and sociology.

**COMM 350 Writing for Magazines**

Fall, spring, or summer. 3 credits. Prerequisite: any college-level writing course. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drops after third week. Extensive out-of-class writing assignments. Fall: M 1:25–4:25. W. Ward; spring: lec, T R 8:40–9:55; lab, R 1:25–2:15. Staff.

A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

**COMM 352 Science Writing for the Mass Media (also S&TS 352)**

Fall. 3 credits. Not open to freshmen. Limited to 24 students. Prerequisite: 1 college-level writing course. Lec, M W 9:05; lab, W 12:20–2:15. B. Lewenstein.

How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

**COMM 353 Science Writing Practicum**

Spring. 1 credit. Prerequisite: COMM 260, COMM/S&TS 352, ENG. 350 or permission of instructor. Hours TBA. Offered even-numbered years. B. Lewenstein.

Students will cover the annual meeting of the American Association for the Advancement of Science, held in February each year. Before the meeting, students will review science writing techniques and issues. At the meeting, students will meet with science writers and attend press conferences and scientific sessions. Students will write at least two stories. Students responsible for all costs of travel, lodging, and meals.

**COMM 368 Text Editing and Management**

Fall. 3 credits. Limited to 25 junior, senior, or graduate students. Prerequisite: COMM 250, 260, 263, 350 or 352. M W F 12:20–1:10. L. Cowdery.

How to guide a manuscript from draft to presentation. Topics include production, copy editing and design, document management, and editorial decision making. Publications include books, magazines, newsletters, and promotional and educational materials for

internal and external use. Appropriate for those who will oversee publications as part of their work.

#### **COMM 376 Planning Communication Campaigns**

Spring. 3 credits. Prerequisites: COMM 282 or equivalent social research course (may be taken concurrently). T R 10:10–11:25. D. Scheufele.

Overviews theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Students work closely with a client in designing a communication campaign.

#### **COMM 380 Independent Honors Research in Social Science**

Fall or spring. 1–6 credits. Limited to undergraduates who have met the requirements for the honors program. R. Ostman and C. Scherer.

#### **COMM 398 Issues in Teaching Communication**

Fall. 1 credit. Prerequisite: must be past or current undergraduate teaching assistant for COMM 201, 204, or 301. Alternate M 7:30–9:10 P.M. K. Berggren.

This seminar brings together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, we will examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

#### **COMM 405 Community Service Practicum**

Fall and spring. 2 credits. May be repeated for credit. Limited to 10–15 Program in Speech and Debate members; permission of instructor required. Hours TBA. P. Stepp.

Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

#### **COMM 410 Organizational Behavior and Communication**

Fall. 3 credits. Labs limited to 15 junior, senior, or graduate students. Prerequisite: COMM 116 or equivalent. Lec, M W 10:10–11:00; Sec 01, W 2:30–4:25; Sec 02, F 10:10–12:05; Sec 03, F 10:10–12:05; Sec 04, F 12:20–2:15; Sec 05, F 12:20–2:15. D. Krikorian.

Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab.

#### **COMM 411 Leadership from a Communication Perspective**

Spring. 3 credits. Limited to 30 students. Lec, T R 1:25–2:40. P. Stepp.

Leadership is a product of human communication. Leadership competence can be increased

by increasing communication competence. Leadership theories, particularly transformational leadership, will be studied, and gender/minority responsive leadership will be stressed. Practical application will include leadership exercises and observation of leaders.

#### **COMM 412 Communication Leadership Lab**

Spring. 1 credit. Concurrent enrollment in COMM 411 required. Hours TBA. P. Stepp. This course will provide laboratory experience in leadership and the methods used to analyze leadership in an organization. Students will take turns serving as a group leader of six to eight students in applying leadership theories to study leadership styles, leader-follower relations, organizational culture, and leadership competencies in an organization.

#### **COMM 418 Communication and Persuasion**

Spring. 3 credits. Limited to juniors and seniors only. Prerequisite: COMM 116 and 120 or introductory psychology or social psychology. T R 10:10–11:40. M. Campo.

The course focuses on theories of communication's influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

#### **COMM 420 Public Opinion and Social Processes**

Fall. 3 credits. Limited to juniors and seniors only. Lec, T R 10:10–11:25. M. Campo.

The course provides an overview of the theoretical and applied literature related to the concept, "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication, and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 620; graduate students should enroll in COMM 620.

#### **[COMM 421 Communication and the Environment**

Spring. 3 credits. Lec, T R 11:40–12:55. Offered even-numbered years. Not offered 2000–2001. J. Shanahan.

Students will investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus will be mass media's impact in public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.]

#### **COMM 422 Psychology of Television**

Fall. 3 credits. Prerequisites: introductory psychology or COMM 120. M W F 12:20–1:10 (one evening mid-semester prelim). M. Shapiro.

A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics

may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 622; graduate students should enroll in COMM 622.

#### **COMM 424 Communication in the Developing Nations**

Fall. 3 credits. Limited to juniors and seniors. Lec, T 1:25–2:35; lab, T 2:35–4:25. R. Colle.

The role of communication in development programs, particularly in the Third World. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 624; graduate students should enroll in COMM 624.

#### **COMM 426 Impact of Communication Technologies**

Spring. 3 credits. M W 2:55–4:10. B. Lewenstein.

Examine emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Meets with COMM 626; graduate students should enroll in COMM 626.

#### **COMM 428 Communication Law**

Spring. 3 credits. Offered even-numbered years. Limited to junior, senior, and graduate students; others by permission of the instructor. Lec, M W F 11:15–12:05. D. Grossman.

A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, defamation, copyright, broadcast and cable regulation, access, electronic media, and other issues of current interest.

#### **COMM 429 Legal Issues in Business and Electronic Communication**

Spring. 3 credits. Prerequisite: COMM 428. Offered odd-numbered years. M W F 11:15–12:05. D. Grossman.

The increase in commercial use of the Internet and new types of interactive electronic media in business create unique contexts for applying traditional principles of law. This course will examine the rights and responsibilities of parties involved in electronic commerce, including information security (guaranteeing confidentiality and effective record-keeping), electronic contracts and EDI, rights in information (copyrights, trade secrets, trademarks, and patents), regulation of information content (pornography and advertising) and regulation of on-line conduct (criminal liability and civil exposure).

#### **COMM 439 Interactive Multimedia: Design and Research Issues**

Fall. 3 credits. Prerequisite: permission of instructor. Lec, T 11:40–12:55; lab 01, T 1:25–2:15; lab 02, R 1:25–2:15. G. Gay.

An overview of interactive multimedia technologies (videodisc, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation. Lectures concurrent with COMM 639; grad students should enroll in COMM 639.

**COMM 440 Computer Mediated Communication: Theory and Practice**

Spring. 3 credits. Permission of instructor. Letter grade only. Lec, T 12:20–2:15; lab 01, T 11:15–12:05; lab 02, R 11:15–12:05. G. Gay.

Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues. Lectures concurrent with COMM 640; graduate students should enroll in COMM 640.

**COMM 466 Public Communication of Science and Technology (also S&TS 466)**

Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 360, or Engineering 350, or permission of instructor. Offered even numbered years. M W 2:55–4:10. B. Lewenstein.

Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, analyze the functions of PCST. Tie existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.

**COMM 476 Communication Fellows Program**

Spring. 2 credits. M 2:55–4:10. Prerequisites: permission of instructor; limited to communication seniors selected based on goals and academic preparation. B. O. Earle.

A series of lectures, seminars and guest speakers exploring the planning, evaluation and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers. Fee charged.

**COMM 486 Risk Communication**

Spring. 3 credits. T R 1:25–2:40. C. Scherer. An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 686; graduate students should enroll in COMM 686.

**COMM 490 Senior Thesis in Communication**

Fall, spring. 3 credits; may be repeated for a maximum of 6 credits. Communication majors only. Staff.

Seniors conduct research based on a thesis proposal. Supervision provided by a member of the Communication graduate faculty. Thesis will be reviewed by faculty readers before approval.

**COMM 494 Special Topics in Communication**

Fall, spring, or summer. 1–3 credits variable. S-U grades optional. Prerequisite: permission of instructor.

Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

**COMM 496 Internship**

Fall, spring, summer, and intersession. 1–3 credits. Students must apply no later than the spring pre-course enrollment period for a fall internship or the fall pre-course enrollment period for a spring or summer internship. **Prerequisites: limited to communication juniors or seniors, 3.0 average in communication courses, and approval of academic advisor.** S-U grades only.

Structured, on-the-job learning experience under supervision of communication professionals in a cooperating organization. Maximum of six credits total may be earned; no more than three per internship but flexibility allows six for one credit each, three for two credits each, or two for three credits each. Internships must be approved in advance by the student's academic adviser and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcasting. Minimum of 60 on-the-job hours per credit required.

**COMM 497 Individual Study in Communication**

Fall or spring. 1–3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall).

Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

**COMM 498 Communication Teaching Experience**

Fall or spring. 1–3 credits; may be repeated to 6 credits with different courses. **Limited to juniors and seniors.** Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall).

Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

**COMM 499 Independent Research**

Fall or spring. 1–3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall).

Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

**COMM 510 Organizational Behavior and Communication**

Fall. 3 credits. Lec, M W 10:10–11:00; sec, TBA. D. Krikorian.

Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab. Lectures concurrent with COMM 410; graduate students should enroll in COMM 510.

**[COMM 610 Seminar in Organizational Communication]**

Spring. 3 credits. Prerequisites: COMM 410/510 or one course in organizational behavior or permission of instructor. Not offered 2000–2001. Lec, M W 11:15–12:05; lab, F 10:10–12:05. D. Krikorian.

Examination of contemporary research on the social psychology of interpersonal communication in organizations including supervisor-employee relations, leadership style, work motivation, organizational socialization, and formal and informal communication networks.)

**COMM 618 Communication and Persuasion**

Spring. 3 credits. Prerequisite: introductory research methods course and introductory psychology or social psychology course. T R 10:10–11:40. M. Campo.

The course focuses on the theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 418; graduate students should enroll in COMM 618.

**COMM 620 Public Opinion and Social Processes**

Fall. 3 credits. T R 10:10–11:25. M. Campo.

The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication, and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 420; graduate students should enroll in COMM 620.

**COMM 622 Psychology of Television**

Fall. 3 credits. Prerequisites: introductory psychology or social psychology and introductory research-methods course. M W F 12:20-1:10. M. Shapiro.

A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 422; graduate students should enroll in COMM 622.

**COMM 624 Communication in the Developing Nations**

Fall. 3 credits. Open to juniors, seniors, and graduate students. Lec, T 1:25-2:35; lab, T 2:35-4:25. R. D. Colle.

The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

**COMM 626 Impact of Communication Technologies**

Spring. 3 credits. Open to seniors. M W 2:55-4:10. B. Lewenstein.

Examines emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Meets with COMM 426; graduate students enroll in COMM 626.

**COMM 639 Interactive Multimedia: Design and Research Issues**

Fall. 3 credits. Prerequisite: permission of instructor. Lec, T 11:40-12:55; lab 01, T 1:25-2:15; lab 02, R 1:25-2:15. G. Gay.

An overview of multimedia technologies (videodisk, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation. Lectures concurrent with COMM 439; grad students should enroll in COMM 639.

**COMM 640 Computer Mediated Communication: Theory and Practice**

Spring. 3 credits. Prerequisite: permission of instructor. Lec, T 12:20-2:15; lab 01, T 11:15-12:05; lab 02, R 11:15-12:05. G. Gay.

Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues. Lectures concurrent with COMM 440; graduate students should enroll in COMM 640.

**COMM 641 Human-Computer Interaction**

Spring. 3 credits. Offered odd-numbered years. T R 8:40-9:55. G. Gay.

An examination of how people relate to, think about, and think with new communication technologies in schools, homes, and the workplace. Using assigned readings from multiple disciplines, class exercises, field studies, and case studies, students will study and critique aspects of human-computer interaction, social psychology, and other issues that shape the process and effectiveness of designing, implementing, and using computer systems.

**[COMM 676 Communication Planning for Social and Behavioral Change**

Spring. 3 credits. T R 10:10-11:25. Not offered 2000-2001. Staff.

Overview theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Course seeks to integrate theory, data-based generalizations, and planning processes into an integrated communication plan.]

**COMM 680 Studies in Communication**

Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor. M W 8:40-9:55. J. Shanahan.

A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

**COMM 681 Advanced Communication Theory**

Spring. 4 credits. Prerequisite: COMM 680 or graduate standing and permission of instructor. M W 2:55-4:10 with additional meetings TBA. Staff.

Development of, and contemporary issues in, communication theory. Discussion will include the interaction between communication and society, social groupings, and mental processing.

**[COMM 682 Methods of Communication Research**

Spring. 3 credits. Lec, M W 12:20-1:10; sec, F 12:20-2:15. Not offered 2000-2001. Staff.

An analysis of the methods used in communication research. Emphasis on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.]

**[COMM 683 Quantitative Research Methods in Communication**

Spring. 3 credits. Prerequisite: COMM 682 or equivalent. Lec, M 6:00-9:00 P.M. Not offered 2000-2001. Staff.

Experience in quantitative research techniques. The course provides an introduction to inter- and multi-disciplinary research through examination of the procedures, techniques, and assumptions associated with particular techniques of design and measurement, data collection, data preparation, data

analysis, and hypothesis testing. Readings include a variety of fields and disciplines in the social and natural sciences.]

**[COMM 685 Training and Development: Theory and Practice (also International Agriculture 685 and EDUC 685)**

Spring. 4 credits. S-U grades optional.

Charge for materials, \$45. F 9:05-12:05; lab TBA. Not offered 2000-2001. Staff.

Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Design for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.]

**COMM 686 Risk Communication**

Spring. 3 credits. T R 1:25-2:40. C. Scherer.

An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 486; graduate students should enroll in COMM 686.

**COMM 691 Seminar: Topics in Communication**

Fall and spring. No credit. S-U grades only. Hours TBA. R. Ostman and A. Chan.

Some weeks scholars from a wide variety of fields will present varied topics in theory or research as it relates to communication; other weeks graduate students will present thesis (project) proposals to faculty and peers.

**COMM 694 Special Topics in Communication**

Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Hours TBA. Staff.

Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

**COMM 700 MPS Project Research**

Fall or spring. 1-6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.

Project research for Master of Professional Studies (Communication) students.

**[COMM 781 Seminar in Psychology of Communication**

Spring. 3 credits. Letter grade. Offered odd-numbered years. Prerequisite: COMM 680 and 681 or equivalent graduate level theory in psychology or social psychology. Hours TBA. Not offered 2000-2001. M. Shapiro.

Discussion and analysis of selected current issues in the psychology of communication. Students will discuss and synthesize current research and theory in the mental processing of communication.]

**COMM 794 Seminar in Communication Issues**

Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: permission of instructor.

Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

**COMM 797 Graduate Independent Study**

Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: permission of instructor.

Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

**COMM 798 Communication Teaching Laboratory**

Fall and spring. 1-3 credits each semester. Letter grade only. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.

Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

**COMM 799 Graduate Research**

Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor.

Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

**COMM 800 Master's-Level Thesis Research**

Fall or spring. 1-6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.

Thesis research for Master of Science (Communication) students.

**COMM 901 Doctoral-Level Dissertation Research**

Fall or spring. 1-9 credits. May be repeated for a maximum of 9 credits. S-U grades only. Prerequisites: completion of "A" exam; permission of committee chair.

Dissertation research for doctoral candidates.

**CROP AND SOIL SCIENCES**

S. D. DeGloria, chair; M. Alexander, P. C. Baveye, D. R. Bouldin, R. B. Bryant, J. H. Cherney, W. J. Cox, A. DiTommaso, J. M. Duxbury, E. C. Fernandes, G. W. Fick, D. L. Grunes, R. R. Hahn, S. D. Klausner, L. V. Kochian, T. A. LaRue, M. B. McBride, J. Mt. Pleasant, R. L. Obendorf, W. D. Pardee, W. S. Reid, S. J. Riha, T. W. Scott, T. L. Setter, P. L. Steponkus, J. E. Thies, H. M. van Es, A. Van Wambeke, R. M. Welch

**Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

**Courses by Subject**

Crop Science: 311, 312, 314, 315, 317, 455, 608, 610, 612, 613, 614, 642, 691, 820, 920, 921

Environmental Information and Analysis: 398, 411, 420, 465, 620, 660, 675

Soil Science: 260, 321, 362, 363, 365, 366, 371, 372, 373, 471, 473, 483, 663, 666, 667, 669, 671, 693, 880, 980, 981

**All following Crop and Soil Sciences course prefixes were previously listed as SCAS.**

**General Courses****CSS 190 Sustainable Agriculture**

Fall. Credits variable, 2 or 3. Limited to 60 students. S-U grades optional. Lec, R 10:10; labs, M T 2:00-4:25. G. W. Fick.

This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes scientific principals of management that conserve or renew those resources for continuing benefit to society. The information is of general value for nonmajors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the web. An extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

**CSS 494 Special Topics in Crop and Soil Sciences (undergraduate level)**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**CSS 497 Individual Study in Crop and Soil Sciences**

Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

The topics in soil science or crop science or atmospheric science are arranged at the beginning of the term for individual study or for group discussions.

**CSS 498 Teaching Experience in Crop and Soil Sciences**

Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Teaching experience in soil science or crop science is obtained by assisting in the instruction of a departmental course.

**CSS 499 Undergraduate Research**

Fall or spring. Credit TBA. Students must register with an Independent Study form (available in 140 Roberts Hall).

Independent research on current problems selected from any phase of crop science or soil science.

**CSS 695 Planning and Reporting Research**

Spring. 2 credits. First meeting the first T of the semester in 102 Bradfield. G. W. Fick. New graduate students and students starting to write their theses have found this course

very helpful. Topics covered include scientific writing, reviewing, seminar presentations, and poster presentations. The nature of science and the scientific method are also discussed along with professional ethics in the conduct and communication of science.

**CSS 696 Seminar in Crop and Soil Sciences**

Fall and spring. 1 credit. S-U grades only. Lec, T 3:30-4:30. Staff.

Current research and selected topics in the crop and soil sciences and related fields.

**Crop Science****CSS 311 Grains and Nutriceuticals**

Fall. 4 credits. Prerequisite: CSS 260 or BIOPL 241. Lects, M W F 10:10; lab, M 1:25-4:25. 1 or 2 field trips during lab periods (until 5 P.M. or on weekends). R. L. Obendorf.

Globally six seed crops provide 75 percent of the caloric and protein needs of mankind by direct consumption or indirectly through animal and microbial products. Seed crops for starch, protein, oil, fiber, sugar, nutraceutical, pharmaceutical, and industrial uses are emphasized, including adaptation, growth and development, environmental stress, optimization of yield and quality, and genetic improvement in the context of food systems for improved health. Laboratory uses living plants, extensive crop garden, and computer simulation.

**CSS 312 Forage Crops**

Spring. 4 credits. Prerequisites: introductory course in crop and/or soil science. Recommended: course in animal nutrition. Lects, M W F 11:15; lab, T or W 1:25-4:25. G. W. Fick.

The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

**CSS 314 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also INTAG 314)**

Fall. 3 credits. Prerequisite: an introductory course in crop science or soil science or biology or permission of instructor. Lec, T R 8:40-9:55. E. C. Fernandes.

Characterization and discussion of traditional shifting cultivation, lowland rice-based systems, upland cereal-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The impact of tropical cropping systems on the environment are evaluated.

**CSS 315 Weed Science**

Fall. 4 credits. Prerequisite: introductory course in biology or botany. Lects, T R 10:10-11:25; lab, T or W 2-4:25. A. DiTommaso.

Principles of weed science are examined. Emphasis is on (a) weed biology and ecology, (b) chemistry of herbicides in relation to effects on plant growth and the environment, and (c) current management strategies that are

relevant to both crop and noncrop ecosystems. Hands-on laboratory sessions cover weed identification and ecology, and herbicide selectivity and symptomatology.

**[CSS 317 Seed Science and Technology]**

Fall. 3 credits. Prerequisite: BIOPL 241 or equivalent. Lec, T R 11:40-12:30; lab, R 1:25-4:25. 2 all-day field trips will be scheduled during the semester. Offered alternate years. Next offered fall 2001. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.)

The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.]

**CSS 415 Principles and Practices of Agroforestry (also NTRES 415 and HORT 415)**

Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec, M W F 10:10-11:00. Optional laboratory, CSS [SCAS] 416 (also NTRES 416 and HORT 416).

J. Lassoie, E. Fernandes, K. Mudge, L. Buck. An introduction to modern and traditional agroforestry systems which involves spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and nonwoody components of agroforestry systems are considered, based on above and below ground processes. The sustainability of agroforestry systems will be critically examined from biophysical, socio-economic, and policy perspectives.

**CSS 416 Principles and Practices of Agroforestry—Laboratory (also NTRES 416 and HORT 416)**

Fall. 1 credit. Optional lab component of HORT 415 (also NTRES and CCS [SCAS]). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor; prior or concurrent enrollment in HORT 415. W 1:25-4:25.

J. Lassoie, K. Mudge, E. Fernandes, L. Buck. An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

**[CSS 455 Mineral Nutrition of Crops and Landscape Plants (also HORT 455)]**

Spring. 3-5 credits. Prerequisite: CSS 260 and BIOPL 242, or equivalent. Lec, M W F 9:05; lab, R 1:30-4:00. Not offered spring 2001; next offered spring 2002. H. C. Wien and staff.

A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries one credit; a minimum of three credits must be taken in one semester. By the end of the course, students should understand the principles of mineral nutrient function in crop plants; should be able to diagnose deficiencies

by symptoms and tissue tests, and devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.]

**CSS 608 Water Status in Plants and Soils**

Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Lec, 1 hour TBA; lab, first class meeting R 1:25-4:25. Offered alternate years. Offered fall 2000. T. L. Setter.

Techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

**[CSS 610 Physiology of Environmental Stresses]**

Spring. 3 credits. Prerequisite: BIOPL 242 or 341. Lec, T R 10:10-11:25. Offered alternate years. Not offered spring 2001; next offered spring 2002. P. L. Steponkus.

A study of the responses of plants to environmental stresses, with emphasis on thermal stresses including chilling, freezing, and high temperature injury. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.]

**CSS 612 Seed Physiology and Biotechnology**

Spring. 3 credits. Prerequisite: plant physiology. T R 8:30-9:55. R. L. Obendorf.

This course in seed biology describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events including the deposition and mobilization of seed reserves with illustrations from the world's major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

**CSS 613 Physiology and Ecology of Yield**

Spring. 3 credits. Prerequisite: plant physiology. M W F 12:20. T. L. Setter.

A study of environmental constraints on crop-plant productivity from a physiological perspective. Acclimation responses and genetic adaptation are examined for temperature, light, water, compacted soil, and mineral nutrient environments. Topics include photosynthesis and nitrogen assimilation, translocation, and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral sinks in response to environment; seed set; water transport and stomatal regulation; root growth in flooded and compacted soils; and drought responses. Emphasis on growth processes of vegetative plant organs.

**CSS 614 Weed Ecology and Management**

Spring. 3 credits. Prerequisite: CSS 315 or equivalent. Lec, T R 10:10-11:25. Offered alternate years. Offered spring 2001. A. DiTommaso.

An examination of plant ecological principles governing weed population dynamics and weed-crop competitive interactions in different crop and noncrop ecosystems. Application of these fundamentals for the development and implementation of environmentally sound and sustainable integrated weed management strategies is explored. Topics include seed biology and seedbank dynamics, weed demography and spatial variation, weed-crop

interferences, bio-economic weed thresholds, and site-specific weed management.

**CSS 642 Plant Mineral Nutrition (ALSO BIO PL 642)**

Spring. 3 credits. Prerequisite: BIO PL 341 or equivalent. Lec, M W F 10:10-11. Offered alternate years. Offered spring 2001. L. V. Kochian, R. M. Welch.

A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics will include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements will be emphasized to illustrate the above topics.

**CSS 691 Special Topics in Crop Science**

Fall or spring. 1-6 credits. S-U grades optional. Hours TBA. Staff.

Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered will depend on staff and student interests.

**CSS 820 Master's-Level Thesis Research in Crop Science**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students specifically in a master's program.

**CSS 920 Graduate-Level Thesis Research in Crop Science**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students in a Ph.D. program only before the "A" exam has been passed.

**CSS 921 Doctoral-Level Dissertation Research in Crop Science**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students admitted for candidacy after the "A" exam has been passed.

**Environmental Information Science**

**CSS 398 Environmental Microbiology**

Fall. 3 credits. Prerequisite: BIOES 261 or BIOMI 290 or CSS (SCAS) 260 or permission of instructor. Lec, M W F 10:10. W. C. Ghiorse.

The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

**CSS 411 Resource Inventory Methods (also CEE 411)**

Spring. 3 credits. Prerequisite: permission of instructor. Lec, M W 9:05-9:55; lab, M R 1:25-4:25. S. D. DeGloria.

A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discrimi-

nate, measure, inventory, and monitor environmental resources.

#### **CSS 420 Geographic Information Systems**

Fall. 4 credits. Prerequisite: CSS (SCAS) 411 or permission of instructor. Lects, T R 9:05–9:55; lab, T 10:10–1:10, M W R F 1:25–4:25. S. D. DeGloria.

Principles and applications of geographic information systems for the characterization and assessment of agronomic and environmental resources. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment are considered.

#### **CSS 465 Global Positioning System**

Fall and spring. 1 credit. Prerequisite: CSS 411 or CSS 420, or equivalent, or consent of instructor. Lec, F 9:05–12:05. S. D. DeGloria.

Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization; field-data collection and processing; real-time and post-differential correction; and GPS-GIS integration.

#### **CSS 620 Spatial Modeling and Analysis**

Spring. 3 credits. Prerequisites: CSS (SCAS) 420, CSS (SCAS) 461, or permission of instructor. Lects, T R 9:05–9:55; lab, T W 1:25–4:25. S. D. DeGloria.

Theory and practice in the development, integration, and visualization of spatial data for resource inventory, environmental process modeling, land classification and evaluation. Application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

#### **CSS 660 Remote Sensing Fundamentals (also CEE 610)**

Fall. 3 credits. Prerequisite: permission of instructor. Lects, M W 12:20–1:10; lab, T 2:30–4:25. W. D. Philpot.

An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

#### **[CSS 675 Modeling the Soil-Plant-Atmosphere System (also EAS 675)]**

Spring. 3 credits. Prerequisite: CSS (SCAS) 483 or equivalent. Offered alternate years. Not offered spring 2001. Lects, T R 8:40–9:55. S. J. Riha.

Introduction to the structure and use of soil-plant-atmosphere models. Topics covered will include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation will be discussed.]

#### **CSS 694 Special Topics in Environmental Information Science**

Fall or spring. 1–6 credits. S-U grades optional. Hours TBA. Staff.

Study of topics in environmental science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

#### **CSS 860 Master's-Level Thesis Research in Environmental Information Science**

Fall or spring. Credit by arrangement. S-U grades only. Graduate faculty. Limited to students specifically in a master's program.

#### **CSS 960 Graduate-Level Dissertation Research in Environmental Information Science**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students in a Ph.D. program only before the "A" exam has been passed.

#### **CSS 961 Doctoral-Level Dissertation Research in Environmental Information Science**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students admitted to candidacy after the "A" exam has been passed.

### **Soil Science**

#### **CSS 260 Soil Science (also EAS 260)**

Fall. 4 credits. S-U grades optional. Lects, M W F 9:05; lab, M T W or R 1:25. S. Riha.

Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs will initially be field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs will focus on accessing, interpreting and applying soil information.

#### **[CSS 321 Soil and Water Management]**

Fall. 4 credits. Prerequisites: CSS (SCAS) 260. S-U grades optional. Lects, T R 10:10–11:25; lab, R 2:30–4:30. Offered alternate years. Next offered fall 2001. H. M. van Es. Course introduces students to the principles of soil and water interaction and to the effects of human intervention on these processes. Aspects of soil and water management, including hydrology, soil erosion and conservation, water management, contaminant movement, tillage, soil compaction, and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.]

#### **CSS 362 Soil Morphology**

Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors. R 1:25–4:25; all day field trip required. R. B. Bryant.

The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

#### **CSS 363 Soil Genesis, Classification, and Survey**

Fall. 4 credits. Prerequisite: CSS (SCAS) 260. Lects, M W F 11:15; lab, W 1:25–4:25. 1 all day field trip is required. R. B. Bryant.

Factors and processes of soil formation on which soil survey is based are discussed. Principles of field identification, classification, survey, and interpretation are practiced in a field setting. An overview of soil databases, their content, development, and use for site evaluation and land classification is provided.

#### **CSS 365 Environmental Chemistry: Soil, Air, and Water**

Spring. 3 credits. Prerequisites: CHEM 207–208. Lects, M W F 10:10–11:00.

M. B. McBride.

An overview of the chemical processes that control the concentrations and bioavailability of nutrients and pollutants in soil, air, and water. Particular attention is given to soil's function as a filter for contaminants. The history of environmental contamination and its impact on agricultural soils and ecosystems is described.

#### **CSS 366 The Soil Ecosystem**

Spring. 3 or 4 credits. Lecture only, 3 credits; lecture plus lab, 4 credits; lab cannot be taken without lecture. Prerequisite: BIOES 261 or BIOMI 290, or equivalent, or permission of instructor. Lects, T R 10:10–11:25; lab, W 1:25–4:25. J. E. Thies.

Activities of the soil biota are crucial for the continued functioning and renewal of soil ecosystems. Through study of the soil as an ecosystem, students will gain an understanding of the diversity of soil organisms and the critical roles that microbial activities and interactions have in agricultural production and environmental protection. Through a small research project, students will also gain competencies in developing research questions and formulating hypotheses, planning appropriate methods for gathering and interpreting data, and summarizing research work.

#### **CSS 372 Soil Fertility Management**

Spring. 3 credits. Prerequisite: CSS (SCAS) 260 or permission of instructor. Lec, T R 8:40–9:55; lab, R 1:25–4:25. Staff.

An integrated discussion of soil crop yield relationships, with emphasis on the soil as a source of mineral nutrients for crops and the role of fertilizers and organic nutrient sources in crop production.

#### **[CSS 471 Properties and Appraisal of Soils of the Tropics]**

Spring. 3 credits. Prerequisite: CSS (SCAS) 260 or equivalent. S-U grades optional. No audits accepted. Offered alternate years. Next offered spring 2002. Lects, T R 12:20; disc, W 1:25–3:25. A. VanWambeke.

The course examines the conditions in which soils form, and considers ecological, geological, and vegetational factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production and the preservation of the environment examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American,

French, and English journals. The last part of the course gives special attention to salt-affected soils, paddy rice cultivation, and the characteristics of acid-sulfate soils. Lectures include slides of soils, landscapes, and cropping systems.]

**[CSS 473 Ecology of Agricultural Systems (also BIOES 473)]**

Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Lec and disc, T R 2:30-3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips. Not offered 2000-2001. Next offered fall 2002. A. G. Power and E. C. Fernandes.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.]

**[CSS 483 Environmental Biophysics (also EAS 483)]**

Spring. 3 credits. Prerequisite: CSS (SCAS) 260 or equivalent or permission of instructor. Lec, M W F 11:15. S. J. Riha.

Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

**[CSS 663 Pedology]**

Spring. 3 credits. Prerequisite: CSS (SCAS) 361 or permission of instructor. M W F 12:20. Offered even spring semesters. Next offered spring 2002. R. B. Bryant.

Weathering, reactions, and processes of soil genesis. Principles of soil classification and the rationale and utilization of soil taxonomy. Development and significance of major groups of soils of the world.]

**[CSS 666 Plant/Microbe Interactions]**

Fall. 3 or 4 credits. Prerequisite: CSS 366 or equivalent, or permission of instructor. Lec, T R 10:10-11:25; lab, F 1:25-4:25. Offered alternate years. Next offered fall 2001. J. E. Thies.

Discussions on current research into plant/microbe interactions including: molecular signaling between plants and microbes involved in symbiotic, associative, or pathogenic interactions; and new methodologies for understanding the role(s) soil microorganisms play in plant production. Students participating in the optional lab section (for a total of four credits) will undertake an independent inquiry into a topic of personal interest, the results of which will be presented in a final seminar.]

**[CSS 667 Advanced Soil Physics]**

Spring. 3 credits. Prerequisites: one year of college physics and SCAS 483 or permission of instructor. S-U grades optional. Hours TBA. Offered alternate years. Next offered 2002. P. C. Baveye.

A detailed study of measurement processes and of the hydrostatics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamic and mechanistic (molecular) standpoints. Mechanical and thermodynamical analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.]

**[CSS 669 Organic Matter—Soils, Sediments, and Waters]**

Spring. 3 credits. Prerequisites: CSS (SCAS) 260 and CHEM 357-358 or equivalent. T R 11:15-12:30. J. M. Duxbury.

A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Interaction with anthropogenic organics and effects of anthropogenic activities on natural organics are considered.

**[CSS 671 Soil Chemistry]**

Fall. 3 credits. Prerequisite: 1 year of physical chemistry or permission of instructor. Offered alternate years. Next offered fall 2001. Lec, M W F 10:10. M. B. McBride.

A detailed examination of the structure and surface chemistry of colloidal particles common to soils. Ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays, oxides, and organic matter will be emphasized. The behavior of environmental contaminants in soils, particularly metals and toxic organics, will be described.]

**[CSS 693 Special Topics in Soil Science]**

Fall or spring. 1-6 credits. S-U grades optional.

Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

**[CSS 880 Master's-Level Thesis Research in Soil Science]**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students specifically in a master's program.

**[CSS 980 Graduate-Level Dissertation Research in Soil Science]**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students in a Ph.D. program only before the "A" exam has been passed.

**[CSS 981 Doctoral-Level Dissertation Research in Soil Science]**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students admitted to candidacy after the "A" exam has been passed.

## EARTH AND ATMOSPHERIC SCIENCES

B. L. Isacks, chair; S. J. Riha, associate chair; D. S. Wilks (atmospheric science), R. W. Kay (geological sciences), K. H. Cook (science of earth systems), undergraduate advising coordinators; R. W. Allmendinger, W. Allmon, M. Barazangi, J. M. Bird, L. D. Brown, L. M. Cathles, J. L. Cisne, S. J. Colucci, L. A. Derry, C. H. Greene, T. E. Jordan, S. Mahlburg Kay, W. W. Knapp, F. H. T. Rhodes, D. L. Turcotte, W. M. White, M. W. Wysocki

**EAS 101 Introductory Geological Sciences**

Fall, spring, or summer. 3 credits. Fall, staff; spring, J. M. Bird; summer, W. Brice. Designed to enhance an appreciation of the physical world. Natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems are emphasized. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth System Science). Water, mineral, and fuel resources; environmental concerns. Field trips in the Ithaca region.

**EAS 102 Evolution of the Earth and Life (also BIO G 170)**

Spring. 3 credits. J. L. Cisne. Earth systems and their evolution. Earth history's astronomical context. Plate tectonics, continental drift, and their implications for climate and life. Coevolution of life and the atmosphere. Precedents for ongoing global change. Dinosaurs, mass extinctions, and human ancestry. Laboratories on reconstructing geological history and mapping ancient geography. Fossil collecting on field trips.

**EAS 104 The Sea: An Introduction to Oceanography (also BIO ES 154)**

Spring, summer. 3-4 credits (4 credits with lab section). Spring, C. H. Greene, W. M. White; summer, J. Chiment.

A survey of the physics, chemistry, geology, and biology of the oceans for both science and nonscience majors. Topics include: sea-floor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate change, ocean ecology, coastal processes, marine pollution, and marine resources.

**EAS 105 Writing on Rocks**

Fall. 3 credits. Freshman Seminar. J. Chiment. See Freshman Seminar Handbook for description.

**EAS 106 Vertebrate Fossil Preparation**

Spring. 1 credit. Prerequisites: 1 introductory geology course or concurrent enrollment, class size is limited. J. Chiment. A laboratory-oriented course that will expose students to techniques of vertebrate fossil preparation. Roughing-out and fine preparation of large specimens in solid matrix will be covered, as well as screen washing and microscope techniques for the recovery of micro-vertebrate remains. Specialized scanning techniques will be discussed. The class will meet for one hour each week for the first six weeks of the semester. Students will be assigned to an individual or group project requiring two hours of participation each week for the remainder of the semester.

**EAS 107 How the Earth Works**

Fall. 1 credit. J. L. Cisne.

A user-friendly introduction to the workings and interactions of solid earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

**EAS 109 Dinosaurs**

Fall. 1 credit. J. L. Cisne.

An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

**EAS 111 To Know the Earth**

Fall. 3 credits. J. M. Bird.

Acquaints the nonscientist with Earth. Major features and how Earth has evolved. Earth System Science and building a habitable planet. Effects of human activity on geologic environments, mitigating environment damage, and living with natural hazards. Mineral resource use in the twenty-first century and an environmentally sound fuel-minerals cycle.

**EAS 122 Earthquake! (also ENGRI 122)**

Fall. 3 credits. L. D. Brown.

The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

**EAS 131 Basic Principles of Meteorology (previously SCAS)**

Fall. 3 credits. Lec, T R 11:15; lab, T W or R 1:25-4:25 and M W 7:00-9:30 P.M.

M. W. Wysocki.

A simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

**EAS 150 Introduction to Fortran Programming (previously SCAS)**

Fall. 3 credits. Lec, T R 12:20-1:10; lab T 1:25-3:32. M. W. Wysocki.

An introduction to the elements of computer programming using Fortran. Exercises involve mainly meteorological problems.

**EAS 200 Art, Archaeology, and Analysis (also ARKEO 285, ARTH 200, ENGRI 185, PHYS 200)**

Spring. 3 credits. R. W. Kay.

An interdepartmental course on the use of techniques of science and engineering in cultural research. Applications of physical and physiological principles to the study of archaeological artifacts and works of art. Historical and technical aspects of artistic creation. Analyses by modern methods to deduce geographic origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for engineering.

**EAS 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)**

Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Cathles.

Formation of the solar system: accretion and evolution of the Earth. The rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes. The hydrologic cycle: runoff, floods and sedimentation, groundwater flow, and contaminant transport. Weathering cycle: chemical cycles, CO<sub>2</sub> (weathering), rock cycle, controls on global temperature (CO<sub>2</sub> or ocean currents), and oil and mineral resources.

**[EAS 203 Natural Hazards and the Science of Complexity]**

Fall. 3 credits. Prerequisites: 1 calculus course. Not offered 2000-2001.

D. L. Turcotte.

Studies of natural hazards; earthquakes, volcanic eruptions, floods, hurricanes, tornadoes, severe storms, wildfires, and meteor impacts. Applications of the science of complexity to natural hazards: fractals, chaos, and self-organized criticality.]

**EAS 204 Ocean Sciences Laboratory**

Spring. 3 credits. Prerequisite or co-requisite: BIO ES 154/EAS 104.

C. H. Greene, B. W. Monger.

A laboratory course investigating the physics, chemistry, geology, and biology of the oceans. This course is intended for science majors to supplement the material covered in BIO ES 154/EAS 104. The course includes a discussion session and laboratory each week.

**EAS 210 Introduction to Field Methods in Geological Sciences**

1 lec, Saturday field trips. 3 credits.

Prerequisite: GEOL 101 (or 201) or

permission of instructor. S. M. Kay (255-4701, smk16@cornell.edu).

The methods by which rocks are used as a geological database. Field methods used in the construction of geologic maps and cross sections; systematic description of stratigraphic sections. Field and laboratory sessions on Saturdays until Thanksgiving. One additional lecture during most of these weeks. One weekend field trip to eastern New York.

**EAS 212 Caribbean Field Trip**

Spring. 2 credits. Prerequisite: permission of instructor. Enrollment limited to 15.

Approximate cost \$1,100. L. D. Brown.

A multidisciplinary look at earth science and environmental issues represented in the Yucatan Peninsula of Mexico. Base for operations will be the Centro Ecologico Akumal, located on the Caribbean coast south of Cancun. This coast and its associated reef epitomizes the conflict between ecological preservation and economic development on an international scale. Excursions may include visits to Merida, a historic Spanish town which lies above the buried impact structure that many believe resulted in the death of the dinosaurs; ruins at Chichen Itza, Mayapan, Coba, and Tulum associated with the rise and fall of Mayan culture; and wildlife (monkeys, jaguars, crocodiles) preserves where recent geological studies have found evidence that the fall of the Mayans may have been triggered by climate change. The field trip will feature snorkel tours of reefs and lagoons as well as the cenotes (sinkholes) that characterize this classic karst landscape. Weekly lectures during the semester will provide background; field trip scheduled for January.

**EAS 213 Marine and Coastal Geology**

Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor. Staff.

A special one-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost for 2001 (including tuition, room, board, and ferry transportation) is \$1,100.

**EAS 250 Meteorological Observations and Instruments (previously SCAS)**

Spring. 3 credits. Prerequisite: EAS 131.

Lecs, M W 12:20; lab, R 1:25-3:20.

M. W. Wysocki.

Methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Instrument siting, mounting, and protection. Instrument response characteristics, calibration, and standardization. Recorders and data logging systems. Laboratory exercises in observation and data analysis. Intended to serve as preparation for Observers Examination. Lab fee \$50.

**EAS 260 Soil Science (also CSS 260) (previously SCAS)**

Fall. 4 credits. S-U grades optional. Lec, M W F 9:05; lab, M T W or R 1:25. S. J. Riha.

Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs will initially be field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs will focus on accessing, interpreting, and applying soil information.

**EAS 296 Forecast Competition (previously SCAS)**

Fall and spring. 1 credit. S-U grades only.

Prerequisites: sophomore undergraduate standing in atmospheric science, or permission of instructor. Time TBA.

D. S. Wilks.

This two-semester course provides daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully. Enroll for two consecutive semesters, with credit awarded after the second semester. May be repeated for credit.

**EAS 302 Evolution of the Earth System (also SES 302)**

Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Lec, and disc, TBA. B. L. Isacks and staff.

Co-evolution of life and the Earth system: Earth's early history; plate tectonics, continental drift, and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting information preserved in the rock record.

**EAS 315 Geomorphology**

Fall. 4 credits. Prerequisite: 1 of the following: a 3-credit EAS or SES course, or EAS 260. T. E. Jordan and B. L. Isacks.

A study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. Landforms constructed by Earth's internal processes are the point of departure, as we examine their modification by physical interaction with the atmosphere and oceans. Also treated are depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images and Digital Elevation Models of examples from around the globe. Two Saturday field trips.

**EAS 321 Introduction to Biogeochemistry (also SES 321, NTRES 321)**

Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry, J. Yavitt.

Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

**EAS 326 Structural Geology**

Spring. 4 credits. Prerequisite: MATH 112, EAS 101 or 201, or permission of instructor. R. W. Allmendinger.

Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

**EAS 331 Climate Dynamics (also ASTRO 331) (previously SCAS)**

Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. Lec's, M W F 1:25-2:25; disc, W 2:30. K. H. Cook and P. J. Gierasch.

Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

**[EAS 334 Microclimatology**

Spring. 3 credits. Prerequisite: A course in physics. T R 10:10-11:25. Offered alternate years. Next offered 2001-2002. D. S. Wilks.

The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.]

**EAS 341 Atmospheric Thermodynamics and Hydrostatics (previously SCAS)**

Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. M W F 9:05-9:55. W. W. Knapp.

Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrostatics and stability.

**EAS 342 Atmospheric Dynamics (previously SCAS)**

Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook.

Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics considered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.

**EAS 352 Synoptic Meteorology I (previously SCAS)**

Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. Lec's, T R 9:05; lab, M 1:25-3:25.

M. W. Wysocki.

Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course will strengthen previously introduced meteorological concepts which will be applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

**EAS 355 Mineralogy**

Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay.

Examination of minerals by hand-specimen properties and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals. X-ray diffraction is introduced. Independent research project.

**EAS 356 Petrology and Geochemistry**

Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.

Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

**EAS 375 Sedimentology and Stratigraphy**

Fall. 4 credits. Prerequisite: EAS 101 or 201. J. L. Cisne.

Formation of sedimentary rocks. Depositional processes and environments. Correlation of strata in relation to time and environment. Petrology of sandstones and limestones. Geological age determination. Reconstruction of paleogeography and interpretation of Earth history from stratigraphic evidence. Organization of strata in stratigraphic sequences.

**EAS 388 Geophysics and Geotectonics**

Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.

Global tectonics and the deep structure of the solid earth as revealed by investigations of

earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

**[EAS 411 Satellite Remote Sensing in Geosciences**

Fall. 3 credits. Prerequisite: permission of instructor. Not offered 2000-2001.

B. L. Isacks.

Instruction in satellite remote sensing, image processing, geographic information systems (GIS), and analysis of digital elevation models using advanced computer workstations via participation in current research on earthquakes, glaciers, and tectonics.]

**EAS 417 Field Mapping in Argentina**

Summer. 3 credits. Prerequisites: EAS 210 and 326; Spanish desirable, but not required. S. Mahlburg Kay.

Modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampean Ranges (Pie de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ullun).

**[EAS 423 Petroleum Geology**

Fall. 3 credits. Recommended: EAS 326. Offered alternate years. Not offered 2000-2001. Staff.

Introduction to hydrocarbon exploration and development. Exploration techniques, including well logs, fluid pressures, seismic-reflection methods, gravity, and magnetic measurements to map subsurface structures and stratigraphy. Petroleum origin and migration. Dispersal systems and depositional patterns of petroleum reservoirs. Economics of exploration, leasing, drilling, and production. Estimates of petroleum reserves, including tar sands and oil shales.]

**[EAS 434 Reflection Seismology**

Spring. 4 credits. Prerequisites: MATH 192 and PHY 208, 213, or equivalent. Not offered 2000-2001. L. D. Brown.

Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling, and interpretation software from LandMark.]

**EAS 435 Statistical Methods in Meteorology (previously SCAS)**

Fall. 3 credits. Prerequisites: 1 introductory course each in statistics (e.g., BTRY 215 or ARME 210) and calculus. T R 10:10-11:25. D. S. Wilks.

Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Some statistical characteristics of meteorological data including probability distributions and correlation structures. Operational forecasts derived from multiple regression models including the MOS system. Forecast verification techniques and scoring rules. Time series analysis, EOFs, and other research topics as time permits.

**EAS 437 Geophysical Field Methods**

Fall. 3 credits. Prerequisites: PHYS 213 or 208, or permission of instructor.  
L. D. Brown.

Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis on seismic, ground penetrating radar, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed and interpreted. A field companion to EAS 436, which is recommended but not required prior to this course.

**EAS 444 Tropical Meteorology (previously SCAS)**

Spring. 3 credits. Prerequisites: EAS 342 or instructor's approval. M W F 11:15–12:05.  
Not offered 2000–2001. K. H. Cook.

Structure and dynamics of the tropical atmosphere on a wide range of time and space scales ranging from meso-scale convective systems to planetary waves. Topics include hurricanes, monsoonal circulation, and El Niño.]

**EAS 445 Geohydrology (also ABEN 471 and CEE 431)**

Fall. 3 credits. Prerequisites: MATH 294 and ENGR 202. W. Brutsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

**EAS 447 Physical Meteorology (previously SCAS)**

Fall. 3 credits. Prerequisite: 1 year each of calculus and physics. M W F 10:10. Offered alternate years. Next offered 2001–2002.  
W. W. Knapp.

Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.]

**EAS 451 Synoptic Meteorology II (previously SCAS)**

Fall. 3 credits. Prerequisites: EAS 341 and 342. Lects, T R 9:05; lab, M 1:25–3:20.  
S. J. Colucci.

Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

**EAS 453 Advanced Petrology**

Fall. 3 credits. Prerequisite: EAS 356.  
Offered alternate years. R. W. Kay.

Magma and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

**EAS 454 Advanced Mineralogy**

Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. Not offered 2000–2001. W. A. Bassett.

Crystallography and crystal chemistry of minerals and the methods of their study. X-ray diffraction, optical methods, and computer simulation of crystal structures. Emphasis on effects of high pressures and temperatures with implications for understanding the Earth's interior.]

**EAS 455 Geochemistry**

Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years.  
Next offered 2001–2002. W. M. White.

The Earth from a chemical perspective. Formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems; and ore deposition.]

**EAS 456 Mesoscale Meteorology (previously SCAS)**

Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. T R 11:40–12:55. Offered alternate years. Next offered 2001–2002. S. J. Colucci.

Structure and dynamics of midlatitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms.]

**EAS 457 Atmospheric Air Pollution (previously SCAS)**

Fall. 3 credits. Prerequisites: EAS 341 or 1 course in thermodynamics, and 1 semester of chemistry, or permission of instructor. M W F 11:15–12:05. Offered alternate years. M. W. Wysocki.

Course will examine sources, effects, transport, measurement, and controls of air pollution. The basic principles in each area will be discussed with an emphasis on their local, regional, and global impacts.

**EAS 458 Volcanology**

Spring. 3 credits. Corequisite: EAS 356 or equivalent. Offered alternate years.  
R. W. Kay and W. M. White.

Causes of volcanism, melting in the Earth, and the origin of magmas. Physical volcanology, nature and types of volcanic eruptions and associated deposits, and eruption mechanisms. Volcanic plumbing systems, magma chamber processes, evolution of magma. Volcanism and impact phenomena in the solar system. Volcanic hazard assessment and volcano monitoring. Ore deposits associated with volcanism.

**EAS 462 Marine Ecological Processes (also BIOES 462)**

Spring. 3 credits. Limited to 75 students.  
Prerequisite: BIOES 261. Offered alternate years. C. D. Harvell and C. H. Greene.

Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas,

temperate coastal waters, and tropical coral reefs.

**EAS 475 Special Topics in Oceanography**

Spring, summer. 2–5 var. credits. Prerequisites: EAS 104 or BIOES 154, and permission of instructor. C. H. Greene.

Undergraduate instruction and participation in advanced areas of oceanographic research. Topics will change from term to term. Contact instructor for further information.

**EAS 476 Sedimentary Basins: Tectonics and Mechanics**

Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. T. E. Jordan.

Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geophysical and stratigraphic modeling; sequence stratigraphy. Modern and ancient examples.

**EAS 478 Advanced Stratigraphy**

Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. Next offered 2001–2002.  
T. E. Jordan.

Modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Physical controls on the stratigraphic record. Numerical modeling.]

**EAS 479 Paleobiology (also BIOES 479)**

Fall. 4 credits. Prerequisites: 1 year of introductory biology for majors and either BIOES 274, 373, EAS 375, or permission of instructor. W. Allmon.

A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

**EAS 481 Senior Survey of Earth Systems**

Fall. 3 credits. Limited to seniors majoring in geological science. J. M. Bird.

Survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis on current models of Earth's dynamic systems (e.g., global climate change; mantle evolution). Guest lecturers; synthesis and review literature; scientific literature readings; discussions; student presentations.

**EAS 483 Environmental Biophysics (also CSS 483) (previously SCAS)**

Spring. 3 credits. Offered alternate years.  
Prerequisites: EAS/CSS 260 or equivalent, or permission of instructor. M W F 11:15.  
S. J. Riha.

Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problem sets.

**EAS 491-492 Undergraduate Research**

Fall, spring. 1 to 4 credits. Staff.  
Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

**EAS 494 Special Topics in Atmospheric Science (undergraduate level)**

Fall or spring. 8 credits maximum. S-U grades optional. Staff.  
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. The same course is not offered more than twice as EAS 494.

**EAS 496 Internship experience**

Fall or spring. 1-2 credits. S-U grades only. Staff.

**EAS 497 Individual Study in Atmospheric Science**

Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form. Staff.

Topics are arranged at the beginning of the term for individual study or for group discussions.

**EAS 498 Teaching Experience in Atmospheric Science**

Fall or spring. 1-5 credits. S-U grades optional. Students must register with an Independent Study form. Staff.  
Teaching experience is obtained by assisting in the instruction of an atmospheric science course.

**EAS 499 Undergraduate Research in Atmospheric Science**

Fall or spring. Credit by arrangement. Students must register with an Independent Study form. Staff.  
Independent research on current problems in atmospheric science.

**EAS 500 Design Project in Geohydrology**

Fall, spring. 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters. L. M. Cathles.

The project may address one of the many aspects of groundwater flow and contamination, and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

**EAS 502 Case Histories in Groundwater Analysis**

Spring. 4 credits. L. M. Cathles.  
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of term.

**[EAS 622 Advanced Structural Geology I]**

Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. Next offered 2001-2002. R. W. Allmendinger.

Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.]

**EAS 624 Advanced Structural Geology II**

Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.  
Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, rift provinces, or strike-slip provinces. Techniques of balanced cross sections.

**EAS 628 Geology of Orogenic Belts**

Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.  
A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement EAS 681.

**[EAS 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics]**

Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. Next offered 2001-2002. D. L. Turcotte.

Definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods and droughts. Definitions of chaos and self-organized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the Earth's dynamo, and distributed seismicity.]

**EAS 635 Advanced Statistical Meteorology (previously SCAS)**

Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. Lec, T R 10:10-11:25, R 11:35-12:05. D. S. Wilks.

Lectures and topics concurrent with EAS 435, plus an extra 30-minute session per week in which selected topics from EAS 435 are treated in more depth, and additional topics are covered which may vary from year to year according to student interest. Term project required. Not open to students who have taken EAS 435 for credit.

**EAS 636 Advanced Geophysics II: Quantitative Geodynamics**

Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. D. L. Turcotte.

Stress and strain in the Earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.

**[EAS 641 Analysis of Biogeochemical Systems]**

Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. Next offered 2001-2002. L. A. Derry.

Dynamics of biogeochemical systems. Kinetic treatment of biogeochemical cycles. Box models, residence time, response time. Analytical and numerical solutions of model systems. Eigen-analysis of linear systems. Feedback and nonlinear cases, problems of uncertainties in natural systems. Modeling software such as Stella II and Matlab; applications to current research of participants or from recent literature.]

**EAS 651 Advanced Atmospheric Thermodynamics (also ASTRO 651)**

Fall. 3 credits. Prerequisites: a good background in undergraduate calculus and physics is required. Offered alternate years. K. H. Cook, P. J. Gierasch, S. J. Colucci.

A survey of the fundamental physical processes in atmospheres. Topics include thermodynamics of atmospheric gases, moist effects, hydrostatics, convective instability, atmospheric radiation and radiative heating, radiative-convective equilibrium, clouds, cloud microphysics, and precipitation processes. Thermal structure and greenhouse effects on the Earth and other planets will be discussed. The course will be taught at the level of *Fundamentals of Atmospheric Physics* by Salby.

**EAS 652 Advanced Atmospheric Dynamics (also ASTRO 652) (previously SCAS)**

Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. T R 11:40-12:55. Offered alternate years. S. J. Colucci, K. H. Cook, P. J. Gierasch.  
Quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

**[EAS 656 Isotope Geochemistry]**

Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. Next offered 2001-2002. W. M. White.

Nucleosynthetic processes and the isotopic abundance of the elements. Geochronology and cosmochronology using radioactive decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as  $^{14}\text{C}$  and  $^{36}\text{Cl}$ . Use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the solar system. Stable isotopes and their use in geothermometry, ore petrogenesis, paleontology, and the global climate system.]

**[EAS 675 Modeling the Soil-Plant-Atmosphere System (also CSS 675) (previously SCAS)]**

Spring. 3 credits. Prerequisites: EAS/CSS 483 or equivalent. T R 8:40-9:55. Offered alternate years. Next offered 2001-2002. S. J. Riha.

Introduction to the structure and use of soil-plant-atmosphere models. Topics covered will include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation will be discussed.]

**EAS 681 Geotectonics**

Fall. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

Theories of orogeny; ocean and continent evolution. Kinematics of lithosphere plates. Rock-time assemblages of modern oceans and continental margins, and analogs in ancient orogenic belts. Time-space reconstructions of specific regions. Problems of dynamic mechanisms—corollaries and evidence from crustal features.

**EAS 692 Special Topics in Atmospheric Science (previously SCAS)**

Fall or spring. 1–6 credits. S-U grades optional. Staff.

Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

**EAS 695 Computer Methods in Geological Sciences**

Fall, spring. 3 credits. L. Brown and B. L. Isacks.

Independent research projects using modern computational resources in the Department of Earth and Atmospheric Sciences. Possibilities include: image and seismic processing, seismic and geomechanical modeling, GIS, use of interpretational workshops for 3-D seismics and satellite imagery; modeling fluid flow through complex media.

**EAS 700–799 Seminars and Special Work**

Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.

Advanced work on original investigations in earth and atmospheric sciences. Topics change from term to term. Contact appropriate professor for more information.

**EAS 722 Advanced Topics in Structural Geology**

R. W. Allmendinger.

**EAS 731 Plate Tectonics and Geology**

J. M. Bird.

**EAS 733 Fractals and Chaos—Independent Studies**

D. L. Turcotte.

**EAS 751 Petrology and Geochemistry**

S. Mahlburg Kay and R. W. Kay.

**EAS 753 Advanced Topics in Mineral Physics**

W. A. Bassett.

**EAS 755 Advanced Topics in Petrology and Tectonics**

J. M. Bird and W. A. Bassett.

**EAS 757 Current Research in Petrology**

S. Mahlburg Kay and R. W. Kay.

**EAS 762 Advanced Topics in Petroleum Exploration**

Fall. W. B. Travers.

**EAS 771 Advanced Topics in Sedimentology and Stratigraphy**

T. E. Jordan.

**EAS 773 Paleobiology**

J. L. Cisne.

**EAS 775 Advanced Topics in Oceanography**

Spring. C. H. Greene.

**EAS 780 Earthquake Record Reading**

Fall. M. Barazangi.

**EAS 781 Geophysics, Exploration Seismology**

L. D. Brown.

**EAS 783 Advanced Topics in Geophysics**

B. L. Isacks.

**EAS 789 Lithospheric Seismology (COCORP Seminar)**

L. D. Brown.

**EAS 793 Andes-Himalaya Seminar**

S. Mahlburg Kay, R. W. Allmendinger, B. L. Isacks, and T. E. Jordan.

**EAS 795 Low Temperature Geochemistry**

L. A. Derry.

**EAS 796 Geochemistry of the Solid Earth**

W. M. White.

**EAS 797 Fluid-Rock Interactions**

L. M. Cathles.

**EAS 799 Soil, Water, and Geology Seminar**

L. M. Cathles and T. S. Steenhuis.

**EAS 850 Master's-Level Thesis Research in Atmospheric Science (previously SCAS)**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students specifically in the master's program in atmospheric science.

**EAS 950 Graduate-Level Dissertation Research in Atmospheric Science (previously SCAS)**

Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.

Limited to students in the atmospheric science Ph.D. program only **before** the "A" exam has been passed.

**EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science (previously SCAS)**

Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.

Limited to students admitted to candidacy in the atmospheric science Ph.D. program **after** the "A" exam has been passed.

**EDUCATION**

D. E. Hedlund, chair; G. J. Applebee, W. S. Carlsen, C. A. Conroy, A. Dowd, J. A. Dunn, D. M. Ewert, J. J. Lo, S. J. Peters, S. C. Piliero, G. J. Posner, R. E. Ripple, V. N. Rockcastle, D. E. Schrader, J. W. Sipple, R. E. Steele, K. A. Strike, H. D. Sutphin, D. J. Trumbull, D. G. Way, A. L. Wilson

**EDUC 005 Basic Review Mathematics**

Fall. 3 credits (this credit is not counted toward the 120 credits required for the degree). Lecs, M W F 8:00 or 9:05. J. J. Lo.

Review of concepts necessary for success in basic mathematics and statistics courses. Topics include problem solving, graphing, basic algebra skills, linear and quadratic functions, polynomial equations, exponents and logarithms, and trigonometry. Considerable emphasis is placed on learning mathematics for understanding and solving word problems.

**EDUC 101 Introduction to Education**

Fall. 3 credits. T R 11:40–12:55.

C. A. Conroy.

An introduction to the field of education that is structured around an examination of three contemporary policy issues. The issues are chosen to help students understand important aspects of formal schooling systems (e.g., the public schools, colleges, and universities) as well as nonformal educational activities (e.g., adult education, extension education, and community education). The course is team-taught by two members of the faculty and is designed for students seeking a self-contained introduction to education that can also lead to additional study in the field.

**EDUC 115 Introductory College Mathematics**

Spring. 4 credits. M W F 11:15 or 12:20.

J. J. Lo.

Designed for students wishing to fulfill distribution requirements and/or prepare for study in calculus. This course offers a multi-representational approach to college-level precalculus mathematics, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical, and symbolic representations of functions and their transformations. Students will use graphing calculators in a collaborative lab setting.

**[EDUC 120 Education for Empowerment**

Spring. 3 credits. W 1:25–4:25. Not offered 2000–2001. Staff.

Common themes running through the modules include human learning, teaching strategies, political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.]

**[EDUC 210 Psychology of Learning and Memory**

Fall. 3 credits. Prerequisite: introductory psychology. Not offered 2000–2001.

J. A. Dunn.

This course deals with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the management of teaching and learning. Practical applications of research findings will be emphasized. One or more experimental projects and the use of microcomputers will be required.]

**EDUC 212 Psychological Foundations of Education**

Spring and fall. 3 credits. S-U option available. Prerequisite: introductory psychology. W 2–4:25 plus times TBA. J. A. Dunn.

A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.

**EDUC 220 Community Learning and Service Partnership**

Fall and spring. 4 credits. S-U grades optional. T R 2:55–4:10. A. Wilson.

Students learn to be self-directed learners, to integrate theory, and to be critical observers of their own experiential learning, issues of diversity and empowerment, interpersonal communication, and critical analysis. Concepts and skills are learned through participation in a campus-based adult education program, the

Community Learning and Service Partnership (CLASP). Students practice adult education facilitation techniques in lab.

#### **EDUC 240 The Art of Teaching**

Fall and spring. 3 credits. Fall: M 8-9:55 or T 10:10-12:05 or 2:30-4:25. Spring: M 8-9:55 or 12:20-2:15 or T 2:30-4:25 or W 12:20-2:15 or 2:30-4:25. Fall, staff; spring, G. J. Posner and staff.

This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nonformal situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

#### **EDUC 271 Sociology of Education**

Fall. 3 credits. S-U grades optional. T R 10:10-11:25. J. W. Sipple.

An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, from elementary school to the university, are considered.

#### **EDUC 311 Educational Psychology**

Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W F 11:15-12:05. D. E. Schrader.

This course applies psychological concepts to educational settings such as schools with a focus on understanding the interaction between people, context, and knowledge in schools and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. This course is designed to foster effective teaching and learning across the life span, but with a focus on secondary education.

#### **EDUC 317 Psychology of Adolescence**

Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15-12:05; Friday morning section TBA. D. E. Schrader.

This course surveys the nature of adolescent cognitive, social, moral, and self-development. Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications will be discussed for both formal and informal settings.

#### **EDUC 331 Careers in Agriculture, Extension, and Adult Education**

Fall. 1-3 credits. Letter grade only. M 2:00-4:25. D. E. Foster, and G. J. Applebee.

This course will offer modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module will offer one hour of credit, and students may take one or more of the modules. The course will provide a historical perspective and an introduction to the organization and scope of programs for each module. Students will examine career opportunities and characteristics of the professions addressed by each module.

Course activities include field observations and experiences during arranged times.

#### **EDUC 332 Instructional Methods in AgriScience Education**

Spring. 1-3 credits. Prerequisite: enrolled in a Cornell teacher education program or permission of instructor. R 2:00-4:25. C. A. Conroy.

Selection, practice, and evaluation of methods in AgriScience education will be stressed. The course offers a modular approach to focus on teaching strategies and methodology unique to teaching in schools. Content will include program planning (Module I), experiential learning (Module II), and youth leadership (Module III). All students must enroll for one credit in Module I; students may be exempt from Modules II and III with permission of instructor. Participants will be required to participate in field experiences at arranged times.

#### **[EDUC 335 Youth Organizations**

Spring. 3 credits. T R 10:10-11:25; lab TBA. Not offered spring 2000-2001. Staff.

Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations. The course provides students with indepth learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.]

#### **EDUC 370 Issues in Educational Policy**

Spring. 3 credits. T R 10:10-11:25. K. A. Strike.

An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity; student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives. Meets group C requirements for College of Agriculture and Life Sciences.

#### **EDUC 378 Political Economy of Education**

Fall. 3 credits. S-U grades optional. T R 1:25-2:40. A. Dowd.

A policy oriented examination of educational systems with an emphasis on political and economic perspectives. Attention will be paid to both external and internal aspects of educational activities. Specific topics will include the changing contributions of education to earnings, school-community relations, power within educational organizations, the impact of technology in the workplace and in classrooms, and the sources and impact of educational costs. A variety of education settings will be examined including higher education and non-formal education.

#### **EDUC 380 Independent Honors Research in Social Science**

Fall or spring. 1-6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program. Staff.

#### **EDUC 401 Our Physical Environment**

Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately \$7. T 1:25-4:25. V. N. Rockcastle.

A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding and techniques for teaching. An individual research project is included. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

#### **EDUC 402 Knowing and Learning in Science, Mathematics, and Agriscience**

Fall. 4 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. M W 2:30-4:20. D. J. Trumbull and C. A. Conroy.

Students examine both current notions in the history and philosophy of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students' individual research projects investigating neophytes' knowledge of science and mathematics concepts. All students enrolled must complete fieldwork. Fieldwork will comprise a minimum of three hours a week in an appropriate educational setting.

#### **EDUC 403 Observing and Teaching Science, Mathematics, and Agriscience**

Spring. 4 credits. Prerequisites: enrollment in a Cornell teacher education program or permission of the instructor. C. A. Conroy.

Designed for prospective secondary teachers, this course provides a multiple-perspectives orientation to the culture of schools and the work of teaching science and mathematics. Students spend six to eight hours each week observing in area schools. Students also plan and teach innovative lessons in the scheduled teaching laboratory. Readings and discussions planning, delivery, and evaluation of instruction classroom management, and other issues such as equity, tracking, and classroom language.

#### **EDUC 413 Psychology of Human Interaction**

Fall. 3 credits. Enrollment limited. Prerequisite: permission of instructor. T R 10:10-12:05. D. E. Hedlund and staff.

Designed to develop skills for, and understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

#### **EDUC 414 Counseling Psychology**

Spring. 4 credits. Prerequisites: introductory psychology, social or personality psychology. T R 10:10-12:05. D. E. Hedlund and staff.

The processes of counseling are examined from various theoretical perspectives. Typical counseling issues are examined, and implications are drawn for counseling strategies, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.

#### **EDUC 420 Field Experience**

Fall or spring. 1-4 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Staff.

Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate their field experience.

#### **EDUC 445 Curriculum Design Workshop**

Summer. 3 credits. G. J. Posner.

A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.

#### **EDUC 447 Curriculum Design Laboratory: A Technology-Intensive Course**

Spring or summer. 3 credits. W. S. Carlsen.

A project-focused introduction to course design, from needs assessment, through materials development, to the evaluation of student outcomes. The course involves the creation and implementation of an actual curriculum, and the nature of the project will vary from year to year. Students are expected to make extensive use of computer software writing, design, management, and communications. The summer section of 447 will be smaller and we anticipate that, rather than working on a single class project, students will undertake curriculum development projects of their own design.

#### **EDUC 472 Philosophy of Education**

Fall. 3 credits. T 2:30-4:25. K. A. Strike.

A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the theory of knowledge are examined and linked to current educational issues.

#### **EDUC 477 Law and Educational Policy**

Fall. 3 credits. M 2:30-4:25. K. A. Strike.

A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational issues and in terms of the consequences of legal decisions for the development and operation of educational institutions.

#### **EDUC 483 Comparative Studies in Adult Education**

Spring. 3 credits. S-U grades optional. T R 3:35-5:00. Staff.

Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

#### **EDUC 494 Special Topics in Education**

Fall or spring. 4 credits maximum. S-U grades optional. Hours TBA. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

#### **EDUC 495 Senior Seminar**

Spring. 2 credits. Education majors or permission of instructors. S-U only. TBA. Undergraduate coordinator for the department.

This seminar focuses in depth on two or three significant educational issues, which may vary from year-to-year depending on the interests and background of students and faculty. The seminar attempts to help students relate the knowledge gained in their particular concentrations to a set of broad issues in education. While education faculty will be involved in selecting the issues and providing guidance for the seminar, students will be expected to provide the initiative and leadership in the classroom.

#### **EDUC 497 Individual Study in Education**

Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.

A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

#### **EDUC 498 Undergraduate Teaching**

Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with GPA of at least 2.7. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

#### **EDUC 499 Undergraduate Research**

Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with GPAs of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.

Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

#### **EDUC 501 Communication Workshop**

Summer and intersession. 2 credits. S-U grades optional. M. D. Glock.

The course focuses on skills enabling individuals to cope with such concerns as motivation, dealing with difficult people, productive criticism, improving comprehension, adjusting to different learning styles, and communicating with the public. Practice is coordinated with theory and research findings. The ongoing dynamics of the course necessitate intense participation over a period of time, not provided by regularly scheduled 50-minute class periods. Additional auto-tutorial lab time is scheduled. Appropriate for anyone who works with people.

#### **EDUC 507 Environmental Inquiry (also NTRES 507)**

Summer. 1-3 credits (V). S-U grades optional. Prerequisite: limited to preservice or inservice secondary science teachers. Permission of one of the instructors required. W. S. Carlsen and M. E. Krasny.

Exploration of selected topics in environmental science and environmental science education at the secondary school level. The subject-matter focus will vary from year to year, and will track ongoing research and development conducted through Cornell's Environmental Inquiry project, a collaboration between the Departments of Education and Natural Resources and the Center for the Environment. Current work centers on watershed dynamics, biodegradation, environmental toxicology, and invasive species.

#### **EDUC 513 Interpersonal Interaction**

Summer. 1-2 credits. D. E. Hedlund. Designed to develop skills for an understanding of effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources. A workshop design is required for the second credit. Participants must bring a tape recorder to class.

#### **EDUC 523 Food and Fiber Across the Curriculum**

Summer. 0-3 credits. J. Hawkes. An intensive five-day course designed to help New York State elementary teachers and administrators implement the New York Agriculture in the Classroom Program and understand the complexity of New York's leading industry. Participants learn how instructional materials and experiences with our food-fiber system can be used to teach students language arts, mathematics, science, and social studies. One credit is earned by class attendance and participation. Two credits require one additional project. Three credits require two additional projects.

#### **EDUC 548 Effective College Teaching**

Spring. 1-3 credits. S-U grade option. T 5:00-7:00. D. Way.

This course is designed to help participants become more effective college teachers. It will examine the basic principle of learning, identify different learning styles, and explore a variety of teaching techniques, methods, and technologies. Participants will also learn how to design a course and improve their effectiveness as teachers.

#### **EDUC 578 International TA Training Course: Cross-Cultural Classroom Dynamics, Pronunciation and Language, Video Teaching Practicum**

Fall and spring. 2 credits. S-U only. TBA. I. Arnesen, E. Burns, G. Wolek, D. Mendelson.

Designed for first-time international teaching assistants from countries in which English is not the primary language, the ITATP course focuses on three areas: cross-cultural classroom dynamics, video-teaching practicum, and language—enhancing communicative competence in English. Through small group seminars and individual conferences, the ITATP helps international TAs develop their linguistic and pedagogical skills as they gain sensitivity to the dynamics of U.S. classrooms.

**EDUC 601 Secondary Agriculture, Science, and Mathematics Teaching Practicum**

Fall or spring. 6 credits. Prerequisite: permission of instructor. Letter grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics Program. M T W R F 8:00-3:00. W. S. Carlsen, C. A. Conroy, S. C. Piliero, G. J. Posner, A. Solomon, and D. J. Trumbull.

Supervised student teaching in science or mathematics at the secondary level. Program includes teaching in a local school for ten weeks.

**EDUC 602 Teaching Agriculture, Science/Mathematics: Methods, Materials, Practice**

Fall or spring. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor. M T W R F 9:00-3:00. W. S. Carlsen and staff.

The course begins with full day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the semester require students to use those theories to develop and evaluate teaching materials and practices. Students will complete an extensive portfolio documenting their work.

**[EDUC 606 Seminar in Science and Mathematics Education]**

Fall. 1 credit. S-U grades only. T 4:30-5:30. Not offered fall 2000-2001. W. S. Carlsen and S. C. Piliero.

Explores topics in science and mathematics education. The focus of the seminar changes each year.]

**EDUC 609 Methods for Interpretive Research**

Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor. T R 2:55-4:10. D. J. Trumbull.

This course examines some of the methods of educational interpretive research. An interpretive research perspective attends to the complex interactions between researcher, researched, and contexts and accepts the centrality of interpretation in the conduct of human affairs. This perspective imposes some unique demands on researchers wishing to justify the quality of their projects. In the class, students will practice methods for gathering and interpreting data by conducting a small project using methods as they relate to the aims and assumptions of interpretive research.

**EDUC 611 Educational Psychology**

Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15-12:05. R. E. Ripple.

A basic survey course for graduate students (selected undergraduates admitted with permission). Emphasis on psychological factors involved in human learning and the educational process. Set in a broad-based conceptual model of any behavioral setting for learning. A life span developmental approach is used, appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

**EDUC 614 Epistemological Development and Reflective Thought**

Fall. 3 credits. S-U grades optional. M 12:20-2:15. D. E. Schrader.

Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of intellectual development and their implications for educating students of various age groups, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored.

**[EDUC 615 Self and Interpersonal Development and Education]**

Spring. 3 credits. S-U grades optional. M 12:20-2:15. Not offered 2000-2001. D. E. Schrader.

Interpersonal interactions affect teaching and learning. This course takes a life-span perspective as it explores constructive-developmental theories of self and others, and how such theories explain students' understanding of their own and others' actions in educational contexts.]

**EDUC 620 Internship In Education**

Fall or spring. 1-6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. Staff.

An opportunity for practical experience in educational professions development.

**EDUC 621 Work-Experience Coordinator Certification Course I**

Summer. 3 credits. S-U grades optional. D. E. Foster.

The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, and evaluation of work-experience programs including articulation with JPTA and VESID. Field interviews are required. A prerequisite for Course II, EDUC 622.

**EDUC 622 Work-Experience Coordinator Certification Course II**

Summer. 3 credits. Prerequisite: EDUC 621 Work-Experience Certification Course I. D. E. Foster.

The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

**EDUC 630 Special Problems In Agricultural, Extension, and Adult Education**

Fall or spring; may also be offered in summer. 1-3 credits. S-U grades optional. Hours TBA. Staff.

The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural, extension, and adult education.

**EDUC 632 Teaching Agricultural, Extension, and Adult Education**

Summer. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. Hours TBA. C. A. Conroy.

The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

**EDUC 633 Program Planning in Agricultural, Extension, and Adult Education**

Spring. 3 credits. Field trip. Lec, R 1:25-4:25. A. Wilson.

Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education, and to pursue individual interests in program development and improvement.

**[EDUC 635 Experiential Learning]**

Fall. 2 credits. Prerequisite: open to undergraduates with permission of instructor. S-U grades optional. T 12:20-2:15. Not offered 2000-2001. Staff.

Participants will explore various dimensions of scholar and practitioner thinking about the understanding and practice of experiential learning. Theoretical perspectives on experiential education, reflective practice, and a critical learning systems perspective will be explored through readings and applied assignments. The instructor will introduce methods of facilitation designed to encourage inquiry and dialogue for improvement of both nonformal and formal educational activities. The course process is intended to engage participants in reflective dialogue—nurturing emergence of learning community elements.]

**EDUC 644 Curriculum Theory and Analysis**

Spring. 3 credits. M 1:25-4:25. G. J. Posner.

An examination of the basic elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course focuses on the assumptions underlying any curriculum. The major task of each student is to choose and conduct an in-depth analysis of a curriculum. This course is the basic graduate course in curriculum.

**EDUC 661 Administration of Educational Organizations**

Fall. 3 credits. R 3:35-6:00. J. W. Sipple.

Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

**EDUC 664 Educational Finance**

Fall. 3 credits. S-U grades optional. W 3:35-6:00. Staff.

An analysis of the distribution and use of public and private resources for educational

purposes. The discussion will revolve around the issues of equity, efficiency, and freedom of choice. Alternative methods of financing schools will be evaluated, and the perplexing legal and moral issues raised by such questions as "Who pays?" and "Who benefits?" will be discussed. Specific attention will be given to budgeting, accountability, and productivity. An opportunity for individuals to focus on their own areas of interest, such as occupational education, the two-year college, or secondary or higher education.

#### **EDUC 665 Administrative Decision Making**

Spring. 3 credits. S-U grades optional. W 3:35-6:00. Staff.

An introduction to decision-making theory and its relevance to the field of educational administration. Specific applications will be made to the study and improvement of productivity in educational systems. A wide variety of educational settings will be considered, including higher education and nonformal education.

#### **EDUC 680 Foundations of Extension Adult Education**

Fall. 3 credits. Limited to 20 students. S-U grades optional. F 9:05-12:05. A. Wilson.

An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions will be examined through a seminar approach.

#### **EDUC 682 Community Education and Development**

Fall. 3 credits. Limited to 25 students.

Letter grade only. M 1:25-4:25. S. Peters.

An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

#### **[EDUC 685 Training and Development: Theory and Practice (also COMM 685, INTAG 685)]**

Spring. 4 credits. S-U grades optional.

Charge for materials, \$45. F 9:05-12:05; lab TBA. Not offered 2000-2001. Staff.

Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.]

#### **EDUC 694 Special Topics in Education**

Fall, spring, or summer. 1-3 credits.

Prerequisite: permission of instructor. S-U grades optional. Hours TBA. Staff.

Topics to be announced.

#### **EDUC 711 Contemporary Issues in Educational Psychology**

Fall and spring. Variable. 3 credits. S-U grades optional. TBA. Educ psych staff.

This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics will vary from semester to semester. Students may take the course more than once.

#### **EDUC 714 Moral Development and Education**

Spring. 3 credits. S-U grades optional. M 12:20-2:15. D. E. Schrader.

This seminar focuses on current topics in moral development research as related to the educational process. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-span perspective; however, special emphasis will be placed on development from adolescence through adulthood.

#### **EDUC 718 Adult Learning and Development**

Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:00-4:25. R. E. Ripple and A. Wilson.

Deals with adult development and learning behavior from points of view of educational psychology and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

#### **EDUC 730 Seminar in Agricultural, Extension, and Adult Education**

Spring. 2 credits. S-U grades optional. R 8:00-9:55. S. Peters.

Emphasis on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.

#### **[EDUC 745 Seminar in Curriculum Theory and Research]**

Fall. 3 credits. Prerequisite: EDUC 644, or permission of instructor. Not offered 2000-2001. T 2:30-5:00. G. J. Posner.

Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform. Both topics serve to uncover the relation between ideology and research.]

#### **EDUC 760 Practicum Seminar in Educational Administration**

Fall, spring, and summer. 2 credits. S-U only. Hours TBA. J. W. Sipple and K. A. Strike.

The practicum seminar is taken in conjunction with the administrative internship and serves to tie together previous coursework, current policy issues, and the concurrent internship. It involves two elements. First, current interns will meet regularly during the semester to bring their knowledge base (developed in the program) to bear on their current duties and problems and will collaboratively problem solve with faculty and other interns. Second, interns will participate in special topics

seminars as needed in order to supplement coursework in critical areas. Examples of special topics are AIDS, sexual harassment in the workplace, child abuse, and substance abuse recognition.

#### **EDUC 761 Internship in Educational Administration**

Fall, spring, and summer. 9 credits. S-U only. Hours TBA. G. Posner, J. W. Sipple and K. A. Strike.

The internship experience will provide aspiring administrators with supervised professional activities in a public school district. Students undertaking an internship in Educational Administration will (1) learn the practical day-to-day skills of school administration under the supervision of an on-site administrator, and (2) conceptualize and execute a research project dealing with an issue of interest to the participating school district and the student's special committee. Students will work in collaboration with their special committee and on-site supervisor to integrate educational theory and the field experience. A minimum of 20 hours per week will be devoted to on-site internship duties. Students will enroll concurrently in EDUC 760 (practicum seminar) to complete additional degree and certification requirements.

#### **EDUC 772 Seminar in Philosophy of Education**

Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 9:00-11:00. K. A. Strike.

Topics TBA.

#### **EDUC 783 Comparative Extension Education Systems**

Summer. 3 credits. S-U option. Staff.

Extension education in the developing nations is studied using, as an analytical frame of reference, a hypothetical model comprising such components as community organization, community-based learning, indigenous facilitators and leaders, extension generalists and specialists, and training and research-extension linkages. Case materials on alternative extension models and intercountry experiences provide an empirical base.

#### **EDUC 800 Master's-Level Thesis Research**

Fall or spring. Credit TBA. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

#### **EDUC 900 Doctoral-Level Thesis Research**

Fall or spring. Credit TBA. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

## ENTOMOLOGY

D. A. Rutz, chair; A. M. Agnello, M. C. Caillaud, N. W. Calderone, B. N. Danforth, G. M. English-Loeb, J. Ewer, P. P. Feeny, C. Gilbert, A. E. Hajek, M. P. Hoffmann, J. K. Lieberr, J. E. Losey, R. A. Morse, J. P. Nyrop, B. L. Peckarsky, D. Pimentel, L. S. Rayor, R. B. Root, J. P. Sanderson, J. G. Scott, A. M. Shelton, E. J. Shields, M. J. Tauber, W. M. Tingey, M. Villani, P. A. Weston, Q. D. Wheeler

## Courses by Subject

Apiculture: 260, 264  
 Behavior: 215, 325, 471, 662  
 Ecology: 452, 455, 456, 470, 471, 672  
 Introductory courses: 201, 212, 215  
 Medical entomology and veterinary entomology: 352  
 Morphology: 322  
 Pathology: 463  
 Pest management: 241, 277, 441, 443, 444, 477, 644  
 Physiology, development and toxicology: 370, 400, 483, 490, 685  
 Systematics: 331, 453, 631, 632, 634, 635

**Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

**[ENTOM 201 Alien Empire: Bizarre Biology of Bugs]**

Spring. 2 credits. Limited to 100 students. S-U grades optional. Lecs, T R 9:05; optional field trips, required lab demonstrations. Offered alternate years. Not offered spring 2001; next offered spring 2002. B. N. Danforth.

Insects are the most abundant and diverse animals on earth. This course will explore the bizarre biology of insects by examining their evolutionary history, anatomy, development, feeding habits, life-history strategies, behavior, and their interactions with humans (both positive and negative) through history. Optional field trips and one open lab will provide hands-on opportunities for examining these amazing animals.]

**ENTOM 212 Insect Biology**

Fall. 4 credits. Prerequisites: BIO G 101-102 (may be taken concurrently) or equivalent. Lecs, W F 10:10-11:00; labs T W or R 1:25-4:25. Lab fee \$35. Q. D. Wheeler.

Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A collection emphasizing ecological, behavioral, and taxonomic categories is required.

**ENTOM 215 Spider Biology: Life on a Silken Thread**

Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S-U grades optional. Lecs, W F 1:25-2:15. L. S. Rayor.

An introduction to the fascinating world of spiders. Evolution, ecology, behavior, and physiology of spiders and their close kin will be explored from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, and potential use in IPM.

**ENTOM 241 Applied Entomology**

Spring. 3 credits. Prerequisites: BIO G 101-102 or equivalent. Lecs, T R 10:10; lab/disc, T or W 12:20-3:15. W. M. Tingey. Introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

**ENTOM 260 Introductory Beekeeping**

Fall. 2 credits. Lecs, T R 11:15. Staff. Introduces the fundamentals of practical beekeeping, including the life history, physiology, and behavior of honey bees. The classical experiments on the dance language and the role of pheromones are reviewed. Some lectures are devoted to pollination of agricultural crops and the production of honey and beeswax.

**ENTOM 264 Practical Beekeeping**

Fall. 1 credit. Limited to 20 students. Prerequisite: ENTOM 260 (may be taken concurrently). Lab, R 2-4:25. Staff. This course consists of 14 laboratory sessions to acquaint students with practical methods of colony management. Laboratories involve actual work with honey bee colonies and equipment. Some of the topics covered are management of bees for apple pollination, honey harvesting and processing, and disease identification and control.

**ENTOM 277 Natural Enemies Managing Pests: An Introduction to Biological Control**

Spring. 2 credits. S-U grades optional. Lecs, T R 1:25-2:15; lab demonstration; optional field trip. Offered alternate years. A. E. Hajek.

An introduction to the dynamic field of biological control. What is it and when should it be used? This course covers a diversity of types of biological control including use of parasitoids, predators, pathogens, and competitors as well as plant breeding to control pests from microbes to weeds to invertebrates and vertebrates. This course is intended for students curious about safely controlling pests.

**ENTOM 322 Comparative Insect Morphology**

Spring. 5 credits. Prerequisite: ENTOM 212 or 241. Lecs, M W F 9:05; labs, M W 1:25-4:25. Offered alternate years. B. N. Danforth.

This course provides a detailed introduction to the external and internal anatomy of insects. Lectures introduce basic concepts in insect morphology, such as the organization of the insect body plan and organ systems, functional morphology, homology, phylogeny, modularity, and development. The laboratory portion of the course introduces students to the basic methods of insect microdissection, specimen preparation, and scientific illustration. High-quality, publishable illustrations are produced based on student art-work.

**ENTOM 325 Insect Behavior**

Spring. 3 credits. Prerequisites: introductory biology or introductory entomology or permission of instructor. Lecs, M W F 12:20. Offered alternate years. L. S. Rayor.

Insects are the most diverse organisms on earth, with equally diverse behavior. This course will explore the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of

insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include insect learning, perceptual abilities, host finding strategies, predation, pollination, and examination of current issues in insect behavior.

**[ENTOM 331 Introductory Insect Systematics]**

Fall. 4 credits. Prerequisite: ENTOM 212. Lecs, T R 12:20; labs, T R 1:25-4:25. Offered alternate years. Not offered fall 2000; next offered fall 2001. Q. D. Wheeler.

An introduction to the classification, evolutionary history, and distribution of the insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect evolution. Insect collections are required.]

**[ENTOM 352 Medical and Veterinary Entomology]**

Fall. 3 credits. Prerequisites: BIO G 101-102 or equivalent. S-U grades optional. Lecs, T R 10:10; lab, R 1:25-4:25. Offered alternate years. Not offered fall 2000; next offered fall 2001. Staff.

The ecology of arthropods of medical and veterinary importance in temperate and tropical regions of the world with emphasis on the role they play in causation or transmission of disease. The laboratory involves two field trips, techniques of collection and identification, dissections, methods of transmission, means of identification of a blood pathogen, and the source of a blood meal.]

**ENTOM 370 Pesticides, the Environment, and Human Health (also TOX 370)**

Fall. 2 credits. Prerequisites: BIO G 101-102 or equivalent. Lecs, T R 9:05. Offered alternate years. J. G. Scott.

A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits, regulation, politics, and current controversies associated with pesticide use.

**[ENTOM 400 Insect Development (also BIOGD 402)]**

Spring. 4 credits. ENTOM 212 or BIOGD 281 or permission of instructor. S-U grades optional. Lecs, M W 11:15; lab, M 12:20-3:20; disc, F 11:15-12:05. Offered alternate years. Not offered spring 2001; next offered spring 2002. J. Ewer.

The course will emphasize the mechanisms that underlie embryonic and post-embryonic developmental processes of insects. The portion of the course on embryonic development will lean heavily on knowledge obtained from *Drosophila*, but will also cover more classical studies as well as recent advances exploring the molecular basis for the evolution of body plan. The postembryonic development portion will cover the control of growth, molting, and metamorphosis. The laboratory will use modern techniques to illustrate developmental events at the organismal and cellular level. The discussion section will involve the analysis and presentation of primary research papers.]

**[ENTOM 441 Seminar in Insect Pest Management]**

Spring. 1 credit. Limited to 15 students. Prerequisite: ENTOM 241 or 444 or permission of instructor. S-U grades only. Hours TBA. Offered alternate years. Not offered spring 2001; next offered spring 2002. M. P. Hoffmann and A. M. Shelton.

Discussion and analysis of current topics in insect pest management.]

**[ENTOM 443 Entomology and Pathology of Trees and Shrubs (also PL PA 443)]**

Fall. 4 credits. Prerequisites: ENTOM 212 or equivalent and PL PA 241 or equivalent. S-U grades optional. Evening prelims. Lects, M W F 11:15; lab, F 1:25-4:25. Offered alternate years. P. A. Weston and G. W. Hudler.

For students preparing for careers in horticulture, urban forestry, pest management, and natural history/science education. Deals with the nature, diagnosis, assessment, and management of insect and disease pests on trees and shrubs in forests, urban landscapes, Christmas tree plantations, and other sites where intensive pest management is practiced.

**[ENTOM 444 Integrated Pest Management (also PL PA 444)]**

Fall. 4 credits. Prerequisites: BIOES 261, ENTOM 212 or 241, and PL PA 241 or their equivalents or permission of instructor. Lects, M W F 9:05; labs, M 1:25-4:25. P. Arneson and J. Losey.

Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

**[ENTOM 452 Herbivores and Plants: Chemical Ecology and Coevolution (also BIOES 452)]**

Spring. 3 credits. Prerequisites: 1 year of introductory biology; BIOES 261; CHEM 257 or 357/358 and 251 or 301; or permission of instructor. Lects, M W F 11:15. Offered alternate years. P. P. Feeny.

Significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

**[ENTOM 453 Principles and Practice of Historical Biogeography (also BIOPL 453)]**

Fall. 3 credits. Prerequisite: a course in systematics or permission of instructors. S-U grades optional. Lects, T R 10:10; lab T 1:25-4:30. Offered alternate years. Not offered fall 2000; next offered fall 2001. J. K. Liebherr and M. Luckow.

A survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Geological and paleontological aspects of biogeography will be presented, and large-scale biogeographic patterns discussed. Laboratories will focus on computer applications and discussion of controversial issues.]

**[ENTOM 455 Insect Ecology (also BIOES 455)]**

Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or equivalent knowledge of another taxon. S-U grades optional. Lects, M W F 11:15. Offered alternate years. Not offered fall 2000; next offered fall 2001. R. B. Root.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.]

**[ENTOM 456 Stream Ecology (also BIOES 456 and NTRES 456)]**

Spring. 4 credits. Limited to 60 students. Recommended: BIOES 261. S-U grades optional. Lects, T R 9:05; labs, T W or R 1:25-4:25. Offered alternate years. B. L. Peckarsky.

Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation, and the impacts of disturbances. Lab: a field project includes descriptive and experimental techniques and hypothesis testing related to environmental assessment.

**[ENTOM 463 Invertebrate Pathology]**

Spring. 4 credits. Prerequisites: one year of introductory biology. S-U grades optional. Lects, M W F 9:05; lab, W 1:25-4:25. Offered alternate years. Not offered spring 2001; next offered spring 2002. A. E. Hajek.

Lecture presents principles of pathology as applied to invertebrates. Topics explored include noninfectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizootiology of insect diseases, and use of pathogens for control. Laboratory involves a diversity of pathogens and hosts using techniques such as microinjection, electrophoresis, immunoassay, density gradient centrifugation, soil extraction, and computer simulation.]

**[ENTOM 470 Ecological Genetics]**

Spring. 3 credits. Prerequisites: BIOES 278 or permission of instructor. S-U grades optional. Lects, T R 10:10; disc, 1 hr/wk TBA. Offered alternate years. Not offered spring 2001; next offered spring 2002. M. C. Caillaud.

A study of the genetic basis and evolution of ecologically important traits. Blending theory with an experimental approach to study evolution in nature, the course includes methods for measuring genetic variation and natural selection; biometrical and molecular analysis of genetic architecture; constraints and limits on evolution in natural populations; genetic aspects of coevolution, phenotypic plasticity, and conservation of endangered species. Examples are taken from studies of animals and plants.]

**[ENTOM 471 Freshwater Invertebrate Biology and Biomonitoring]**

Spring. 5 credits. Recommended: ENTOM 212. S-U grades optional. Lects, T R 9:05; labs, T R 1:25-4:25. Offered alternate

years. Not offered spring 2001; next offered spring 2002. B. L. Peckarsky.

The lecture explores the morphology, physiology, phylogeny, life histories, behavior, feeding ecology, and evolution of macroscopic freshwater invertebrates with an emphasis on contrasting the attributes of aquatic and terrestrial insects. The laboratory involves field collections and laboratory identification of invertebrates and stresses the use of keys. Students will prepare a collection of freshwater invertebrates or conduct a project using freshwater invertebrates to biomonitor stream habitat quality.]

**[ENTOM 477 Biological Control]**

Fall. 3 credits. Prerequisites: ENTOM 212, BIOES 261, and permission of instructor. Lects, T R 9:05; lab T 1:25-4:15. Offered alternate years. Not offered fall 2000; next offered fall 2001. Staff.

Approach and procedures in biological control of arthropod pests and weeds. Demonstrations focus on living parasitoids and predators. Discussions focus on case histories.]

**[ENTOM 483 Insect Physiology]**

Fall. 5 credits. Prerequisite: ENTOM 212 or permission of instructor. Lects, M W F 11:15; lab W 1:25-4:25 and a disc, TBA. Offered alternate years. C. Gilbert.

An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. The student will also be introduced to some common methods used in physiological research and to the critical reading of scientific literature.

**[ENTOM 490 Toxicology of Insecticides (also TOX 490)]**

Spring. 4 credits. Prerequisites: general chemistry. S-U grades optional. Lects, M W F 9:05; disc 1:25-2:15, day TBA. Offered alternate years. J. G. Scott.

The history, metabolism, and mechanism of action of synthetic and naturally occurring insecticides. Mechanisms of insecticide resistance, evaluation of insecticide toxicity, and new approaches to insect control with biotechnology will be discussed.

**[ENTOM 494 Special Topics in Entomology]**

Fall or spring. 4 credits maximum. S-U grades optional. Hours TBA. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**[ENTOM 497 Individual Study in Entomology]**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

**[ENTOM 498 Undergraduate Teaching]**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet

regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

#### **[ENTOM 631 Systematics of the Coleoptera]**

Summer. 3 credits. Limited to 18 students. 3 week summer session. Prerequisites: an introductory course in insect taxonomy and permission of instructor. Labs, M T W R F 9-4; Saturday field trips. Offered alternate years. Not offered 2000-2001. Q. D. Wheeler.

A comprehensive review of the comparative morphology, phylogenetic relationships, classification, natural history, and distribution of the Coleoptera, including adult and immature stages. Laboratory practice in identification and methods for collection and study of beetles. A collection is required.]

#### **[ENTOM 632 Advanced Coleopterology]**

Summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Lab, TBA. Offered alternate years. Not offered 2000-2001. Q. D. Wheeler.

An advanced course on the phylogeny and classification of selected subclades of Coleoptera. Laboratory exercises in identification of beetles, generally to the level of genus or beyond. Taught by authority on taxon of interest, frequently including a visiting scholar. Can be repeated for credit.]

#### **[ENTOM 634 Special Topics in Systematic Entomology]**

Fall or spring; taught on demand. 2-4 credits. Prerequisite: permission of instructor. Staff.

Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

#### **[ENTOM 635 Insect Molecular Systematics]**

Spring. 2 credits. Prerequisites: permission of instructor. Offered alternate years. Not offered spring 2001; next offered spring 2002. TBA. Limited to 6 students. B. N. Danforth.

Analysis of DNA sequence variation can provide a powerful tool for resolving problems in insect systematics, from species level taxonomic decisions to higher level (ordinal) relationships. This course will introduce students to the basic methods of insect molecular systematics, including DNA extraction, gel electrophoresis, PCR, DNA purification, and DNA sequencing (manual and automated). Results will be analyzed using available computer programs. Students are encouraged to collect preliminary data for thesis or post-doctoral research.]

#### **[ENTOM 644 Advanced IPM: Theory and Implementation]**

Spring. 1-4 credits. S-U grades optional. Lects, M W F 10:10. Coordinator: J. E. Losey.

This advanced course in integrated pest management (IPM) will be comprised of a rotating series of four-week intensive modules on specialized topics. Topics will range from basic ecology and genetics of pests and their natural enemies to specific strategies for pest management implementation. The course is designed to provide advanced IPM instruction for graduate and upper-level undergraduate students with intermediate backgrounds in

IPM. In special cases, students with little or no background in IPM seeking intensive instruction on a specialized topic may enroll with permission of the instructor. Each module is a unique unit and students may take any or all modules each time the course is offered. Prerequisites and grading procedures will be determined by the instructor(s) of each module. Potential modules include: Insecticide resistance and resistance management—J. Scott: Entomology (Ithaca); Crop protection decision making—J. Nyrop: Entomology (Geneva); Economics of pest management—Staff: ARME; Greenhouse and Floriculture IPM—J. Sanderson: Entomology (Ithaca); IPM in fruit systems—A. Agnello, G. English-Loeb: Entomology (Geneva); Genetics in managed ecosystems—M. C. Caillaud: Entomology (Ithaca); Turf-grass insect IPM—M. Villani: Entomology (Geneva); Insect vectors of plant pathogens—Staff; IPM of soil-dwelling arthropods—M. Villani: Entomology (Geneva); Integrated weed and insect pest management—C. Mohler: Ecology & Evolutionary Biology; IPM implementation and extension—M. Hoffmann, J. Sanderson: Entomology (Ithaca); Plant resistance—Staff: Entomology, Plant Breeding; Integrated Pest Management in Tropical Agriculture—P. Arneson: Plant Pathology (also PL PA 655); IPM of natural systems—B. Blossey: Natural Resources; Sustainable strategies for pest management—Staff.

#### **[ENTOM 662 Insect Behavior Seminar]**

Spring. 2 credits. Prerequisites: permission of instructor and ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years. Hours TBA. Staff.

#### **[ENTOM 672 Seminar in Aquatic Ecology]**

Spring. 1 credit. Prerequisites: permission of instructor or either ENTOM 456, 471, or BIOES 261, 462. S-U grades optional. Hours TBA. Offered alternate years. B. L. Peckarsky.

Discussion and analysis of current topics in the ecology of streams, lakes, and marine ecosystems, including student-generated synthesis of key papers in the literature.

#### **[ENTOM 685 Seminar in Insect Physiology]**

Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Not offered spring 2001; next offered spring 2002. Hours TBA. C. Gilbert.]

#### **[ENTOM 707 Individual Study for Graduate Students]**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

#### **[ENTOM 709 Teaching Entomology]**

Credit TBA. Staff. Teaching entomology or for extension training.

#### **[ENTOM 800 Master's-Level Thesis Research]**

Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff.

#### **[ENTOM 900 Doctoral-Level Thesis Research]**

Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff.

#### **Jugatae Seminar**

Fall and spring.

A seminar conducted by Jugatae, the entomology club of Cornell University, to

discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

## **FLORICULTURE AND ORNAMENTAL HORTICULTURE**

Floriculture and Ornamental Horticulture courses are listed under Horticultural Sciences.

### **Freehand Drawing and Scientific Illustration**

Freehand Drawing and Scientific Illustration courses are offered through the Department of Floriculture and Ornamental Horticulture and are described in the section "Freehand Drawing and Scientific Illustration."

## **FOOD SCIENCE**

D. D. Miller, chair; T. E. Acree, D. K. Bandler, D. M. Barbano, C. A. Batt, K. J. Boor, M. C. Bourme, J. W. Brady, D. P. Brown, J. M. Brown, R. B. Gravani, T. Henick-Kling, J. H. Hotchkiss, H. T. Lawless, C. Y. Lee, R. H. Liu, S. J. Mulvaney, J. M. Regenstein, S. S. H. Rizvi, S. K. Sharma, K. J. Siebert, M. Wiedmann.

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

#### **FOOD 101 Science and Technology of Foods**

Fall. 1 credit. S-U grades only. M 1:25-2:15. J. H. Hotchkiss and staff.

This course explores the application of science and technology to foods. Lectures will elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice will be given.

#### **FOOD 102 Exploring Food Processing**

Spring. 1 credit. S-U grades only. F 12:20. 5 field trips, 1 on F 12:30-2:30 and 4 on F 12:30-5:30. D. P. Brown.

A series of seminars on current technological and regulatory developments in food science. Field trips to four commercial food manufacturing/processing plants and one food research organization will be used to illustrate the application of current technologies. A course project, using the Food Science Alumni Network, will be required.

#### **FOOD 150 Food Choices and Issues**

Spring. 2 credits. S-U grades optional. T R 12:20. R. B. Gravani and D. D. Miller.

This course provides Cornell students with the knowledge needed to make healthy food choices. A systematic approach to food production, processing, distribution, and consumption will be presented. Each student will analyze the nutritional quality of his or her personal diet using a computer diet analysis program. Topics include relationships between diet and health; food processing; food safety; and discussions of contemporary issues relating to food quality, safety, and nutrition.

**FOOD 200 Introductory Food Science**

Fall. 3 credits. Prerequisite: college level courses in chemistry and biology. M W F 11:15–12:05. J. H. Hotchkiss.

A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods; nutritional significance; food formulation, preservation, and processing; microbiology and fermentations; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world food needs. Interrelationships between the chemical, physical, nutritional, and quality properties of foods as affected by formulation, processing, and packaging are stressed.

**FOOD 210 Food Analysis**

Spring. 3 credits. Prerequisite: CHEM 208 or equivalent. Lec, W F 1:25–2:15; lab, M 12:20–3:20. R. H. Liu.

Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry are discussed.

**FOOD 250 Kosher and Halal Food Regulations**

Spring. 2 credits. Sophomore standing and above. M 7:30–9:25 P.M. J. M. Regenstein.

A comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. The kosher food laws, their origin, and their application in modern food processing will be examined. The nature of the kosher supervision industry in America will be described. Halal laws will also be examined and the interactions between the two communities explored. Current food-related issues in both communities will be reviewed, including recent court decisions. Some aspects of ethnic foods will also be considered.

**FOOD 290 Meat Science (also AN SC 290)**

Fall. 2 or 3 credits. Lec, T R 11:15; lab M or R 12:20–3:20. Lab cannot be taken without lecture. D. E. Shaw.

An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservations, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants is taken.

**FOOD 311 Milk and Frozen Desserts**

Fall. 2 credits. Prerequisite: FOOD 322 or permission of instructor. R 12:20–4:25. Offered alternate years. Next offered fall 2000. D. K. Bandler and D. P. Brown.

Deals with the principles and practices of processing fluid milk products and frozen desserts. The chemical, microbiological, and technological aspects of processing these dairy products are considered. Emphasis will be on product quality and recognition of factors affecting consumer acceptance.

**FOOD 321 Food Engineering Principles**

Fall. 3 credits. Prerequisites: FOOD 200 and introductory physics. M W F 9:05–9:55. S. S. H. Rizvi.

Introduces the engineering principles underlying food processes and equipment. Topics covered include thermodynamics, mass and energy balance, fluid mechanics, and heat and mass transport.

**FOOD 322 Food Engineering Laboratory**

Spring. 2 credits. Prerequisite: FOOD 321. Lab, T or R 1:25–4:10; lec, T 12:20. S. K. Sharma and S. S. H. Rizvi. Limited to 10 students in each lab session.

Provides hands-on experience with food engineering processes and measurements. Topics covered include mass and energy balances, rheology, fluid mechanics, heat transfer, refrigeration and psychrometry.

**FOOD 351 Milk Quality**

Fall. 1 credit. Prerequisite: AN SCI 250 or equivalent or permission of instructor. F 12:20. D. K. Bandler and D. P. Brown.

Focuses on the important aspects of farm sanitation and milk handling as they affect milk flavor and quality. The course is an overview of quality control tests, basic microbiology, cleaning and sanitizing, and special problems in manufacturing and marketing fresh and storable dairy products.

**FOOD 394 Applied and Food Microbiology (also BIOMI 394)**

Fall. 2–3 credits. Prerequisites: BIOMI 290–291. M W F 12:20–1:10. C. A. Batt.

Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course will present a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes will be reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnology applications.

**FOOD 395 Food Microbiology Laboratory**

Fall. 2 credits. Prerequisite: BIOMI 291 or equivalent. M W 2:00–4:25. J. M. Brown.

Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing safety issues of food.

**FOOD 396 Food Safety Assurance**

Spring. 2 credits. Prerequisite: MICRO 290 or permission of instructor. T R 9:05–9:55. Offered alternate years. Next offered spring 2001. R. B. Gravani.

This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the Hazard Analysis Critical Control Point (HACCP) concept, good manufacturing practices, prerequisite programs, and the application of current technologies in reducing the risk of foodborne illnesses. Case studies and exercises will be used to demonstrate and apply the key principles that are discussed.

**FOOD 400 Senior Seminar in Food Science and Technology**

Fall. 1 credit. Limited to seniors. M 4:30–5:20. D. K. Bandler.

Students prepare and present a seminar on a topic of current interest in food science and technology.

**FOOD 401 Concepts of Product Development**

Spring. 2 credits. Prerequisite: FOOD 200 or equivalent. M W 11:15–12:05. Offered alternate years. Next offered 2001.

J. H. Hotchkiss.

A discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

**FOOD 405 Managing Food Waste without Trashing the Environment**

Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. Lec, 12:30–2:15; lab, M 2:30–4:25. Offered alternate years. Next offered spring 2001. J. M. Regenstein.

A look at the various waste streams generated by food plants, institutional feeders, supermarkets, and restaurants. What is the role of waste minimization? What technologies can control or remediate the problems? What are the disposal, composting, and recycling options? What are the legal requirements locally, state-wide, and nationally that affect various food waste processes? This course will serve as a general introduction to available waste management technologies and to policy issues faced by a wide range of businesses and production plants.

**[FOOD 406 Dairy and Food Fermentations**

Fall. 2 credits. Prerequisite: BIOMI 290. Letter grades only. R 12:20–2:15. Not offered fall 2000. M. Wiedmann.

This is a lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications as well as specific examples of food fermentations. Selected textbook readings will be supplemented with papers from peer-reviewed journals. Significant parts of class will focus on discussion and critical analysis of the assigned reading materials, questions and hot topics.]

**FOOD 410 Sensory Evaluation of Food**

Fall. 2–3 credits (1 lab credit). Prerequisite: statistics. Lec, T R 9:05–9:55; lab, F 1:25–4:25. H. T. Lawless.

Topics include the sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative description and simple difference testing, consumer testing for product acceptability, sensory tests in quality control, strategic product research, and product development. The psychological principles in sensory testing and statistical methods for sensory data analysis are presented. The laboratory provides first hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis. Undergraduate Food Science majors are required to take both the lecture and the laboratory.

**[FOOD 415 Principles of Food Packaging**

Spring. 3 credits. M W F 9:05–9:55. Offered alternate years. Next offered spring 2002; not offered spring 2001. J. H. Hotchkiss.

The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. The

influence of packaging on shelf life is presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.]

#### **FOOD 417-418 Food Chemistry I and II**

Spring 417; fall 418. 3 credits first semester, 2 credits second semester. Prerequisites: BIOBM 330 or 331. S-U or letter grade. FOOD 417, M W F 9:05; FOOD 418, M W 9:05. Both courses will be offered in 2001. J. W. Brady.

A course on the chemistry of food and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components/additives are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (milk, meat, fruits and vegetables, cereals and legumes) are described.

#### **FOOD 419 Food Chemistry Laboratory**

Spring. 2 credits. Prerequisites: BIOBM 330 or 331 and concurrent registration in FOOD 409. W 12:20-4:25. D. D. Miller and J. M. Brown.

A laboratory course emphasizing fundamental chemical principles and laboratory techniques necessary for an understanding of the chemistry of foods. Relationships between chemical composition and functional, nutritional, and organoleptic properties of foods are stressed. Many of the laboratory techniques involved are common to those used in biochemistry laboratories (e.g., electrophoresis, chromatography, enzyme assays) but are applied to specific foods or beverages.

#### **FOOD 423 Unit Operations in Food Manufacturing**

Fall. 4 credits. Intended for seniors and food science majors. Lec, T R 11:15-12:05; recitation, T 12:20; lab, 1:25-4:25 T or TBA. S. J. Mulvaney and S. K. Sharma.

An integrated approach to understanding food manufacturing operations. Topics include major unit operations used for thermalization, freezing, and dehydration of foods. Emphasis is placed on the interplay between engineering design of processes and the physical and chemical transformations that occur as food is produced from various commodities. The impact of process conditions on product safety, overall quality, and storage stability are also considered.

#### **FOOD 430 Understanding Wine**

Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor. Students must be 21 years old by the first day of class (Jan. 23, 2001) to enroll. S-U grades optional. T R 1:25-3:20. T. Henick-Kling, T. E. Acree, and H. T. Lawless.

An introduction to wine appreciation through the study of fermentation biology, wine composition, and sensory perception. Samples of wines will be used to illustrate the sensory properties, microbiological processes, and chemical components that determine wine quality. Students will learn to recognize the major features of wine that determine sensory quality and know the processes that produced them. Topics will include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; and the sensory properties of wines from

different grape varieties, viticultural practices, and wine-making techniques.

#### **FOOD 447 International Postharvest Food Systems**

Fall. 2 or 3 credits. Prerequisite: freshman chemistry. S-U grades optional. T R 10:10-11:00. M. C. Bourne and staff.

An interdisciplinary course designed for all undergraduate and graduate students. Describes postharvest food losses and methods to reduce the loss. Topics include storage and care of unprocessed, and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish; biology and control of fungi, insects, and vertebrates in foods; chemical causes of quality loss; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries. The third credit requires a written case study of a country or commodity.

#### **[FOOD 450 Fundamentals of Food Law**

Spring. 2 credits. Offered alternate years. Next offered spring 2002; not offered spring 2001 or 2003. J. M. Regenstein.

Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis will be on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course also will refer to other regulatory agencies. Emphasis will be placed on how a food or agricultural professional interacts with this legal system during legislative action, regulatory rule making, and with respect to compliance.]

#### **FOOD 456 Advanced Concepts in Sensory Evaluation**

Spring. 2 credits. Prerequisite: FOOD 410. S-U grades optional. Offered alternate years. Next offered spring 2001. F 1:25-3:20. H. T. Lawless.

Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. A major independent research project is conducted on a current issue in sensory evaluation.

#### **FOOD 494 Special Topics in Food Science**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

#### **FOOD 497 Individual Study in Food Science**

Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

#### **FOOD 498 Undergraduate Teaching Experience**

Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study Form (available in 140 Roberts Hall). S-U grades only.

Students assist in teaching a course appropriate to their previous training and experience. Students will meet with a discussion or laboratory section and will regularly discuss objectives with the course instructor.

#### **FOOD 499 Undergraduate Research in Food Science**

Fall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). This course may be repeated for credit.

Students conduct original research directed by a food science faculty member.

#### **FOOD 600 Seminar in Food Science**

Fall and spring. 1 credit. S-U grades only. Required of all food science graduate students. T 4:00-5:00.

A weekly seminar series on contemporary topics and issues in the Field of Food Science and Technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the Field of Food Science and Technology may use the forum to present their required thesis research seminar. Required of all graduate students in the Field of Food Science and Technology. Strongly recommended for graduate students minoring in Food Science and Technology.

#### **FOOD 604 Chemistry of Dairy Products**

Fall. 2 credits. Limited to 16 students. Prerequisites: organic chemistry, biochemistry, knowledge of dairy-product manufacturing procedures, and permission of instructor. F 1:25-3:30. Offered alternate years. Next offered fall 2000. D. M. Barbano.

A detailed study of milk constituents and their properties. Properties of various milk constituents are related to observed physical and chemical changes that occur in dairy products during and after processing. This course will emphasize current research in dairy chemistry.

#### **[FOOD 605 Physical Chemistry of Food Components**

Fall. 3 credits. Prerequisite: an undergraduate course in physical chemistry. M W F 10:10. Offered alternate years. Not offered fall 2000. J. W. Brady.

This course will cover the physical properties of food molecules. Emphasis will be placed on the molecular basis of structural characteristics; colloidal properties; molecular interactions; foams, gels; and water binding of foods.]

#### **[FOOD 607 Advanced Food Microbiology**

Spring. 2 credits. Prerequisites: Microbiology (BIOMI 290), Food Microbiology (FOOD 394). M W 11:15. Offered alternate years. Not offered in spring 2001. M. Wiedmann.

This two-credit course explores advanced topics in Food Microbiology. A major emphasis is placed on critical evaluation of current literature and on microbiological concepts that affect food microbiology. Specific areas that will be covered include microbial ecology of foods, rapid detection and typing methods for foodborne pathogens,

microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment.)

#### **FOOD 608 Chemometric Methods in Food Science**

Fall. 2 credits. Prerequisite: basic statistics and chemistry or permission of instructor. S-U grades optional. W 1:25–3:20. Offered alternate years. Next offered in 2002. K. J. Siebert.

Food science applications using multivariate statistical methods (chemometrics) include extracting information from large data sets, modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry.

#### **[FOOD 616 Flavors—Analysis and Applications]**

Spring. 2 credits. S-U grades optional. Lec, F 1:25; disc, F 2:30. Offered alternate years. Next offered spring 2002; not offered spring 2001. H. T. Lawless and T. E. Acree.

An advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. The course will survey taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems, and consumer acceptance.]

#### **[FOOD 620 Food Carbohydrates (also NS 620)]**

Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: BIOBM 330 or equivalent. T R 10:10. Offered alternate years. Next offered spring 2002; not offered spring 2001. B. A. Lewis and J. W. Brady.

A consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.]

#### **[FOOD 621 Food Lipids]**

Fall. 2 credits. Letter grade. Prerequisites: FOOD 409 and a Biochemistry course. Offered alternate years. Next offered fall 2001; not offered fall 2000. R. Liu.

An advanced course in food lipids. Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasis is on lipid oxidation, emulsions, functional foods associated with lipids, and modern analytical methodology of lipids.]

#### **[FOOD 665 Engineering Properties of Foods]**

Spring. 2 credits. Prerequisite: course in transport processes or unit operations as applied to foods; or permission of instructor. T R 12:20–1:10. Offered alternate years. Next offered spring 2002; not offered spring 2001. S. S. H. Rizvi, S. J. Mulvaney, and S. K. Sharma.

Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial

systems. Emphasis is on physical-mathematical basis of measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.]

#### **FOOD 694 Special Topics in Food Science**

Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

#### **FOOD 695 Current Readings in Food Science**

Fall and spring. 1 credit. Prerequisite: 300- to 400-level course relevant to the chosen topic. S-U grades only. Lec., by arrangement/1 hour per week. Staff.

A seminar series on current topics chosen by participating faculty and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include (but are not limited to) Food Microbiology and Food Safety; Food Chemistry; Packaging; Food Engineering. This course can be taken multiple times. Graduate students in Food Science are strongly encouraged to enroll in this course. Interested students should contact the designated instructor(s) for each term.

#### **FOOD 698 Graduate Teaching Experience**

Fall and spring. 1 to 3 credits. S-U grades only. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

#### **FOOD 800 Masters-Level Thesis Research**

Fall or spring. Credit TBA. Maximum credit, 12. Prerequisite: limited to master's candidates; permission of Special Committee Chair. S-U grades only. Graduate faculty.

#### **FOOD 900 Graduate-Level Thesis Research**

Fall or spring. Credit TBA. Maximum credit, 12. Prerequisite: limited to doctoral students who have not passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

#### **FOOD 901 Doctoral-Level Thesis Research**

Fall or spring. Credit TBA. Maximum credit, 12. Prerequisite: limited to doctoral students who have passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

Introduction to Business Management (ARME 220)

Marketing (ARME 240)

Food Industry Management (ARME 443)

Biological and Environmental Transport Processes (ABEN 350)

Computer-Aided Engineering: Applications to Biomaterials and Food Processing (ABEN 453)

Practical Aspects of Postharvest Handling of Horticultural Crops (HORT 325)

Introduction to Culinary Arts (H ADM 230)

## **FREEHAND DRAWING AND SCIENTIFIC ILLUSTRATION**

Freehand Drawing is a program in the Department of Horticulture. Other courses offered by the department are listed under Horticulture.

#### **[FR DR 109 Nature Drawing]**

Fall. 3 credits. Limited to 25 students. S-U grades optional. Permission of instructor required. M W F 10:10–12:05. Not offered fall 2000. R. J. Lambert.

A beginning course with emphasis on the drawing of natural forms: plants, animals, and landscapes. Of particular interest to students in floriculture and ornamental horticulture, landscape architecture, biological sciences, nature education, or similar fields. Outside field notebook assignments.]

#### **[FR DR 211 Freehand Drawing and Illustration]**

Fall. 2 credits. Prerequisite: FR DR 109 or equivalent. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05 M T W R. Not offered fall 2000. R. J. Lambert.

Progression to the organization of complete illustrations. Subject matter largely from sketchbooks, still life, and imagination. Composition, perspective, and ways of rendering in different media are considered.]

#### **FR DR 214 Watercolor**

Spring. 2 credits. S-U grades optional. 4 studio hours scheduled in 2 hour units between 9:05 and 12:05 and 2 hours outside sketching. T R. R. J. Lambert.

A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

#### **FR DR 316 Advanced Drawing**

Fall. 2 credits. Prerequisite: FR DR 109, 211 or permission of instructor. S-U grades optional. 4 hours TBA. M R 9:05–12:05, 2 hours outside sketching. R. J. Lambert.

For students who want to attain proficiency in a particular type of illustration or technique.

#### **[FR DR 417 Scientific Illustration]**

Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered fall 2000. R. J. Lambert.

A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.]

### Courses by Subject:

General horticulture: 100, 101, 102

Public garden management: 485

Crop production:

Agroforestry: 415

Fruit: 200, 442, 444, 445, 450

Greenhouse and controlled environments:  
400, 410

Nursery: 400, 420

Turfgrass: 330, 475

Vegetable: 225, 456, 460

Extension education: 476, 629

Horticultural physiology: 400, 450, 455, 456,  
460, 462, 615, 620

Independent study, research, and teaching:  
470, 493, 495, 496, 497, 498, 499, 500, 605,  
700, 800, 900

Internships: 496

Landscape horticulture: 301, 435, 440, 485,  
491, 492

Plant materials: 243, 300, 301, 491, 492

Plant propagation: 400

Postharvest physiology: 325, 625, 630

Seminars: 600, 630

Special topics: 470, 493, 494, 629, 630, 635,  
694

Turfgrass management: 330, 475

Vegetable types and varieties: 220, 465

**Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

### HORT 100 History of Horticulture

Fall. 2 credits. Lec, T 2:00-4:25.

C. F. Gortzig.

A survey of the history and development of horticulture as a science, art, and profession. Discussions cover from pre-history to the present with emphasis on the 1700's to present. Field trips to historic sites taken during some class sessions.

### HORT 101 Introduction to Horticulture

Fall. 3 credits. Lec, M W 10:10; lab W 1:25-4:25. Staff.

Introduction to the technology and career opportunities in floriculture and ornamental horticulture. Exploration of private and/or public sector activities: production (greenhouse, nursery, and sod), sales (retail and wholesale), landscape management (landscape management, recreational turfgrass management, urban horticulture) related professional and commercial fields. The role of science and technology in the continuing development of horticultural practice. Field trips to horticultural firms and demonstration sites.

### HORT 102 General Horticulture

Spring. 4 credits. Each lab limited to 25 students. Lec, M W F 10:10; lab M T or W 2-4:25. L. D. Topoleski.

The subject matter of this course acquaints the student with the applied and basic science of horticulture. Open to all students who want a general knowledge of the subject or who

want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes flower, fruit, and vegetable growing and gardening techniques.

### HORT 200 Introductory Pomology

Fall. 3 credits. S-U grades optional. Lec, T R 10:10; lab, T 1:25-4:25. I. A. Merwin.

A general introduction to pomology—the science and art of fruit growing. Lectures and discussion emphasize the natural history, ecology, botany, physiology, integrated pest management, and diverse production systems for fruits grown in temperate climate areas. Lab sessions and field-trips involve fruit anatomy and morphology, clonal selection and propagation, planting and pruning techniques, fruit harvesting and storage, environmental and sustainability issues, web-based information on fruit growing, and hands-on practice in local orchards and vineyards.

### HORT 220 Vegetable Types and Identification

Fall. 2 credits. T 2-4:25. L. Topoleski.

The subject matter of this course acquaints students with the vegetable species grown in the Northeast and the pests and disorders encountered in their production. Subjects covered include identification of economically destructive weeds, diseases, and insects of vegetables, identification of vegetable and weed seeds, nutrient deficiencies, vegetable judging, and potato grade defects.

### HORT 225 Vegetable Production

Fall. 4 credits. Lec, M W F 11:15; lab, W 2-4:25; 1 S fieldtrip and 3 fieldtrips (September). W 11:15-6:00.

L. A. Ellerbrock.

Intended for those interested in the production, processing, and marketing of vegetables. Topics included are techniques, problems, and trends in the culture, harvesting, and storage of the major vegetable crops. Field trips to conventional and organic farms and hands-on experience in growing vegetables in the greenhouse are included.

### HORT 243 Taxonomy of Cultivated Plants (also BIOPL 243)

Fall. 3 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lec, M W 10:10-11:00; lab, M W 2:00-4:25. Offered even years. M. A. Luckow.

A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

### HORT 300 Herbaceous Plant Materials

Fall. 3 credits. Fee for lecture-laboratory manual: \$35. Lec, T R 10:10; lab, T 2-4:25. W. B. Miller.

Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries. Garden planting design is not a component of the course.

### [HORT 301 Plants for Interiors

Spring. 3 credits. Lec, M W 11:15; lab, M 2-4:25. Offered even years. Next offered 2002. T. C. Weiler.

Study of plants for interiors: identification, design characteristics, and cultural requirements; the interior landscape industry (organization, bidding, installation, maintenance); use of plants as elements of planting design (trees, shrubs, groundcovers, and accent plants (including potted flowering plants and cut flowers). Required three-day field trip, estimated cost, \$130.]

### [HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops

Spring. 3 credits. Not offered spring 2001. Lec, M W 9:05; lab T 1:25-4:25. Staff.

A study of changes that occur in horticultural crops between harvest and consumer. Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Maturity/quality indices, preharvest treatments, and harvesting/handling practices and storage/transportation requirements of selected horticulture crops are covered.]

### HORT 330 Turfgrass Management

Fall. 3 credits. Prerequisite: SCAS 260. Lec, M W 10:10; lab, F 10:10-12:05. Offered even years. A. M. Petrovic.

Study of the scientific principles involved in the management of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, and nutrition in the management of turfgrass sites.

### HORT 400 Principles of Plant Propagation

Fall. 3 credits. Prerequisites: BIOPL 242 and 244 or another course in plant physiology. Lec, T R 9:05; lab, R 1:25-4:25. K. W. Mudge.

Sexual (seed) propagation and asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering, and specialized vegetative reproductive structures. Physiological, environmental, anatomical principles, and industry applications are stressed in lecture and hands-on skills in laboratories. Examples include both temperate as well as tropical horticultural, agronomic, and forestry crops.

### HORT 401 The How, When and Why of Grafting—A Distance Learning Approach

Spring. 2 credits. Lec: autotutorial (web, cd); Lab: greenhouse/autotutorial; Discussion: e-mail. 1 introductory face-to-face meeting TBA. K. W. Mudge.

A six-week, web-based autotutorial approach to the principles and practices of grafting and budding as applied to plant propagation. Emphasis will be on the role of grafting in modern horticultural practice and on student development of hands on grafting skills. Instruction will involve micro web-based asynchronous presentation of lecture materials (web, cd-rom), asynchronous discussion (e-mail), and hands-on, autotutorial greenhouse laboratory exercises.

### HORT 410 Production and Marketing of Crops Grown in Controlled Environments

Spring. 4 credits. Letter grade only. Offered odd years; 2001. Lec, T R 10:10; lab 2-4:25. T. C. Weiler and staff.

Basics of establishing and managing agricultural production in environmentally optimized facilities; technology basics, systems and practices, structures, systems and equipment, materials handling, heating and cooling, lighting, fertilizing and irrigation, environmental stewardship, integrated pest management, business management; world centers of production; production of cut, pot, bedding, vegetable, and fruit crops in controlled environments, emphasizing predictive harvesting through environmental, physical, and chemical management of growth and development. Each student will grow one or more crops. Required three-day field trip, estimated cost, \$130.

**[HORT 415 Principles and Practices of Agroforestry (also NTRES 415 and CSS [SCAS] 415)]**

Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec, M W F 10:10-11:00. Optional laboratory, HORT 416 (also NTRES 416 and CSS [SCAS] 416). Offered fall 2001. J. Lassoie, E. Fernandes, K. Mudge, L. Buck.

An introduction to modern and traditional agroforestry systems which involves spatial or temporal integration of multipurpose woody plants (trees or shrubs) with annual or perennial crops or with livestock. Interactions between woody and nonwoody components of agroforestry systems are considered, based on above and belowground processes. The sustainability of agroforestry systems will be critically examined from biophysical, socioeconomic and policy perspectives.]

**[HORT 416 Principles and Practices of Agroforestry—Laboratory (also NTRES 416 and CSS [SCAS] 416)]**

Fall. 1 credit. Optional lab component of HORT 415 (also NTRES and CCS [SCAS]). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor; prior or concurrent enrollment in HORT 415. W 1:25-4:25. Offered fall 2001. J. Lassoie, K. Mudge, E. Fernandes, L. Buck.

An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.]

**[HORT 420 Principles of Nursery-Crop Production]**

Fall. 4 credits. Prerequisite: HORT 400. Lec, M W F 9:05; lab, M 2-4:25. Field trips. Offered odd years; 2001. G. L. Good.

Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.]

**[HORT 435 Landscape Management]**

Fall. 4 credits. Prerequisites: HORT 230 or 335. Lec, M W F 9:05; lab, M 2:00-4:25. Offered even years. G. L. Good.

A study of the practices involved in the maintenance of woody ornamental plants in the landscape. The major emphasis will be on post-planting techniques, including water and fertilization management, weed management,

pruning, and general tree care. Labs have a hands-on focus.

**[HORT 440 Restoration Ecology]**

Fall. Weeks 1-10. 3 credits. Prerequisite: upper division or graduate standing. Letter grade only. Lec, T R 10:10; lab, F 1:25-4:25. Offered odd years; 2001. T. H. Whitlow.

An inquiry based treatment of the principles and methods of ecology, conservation biology, hydrology, soil science and related disciplines applied to the restoration of degraded terrestrial ecosystems. Weekly labs, four weekend field trips, and a semester-long project provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.]

**[HORT 442 Berry Crops: Culture and Management]**

Fall. 3 credits. Lec, M W 9:05; lab, M 1:25-4:25. Offered even years. Not offered 2001. M. P. Pritts.

A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Marketing and economics will be considered, and alternative production practices for both commercial and home gardeners will be discussed. Frequent field trips enhance classroom activities.

**[HORT 444 Applied Viticulture]**

Fall. 3 credits. Lec, T R 9:05; lab, R 1:30-4:25. Next offered 2001. R. M. Pool.

Grape production and post-production practices with emphasis on the Great Lakes and Finger Lakes regions. We will examine grape varieties, site selection, and vine management as affected by geography, meteorology, and vine anatomy/physiology. Protection of vines and grapes from injury by cultural, chemical, and natural means will also be explored. Laboratory exercises and field trips offer hands-on experience in vineyard practices, marketing, and processing.]

**[HORT 445 Orchard Management]**

Spring. 3 credits. S-U grades optional. Lec T R 10:10; lab, T 1:25-4:25. Offered even years. Next offered in 2002. I. A. Merwin.

The science and technology of deciduous tree-fruit production. Topics include basic tree and fruit physiology, orchard renovation and design systems, nutrition, irrigation and freeze protection practices, tree pruning and training, post-harvest fruit storage, marketing and economic spreadsheet models, monitoring and decision systems for integrated pest management, and efficient use of orchard equipment. Emphasis is on the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management. Previous coursework in pomology and other plant sciences is suggested, but not a prerequisite.]

**[HORT 450 Soil Management and Nutrition of Perennial Crops]**

Fall. 3 credits. Fee for course materials \$35. Lec, M W 8; lab, M 1:25-4:25. Not offered fall 2000.

Fundamentals of mineral nutrition and soil management for perennial horticultural crops. Soil management effects on crop performance, nutrient relationships, and interaction with other components of crop production systems are emphasized. Mineral nutrition aspects deal with diagnostic techniques, interpretation of tissue and soil analyses, and nutrient

requirements for optimizing crop performance.]

**[HORT 455 Mineral Nutrition of Crops and Landscape Plants (also CSS [SCAS] 455)]**

Spring. 3-5 credits. Prerequisite: CSS 260 and BIOL 242, or equivalent. Lec, M W F 9:05; lab, R 1:30-4:00. Not offered spring 2001; next offered spring 2002. H. C. Wien and staff.

A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries one credit; a minimum of three credits must be taken in one semester. By the end of the course, students should understand the principles of mineral nutrient function in crop plants; should be able to diagnose deficiencies by symptoms and tissue tests and devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.]

**[HORT 460 Plant-Plant Interactions]**

Spring. 3 credits. Prerequisite: any crop production on plant ecology course or permission of instructor. Lec, T R 9:05; lab/disc, M 2-4:25. Next offered spring 2002. D. W. Wolfe.

Mechanisms by which plants interfere or positively interact in the context of environmental conditions such as light, temperature, and fertility. Competitive and chemical interactions are considered between weeds and crops, among crops in polyculture, and between individuals in monoculture. Most examples will be taken from temperate and tropical monoculture and intercropping systems, but implications for natural ecosystems will also be considered.]

**[HORT 462 Vegetable Crop Physiology]**

Spring. 3 credits. Prerequisites: HORT 225 and BIOL 242. Lec, T R 9:05; lab/disc, M 2-4:25. Offered alternate years. Not offered spring 2002. H. C. Wien.

Study of the physiological processes that determine the timing, quantity, and quality of vegetable crop yields. Processes of flower induction, fruit set, fruit growth, and the relations between vegetative and reproductive growth are covered. The course emphasizes practical hands-on greenhouse experiments and small group discussions.

**[HORT 465 Vegetable Varieties and Their Evaluation]**

Fall, weeks 1-7. 2 credits. Prerequisites: HORT 225 or permission of instructor. S-U grades only. Lec, W F 8; lab, F 1:25-4:25. Offered alternate years. Next offered 2001. D. W. Wolfe and A. Rangarajan.

Principles of vegetable variety evaluation and selection of techniques in relation to program objectives. Morphology, yield, and quality of selected crops will be studied in the field. The seed industry will be briefly discussed.]

**[HORT 470 Special Topics in Pomology]**

Spring. 3 credits. Open to undergraduates by permission. Hours TBA. Staff.

Selected topics are considered with respect to the current literature, experimental techniques, or applied technologies. Topics change from one year to another and reflect the expertise and research interests of the professors who participate. Topics selected for each term will be announced several months before the term begins.

**[HORT 475 Golf Course Management]**

Fall. 2 credits. Prerequisite: HORT 330 or equivalent. Lects, F 1:25-4:25. Offered odd years. Offered fall 2001. A. M. Petrovic.

Advanced study in the management of golf course operations including selection of root zone materials, fertilization practices, integrated pest management practices, irrigation systems, environmental based decision making, personnel management, and financial operations. Analysis of a central New York golf courses will provide the basis for discussion.]

**HORT 476 Practical Problem Solving in Horticulture**

Fall. 2 credits. Prerequisite: permission of instructor. Lec/disc, W 1:25-4:25. C. P. Mazza.

Foundation for extension or similar career oriented students. Application of horticultural science principles to practical situations faced primarily by home gardeners. Techniques of synthesizing information from various scientific disciplines. Classes led by staff in several departments. Topics are interdisciplinary, drawing from expertise in horticultural science (landscape and food), entomology, plant pathology, natural resources, and Cornell Plantations.

**HORT 480 Plantations Seminar Series**

Fall. 1 credit. S-U grade only. W 7:30 P.M. D. A. Rakow.

A 10-week series of seminars given by prominent speakers on a variety of horticultural, natural sciences, and human cultural themes.

**HORT 485 Public Garden Management**

Spring. 3 credits. Prerequisites: HORT 300 or HORT 301; HORT 230 or HORT 335. Lec, T R 10:10-11:00, lab, T R 11:15-12:05. Two-and-a-half-day field trip to visit other botanical gardens and arboreta. Offered odd years, 2001. D. A. Rakow.

The course will explore the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboreta. Included will be separate units on: collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.

**HORT 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 491)**

Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Lec, T R 12:20-1:10; Lab, T R 1:25-4:25. N. L. Bassuk and P. J. Trowbridge.

This course will focus on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, we will be able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details will be produced to implement these practices. A two-semester-long project where students will implement what they have learned by creating a new landscape will serve to integrate theory principles and practices.

**HORT 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 492)**

Spring. 4 credits. Prerequisite: a passing grade in HORT/LA 491. Attendance limited to horticulture and landscape architecture majors or permission of the instructors. Lec, T R 12:20-1:10, lab, T R 1:25-4:25. N. L. Bassuk and P. J. Trowbridge.

This course will focus on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, we will be able to critically assess potential planting site, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details will be produced to implement these practices. A two-semester-long project where students will implement what they have learned by creating a new landscape will serve to integrate theory principles and practices. Together, HORT/LA 491 and 492 constitute an integrated course. 492 may not be taken for credit unless the student has a passing grade in HORT 491.

**HORT 494 Special Topics in Horticulture**

Fall or spring. 4 credits maximum. S-U grades optional.

In Sections 01 and 02, the departments teach "trial" courses under this number. Offerings may vary by semester, and will be advertised by the departments. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

**Section 01, Fruit and Vegetable Science****Section 02, Floriculture and Ornamental Horticulture****HORT 495 Undergraduate Seminar—Current Topics in Horticulture**

Fall and spring. 1 credit. Undergraduate participation in weekly departmental seminar series. Graduate students should enroll in HORT 600. May be taken four times for one credit per semester. S-U grades only. R 4. L. A. Weston, A. Rangarajan, and C. Watkins.

**HORT 496 Internship in Horticultural Sciences**

Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's adviser in advance of participation in internship programs. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Hours TBA. Staff.

**HORT 497 Independent Study in Horticultural Sciences**

Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall). Independent study in horticultural sciences under the direction of one or more faculty members. Hours TBA. Staff.

**HORT 498 Undergraduate Teaching Experience**

Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enroll-

ment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

**HORT 499 Undergraduate Research**

Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall.) Hours TBA. Staff.

Undergraduate research projects in horticultural sciences.

**HORT 500 Master of Professional Studies (Agriculture) Project**

Fall or spring. 1-6 credits. (6 credits maximum toward M.P.S. [Agriculture] degree). S-U grades optional. Staff.

A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Master of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

**HORT 600 Seminar in Horticulture**

Fall and spring. 1 credit. S-U grades only. R 4:00. A. Rangarajan, C. Watkins, and L. A. Weston.

Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring or minoring in horticulture. Undergraduate students register under HORT 495.

**[HORT 615 Quantitative Methods in Horticultural Research]**

Spring. Weeks 1-7. 2 credits. Prerequisite: BTRY 601, BTRY 602 or permission of instructor. S-U grades only. W F 2:30-4:25. Offered alternate years. Next offered spring 2002. D. W. Wolfe.

Advantages and limitations of conventional experimental designs and analyses of greenhouse and field (including-on-farm) experiments. Use and interpretation of plant growth analysis techniques. Discussions will include critical analysis of published data and research in progress.]

**HORT 620 Woody Plant Physiology**

Spring. 4 credits. BIOPL, BIOBM 331, CHEM 357, or equivalent, or permission of instructor. Letter grade only. Lects, T R 8:40-9:55. Lab, T 1:25-4:25. Offered odd years, 2001. T. H. Whitlow.

An examination of physiological processes in woody plants emphasizing whole plant integration and how these processes affect plant growth under both natural and cropping systems. Topics include evolution of the woody plant form, structure and function of the root and shoot, growth periodicity, dormancy, growth analysis, carbon balance and allocation, root symbioses, and physiological responses to biotic and abiotic stress. Faculty from Geneva and Fruit and Vegetable Science collaborate in teaching.

**[HORT 625 Advanced Postharvest Physiology of Horticultural Crops]**

Spring. 3 credits. Prerequisite: BIOPL 242 and/or HORT 325. Lects, T R 10:10; disc, to be arranged. Not offered spring 2001.

Physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts. Topics include morphological and compositional changes during ripening and storage life, some physiological disorders, aspects of hormone action and interactions, and a consideration of control.]

**HORT 629 Special Topics in Plant Science Extension (also PL BR 629)**

Spring. 2 credits. Offered alternate years. F 1:25-4:25. W. D. Pardee.

Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

**HORT 630 Current Topics in Postharvest Horticulture**

Spring. 1 credit. Prerequisite: permission of instructor. Hours TBA. Staff.

Graduate students and staff report and discuss current topics in postharvest biology and technology of horticultural crops.

**HORT 635 Tools for Thought**

Fall. 1 credit. Open to graduate students only. S-U grade only. 1 hour per week, TBA. T. H. Whitlow.

A discussion of readings from Kuhn, Popper, Waddington and others emphasizing application of the philosophy of science to the real world practices of scientists.

**HORT 636 Current Topics in Horticulture**

Fall or spring. 1 credit. S-U grades only. 1 hour per week, TBA. Staff.

Fruit and Vegetable Science. A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each term.

**HORT 694 Special Topics in Horticulture**

Fall or spring. 4 credits maximum. S-U grades optional. Hours TBA. Sec 01, Floriculture. Sec 02, Fruit and Vegetable Science. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

**HORT 700 Graduate Teaching Experience**

Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor. Hours TBA. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

**HORT 800 Thesis Research, Master of Science**

Fall or spring. Credit TBA. S-U grades only.

**HORT 900 Thesis Research, Doctor of Philosophy**

Fall or spring. Credit TBA. S-U grades only.

## INTERNATIONAL AGRICULTURE

**Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

**INTAG 300 Perspectives in International Agriculture and Rural Development**

Fall. 2 credits. F 1:25-3:20. R. W. Everett.

A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

**INTAG 314 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also CSS [SCAS] 314)**

Fall. 3 credits. Prerequisite: an introductory course in crop science, soil science, or biology or permission of instructor. Lec, T R 8:40-9:55. E. C. Fernandes.

Characterization and discussion of traditional shifting cultivation, lowland rice-based systems, upland cereal-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The effect of tropical cropping systems on the environment is evaluated.

**INTAG 402 Agriculture in the Developing Nations I**

Fall. 2 credits. Prerequisite: International Agriculture 300. F 1:25-3:20. P. A. Arneson and staff.

The goal of this course is to acquaint students with the major issues and problems in international agriculture and rural development and to show how problems in development are being addressed by international, government, and nongovernment agencies. The lectures/discussions attempt to establish the global context for sustainable agricultural development and focus on agriculture in the tropics, using case studies of agricultural development in Latin America, especially Ecuador. This course may be taken as a stand-alone survey course in international agriculture, but it is also the preparatory course for participation in Agriculture in the Developing Nations II (International Agriculture 602), which includes a trip to Ecuador during the intersession.

**INTAG 403 Traditional Agriculture in Developing Countries**

Fall. 1 credit. S-U only. T 8-8:50. H. D. Thurston, D. Bates, R. Blake, J. Lassoie, A. Power, E. Fernandez, T. Steenhuis.

Today, perhaps over half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten

in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course will examine traditional systems from several disciplinary points of view.

**INTAG 497 Independent Study in INTAG**

Fall and spring. 1-3 credits. S-U or letter grade. Prerequisites: permission of instructor and signed Independent Study Form. Staff.

Independent Study in INTAG allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

**INTAG 598 International Development M.P.S. Project Paper**

Fall and spring. 1-6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the Field of International Development (ID). S-U grades only. N. Uphoff.

A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.

**INTAG 599 International Agriculture and Rural Development M.P.S. Project Paper**

Fall and spring. 1-6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the Field of International Agriculture and Rural Development (IARD). S-U grades only. R. Blake.

A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

**INTAG 602 Agriculture in the Developing Nations II**

Spring. 3 credits. Prerequisites: INTAG 300 or equivalent, INTAG 402, and permission of instructors. Cost of field-study trip includes air fare and approximately \$450 for lodging, meals, and personal expenses. T R 2:30-4:25 until midterm only.

R. W. Blake and staff.

Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff and students. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments dealing with problems in agriculture and livestock production in the context of social and economic conditions.

**INTAG 603 Administration of Agricultural and Rural Development (also GOVT 692)**

Spring. 4 credits. M 2:30-5:30. N. T. Uphoff and T. W. Tucker.

An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities

during their professional careers.

**[INTAG 685 Training and Development: Theory and Practice (also COMM 685, EDUC 685 and ILR 658)]**

Spring and summer. 4 credits. S-U grades optional. Not offered 2000-2001.

Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.]

**INTAG 694 Graduate Special Topics in INTAG**

Fall or spring. 1-4 credits. S-U or letter option. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**INTAG 694.1 Special Topics: Fallow Management in the Tropics**

Fall. 1-3 credits. Prerequisite: permission of instructor required. S-U or letter option. E. Fernandes and L. Fisher.

A discussion course developed in conjunction with the Cornell International Institute for Food, Agriculture and Development (CIIFAD). Students study traditional and introduced fallow practices in Asia, Africa, and Latin America, participate in the development of on-line fallow systems and species databases, test participatory methodologies adapted by the class for studying fallow management, and in most cases plan and carry out individual field studies. The course focuses upon fallow management practices of primarily resource-limited farmers in the broader rural context.

**INTAG 697 International Development M.P.S. Seminar**

Fall. 1 credit. S-U only. N. Uphoff.

A seminar for M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

**INTAG 698 International Development M.P.S. Seminar**

Spring. 1 credit. S-U only. N. Uphoff.

A seminar for M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

**INTAG 699 International Agriculture and Rural Development M.P.S. Project Seminar**

Spring. 1 credit. S-U grade only. Required for, and limited to, M.P.S. IARD students or with permission of instructor. R. Blake.

The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

## LANDSCAPE ARCHITECTURE

H. W. Gottfried, chair; M. I. Adleman, S. Baugher, K. L. Gleason, P. H. Horrigan, R. Jaenson, D. W. Krall, L. J. Mirin, R. T. Trancik, P. J. Trowbridge, K. A. Wolf

**LA 141 Grounding In Landscape Architecture**

Fall. 4 credits. Limited to 15 students. Letter grade only. Cost of drafting supplies, about \$200.

Introduction to the representation and design of landscapes and to working in a studio setting. Freehand drawing, measured drawing, and model making are used to understand design principles of the changing landscape.

**LA 142 Grounding in Landscape Architecture**

Spring. 4 credits. Limited to approximately 20 students; freshman landscape architecture majors or permission of instructor. Cost of basic drafting equipment, fees, and supplies, about \$250.

Fundamentals of landscape design applied to small-scale site-planning projects. Work in the studio introduces course participant to the design process, design principles, construction materials, planting design, and graphics.

**LA 201 Medium of the Landscape**

Fall. 5 credits. Limited to landscape architecture majors. Cost of basic drafting equipment, supplies, and fees, about \$200; expenses for field trip, about \$250.

This studio course emphasizes the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthform, water, and vegetation.

**LA 202 Medium of the Landscape**

Spring. 5 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies and fees, about \$250; expenses for field trip, about \$250.

This course will focus upon the role of materials in design, design theory, and design vocabulary associated with landscape architectural projects.

**LA 260 Pre-Industrial Cities and Towns of North America (also CRP 360 and CRP 666 and LA 666)**

Fall. 3 credits. Offered alternate years.

Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

**LA 261 Urban Archaeology (also CRP 261)**

Fall. 3 credits.

Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students will participate in a local archaeological excavation.

**LA 262 Laboratory in Landscape Archaeology (also ARKEO 262)**

Spring. 3 credits. Prerequisites: LA 261 or CRP 261 or permission of instructor.

Various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students will learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

**[LA 263/547 American Indians, Planners, and Public Policy (also CRP 363/547)]**

Spring. 3 credits. Offered in alternate years. Not offered spring 2001.

Decisions made by public agencies and private enterprise too often lead to the

flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.]

#### **LA 282 The American Landscape**

Fall. 3 credits.

An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature.

#### **LA 292 Creating a Second Nature**

Spring. 3 credits. Prerequisites: none, but ARKEO 100, ANTHR 100, or CLASSICS/HISTORY OF ART 220 recommended. Offered alternate years.

What can archaeological investigation tell us about the landscape of cultures that spent much of their civic and private lives out of doors? This course introduces the evidence for the markets, parks, gardens, fields, and burial places central to daily life in the ancient Near East and Classical Worlds and formative of our current ideas of these landscapes.

#### **LA 301 Integrating Theory and Practice I**

Fall. 5 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies and fees, about \$250; expenses for field trip, about \$250.

Course participants will be engaged in the art and science of site-scaled design. This includes relating construction and planting details to concepts and program.

#### **LA 302 Urban Design in Virtual Space**

Spring. 5 credits. Cost of supplies and fees, about \$250; basic expenses for field trip, about \$250.

A sequence of projects introducing students to advanced skills in large-scale urban design, including 3-D computer modeling and digital design media as tools for shaping the form of the city.

#### **LA 315 Site Engineering I**

Spring. 2 credits. Prerequisite: permission of instructor.

Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

#### **LA 316 Site Engineering II**

Fall. 2 credits. Prerequisite: LA 315 or permission of instructor.

Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

#### **LA 318 Site Construction**

Spring. 5 credits. Prerequisite: permission of instructor.

Detail design and use of landscape materials used in project implementation. Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project. Students will develop a process of self criticism related to measured drawings specific to the comprehensive project. Course

participants will fabricate material prototypes in wood and metal.

#### **LA 402 Integrating Theory and Practice**

Spring. 5 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies and fees, about \$250; expenses for field trip, about \$250.

The studio will engage course participants in service-oriented community design projects. Theories of place-making, community and participatory design and planning, and sustainability will be explored through practice-based learning. Students will be expected to work independently and collaboratively on team projects in the community. One class period per week will be designated for community field work. Studio theme for 2000-2001: TBA.

#### **LA 410 Computer Applications in Landscape Architecture**

Fall or spring. 3 credits. Offered to landscape architecture students only. Limited to 15 students.

This course is designed to develop a working knowledge of various computer software applications with emphasis on Autocad. The course will explore other applications relative to land-use planning and the profession of Landscape Architecture.

#### **LA 412 Professional Practice**

Spring. 1 credit.

Presents the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or other professional situations. Topics discussed include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

#### **LA 483 Design Criticism**

Fall. 3 credits.

Writing design criticism. Emphasis on analytical descriptions and interpretations of works and on the role of criticism in design discourse.

#### **[LA 486 Community Design Workshop**

Spring. 3 credits. Permission of instructor. S-U grades optional. Not offered spring 2001.

This class will offer hands-on learning of the design process through the designing and building of service-oriented community projects (parks, public spaces, school gardens, downtown revitalization). This course will enable students to both study and experience design and implementation skills at all levels of the design process. Students will learn and practice skills related to community design primarily through work on the participating design and planning phase of the project.]

#### **[LA 487 Experiential Community Design**

Fall. 3 credits. Permission of instructor. S-U grades optional. Not offered spring 2001.

This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects (parks, public spaces, school gardens, downtown revitalization). This course will enable students to both study and experience design and implementation skills at all levels of the design process. Students will be engaged in the community-build phase of a community design project initiated the previous spring semester.]

#### **LA 490 Rome Wasn't Built in a Day**

Spring. 3 credits.

In this electronic course, students will learn about how the form and spatial structure of the city of Rome has evolved through time. Using the interactive CD-ROM "Layers of Rome" as a digital text, the course will engage participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Lectures, research, readings and exercises will be developed using the Layers of Rome CD, web searches, digital networking, and various interactive learning technologies geared toward urban analysis and visual design media.

#### **LA 491 Creating the Urban Eden: Woody Plant Selection, Design and Landscape Establishment (also HORT 491)**

Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Cost of supplies, about \$50; expenses for field trips, about \$50.

This course will focus on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, we will be able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details will be produced to implement these practices.

#### **LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 492)**

Spring. 4 credits. Prerequisites: a passing grade in HORT/LA 491. Attendance limited to horticulture and landscape architecture majors or permission of the instructors.

This course will focus on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, we will be able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details will be produced to implement these practices. A two-semester-long project where students will implement what they have learned by creating a new landscape will serve to integrate theory principles and practices. Together, HORT/LA 491 and 492 constitute an integrated course. 492 may not be taken for credit unless the student has a passing grade in HORT 491.

#### **LA 494 Special Topics in Landscape Architecture**

Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

#### **LA 495 Green Cities: The Future of Urban Ecology (also CRP 495)**

Fall. 4 credits.

Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. The politics, design, and economics of "green cities" are examined in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

**LA 497 Individual Study in Landscape Architecture**

Fall or spring. 1-5 credits; may be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Work on special topics by individuals or small groups.

**LA 498 Undergraduate Teaching**

Fall or spring. 1-2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall).

Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.

**LA 501 Composition and Theory**

Fall. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about \$250. Field trip about \$250.

Basic principles of natural and cultural processes that form "places" in the landscape. Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

**LA 502 Composition and Theory**

Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about \$250; expenses for field trip, about \$250.

The studio will focus on the spatial design of project-scale site development. Students will develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

**LA 505 Landscape Representation I**

Fall. 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor.

This class introduces students to both conventional and unconventional modes of landscape architectural design representation. Drafting, orthographic drawing, axonometric project, lettering, analysis and concept drawing will be taught alongside more expressive modes of direct site study and representation.

**LA 506 Graphic Communication II**

Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor.

An intermediate level course focused on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing; concept modelling; composite drawings; and visual books.

**LANAR 524 History of European Landscape Architecture\***

Spring. 3 credits.

\*Offered through the College of Architecture, Art, and Planning.

**LANAR 525 History of American Landscape Architecture\***

Fall. 3 credits.

\*Offered through the College of Architecture, Art, and Planning.

**LA 545 The Parks and Fora of Imperial Rome**

Spring. 3 credits. Prerequisites: advanced standing in a design field, classics or history of art, or by permission of the instructor.

This advanced seminar is seeking students in classics, art history, archaeology, landscape architecture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome.

**LA 569 Archaeology in Preservation Planning and Site Design (also CRP 569)**

Spring. 3 credits. Offered alternate years.

In response to federal, state, and local legislation, archaeology now plays an important role in design, planning, and land-use decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.

**LA 582 The American Landscape**

Fall. 3 credits.

An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature. At the graduate course level, students will be required to complete additional outside work and to attend an additional class session.

**LA 590 Theory Seminar**

Spring. 3 credits.

Seminar in contemporary landscape design theory. For graduate students and seniors.

**LA 598 Graduate Teaching**

Fall or spring. 1-3 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form. Staff.

Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There will be assigned readings and discussion sessions on education theory and practice throughout the term. (Credit hours are determined by: 2 hours per week = 1 credit hour).

**LA 601 Integrating Theory and Practice I**

Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about \$250; expenses for field trip, about \$250.

The studio will focus on site-scaled projects that engage cultural and natural systems. Theories of place-making, sustainable design, and landscape representation will be critically explored through design projects that derive from and affirm a sense of site and place. The integration of site knowledge and site construction aims to support a deepening level of correspondence between design and site.

**LA 602 Integrating Theory and Practice II**

Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about \$250; expenses for field trip, about \$250.

The studio will build upon your prior course work with an expectation that course participants can creatively manipulate the program and conditions of a site with increased emphasis placed on how things are constructed and contemporary technology. This course will focus on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationship to site design and planning will be critically explored through theory and practice in this studio.

**LA 615 Site Engineering I**

Spring. 2 credits. Prerequisite: permission of instructor.

Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

**LA 616 Site Engineering II**

Fall. 2 credits. Prerequisite: LA 615 or permission of instructor.

Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

**LA 618 Site Construction**

Spring. 5 credits. Prerequisite: permission of instructor.

Detail design and use of landscape materials used in project implementation. Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students will develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants will fabricate material prototypes in wood and metal.

**[LA 619 Advanced Site Grading**

Spring (second 7 weeks of semester). 2 credits. Limited to 10 students. Prerequisite: LA 315 or LA 615. Not offered 2001.

Grading skills and knowledge applied as a design component of site planning projects.]

**LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)**

Fall. 3 credits. Offered alternate years.

Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture altered the landscape in their own unique way as they created their own built environments.

**LA 680 Graduate Seminar in Landscape Architecture**

Fall or spring. 1-3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Seminar topics and group study not considered in other courses.

**LA 694 Special Topics in Landscape Architecture**

Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

**LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)**

Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about \$250; expenses for field trip, about \$250.

Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. 3-D computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

**LA 702 Advanced Design Studio**

Spring. 5 credits.

A capstone studio that provides the opportunity to explore issues of contemporary landscape architecture and integrate related fields. Topics examined include the influences of culture, history, and criticism, as well as reinterpretations of engineering and representation.

**LA 800 Master's Thesis in Landscape Architecture**

Fall or spring. 9 credits.

Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

## NATURAL RESOURCES

J. P. Lassoie, chair; R. A. Baer, M. B. Bain, B. L. Bedford, B. Blossy, T. Brown, L. E. Buck, E. Cooch, P. Curtis, D. J. Decker, J. Enck, T. J. Fahey, T. A. Gavin, J. W. Gillett, B. A. Knuth, C. Kraft, M. E. Krasny, C. C. Krueger, B. Lauber, R. A. Malecki, R. J. McNeil, E. Mills, S. Morreale, M. E. Richmond, L. Rudstam, R. Schneider, R. Sherman, P. J. Smallidge, C. R. Smith, P. Sullivan, J. B. Yavitt

**Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

**NTRES 100 Principles of Conservation**

Fall. 3 credits. Limited to first-year students specializing in natural resources. Letter grade only. M W F 9:05; 1 hr disc TBA. R. J. McNeil.

The nature of natural resources, how they are managed, and their interactions with individuals and societies are considered. Case histories are used to illustrate both principles and practices. Emphasis will be on management of renewable resources based on ecological and cultural perspectives.

**NTRES 201 Environmental Conservation**

Spring. 3 credits. M W F 12:20; 1 hr disc sec TBA. T. Fahey.

At the beginning of the twenty-first century, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course will

stimulate you to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media so that you will have a firmer basis for responsible citizenship and action on environmental issues.

**NTRES 210 Introductory Field Biology**

Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent. 2 overnight weekend field trips required. Cost of field trips, approximately \$12. Lec. W 9:05; labs, M W 1:25-4:25 or T R 1:25-4:25. T. Gavin and C. Smith.

Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn the taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Selected aspects of current ecological thinking are stressed. The interaction of students with biological events in the field and accurate recording of those events are emphasized.

**NTRES 270 Conservation of Birds**

Spring or summer. 2 credits. Prerequisite: NTRES 210 or permission of instructor. Offered alternate years. Next offered spring 2002. C. R. Smith.

A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels. Current resource management issues relevant to birds will be explored in the contexts of agricultural practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change, and the economic importance of bird study as an outdoor recreational activity.

**NTRES 271 Conservation of Birds Laboratory**

Spring or summer. 1 credit. Concurrent enrollment in NTRES 270 required. Offered alternate years. Next offered spring 2002. C. R. Smith.

A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered will include the choice and effective use of field guides, binoculars, and other tools for bird identification; procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying songbird populations.

**NTRES 301 Forest Ecology**

Fall. 3 credits. Prerequisite: introductory biology. M W F 11:15. T. J. Fahey.

A comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests, ecophysiology of forest trees, disturbance, succession and community analysis, primary productivity, and nutrient cycling.

**NTRES 302 Forest Ecology Laboratory**

Fall. 1 credit. Cost of weekend trip approximately \$30. Concurrent enrollment in NTRES 301 required. M 1:25-4:25. T. J. Fahey.

Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to

quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and White Mountains, New Hampshire. Group research projects in local forests.

**NTRES 303 Woodlot Management and Maple Syrup Production**

Spring. 3 credits. Letter grades only. Lec, T R 10:10-11:00; lab R 12:20-4:25. Offered alternate years. Next offered spring 2002. T. J. Fahey.

A practical, field-oriented course emphasizing principles and practices of multiple purpose management of small, nonindustrial private forest land in the northeastern United States, including the production of maple syrup.

**NTRES 305 Wildlife Ecology**

Fall. 3 credits. Letter grade only. Prerequisite: NTRES 210 and background in biology or ecology is strongly recommended; completion or concurrent enrollment in CALS math requirement. M W F 9:05-9:55. E. Cooch.

An in-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. The course will examine in detail models of single species and multi-species dynamics, with emphasis on understanding the relationship between ecological processes at the individual and population level. Computer-based simulations will be used to reinforce concepts presented in lecture.

**NTRES 306 Coastal and Oceanic Law and Policy**

Summer. 2 credits. July 3-10. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,000.

Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

**[NTRES 308 Natural Resources Management**

Fall. 3 credits. Prerequisite: junior standing. M W F 10:10. Not offered fall 2000-2001. B. A. Knuth.

Focus is on fish, wildlife, forest, and water resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.]

**NTRES 309 Sovereign Tribal Environments**

Summer. 1 credit. Prerequisite: none; recommended: one course each in Natural Resources and American Indian Program. Consult Cornell University Summer Session Catalog for scheduling information. S. M. Penningroth.

Under federal law, Native American tribes possess significant attributes of sovereignty. This course introduces American Indian territories as a unique policy arena where tribal jurisdiction and traditions merge with the goals of economic development and cultural survival to shape resource management decisions. Lectures, class discussions, case studies, and a mandatory field trip to an Iroquois territory.

**NTRES 321 Introduction to Biogeochemistry (also GEOL 321, SES 321)**

Fall. 4 credits. Prerequisites: college-level chemistry, plus a course in biology and/or geology. Lec, T R 12:20-1:10; lab, T or R 2:30-4:25. J. B. Yavitt and L. A. Derry. Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

**NTRES 340 Quantitative Population Analysis**

Spring. 3 credits. Letter grade only. Prerequisites: college-level course in statistics or mathematics recommended. M W F 9:05-9:55. P. J. Sullivan. The dynamics and demographics of aquatic and terrestrial populations are examined using statistical techniques and computer modeling. The course will emphasize (1) estimation of population abundance using statistical surveys, mark-recapture methods, cohort analysis, and other sampling techniques; and (2) characterization of population dynamics through mathematical and statistical models representing the fundamental processes of birth, death, growth, and movement. Topics will include applications to aquatic and terrestrial organisms of resource and conservation interest.

**NTRES 350 Global Ecology and Management**

Spring. 3 credits. Prerequisites: college-level courses in biology and chemistry. M W F 12:20-1:10, disc sec, M or W 1:25-2:15. J. B. Yavitt. Human accelerated environmental changes threaten the integrity of nature. This course explains the ecological principles that comprise this threat. Topics include increasing air temperature, atmospheric carbon dioxide and other gases, and pollution. Discussions explore the likely future behavior of nature given different global change scenarios.

**NTRES 400 International Environmental Issues**

Fall. 4 credits. Prerequisite: junior standing or above. T R 10:10-12:05. J. Schelhas. Current international environmental issues are analyzed from an interdisciplinary perspective, with an emphasis on understanding the complex relationships between humans and the environment that underlie environmental problems and solutions. Topics covered include conceptualization of environmental issues, population, property rights, human

behavior, environmental values, environmental education, international policies, international organizations, globalization, conservation and development projects, participation and community-based conservation, and social conflict and unrest. Environmental issues covered include endangered species, biodiversity, tropical forests, global climate change, protected areas, indigenous people, and ocean fisheries. Emphasis on systematic analysis of environmental issues; written and oral presentations.

**NTRES 402 Natural Resources Policy, Planning, and Politics**

Spring. 3 credits. Prerequisites: junior standing; special application process, and course fee (approx. \$350). Lec, January two-week intersession; two 2-hour orientation sessions in fall semester and four 2-hour sessions in February and March. Completed applications due by October 13. Applications are available by contacting map10@cornell.edu or at [www.dnr.cornell.edu/courses/course.html](http://www.dnr.cornell.edu/courses/course.html).

An introduction to the environmental policy process and its conceptual framework. Recognizing phenomena identified as natural resources or environmental problems and issues; aggregating interests; formulating and selecting alternative solutions; implementation and evaluation stages; roles of citizens, lobbyists, government actors. Case studies; presentations by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, oral reports. Several meetings in Ithaca before and after intensive January session in Washington.

**NTRES 406 Ecology Risk Assessment (also TOX 406)**

Spring. 3 credits. Prerequisites: BIOES 261 or equivalent; permission of instructor if not an advanced student in natural sciences of engineering. M W F 11:15-12:05. Offered alternate odd years. J. W. Gillett.

This course strives to develop understanding of and competence in the different types of ecological (nonhuman health) risk assessments. Focus is on cases for chemical, physical, and biological stressors in a variety of circumstances. The proposed USEPA approach under development will serve as the working model.

**NTRES 407 Religion, Ethics, and the Environment**

Fall. 4 credits. For juniors, seniors, and graduate students; others by permission only. S-U grades optional. T R 10:10-11:00; an hr disc TBA. R. A. Baer.

How religion, philosophy, and ethics influence our treatment of nature. Terms like religion, nature, fact, value, knowledge, and public interest are examined in detail. Particular themes include character and moral development, similarities and differences between moral and scientific claims, truth telling, public reason, and property. Also, animals rights vs. ecosystem concerns, responsibility to future generations, the limitations of rationalism in ethics, and discussion of whether women approach moral issues differently than men.

**[NTRES 408 Resource Management and Environmental Law**

Fall. 3 credits. For juniors, seniors, and graduate students. S-U grades optional. M W F 9:05-9:55. Not offered fall 2000. Staff.

A senior-level course that introduces the use of legal concepts, doctrines, and remedies in natural resource and environmental management. For a variety of living resources and their habitats, it explores the common law and regulatory processes available for resolving conflicts between exploitation and protection and stresses a practical understanding of how public and private values, economic considerations, and constitutional limitations affect management techniques and objectives.]

**NTRES 410 Quantitative Methods in Wildlife Management**

Spring. 3 credits. Letter grade only. Prerequisite: NTRES 210 and NTRES 305. Lec, T R 11:15-12:05; lab, R 2:30-4:25.

An in-depth analysis of the ecological and quantitative dimensions for decision making in modern wildlife management. This includes population and system modeling for evaluation of management decisions, and quantitative methods for adaptive management. Afternoon lab sessions will use computer-based approaches to reinforce concepts presented in lecture.

**NTRES 411 Seminar in Environmental Ethics**

Fall. 3 credits. For seniors, juniors and graduate students. S-U grades optional. W 1:25-3:50.

Moral concerns relative to the natural environment and agriculture. In successive years, the seminar will focus on such topics as (1) animal rights vs. ecosystem concerns, (2) natural resource management and the concept of the public interest, (3) applying environmental ethics in a democratic and pluralistic society, and, (4) land use ethics.

**NTRES 415 Principles and Practices of Agroforestry (also HORT 415 and CSS [SCAS] 415)**

Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec, M W F 10:10-11:00. L. Buck, E. Fernandes, J. Lassoie, K. Mudge.

An introduction to modern and traditional agroforestry systems which involves spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems are considered, based on above and below ground processes. The sustainability of agroforestry systems will be critically examined from biophysical, socioeconomic, and policy perspectives. Optional laboratory, NTRES 416 (also CSS and HORT).

**NTRES 416 Principles and Practices of Agroforestry—Laboratory (also HORT 416 and CSS [SCAS] 416)**

Fall. 1 credit. Optional lab component of NTRES 415 (also HORT and CSS [SCAS]). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor; prior or concurrent enrollment in NTRES 415. W 1:25-4:25. J. Lassoie, K. Mudge, E. Fernandes, L. Buck.

An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills

with woody plants including identification, propagation, planting, pruning, and measurement.

#### **NTRES 417 Wetland Resources**

Summer. 2 credits. Prerequisite: 1 year of college biology. June 26–July 3. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,000.

An examination of coastal and adjacent freshwater wetlands from historical, disturbance, and preservation perspectives, including fresh and salt water-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

#### **NTRES 418 Wetland Ecology and Management-Lecture**

Fall. 3 credits. T R 1:25–2:40. B. L. Bedford. Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human activities affect wetlands. Current regulations, protection programs, and management strategies are considered.

#### **NTRES 419 Wetland Ecology and Management-Laboratory**

Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. W or F 12:20–4:25. 1 weekend fieldtrip required. An integrated set of laboratory field exercises designed to expose students to: (a) the diversity of wetland ecosystems; (b) the vegetation, soils, water chemistry, and hydrology of wetlands in the region; (c) methods of sampling wetlands vegetation, soils, and water; and (d) methods of wetland identification and delineation.

#### **NTRES 420 Ecological Management of Water Resources**

Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. M W F 9:05–9:55. R. Schneider.

In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion will integrate scientific literature with current management issues. Topics include: linkages between hydrologic variability and communities; groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

#### **NTRES 428 Landscape Impact Analysis**

Spring. 3 credits. Prerequisites: 1 introductory and 1 advanced course in ecology or the equivalents, and junior standing. T R 1:25–2:40. B. Bedford.

This course presents ecological concepts and analytical tools needed to evaluate environmental impacts to natural resources and ecosystems within an integrated context that incorporates the landscapes in which these resources occur. It explores diverse conceptual frameworks for landscape impact analysis and exposes students to modern tools for evaluating landscapes.

#### **NTRES 438 Fishery Management**

Spring. 3 credits. Lec, T R 10:10; disc, T or R 11:15. Offered alternate years. Next offered spring 2001. C. C. Krueger.

Introduction to management as an adaptive process that focuses on achievement of goals. Coverage includes sport and commercial fisheries and species restoration. Topics include setting goals and objectives, regulations, habitat management, population control, stocking, and management of trout, reservoirs, the Great Lakes and Pacific halibut. Ecological, social, political, and economic aspects of those topics are discussed.

#### **NTRES 442 Techniques in Fishery Science**

Fall. 5 credits. Limited to 15 upperclass and graduate fishery students. Cost of field trips, no more than \$30. Offered alternate years. T R 1:25–4:25; 2 or more weekend field trips and 1 mid-week field trip.

C. C. Krueger.

Emphasis is on methods for collecting and analyzing data from fish populations and their habitats. Topics include passive and active fish-capture methods, tagging and marking, and physical and chemical habitat measurements. Assumptions and limitations inherent in data sets, research planning, and scientific report writing are also discussed. Several field trips provide hands-on experience in data collection on streams and lakes.

#### **NTRES 450 Conservation Biology**

Fall. 3 credits. Prerequisite: a reasonable biology background. Limited to first 30 seniors, plus graduate students. Lec, T 10:10–12:05; disc, R 10:10 or 11:15.

T. A. Gavin.

Emphasis will be on biological topics that are important to the maintenance of biological diversity. Examples include population viability analysis, and the analysis of the demography and genetics of small populations as they are affected by habitat fragmentation and isolation. Students will gain thorough familiarity with these concepts and their potential application through lectures, discussion, and use of computer models. This course is intended primarily for students with a background in college biology. Students with no college biology background should enroll in BIOES 257.

#### **NTRES 456 Stream Ecology (also ENTOM 456, BIOES 456)**

Spring. 4 credits. Limited to 60 students. Prerequisites: none; BIOES 261 recommended. Offered alternate years. Lec T R 9:05–9:55; lab T W or R 1:25–4:25. B. Peckarsky.

**Lecture** addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation and the impacts of disturbances. **Lab:** A field project includes descriptive and experimental techniques and hypothesis-testing related to environmental assessment.

#### **NTRES 458 Human Dimensions of Natural Resource Management**

Spring. 3 credits. S-U grades optional. Limited to juniors and seniors. Lec, T R 11:40–12:55. B. Lauber and J. Enck.

This course focuses on how a social science-based understanding of human attitudes, values, and behaviors can be incorporated in

natural resource management decisions and actions. Examples from federal, state, and nongovernmental fish, wildlife, and forest management programs are used to illustrate the importance of socioeconomic considerations in problem solving and decision making.

#### **NTRES 459 Techniques for Demographic Analysis of Wildlife Population**

Fall. 3 credits. Letter grade only. Prerequisites: CALS math requirements or permission of instructor. Lec, T R 1:25–2:15 P.M.; lab, W 1:25–4:25 P.M. Next offered fall 2001. E. Cooch.

This course will explore the theory and application of a variety of statistical techniques in the study of population dynamics. We will cover the use of capture-recapture and recovery analysis to estimate survival probability, abundance (and density), immigration, emigration, population change ( $\lambda$ ), and sensitivity analysis using open and closed population models. We will also examine inference methods including covariate analysis and model selection.]

#### **NTRES 460 Quantitative Ecology of Fisheries Resources**

Spring. 3 credits. S-U grades optional. Prerequisites: NTRES 304 recommended or permission of instructor. M W F 10:10–11:00. Offered alternate even years. Next offered spring 2002. P. J. Sullivan.

The dynamics of marine and freshwater fisheries resources are examined with a view towards observation, analysis, and decision making within a quantitative framework. Growing pressure on fisheries' resources, habitat modification, and increased uncertainty about the nature of biological systems are at the center of many fisheries' issues. Quantitative models are useful for integrating information needed by decision makers in addressing these issues. The course develops analytical methods to assess the dynamics and status of fisheries' resources and then demonstrates how the information may be transformed into useful information for decision makers.]

#### **NTRES 471 Management of Terrestrial Habitats**

Spring or summer. 2 credits. Prerequisites: NTRES 210, 305; statistics recommended; junior standing or above. Lec/lab, W 1:25–4:25. Offered alternate odd years. C. R. Smith.

A landscape ecological approach will be used to introduce students to habitat concepts and to methods of inventorying, measuring, monitoring, describing, classifying, and restoring terrestrial habitats at a variety of temporal and spatial scales. Field trips will be taken to areas managed by both public and private land management organizations. An introduction to use of the Global Positioning System (GPS) is included.

#### **NTRES 493 Individual Study in Resource Policy, Management, and Human Dimensions**

Fall, spring, or winter. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. R. A. Baer, T. Brown, L. E. Buck, D. J. Decker, J. Gillett, B. Knuth, R. McNeil, J. Schellhas.

Topics in environmental and natural resource policy, management, and human dimensions are arranged depending on the interests of students and availability of staff. Students must

register with an Independent Study form (available in 140 Roberts Hall).

#### **NTRES 494 Special Topics in Natural Resources**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

#### **NTRES 495 Individual Study in Fish and Wildlife Biology and Management**

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. M. Bain, E. Cooch, P. Curtis, T. Gavin, C. Kraft, C. Krueger, R. Malecki, E. Mills, A. Moen, S. Morreale, M. Olson, M. Richmond, L. Rudstam, C. Smith, P. Sullivan.

Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

#### **NTRES 496 Individual Study in Ecology and Management of Landscapes**

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, B. Blossley, T. Fahey, M. Krasny, J. Lassoie, R. Schneider, R. Sherman, P. Smallidge, J. Yavitt.

Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

#### **NTRES 498 Teaching in Natural Resources**

Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students will gain insight into the organization, preparation, and execution of course plans through application and discussions with instructor.

#### **NTRES 500 Professional Projects—M.P.S.**

Fall and spring. Credit TBA. Limited to graduate students working on professional master's projects. S-U grades only.

#### **NTRES 507 Environmental Inquiry (also EDUC 507)**

Summer. 1-3 credits (V). S-U grades optional. Prerequisite: limited to preservice or inservice secondary science teachers. Permission of one of the instructors required. W. S. Carlsen and M. E. Krasny.

Exploration of selected topics in environmental science and environmental science education at the secondary school level. The subject-matter focus will vary from year to year, and will track ongoing research and development conducted through Cornell's Environmental Inquiry project, a collaboration between the Departments of Education and Natural Resources and the Center for the Environment. Current work centers on watershed dynamics, biodegradation, environmental toxicology, and invasive species.

#### **NTRES 601 Seminar on Selected Topics in Natural Resources**

Fall or spring. 1 credit. S-U grades only. T 3:35-4:25; disc sec, T 4:30-5:00.

Selected readings and discussions of research and/or current problems in natural resources.

#### **[NTRES 604 Seminar on Selected Topics in Resource Policy and Management**

Fall. 2 credits. S-U grades only. M 3:00-4:30. Not offered in 2000-2001.

Primarily for graduate students with a major or minor in resource policy and management and upper level undergraduates with a strong interest in resource policy analysis. Topics include the policy process, actors and stakeholders, ethical dimensions, and evaluation. Emphasis is placed on discussion, faculty-student interaction, communication skills, and current resource policy issues.]

#### **[NTRES 607 Ecotoxicology (also TOX 607)**

Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. M W F 11:15-12:05. Offered alternate even years. Next offered spring 2002.

J. W. Gillett.

Lectures, readings, and special guests focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.]

#### **NTRES 610 Introduction to Chemical and Environmental Toxicology (also Toxicology 610)**

Fall. 3 credits. Prerequisites: biochemistry and animal physiology. Letter grade only. M W F 11:15-12:05. J. W. Gillett.

Introduction to the basic concepts of toxicology, exposure and biological responses to toxicants, methods of assessing toxicity; factors affecting outcomes, specific sources of toxicants (including air pollution, agriculture, industrial and commercial processes, natural occurring toxicants, and social poisons), risk assessment and regulation of toxic materials.

#### **NTRES 612 Wildlife Science Seminar**

Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Check with department for availability.

Discussion of individual research or current problems in wildlife science.

#### **NTRES 615 Case Studies and Special Topics in Agroforestry**

Spring. 2 credits. Prerequisites: NTRES/CSS/HORT 415 or permission of instructor. S-U grades optional. W 1:25-3:20. L. E. Buck, J. P. Lassoie.

Interdisciplinary groups of students examine case study examples of agroforestry practice and research in developed and developing countries. Key current topics in the field are examined in depth, through lecture presentations, library research, and class discussion. Students prepare individual or team-written original case studies or critical analyses of existing case studies for presentation to class.

#### **NTRES 616 Forest Science and Management Seminar**

Fall and spring. 1 credit. Permission of instructor. S-U grades only. Check with department for availability.

Selected readings and discussions of research and/or current problems in forest science and management.

#### **NTRES 618 Critical Issues in Conservation and Sustainable Development**

Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students. T R 2:30-4:25.

Establishes a conceptual foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and rural development. Students work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

#### **NTRES 619 Field Practicum in Conservation and Sustainable Development**

Spring. 3 credits. Prerequisites: NTRES 618; preference given to graduate students with minor in conservation and sustainable development; permission of instructor. Limited to 12 students. Includes 2-week field study trip to a Latin American country in January.

An interdisciplinary study of a conservation and development problem in Latin America. The course will use an interdisciplinary research methodology that includes group problem identification, individual or rapid appraisal projects, and synthesis of group work to identify key conservation and development issues and research priorities for a selected site.

#### **[NTRES 659 Techniques for Demographic Analysis of Wildlife Population**

Fall. 3 credits. Letter grade only. Prerequisites: CALS math requirements or permission of instructor. Lec, T R 1:25-2:15 P.M.; lab, W 1:25-4:25 P.M. Next offered fall 2001. E. Cooch.

This course will explore the theory and application of a variety of statistical techniques in the study of population dynamics. We will cover the use of capture-recapture and recovery analysis to estimate survival probability, abundance (and density), immigration, emigration, population change (lambda), and sensitivity analysis using open and closed population models. We will also examine inference methods including covariate analysis and model selection. Students enrolling for graduate credit will do extra work beyond that expected for undergraduates in the 400-level course (NTRES 459).]

#### **[NTRES 660 Quantitative Ecology of Fisheries Resources**

Spring. 3 credits. S-U grades optional. Prerequisites: NTRES 304 recommended or permission of instructor. M W F 10:10-11:00. Offered alternate even years. Next offered spring 2002. P. J. Sullivan.

This course is taught in conjunction with NTRES 460 (see description above). Students taking the course for graduate credit will be asked, in addition to the 400-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.]

**NTRES 670 Spatial Statistics**

Spring. 3 credits. Prerequisites: BTRY 601 and 602; an intro GIS course strongly recommended. S-U grades optional. M W F 10:10–11:00. Offered alternate odd years. P. J. Sullivan.

Spatial statistical concepts and techniques are developed and applied to ecological and natural resource issues. Topics include visualizing spatial data and analysis and modeling of geostatistical, lattice, and spatial point processes. Consider taking this course simultaneously with CSS 620.

**NTRES 694 Special Topics in Natural Resources**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**NTRES 698 Current Topics: Environmental Toxicology (also TOX 698)**

Fall, spring. 1–3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor.

A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

**NTRES 699 Graduate Individual Study in Natural Resources**

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. NTRES graduate faculty.

Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

**NTRES 800 Master's Thesis Research**

Fall and spring. Credit TBA. Limited to graduate students working on master's thesis research. S-U grades only.

**NTRES 900 Graduate-Level Thesis Research**

Fall and spring. Credit TBA. Limited to graduate students in a Ph.D. program **only before** the "A" exam has been passed. S-U grades only.

**NTRES 901 Doctoral-Level Thesis Research**

Fall and spring. Credit TBA. For students admitted to candidacy **after** the "A" exam has been passed. S-U grades only.

**Related Courses in Other Departments**

Courses in many other departments are relevant to students majoring in Natural Resources. The following list includes some of the most closely related courses but is not exhaustive.

Environment and Society (R SOC 208, 324, 340, 410, 440, 495)

Ecology and Biology (ENTOM 456, 470, 471; BIOES 263, 274, 278, 452, 457, 461, 462, 463, 471, 472, 475, 476, 478)

Environmental Law, Ethics, and Philosophy (S&TS 206; CRP 451; PHIL 241, 246, 247, 381)

Human Systems and Communication (COMM 260, 285, 352, 421)

Physical Sciences (ABEN 435, 475; CSS and EAS [SCAS] 260, 321, 365, 371, 483; GEOL 102, 104; CEE 432)

Public Policy and Politics (GOVT 427, 428; BIO & SOC 461; CEE 529)

Resource Economics (ARME 100, 250, 450, 451; ECON 409)

Spatial Data Interpretation (CSS [SCAS] 420, 461, 620, 660)

**PLANT BREEDING**

E. D. Earle, chair; W. R. Coffman, W. De Jong, S. Kresovich, M. M. Jahn, S. R. McCouch, M. A. Mutschler, K. V. Raman, M. E. Smith, M. E. Sorrells, S. D. Tanksley, D. R. Viands

Emeritus Professors: R. E. Anderson, H. L. Everett, H. M. Munger, R. P. Murphy, W. D. Pardee, R. L. Plaisted and D. H. Wallace

**Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

**PL BR 201 Plants, Genes, and Global Food Production**

Spring. 2 credits. Prerequisite: 1 year of introductory biology or permission of instructor. Lects, T R 11:15. S. R. McCouch.

This course provides an introduction to plant breeding. It offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. It offers specific examples of how breeding objectives are realized and raises questions about the environmental, social, and economic consequences of intensive food production systems. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B—Biological Sciences.

**PL BR 401 Plant Cell and Tissue Culture**

Fall. 3 credits. Prerequisites: a course in plant biology, cell biology, or genetics, or permission of instructor. Lects, T R 10:10. E. D. Earle.

Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Methods for plant improvement via manipulations of cultured cells will be discussed.

**PL BR 402 Plant Tissue Culture Laboratory**

Fall. 1 credit. Enrollment limited. Prerequisites: PL BR 401 (may be taken concurrently) or permission of instructor. W or R 1:25–4:25 (alternate weeks) plus 1 hr TBA. E. D. Earle, A. Brants.

Laboratory exercises complementing PL BR 401. Techniques for establishing, evaluating, and utilizing plant organ, tissue, and cell cultures will be covered. Experiments use a broad range of plant materials and include *Agrobacterium*-mediated gene transfer.

**PL BR 403 Genetic Improvement of Crop Plants**

Fall. 3 credits. Prerequisites: genetics (BIOGD 281 or other standard genetics course), and a course in crops, horticulture, or floriculture. M W F 9:05–9:55. M. E. Smith.

Genetic enhancement of crop value to humans began with domestication and continues with farmers' variety development

and scientifically trained plant breeders' applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

**PL BR 404 Genetic Diversity**

Spring. 2 credits. S-U or letter. Prerequisites: a course in genetics, plant breeding, or permission of instructor. T R 9:05–9:55. S. Kresovich.

This course explores the structure of genetic variation through time and space and how it ultimately may be maintained and utilized. Case studies representing organisms of biological interest and agricultural importance are employed to highlight biological and genetic theories, technologies, and approaches essential to conservation genetics and the improvement of crop and animal species. In complement, underlying ethical, legal, and social issues affecting conservation and use of genetic diversity are addressed.

**PL BR 446 Plant Cytogenetics Laboratory**

Spring. 1 credit. S-U only. Prerequisites: a course in genetics or permission of instructor. Will be offered as a 2-week module at a time to be arranged in Spring 2001. Check with department for further information. K. N. Watanabe.

This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis is on applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Basic techniques for examination of plant chromosomes are covered.

**PL BR 494 Special Topics in Plant Breeding**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**PL BR 496 Internship in Plant Breeding**

Fall or spring. Credits variable, may be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades only. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

**PL BR 497 Individual Study in Plant Breeding**

Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

**PL BR 498 Undergraduate Teaching**

Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

**PL BR 499 Undergraduate Research**

Fall or spring. Credits variable. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate research projects in plant breeding.

**PL BR 604 Methods of Plant Breeding Laboratory**

Fall. 2 credits. Prerequisite: PL BR 403 or equivalent (may be taken concurrently). T R 1:25-4:15. M. E. Sorrells and R. E. Anderson.

Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germ plasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

**PL BR 606 Advanced Plant Genetics**

Spring. 3 credits. S-U grades optional. Prerequisites: BIOGD 281, or equivalent. Lects, T R 1:25-2:40. M. M. Jahn.

This course provides an advanced survey of genetics in higher plants. Topics include genetic analysis of developmental and metabolic processes, cytogenetics, mating behavior and barriers, and aspects of population and quantitative genetics.

**PL BR 607 Analysis of Sequence Similarity**

Fall. 1 credit. Enrollment limited. S-U or letter grades optional. Prerequisites: basic biology, basic genetics, familiarity with computers. Permission of instructor required. 3 times a week for 4 weeks. Times TBA. Check with Plant Breeding Office for details. A. Baldo and S. McCouch.

This course will focus on the tools available for accessing nucleotide and protein sequence similarity in plants, animals, and microbes and the strengths and limitations of these approaches for answering biological questions. The mathematical and statistical background of the algorithms will be presented in lectures and weekly on-line projects will provide students with experience in addressing a range of biological problems involving sequence analysis.

**[PL BR 608 Comparative Genomics**

Fall. 1 credit. Enrollment limited. S-U or letter grades optional. Prerequisites: PL BR

607 or equivalent experience. Permission of instructor required. Times TBA—3 times/week for 1 month. Not offered 2000–2001. E. Paul, S. McCouch, and M. Sorrells.

This course will emphasize how to access and integrate different types and sources of data using computer databases and a variety of querying mechanisms. Students will learn to integrate information derived from analysis of phenotypes, biochemical and metabolic pathways, DNA sequences, and genetic and physical maps using plant genome databases, and a variety of software packages.]

**PL BR 610 Advanced Plant Breeding Methods**

Spring. 3 credits. Prerequisites: PL BR 403 or equivalent, BIOGD 281, or equivalent. M W F 12:20-1:10. M. Mutschler.

This course integrates information from a variety of disciplines to examine current issues in plant breeding. Topics covered include: issues surrounding the maintenance, selection, and use of germplasm resources; traditional plant breeding methods used for a variety of crops; integration of biochemical and molecular techniques into an applied breeding program; the effect of crop and breeding objectives on the success of breeding strategies; intellectual property protection and its impact on breeding goals and strategies.

**PL BR 618 Breeding for Pest Resistance**

Fall. 2 credits. S-U grades optional. Prerequisites: BIOGD 281 and PL BR 403 or equivalents. An introductory course in Plant Pathology and/or Entomology also highly recommended. Lec, M F 2:30-3:20. Offered alternate years. P. Griffiths.

A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance, stability of genetic resistance mechanisms, and the use of biochemical, physiological, and molecular tools in breeding for pest resistance.

**PL BR 622 Seminar**

Fall or spring. 1 credit. S-U grades only. T 12:20-1:10. Staff and graduate students.

**PL BR 650 Special Problems in Research and Teaching**

Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching. Staff.

**PL BR 653.2 Plant Biotechnology (also PL PA 663 and BIO PL 653.2)**

Fall. 1 credit. S-U grades optional. Prerequisite: BIO PL 653.1 or permission of instructor. Lects, M W F 1:25-2:15 (12 lecs) Sept. 27–Oct. 25. E. D. Earle and M. Zaitlin.

This course deals with production and use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

**PL BR 653.3 Plant Genome Organization (also BIO PL 653.3)**

Fall. 1 credit. S-U grade or letter option. Prerequisites: BIO PL 653.1. M W F 10:10–11:00. (12 lecs) Sept. 27–Oct. 25. Offered alternate years. S. D. Tanksley.

The structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing, and comparative genomics.

**[PL BR 653.6 Molecular Breeding and Genetic Diversity (also BIO PL 653.6)]**

Fall. 1 credit. S-U grade or letter option. Lects, M W F 10:10–11:00. (12 lecs). Offered alternate years. Not offered 2000–2001. S. Kresovich and S. Tanksley.

Application of DNA markers to the evaluation of genetic diversity in natural populations and germplasm collection as well as the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students will learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs. Strategies for the use of DNA polymorphisms in the management of genetic resources will also be taught.]

**PL BR 694 Special Topics in Plant Breeding**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**PL BR 716 Perspectives in Plant Breeding Strategies**

Spring. 3 credits. S-U grades optional. Prerequisite: PL BR 403. W 3:35-5:15, F 3:35-4:25. Offered odd years. M. E. Sorrells.

Emphasis is on discussion and evaluation of selected benchmark papers and current literature. Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required.

**[PL BR 717 Quantitative Genetics in Plant Breeding]**

Spring. 3 credits. S-U grades optional. Prerequisites: PL BR 403 and BTRY 601 or equivalent. M W F 2:30-3:20. Offered even years. Next offered spring 2002. D. R. Vians and M. E. Sorrells.

Discussion about quantitative genetics and quantitative trait loci (QTLs) for more efficient plant breeding. Specific topics include components of variance (estimated from various mating designs); theory and computer analysis for QTL, population structure, multiple locus regressions, and interval analysis; heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During one period, plants in the greenhouse will be evaluated to provide data for computing quantitative genetic parameters.]

**PL BR 800 Master's-Level Thesis Research**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

For students working on a master's thesis.

**PL BR 900 Graduate-Level Dissertation**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

For students in a Ph.D. program **only before** the "A" exam has been passed.

**PL BR 901 Doctoral-Level Dissertation Research**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

For students admitted to candidacy **after** the "A" exam has been passed.

## PLANT PATHOLOGY

R. Loria, chair; J. R. Aist, P. A. Arneson, S. V. Beer, G. C. Bergstrom, B. B. Brodie, A. R. Collmer, T. P. Delaney, W. E. Fry, S. M. Gray, K. T. Hodge, G. W. Hudler, J. A. Laurence, S. G. Lazarowitz, J. W. Lorbeer, G. B. Martin, M. T. McGrath, M. G. Milgroom, E. B. Nelson, B. G. Turgeon, O. C. Yoder, M. Zaitlin, T. A. Zitter

**Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

**PL PA 101 Freshman Writing Seminar: Pests, Pesticides, People, and Politics**

Spring. 3 credits. Limited to 17 students. Lec, M W F 8:00. Offered spring 2001. P. A. Arneson.

This seminar examines the use of pesticides, their impact on human health and the environment, and their regulation. Beginning with Rachael Carson's classic *Silent Spring*, we will examine many facets of the pesticide controversy through readings in current popular literature, technical journals, government documents, industry propaganda, and publications of various so-called "public interest groups." We will emphasize the need for critical thinking as we explore the power of the written word to persuade.

**[PL PA 102 Freshman Writing Seminar: Environmental Issues and the Changing Global Climate**

Fall. 3 credits. Limited to 17 students. Lec, T R 8:40. Not offered fall 2000.

This seminar provides an opportunity to learn more about the biological, social, and political impact of environmental issues on scales ranging from local to global. Readings, discussions, and some hands-on experience will provide subjects for a seminar designed to teach writing at levels of single sentences to term papers.]

**PL PA 201 Magical Mushrooms, Mischievous Molds**

Spring. 2 credits. S-U optional. Lec, T R 11:15. G. W. Hudler.

A presentation of the fungi and their roles in nature and in shaping past and present civilizations. The historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals are emphasized.

**PL PA 241 Plant Diseases and Disease Management**

Spring. 4 credits. Prerequisite: one year of biology. Lec, M W F 11:15; lab, T or W 1:25. W. E. Fry.

An introduction to plant diseases, their diagnosis, and their management. Topics covered include fungi, bacteria, viruses, nematodes, and other plant pathogens; disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course is intended for students who want a practical knowledge of plant diseases and their control. It is not an adequate prerequisite for plant pathology courses numbered 600 and above.

**PL PA 309 Introductory Mycology**

Fall. 3 credits. Prerequisite: a year of biology or equivalent. Concurrent registration in PL PA 319 is recommended. Lec, T R 9:05-9:55; labs, R 1:25-4:25. J. R. Aist.

An introduction to fungi, emphasizing biology, comparative morphology, and taxonomy.

**PL PA 319 Field Mycology**

Fall. 1 credit. Lab, W 1:25-4:25 P.M., W 7:30-9:30 P.M. K. T. Hodge.

Learn to identify mushrooms and other macrofungi on a series of eight afternoon field trips followed by evening lab sessions. Fungi are collected during field trips to sites in the Ithaca area. In the evenings, students learn to use technical keys and microscopes to identify the fungi and learn about the ecology and biology of these enigmatic organisms. The course runs only for the first eight Wednesday of the semester. Grades are based on a collection project and a final laboratory examination.

**[PL PA 401 Basic Plant Pathology**

Fall. 4 credits. Prerequisite: 1 year of biology and BIO PL 241 or equivalent. Recommended: general microbiology, plant physiology. Lec, T R 11:15, F 12:20; lab, T or W 1:25. Not offered fall 2000.

Principles and practice of plant pathology. Lectures and labs are coordinated to consider types of plant pathogens and their population dynamics, disease cycles, diagnostic criteria and procedures, mechanisms of pathogen attack and plant defense, vector relationships, epidemiology, disease forecasting, loss assessment, and disease control. This course prepares students for graduate-level work in plant pathology.]

**PL PA 407 Nature of Sensing and Response (also BIO G 407)**

Spring. 3 credits. Prerequisites: BIO BM 330 or 333 or 331 and previous or concurrent registration in 332. Recommended: BIO GD 281. Lec, T R 10:10-11:25. T. P. Delaney.

The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. A wide variety of response systems will be explored to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant and animal systems for environmental sensing, control of development and responses during disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way

these systems are perturbed by mutation and disease.

**[PL PA 411 Plant Disease Diagnosis**

Fall. 3 credits. Limited to 18 students.

Prerequisites: PL PA 241 or equivalent and permission of instructor. Lec, T R 10:10; lab T R 1:25-4:25. Offered alternate years.

Next offered fall 2001. G. W. Hudler.

A method of diagnosing plant diseases caused by infectious and noninfectious agents is taught with emphasis on application of contemporary laboratory techniques and effective use of the literature. After seven weeks of formal lecture and laboratory sessions, students will spend the rest of the semester working on their own to determine the causes of plant diseases on samples that have either been received by the Plant Disease Diagnostic Lab or that have been prepared by instructors.]

**PL PA 443 Pathology and Entomology of Trees and Shrubs (also ENTOM 443)**

Fall. 4 credits. Limited to 30 students.

Prerequisites: PL PA 241 or equivalent, ENTOM 212 or equivalent. Lec, M W F 11:15; lab F 1:25-4:25. Offered alternate years. G. W. Hudler, P. A. Weston.

For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasis is on pests of northeastern flora but examples from other parts of the country and the world are also used. Forest, shade, and ornamental plants are considered.

**PL PA 444 Integrated Pest Management (also ENTOM 444)**

Fall. 4 credits. Prerequisites: BIO ES 261, ENTOM 212 or 241, or PL PA 241 or their equivalents or permission of instructor. P. A. Arneson and J. Losey.

Lectures integrate the principles of pest control, ecology, and economics in the management across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

**PL PA 472 Microbial Control of Plant Diseases**

Spring. 3 credits. Limited to 20 students.

Prerequisites: PL PA 241 or PL PA 401, BIOMI 290, or equivalent. Lec, M W F 9:05-9:55. E. B. Nelson.

This course is intended to provide students with a broad exposure to the field of biological disease control. The basic ecological concepts and principles underlying microbial interactions with plants, as well as plant pathogens, and the role of these interactions in the suppression of fungal and bacterial diseases will be discussed. Emphases will be placed equally on biological control processes in rhizosphere and phylloplane habitats. Topics will address aspects of root and leaf microbial ecology, plant pathogen ecology and behavior, ecological and molecular mechanisms of biological disease control, and manipulation and enhancement of biological control processes. Applied aspects such as delivery approaches, commercialization and registration of biological control organisms, and implementation of biological disease control practices in agriculture will also be covered.

**PL PA 494 Special Topics in Plant Pathology**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL PA 497 Independent Study**

Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

**PL PA 498 Teaching Experience**

Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

**PL PA 499 Undergraduate Research**

Fall or spring. 3-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

An opportunity for research experience under the direction of a faculty member.

**PL PA 642-661 Special Topics Series**

Unless otherwise indicated, the following description applies to courses 642-661.

Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

**PL PA 642 Plant Disease Epidemiology**

Fall. TBA. M. G. Milgroom.

**PL PA 644 Ecology of Soil-Borne Pathogens**

Fall. R 12:20. E. B. Nelson.

**PL PA 645 Plant Virology**

Fall. F 12:20. S. M. Gray.

**PL PA 647 Bacterial Plant Diseases**

Fall and spring. M 9:05. S. V. Beer. Emphasizes current research in phyto bacteriology undertaken in laboratories at Cornell.

**PL PA 648 Molecular Plant Pathology**

Fall. R 12:20. T. P. Delaney.

**PL PA 649 Mycology Conferences**

Fall. 1 credit. TBA. K. T. Hodge.

**PL PA 650 Diseases of Vegetable Crops**

Fall. TBA. Hours TBA. J. W. Lorbeer and T. A. Zitter.

**PL PA 652 Field Crop Pathology**

Spring. W 8:00. G. C. Bergstrom.

**[PL PA 654 Diseases of Florist Crops**

Spring. F 12:20. Not offered 2000-2001. R. K. Horst.]

**PL PA 655 Integrated Pest Management in Tropical Agriculture (also ENTOM 644)**

Spring. T 12:20. P. A. Arneson.

**PL PA 661 Diagnostic Lab Experience**

Summer and fall. 1 or 2 credits. S-U grades only. Requires 3 hrs/wk per credit hour. Hours TBA. T. A. Zitter.

For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnostician. Coursework or experience in diagnostic techniques is strongly advised. Priority will be given to graduate students in plant pathology and plant protection.

**PL PA 662 Molecular Plant-Pathogen Interactions**

Spring. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331, and BIOMI 653.1. Lects, M W F 10:10 (12 lecs) Jan. 24-Feb. 19. T. P. Delaney, A. R. Collmer.

An examination of the molecular properties that control the development of host-parasitic interactions in both microorganisms (bacteria and fungi) and higher plants. Contemporary theories describing the genetic mechanisms of pathogenesis and resistance are discussed.

**PL PA 663 Plant Molecular Biology 1**

Fall. 1-5 credit. Prerequisites: BIO GS 281, BIO BM 330 or 331.

**Section 01 Concepts and Techniques in Plant Molecular Biology (BIO PL 653.1)**

1 credit. Lects, M W F 10:10 (12 lecs)

August 30-Sept. 25. T. Delaney, G. B. Martin.

A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, and protein structure and translation.

Methods applicable to plant molecular biology are described, including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, plant transformation, mutant production, and use of sequence databases.

**Section 02 Plant Biotechnology (BIO PL 653.2 and PL BR 653.2)**

1 credit. Lects, M W F 1:25 (12 lecs) Sept. 27-Oct. 25. M. Zaitlin, E. D. Earle.

This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

**PL PA 681 Plant Pathology Seminar**

Fall and spring. 1 credit. Required of all plant pathology majors. S-U grades only. W 12:20-1:10.

**PL PA 694 Special Topics in Plant Pathology**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL PA 701 Concepts of Plant Pathology: Organismal Aspects**

Spring. 3 credits. For graduate students with majors or minors in plant pathology; others by permission. Prerequisites: PL PA 401 or equivalent and permission of instructor. Lects, T R 9:05; lab/disc, R 2-4:25. A. R. Collmer.

Concepts in host-pathogen relationships with emphasis on roles of molecules and cells in determining the outcome of an interaction. Genetic, molecular biological, physiological, and cell biological approaches to experimental analysis of exemplary host-pathogen systems are considered. Historical perspectives and recent research are reviewed and analyzed. Students prepare and review mock grant proposals.

**PL PA 702 Concepts of Plant Pathology: Population Aspects**

Fall. 3 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or permission of instructor. Some background in statistics is recommended.

Lab=discussion section. Lec, T R 10:10; disc, T 2-4:25. M. G. Milgroom.

Theory and concepts in plant disease epidemiology and population biology of plant pathogens. Topics include: population dynamics of pathogens in time and space, interactions of pathogen and plant populations, and population genetics of pathogens. The discussion section is used for examining current plant pathology literature and other exercises complementary to lecture material.

**PL PA 705 Phyto virology**

Spring. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent. S. G. Lazarowitz.

This course considers plant viruses and the diseases they cause. Consideration is given to virus structure and composition, classification, replication, effects on hosts, modes of transmission, and the relationships of these aspects to principles of diagnosis and control.

**[PL PA 706 Phytonematology**

Fall. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent or permission of instructor. Not offered 2000-2001.

The course deals with plant-parasitic and plant-associated nematodes, their biology, morphology and systematics; ecology and role in ecosystem health; physiology and molecular aspects of nematode-plant interactions; population dynamics; interactions with other plant pathogens; and management options. Bioengineering, breeding for resistance, genetic mechanisms of host resistance, biological control, and technical methods of handling nematodes will also be covered. Emphasis will be placed on the nematode as an animal system.]

**PL PA 707 Phytobacteriology**

Fall. 2 credits. Prerequisites: general microbiology, lectures and laboratory; introductory plant pathology. Offered alternate years. S. V. Beer.

A consideration of the prokaryotes that cause disease in plants and examples of the diseases they cause. The course emphasizes properties of bacterial pathogens that affect disease, methods for manipulation of the pathogens, and recent developments in phytobacteriology. The current state of

knowledge of important phytopathogenic genera including their genetics and mechanisms of pathogenesis is reviewed. Laboratory practice in isolation, inoculation, identification, genetics, and physiology is included.

**[PL PA 709 Phytomycology]**

Spring. 2 credits. For graduate students with a major or minor in plant pathology or mycology; others by permission. Prerequisites: PL PA 401 and 309 or equivalents, or permission of instructor. Lec, F 1:25–2:30; lab, 2:30–4:30. Not offered 2001. J. W. Lorbeer.

Provides basic information on the biology of plant pathogenic fungi with emphasis on the structure, ecology, genetics, life cycles, and disease cycles of representative genera and species.]

**[PL PA 715 Phytovirology Laboratory]**

Spring. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades only. Not offered spring 2000. S. G. Lazarowitz.]

**[PL PA 738 Genetics and Development of Filamentous Fungi]**

Fall. 2 credits. Prerequisite: BIOGD 281 or equivalent. Hours TBA. Next offered 2001–2002. B. G. Turgeon, O. C. Yoder.

Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity) and reproduction, both sexual and asexual, are described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as *Cochliobolus heterostrophus*, *Magnaporthe grisea*, and *Ustilago maydis* and from well known genetic models such as *Aspergillus nidulans* and *Neurospora crassa*.]

**[PL PA 739 Advanced Mycology]**

Spring. 4 credits. Prerequisites: PL PA 309 or equivalent, and permission of instructor. Offered odd-years. 1 lecture; 2 labs TBA. K. T. Hodge.

Advanced-level topics in mycology, including ecology and systematics of selected fungal groups. One lecture per week introduces the week's topics; students gain hands-on experience working with and identifying fungi during two laboratory sessions. The course is aimed at students pursuing or preparing for graduate-level work in mycology.

**[PL PA 788 Research in Molecular Plant Pathology]**

Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor before beginning research. S-U grades only. S. V. Beer.

Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in Molecular Plant Pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

**[PL PA 797 Special Topics]**

Fall or spring. 1–5 credits. S-U grades optional.

An opportunity for independent study of a special topic.

**[PL PA 798 Graduate Teaching Experience]**

Fall or spring. 1–5 credits. S-U grades. Hours TBA. Staff.

Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

**[PL PA 800 Master's-Level Thesis Research]**

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.

For students working on a master's degree.

**[PL PA 900 Graduate-Level Thesis Research]**

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.

For students in a Ph.D. program who have not passed the "A" exam.

**[PL PA 901 Doctoral-Level Thesis Research]**

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty.

For doctoral candidates who have passed the "A" exam.

## POMOLOGY (FRUIT SCIENCE)

See Horticulture.

## RURAL SOCIOLOGY

P. D. McMichael, chair; D. L. Brown, P. R. Eberts, P. Eloundou-Enyegue, S. Feldman, J. D. Francis, C. C. Geisler, P. K. Gellert, A. Gonzales, D. T. Gurak, T. A. Hirschl, T. A. Lyson, M. J. Pfeffer, J. M. Stycos, L. B. Williams

**Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.**

**[R SOC 100 Indian America to 1890 (also AIS 100)]**

Fall. 3 credits. S-U optional. Enrollment limited to 550. W 7:30–10 P.M. R. W. Venables.

Slide lectures survey the rich cultures and complex histories of the Indian nations north of Mexico. Indian arts and philosophies are compared and contrasted with those of Europe, Africa, Asia, Canada, and the United States. The origins of today's major legal issues involving American Indians are also discussed. The course begins with a survey of Indian America before Columbus and ends at Wounded Knee in 1890, the event which marks the end of the conquest of Indian America. Guest lecturers, including American Indian leaders, provide additional perspectives.

**[R SOC 101 Introduction to Sociology]**

Fall, spring, or summer. 3 credits. Enrollment limited to 300 in the fall, 400 in the spring. Lects, T R 10:10–11:00; sec, various times. Fall, T. Hirschl; spring, staff.

This course provides an introduction to theory and research in sociology. It demonstrates

how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. The course will provide "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

**[R SOC 103 Self and Society (also SOC 103)]**

Fall. 3 credits. S-U optional. Lec, T R 1:25–2:15. M. Macy.

An introduction to microsociology, focusing on social processes in small groups, including the family. Emphasis is on leadership, conformity, social influence, cooperation and competition, distributive justice, and micro analyses of interaction.

**[R SOC 105 Economic Sociology (also SOC 105)]**

Fall. 3 credits. S-U optional. T R 11:30–12:45. C. Leuenberger.

This course examines how sociologists understand the economy as a social phenomena. The focus is on classical and contemporary theorists as well as empirical studies in economic sociology. We will study the impact of the dynamics of capitalism and globalization on social life and how the economic organization of society can be related to religion, culture, and concepts of leisure. We will also investigate areas in which people interact with the economy on a daily basis: in selling, shopping, and consuming.

**[R SOC 175 Indian America in the Twentieth Century (also AIS 175)]**

Spring. S-U option. Enrollment limited to 125. Lec, M W 10:10–11:00; sec, various times. B. Baker.

This course addresses major U.S. policies affecting American Indians in the twentieth century, and ways in which American Indians pursued strategies to sway the process of social change. American Indian political, economic, and cultural issues are examined through history, literature, music/art, and film/documentary. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current trends are discussed, and the implications for American Indians in the twenty-first century are explored. Guest lecturers, including American Indian scholars, leaders, and activists, provide additional perspectives.

**[R SOC 200 Social Problems (also SOC 200)]**

Fall. 3 credits. S-U grades optional. Enrollment limited to 100. T R 10:10–11:25. Not offered fall 2000. T. A. Hirschl.

This course investigates a variety of current social problems from a sociological perspective. The course begins with an overview of sociological theories that may account for social problems and identifies common as well as competing elements of these theories. The theoretical framework is then applied to analyze a variety of social problems, which may vary semester to semester. Examples of social problems are homelessness, teenage pregnancy, deindustrialization, and homicide, among others. Emphasis in the course will be given to how social problems are measured,

and students will be given an opportunity to test theories with data analysis.]

**R SOC 201 Population Dynamics (also SOC 202)**

Spring. 3 credits. S-U grades optional. Enrollment limited to 35. ALS students must register for this course as R SOC 201. T R 2:55-4:10. P. Eloundou-Enyegue.

This course provides an introduction to population studies. The primary focus is on the relationships between demographic processes (fertility, mortality, and migration) and social and economic ones. Discussion will cover special topics related to population growth and distribution, including marriage and family formation, labor force participation, urban growth and urbanization, resource allocation, and the environment.

**[R SOC 202 Religion and Family in the United States (also SOC 201)]**

Fall. 3 credits. S-U optional. Lec, M W 2:55-4:10. Not offered fall 2000. P. Becker.

This course will examine how two fundamental social institutions—religion and the family—are interlinked in American society. As recently as the 1950s, religious institutions were organized around the needs of one dominant family form, the male-breadwinner family with a stay-at-home mother. But since the 1950s, that family form is no longer statistically dominant or culturally normative. How have religious institutions adapted to new family forms? How do religious beliefs influence behavior within families like the raising of children? How do religious groups foster ideals of family life, or influence our beliefs about what are "good" families? How do people's family experiences and family values influence their participation in organized religion? We will begin to answer these questions by drawing on readings that explore the religion-family link in a variety of ethnic and social class contexts within the contemporary United States.]

**R SOC 205 International Development (also SOC 206)**

Spring. 3 credits. Enrollment limited to 74. M W F 10:10-11:00. Staff.

New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, we examine Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. We will also examine the new social movements, such as environmentalism, feminism, and grassroots activism.

**R SOC 206 Gender and Society (also WOMNS 206)**

Spring. 3 credits. Enrollment limited to 100. Lec, M W 11:15-12:05; sec, various times. B. Wejnert.

Course will familiarize students with origin of gender hierarchies, social and behavioral similarities/differences between females and males, and the degree that biological, psychoanalytic, psychological and sociological perspectives help to understand the differ-

ences. United States and cross-cultural comparisons of the consequences of gender inequality will be a major focus of the course. Objectives will be met through lectures, readings, films, participant observation, and personal experiences.

**R SOC 207 Problems of Contemporary Society (also SOC 207)**

Spring. 3 credits. S-U grades optional. Lec, T R 8:40-9:55. D. Heckathorn.

This course examines contemporary social problems, with a focus on their sources in the organization of society. Modern societies are based on three fundamental types of institutions—social norms, hierarchies, and markets. Each is subject to distinctive types of failures resulting in problems that include poverty, prejudice and discrimination, intolerance and hate, alcohol and drug abuse, physical and mental illness, crime and delinquency, and urban problems. In analyzing these problems, we emphasize the institutions through which they are created and perpetuated, and the forms of institutional change required to address them.

**[R SOC 208 Technology and Society]**

Fall. 3 credits. Offered odd years. Next offered fall 2001. M W F 10:10-11:00.

C. C. Geisler.

The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or "appropriate" is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.]

**R SOC 209 Social Inequality (also SOC 208)**

Fall. 3 credits. S-U optional. T R 1:25-2:40. D. Grusky.

This course examines the nature and processes of social inequality in industrial societies. The principal focus is on the contemporary United States, with some comparisons to other industrial societies with different educational and class structures. Readings include theoretical and empirical materials on urban inequality and stratification along race, class, and gender lines. The course includes ethnographies of schools and workplaces as well as more quantitative research.

**R SOC 213 Social Indicators, Data Management, and Analysis**

Fall. 3 credits. Offered alternate years (complement of R SOC 214). T R 11:40-12:55. P. R. Eberts.

A survey of definitions of social indicators and general principles of social indicators research will be illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, etc., based on census data, household surveys, and key-informant and other low-cost techniques, will be examined using personal computers.

**[R SOC 214 Research Methods for the Social Sciences]**

Fall. Offered even years (complement of R SOC 213). 3 credits. Enrollment limited to 25. T R 11:40-12:55. Not offered fall 2000

through 2001; next offered fall 2002.

L. B. Williams.

A number of approaches to conducting research in the social sciences will be presented. These include observation techniques, unstructured, semi-structured, and structured interviews, experiments, and focus groups. Some statistical techniques for data analysis will be discussed. A background in elementary statistics is preferred although it is not required.]

**[R SOC 215 Organizations: An Introduction (also SOC 215)]**

Fall. 3 credits. S-U optional. Lec, T R 10:10-11:25. Not offered fall 2000. S. Han.

This is an introductory course in the study of organizations. We will start by taking a look at various examples of organizing, including a street gang in a Boston neighborhood, a minority community, industrial corporations, modern universities, Silicon Valley and Route 128, and more. Hence, a sampler. These brief glimpses serve as exercises in looking behind and beyond diverse rhetoric for common patterns in organizational phenomena. The focus of the course is on research scholarship, not the training of managers. Nonetheless, the analytical skills you will acquire are applicable to work in firms, government agencies, and nonprofit organizations.]

**R SOC 220 Sociology of Health of Latinos and Ethnic Minorities (also LSP 220)**

Fall. 3 credits. S-U grades optional. Enrollment is limited to 15. T R 10:10-11:25. P. A. Parra.

Discusses the health status of minorities in the United States. This course explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

**R SOC 261 Sociology of Sustainable Development**

Fall. 3 credits. S-U grades optional. M W 2:55-4:10. L. Glenna.

This course is designed to offer a critical evaluation of sustainable development as concept and practice. Although scholars and practitioners now analyze and debate it, sustainable development originated more in practice than in theory. Powerful global organizations, governments, and local activists have adapted and adopted it since it was popularized in the 1987 Brundtland report, giving rise to more than 40 definitions by 1994. To determine the social usefulness of such a widely debated term, we will examine its evolution from the original eighteenth-century concept of development into sustainable development in the field of natural resource management in the 1970s and into an environmental critique of economic growth, or market society, in the 1980s. We will then debate the salience of this concept by evaluating case studies in the United States and other parts of the world.

**R SOC 301 Theories of Society (also SOC 375)**

Spring. 3 credits. Prerequisites: Rural sociology or sociology course. S-U grades optional. Offered alternate years. Enrollment is limited to 30. M W F 11:15-12:05. P. K. Gellert.

An introduction to the "classical" sociological theorists (Marx, Weber, Durkheim) of the late

nineteenth and early twentieth century, as well as "erased" and missing sociological voices of the period (such as C. Perkins Gilman, W.E.B. DuBois). The course addresses the dramatic social upheavals including the fall of the 'old order,' industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. The intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society are emphasized.

**[R SOC 302 Evaluating Statistical Evidence (also SOC 301)]**

Fall. 3 credits. S-U optional. Lec, M W 10:10–11:00. Not offered 2000–2001. M. Clarkberg.

A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.]

**R SOC 318 Ethnohistory of the Northern Iroquois (also AIS 318)**

Spring. 3 credits. S-U grades optional. Enrollment limited to 20. M 7:30–10:30 P.M. R. W. Venables.

The development of Iroquois (Haudenosaunee) history and culture is traced to the present day.

**R SOC 324 Environment and Society (also S&TS 324 and SOC 324)**

Spring or summer. 3 credits. Enrollment limited to 100. M W F 1:25–2:15. L. Glenna. The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like preservationism, conservationism, deep ecology, ecofeminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

**R SOC 331 Demographic Analysis in Business and Government (also ARME 416)**

Fall. 3 credits. Prerequisite: ARME 210 or equivalent. Enrollment limited to 50 students (15 R SOC students, 35 ARME students). Lec, W F 1:25–2:15. Sec, M 12:20–1:10, 1:25–2:15. W. Brown.

An overview of the way demographic analysis is used in business and government. Through the use of case study and problem solving methods of learning, students come to understand how demographic concepts, methods, and data are used by demographers to solve problems in business and government. The course is designed for upper-level undergraduates from a variety of academic disciplines and career orientations. Students will work on problems drawn from consumer marketing, education, housing and real estate development, human resources, and health services.

**[R SOC 336 Rural Areas in Metropolitan Society]**

Fall. 3 credits. S-U grades optional. Prerequisite: a social science course. T R 11:40–12:55. Offered alternate years. Next offered fall 2001. D. L. Brown.

This course analyzes the changing structure and role of small towns and rural areas in developed nations. The focus is on adaptation of rural communities and populations to major trends including increased societal differentiation and complexity, increased societal interdependence, and rapid social, economic, technological, and ecological change. Alternative policies to ameliorate rural problems and/or enhance rural contributions to national development are considered. Students participate in group research projects in rural communities.]

**R SOC 340 Sociology of Food Systems**

Spring. 3 credits. S-U grades optional. T R 1:25–2:40. G. W. Gillespie.

Our changing food and agricultural systems will be examined sociologically, with attention to how these reflect the social organization of an increasingly global society. What are the major trends? What drives them? What do these trends imply for people, communities, and the environment? What are the social, human health, and environmental issues? What might be better alternatives and what strategies of development might achieve them?

**[R SOC 360 Sociology of American Indians (also AIS 361)]**

Spring. 3 credits. S-U option. Enrollment limited to 20. Prerequisite: RSOC/SOC 101, AIS 100 or AIS 175, or approval of the instructor. Enrollment limited to 20. M W 2:55–4:10. Not offered spring 2001.

This course is designed to emphasize the role of theory and research in our understanding of American Indians. Towards that end, the relationship between the nation-state and indigenous populations will be emphasized. Students will be exposed to the following theoretical perspectives: world systems and dependency, internal colonialism, social disintegration, the social construction of reality, political mobilization, and ethnic reorganization. The course is also historical and comparative, as students will study different Indian tribes located in the United States and Canada.]

**R SOC 367 American Indian Politics and Policy (also AIS 367)**

Fall. 3 credits. S-U option. Enrollment limited to 20. T R 2:55–4:10. B. Baker.

This course addresses the Constitutional basis of the Federal-Indian relationship through an examination of treaties, Supreme Court decisions, and congressional law/policy. The effects of European and American forms of governance on traditional American Indian political structures are detailed and contrasted with contemporary tribal governments and political organizations. Issues relating to sovereignty and self-governance with respect to American Indian tribal governments are addressed relative to state and federal governments.

**R SOC 370 Comparative Issues in Social Stratification (also SOC 371)**

Fall. 3 credits. Prerequisite: an introductory social science course. T R 1:25–2:40 or T R 8:40–9:55 (depending on professor). T. A. Lyson or S. Feldman.

This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning,

and experiences of inequality. Throughout the course we will give special attention to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

**[R SOC 375 Classical Theory (also SOC 375)]**

Spring. 3 credits. Lec, T R 11:40–12:55. Not offered spring 2001. S. Szelenyi.

Introduces students to major macro-sociological paradigms and encourages them to participate in "cross-paradigm" debates. The three main theorists of sociology (i.e., Marx, Durkheim, and Weber) are compared with respect to their approaches to the social sciences, their views on human history, their conceptions of capitalist society, and their ideas on social change. The assigned reading focuses on the original writings of these theorists, while the lectures provide the requisite socio-historical context.]

**R SOC 380 Independent Honors Research in Social Science**

Fall and spring. 1–6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program. Staff.

Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

**[R SOC 408 Human Fertility in Developing Nations (also B&SOC 404)]**

Spring. 3 credits. Enrollment limited to 15. T R 2:55–4:10. Offered alternate years. Not offered spring 2001. Staff.

A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.]

**[R SOC 410 Population and Environment]**

Spring. 3 credits. Enrollment limited to 15. T R 10:10–11:25. Not offered 2001. Staff.

A voluminous new literature is emerging, attempting to trace the connections between population dynamics and environmental change. The seminar will be devoted to a critical examination of this literature, stressing population change both as cause and consequence of environmental factors. In addition, the social and economic forces that mediate the population-environment relation will be examined.]

**[R SOC 418 Population Policy (also B&SOC 414)]**

Spring. 3 credits. Prerequisite: R SOC 201 or permission of instructor. Enrollment limited to 15. T R 10:10–11:25. Offered alternate years. Not offered 2001. Staff.

The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to reduce fertility.]

**[R SOC 425 Gender Relations, Gender Ideologies, and Social Change]**

Spring. 3 credits. R 1:25–4:25. Offered alternate years. Not offered 2000–2001. S. Feldman.

Drawing on feminist and sociological theory and methods, and employing a comparative and global analytic framework, this course examines how gender ideologies, work-family

linkages, and the transformation of work and the labor process are based on and help transform gender relations. The course gives attention to the particularity of place and time as these help to situate gender relations in the different state, regional, and global configurations that contextualize and configure everyday life.]

**R SOC 430/629 Migration and Population Redistribution**

Spring. 3 credits. Prerequisite: a social science course or permission of instructor. T R 8:40-9:55. Offered alternate years. D. L. Brown.

This course analyzes the determinants and consequences of internal migration in urban and rural areas of developed and developing nations. Economic and demographic interrelationships are emphasized as are implications of changes in local and regional population size and composition for labor supply, the demand for goods and services, and infrastructure. Public policy implications of the inter-relations are investigated. Techniques and measurement issues associated with the analysis of migration and population distribution are discussed. For 629, graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

**R SOC 431/631 Comparative Ethnic Stratification: Demographic Perspectives**

Spring. 3 credits. S-U grades optional. Prerequisite: Intro to Sociology or permission of instructor. T R 11:40-12:55. D. Gurak.

A comparative examination of ethnic stratification and mobility that focuses principally on dimensions of social groups that can be empirically measured using readily available demographic sources. These include residential segregation, occupational status and mobility, marriage and family formation patterns, health and mortality, family structure, fertility, and intermarriage. The role of migration in shaping ethnic stratification systems is also examined. About half of the course examines the U.S. situation. Other societies receiving significant attention include India, Brazil, Nigeria, and several European societies. For 631, graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

**[R SOC 436 Successful Aging: Issues and Social Policy in the 1990s]**

6-week summer session. 3 credits. M-F 10:00-11:15. Not offered summer 2000. Staff.

This course aims to correct the misconceptions about aging and to free ourselves of the stereotypic viewpoint that older persons are members of a single, homogeneous category. Successful aging in the 1990s and beyond is the central focus of the course. The response of the public and private sectors to the rapidly growing older population is examined in view of the imbalance between the strengths and capacities of older persons and the lack of roles and opportunities in society to utilize and reward their talents and abilities. Films and fieldtrips.]

**[R SOC 437 Aging and Aging Social Policy in the 1990s]**

Fall. 3 credits. Prerequisite: R SOC 101 or its equivalent. Enrollment limited to 30. T

R 11:40-12:55. Not offered 2000-2001. Staff.

An analysis of the "graying" of America and the responses of the public and private sectors to this demographic revolution. Examines the interplay between basic and applied knowledge in social gerontology. Explores the formal and informal networks of services, in both rural and urban environments, that help maintain independent living arrangements for the elderly.]

**R SOC 438/638 Population and Development**

Fall. 3 credits. S-U grades optional. Prerequisite: permission of instructor. T R 11:40-12:55. D. Gurak.

We examine major historical and recent demographic transitions in mortality, fertility, age structure, and composition and explore the relationships between these transitions and the social, or economic, and cultural changes being experienced by diverse societies prior to, during, and following the onset and conclusions of the demographic shifts. Case studies from diverse historical periods and geographic locations are used. Graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

**[R SOC 440 The Social Impact of Resource Development (also AIS 440)]**

Spring. 3 credits. S-U grades optional. Offered alternate years. Not offered 2000-2001. C. C. Geisler.

Social impact assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies, and new technologies before they happen and a decision tool for mitigation. The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Students learn practical SIA skills and related theoretical/conceptual debates.]

**R SOC 442 American Indian Philosophies: Selected Topics (also AIS 442)**

Spring. 3 credits. S-U grades optional. Prerequisite: permission of instructor. Enrollment limited to 15. W 7:30-10:30. R. W. Venables.

This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

**[R SOC 490 Society and Survival]**

Fall. 3 credits. Prerequisite: introductory sociology course or permission of instructor. Enrollment limited to 30. T R 2:55-4:10. Not offered 2000-2001. D. T. Gurak.

Course surveys existing theories, methodological techniques, and research results relating to how social, economic, and cultural structures and processes affect survival chances in diverse societies. A comparative framework is presented, and the utility of existing knowledge for policy-related applications in different societies is assessed. Attention is given to the problems associated with imputing causality in morbidity and mortality data.]

**R SOC 494 Special Topics in Rural Sociology**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses

offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**R SOC 495/695 Population, Environment, and Development in Sub-Saharan Africa**

Fall. 3 credits. S-U grades optional. Prerequisite: permission of instructor. T R 2:55-4:10. P. Eloundou-Enyegue.

Course examines trends in rapid population growth, weak economic growth, and growing environmental problems in Sub-Saharan Africa and examines the linkages among these dimensions. After reviewing trends in the region, the course focuses on specific problems, including: urbanization, health and survival, population pressure and sustainable agriculture, refugees, and gender/family/community structures. Graduate students will be assigned additional reading and writing and will meet bi-weekly in a seminar format.

**R SOC 497 Independent Study in Rural Sociology**

Fall or spring. 3 credits variable (may be repeated for credit). Students must register with an Independent Study form (available at 140 Roberts Hall). S-U grades optional.

Informal study may include a reading course, research experience, or public service experience.

**R SOC 560 Managing Local Environmental Systems: Social Perspectives and Research Bases**

Fall. 3 credits. S-U optional. Enrollment limited to 15. W 1:25-4:25. J. D. Francis.

Course is for students with diverse backgrounds: undergrads, grads, people in professional careers, others with interest in environmental issue identification, resolution, and management. Course discussions include ecological, social, economic, and local government perspectives. Via lab exercises throughout the semester, student will have opportunities to apply the concepts and principles of these perspectives to analysis of specific local environmental management problems. Readings, lectures, and a course project are mandatory.

**R SOC 599 M.P.S. Project**

Fall and spring. 1-6 credits. S-U optional. Lec: TBA. Graduate faculty.

For students admitted specifically to a MPS program.

**R SOC 601 Theoretical and Methodological Approaches to Community and Rural Development**

Fall. 3 credits. Letter grade only. Prerequisite: graduate student. Lec, W 7:30-10:00 P.M. P. R. Eberts.

A survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of: (1) community structural changes and policymaking; (2) participatory processes for generating community development; and (3) planning strategies as mechanisms for creating community development opportunities.

**R SOC 602 Community Development Seminar**

Spring. 1 credit. Prerequisite: R SOC 601. W 7:30-10 P.M. (Meets tri-weekly.) P. R. Eberts.

A participatory seminar for feedback, collective learning, and guidance as M.P.S. students apply community and rural develop-

ment theory and methods in thesis project work with local and regional communities.

**R SOC 603 Classical Sociological Theory**

Fall. 4 credits. S-U grades optional.

Prerequisites: open to graduate students only. T R 2:55-4:10. M. J. Pfeffer.

Students will review the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, and Marx. Course materials include original texts and secondary literature, used to examine the concepts, methods, and explanation in classical sociological thought. Important objectives of the course will be to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

**[R SOC 604 Theories of Social Change**

Spring. 3 credits. S-U grades optional. T R 2:55-4:10. Not offered 2000-2001.

P. D. McMichael.

This course surveys major twentieth-century social theories, focusing on lineages from classical theory and on theories relevant to understanding the processes of social change. Major topics covered will include mid-century functionalism, conflict theories, neo-Marxism, neo-Weberianism, substantive economic sociology, and world-systems theory. Other topics, such as the "new sociology of culture," critical theory, structuration theory, neofunctionalism, the new methodological individualism, and the macro-micro link, will be covered briefly.]

**R SOC 606 Sociological Theories of Development**

Spring. 3 credits. T 2:30-5:30. P. K. Gellert.

This course is a critical examination of a historical range of theories and research in the sociology of development from the post-war period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous and other social movements.

**[R SOC 607 Sociology of Natural Resources and Development**

Fall. 3 credits. S-U optional. Offered odd years. R 1:25-4:25. P. K. Gellert.

Building on theories in the sociology of development, this seminar will examine the role of natural resource extraction, processing, and exports to global markets in the developmental trajectories of nations in Asia, Africa, and Latin America. Engages students in both theoretical debates and practical implications of resource access, control, and conflict amongst various social actors ('stakeholders'). Detailed historical cases will be examined, primarily from Southeast Asia (Indonesia, Malaysia, Philippines).]

**[R SOC 612 Population and Development in Asia (also WMNS 612)**

Spring. 3 credits. Offered odd years. Not offered spring 2001. W 10:10-1:10.

L. B. Williams.

This graduate seminar considers issues surrounding population and development in Asia. Case studies pertaining to Southeast Asia will be highlighted. The linkages between population and development are highlighted and both are considered from a historical perspective. Recent social, economic, and

demographic changes in the region are considered in depth. Evolving gender roles in the family, labor force, and broader social context are also examined.]

**R SOC 618 Research Design I**

Fall. 4 credits. Prerequisite: a statistics course. T R 12:20-2:15. J. D. Francis.

First of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, and problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with an introduction to factor analysis. Students apply principles to development of several common types of scales. Computers will be used extensively.

**R SOC 619 Research Design II**

Spring. 4 credits. Prerequisite: an introductory methods course and a statistics course. T R 12:20-2:15. J. D. Francis.

The second part of the two-semester sequence in introductory graduate methods, with emphasis on an intermediate-level treatment of the following topics: regression, analysis of variance, analysis of covariance. Special attention is given to use of categorical variables in regression. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.

**R SOC 620 Sociology of the Community**

Fall. 3 credits. R 1:25-4:25. D. Brown.

This graduate seminar will critically analyze the intellectual core of community sociology, and its theoretical development over time. "Community," as a concept, is often reified and rarely critically examined, hence the course will begin by clarifying the various ways in which "community" has been conceptualized and operationalized by sociologists. The course will provide students with both a grounded conceptual foundation and an overview of multiple strategies for conducting research on community structure and change in the United States and internationally. The course will include a critical examination of the forms and shapes sociological research on the community assumes. We will use a case study approach to examine the assumptions driving the methods and analysis of both contemporary and historical research.

**R SOC 621 Foundations of Environmental Sociology**

Fall. 3 credits. Open to graduate students only. S-U optional. Enrollment limited to 20. W 10:10-12:35. Offered even years. L. Glenna.

Foundations of Environmental Sociology provides graduate students with a broad survey of the literature in this disciplinary specialty area. Students will review the history of thought in environmental sociology as well as key literature in the various substantive foci of this specialty. The principle objective of this course is to provide graduate students specializing in environmental sociology with a firm grasp of the content, controversies, and trends in the area. Sessions are conducted in a seminar style, and discussions are focused on close review of assigned readings.

**[R SOC 625 State, Economy, and Society**

Spring. 3 credits. Enrollment limited to 25. W 1:25-4:25. Offered even years. Not offered spring 2001. P. D. McMichael.

Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and cultural institutions in the process of social change. Theoretical perspectives are drawn from classical and modern social theory, including the application of comparative and historical methodologies. Substantive themes concern political-economic restructuring in world regions, and the interaction between national and global processes.]

**[R SOC 630 Field Research Methods and Strategies**

Fall. 3 credits. Enrollment limited to 20. W 10:10-1:10. Offered odd years. Next offered fall 2001. L. B. Williams.

This course will cover a variety of methods: focus groups, in-depth interviews, participant observation, archival research, and structured surveys, among others. The importance of matching research questions with appropriate field methodologies and the strengths and weaknesses of various strategies of field research are assessed. Practical experience with a number of methodologies is offered. Ethical issues involved in fieldwork are highlighted.]

**R SOC 640 Community and Changing Property Institutions**

Fall. 3 credits. R 1:25-4:25. Offered even years. C. C. Geisler.

The seminar acquaints students with the evolution of property rights, from antiquity to the present, and features a number of property debates (the biological basis of ownership; private versus public ownership; property and value; the so-called "tragedy of the commons"; the "new" property). Readings explore land use regulation and property rights, common property issues, opposing land ethics, and new property forms in the future.

**R SOC 641 Politics and Economics of Rural and Regional Development**

Fall. 3 credits. Limited to upperclass or graduate students. S-U grades optional. M 12:20-2:50. Offered alternate years. T. A. Lyson.

A survey of social, political, and economic factors in local and regional development. Theories of community and regional development and underdevelopment are explored. Neoclassical, Marxist, and civil society theories are examined within local and global contexts.

**[R SOC 643 Land Reform Old and New**

Spring. 3 credits. S-U grades optional. R 1:25-4:25. Offered odd years. Not offered 2001. C. C. Geisler.

Land reform continues to be a major cornerstone of development planning. Between 1980 and 2000 the number of landless and near-landless in the Third World will approach one billion. Though land reform is a principal source of hope for the landless, its meanings are many and its models are controversial. The seminar acquaints students with land reform in antiquity as well as in contemporary settings (among others, Japan, the Philippines, Israel, India, Brazil, Mexico, Russia, and the United States). Perennial issues of equity, efficiency, and sustainability will be discussed in each of these case study areas.]

**R SOC 645 Rural Economy and Society**

Spring. 3 credits. W 1:25-4:25. Offered alternate years. Staff.

The structure and dynamics of rural communities are examined in a comparative historical

framework focusing on continuities and divergences among imperialist and post colonial settings. Major topics include classical theories of rural social organization and their retheorization in contemporary peasant studies and agrarian political economy literatures, theorizations of locality, rurality and spatial complexity within the world economy, and critical issues framing the relationship between political and labor market restructuring and petty commodity and household production systems.

**[R SOC 655 Advanced Techniques of Demographic Analysis]**

Spring. 3 credits. Prerequisites: CEH 606, graduate standing or permission of instructor. Enrollment limited to 25. M 7:30-10:30 P.M. Offered alternate years. Not offered 2000-2001. D. T. Gurak.

An examination of analytical techniques that assumes a basic knowledge of demographic data and research methodology. Life tables, demographic estimates with incomplete data, survey techniques to supplement inadequate vital registration systems, data management, multi-level models, and other multivariate procedures are among the topics to be covered.]

**[R SOC 661 Sustainable Agriculture and Development]**

Spring. 3 credits. S-U grades optional. Prerequisites: graduate standing or instructor's permission. Offered alternate years. M 10:10-12:35. Not offered 2000-2001. T. A. Lyson.

This course examines the relationship between local agriculture and development as these are embedded in a globalizing economy. Topics include an examination of the social scientific theoretical underpinnings of conventional agriculture, the social origins of sustainable agriculture, environmental and community sustainability, agricultural diversification strategies, community agriculture development, and the political and policy contexts of more sustainable agricultural systems.]

**[R SOC 671 Epistemological Challenges to Social Science Paradigms: A Feminist Inquiry (also WOMNS 671)]**

Fall. 3 credits. W 1:25-4:25. Offered alternate years. Not offered 2000-2001. S. Feldman.

This course will review and analyze contemporary themes in feminist epistemological critiques of sociological methods and knowledge systems. It identifies mainstream explanations within the social sciences, introduces early feminist challenges to androcentric paradigms, and explores philosophical assumptions of postmodern and poststructural analyses. Substantive foci assess various approaches to field, archival, and survey research, and the theoretical presuppositions of approaches from rationalism to post-positivism. We also address the linkages between theory and questions of political practice, individualism, and autonomy.]

**[R SOC 675 Global Patterns of International Migration]**

Fall. 3 credits. Enrollment limited to 20. M 7:30-10:30 P.M. Offered alternate years. Not offered 2000-2001. Staff.

International migration to the United States and other countries has increased in recent decades. What accounts for that trend in an era when large-scale international migration is supposed to have ended and what are the

implications of immigration for receiving countries? Theories and research on these issues are examined in the course from a comparative and interdisciplinary perspective. Several migration systems are examined, including those of North America and the European Community. Policies shaping immigration are also reviewed.]

**R SOC 694 Special Topics in Rural Sociology**

Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**R SOC 715 Comparative Research Methods**

Spring. 3 credits. M 12:20-2:50. Offered odd years. T. A. Lyson.

This seminar focuses on the comparative method in the social sciences. The logic of comparative inquiry forms the substantive base of the course. Topics include cross-national and cross-regional research design and an analysis of the comparative case study approach. Illustrations of the comparative research approach will cover a range of data types and problems.

**[R SOC 718 Multidimensional Measurement and Classification]**

Fall. 4 credits. Prerequisite: previous course work in scaling and statistics. T R 12:20-2:15. Offered odd years. Next offered 2001-2002. J. D. Francis.

An advanced course in measurement and scaling, building from work by Thurstone, Guttman, and Coombs to multidimensional measurements. Topics include philosophy of factor analysis, factor-analysis models, factoring design, factoring techniques, and comparison with factor-analysis models. Cluster analysis and multidimensional scaling are the other major techniques discussed. As matrix algebra is an integral part of these procedures, class time is devoted to this topic. Computers are used to analyze fit to models.]

**[R SOC 719 Logistic and Log Linear Models]**

Spring. 4 credits. Prerequisites: two courses in statistics and one in methods. T R 12:20-2:15. Offered even years. Next offered 2002-2003. J. D. Francis.

The first part of the course reviews multiple regression theory and procedures, after which extensions of these models to categorical data are discussed. Consideration is given to violations of assumptions and their effects. Then more advanced regression concepts and estimation techniques are discussed. The main focus of the course is on logit and log linear models. Computerized labs are an integral part of the course.]

**R SOC 725 The Sociology of "Third World" States**

Fall. 3 credits. W 1:25-4:25. Offered alternate years. S. Feldman.

This course examines how processes of political and economic restructuring have reshaped state capacities and processes of state formation. Particular attention is paid to questions of class formation, corporatist alliances, transnational interests, and alternative development strategies with the emergence of austerity, privatization, and

trade liberalization and its neoliberalist ideology. Critical to this discussion are the contours of authoritarianism, nationalism, communalism, and fundamentalism as these reconfigure national and regional alliances and practices and shape interpretations of current processes of resistance, change, and terms of intervention and exchange.

**R SOC 730 Sociology of Global Change**

Spring. 3 credits. S-U grades optional. Enrollment limited to 20. W 1:25-4:25. Offered odd years. P. D. McMichael.

Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multi-layered entity anchored in an evolving international division of labor and the system of nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, the new regionalism, and transnational social movements). The seminar examines the substantive and methodological questions generated by research on these global processes, including questions of relevant units of analysis, situating global process in local events and subjectivities and vice versa, and examining the ways in which national structures and cultures interact with global structures and cultures.

**[R SOC 741 Community Development and Local Control]**

Spring. 3 credits. W 1:25-4:25. Offered alternate years. Not offered 2001. C. C. Geisler.

Theories of community growth and decline and the current debate over the place of local control in community development in general are considered. Salient themes include the role of neopopulism in community development, changing institutions of property as community development occurs, and changing definitions of "community."]

**R SOC 791 Teaching Experience**

Fall or spring. 1-3 credits. Limited to graduate students. S-U grades only. Graduate faculty.

Participation in the ongoing teaching program of the department.

**R SOC 800 Master's-Level Thesis Research**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

For students admitted specifically to a Master's program.

**R SOC 872 Development Sociology**

Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional. Graduate faculty.

**R SOC 900 Graduate-Level Thesis Research**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

For students in a Ph.D. program only before the "A" exam has been passed.

**R SOC 901 Doctoral-Level Thesis Research**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

For students admitted to candidacy after the "A" exam has been passed.

## COLLEGE OF ARCHITECTURE, ART, AND PLANNING

### ADMINISTRATION

Porus Olpadwala, dean

John Zissovici, associate dean

Walter Williams, director of alumni affairs and development

Cynthia K. Prescott, director of administration and finance

Reginald D. Ryder, director of minority educational affairs

Donna L. Kuhar, registrar

Elizabeth A. Cutter, director of student services and admissions

Margaret Webster, curator of visual resources facility

Susan Lewis, director of career services

### FACULTY ADVISERS

Architecture students are assigned faculty advisers for their first year. Upperclass students have one assigned adviser but are encouraged to seek assistance and advice from the most appropriate faculty member or college officer.

Students in the fine arts department are assigned a faculty adviser for the first year. After the first year, students may select their advisers. Students are required to have an adviser throughout their program in their area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:

Mark Cruvellier, chair, Department of Architecture

John Forester, chair, Department of City and Regional Planning

Roberto Bertoia, chair, Department of Art

### DEGREE PROGRAMS

	<i>Degree</i>
Architecture	B.Arch.
	B.F.A.
Fine Arts	B.F.A.
History of Architecture and Urbanism	B.S.
Urban and Regional Studies	B.S.

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the Bachelor of Architecture; four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentra-

tion in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with the students and faculty in other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over sixty, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

### FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Cafe, a student eatery and lounge, is located in the lower level of Sibley Dome. There are darkrooms in the Department of Art that are available for general use by students in the college and are primarily used as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

### Libraries

The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 176,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,800 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 450,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

### Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

### Rome Program

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the restored 17th century Palazzo Lazzaroni in the center of the eternal city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, fine arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that

ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings or contact the Rome Program Office, 149 Sibley Hall.

## COLLEGE ACADEMIC POLICIES

### Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

### Exhibitions of Student Work

Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

### Scholastic Standards

Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have an average for the term of not less than C (2.0). The record of each student who falls below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

- 1) Warning means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.
- 2) Final Warning indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.
- 3) Required leave of absence: academic deficiency. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may apply for readmission after an absence of at least two semesters. Application for readmission is made by letter, addressed to the Student Records Committee. The student must submit evidence that his or her time has been well used, and, if employed, must submit a letter from an immediate superior. If a student chooses to register for courses, either extramurally at Cornell or at another institution, he or she should be advised that credit for these courses will not apply toward the degree but will appear on the student's transcript. The grades received for any courses taken while on a required leave of absence will not be counted into the grade point average. Readmission to the college is at the discretion of the Student Records Committee. Application for spring-term readmission must be made by November 15, and application for fall-term readmission must be made by April 15. Refer to

the Architecture, Art, & Planning Handbook (Whitebook) for further information regarding required leave of absence.

- 4) Required withdrawal: may not reregister in the College of Architecture, Art, and Planning. The student is dismissed from the college and is permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the next term if performance during that time is deemed to be grossly deficient.

A cumulative average of at least C- (1.7) is required for graduation.

## ARCHITECTURE

Mark Cruvellier, chair; L. Briggs, L. Chi, M. Curry, F. Davis, W. Goehner, D. P. Greenberg, G. Hascup, K. Hubbell, D. M. Lasansky, D. J. Lewis, B. G. MacDougall, A. B. Mackenzie, J. C. Miller, L. Mirin, V. Mulcahy, J. Ochshorn, C. F. Otto, A. Ovaska, C. W. Pearman, H. W. Richardson, M. Schack, A. Simitch, V. K. Warke, J. Wells, M. Woods, J. Zissovici

### Professional Degree Program

The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental controls, structures, construction and computer graphics, and applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to

apply the last year's work for the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

### Note on Professional Accreditation

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes two types of degrees: the Bachelor of Architecture and the Master of Architecture. A program may be granted a five-year, three-year, or two-year term of accreditation, depending on its degree of conformance with established educational standards.

Master's degree programs may consist of preprofessional undergraduate degree and a professional graduate degree, which, when earned sequentially, comprise an accredited professional education. The preprofessional degree, however, is not, by itself, recognized as an accredited degree.

### Rome Program

The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, thesis, thesis introduction, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

### Overlap Program

For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year, interested students petition the department to substitute ARCH 601-602 or 603-604 for ARCH 501-502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501-502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including ARCH 601-602 or 603-604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

**Curriculum****First Year**

<i>Fall Term</i>	<i>Credits</i>
101 Design I	6
181 History of Architecture I	3
151 Drawing I	2
Math 111 Calculus or Math 106 or out-of-college elective	3-4
Out-of-college elective	3
	17-18

*Spring Term*

102 Design II	6
182 History of Architecture II	3
152 Drawing II	2
Math 111 or out-of-college elective	3-4
Out-of-college elective (freshman writing seminar suggested)	3
	17-18

**Second Year**

<i>Fall Term</i>	<i>Credits</i>
201 Design III	6
263 Structural Concepts	4
231 Architectural Analysis I	2
261 Site Planning	3
Out-of-college elective	3
	18

*Spring Term*

202 Design IV	6
232 Architectural Analysis II	2
262 Building Technology, Materials, and Methods	3
264 Structural Elements	3
College elective	3
	17

**Third Year**

<i>Fall Term</i>	
301 Design V	6
361 Environmental Controls I—Lighting and Acoustics	3
363 Structural Systems	3
Departmental elective	3
Out-of-college elective	3
	18

*Spring Term*

302 Design VI	6
342 Architecture as a Cultural System	3
362 Environmental Controls II—Mechanical and Passive Solar Systems	3
Departmental elective	3
College or out-of-college elective	3
	18

**Fourth Year**

<i>Fall Term</i>	
401 Design VII	6
411 Professional Practice	3
Departmental elective	3

College elective	3
Out-of-college elective	3
	18

*Spring Term*

402 Design VIII	6
Departmental elective	3
Departmental elective	3
College or out-of-college elective	3
Out-of-college elective	3
	18

**Fifth Year**

<i>Fall Term</i>	<i>Credits</i>
501 Design IX or 601 or 603 Overlap Program	6
Departmental elective	3
College or out-of-college elective	3
Out-of-college elective	3
Out-of-college elective	3
	18

*Spring Term*

502 Design X or 602 or 604 Overlap Program	8
Departmental elective	3
College or out-of-college elective	3
College or out-of-college elective	3
	17

**Required Departmental Courses**

<i>Terms</i>	<i>Course Subject</i>	<i>Numbers</i>	<i>Credits</i>
10	design	101-502	62
1	mathematics	Math 111, Math 106, or approved equivalent	3-4
3	structures	263, 264, 363	10
4	technology	261, 262, 361, 362	12
2	architectural theory	231, 232	4
2	history of architecture	181, 182	6
1	architecture, culture, and society	342	3
1	professional practice	411	3
2	drawing	151, 152	4
			107-108

**Electives**

<i>Departmental Terms</i>	<i>Credits</i>
3 history of architecture: 300-level	9
1 visual studies	3
2 architectural theory or 600-level design-related course	6
1 architectural structures, construction, or environmental controls	3

1 computer programming or applications (may also be taken out of college)	3
	21

*College Terms*

2 art: any studio courses	6
---------------------------	---

*Out-of-College Terms*

1 computer programming or applications	3
1 freshman seminar	3
1 mathematics, or physical or biological sciences	3
1 humanities	3
	12

## Free

Of the electives, 15 credits are to be taken outside the College of Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college.	30
Total credits	176

**Architecture Concentrations for Majors**

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students.

It is often advantageous for undergraduates to concentrate in specific sub-disciplines of architecture, especially if they anticipate application to specialized graduate programs, therefore, the following concentrations in architecture are offered within the department for B.Arch. and B.F.A. in Architecture candidates only:

Architecture, Culture, and Society 342 (or equivalent), plus 9 credits in this area.

Architectural Science and Technology 261, 262, 263, 264, 361, 362, 363, distribution requirement (3 credits), plus 6 credits in this area.

History of Architecture 181, 182, distribution requirements (9 credits), plus 7 credits (including a 4 credit hour seminar course) in this area.

Theory of Architecture 231, 232, distribution requirements (6 credits), plus 6 credits in this area.

Visual Studies in Architecture 151, 152, distribution requirement (3 credits), plus 9 credits in this area.

Students wishing to receive recognition for a concentration, must submit a Concentration Request form to the Architecture Department Office. In order for a course to count toward a concentration, the grade must be C or better.

**Transfer Students**

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to

transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.

Transfer students are responsible for completing that portion of the curriculum that has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-term design sequence. Since this sequence may be accelerated by attending summer terms, seven or eight regular terms and two or three summer terms are typically required.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint the participants with opportunities, issues, and methods in the field of architecture.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, taking 35 of the 70 credits (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

## Alternative Programs

### Bachelor of Fine Arts

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

### Bachelor of Science in History of Architecture

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

**Admission requirements.** Two years of undergraduate study, ARCH 181 and 182 or the equivalent. Students transferring from a B.Arch. program must be in good standing in their design sequence.

**Procedure.** Students from Cornell may transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

Students who wish to transfer to the program from outside Cornell must apply to the Department of Architecture by March 15. Applications may be considered after this date but are given lower priority. Applications for

both internal and external transfer students are available from Elizabeth Cutter, Admissions Office, College of Architecture, Art, and Planning, Cornell University, Sibley Hall, Ithaca, NY 14853-6701.

**Curriculum.** A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

- 1) 24 credits of 300-level courses in architectural history: ARCH 380 through ARCH 399
- 2) 12 credits in 600-level architectural history seminars: ARCH 681 through ARCH 699; or 8 credits in a 600-level seminar plus ARCH 499, offered for honors candidates only
- 3) One 300-, 400-, or 600-level course in architectural theory
- 4) 24 credits in electives selected in consultation with the student's adviser
- 5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

**Honors program.** Students will graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

### Dual Degree Options

Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, 135 East Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

### Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program

abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

At the graduate level participation in the summer program cannot be undertaken without the consent of the student's Special Committee.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

### Concentration In Architecture For Non-Majors

This special concentration has been formulated specifically for those students not enrolled in the Department of Architecture and who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Non-Majors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students are admitted to this program through application to the Department of Architecture.

The curriculum for students accepted to the Concentration in Architecture Program totals 15 credit hours. Grades received must be C or better in all courses.

9 credits of required courses, including one semester each of:

ARCH 130, 131, or 132: Introduction to Architecture	3 credits
ARCH 151: Drawing I	2 credits
ARCH 111: Concentration in Architecture: Design Studio	4 credits

(ARCH 110: Introduction to Architecture: Design Studio, offered in the summer only, may substitute for ARCH 111.)

And 6 credits of elective department courses, chosen, for example from among the following:

ARCH 130, 131, 132: Introduction to Architecture	3 credits
ARCH 152: Drawing II	2 credits
ARCH 181, 182: History of Architecture I, II	3 credits each
ARCH 342: Architecture as a Cultural System	3 credits
ARCH 231, 232: Architectural Analysis I, II	2 credits each
ARCH 263, 264, 363: Structures	3 credits each
ARCH 261, 361, 362: Environmental Controls	3 credits each
ARCH 262: Building Technology	3 credits
ARCH 476: Computer Applications	3 credits

## Architectural Design

Courses in brackets are not offered this year.

Each student in the architecture program (undergraduate, graduate, and in the Rome Program) is charged a fee each semester to help defray the continuing costs of refurbishing and replacing equipment.

### Sequence Courses

#### ARCH 101 Design I

Fall. 6 credits. Limited to department students.

An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

#### ARCH 102 Design II

Spring. 6 credits. Limited to department students. Prerequisite: ARCH 101 and ARCH 151.

A continuation of ARCH 101. Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

#### ARCH 201-202 Design III and IV

Fall and spring. 6 credits each term. Coregistration in ARCH 231-232 and completion of ARCH 151-152 required. Limited to department students. Prerequisite for ARCH 201 is ARCH 102 and ARCH 152. Prerequisite for ARCH 202 is ARCH 201.

#### ARCH 301-302 Design V and VI

Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 301 is ARCH 202. Prerequisite for ARCH 302 is ARCH 301.

#### ARCH 401-402 Design VII and VIII

Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 401 is ARCH 302. Prerequisite for ARCH 402 is ARCH 401 or ARCH 309.

Programs in architectural design, urban design, or architectural technology and environmental science, etc.

#### ARCH 501 Design IX

Fall or spring. 6 credits. Limited to department students. Prerequisite: ARCH 402.

Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

#### ARCH 502 Design X—Thesis

Fall or spring. 8 credits. Prerequisite: ARCH 501 or ARCH 500 and ARCH 510. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement.

#### ARCH 601-602 Special Program in Architectural Design

Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

#### ARCH 603-604 Special Program in Urban Design

Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

### Graduate Courses

#### ARCH 701-702 Problems in Architectural Design

Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is architectural design.

#### ARCH 703-704 Problems in Urban Design

Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is urban design.

#### ARCH 801 Thesis or Research in Architectural Design

Fall or spring. 9 credits. Prerequisite: ARCH 701 and ARCH 702.

Second-year design course for graduate students whose major concentration is architectural design.

#### ARCH 802 Thesis or Research in Urban Design

Fall or spring. 9 credits. Prerequisite: ARCH 703 and ARCH 704.

Second-year design course for graduate students whose major concentration is urban design.

### Elective Design Courses

#### ARCH 103-104 Elective Design Studio

103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for ARCH 103: permission of instructor required. Prerequisite for ARCH 104: ARCH 103 and permission of instructor.

#### ARCH 200, 300, 400 Elective Design Studio

Fall or spring. 6 credits. This course is for students who are not architecture majors at Cornell. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level.

For descriptions, see ARCH 201-202, ARCH 301-302 and ARCH 401-402.

#### ARCH 309 Elective Design Studio

Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 202. ARCH 309 is a design studio that, upon completion, will be credited as an elective design studio. With the successful completion of ARCH 302, ARCH 309 may be used as a substitute for ARCH 401.

#### ARCH 500 Design IX Alternate Studio

Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 402. Co-requisite: ARCH 510. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510. In order to take ARCH 502, one must have a grade of C or better in ARCH 500 and a passing grade in ARCH 510.

For description, see ARCH 401-402.

### Related Courses and Seminars

#### ARCH 110 Introduction to Architecture: Design Studio

Summer. 3 credits. S-U option. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty as well as by periodic reviews of the group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

#### ARCH 111 Concentration in Architecture: Design Studio

Spring. 4 credits. Not open to architecture majors. Prerequisite: acceptance into the Concentration in Architecture Program.

A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty as well as by periodic reviews by guest critics.

#### ARCH 303 Special Problems in Architectural Design

Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form.

Independent study. This course does not count for design sequence credit.

#### ARCH 317 Contemporary Italian Culture

Fall or spring. Variable credit (maximum 3). For students in the Rome Program only. This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

#### ARCH 411 Professional Practice

Fall or spring. 3 credits. An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

#### ARCH 412 Professional Seminar

Fall or spring. 3 credits. Prerequisite: ARCH 411.

Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

#### ARCH 510 Thesis Introduction

Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with ARCH 500. Prerequisite for ARCH 500 is ARCH 402. ARCH 500 will be considered equivalent to ARCH 501

when taken concurrently with ARCH 510 during a foreign summer program or in Rome.

Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

#### **ARCH 605 Special Problems in Design**

Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Independent study. This course does not count for design sequence credit.

#### **ARCH 610 Graduate Design Seminar**

Fall. 3 credits. Intended for, but not limited to, graduate students in the Architectural Design and Urban Design Program. Issues in architectural and urban design.

#### **ARCH 611-612 Urban Housing Developments**

611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students. Prerequisite: permission of instructor. Not offered every year.

#### **ARCH 613 Transportation**

Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year. The effect of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

#### **ARCH 614 Low-Cost Housing**

Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

#### **ARCH 618-619 Seminar in Urban and Regional Design**

618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students. Not offered every year.

A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by the participants and visitors.

### **Architectural Theory**

#### **ARCH 130 An Introduction to Architecture: Lectures**

Summer. 3 credits. S-U option. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A survey course that covers the many facets of architecture: history, design principles, preservations, landscape architecture, building technology, and cultural factors. The format of the course comprises lectures, demonstrations, films, and field trips. Course evaluation is based on quizzes and a final examination.

#### **ARCH 131 An Introduction to Architecture**

Fall. 3 credits. Open to out-of-department students only. ARCH 131 is not a prerequisite for ARCH 132.

Intended to familiarize nonarchitecture students with the art and science of architecture. Fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from the contemporary Cornell campus.

#### **ARCH 132 An Introduction to Architecture**

Spring. 3 credits. Open to out-of-department students only. ARCH 131 is not a prerequisite for ARCH 132.

Nonarchitecture students are initiated into various types of architectural drawings and exposed to a variety of methods whereby architectural forms communicate both simple and complex meanings. Architecture in its relation to fields such as landscape architecture, urban design, structural design, interior design, set design, architectural history, preservation, and computer graphics will be included in the presentations, which will also deal with the various relationships established between an architect and a society. Cross-historical and cross-cultural examples will be used in developing in the student a degree of fluency in the languages of architectural discourse.

#### **ARCH 231 Architectural Analysis I**

Fall. 2 credits. Architecture students must register concurrently in ARCH 201. An introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

#### **ARCH 232 Architectural Analysis II**

Spring. 2 credits. Architecture students must register for this course concurrently with ARCH 202.

Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

#### **ARCH 334 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 634)**

Fall or spring. 3 credits. Limited to third-year level students and above.

Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades.

The first part of the seminar is lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

#### **ARCH 335 Theory of Architecture**

Fall or spring. 3 credits. Prerequisite: ARCH 231-232 or permission of instructor. Not offered every year.

#### **ARCH 336 Theory of Architecture**

Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year.

Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier's architecture and

urban theories, architectural sequence, facades, the free plan, "DOM-INO" theory.

#### **ARCH 337 Special Investigations in the Theory of Architecture I**

Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

#### **ARCH 338 Special Topics in the Theory of Architecture I**

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced before preregistration.

#### **ARCH 339 Elements, Principles, and Theories in Japanese Architecture**

Spring. 3 credits. Not offered every year. An examination of Japanese architecture—buildings and gardens—and their contexts—landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

#### **ARCH 431 Theory of Architecture**

Fall. 3 credits. Prerequisite: third-year status. Not offered every year. Gardening and architecture: urban parks; villas and country houses; and Italian, French, and English landscape gardens. Site planning.

#### **ARCH 432 Theory of Architecture**

Spring. 3 credits. Prerequisite: third-year status. Not offered every year. The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

#### **ARCH 435 Architecture and Representation**

Fall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of ARCH 231-232. Not offered every year.

A study of architecture as it functions as a representational art, referring to its past while inferring its present.

#### **ARCH 634 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 334)**

Fall or spring. 3 credits. Limited to third-year level students and above. For description, see ARCH 334.

#### **ARCH 635 Critical Theory in Architecture**

Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

#### **ARCH 637 Special Investigations in the Theory of Architecture II**

Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

**ARCH 638 Special Topics in the Theory of Architecture II**

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced before preregistration.

**Architecture, Culture, and Society****ARCH 342 Architecture as a Cultural System**

Spring. 3 credits. ARCH 445, 446, 447, or 448 can substitute with permission of instructor.

What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies, the structure of the ideal social order and its refraction in the material world, cosmological models and architectural form, geometries of non-Western traditions, and the relationship between indigenization and culture change.

**ARCH 349 Undergraduate Investigations in Architecture, Culture, and Society**

Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form.

Independent study.

**ARCH 441-442 Special Topics in Architecture, Culture, and Society**

Fall and spring. 3 credits each term. Prerequisite: permission of instructor.

Topic to be announced before preregistration.

**ARCH 445 Architecture and the Mythic Imagination**

Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year.

This course focuses on traditional societies in which beliefs about architectural order are borne out of the mythic and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time and into contemporary theory.

**ARCH 446 Topics in Architecture, Culture, and Society**

Fall or spring. 3 credits. Prerequisite: ARCH 342 or permission of instructor.

**ARCH 447 Architectural Design and the Utopian Tradition**

Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year.

This course explores the relationship between visionary architecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects,

planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

**ARCH 448 The Indian Example and the Visual Tradition in Culture**

Spring. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year.

This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as an element and the eye as a motif, darshan, the spiritually transforming vision, and the destructive power of vision as revealed in myth and beliefs about "evil eye."

**ARCH 647-648 Architecture in Its Cultural Context I and II**

647, fall; 648, spring. 4 credits each term. Prerequisite: permission of instructor. Not offered every year.

Fall term, theory; spring term, problem solving and method. An examination of the relationship between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.

**ARCH 649 Graduate Investigations in Architecture, Culture, and Society**

Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form.

Independent study.

**Visual Studies**

Darkroom fees charged for all photography courses.

**ARCH 151 Drawing I**

Fall. 2 credits.

Freehand drawing with emphasis on line and perspective representation of form and space.

**ARCH 152 Drawing II**

Spring. 2 credits. Prerequisite: ARCH 151.

Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

**ARCH 251 Introductory Photo I (also ART 161)**

Fall or spring. 3 credits each term.

For description see ART 161.

**ARCH 351 Photography II (also ART 261)**

Spring. 4 credits. Prerequisites: ARCH 251 or ART 161, or permission of instructor.

For description see ART 261.

**ARCH 450 Architectural Publications**

Fall and spring. Variable credit (maximum 3). May be repeated for credit.

Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

**ARCH 457 Special Project in Photography**

Fall or spring. Variable credit (maximum 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year.

Independent study.

**ARCH 458 Special Investigations in Visual Studies**

Fall or spring. Variable credit (maximum 3). Prerequisites: permission of instructor and approved independent study form.

Independent study.

**ARCH 459 Special Topics in Visual Studies I**

Fall or spring. 3 credits. Prerequisite: permission of instructor.

Topics to be announced before preregistration.

**ARCH 658 Special Investigations in Visual Studies II**

Fall or spring. Variable credit (maximum 4). Prerequisites: permission of instructor and approved independent study form.

Independent study.

**ARCH 659 Special Topics in Visual Studies II**

Fall or spring. 3 credits. Prerequisite: permission of instructor.

Topic to be announced before preregistration.

**Architectural Science and Technology****Structures****ARCH 263 Structural Concepts**

Fall. 4 credits. Prerequisite: Mathematics 111 or approved equivalent.

Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

**ARCH 264 Structural Elements**

Spring. 3 credits. Prerequisite: ARCH 263.

Concepts and procedures for the design of individual structural components (columns, beams, etc.) in steel, concrete, and timber construction.

**ARCH 363 Structural Systems**

Fall or spring. 3 credits. Prerequisite: ARCH 264.

Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

**ARCH 364 Vertigo Structures (also ARCH 664)**

Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year.

A course in which students examine and experiment with the design of tall vertical structures, principally in terms of overall structural form and behavior, but also in the context of aesthetic, perceptual, historic, economic, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

**ARCH 365 Bridge Design (also ARCH 665)**

Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year.

There can be no denying the major visual impact of bridges on the built environment. And yet, during the past century, architects have virtually abandoned the role that they

have historically had in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have hailed it as evidence of Structural Art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students in this course examine and experiment with the design of bridge structural forms, not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

**ARCH 463 Special Topics in Structures**

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 263, 264, and 363 or permission of instructor. Not offered every year.

Topic to be announced by preregistration.

**ARCH 473 Special Investigations In Structures**

Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form.

Independent study.

**ARCH 664 Vertigo Structures**

Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year.

For description, see ARCH 364.

**ARCH 665 Bridge Design**

Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year.

For description, see ARCH 365.

**Construction**

**ARCH 262 Building Technology, Materials, and Methods**

Spring. 3 credits.

Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

**ARCH 465 Special Topics in Construction**

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 262 or permission of instructor. Not offered every year.

Topic to be announced by preregistration.

**ARCH 475 Special Investigations In Construction**

Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form.

Independent study.

**Environmental Controls**

**ARCH 261 Environmental Controls—Site Planning**

Fall. 3 credits.

The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

**ARCH 361 Environmental Controls—Lighting and Acoustics**

Fall. 3 credits.

Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design; light, color, and form. Natural lighting possibilities and constraints as well as good and bad examples of artificial lighting.

**ARCH 362 Environmental Controls—Mechanical and Passive Solar Systems**

Spring. 3 credits.

Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems, and plumbing.

**ARCH 464 Special Topics In Environmental Controls**

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year.

Topic to be announced by preregistration.

**ARCH 474 Special Investigations in Environmental Controls**

Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form.

Independent study.

**Computer Applications**

**ARCH 372 Imaging and the Electronic Age**

Spring. 3 credits. For undergraduate, non-computer-scientists. 2 lectures. 1 recitation. Not offered every year. D. Greenberg.

Historical technological advances which created major paradigm shifts for communications as well as advances in computer technology will be presented. Technical fundamentals of computer graphics capabilities will be emphasized. The latter half of the course will cover the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education itself. The course will be heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

**ARCH 374 Computer Graphics and Visualization (also COM S 417)**

For description, see COM S 417.

**ARCH 375 Practicum in Computer Graphics (also COM S 418)**

For description, see COM S 418.

**ARCH 378 Microcomputer Applications In Design**

Fall. 3 credits. Prerequisites: previous knowledge of PC-based CAD or permission of instructor.

This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animations. It combines seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

**ARCH 379 Design by Computer**

Spring. 3 credits. Prerequisites: limited to third-year students and above. Not offered every year.

Exploration of the formalization of the design process for compatibility with the computer, and the role of computers in design. Lecture with CAD lab.

**ARCH 476 Special Topics in Computer Applications**

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 374 or 379 or permission of instructor. Not offered every year.

Topic to be announced by preregistration.

**ARCH 477-478 Special Projects in Computer Graphics**

477, fall; 478, spring. Variable credit (maximum 4). Limited to third-year students and above. Prerequisites: ARCH 374 plus concurrent registration in Computer Science 314 or equivalent, and permission of instructor.

Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector, and color raster displays.

**ARCH 479 Micro-Computer Applications in Design (also ARCH 679)**

Fall. 3 credits. Prerequisites: an introductory course in computer graphics or computer science, or permission of instructor; upper level undergraduate or graduate status.

The course explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course is devoted to examining the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second part of the course explores the uses of information technologies to model and simulate the creative design process. These explorations include: developing a library of design ideas as building blocks for design; creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts; and "reverse architecturing" of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

**Graduate Courses**

**ARCH 679 Micro-Computer Applications in Design**

For description, see ARCH 479.

**ARCH 761-762 Architectural Science Laboratory**

761, fall; 762, spring. 6 credits each term. Open to architectural science graduate students only.

Projects, exercises, and research in the architectural sciences.

**ARCH 763-764 Thesis or Research in Architectural Science**

763, fall; 764, spring. Variable credit (maximum 12). Limited to architectural science graduate students.

Independent study.

## Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take ARCH 181-182 in the first year, and three additional courses from the 380-399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may only be taken once to satisfy history of architecture or in-college requirements.

### Sequence Courses

#### ARCH 181 History of Architecture I

Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain.

The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

#### ARCH 182 History of Architecture II

Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of ARCH 181.

The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

### Directed Electives

#### ARCH 380 History of Theory

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

#### ARCH 381 From Eutopia to the Ghetto: Renaissance Urban Form

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

Significant developments in European urban design from 1300-1600. Particular attention will be awarded to Italy and Spain. We will focus on a series of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussions will contextualize the city within a larger cultural framework. We will consider how civic, economic, social, political, legislative, technical, and material concerns have had a significant impact on the form, function, and patronage of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice will also be emphasized through the discussion of several twentieth-century urban plans and built projects.

#### ARCH 382 Architecture of the Middle Ages (also ART H 332 and RELST 332)

Fall. 4 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

For description, see ART H 332.

#### ARCH 383 The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

This course will examine the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. We will focus on late eighteenth-, nineteenth-, and twentieth-century Europe. Particular attention will be awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovannoni); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (such as the world's fair, department store, morgue, and panorama); and the role played by tourism in the commodification of local and foreign sites.

#### ARCH 384 The Urban Landscape of Renaissance Rome: 1450-1600

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

This class is an exploration into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. We will survey the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity; the role of the Vatican with its large population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment; and the unique topography and natural resources of the city's location. The last portion of the course will address the legacy of the Renaissance during the period of Italian unification and the Fascist regime.

#### ARCH 385 Magnificent Utility—Architecture and the Arts of Persuasion

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the seventeenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

#### ARCH 387 The Nineteenth Century—Style, Technology, and Individuality in the West

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

An examination of the nineteenth-century efforts to create appropriate stylistic forms and

expressions for emerging building technologies and typologies. The preservation of individual artistic expression against the backdrop of industrialization, urbanization, and professionalization will be emphasized. The course begins with Rationalist theory and its architectural expression and concludes with considerations of Art Nouveau, Modernismo, and Jugendstil.

#### ARCH 388 Modernism

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

Precursors and proponents of the modern movement from the late nineteenth century into the 1940s are considered in this course. The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in serving the state during the 1930s.

#### ARCH 389 Architecture, Revolution, and Tradition

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

From early eighteenth to early nineteenth century, European society underwent profound change. Political absolutism—the doctrine of unlimited government control—was challenged; Enlightenment attitudes—commitments to human reason, science, and education—gained ascendancy. This course considers architectural and urban design in these times of tumult. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

#### ARCH 390 American Architecture and Building I

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts will be emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders will be examined. The architectural expressions of Native Americans, African Americans, women, and others will be treated in addition to those of European colonists and settlers.

#### ARCH 391 American Architecture and Building II

Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

**ARCH 392 Modern Architecture on Film**

Fall or spring. 3 credits. Prerequisites:  
ARCH 181-182 or permission of instructor.  
Not offered every year.

An exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus will vary each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theatre, literature, and advertising will also be examined. Selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

**ARCH 393 The Cumulative City**

Fall or spring. 3 credits. Prerequisites:  
ARCH 181-182 or permission of instructor.  
Not offered every year.

Well-established cities were transformed by radical and unimagined change in the nineteenth and twentieth centuries. Politics and economies were recast, populations exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa, and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

**ARCH 394 Toward the Millennium**

Fall or spring. 3 credits. Prerequisites:  
ARCH 181-182 or permission of instructor.  
Not offered every year.

Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

**ARCH 396 Special Topics in the History of Architecture and Urbanism**

Fall or spring. 3 credits. Prerequisites:  
ARCH 181-182 or permission of instructor.  
Not offered every year.

Topic to be announced.

**ARCH 397 Special Topics in the History of Architecture and Urbanism**

Fall or spring. 3 credits. Prerequisites:  
ARCH 181-182 or permission of instructor.  
Not offered every year.

Topic to be announced.

**ARCH 398 Special Topics in the History of Architecture and Urbanism**

Fall or spring. 3 credits. Prerequisites:  
ARCH 181-182 or permission of instructor.  
Not offered every year.

Topic to be announced.

**ARCH 399 Special Topics in the History of Architecture and Urbanism**

Fall or spring. 3 credits. Prerequisites:  
ARCH 181-182 or permission of instructor.  
Not offered every year.

Topic to be announced.

**Courses in Preservation**

**ARCH 583 Measured Drawing (also CRP 567)**

For description, see CRP 567.

**ARCH 584 Problems in Contemporary Preservation Practice (also CRP 563)**

For description, see CRP 563.

**ARCH 585 Perspectives on Preservation (also CRP 562)**

For description, see CRP 562.

**ARCH 586 Documentation for Preservation (also CRP 560)**

For description, see CRP 560.

**ARCH 587 Building Materials Conservation (also CRP 564)**

For description, see CRP 564.

**ARCH 588 Historic Preservation Planning Workshop: Surveys and Analyses (also CRP 561)**

For description, see CRP 561.

**Graduate Seminars in the History of Architecture and Urbanism**

**ARCH 680 Seminar in Historiography**

Fall. 4 credits. Prerequisite: permission of instructor.

Historiographic and methodological issues are examined in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism Program.

**ARCH 682 Seminar in Urban History**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 683 Seminar in the History of Theory**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics, and Urbanism**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 686 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 688 Seminar in Twentieth-Century Architecture and Urbanism**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 689 Seminar in the History of Cities**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 690 Seminar in American Architecture, Building, and Urbanism**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 692 Seminar in Nineteenth-Century Architecture, Building, and Urbanism**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 696 Seminar in Special Topics in the History of Architecture and Urbanism**

Fall or spring. 4 credits. Prerequisites: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 697 Seminar in Special Topics in the History of Architecture and Urbanism**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 698 Seminar in Special Topics in the History of Architecture and Urbanism**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**ARCH 699 Seminar in Special Topics in the History of Architecture and Urbanism**

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Topic to be announced.

**Independent Study, Thesis, Dissertation**

**ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism**

Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements.

Independent study for undergraduate students.

**ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism**

Fall or spring. 4 credits. For B.S. honors candidates in history only.

**ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism**

Fall or spring. Variable credit (maximum 12). Prerequisite: permission of instructor. Independent study for graduate students.

**ARCH 899 M.A. Essay in the History of Architecture and Urbanism**

Fall or spring. 4 credits. Independent preparation of the M.A. essay, often developed from topics investigated in ARCH 680.

**ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism**

Fall or spring. Variable credit (maximum 12). Independent study for the doctoral degree.

## ART

R. Bertoia, chair; Z. Blum, V. G. Kord, director of graduate studies; J. N. Locey, M. Lyons, T. McGrain, E. Meyer, G. Page, B. Perlus, S. Poleskie, J. L. Squier, W. S. Taft, K. WalkingStick, and visiting critics.

### Undergraduate Program

The curriculum in art is a program of study within the College of Architecture, Art, and Planning, as well as other colleges at Cornell.

The undergraduate curriculum in art is an excellent background for a career in the visual arts. Past graduates have found it to be an excellent preparation for a career in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remainder is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student will be assigned an adviser in both colleges of their dual degree program to provide needed guidance. A candidate for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met.

It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during either their fourth or fifth year.

### Bachelor of Fine Arts Degree Requirements

#### Credits and Distribution

130 credits are required for the B.F.A. degree. A minimum of 62 are taken in the Department of Art. A minimum of 57 are taken outside the department.

#### Curriculum

Students are expected to take an average course load of 16 credits per semester during their four years. If a student wishes to take more than three studio courses in any one semester they must file a petition. All students

must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. **Any request to deviate from the standard curriculum must be petitioned to the department prior to the act.**

### Specific Course Requirements

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

### Concentration

Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, photography, or printmaking. Declaration of the area of concentration must be made during the second semester of the sophomore year. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in printmaking)

The required courses for each concentration are as follows:

Painting: ART 121, 221, 321, 322, 421, 422 (Thesis)

Sculpture: ART 141, 241, 341, 342, 441, 442 (Thesis)

Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432 (Thesis)

Photography: ART 161, 261, 263, 461, 462 and one of the following: ART 264, 265, 361

### Dual Concentration

If a student is interested in studying in more than one area, they may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration and 15 credits in the second area of concentration. Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

#### First Area of Concentration Total Credits

Painting: ART 121, 221, 321, 421, 422 23

Sculpture: ART 141, 241, 341, 441, 442 23

Printmaking: ART 131/132/133 (2 of 3) 231/232/233 (1 of 3) 431, 432 22

Photography: ART 161, 261, 263/264/265 (1 of 3), 461, 462 23

#### Second Area of Concentration Total Credits

Drawing: ART 151, 152, 251, 252, repeat 251 15

Painting: ART 121, 221, 321, 322 15

Sculpture: ART 141, 241, 341, 342 15

Printmaking: ART 131/132/133 (2 of 3) 231/232/233 (1 of 3); 331 14

Photography: ART 161, 261, 263/264 265 (2 of 3) 15

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

### Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc. The student's proposed program must be approved by his or her adviser.

The required courses for the concentration in **Combined Media** (33 credits) are:

100 and 200 level studios ART 1\_\_, 2\_\_ 7

200 and 300 level studios ART 2\_\_, 2\_\_, 3\_\_, 3\_\_ (2 of 4) 8

Pre-Thesis and Thesis ART 481, 482 12

Out-of-college studio electives (minimum of 2) 6

OCE Studio, OCE Studio

**Total** 33 credits

Note: The total number of in/out-of-college elective credits required will be adjusted to allow for the additional credits required of the combined media concentration.

### Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic records.

Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser, the Art Department Rome Program adviser, and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. Under special circumstances, seniors may petition to attend the Rome Program. Students wishing to spend two consecutive semesters in Rome are encouraged to do so. This petition must include the proposed course schedule for both semesters and must show signatures of approval by the adviser in the student's area of concentration, the department chair, and by the Rome Program adviser.

### Rome Curriculum

ART 400 Rome Studio 4  
Fulfills 4 credits of concentration

ART 312\* Modern Art in Italy 3

ART 317 History of Art in Rome: Early Christian to the Baroque Age 4

or

ART 318 History of Art in Rome: Renaissance in Rome and Florence 4

ITALA 111/112 Italian Language	4
ARCH 317 Contemporary Italian Film	1

**16 Total**

Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

\*Fulfills 300-level Theory and Criticism requirement.

**Out-of-College Requirements**

A minimum of 57 elective credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include: Physical and Biological Sciences (minimum of two courses, of at least 3 credits each); Social Sciences (minimum of three courses, of at least 3 credits each); and, Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the History of Art. One course must be taken in each of the following areas:

Modern: 260, 265, 270, 360, 361, 362, 364, 365, 366, 367, 370, 376, 464.

Non-Western: 280, 378, 380, 381, 383, 384, 385, 386, 389, 395, 396.

Three electives: any art history elective at the 300 level or above or any architectural history elective.

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two terms.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

**For those students matriculating in fall of 2000:**

Students are required to take ART 111, Introductory Art Seminar; ART 121, Introductory Painting; or ART 141, Introductory Sculpture; Art History Elective; and a Freshman Writing Seminar during the fall semester of the freshman year. Art History Elective, ART 171, Electronic Imaging in Art, and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be taken sometime during the junior or senior year.

Courses that will fulfill Theory and Criticism requirement (note: offerings may change from year to year. Check the current course catalog.):

**The M.F.A. Program**

The Master of Fine Arts program requires four terms of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each term; of these, nine credits are in studio work, and three credits are in Graduate Seminar (ART 611, 612, 613, 614). Students are required to take at least twelve credits of academic work outside the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written thesis, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

**Course Information**

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor.

Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, there are several course offerings during summer session.

**Guidelines for Independent Study**

A student who wants to undertake Independent Study must be a junior in good standing. Fine Arts students must have completed two years of the curriculum, **including all first- and second-year studios and four semesters of drawing.** An independent study cannot be used to fulfill any of the four drawing requirements. All students must have taken a minimum of one Cornell Art Department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor.

Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of four.

## Courses in Theory and Criticism

### ART 111 Introductory Art Seminar

Fall. 1 credit. S-U only. Limited to B.F.A. students.

Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed. A maximum of two absences is allowed except by permission of chairman.

### ART 214 Art and the Multicultural Experience

Fall. 3 credits.

This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the expression of art. They will question the nature of the visual arts as a discipline and survey art created by under-represented American minority cultural groups.

### ART 312 Modern Art in Italy

Fall or spring. 3 credits. Rome Program only.

This course is designed to introduce students to contemporary developments in Italian art and to major issues concerning the art world. Significant movements of the twentieth century, including Futurism, Metaphysical painting, and Magic Realism will be discussed. Post-war painting and sculpture will be emphasized. Visits with artists in studios, galleries, and museums will introduce students to the exchange between artists, dealers, and critics. Fulfills 300-level Theory and Criticism requirement for Fine Arts majors.

### ART 317 History of Art in Rome: Early Christian to the Baroque Age

Fall. 4 credits. Rome Program only.

General survey of the early Christian period to the fantastic vision of Piranesi in the eighteenth century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

### ART 318 History of Art in Rome: Renaissance in Rome and Florence

Spring. 4 credits. Rome Program only.

A direct knowledge of art in its historical context is the aim of this course. Open both to students interested in history and to those concentrating on the visual impact of art. Included are lectures and field trips.

### ART 419 Independent Study/Supervised Readings in Art

Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

### ART 611 Professional Skills for the Visual Artist

Fall. 3 credits. Limited to M.F.A. students.

This seminar will help fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment.

Students will complete a resource notebook that should be useful to them in the years after they graduate. Topics will include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

### ART 612 Recent Practice in the Visual Arts

Spring. 3 credits. Limited to M.F.A. students.

This seminar is designed to provide graduate students with an overview of recent visual artwork. Students will study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as Documenta, La Biennale di Venezia, and the Whitney Biennial will be discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

### ART 613 On-Line Publication for the Visual Artist

Fall. 3 credits. Limited to M.F.A. students.

This course is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student will interview a contemporary visual artist. These interviews will be illustrated with digital images of each artist's work and combined in an on-line magazine. Additionally each student will learn to create a home page on the web.

### ART 614 Contemporary Theory in the Visual Arts

Spring. 3 credits. Limited to M.F.A. students.

This seminar explores selected writings on the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics will vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

## Studio Courses in Painting

Fees for painting courses: 121, 221, 321, 322, 421, 422, 429: \$40

### ART 121 Introductory Painting

Fall, spring, or summer. 3 credits.

The study of the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

### ART 221 Painting II

Fall or spring. 4 credits. Prerequisite: ART 121 or permission of instructor.

A continuation of the study of aspects of pictorial composition initiated in ART 121, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

### ART 321 Painting III

Fall or spring. 4 credits. Prerequisite: ART 221 or permission of instructor.

An intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encaustic, and oil. In addition, paints and associated techniques developed in the 20th

century are used as well as developing technologies applicable to the painting process.

### ART 322 Painting IV

Fall or spring. 4 credits. Prerequisite: ART 321 or permission of instructor.

An advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

### ART 421 Pre-Thesis in Painting

Fall or spring. 6 credits. Prerequisite: ART 322.

Advanced study of painting through assigned and independent projects using a variety of materials leading to the formulation of a thesis project.

### ART 422 Thesis in Painting

Fall or spring. 6 credits. Prerequisite: ART 421.

A focussed independent project demonstrating creative ability and technical proficiency. The project will be exhibited in an appropriate space at the end of the term.

### ART 429 Independent Studio in Painting

Fall, spring, or summer. 4 credits variable.

Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in painting allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

### ART 721-722, 821-822 Graduate Painting

721, fall; 722, spring; first-year M.F.A. students. 9 credits. 821, fall; 822, spring; second-year M.F.A. students. 9 credits.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

## Studio Courses in Printmaking

Fees for printmaking courses:

Intaglio: 131, 231, 431.1, 432.1, 439.1: \$65  
Lithography: 133, 233, 431.2, 432.2, 439.2: \$85  
Screenprinting: 132, 232, 431.3, 432.3, 439.3: \$45

### ART 131 Introductory Intaglio

Fall and spring. 3 credits.

A basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

### ART 132 Introductory Graphics

Fall and spring. 3 credits.

An introduction to the two-dimensional thought process and the language of vision. Students will explore design projects and the use of graphic materials, including collage, pochoir, and screen printing.

### ART 133 Introductory Lithography

Fall and spring. 3 credits.

The theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

**ART 231 Intaglio II**

Spring. 4 credits. Prerequisite: ART 131.  
A studio course in advanced etching techniques. Refinement of processes and ideas through the uses of aquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple plate color printmaking.

**ART 232 Advanced Screen Printing**

Fall. 4 credits. Prerequisite: ART 132.  
An exploration of the screen printing process as it applies to the fine arts. Students will develop skills in multicolor printing using transparent inks and additives. Stencils will be made by the handcut and the photo process.

**ART 233 Lithography II**

Spring. 4 credits. Prerequisite: ART 133.  
The theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodolith and computer-generated transparencies.

**ART 331 Printmaking III**

Fall or spring. 4 credits. Prerequisite: ART 231, 232, or 233 or permission of instructor.

Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

**ART 332 Printmaking IV**

Fall. 4 credits. Prerequisite: ART 331 or permission of instructor.

Continuation and expansion of ART 331.

**ART 431 Pre-Thesis in Printmaking**

Fall or spring. 6 credits. Prerequisites: ART 332.

Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

**ART 432 Thesis in Printmaking**

Fall or spring. 6 credits. Prerequisite: ART 431.

Advanced printmaking project to demonstrate creative ability and technical proficiency.

**ART 439 Independent Studio in Printmaking**

Fall, spring, or summer. 4 credits variable.  
Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in printmaking allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 731-732, 831-832 Graduate Printmaking**

731, fall; 732, spring; first-year M.F.A. students. 9 credits. 831, fall; 832, spring; second-year M.F.A. students. 9 credits.  
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

**Studio Courses in Sculpture**

Fees for sculpture courses:

141	\$50
241, 341, 342, 343, 441, 442	\$75

**ART 141 Introductory Sculpture**

Fall, spring, or summer. 3 credits.  
A series of studio problems introduce the student to the basic considerations of artistic expression through three-dimensional design, i.e., modeling in Plasteline, building directly in plaster, casting in plaster, and constructing in wood and metal.

**ART 241 Sculpture II**

Fall or spring. 4 credits. Prerequisites: ART 141, or an architecture design studio, or permission of instructor.

Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore the bronze casting process. The sculpture program, which is housed in its own building, contains a fully equipped bronze casting foundry.

**ART 341 Sculpture III**

Fall or spring. 4 credits. Prerequisite: ART 241 or permission of instructor.  
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

**ART 342 Sculpture IV**

Fall or spring. 4 credits. Prerequisite: ART 341 or permission of instructor.  
Continuation and expansion of ART 341.

**ART 343 Sculpture V**

Fall or spring. 4 credits. Prerequisite: ART 342 or permission of instructor.  
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

**ART 441 Pre-Thesis in Sculpture**

Fall or spring. 6 credits. Prerequisite: ART 343.

Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

**ART 442 Thesis in Sculpture**

Fall or spring. 6 credits. Prerequisite: ART 441.

Advanced sculpture project to demonstrate creative ability and technical proficiency.

**ART 449 Independent Studio in Sculpture**

Fall, spring, or summer. 4 credits variable.  
Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in sculpture allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 741-742, 841-842 Graduate Sculpture**

741, fall; 742, spring; first-year M.F.A. students. 9 credits. 841, fall; 842, spring; second-year M.F.A. students. 9 credits.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

**Studio Courses in Photography**

Darkroom fees for photography courses:

Fee for B & W courses:	\$105.00
Fee for color courses:	\$185.00
Fee for an additional B & W course taken the same term:	\$25.00
Fee for an additional color course taken the same term:	\$105.00

**ART 161 Photography I (also ARCH 251)**

Fall, spring, or summer. 3 credits.  
A basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photographic imagery.

**ART 168 Black-and-White Photography**

Summer. 3 credits. 3-week session only.  
Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

**ART 169 Color Photography**

Summer. 3 credits. 3-week session only.  
Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

**ART 261 Photography II (also ARCH 351)**

Fall, spring, or summer. 4 credits.  
Prerequisites: ART 161 or ARCH 251, or permission of instructor.  
A continuation of Photography I concentrating on black and white photographic processes, history and theory of creative practice, and individual projects.

**ART 263 Color Photography**

Fall, spring, or summer. 4 credits.  
Prerequisite: ART 161 or ARCH 251, or permission of instructor.  
A studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

**ART 264 Photo Processes**

Fall, spring, or summer. 4 credits.  
Prerequisite: ART 161 or ARCH 251, or permission of instructor.  
A studio course in alternative and nonsilver photographic processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

**ART 265 Studio Photography**

Fall or spring. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor.  
A course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

**ART 361 Photography III**

Fall, spring, or summer. 4 credits.

Prerequisite: ART 161, 261, or permission of instructor.

Continued study of creative use of photography, with emphasis on specialized individual projects.

**ART 461 Pre-Thesis in Photography**

Fall or spring. 6 credits. Prerequisite: ART 261, 263.

A studio course intended for photography majors and other qualified students.

**ART 462 Thesis in Photography**

Fall or spring. 6 credits. Prerequisite: ART 461.

A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

**ART 469 Independent Studio in Photography**

Fall, spring, or summer. 4 credits variable.

Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in photography allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 761-762, 861-862 Graduate Photography**

761, fall; 762, spring; first-year M.F.A. students. 9 credits. 861, fall; 862, spring; second-year M.F.A. students. 9 credits.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

**Studio Courses in Drawing**

Fees for drawing courses: \$25

**ART 151 Drawing I**

Fall, spring, or summer. 3 credits.

A course that is general in nature and introduces students to principles and techniques of representation. Emphasis will be on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. In addition, the student will have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink and wash, etc.

**ART 152 Drawing II**

Spring. 3 credits. Prerequisite: ART 151.

A general course in drawing that will emphasize figure study and life drawing. This course will build on the foundation of ART 151 and concentrate on the analytical study of the figure. Students will explore a variety of materials, traditional and contemporary.

**ART 158 Conceptual Drawing**

Summer. 3 credits.

Emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

**ART 159 Life and Still-Life Drawing**

Summer. 3 credits.

The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

**ART 251 Drawing III**

Fall. 3 credits. Prerequisites: ART 152.

An intermediate drawing course in which students will study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials will be stressed.

**ART 252 Drawing IV**

Spring. 3 credits. Prerequisites: ART 251.

Advanced drawing with an emphasis on life drawing and figure composition. Individual expression will be encouraged along with creative investigation of materials and processes.

**ART 459 Independent Studio in Drawing**

Fall, spring, or summer. 4 credits variable.

Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in drawing allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**Special Studio Courses**

Course fees:

171, 271, 272, 479	\$105
391, 392	\$ 50
481, 482, 489	\$ 70

**ART 171 Electronic Imaging in Art**

Fall or spring. 3 credits.

An introductory studio course using the computer as a tool for making art. Students will explore various approaches to 2- and 3-D image creation using software programs for imaging generation and processing. Intro to the web.

**ART 271 Electronic 3-D Modeling and Animation**

Fall or spring. 4 credits. Prerequisite: ART 171.

A studio course in creating 2- and 3-D still and animated visualizations using computers and 3-D software for object modeling, animation, and rendering. Concentration on the web.

**ART 272 Digital Video and Sound**

Fall or spring. 4 credits. Prerequisite: ART 171.

A studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD ROM production. Concentration on the web.

**ART 372 Special Topics in Art Studio**

Fall, spring, or summer. Variable credit.

An exploration of a particular theme or project.

**ART 379 Independent Studio in Rome**

Fall and spring. 4 credits variable.

Prerequisite: student must be a junior in good standing, and have the written permission of the instructor. Rome Program only.

Independent studio in Rome allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

**ART 391 Media Arts Studio I**

Fall. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent. Also student must be a junior and have permission of instructor. Lab fee \$50.

A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, film and video, and dance. Group projects and discussions will also investigate the artistic and interactive potential of a high-speed intranet connecting arts spaces on campus, including virtual and performative events.

**ART 392 Media Arts Studio II**

Spring. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent. Also student must be a junior and have permission of instructor. Lab fee \$50.

A continuation of ART 391. A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video. Group projects and discussions will also investigate the artistic and interactive potential of a high-speed intranet connecting arts spaces on campus, including virtual and performative events.

**ART 400 Rome Studio**

Fall or spring. 4 credits. Rome Program only. Prerequisite: permission of instructor. Fee: \$25.

The content for the Rome studio will be determined by the instructor. Emphasis will be divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media will consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor. ART 400 fulfills four credits of the concentration requirement.

**ART 479 Independent Studio in Electronic Imaging**

Fall, spring, or summer. 4 credits variable.

Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in electronic imaging allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 481 Pre-Thesis in Combined Media**

Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in this course.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

**ART 482 Thesis in Combined Media**

Fall or spring. 6 credits. Prerequisite: ART 481 and written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in this course.

Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

**ART 489 Independent Studio in Combined Media**

Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.

Independent studio in combined media allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**CITY AND REGIONAL PLANNING**

J. F. Forester, chair; I. Azis (visiting), S. Baugher, L. Beneria, R. S. Booth, S. Christopherson, P. Clavel, S. Czamanski (emeritus), M. Drennan, A. M. Esnard, W. W. Goldsmith, director, URS; W. Isard (emeritus), D. Lewis, J. Lobo, B. Lynch, P. Olpadwala, R. Pendall, J. W. Reps (emeritus), S. Saltzman, S. W. Stein (emeritus), M. A. Tomlan, R. T. Trancik, T. Vietorisz (visiting), M. Warner

The department offers several programs of study at both the undergraduate and graduate levels.

**The Undergraduate Program in Urban and Regional Studies**

The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

**Basic Degree Requirements**

*Requirements for Graduation:* URS requirements include (1) eight semesters of residence, (2) 120 credits, (3) two freshman seminars, (4) qualification in one foreign language, (5) four groups of distribution requirements, (6) required courses for major, (7) area requirements for major, (8) free electives, (9) a minimum of 34 courses, (10) completion of the university requirement of two one-credit nonacademic courses in

physical education. Please note that physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. (see page 13 Physical Education section). Please note that no course may satisfy more than one requirement.

**1. General education**

- Freshman writing seminars: 2 courses
- Foreign language: 3 courses or qualification in one foreign language
- Distribution Requirements: 9 courses

Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1-4.

Group 1: Physical and biological sciences (2-3 courses required)

Group 2: Quantitative and formal reasoning (1-2 courses required)

Group 3: Social sciences and history (2-3 courses required)

Group 4: Humanities and the arts (2-3 courses required)

**Advanced Placement Credit**

Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of S-U courses cannot be applied to the distribution requirements.

**2. Required Courses for the Major in Urban and Regional Studies: 5 courses**

CRP 100: The American City

CRP 101: The Global City: People, Production, and Planning in the Third World

CRP 223: Introduction to Statistical Reasoning for Urban and Regional Analysis or from the following list:

ARME 210: Introduction to Statistics

ILRST 210: Statistical Reasoning I

Microeconomics course (at least 3 credits, from approved list)

Architecture course (at least 3 credits, from approved list)

Approved List of Microeconomics and Architecture Courses

Micro Economics:

ARME 250: Introduction to Statistics

PAM 200: Intermediate Microeconomics

ECON 101: Introduction to Microeconomics

ECON 301: Microeconomics

ARCH 131: An Introduction to Architecture I

ARCH 132: An Introduction to Architecture II

ARCH 181: History of Architecture I

ARCH 182: History of Architecture II

ARCH 399: Special Topics: Architectural History (Rome)

**3. Area Requirements for the Major in Urban and Regional Studies: 11 courses**

A. Students must take one listed CRP course in each of the following 6 areas: Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis

**a. Design**

CRP 381: Principles of Spatial Design and Aesthetics

CRP 491: Rome Wasn't Built in a Day

**b. Economics**

CRP 320: Regional Question: The Case of Italy (Rome)

CRP 401: Seminar in Urban Political Economy

CRP 404: Urban Economics

CRP 417: Industrial Restructuring: Implications for State and Local Policy

**c. Environment**

CRP 380: Environmental Politics

CRP 395.15: Recycling & Solid Waste

CRP 395.31: Green Cities

CRP 443: Emerging Global Environmental Trends

\*CRP 444: Resource Management & Environmental Law

\*CRP 451: Environmental Law

\*CRP 453: Environmental Aspects of International Planning

\*Meets requirement only with instructor's permission.

**d. History**

CRP 261: Urban Archaeology

CRP 360: Pre-Industrial Cities and Towns of North America

CRP 361: Seminar in American Urban History

ARCH 399: Special Topics: Architectural History (Rome)

ART 317.20: Art History: Early Christian, Romanesque, and Gothic Art in Rome and Central Italy (Rome)

ART 318.20: Art History: Renaissance in Rome (Rome)

ART H 371: The History of Washington Architecture (Cornell-in-Washington)

HIST 419: Seminar in American Social History: Race, Class, and the American City (Cornell-in-Washington)

## e. Politics/Policy

CRP 293: Inequality, Diversity, and Justice

CRP 314: Planning, Power, and Decision Making

CRP 318: Politics of Community Development

CRP 363: American Indians, Planners, and Public Policy

CRP 371: Cuba: The Search for Developing Alternatives

CRP 395.30: Latin American Cities

CRP 412: Devolution and Public Sector Restructuring

CRP 416: European City-Urban Political Economy (Rome)

CRP 418: Local Government Restructuring in New York

CRP 448: Social Policy and Social Welfare (also Cornell-in-Washington)

CRP 474: The Third World Urbanization

GOVT 500: Politics/Policy: Theory, Research, and Practice (Cornell-in-Washington)

(4 credits of the 8-credit course—see B below)

## f. Quantitative Analysis

CRP 321: Introduction to Quantitative Methods for the Analysis of Public Policy

CRP 328: Overview: Quantitative Methods Policy Analysis

CRP 529: Mathematics for Planners

ILRST 211: Quantitative Reasoning II

## B. Students must take any additional 5

CRP courses (of at least 3 credits each, letter grade only)

NOTE: Cornell-in-Washington Program: GOVT 500: Politics/Policy: Theory, Research, and Practice can be used to fulfill four credits.

## 4. Free Electives: 6-9 courses

## 5. Physical Education (2 terms of PE)

Required courses for graduation: 34

Required credits: 120

## Honors Program

Each year a few well-qualified junior-year students may join the honors program. Each honors student will develop and write an honors thesis under the guidance of his or her faculty adviser.

## Off-Campus Opportunities

**Cornell-in-Washington Program.** Students in good standing may earn degree credits in the Cornell-in-Washington program through course work and an urban-oriented externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy.

Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

**Cornell Abroad.** We encourage qualified undergraduates to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. We work continually to develop study abroad opportunities. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Mideast, and France should be forthcoming. We encourage URS students to explore these opportunities.

**Cornell-in-Rome Program.** The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing can earn degree credits through courses taken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

**Research and fieldwork.** Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

## Additional Degree Options

**Linked degree options.** Urban and regional studies students may earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

**Dual degree option.** A student accepted in the Cornell College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

## Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

## Transfer Students

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program, may contact Professor William W. Goldsmith, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701 (telephone: 607-255-4613).

## The Graduate Program in City and Regional Planning

The major concentrations of course work in city and regional planning are in the following areas:

Build environment and urban development planning is concerned with physical facilities; the social, economic, and environmental forces that affect their design; and the process of development, plan making, and administration.

History and historic preservation planning is a special program of study preparing students for work in history, analysis, and preservation of buildings, urban environments, and neighborhoods, including downtown business areas.

Regional planning and regional science are concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the ways in which resources can best be used.

Local and regional economic development is concerned with understanding and influencing how economic change may be harnessed to the benefit of communities, counteracting plant closings and more general regional decline and stimulating more equitable programs of socioeconomic change and development.

International planning offers a broad range of courses in international economic development, development planning, and political economy.

Quantitative methods and policy analysis courses are offered to prepare planners and researchers for a variety of situations and problems.

Complementing these concentrations, planning theory and political economy courses examine the organizational and planning processes and the political and economic conditions in which planning and international development operate.

Several graduate degrees are offered: the Ph.D.; the Master of Regional Planning (M.R.P.), in a two-year program; the Master of Arts (M.A.) in historic preservation planning, in a two-year program; and, in special cases, the Master of Professional Studies (International Development) [M.P.S.(I.D.)], for the twelve-month international planning program.

### Off-Campus Opportunities

**Rome Program.** Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

### Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

### Undergraduate Program in Urban and Regional Studies

#### CRP 100 The American City

Fall. 3 credits. S-U grades optional for out-of-department students only.

An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we approach the last decade of the twentieth century. Readings, discussions, and brief papers exploring topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

#### CRP 101 The Global City: People, Production, and Planning in the Third World

Spring. 3 credits. S-U grades optional for out-of-department students only.

A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

#### CRP 223 Introduction to Statistical Reasoning

Fall. 4 credits. Letter grade.

An introduction to the role and use of quantitative methods in the study of urban and regional issues. Emphasis will be on statistical and related computer methods for the formulation, analysis, and testing of hypotheses and models of social, economic, and physical phenomena of cities and regions. This course will cover applicable methods in probability, descriptive statistics, estimation, hypothesis testing, and regression.

#### CRP 261 Urban Archaeology

For description, see LA 261.

#### CRP 314 Planning, Power, and Decision Making

Fall. 3 credits.

This seminar examines various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups?

#### CRP 318 Politics of Community Development (also CRP 518)

Spring. 3 credits. Letter grade.

A seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics will vary from year to year.

#### CRP 321 Introduction to Quantitative Methods for the Analysis of Public Policy (also CRP 545)

Spring. 3 credits.

An introduction to the role and use of quantitative methods in the study of urban and regional issues. This course will focus on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, and simulation, and others. Strengths and weaknesses of those methods will also be considered.

#### CRP 360 Pre-Industrial Cities and Towns of North America (also LA 260/LA 666 and CRP 666)

Fall. 3 credits. S-U grades optional.

For description, see LA 260.

#### CRP 361 Seminar in American Urban History (also CRP 662)

Fall or spring. 3 credits. Prerequisite: permission of instructor.

Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

#### CRP 363 American Indians, Planners, and Public Policy (also CRP 547 and LA 263/LA547)

Spring. 3 credits.

For description, see LA 363.

#### CRP 370 The Regional Question: The Case of Italy

Fall. 3 credits. For majors in urban and regional studies only. Rome Program only. The "southern problem" in Italy has long

interested regional planners, economists, sociologists, and political scientists. This course will make use of field trips to the Mezzogiorno and Emilio-Romagna to explore practical aspects of regional inequality. Special attention will be paid to theories that purport to explain why the south remains underdeveloped and why the "Third Italy" is thought to be one of the world's most successful regions—in economics, politics, and social life. We will examine how Italy's integration into the European Union affects and is affected by its regional issues.

#### CRP 371 Cuba: The Search for Development Alternatives

Fall. 3 credits. Open to sophomores, juniors, seniors.

Cuba is a symbol; it is also a society. This course looks beyond the symbol to Cuban society, environment, and political economy in a Caribbean context. Cuba's relations with other nations and their impacts on Cuban development will be emphasized. The 1959 Revolution was a defining moment in Cuban history and a central element in Cuban culture. Students will learn about the experiences that shaped the revolution, altered its course in the 1970s and 1980s, and led to profound experimentation and a renewed search for authenticity in the 1990s.

#### CRP 380 Environmental Politics

Spring. 4 credits.

Examines the politics of public decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

#### CRP 381 Principles of Spatial Design and Aesthetics (also CRP 581)

Fall. 3 credits. Course enrollment requires special permission of instructor and is limited to 30 students.

A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

#### CRP 395 Special Topics

Fall, spring, summer. 4 credits. Hours to be arranged.

#### CRP 395.40 The History of Urban Form in America (also CRP 669.40)

Fall. 3 credits.

The history of city planning in America from colonial times to the early 20th century including brief reviews of European influences on urban form. Lecture, discussions, short papers.

#### CRP 400 Introduction to Urban and Regional Theory

Fall. 4 credits. Open to juniors and seniors.

Introductory review of theories dealing with the spatial distribution of population and economic activity, drawn from various social science disciplines such as geography, economics, and sociology. Review of recent research dealing with such topics as population distribution, migration, location of industry and economic activity, and the spatial organization of urban and regional social systems.

**CRP 401 Seminar in Urban Political Economy**

Spring. 4 credits. Prerequisites: introductory economics or sociology; for URS students, CRP 400 also.

The world economy, the global city, and social change. Population, technology, and work in industrial and developing countries. Race, ethnicity, and nationality. Profits, subsistence, and poverty. Students may read and direct discussions on outstanding texts, write book reviews, and prepare brief reports.

**CRP 404 Urban Economics (also CRP 504)**

Spring. 4 credits. Prerequisite: microeconomics.

Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.

**CRP 408 Introduction to Urban Geographic Information Systems (GIS) (also CRP 508)**

Spring. 4 credits. Letter grade.

Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course will focus on GIS in the social sciences. Many of the exercises and examples will be based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues to be covered include: fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

**CRP 412 Devolution and Public Sector Restructuring (also CRP 612)**

Fall. 3 credits. S-U grades optional.

This course will address devolution and decentralization of government services in a national and international context and then focus on the local public sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring will be reviewed including changing roles for the private sector, nonprofit sector and unions. Implications for policy, program design, public advocacy, and citizen involvement will be addressed. Special topics may include welfare reform. Graduate students will be expected to write a major research paper in addition to short papers throughout the term.

**CRP 416 European City: The Public Sphere and Public Space**

Fall. 2-4 credits variable. Open to all juniors and seniors, S-U option available to non-majors. Enrollment may be limited by the instructor. Rome Program only.

An examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socio-economic underpinnings of the city. How are cities organized, how do citizens relate to the state, the city to the nation, the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people

expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

**CRP 417 Industrial Restructuring: Implications for State and Local Policy (also CRP 517)**

Fall. 4 credits.

A basic introduction to new issues arising from the way in which national and international economic shifts are affecting diverse United States localities. The course will focus on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific application to New York and other Northeast locations.

**CRP 418 Local Government Restructuring in New York (also CRP 618)**

Spring. 4 credits. Optional grade.

Prerequisite: CRP 412/612.

Students will undertake research requested by New York State clients—statewide associations of local government, state agencies, and the public sector union—to analyze and identify alternative approaches to restructuring local government service delivery. The course will begin with an overview of qualitative research methods: case studies, interviews techniques, and surveys. The class will work as a team with specific statewide client organizations to complete a project. Formal presentation and web page design will be part of the final product.

**CRP 442 The Sociology of Science**

For description, See S&TS 442.

**CRP 443 Emerging Global Environmental Trends (also CRP 543)**

Spring. 3 credits. Letter grade. Limited to 20 students. Open to juniors, seniors, and graduate students or by permission of instructor.

This seminar focuses on the emergence of broad trends that suggest human society is facing a global environmental crisis. It will examine the factual grounds on which concern about these trends is founded, their implications, and the types of steps human society might take in order to reverse or otherwise alter these trends before they generate enormous and irreversibly tragic problems.

**CRP 444 Resource Management and Environmental Law (also CRP 544)**

Spring. 4 credits. Letter grade. Open to juniors, seniors, and graduate students or by permission of instructor.

This course introduces the application of legal concepts and processes to the management of natural resources and natural resource areas. It explores the role of the common law, statutory law, administrative regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and critical resources on public lands, and to the conflicts inherent in government attempts to regulate important natural resources on private lands.

**CRP 448 Social Policy and Social Welfare (also CRP 548)**

Spring. 4 credits.

This course addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social welfare controversies. The first part of the course will introduce principles that guide the development of social policy including fairness and justice. Various conceptions of society will be examined with reference to their influence on the nature and extent of social welfare provision, comparing the United States with other industrialized countries. The second part of the course will examine the relationship between economic change and social policy in the United States. A series of current social policy controversies (such as AIDS, homelessness, abortion, and workfare) will illustrate how values and assumptions about state, economy, and society affect the forms of social welfare provisions and how they are administered.

**CRP 451 Environmental Law (also CRP 551)**

Fall. 4 credits.

An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act, and of important judicial decisions that have been handed down under federal environmental statutes and regulations. Discussion of environmental law topics from a policy management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resources, government, environmental engineering, law, business, architecture, landscape architecture, etc. Course assignments for graduate students will differ in some aspects from those for undergraduates.

**CRP 453 Environmental Aspects of International Planning (also CRP 683)**

Fall. 3 credits.

This seminar will examine the roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations—in shaping environmental debates and designing conservation and remediation programs in the Third World. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences.

**CRP 457 Community Service Fieldwork**

Fall or spring. 4 credits variable. Permission is granted by instructor.

Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects will involve urban and regional issues as defined by a "client" and agreed upon by the faculty member.

**CRP 461 Methods of Archival Research**

Spring. 3 credits.

Examination of methods of using archival materials, including documents in the Cornell archives and regional history collection, for research in the history of architecture, historic preservation, and history of urban development.

**CRP 474 Third World Urbanization (also CRP 674)**

Spring. 4 credits. S-U grades optional. Colonialism and economic globalization have profoundly affected urban Third World societies and landscapes—often by relegating everyday urban life to the margins and shrouding it in illegality. This course explores social, political, and spatial dimensions of these processes. We look at rural-urban dynamics and their implications for the structure of urban space and for concepts of state and citizenship. We assess the position of Third World Cities in the global economy and implications for employment, paying special attention to women workers and urban environment. The second half of the course focuses on responses to these massive changes: violence and repression, social movements, and transmigration.

**CRP 477 Issues in African Development (also CRP 677)**

Fall and spring. 1 credit. S-U only. This course examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

**CRP 490 Student-Faculty Research**

Fall or spring. 1–4 credits. Limited to undergraduate students in the Urban and Regional Studies Program. S-U grades only. Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

**CRP 491 Rome Wasn't Built in a Day**

Spring. 3 credits. Letter grade. In this electronic course, students will learn about how the form and spatial structure of the city of Rome has evolved through time. Using the interactive CD-ROM "layers of Rome" as a digital text, the course will engage participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Lectures, research, readings, and exercises will be developed using the Layers of Rome CD, web searches, digital networking, and various interactive learning technologies geared toward urban analysis and visual design media.

**CRP 492 Honors Thesis Research**

Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty. Each selected student works with his or her thesis adviser.

**CRP 493 Honors Thesis Writing**

Fall or spring. 4 credits. Prerequisite: completion of CRP 492. Each selected student works with his or her thesis adviser.

**CRP 497 Supervised Readings**

Fall or spring. Variable 4 credits. Limited to upperclass students. Prerequisite: permission of instructor.

**Graduate Courses and Seminars**

Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 499. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

**CRP 504 Urban Economics (also CRP 404)**

Spring. 4 credits. For description, see CRP 404.

**CRP 508 Introduction to Urban Geographic Information Systems (GIS) (also CRP 408)**

Spring. 4 credits. Letter grade. For description, see CRP 408.

**CRP 512 Public and Spatial Economics for Planners**

Fall. 3 credits. Letter grade. No prior knowledge of economics. Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course will also cover the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

**CRP 513 Planning Practice and Urban Structure Seminar**

Fall. 4 credits. This introductory graduate seminar has several objectives. It exposes students to the theory and history of (1) planning, administration, and related public intervention in urban affairs, (2) the growth and development of cities, and (3) the built environment. Topics are analyzed from the perspective of political economy. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing short papers, and explore one research topic in depth.

**CRP 517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)**

Fall. 4 credits. For description, see CRP 417.

**CRP 518 Politics of Community Development (also CRP 318)**

Spring. 3 credits. Letter grade. For description, see CRP 318.

**CRP 519 Urban Theory and Spatial Development**

Spring. 3 credits. Letter grade. This course complements theories of urbanization and spatial development with an introduction to issues of governance within urban regions in the United States and Western Europe. The course will discuss economic and political institutions and actors as they shape the spatial form of cities. The work of authors such as Patsy Healey, Margit Mayer, David Harvey, Mike Davis, and Susan Fainstein will be discussed.

**CRP 520 Statistical and Mathematical Concepts for Planning**

Fall. 3 or 4 credits. An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics will include matrix algebra, probability, sampling, estimation, and regression as well as the use of a microcomputer statistical package.

**CRP 521 Mathematical Foundation for Planning Analysis.**

Fall. 1 credit. S-U grades only. Meets for two hours, once each week, for approximately half the semester. Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

**CRP 525 Introductory Methods of Planning Analysis**

Fall. 4 credits. Letter grade. A course on quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from places in the United States, but tools are applicable throughout the world: descriptive and inferential statistics; mapping; and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

**CRP 529 Mathematics for Planners**

Fall. 4 credits variable. S-U grades optional. The course covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

**CRP 532 Real Estate Development Process**

Fall. 3 credits. Examination of various forms of development as well as the role of major participants in the processes. Review issues in residential, retail, industrial, office, and low-income housing projects. Some guest speakers and case studies.

**CRP 533 Real Estate Marketing and Management**

Fall. 3 credits. The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies.

**CRP 537 Real Estate Seminar Series**

Fall and spring. 1/2 credit per term. S-U grades only. Restricted to MPS/RE students. A one-credit course designed to bring students weekly into direct contact with real estate professionals mainly through the use of videoconferences originating from locations around the world.

**CRP 541 The Politics of Technical Decisions I (also GOVT 628 and S&TS 415)**

Spring. 4 credits.

For description, see S&TS 415.

**CRP 543 Emerging Global Environmental Trends (also CRP 443)**

Spring. 3 credits. Letter grade.

For description, see CRP 443.

**CRP 544 Resource Management and Environmental Law (also CRP 444)**

Spring. 4 credits. Letter grade.

For description, see CRP 444.

**CRP 545 Introduction to Public Policy Analysis and Management (also CRP 321)**

For description, see CRP 321.

**CRP 546 Introduction to Community and Environmental Dispute Resolution**

Fall. 3 credits.

This course will explore the theories and techniques of dispute resolution as they apply to community, environmental, and related public policy disputes. Analysis will complement skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

**CRP 547 American Indians, Planners, and Public Policy (also CRP 363 and LA 263/LA547)**

Spring. 3 credits.

For description, see LA 363.

**CRP 548 Social Policy and Social Welfare (also CRP 448)**

Spring. 4 credits.

For description, see CRP 448.

**CRP 549 Ethics and Practical Judgment in Planning**

Spring. 4 credits variable.

An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

**CRP 551 Environmental Law (also CRP 451)**

Fall. 4 credits.

For description, see CRP 451.

**CRP 552 Urban Land-Use Planning I**

Fall. 3 credits.

Surveys, analyses, and plan-making techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

**CRP 553 Urban Land-Use Planning II**

Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.

Seminar covering the essentials of growth management, zoning, and subdivision: the main tools for implementing a land-use plan. Agriculture and open space preservation, infrastructure timing controls, redevelopment, planned unit development, and much more.

**CRP 555 Urban Systems Studio (also LA 701)**

Fall. 5 credits. Prerequisite: permission of instructor.

Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of

urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. Computer modeling and digital design media will be introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

**CRP 557 City Planning Design Studio**

Spring. 4 credits. Prerequisite: previous design courses or permission of instructor.

A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

**CRP 558 City and Regional Planning Workshop**

Fall and spring. 4 credits. S-U grades only.

Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

**CRP 560 Documentation for Preservation (also ARCH 586)**

Fall or spring. 3 credits.

Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

**CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses (also ARCH 588)**

Fall or spring. 4 credits.

Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

**CRP 562 Perspectives on Preservation (also ARCH 585)**

Fall. 3 credits.

Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

**CRP 563 Problems in Contemporary Preservation Practice (also ARCH 584)**

Spring. Variable credit.

A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

**CRP 564 Building Materials Conservation (also ARCH 587)**

Spring. 3 credits. Open to juniors, seniors, and graduate students.

A survey of the development of building materials in the United States, chiefly during

the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

**CRP 565 Fieldwork or Workshop in History and Preservation**

Fall or spring. Variable credit.

Work on applied problems in history and preservation planning in a field or laboratory setting or both.

**CRP 567 Measured Drawing (also ARCH 583)**

Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor.

Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

**CRP 569 Archaeology in Preservation Planning and Site Design (also LA 569)**

Spring. 3 credits.

For description, see LA 569.

**CRP 581 Principles of Spatial Design and Aesthetics (also CRP 381)**

For description, see CRP 381.

**CRP 605 Urban Public Finance**

Fall. 4 credits. Letter grade. Prerequisite: prior exposure to microeconomics.

An overview of neoclassical public economics theory, particularly those aspects of the theory that are central to urban public finance. In part two, the unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Part three of the course presents the public finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. Part four is the heart of the matter, namely the measurement and analysis of the fiscal condition of cities.

**CRP 607 GIS Applications Workshop**

Spring. 3 credits. Letter grade. Prerequisites: a basic GIS course and knowledge of ArcView or ArcInfo. Students with exceptional programming and web design skills can take the class with the prior permission of instructor.

This course is a more advance GIS class that focuses upon GIS applications and projects for one or more clients. Clients may be out-of-state and travel for meetings and/or site visits for data collection may be required. Contact the instructor directly to learn about project options for the current semester.

**CRP 612 Devolution and Public Sector Restructuring (also CRP 412)**

Fall. 3 credits S-U grades optional.

For description, see CRP 412.

**CRP 614 Gender and International Development (also WOMNS 614)**

Spring. 3 credits.

This course has four main objectives. First, to provide an analysis of the location of women in processes of development and to understand the centrality of gender in each case. Second, to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such

as class, race, and ethnicity. Third, to reflect upon the linkages between the global economy and the gendered macro and micro processes of development. Fourth, to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

**CRP 616 Globalization and Development**

Spring. 3 credits. Letter grade only.  
This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the distribution of resources. This includes the analysis of processes through which the current neoliberal model is being built, such as trade liberalization, labor market flexibility, the erosion of nation states as economic units, and the formation of trade blocks and global institutions.

**CRP 618 Local Government Restructuring in New York (also CRP 418)**

Spring. 4 credits. S-U grades optional.  
Prerequisite: CRP 412/612.  
For description, see CRP 418.

**CRP 621 Quantitative Techniques for Policy Analysis and Program Management**

Spring. 4 credits.  
Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

**CRP 631 Local Economic Policy—Field Workshop**

Fall. 4 credits.  
A group policy analysis exercise in an upstate New York city. Students do a combination of data analysis; interviews with labor, business, and public leaders; and problem papers addressed to current issues presented by a client group. Individual work is synthesized into a comprehensive report at the end of the semester.

**CRP 632 Methods of Regional Science and Planning I**

Spring. 4 credits variable.  
An introduction to some of the major methods and models used in regional science and planning. This course is half of a two-semester sequence (see CRP 731). Either course may be taken first. Both courses will cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation will be considered. CRP 730 emphasizes statistical and econometric models.

**CRP 633 Methods of Regional Science and Planning II**

Fall. 4 credits.  
See CRP 632. CRP 633 will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.

**CRP 635 Workshop: State Economic Development Strategies**

Spring. 4 credits. S-U grades optional.  
The purpose of this course/workshop is twofold: (1) to provide students with research tools useful in developing state-level economic development strategies; and (2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers: firm specific subsidies. The course will consist of lecture and discussion meetings. The workshop sessions will include exercises in qualitative information gathering on economic development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

**CRP 639.05 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World-I: Historical and Theoretical Perspective**

Fall. 4 credits variable.  
Historical and conceptual background, and relevant case material, for dealing with urban and regional development using production analysis with a focus on the Third World. Consequences of the organization of production for urban-rural and regional interactions will be emphasized. This historically oriented theoretical framework will be compared to location, central place, and interregional feedback theories.

**CRP 639.06 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World-II: Current Policy Perspective**

Spring. 4 credits variable.  
The course focuses on what the market can or cannot accomplish in terms of guiding economic industrial, and regional development. Points of view represented range from completely unrestricted market operations to proactive industrial development policies in market contexts. Lessons are devised for Third World regional development policy drawn from the experience.

**CRP 642 Critical Theory and the Micro-Politics of Practice**

Spring. 4 credits variable.  
Trying to "solve problems," planners and policy analysts set agendas, shape participation, and negotiate relations of power. This seminar explores theories illuminating the communicative micro-politics of their daily practice. We explore issues of power and discourse, practical judgment and deliberation, productive and reproductive aspects of prismatic, political speech, and action in diverse practical settings.

**CRP 653 Legal Aspects of Land-Use Planning**

Spring. 3 credits. Offered alternate years.  
Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

**CRP 655 Real Estate Project Workshop**

Spring. 3 credits. Permission of instructor required.  
Students will be asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships will be required. A range of types of problems that may be encountered in the real estate field will be addressed, including project feasibility, marketing, planning and design, legal

constraints and concerns, etc. Projects will focus on real world case studies and will require professional level reports suitable for oral and written presentations.

**CRP 657 Real Estate Law**

Fall. 3 credits. Letter grade.  
Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Discussion of current legal issues affecting real estate industry.

**CRP 658 Residential Development**

Spring. 3 credits. Letter grade.  
The course explores the residential development process from site acquisition through delivery and servicing of the finished product. Topics to be covered include market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing and sales activities, and customer service. Current issues in providing competitive housing products in today's markets will also be explored. Composition of the residential development project team will be discussed, and classes will be supplemented by presentations from visiting professionals as well as a visit(s) to an actual project(s).

**CRP 661 Historic Preservation Planning Workshop: Plans and Programs**

Fall or spring. 1-4 credits. Prerequisite: CRP 561.  
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

**CRP 662 Seminar in American Urban History (also CRP 361)**

Spring. 3 credits. Prerequisite: permission of instructor.  
For description, see CRP 361.

**CRP 663 Historic Preservation Law**

Spring. 3 credits. Offered alternate years.  
Law of historic district and landmark designation, tools for preservation (such as police power, taxation, eminent domain), and recent developments in state and federal historic preservation.

**CRP 664 Economics and Financing of Neighborhood Conservation and Preservation**

Spring. 3 credits.  
The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

**CRP 665 Preservation Planning and Urban Change**

Fall. 3 credits.  
An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

**CRP 666 Pre-Industrial Cities and Towns of North American (also LA 666)**

Fall. 3 credits. S-U grades optional.  
For description, see LA 666.

**CRP 669.40 The History of Urban Form in America (also CRP 395.40)**

Fall. 3 credits.  
For description, see CRP 395.40.

**CRP 670 Regional Planning and Development in Developing Nations**

Fall or spring. 4 credits. Prerequisite: second-year graduate standing.  
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

**CRP 671 Seminar in International Planning**

Spring. 1 credit. S-U grades only.  
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

**CRP 672 International Institutions**

Fall. 3 credits. Letter grade.  
Studying major international organizations of the post-WWII period like the UN, ILO, GATT-WTO, World Bank and IMF, and Bretton Woods. We examine how they functioned during and after the globalizing international economy. We explore weaknesses in global governance and in the international financial system, and we assess current debates and proposals for reform.

**CRP 674 Third World Urbanization (also CRP 474)**

Spring. 4 credits. S-U grades optional.  
For description, see CRP 474.

**CRP 675 Seminar in Project Planning in Developing Countries**

Fall. 4 credits.  
An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

**CRP 677 Issues in African Development (also CRP 477)**

Fall or spring. 1 credit. S-U grades only.  
For description, see CRP 477.

**CRP 683 Environmental Aspects of International Planning (also CRP 453)**

Fall. 3 credits.  
For description, see CRP 453.

**CRP 703 Contemporary Theories of Regional Development**

Fall or spring. 4 credits.  
An advanced seminar, mainly for doctoral candidates, to review recent contributions to

the literature. After a fast-paced review of basic material in political economy, students will read and present summaries of works by major contemporary theorists. A final paper is required.

**CRP 711 Planning and Organization Theory**

Fall or spring. 4 credits.  
Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussion characterize the course.

**CRP 732 Methods of Regional Science and Planning III**

Fall or spring. 3 credits. Prerequisites: CRP 632 and CRP 633 or permission of the instructor.

An introduction to the design and implementation of Social Accounting Matrix and Computable General Equilibrium models and their uses, primarily in a regional context, for planning and policy analysis. The use of econometric methods and CGE models will be discussed. The GAMS software package will be used in related computer exercises.

**CRP 733 Seminar in Regional Models**

Fall or spring. 3 credits. S-U grades optional. Prerequisites: sufficient methodological background to read the current literature.  
A review of the classical and important current literature on socioeconomic and/or environmental models of subnational regions. Each student will be expected to identify his or her own area of interest and critically review and report to the class on important papers in that area.

**CRP 790 Professional Planning Colloquium I**

Fall. 1 credit.  
Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester's end.

**CRP 791 Master's Thesis in Regional Science**

Fall or spring. 12 credits variable. S-U grades optional. Hours to be arranged. Regional Science faculty.

**CRP 792 Master's Thesis, Project, or Research Paper**

Fall or spring. 10 credits variable. S-U grades optional.

**CRP 794 Planning Internships**

Fall, spring, or summer. 1-12 credits variable.  
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal,

urban, and regional policy from the perspective of planning practice.

**CRP 795 Master's Thesis in Preservation Planning**

Fall or spring. 1-6 credits variable.

**CRP 796 Professional Writing and Publishing (Colloquium)**

Fall or spring. 2 credits. S-U grades only. Individual and group projects culminating in the production of a professional journal.

**CRP 797 Supervised Readings**

Fall or spring. 4 credits variable. Limited to graduate students. Prerequisites: permission of instructor.

**CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis**

Fall or spring. 1 credit.  
Presentation and discussion of current research by faculty, visitors, and graduate students working on their dissertations. Typically, the colloquium will meet once a week during the semester.

**CRP 800 Advanced Seminar in Urban and Regional Theory I**

Fall. 3 credits.  
The theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intraregional and intraurban distribution of population and economic activity are reviewed.

**CRP 801 Advanced Seminar in Urban and Regional Theory II**

Spring. 3 credits.  
A continuation of City and Regional Planning 800, concentrating on recent developments.

**CRP 810 Advanced Planning Theory**

Fall. 3 credits.  
A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

**CRP 830 Seminar in Regional Science, Planning, and Policy Analysis**

Fall or spring. 4 credits variable. S-U grades only.  
This seminar will provide an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered will vary each year. Empirical and analytical research will be emphasized. Students will be expected to prepare and present a research paper during the semester on some aspect of the topics under review.

**CRP 890 Planning Research Seminar I**

Fall or spring. 2 credits.  
Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

**CRP 892 Doctoral Dissertation**

Fall or spring. 1-2 credits variable.

**Special Topic Courses**

Fall or spring. Variable credit.  
Typical topics are:

- CRP 609 Urban and Regional Theory**
- CRP 619 Planning Theory and Politics**
- CRP 629 Quantitative Methods and Analysis**
- CRP 639 Regional Development Planning**
- CRP 649 Social-Policy Planning**
- CRP 659 Urban Development Planning**
- CRP 669 History and Preservation**
- CRP 679 Planning and Developing Regions**
- CRP 689 Environmental Planning**
- CRP 699 Regional Science**
- CRP 719 Planning Theory and Politics**

## LANDSCAPE ARCHITECTURE

Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

### The Program

Program faculty: M. I. Adleman, S. Baugher, K. L. Gleason, H. Gottfried, chair; P. Horrigan, R. Jaenson, D. W. Krall, L. J. Mirin, R. T. Trancik, P. J. Trowbridge, K. A. Wolf.

Landscape Architecture offers a three-year Master of Landscape Architecture License Qualifying Degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in Landscape Architecture, a concentration in a subject related to the core courses, and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, and six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program, administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

### Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

### Course Information

- \*LA 141 Grounding in Landscape Architecture**  
Fall. 4 credits.
- \*LA 142 Grounding in Landscape Architecture**  
Spring. 4 credits.
- \*LA 201 Medium of the Landscape**  
Fall. 5 credits.
- \*LA 202 Medium of the Landscape**  
Spring. 5 credits.
- \*LA 260 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 666)**  
Fall. 3 credits.
- \*LA 261 Urban Archaeology (also CRP 261)**  
Fall. 3 credits.
- \*LA 262 Laboratory in Landscape Archaeology (also ARKEO 262)**  
Spring. 3 credits.
- \*LA 263 American Indians, Planners, and Public Policy (also CRP 363/547 and LA 547)**  
Spring. 3 credits.
- \*LA 282 The American Landscape**  
Fall. 3 credits.
- \*LA 292 Creating a Second Nature**  
Spring. 3 credits.
- \*LA 301 Integrating Theory and Practice I**  
Fall. 5 credits.
- \*LA 302 Urban Design in Virtual Space**  
Spring. 5 credits.
- \*LA 315 Site Engineering I**  
Spring. 2 credits.
- \*LA 316 Site Engineering II**  
Fall. 2 credits.
- \*LA 318 Site Construction**  
Spring. 5 credits.
- \*LA 402 Integrating Theory and Practice**  
Spring. 5 credits.
- \*LA 410 Computer Applications in Landscape Architecture**  
Fall or spring. 3 credits.
- \*LA 412 Professional Practice**  
Spring. 1 credit.
- \*LA 483 Design Criticism**  
Fall. 3 credits.
- [\*LA 486 Community Design Workshop**  
Spring. 3 credits. Not offered 2000–2001.]
- [\*LA 487 Experiential Community Design**  
Fall. 3 credits. Not offered 2000–2001.]
- \*LA 490 Rome Wasn't Built in a Day**  
Spring. 3 credits.
- \*LA 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491)**  
Fall. 3 credits.
- \*LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment**  
Spring. 3 credits.
- \*LA 494 Special Topics in Landscape Architecture**  
Fall or spring. 1–3 credits.

### LANAR 497 Individual Study in Landscape Architecture

Spring. 1–5 credits; may be repeated for credit. S-U grades optional. L. J. Mirin.  
Work on special topics by individuals or small groups.

**\*LA 498 Undergraduate Teaching**  
Fall or spring. 1–2 credits.

**\*LA 501 Composition and Theory**  
Fall. 5 credits.

**\*LA 502 Composition and Theory**  
Spring. 5 credits.

**\*LA 505 Graphic Communication I**  
Fall. 3 credits.

**\*LA 506 Graphic Communication II**  
Spring. 3 credits.

### LANAR 524 History of European Landscape Architecture

Fall. 3 credits. L. Mirin.  
A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

### LANAR 525 History of American Landscape Architecture

Spring. 3 credits. L. Mirin.  
Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

**\*LA 545 The Parks and Fora of Imperial Rome**  
Spring. 3 credits.

**\*LA 547 Americans, Indians, Planners, and Public Policy (also CRP 363/547 and LA 263)**  
Spring. 3 credits.

**\*LA 569 Archaeology in Preservation Planning and Site Design (also CRP 569)**  
Spring. 3 credits.

**\*LA 582 The American Landscape**  
Fall. 3 credits.

**\*LA 590 Theory Seminar**  
Spring. 3 credits.

**\*LA 598 Graduate Teaching**  
Fall or spring. 1–2 credits.

**\*LA 601 Integrating Theory and Practice I**  
Fall. 5 credits. Limited to graduate students.

**\*LA 602 Integrating Theory and Practice II**  
Spring. 5 credits. Limited to graduate students.

**\*LA 615 Site Engineering I**  
Spring. 2 credits.

**\*LA 616 Site Engineering II**  
Fall. 2 credits.

**\*LA 618 Site Construction**

Spring. 5 credits. Weeks 8-15.

**\*LA 619 Advanced Site Grading**

Spring. 2 credits.

**\*LA 666 Pre-Industrial Cities and Towns of North America (also CRP 360/666 and LA 260)**

Fall. 3 credits.

**\*LA 680 Graduate Seminar in Landscape Architecture**

Fall or spring. 1-3 credits.

**\*LA 694 Special Topics in Landscape Architecture**

Fall or spring. 1-3 credits.

**\*LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)**

Fall. 5 credits.

**\*LA 702 Advanced Design Studio**

Spring. 5 credits.

**\*LA 800 Master's Thesis in Landscape Architecture**

Fall or spring. 9 credits.

\*Offered through the College of Agriculture and Life Sciences.

## DIVISION OF BIOLOGICAL SCIENCES

The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

### ORGANIZATION

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), which includes the Behrman Biology Advising Center. Co-located in Stimson Hall, the professional and student advisers provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisers in the OUB also follow the progress of biology majors and work closely with faculty advisers. Additional services and resources of the Biology Center include tutoring, lecture tapes, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic and career advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner *Westward* or brigantine *Corwith Cramer*.

### DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108 or any combination of the first term of one sequence and the second term of another. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) satisfies the requirement for introductory biology. The additional credits may be satisfied by any biological sciences courses *except* *BIOG 200* (unless permission is obtained), *BIOG 209*, or *BIOSM 367*.

For students in the College of Arts and Sciences who matriculate fall 1992 or later, all biology ("BIO") courses can be used toward fulfillment of the biological distribution requirement *except* *BIOG 200* (unless permission is obtained), *BIOG 209*, or *BIOSM 367*. The following courses are especially

suitable for the distribution requirement because they have no prerequisites: *BIO G 101–104*, *105–106*, *107–108*, *109–110*, *170*, *202*, *207*; *BIOES 154*, *264*, *275*; *BIOGD 184*; *BIOMI 192*; *BIOAP 212*; *BIOPL 240*, *241*. *Note that introductory biology can only count for distribution credit when taken as a two-semester sequence: 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108, or a combination of the first term of one sequence and the second term of another.* Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) may be applied to the Group 1 distribution area in accordance with regulations stipulated by the Arts College.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from *BIO G 109–110*, *101* and *103* plus *102* and *104*, *105–106* or *107–108* or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) also satisfies the distribution requirement in the natural sciences.

*Note:* *BIO G 101–102–103–104* should be taken as a unit by students of any college except those with advanced placement credit.

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.

### USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.
2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals. (DHEW publication 86–23, revised 1996; see p. 14, *Courses of Study*), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any

biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).
4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Fred Quimby, at 253–3520. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.
5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS...) at the first meeting of the course."

### ADVANCED PLACEMENT

For information on credit for advanced placement in Biological Sciences, please see the section on Advanced Placement in the front of this publication.

### THE MAJOR

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges through the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to re-evaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology adviser, and to take advantage of the advising and counseling resources of the

Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1-8 must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S-U only or if the student's adviser grants permission.

- 1) **Introductory biology for majors** (one year): BIO G 101 and 103 plus 102 and 104, or 105-106. BIO G 107-108, offered during the eight-week Cornell Summer Session for eight credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking BIO G 101-102, 101 and 103, 102 and 104, or 103-104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (216 Stimson Hall) to determine which semester to complete the introductory biology requirement. For students in doubt, completion of BIO G 101 and 103 is advised. These students receive a total of eight introductory biology credits (four AP credits plus four course credits).
- 2) **General chemistry** (one year): Chemistry 207-208,\* or 206-208, or 215-216.\*
- 3) **College mathematics** (one year): one semester of calculus (Mathematics 106, 111, 191 or their equivalent) plus one semester selected from the following:
  - a. a second semester of calculus (Mathematics 112, 192, or their equivalents).
  - b. a course in finite mathematics (Biometry 101, 417, Mathematics 105, 231).
  - c. a course in statistics (Biometry 261, Mathematics 171, Agriculture and Resource Management 210, Psychology 350, Industrial and Labor Relations 210 and 211).

Students interested in quantitative aspects of biology (e.g., computational, physical, population biology) are advised to satisfy the mathematics requirement with two semesters of calculus.

- 4) **Organic chemistry:** Chemistry 257 and 251, or 357-358 and 251, or 357-358 and 301, or 359-360 and 251, or 359-360 and 301.
- 5) **Physics:** Physics 207-208,\* 112-213,\* or 101-102. Those who take Physics 112-213 are advised to complete Physics 214 as well.
- 6) **Genetics:** BIOGD 281.
- 7) **Biochemistry:** BIOBM 330, or 331 and 332, or 333.
- 8) **Evolutionary Biology:** BIOES 278 or BIOPL 448.
- 9) **A program of study** selected from the outline below.

- 10) **Foreign language:** students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement for the biology major by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least six college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

\*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the Program of Study Requirements.

### Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible programs of study are listed below.

- 1) **Animal Physiology:** BIOAP 311, Introductory Animal Physiology, Lectures; BIOAP 313, Histology: The Biology of the Tissues; BIOAP 316, Cellular Physiology; and BIOAP 319, Animal Physiology Experimentation. The Program of Study in Animal Physiology emphasizes whole-animal, tissue, and cell physiology, and provides considerable opportunity for studies using live animals. It is intended especially for students contemplating careers in biomedical practice or research. Advanced courses, though not required, include BIOAP 419, Advanced Animal Physiology Experimentation, which permits selected students to conduct supervised research projects of their choice, and BIOAP 458, Mammalian Physiology, which provides in-depth coverage of selected topics in mammalian and human physiology.
- 2) **Biochemistry:** Chemistry 300, Quantitative Chemistry; six credits of organic chemistry (Chemistry 357-358 or 359-360); a minimum of four credits of organic chemistry laboratory (Chemistry 301-302 or 251-252-302 or 301 or 251-252); four credits of biochemistry

laboratory courses (BIOBM 430); and Physical Chemistry (Chemistry 389-390 or 287-288 or 287-390 or 389-288).

Note: Chemistry 288 is designed for biologists. Five hours of Biochemistry are recommended (331 and 332 or 330 and 334) and students interested in graduate work in biochemistry should take Physics 207-208 and consider taking a third semester of calculus in preparation for CHEM 389-390. Be sure to complete CHEM 207-208 or 215-216 during the freshman year.

- 3) **Molecular and Cell Biology.** Chemistry 357-358 or 359-360; BIOBM 432, Survey of Cell Biology; four credits of BIOBM 430, Laboratories in Biochemistry, Molecular and Cell Biology, and at least seven additional credits of courses that have a cell biological or molecular biological orientation. The seven additional hours should include at least two courses from the following list (underlined courses are recommended as providing breadth in molecular and cell biology): BIOAP 619, Lipids; BIOAP 658, Molecular Mechanisms of Hormone Action; BIOBM 434, Applications of Molecular Biology; BIOBM 437, Eukaryotic Cell Proliferation; BIOBM 631, Protein Structure and Function; BIOBM 632, Membranes and Bioenergetics; BIOBM 633, Biosynthesis of Macromolecules; BIOBM 635, Mechanisms of Metabolic Regulation and Mammalian Gene Expression; BIOBM 636, Cell Biology; BIOBM 639, The Nucleus; BIO G 305, Immunology; BIOBM 407, Nature of Sensing and Response: Signal Transduction in Biological Systems; BIOBM 439, Molecular Basis of Human Disease; BIOGD 385, Developmental Biology; BIOGD 483, Molecular Aspects of Development; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOGD 682, Fertilization and the Early Embryo; BIOPL 343, Molecular Biology and Genetic Engineering of Plants; BIOPL 347, Laboratory in Molecular Biology and Genetic Engineering of Plants; BIOPL 444, Plant Cell Biology; BIOPL 641, Laboratory in Plant Molecular Biology; BIOPL 652, Plant Molecular Biology II; BIOPL 290, General Microbiology, Lectures; BIOPL 408, Viruses and Disease; BIOPL 485, Bacterial Genetics; BIOPL 692, Protein-Nucleic Acid Interactions; BIONB 222, Neurobiology and Behavior II: Introduction to Neurobiology; BIONB 325, Neurodisorders-Molecular Aspects; BIONB 425, Natural History of Ion Channels; BIONB 495, Molecular and Genetic Approaches to Neurosciences. Five hours of biochemistry are recommended (BIOBM 331 and 332 or 330 and 334). Be sure to complete CHEM 207-208 or 215-216 during the freshman year.
- 4) **Ecology and Evolutionary Biology:** BIOES 261, Ecology and the Environment, and 10 credits from the following course lists, including at least one course from each group:
  - (a) BIOPL 241, Introductory Botany; BIOES 274, The Vertebrates: Structure, Function, and Evolution; BIOES 373, Biology of the Marine

Invertebrates; BIOMI 415, Bacterial Diversity; BIOES 471, Mammalogy; BIOES 472, Herpetology; BIOES 475, Ornithology; BIOES 476, Biology of Fishes; ENTOM 212, Insect Biology.

- (b) BIOES 263, Field Ecology; BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOES 452, Herbivores and Plants: Chemical Ecology and Coevolution; BIOES 455, Insect Ecology; BIOES 456, Stream Ecology; BIOES 457 and 459, Limnology: Ecology of Lakes, Lectures and Laboratory; BIOES 461, Population and Evolutionary Ecology; BIOES 462, Marine Ecology; BIOES 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; BIOES 464, Macroevolution; BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory; BIOES 473, Ecology of Agricultural Systems; BIOES 478, Ecosystem Biology; BIOES 479, Paleobiology; BIOGD 481, Population Genetics; BIOGD 484, Molecular Evolution.

*Note:* One 400-level, four-credit course (including four credits from BIOSM 364) offered at Shoals Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

*Note:* The Ecology and Evolutionary Biology program of study offers an undergraduate specialization in Marine Biology and Oceanography. A description of this specialization can be found in the section entitled COURSES IN MARINE SCIENCE.

*Note:* The Organization for Tropical Studies (OTS) offers an Undergraduate Semester Abroad Program, featuring two courses in biology (Fundamentals of Tropical Biology and Field Research in Tropical Biology) and one course each in Environmental Policy and Latin American Culture. Cornell biology majors, with a concentration in Ecology and Evolutionary Biology, who complete the OTS Program as part of Cornell Abroad can substitute the credit earned from the biology courses for two three-credit courses at the 400 level from list (b). The OTS Program is administered through Duke University. Applications are available at Cornell Abroad, 474 Uris Hall.

- 5) *General Biology:* The Program of Study in General Biology requires a minimum of 13 credit hours in addition to courses counted toward requirements 1–10 on page 144. These 13 credits must include

- 1) One course from each of three different programs of study in biology. Only those courses specifically listed as fulfilling a program of study requirement are acceptable without permission of adviser.
- 2) a course with a laboratory, and
- 3) a minimum of two upper-level (300 and above) courses of two or more credits each.

100-level courses are not acceptable for meeting any of these requirements.

BIOPL 341 may not count as the lab course; BIO G 498 may not be used to fulfill the requirements of this program of study. BIO G 499 (minimum of two credits, but no more than three credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser, but it cannot count as a course representing a program of study.

*Note:* It is possible to use a single course to fulfill more than one requirement. For example, BIOES 472, Herpetology, could count in all three areas: as a course in the Ecology & Evolutionary Biology program of study, as an upper level course, and as a course with a lab.

- 6) *Genetics and Development:* A minimum of 13 credits, usually chosen from the following courses: BIOGD 385, Developmental Biology; BIOGD 387, Developmental Aspects of Evolution; BIOGD 389, Embryology; BIOGD 480, Seminar in Developmental Biology; BIOGD 481, Population Genetics; BIOGD 482, Human Genetics and Society; BIOGD 483, Molecular Aspects of Development; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOMI 485, Bacterial Genetics, BIONB 493, Developmental Neurobiology; BIOPL 343, Molecular Biology and Genetic Engineering of Plants; BIOGD 450, Vertebrate Development.

Students may also choose from the following courses to complete the 13-credit requirement: BIOGD 682, Fertilization and Early Development; BIOGD 684, Advanced Topics in Population Genetics; BIOGD 687, Developmental Genetics; BIOBM 633, Biosynthesis of Macromolecules; BIOBM 639, The Nucleus; BIOES 663, Theoretical Population Genetics; BIOMI 694, Genetics of Diverse Bacteria; BIOPL 641, Laboratory in Plant Molecular Biology; BIOPL 644, Plant Growth and Development; BIOPL 652, Plant Molecular Biology II; BIOPL 653, Plant Molecular Biology I; PL BR 606, Advanced Plant Genetics.

Up to three credits for this program of study may be chosen from other biological sciences courses, including BIO G 499, Undergraduate Research in Biology, with approval of the faculty adviser.

- 7) *Microbiology:* BIOMI 290, General Microbiology, Lectures; BIOMI 291, General Microbiology, Laboratory; BIOMI 300, Seminar in Microbiology; and at least three courses chosen from the following: BIOMI 391, Advanced Microbiology Laboratory; BIOMI 415, Bacterial Diversity; BIOMI 416, Bacterial Physiology; and BIOMI 485, Bacterial Genetics.
- 8) *Neurobiology and Behavior:* The two-semester introductory course sequence, Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion section (four-credits per term), and seven additional credits. These additional credits must include a course from the neurobiology and behavior offerings (this course can NOT be BIONB 420, 720 or BIOG 499). However, BIONB 420, 720 and BIO G

499 MAY be used to supplement this neurobiology and behavior course to fulfill the seven additional credits. Please consult with your advisor for courses that may be applied towards the seven additional credits that are not listed in the Biological Sciences course offerings. BIO G 498 may not be used to fulfill the requirements of this program of study.

*Note:* Students who declare the Program of Study in Neurobiology and Behavior after taking BIONB 221 or 222 for only three credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W363 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

- 9) *Nutrition:* NS 331, Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least nine credits of additional coursework in the biological aspects of nutrition, such as NS 315, Obesity and the Regulation of Body Weight; NS 332, Methods in Nutritional Sciences; NS 431, Mineral Nutrition and Chronic Disease; NS 441, Nutrition and Disease; NS 475, Molecular Nutrition and Development; NS 602, Lipids; and NS 604, The Vitamins; and NS 614, Topics in Maternal and Child Nutrition. Some courses require NS 115 Nutrition and Health: Concepts and Controversies, which may be used as part of the additional nine credits.

*Note:* For students in the College of Agriculture and Life Sciences, credits in NS courses count towards the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits will count toward the 100 hours required in A&S if those credits fulfill major requirements.

- 10) *Plant Biology:* Students choose one area of study from the following two options:

Option (a) *Botany:* Students are required to take Introductory Botany (BIOPL 241). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 247, Ethnobiology; BIOPL 248, Taxonomy of Vascular Plants; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOPL 345, Plant Anatomy; BIOPL 444, Plant Cell Biology; BIOPL 445, Photosynthesis; BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOES 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory.

Option (b) *Plant Biotechnology:* Students are required to take BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits

from the following list: BIOPL 241, Introductory Botany; BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 444, Plant Cell Biology; BIOPL 648, Plant Biochemistry; PL BR 401, Plant Cell and Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

- 11) *Systematics and Biotic Diversity*: A minimum of 13 credits from the following two groups, including at least seven credits from Group A, and three from Group B, and at least two laboratory courses (marked with \*). BIOG 499, Undergraduate Research in Biology, with approval of the adviser, can be used in fulfillment of up to four credits in Group A, and can count as one laboratory course if it has a laboratory component of two or more credits.

(a) \*BIOES 274, The Vertebrates: Structure, Function, and Evolution; \*BIOES 371, Human Paleontology; \*BIOES 373, The Invertebrates: Form, Function, and Evolution; \*BIOES 471, Mammalogy; \*BIOES 472, Herpetology; \*BIOES 475, Ornithology; \*BIOES 476, Biology of Fishes; BIOMI 290, General Microbiology, Lectures; \*BIOMI 291, General Microbiology, Laboratory; BIOMI 415, Bacterial Diversity, Lectures; \*BIOPL 241, Introductory Botany; \*BIOPL 243, Taxonomy of Cultivated Plants; BIOPL 247, Ethnobiology; \*BIOPL 248, Taxonomy of Vascular Plants; BIOPL 343, The Healing Forest; BIOPL 645, Families of Tropical Flowering Plants—Lecture; \*BIOPL 646, Families of Tropical Flowering Plants—Lab; \*ENTOM 212, Insect Biology; ENTOM 215, Spider Biology: Life on a Silken Thread; \*ENTOM 322, Insect Morphology; \*ENTOM 331, Introductory Insect Systematics; \*ENTOM 471, Freshwater Invertebrate Biology; \*ENTOM 631, Systematics of the Coleoptera; PL PA 309, Introductory Mycology; \*PL PA 319, Field Mycology.

(b) BIOES 464, Macroevolution; BIOES 479, Paleobiology; \*BIOPL 440, Phylogenetic Systematics; BIOPL 447, Molecular Systematics; \*BIOPL 448, Plant Evolution and the Fossil Record; \*BIOPL 453, Historical Biogeography; BIOPL 442, Current Topics in Ethnobiology.

- 12) *Independent Option*: Students who want to undertake a course of study not covered by the existing programs of study may petition the Biological Sciences Curriculum Committee. Information on independent option and Curriculum Committee petition forms are available in the Office of Undergraduate Biology, 216 Stimson Hall.

**Genomics and Bioinformatics.** The term "genomics" refers to new ways that diverse biological problems can be addressed due to the availability of exponentially increasing amounts of data from genome sequencing and gene expression studies. Fueling the genomics

explosion is a corresponding revolution in the management and analysis of data. This subdiscipline is often called "computational genomics" or, more broadly, "bioinformatics."

The impact of genomics is sweeping, from genetics and biochemistry to systematics and ecology, and courses scattered throughout the various biology programs of study introduce genomic concepts and incorporate bioinformatic approaches. Some examples of biology courses with informatics and computational components or applications are: BIOBM 233 (Introduction to Biomolecular Structure); BIOBM 334 (Computer Graphics and Molecular Biology); BIOBM 434 (Applications of Molecular Biology to Medicine, Agriculture, and Industry); BIOES 261 (Population and Evolutionary Ecology); BIOGD 481 (Population Genetics); BIONB 422 (Modeling Behavioral Evolution); BIOPL 440 (Phylogenetic Systematics); BIOPL 453 (Principles and Practice of Historical Biogeography).

Students majoring in biology and having proficiency with computers and computer programming may wish to consider a career in bioinformatics. The computer, mathematical, and statistical skills required for a solid grounding in informatics go beyond what is required in the biology major. Therefore, students wishing to major in biology with an eye toward a career in bioinformatics should choose a biology program of study that most closely matches their interests in biology and also should take courses from the following lists of non-biology foundation courses.

#### Essential Bioinformatics foundation courses:

MATH 111\*, 112\*, and 213 or 221 (calculus and linear algebra courses)

COM S 100 (Introduction to Computer Programming)

BTRY 417 (Matrix Algebra)

\*Can be used to fulfill mathematics requirement for biology major

#### Additional relevant foundation courses:

BTRY 408/409 (Theory of Probability/Statistics)

BTRY 601/602 (Statistical Methods)

BTRY 682 (Statistical Methods for Molecular Biology; undergraduate section to be offered in spring 2002).

COM S 211 (Computers and Programming)

COM S 222 (Introduction to Scientific Computation)

COM S 221 (Numerical Methods in Computational Molecular Biology)

COM S 409 (Data Structure and Algorithms for Computational Science)

MATH 222 (Linear Algebra and Calculus)

#### Independent Research and Honors Program

Individual research projects under the direction of a faculty member are encouraged as an important part of a biology education. Students interested in participating in research should contact faculty members with compatible research interests. Faculty members may consider students' previous academic accomplishments, interests and goals, and the availability of space and

equipment when agreeing to supervise a student in his or her laboratory. Students conducting independent research may enroll for credit in Biological Sciences BIO G 499, Undergraduate Research in Biology, and must register for this course in 216 Stimson Hall. The student's research project must have significant biological content in order to be considered for BIO G 499 credit. Students may not earn credit for research conducted outside of Cornell. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall.

Up to three credits of research may be used to complete the program of studies in general biology, genetics and development, systematics and biotic diversity, as well as four credits of research in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office of Undergraduate Biology, 216 Stimson Hall, and must be submitted early in the senior year to the Honors Program Committee by the announced deadline. Application forms for the honors program are separate from the enrollment forms for BIO G 499, Undergraduate Research in Biology. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.0. In addition, students must have at least a 3.0 Cornell cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill major requirements are included in this computation.) In addition, candidates must have a Cornell faculty member in Biological Sciences to supervise their research. Students who select supervisors outside of Biological Sciences must arrange for a cosigner within Biological Sciences. The cosigner must agree to meet with the student on a regular basis, report to the Honors Program Committee on the progress of the work approximately two months before the thesis is due, and to serve as a reviewer of the thesis. An honors candidate usually enrolls for credit in BIO G 499, Undergraduate Research in Biology under the direction of the faculty member acting as honors supervisor, although it is not necessary. Requirements of the honors program include participation in honors research seminars during two semesters, submission of an acceptable honors thesis, completion of all major requirements, and maintenance of the 3.00 Cornell cumulative grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final grade point average is a factor in determining the level of honors recommended.

Students interested in the honors program should consult their faculty advisers early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of their senior year. Students

who are considering study abroad during their junior year should consult with a member of the Honors Committee during their sophomore year to plan a reasonable schedule for honors research. The Honors Program requires that student participants attend honors seminars in which they give oral presentations during the first and second semesters of their senior year. Therefore, students who are considering studying away from campus during their senior year should consult with a member of the Honors Committee no later than the beginning of the first semester of their junior year. Information pertaining to faculty research activities, thesis due dates, seminars, and other requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall.

## CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biological Sciences Curriculum Committee. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested persons.

## ADVISING

Students in need of academic advice are encouraged to consult their advisers or come to the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the multidisciplinary program of Biology and Society should see "Special Programs and Interdisciplinary Studies," in the College of Arts and Sciences section of this catalog.

## INDEX OF COURSES

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOBM; Ecology and Systematics, BIOES; Genetics and Development, BIOGD; Microbiology, BIOMI; Neurobiology and Behavior, BIONB; Plant Biology, BIOPL; Shoals Marine Laboratory, BIOSM.

Note: Biological sciences ("BIO") courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

## GENERAL COURSES (BIO G)

Biological Sciences teaches three introductory biology course sequences during the academic year: BIO G 101-104, BIO G 105-106, and BIO G 109-110; and one during the eight-week summer session: BIO G 107-108. BIO G 101-104, 105-106, and 107-108 are intended for biological sciences majors and other students needing eight credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. BIO G 109-110 is a course sequence intended for nonmajors, and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of eight credits in introductory biology (including advanced placement credits).

### BIO G 101-102 Biological Sciences, Lectures

101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional, with permission of instructor. Lecs, M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 21 and Oct. 31; spring, Feb. 22 and Apr. 3. T. G. Owens and C. Walcott.

Designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in the light of modern evolutionary theory and discussions of plant and animal systems are integrated. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

### BIO G 103-104 Biological Sciences, Laboratory

103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. No admittance after second week of classes. S-U grades optional, with permission of instructor. Lab, M T W or R 1:25-4:25, M or W 7:30-10:30 P.M., or T R or S 8-11. One 3-hour lab each week and a weekly lec for discs, special lecs, etc. J. C. Glase, P. R. Ecklund, and staff.

BIO G 103-104 is designed to provide laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, biotechnology, invertebrate diversity, plant and animal development, and ecology. During the first semester, dissection of a doubly-pithed frog is included. Pithing is done by the instructor. Dissection of several invertebrates occurs during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

### BIO G 105-106 Introductory Biology

105, fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. May not be taken for credit after BIO G 101-104 or 109-110. No admittance after first week of classes. Estimated cost for dissection kit, \$11. S-U grades optional, with permission of instructor. Lec, T 9:05 (first lec of fall term, R 8/24 9:05); additional study and lab hours TBA. C. H. McFadden and staff.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects in the spring semester are genetics, development, ecology, evolution,

behavior, and the diversity of organisms (accompanied by preserved and anesthetized invertebrate dissection). Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of pre-dissected specimens, students who object to dissections should take BIO G 101-104. The course uses an autotutorial format and offers considerable flexibility in scheduling.

Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam.

### BIO G 107-108 General Biology

Summer (8-week session); 107, weeks 1-4; 108, weeks 5-8). 4 credits each. Prerequisite: one year of college or permission of instructor; BIO G 101-103, 105, or 107 is a prerequisite for 108. Fee, \$25 for weeks 1-4; \$15 for weeks 5-8. Lecs, M-R 9-12; labs, M T R 1:30-4:30, F 9-12. Staff.

Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organ system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. BIO G 108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. BIO G 107-108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

### BIO G 109-110 Biological Principles

109, fall; 110, spring. 3 credits each term. Limited to 600 students. A passing grade in 109 or 101-103 or 105 is prerequisite to 110 unless written permission is obtained from the instructor and the student has at least 3 credits of college biology. Since 109-110 together constitute an integrated survey, 109 cannot be used to satisfy the College of Arts and Sciences or College of Agriculture and Life Sciences distribution requirement unless it is followed by 110 or an exemption is obtained from the instructor. May not be taken for credit after BIO G 101-104 or 105-106. This course sequence may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology but may not be used as an introductory course for the major in biological sciences. *Note that this course satisfies the prerequisite for many, but not all second- and third-level courses in biology.* Letter grade only. Students do

not choose lab sections during course enrollment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks. Evening prelims: fall, Sept. 21 and Oct. 31; spring, Feb. 22 and Apr. 3. Lects, M W F 9:05 or 10:10; lab, M T W R or F 2-4:25 or T 10:10-12:35. H. Greene, R. Turgeon, C. Eberhard, and staff.

Students who do not plan to major in biology may take this broad introductory course. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Broad goals of the course encompass an understanding of the potential benefits and limitations of science, the complexity and workings of the natural world, and the internal machinery of life—how our bodies and those of other animals and plants work. Fall semester covers genetics and evolution, ecology and behavior, and conservation; spring semester covers cells, genetic engineering, function of plants and animals, and human health. Laboratory sections enable small groups of students to meet with course staff and are used for problem-solving experiments, demonstrations, and discussions. There are dissections of preserved vertebrate, invertebrate, and plant materials; for those students who object to dissection, alternative materials are available for study and there is no grade penalty for omitting dissection or observation of animals. Testing, for students choosing to be tested, will involve identification of important structures in real organisms.

#### **BIO G 170 Evolution of the Earth and Life (also GEOL 102)**

Spring. 3 credits. S-U grades optional. Lects, T R 9:05 or 11:15; lab, T W or R 2:00-4:25; field trips during lab. J. L. Cisne.

Earth systems and their evolution. Earth history's astronomical context. Plate tectonics, continental drift, and their implications for climate and life. Coevolution of life and the atmosphere. Precedents for ongoing global change. Dinosaurs; mass extinctions; human ancestry. Laboratories on reconstructing geological history and mapping ancient geography. Fossil-collecting on field trips.

#### **BIO G 200 Special Studies in Biology**

Fall, spring, or summer. 1-3 credits. Prerequisites: transfer- or special-student status and written permission from the Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S-U grades optional, with permission of instructor. Hours TBA. Staff.

A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used in fulfillment of college distribution requirements except by permission from the Office of Undergraduate Biology.

#### **[BIO G 202 The Diversity of Life]**

Fall. 3 credits. S-U grades optional. Lects, M W F 2:30. Not offered 2000-2001.

J. I. Davis, J. J. Doyle, E. Rodriguez.

The main focus of this course is on the diversity of living and extinct species. This diversity is examined from an evolutionary perspective, with attention to the principles

employed in the discovery of species and in the analysis of relationships among them. Interactions between humans and other species are examined during the latter portion of the semester.]

#### **BIO G 207 Evolution (also HIST 287 and S&TS 287)**

Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOES 278. Does not meet the evolutionary biology requirement for the biological sciences major. S-U grades optional. Fall: Lects, T R 10:10; disc, 1 hour each week TBA. W. B. Provine. Summer (6-week session): Lects and discs, M W 6:00-9:00 P.M. W. B. Provine.

Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology, and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

#### **BIO G 209 Introduction to Natural Science Illustration**

Summer (6-week session). 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional. Lects and labs, T R 6:30-9:30 P.M. B. S. King.

An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

#### **BIO G 305 Basic Immunology Lectures (also VETMI 315)**

Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional, with permission of instructor. Lects, T R 8:30-9:55. J. A. Marsh.

A survey of immunology, with emphasis on the biological functions of the immune response.

#### **BIO G 320 Principles of Toxicology (also VETMI 320)**

Spring. 3 credits. Prerequisites: 1 year each of introductory biology and chemistry, with lab; 1 semester of organic chemistry lecture or waiver by instructor. Lec T R 1:25-2:40. S. Penningroth, R. Dietert, and S. Bloom.

An introduction to the interdisciplinary science of toxicology is presented, including selected material from biology, chemistry, ecology and pharmacology. Basic principles are illustrated by examining several "toxicological contexts," for example, DDT toxicity to wildlife reproduction. Risk management is introduced as a new discipline in which regulatory agencies integrate science-based quantitative risk assessment with economic and social considerations to implement politically acceptable cleanups at hazardous chemical waste sites. Students form teams and present toxicological analyses of hypothetical "risk scenarios," recommending acceptable risk management strategies in response to environmental contamination. Occasional research talks by toxicology faculty introduce

students to basic research in this interdisciplinary branch of Biological Science.

This is an introductory level course in toxicology. The format is lecture, supplemented by case examples. It is appropriate for non-majors seeking basic literacy in environmental and human toxicology. It also serves as a "gateway course" for students interested in 400- and 600-level toxicology courses.

#### **BIO G 400 Undergraduate Seminar in Biology**

Fall or spring. Variable credit (1-3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional. Sem TBA. Staff.

From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty or faculty from the Sections of Ecology and Systematics, Genetics and Development, or Plant Biology. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester. For students interested in Biochemistry, Physiology, or Neurobiology, please see descriptions under appropriate section.

#### **BIO G 401 Introduction to Scanning Electron Microscopy**

Fall or spring, weeks 1-8. 1 credit. Limited to 8 students (fall), 12 students (spring). S-U grades optional. Fee may be charged. Lec, M 10:10; lab, T R or F 9:05-12:15 or T W or R 1:25-4:25. M. V. Parthasarathy.

An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the specimens, the students use the scanning electron microscope to study and obtain micrographs of features that interest them.

#### **BIO G 403 Transmission Electron Microscopy for Biologists**

Fall. 1, 3, or 4 credits (4 credits if student takes both sections). Limited to 12 students. Prerequisites: BIOAP 313, BIOPL 345 or 443. S-U grades optional. Two sections: Sec 01, 1 credit, weeks 1-4; sec 02, 3 credits, weeks 5-12. Students may register for one or both sections. Fee may be charged. Lec, T 11:15; labs, M W or T R 1:25-4:25. M. V. Parthasarathy.

Section 01, 1 credit, weeks 1-4, covers the principles and use of the transmission electron microscopy (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02, 3 credits, weeks 5-12, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials this section studies chemical fixtures, cryofixations, ultrathin sectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

#### **BIO G 405 Biology of the Neotropics**

Fall. 2 credits. Prerequisite: introductory biology (majors, non-majors, or equivalent), or permission of instructor. S-U grades optional. Lec and disc, W 7:30-9:30 P.M. P. H. Wrege, A. S. Flecker.

This course is an introductory survey of the biology of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn the basic characteristics and phenomena important to understanding neotropical biology, to gain firsthand knowledge of the resources in tropical biology available at Cornell, and to learn how to organize and execute a meaningful seminar presentation.

#### **BIO G 408 Presentation Skills Biologists**

Spring. 1 credit. Prerequisites: previous research experience. Preference given to students accepted into the Honors Program. L. Southard and G. Hess.

This course will cover oral and written communication skills used in presenting research to other scientists. Topics covered will include organization of scientific papers, presentation tips for research seminars, and preparation of visual aids using Power Point. All students will present a 10-minute seminar on their research and will evaluate other presentations.

#### **BIO G 410 Teaching Contemporary Biology**

Fall. 3 credits. Prerequisite: one year introductory biology; permission of instructor. L. Southard and S. Merkel.

This course provides students with the opportunity to experience teaching high school science. Students will concentrate on a topic of current public interest, then develop teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which will familiarize the students with the scientific content of the course. Students will then work in teams with high school teachers to develop their presentations. The final part of the course will include practice presentations and teaching at regional high schools.

#### **BIO G 431 Frontiers in Biophysics**

Fall. 1/2 credit. S-U grades only. Lec TBA. G. Feigenson and staff.

A day of lectures on Saturday 9/23 giving an overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates who are considering a career in biophysics and for graduate students who are interested in biophysics research opportunities at Cornell.

#### **BIO G 450 Light and Video Microscopy for Biologists**

Spring. 3 credits. Limited to 12 students. Prerequisites: one year of introductory biology and permission of instructor. Lects, T R 1:25-2:30; lab, R 2:30-4:30. R. O. Wayne.

Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living cells.

#### **BIO G 467 Seminar in the History of Biology (also HIST 415, B&SOC 447, and S&TS 447)**

Summer (6-week session). 4 credits. Limited to 18 students. S-U grades optional. W. B. Provine.

Specific topic changes each year.

#### **[BIO G 469 Food, Agriculture, and Society (also B&SOC 469 and S&TS 469)]**

Spring. 3 credits. Limited to 20 students. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Lects, T R 1:25-2:40. Not offered 2000-2001. Next offered spring 2002. A. G. Power.

A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.]

#### **BIO G 498 Teaching Experience**

Fall or spring. 1-4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent. *Arts students may not count this course toward graduation. They may, however, upon petition to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility, but not eligibility for graduating with distinction.* S-U grades optional, with permission of instructor. Hours TBA. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include BIO G 105-106; BIOAP 311, 313, 319; BIOBM 330, 331; BIOES 274, 475; and BIOMI 291, 292.

#### **BIO G 499 Undergraduate Research in Biology**

Fall or spring. Variable credit. *Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor.* Prerequisite: written permission of staff member who supervises the work and assigns the grade. *Students must register in the Office of Undergraduate Biology in 216 Stimson Hall.* Each student must submit an independent study statement describing the proposed research project during course registration. (Applications are available in the college offices and in 216 Stimson Hall.) Any faculty member in Biological Sciences may act as a supervisor. Supervisors outside of Cornell are not acceptable. S-U grades optional. Hours TBA. Staff.

Practice in planning, conducting, and reporting independent laboratory and library research programs. Up to three credits of research may be used to complete the Program of Studies in general biology, genetics and development, and systematics and biotic diversity and four credits of research in neurobiology and behavior.

#### **BIO G 663 Nanobiotechnology (also AEP 663)**

Spring. 3 credits. Prerequisite: permission of instructor. Letter grade. Lec, T R 1:25-2:40. Nanobiotechnology faculty.

Nanobiotechnology is the application of nano- and microfabrication methods to build tools for exploring the mysteries of biological systems. It is a graduate-level course that will cover the basics of biology and the principles and practice of microfabrication techniques with a focus on applications in biomedical and biological research. One objective of the course is to facilitate a means through which biologists and engineers can communicate. A team design project that stresses interdisciplinary communication and problem solving will be one of the course requirements.

#### **BIO G 705 Advanced Immunology Lectures (also VETMI 705)**

Spring. 4 credits. Prerequisite: BIO G 305 or permission of instructor. Offered alternate years. Next offered spring 2002.

Lects, M W F 9:05. Coordinator: R. G. Bell. Coverage at an advanced level of molecular and cellular immunology.

#### **BIO G 706 Immunology of Infectious Diseases and Tumors (also VETMI 719)**

Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional, with permission of instructor. Lec. R 10:10-12:05. Offered alternate years. Coordinator: E. Denkers.

Coverage at an advanced level of the immunology of diseases caused by selected viruses, protozoa, and helminths, and tumor immunology.

#### **Related Courses in Other Departments**

Medicine and Civilization (Biology and Society 322)

Pathogenic Bacteriology and Mycology (Biological Sciences [BIOMI] 404 and Veterinary Microbiology 318)

Viruses and Disease (Biological Sciences [BIOMI] 408 and Veterinary Microbiology 408)

## **ANIMAL PHYSIOLOGY (BIOAP)**

#### **BIOAP 212 Human Physiology for Non-Biology Majors**

Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of any program of study in the biological sciences major. Evening prelims: March 1 and Apr. 12. Lects, M W F 1:25; disc, M W or F 2:15. P. W. Concannon and staff.

Introduction to the physiology of all major organ systems and the relation of that physiology to human health and disease. Emphasis on understanding of major body functions and control mechanisms regulating each organ system. Students develop a fundamental understanding of how their bodies work that will be the basis of making informed decisions about their own health and medical needs and those of their families. Taught by physiologists of the Department of Biomedical Sciences.

**[BIOAP 214 Biological Basis of Sex Differences (also B&SOC 214 and WOMNS 214)]**

Spring. 3 credits. Limited to non-biology majors and freshman, sophomore, and junior biology majors; senior biology majors may register with permission of instructor. Prerequisite: one year of introductory biology. S-U grades optional. Lec, T R 1:25–2:40. Offered alternate years. Not offered 2000–2001. J. E. Fortune.

The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.]

**BIOAP 311 Introductory Animal Physiology, Lectures (also VETPH 346)**

Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional, with permission of instructor. Evening prelims: Sept. 28 and Oct. 31. Lec, M W F 11:15. E. R. Loew and staff.

A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

**BIOAP 312 Farm Animal Behavior (also ANSC 305)**

Spring. 2 credits. Prerequisites: introductory animal physiology (AN SC 100 and 150 or equivalent). Recommended: at least one animal production course or equivalent experience. S-U grades optional. Lec, T R 11:15. E. A. Oltenacu, K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

**BIOAP 313 Histology: The Biology of the Tissues**

Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: BIOBM 330 or 331, or their equivalents; and previous or concurrent enrollment in BIOAP 311. S-U grades optional, with permission of instructor. Evening prelims: Sept. 28 and Nov. 9. Lec, T R 1:25; lab, T R 2:30–5:00. C. Wahl.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analytic morphology at the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with vertebrate animals.

**BIOAP 316 Cellular Physiology**

Spring. 4 credits. Limited to 72 students, with preference given to students studying in animal physiology. Each lab limited to 36 students. Prerequisite: concurrent or previous enrollment in BIOBM 330 or 331 and 332 or 333. Evening prelims: Feb. 27, Apr. 3, and Apr. 26. Lec, M W F 10:10; lab, M or T 1:25–5:00. A. Quaroni and staff.

Lectures introduce students to the most current information on the way cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories provide an introduction to cell and organ culture and to immunological techniques used to study cell structure and function *in vivo* and *in vitro*. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

**BIOAP 319 Animal Physiology Experimentation**

Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor. Lec, R 12:20; lab, M or W 12:20–5:00 (includes disc section). Faculty.

A series of student-conducted *in vitro* and *in vivo* experiments designed to illustrate basic physiological processes in animals, with emphasis on relevance to humans, and to introduce students to physiology research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, vivisection under anesthesia, and real-time computer recording and analysis of data. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves; cardiovascular, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals, frogs, rats, and rabbits, which are euthanized after the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, take-home case studies, laboratory performance, and weekly quizzes.

**BIOAP 458 Mammalian Physiology**

Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: BIOAP 311 or equivalent. Students not meeting this prerequisite must obtain written permission of instructor in T8 014 Vet Research Tower before the first class. Evening prelims: Feb. 20, Mar. 27, and Apr. 24. Lec, M W F 10:10. K. W. Beyenbach and staff.

The course offers an in-depth treatment of selected topics in mammalian and human physiology. Emphasis is on concepts and a working knowledge of physiology. Selected topics include: basic functional elements of biological systems; recurrent themes in physiology; design of multicellular animals;

mammalian fluid compartments; homeostasis; membrane and epithelial transport; electrophysiology; cardiovascular physiology; gastrointestinal physiology; renal physiology; and acid/base physiology. The lectures incorporate clinical correlations whenever appropriate. Occasional guest lecturers talk about work and careers in basic research and/or clinical medicine. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science.

**BIOAP 619 Lipids (also NS 602)**

Fall. 2 credits. Lec, T R 11:15. A. Bensadoun.

Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, molecular structure, and catabolism; molecular biology, function and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

**BIOAP 710–718 Special Topics in Physiology**

Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.

**BIOAP 711 Readings in Applied Animal Behavior**

Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. Lec, 1 hour each week TBA. K. A. Houpt.

**[BIOAP 712 Thermoregulation and Exercise]**

Fall. 1 credit. Offered alternate years. Not offered 2000–2001. D. Robertshaw.

An examination of the competing demands on the body of exercise and heat exposure with particular emphasis on the cardiopulmonary system and integration of thermoregulatory reflexes.]

**BIOAP 713 The Physiological Control Systems That Control Ingestive Behavior: Food and Water Intake**

Fall. 1 credit. T. R. Houpt.

A variety of species will be considered with emphasis on common mammalian species: rat, dog, goat, pig, horse, and human. A mixed lecture/seminar format will be used. Open to both graduate and undergraduate students.

**BIOAP 714 Cardiac Electrophysiology**

Fall. 1 credit. Offered alternate years. R. Gilmour.

Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasis on nonlinear dynamical aspects of cardiac electrophysiology and cardiac arrhythmias.

**BIOAP 715 Stress Physiology: To Be Discussed as Part of Animal Welfare**

Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent required. Offered alternate years. K. A. Houpt.

The emphasis will be on physiological assessment of stress.

**BIOAP 719 Graduate Research in Animal Physiology (also VETPH 628)**

Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Students must register in Vet Research Tower 825. S-U grades optional. Hours TBA. Staff.

Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

**[BIOAP 757 Current Concepts in Reproductive Biology]**

Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and a strong interest in reproductive biology. S-U grades optional. Lec/disc, T R 10:10-12:05. Offered alternate years. Not offered 2000-2001. J. E. Fortune, W. R. Butler, and staff.

A team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Student participation in the form of discussions and/or presentations.]

**BIOAP 811 Advanced Physiological Methods I**

Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: J. Ray.

This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

**BIOAP 812 Advanced Physiological Methods II**

Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: J. Ray.

This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

**BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)****BIOBM 132 Orientation Lectures in Biochemistry**

Spring, weeks 1-3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance). Lec, S 10:10-11:00, for first three S of semester. Section chair and staff.

Discussions by six professors about their research and promising areas for research in the future.

**BIOBM 233 Introduction to Biomolecular Structure (also CHEM 233)**

Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207-208 or equivalents. Lec, T R 2:30-3:20. S. E. Ealick.

This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship between the structure and function of biologically important molecules are explored. Emphasis is placed on understanding the way in which the three-dimensional arrangements of atoms determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.

**BIOBM 330-332 Principles of Biochemistry**

Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year and lecture (333) during the summer. *Individualized instruction is offered to a maximum of approximately 250 students each semester. Lectures given fall semester (331), spring semester (332), and summer (333).*

**BIOBM 330 Principles of Biochemistry, Individualized Instruction**

Fall or spring. 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257 or 357-358 (CHEM 358 may be taken concurrently) or equivalent, or permission of instructor. Concurrent registration in BIOBM 334 is encouraged. May not be taken for credit after BIOBM 331, 332, or 333. S-U grade optional for graduate students only. Evening prelims: fall, Oct. 3 and Nov. 2; spring, Feb. 27 and Apr. 5. Hours TBA. J. E. Blankenship, P. C. Hinkle, and staff.

Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an

introduction to gene cloning. No formal lectures; autotutorial format.

**BIOBM 331 Principles of Biochemistry: Proteins and Metabolism**

Fall. 3 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257 or 357-358 (CHEM 257 or 357 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades with permission of instructor. Evening prelim: Oct. 19. Lec, M W F 10:10. G. W. Feigenson.

The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

**BIOBM 332 Principles of Biochemistry: Molecular Biology**

Spring. 2 credits. Prerequisites: one year of introductory biology for majors and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades optional, with permission of instructor. Lec, T R 12:20. B. K. Tye.

A comprehensive course in molecular biology that covers the structure and properties of DNA, DNA replication and recombination, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

**BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology**

Summer (8-week session). 4 credits. Prerequisites: one year of introductory biology for majors and one year general chemistry and CHEM 257, or 357-358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 331, or 332. S-U grades with permission of instructor. Lec, M W F 10:00-12:00. S. Ely or H. T. Nivison.

The content of this course is similar to that of BIOBM 330; however, it is presented in lecture format rather than as individualized instruction. The topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

**BIOBM 334 Computer Graphics and Molecular Biology**

Fall or spring. 1 credit. Prerequisite: concurrent registration in BIOBM 330. If space permits, students who have completed BIOBM 331 and have either taken or are concurrently taking, BIOBM 332 will be permitted to register during the first week of classes. Disc TBA.

J. E. Blankenship, P. C. Hinkle, and staff. Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

**BIOBM 407 Nature of Sensing and Response: Signal Transduction in Biological Systems (also PLPA 407)**

Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and previous or concurrent registration in 332. Recommended: BIOGD 281. S-U grades optional. Lec T R 10:10-11:25. T. P. Delaney.

The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. A wide variety of response systems will be explored to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant and animal systems for environmental sensing, control of development and responses during disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed by mutation and disease.

#### **BIOBM 430 Laboratories in Biochemistry, Molecular, and Cell Biology (also BIONB 430)**

Fall, spring, summer. 2 or 4 credits (students are expected to sign up for two sections for a total of 4 credits; limited space available for students taking only one section). Enrollment limited. Prerequisites: BIOBM 330, or 331 and previous or concurrent enrollment in 332, or 332 and previous or concurrent enrollment in 331, or 333, and permission of instructor. Strongly recommended: BIOGD 281. Form to apply for admission to this course is found on the web ([www.bio.cornell.edu/biochem/biobm430/signup.html](http://www.bio.cornell.edu/biochem/biobm430/signup.html)).

**Registration in the course is official only if the form is completed before a student preregisters.** Class assignments are affected by the date the enrollment form is returned. Preference given to undergraduate majors in the Biochemistry or Molecular and Cell Biology Programs of Study, and to graduate students with a minor in the Field of Biochemistry, Molecular and Cell Biology. Each section is seven weeks during the semester; which sections are offered in each semester depends on scheduling constraints and student preferences. Labs, M W 12:20–4:25 (disc, F 1:25–2:25) or T 9:05–4:25 (disc, R 1:25–2:25) or R 9:05–4:25 (disc, T 1:25–2:25).

#### **Section 01 Experimental Molecular Biology**

2 credits. S. Ely and H. T. Nivison. Experiments include cloning of DNA fragments, restriction mapping, DNA sequencing, Southern blotting, and PCR. The experiments emphasize quantitative aspects as well as experimental design.

#### **Section 02 Experimental Proteins and Enzymology**

2 credits. S. Ely and H. T. Nivison. Experiments include purification of enzymes by salt fractionation, ion exchange chromatography, and affinity chromatography, determination of kinetic parameters for an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

#### **Section 03 Experimental Cell Biology**

Spring only. 2 credits. T. Huffaker. Experiments include culture of animal cells, purification and analysis of subcellular components, immunofluorescence and electron microscopy, and in vitro assays.

#### **[Section 04 Experimental Molecular Neurobiology]**

Spring. Next offered spring 2001. D. Deitcher.

Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, and DNA sequencing. Experiments will emphasize how molecular techniques can be applied to studying neurobiological problems.]

#### **BIOBM 432 Survey of Cell Biology**

Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent. Recommended: BIOGD 281. S-U grades optional for graduate students only. Lecrs, M W 8:40–9:55. W. J. Brown, V. M. Vogt, D. Manor.

A survey of a wide array of topics focusing on the general properties of eucaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437; BIOGD 483; BIOBM 632, 636, and 639.

#### **BIOBM 434 Applications of Molecular Biology to Medicine, Agriculture, and Industry**

Fall. 3 credits. Enrollment limited to 36 students. Prerequisites: BIOBM 330 or 333 or 331 and 332. Recommended: BIOGD 281. S-U grades optional. Lecrs, M W F 11:15. J. M. Calvo, S. Ely.

By considering some recent applications of biology, you may extend your knowledge of molecular biology and integrate information from biochemistry, cell biology, genetics, immunology, virology, microbiology, and plant biology. Topics include large scale sequencing of genomes, drug discovery based upon genomics, mapping and cloning human disease genes, DNA vaccines, transgenic animals, engineering plants resistant to insects, and gene therapy. Problem solving and oral presentations are important aspects of this course.

#### **BIOBM [435]–436 Undergraduate Biochemistry Seminar**

435, fall; 436, spring. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisites: BIOBM 330, 333, or 331 and 332 or written permission of instructor. S-U grades only. Sem time TBA. Organizational meeting first W of each semester at 4 P.M. Not offered fall 2000. Offered spring 2001. Fall: G. P. Hess; spring: staff.

Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

#### **Molecular Neurobiology 435-01 (undergraduates) 735-01 (graduates) (also BIONB 420-02/720-05)**

Fall 2000 only. 2 credits. Limited to 40 students. S-U and letter grades. Prerequisites: BIOBM 330 or 332 (or equivalent molecular biology course), and BIONB 222 (or equivalent neurobiology course). For graduate students with a strong background in one of those areas, the prerequisite in the other area is waived. Lecrs, R 12:20–2:25, and seminars F 4:00–5:30 (5 times during the semester). R. Harris-Warrick, M. Wolfner, and staff.

Five leading international experts will come to Cornell for public seminars that describe recent advances in data and theory at the intersection between neurobiology and

molecular biology. Topic coverage will center around the structure and function of ion channels and neurotransmitter receptors. During the Thursday class meeting prior to each expert's visit, students and course faculty will present and discuss recent papers by the upcoming speaker. The following week, students will be required to attend two one-hour seminars by the speaker (Thursday at 12:20 P.M. and Friday at 4 P.M.) and a one-hour in-depth discussion meeting with the speaker after the Thursday seminar.

#### **BIOBM 437 Eukaryotic Cell Proliferation (also TOX 437)**

Fall. 2 or 3 credits. (Students may take lectures for 2 credits, or take both lectures and discussions for 3 credits. Enrollment for discussion section is limited to 20, with preference given to graduate students.) Prerequisite: BIOG 101–102 or BIOG 105–106 and BIOBM 330 or BIOBM 331–332. Recommended: BIOGD 281 and BIOGM 432. S-U grades optional. Lecrs, T R 12:20–1:10. Disc, TBA. R.-H. Chen

The course covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. The facts as well as concepts and logics behind findings are presented in the lectures. Research articles are analyzed and discussed in depth during discussion section.

#### **BIOBM 439 Molecular Basis of Human Disease**

Fall. 1 credit. Prerequisites: BIOBM 330 or BIOBM 331–332. Recommended: genetics (e.g., BIOGD 281) and cell biology (e.g., BIOBM 432 or BIOAP 316). S-U grades optional. Lecrs, T R 11:15 for the first 7 weeks of the semester. [Note: beginning fall 2001 this will be a 2-credit course, offered T R 11:15 for the entire semester.] W. L. Kraus.

This course will examine how changes in the normal expression, structure, and activity of gene products caused by genetic mutations and environmental agents lead to human diseases. The material will focus on how proteins with modified structures and biochemical activities cause alterations in normal cellular processes, as well as the physiological consequences of these changes. Topics will be selected from hormone insensitivity syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of environmental poisons and toxins. Examples of diseases will be selected to emphasize various aspects of cell biology, physiology, and immunology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, will be presented.

#### **BIOBM 631 Protein Structure and Function**

Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 and organic chemistry. Recommended: physical chemistry. S-U grades optional. Lecrs, M W F 9:05. L. Nicholson.

Presentations on the principles of protein structure and the nature of enzymatic

catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

**BIOBM 632 Membranes and Bioenergetics**

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Lects, T R 11:15. Offered alternate years. P. C. Hinkle.

Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.

**BIOBM 633 Biosynthesis of Macromolecules**

Fall. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332. Recommended: BIOGD 281. Lects, T R 9:05. J. W. Roberts, D. B. Wilson.

Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

**BIOBM 635 Mechanisms of Metabolic Regulation and Mammalian Gene Expression (also NS 635)**

Spring. 2 credits. Prerequisites: at least 4 credits of Principles of Biochemistry and CHEM 358 or 360, or permission of instructor. Lects, T R 9:05. Offered alternate years. M. N. Kazarinoff, N. Noy, P. Stover.

"Molecular mechanisms by which sensory, hormonal, and nutritional inputs cause changes in enzyme activity in order to regulate metabolic transformations." For course description see Nutritional Sciences 635.

**BIOBM 636 Advanced Cell Biology**

Spring. 2 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, and 432, or their equivalents. Lec, T R 9:05-9:55. A. P. Bretscher.

With the availability of whole genome sequences, new families of genes are being identified. It is the goal of functional genomics to elucidate the role of the gene products in the functional organization of cells. This course provides an integrated view of how this can be achieved employing molecular, genetic, and cell biological approaches. The discussion will center around a detailed discussion of topics such as the cytoskeleton, secretion, endocytosis, cell polarity, and related topics. Together with BIOBM 437, 632, and 639 this course provides broad coverage of the cell biology subject area.

**BIOBM 637 Integration and Coordination of Energy Metabolism (also NS 636)**

Fall. 3 credits. Prerequisite: BIOBM 330 or 331 or 333 or equivalent. Lects, M W F 9:05. Evening prelims TBA. W. J. Arion.

"The elements and dynamics of energy metabolism in humans and higher animals are developed systematically through biochemical characterizations of the metabolic components and structure of major tissues and organs." For course description see Nutritional Sciences 636.

**[BIOBM 639 The Nucleus**

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332, and 434, or their equivalent. Recommended: BIOGD 281. Lec, T R 10:10. Not offered 2000-2001. J. T. Lis.

Lectures on topics of eucaryotic gene organization, regulation of gene expression, RNA processing, chromatin structure, the structure and movement of chromosomes, and the architecture of the nucleus. This course covers the structure and function of the nucleus at the molecular and cell biological levels, and together with BIOBM 437, 632 and 636, provides broad coverage of the cell biology subject area.]

**BIOBM 641 Laboratory in Plant Molecular Biology (also BIOPL 641)**

Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor.

Students (including graduate students) strongly advised to preregister by Nov. 29, in the Section of Plant Biology main office (Room 228 Plant Science Building).

S-U grades optional. Lab, T 9:05-4:30.

J. B. Nasrallah, M. R. Hanson.

Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

**BIOBM 730 Protein NMR Spectroscopy (also VETPR 730)**

Spring. 2 credits. Prerequisites: CHEM 389 and 390 or CHEM 287 and 288 or permission of instructor. S-U grades optional. Lec TBA. L. K. Nicholson, R. E. Oswald.

The student acquires the tools necessary for in-depth understanding of multidimensional, multinuclear NMR experiments. Schemes for magnetization transfer, selective excitation, water suppression, decoupling, and others are presented. The application of these techniques to proteins for resonance assignment, structure determination, and dynamics' characterization is studied.

**BIOBM 732-737 Current Topics in Biochemistry**

Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit.

Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. S-U grades only.

Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

**[BIOBM 738 Macromolecular Crystallography (also CHEM 788)]**

Spring. 3 credits. S-U grades optional.

Prerequisite: permission of instructor. Lects, M W F 10:10. Offered alternate years. Not offered 2000-2001. D. J. Thiel, S. E. Ealick, J. C. Clardy.

Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the three-dimensional structures of macromolecules.]

**BIOBM 750 Cancer Cell Biology (also VETPA 750)**

Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Lects TBA. Offered alternate years. J. Guan, R. Levine, B. Pauli, A. Yen.

"Course covers molecular, cellular, and genetic aspects of cancer." For course description see VETPA 750.

**BIOBM 751 Ethical Issues and Professional Responsibilities (also TOX 751)**

Spring. 1 credit. Limited to graduate students beyond first year. S-U grades only. Organizational meeting will be held on the first W of the semester. Sem, W 3:35-4:25. Additional sections may be offered. P. Hinkle.

Ethical issues in research and the professional responsibilities of scientists are discussed in a case-study format. Topics to be discussed include regulations; data selection, manipulation, and representation; fraud, misconduct, and whistle-blowing; conflicts of interest and commitment; authorship, ownership, and intellectual properties; peer review and confidentiality; scientific response to external pressure; legal liabilities; and professional codes of ethics.

**BIOBM 830 Biochemistry Seminar**

Fall or spring. No credit. Sem, F 4:00. Staff.

Lectures on current research in biochemistry, presented by distinguished visitors and staff members. Lectures are open to everyone, but registration is limited to graduate students in Biochemistry, Molecular and Cell Biology.

**BIOBM 831 Advanced Biochemical Methods I**

Fall. 6 credits. Required of, and limited to, first year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Labs and Discs 12 hours each week TBA. Organizational meeting first R of semester, 10:10. V. M. Vogt and staff.

The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half of the course comprises research in the laboratory of a professor chosen by the student (See BIOBM 832). Students must enroll separately for each half.

**BIOBM 832 Advanced Biochemical Methods II**

Spring. 6 credits. Required of, and limited to, first year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Lab TBA. Staff.

Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the Director of Graduate Studies and the research adviser.

**BIOBM 833 Research Seminar in Biochemistry**

Fall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in biochemistry. S-U grades only. Sem, M 12:20-1:30. T. C. Huffaker.

Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

**BIOBM 836-837 Methods and Logic in Biochemistry, Molecular and Cell Biology**

836, spring; 837, fall. 1 credit each term.

Limited to first-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Sem and disc TBA. Fall: G. P. Hess; spring: J. Roberts.

A seminar course with critical discussion by students of original research papers. A variety

of topics in biochemistry, molecular and cell biology are covered.

## ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOES)

### BIOES 154 The Sea: An Introduction to Oceanography (also GEOL 104)

Spring. 3 or 4 credits (4-credit option includes one 2 1/2 hour laboratory each week). S-U grades optional. Lects, T R 11:40–12:55; lab, M or W 2:00–4:25, or M 7:30–9:55 P.M. C. H. Greene, W. M. White.

A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate, ocean ecology, coastal processes, marine pollution, and marine resources.

### BIOES 261 Ecology and the Environment

Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lects, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. R. B. Root and staff. An introduction to the science of ecology, the study of interactions between organisms and their environments. Major topics include demography, succession, biodiversity, biogeochemistry and ecosystems, and the evolution of adaptations. The influences of enemies, competitors, and mutualists on populations and communities are discussed. The effects of climate and human activities on ecological processes are also considered. Ecological principles are used to explain the issues associated with several environmental problems.

### BIOES 263 Field Ecology

Fall. 2 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOES 261. Lec, R 1:25; lab, F 12:20–5:00; 1 weekend field trip to the Hudson Valley. R. B. Root. Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

### BIOES 264 Birds in Biology

Fall. 3 credits. Limited to 25 students. May not be taken for credit after BIOES 475. Intended primarily for biology nonmajors.

S-U grades optional. Lects and discs, T R 8:40–9:55; 2 field trips TBA. A. A. Dhondt. This course explores exciting new insights in biology using detailed examples drawn from bird studies. Subject matter is suitable for non-majors, but of interest to majors as well. Topics will be drawn from a variety of biological disciplines. These include behavioral ecology (mating systems, territorial behavior, song), population ecology (migration, population limitation, micro-evolution, competition), evolutionary biology (trade-offs in life histories, optimal clutch size), and conservation biology (habitat fragmentation, inbreeding, acid rain). Lectures will be interspersed with discussion of selected papers.

### BIOES 267 Introduction to Conservation Biology

Fall. 3 credits. May not be taken for credit after NTRES 450. Intended for both science and non-science majors. Completion of BIOES 267 is not required for NTRES 450. S-U grades optional. Lects, M W 9:05; disc, F 9:05 or R 2:30; 1 Saturday field trip. A. S. Flecker, J. W. Fitzpatrick.

An exploration of biological concepts related to conserving the earth's biodiversity, introducing ecological and evolutionary principles important for understanding major conservation problems. Topics include patterns of species and ecosystem diversity, causes of extinction, genetic risks of small populations, design of nature preserves, strategies for protecting endangered species, ecosystem restoration, and the value of biodiversity.

### BIOES 274 The Vertebrates: Structure, Function, and Evolution

Spring. 4 credits. Prerequisite: one year of introductory biology. Fee, \$25. Lects, M W F 12:20; lab, M T or W 1:25–4:25. K. R. Zamudio.

An introductory course in vertebrate organismal biology which explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures will cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

### BIOES 275 Human Biology and Evolution (also ANTHR 275 and NS 275)

Fall. 3 credits. S-U grades optional, with permission of either instructor. Lects, W F 10:10; disc, M 10:10 or TBA. Offered alternate years. K. A. R. Kennedy, J. D. Haas. An introduction to the biology of *Homo sapiens* through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

### BIOES 278 Evolutionary Biology

Fall or spring. 3 or 4 credits. (4-credit option involves writing component and two discussion sections per week; limited to 20 students each semester. Students may not preregister for the 4-credit option; interested students complete an application form on the first day of class.) Limited to 300 students. Prerequisite: 1 year of introductory biology or permission of instructor. S-U grades optional. Evening prelims: fall, Sept. 21 and Oct. 26; spring, Feb. 27 and Apr. 3. Lects, T R 9:05; disc, 1 hour each week TBA. Fall, staff; spring, M. Shulman.

The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the four-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.

### [BIOES 371 Human Paleontology (also ANTHR 371)]

Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lects, M W F 2:30; lab, 1 hour each week TBA; occasional field trips. Offered alternate years. Not offered 2000–2001. K. A. R. Kennedy.

A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.]

### [BIOES 373 Biology of the Marine Invertebrates]

Fall (but taken in the previous summer at the Shoals Marine Laboratory [SML]). 4 credits. Limited to 30 students. Prerequisite: 1 year of introductory biology for majors. Permission of faculty required because it will be off campus. Two week, full-time course (August). Daily and evening lectures, laboratories, and field work. Total cost for room, board, and overhead at SML: \$800. Offered alternate years. Not offered 2000–2001. C. D. Harvell, J. G. Morin, SML Faculty.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Shoals Marine Laboratory exposes students to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and *in situ* representatives of most of the major phyla.]

### BIOES 452 Herbivores and Plants: Chemical Ecology and Coevolution (also ENTOM 452)

Spring. 3 credits. Prerequisites: one year of introductory biology, BIOES 261, CHEM 253 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Field trips, additional lectures, or laboratory demonstrations may be held in

place of F lecture. Offered alternate years.

Lecs, M W F 11:15. P. P. Feeny.

Topics include significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; and implications for human food and agriculture.

**[BIOES 455 Insect Ecology (also ENTOM 455)]**

Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or knowledge of another taxon. S-U grades optional.

Lecs, M W F 11:15. Offered alternate years. Not offered 2000-2001. R. B. Root.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.]

**BIOES 456 Stream Ecology (also ENTOM 456 and NTRES 456)**

Spring. 4 credits. Recommended: BIOES 261. S-U grades optional. Field project with lab papers. Lec, T R 9:05; lab, T W or R 1:25-4:25. Offered alternate years.

B. L. Peckarsky.

**Lecture:** addresses the patterns and processes occurring in stream ecosystems, including channel formation; water chemistry; watershed influences; plant, invertebrate, and fish community structure; nutrient cycling; trophic dynamics, colonization, and succession; community dynamics; conservation; and the impacts of disturbances. **Lab:** a field project includes descriptive and experimental techniques and hypotheses testing related to environmental assessment.

**BIOES 457 Limnology: Ecology of Lakes, Lectures**

Fall. 3 credits. Prerequisite: BIOES 261 or written permission of instructor. Recommended: introductory chemistry. Lec, M W F 11:15. Offered alternate years. N. G. Hairston, Jr.

Limnology is the study of inland fresh waters and other, nonmarine, environments. This course focuses on lakes and ponds, which are discussed as distinct aquatic environments with clear terrestrial boundaries, and within which ecological interactions are especially evident. In lakes, interactions between organisms are often strong and adaptations easily recognized. Physical and chemical properties of the environment impact organisms in important ways and organisms, likewise, influence physics and chemistry. As a result, lakes provide excellent systems for understanding the links between physical (thermal and mixing), chemical (dissolved elements and compounds), and organismal dynamics. Lakes are exciting environments for study in their own right, and for gaining perspective on ecological and evolutionary processes in general.

**BIOES 459 Limnology: Ecology of Lakes, Laboratory**

Fall. 2 credits. Prerequisite: concurrent or previous enrollment in BIOES 457. Lab, T W or R 1:25-4:25; 1 weekend field trip.

Fee, \$10 (for food on field trip). Offered alternate years. N. G. Hairston, Jr. and staff.

Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Exercises focus on understanding the freshwater environment, on experimentation, and on understanding ecological processes within lakes. Optional vertebrate dissection (fish) during one laboratory exercise and during a portion of the weekend field trip.

**BIOES 461 Population and Evolutionary Ecology**

Spring. 4 credits. Prerequisites: BIOES 261 or 278 plus two semesters of calculus, or permission of instructor. S-U grades optional. Lec, M W F 9:05; lab, M or T 1:25-4:25. Offered alternate years.

D. W. Winkler and staff.

Problems of ecology are viewed from an evolutionary perspective, exploring issues of adaptation and fitness by developing advanced understanding of demography and interspecific interactions. Blending theory and empirical findings, the course explores population dynamics; life-history theory; dispersal; competition; predation; parasite-host coevolution; mutualisms; and sexual, kin, and group selection. Methods of estimation and analysis are learned in laboratory.

**BIOES 462 Marine Ecology (also GEOL 462)**

Spring. 3 credits. Limited to 75 students. Prerequisite: BIOES 261. Lec and disc, M W F 10:10. Offered alternate years.

C. D. Harvell, C. H. Greene.

Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

**BIOES 463 Plant Ecology and Population Biology, Lectures**

Fall. 3 credits. Prerequisite: BIOES 261 or 278 or equivalents, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOES 465. Lec, M W F 11:15. Offered alternate years.

M. A. Geber, P. L. Marks.

This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities are considered. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

**[BIOES 464 Macroevolution**

Spring. 4 credits. Limited to 25 students. Prerequisite: BIOES 278 or permission of instructor. S-U grades optional, with permission of instructor. Lec, T R 10:10-11:25; disc, 1 hour each week TBA.

Offered alternate years. Not offered 2000-2001. A. R. McCune.

An advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction, the origin of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involve data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.]

**BIOES 465 Plant Ecology and Population Biology, Laboratory**

Fall. 1 credit. Prerequisite: concurrent enrollment in BIOES 463. Lab, F 12:05-5:00. Offered alternate years. M. A. Geber, P. L. Marks.

Field and laboratory exercises designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

**[BIOES 466 Physiological Plant Ecology, Lectures**

Spring. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Lec, M W 8:40-9:55; optional disc TBA. Offered alternate years. Not offered 2000-2001. Staff.

A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and physiology; the evolution of physiological performance; and physiology at the population and community and ecosystem levels. Readings draw from the primary literature and textbooks.]

**[BIOES 468 Physiological Plant Ecology, Laboratory**

Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Lab, W 1:25-4:25, plus additional lab hours TBA. Offered alternate years. Not offered 2000-2001. Staff.

A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of three hours/week in additional lab time for this course.]

**[BIOES 471 Mammalogy**

Fall. 4 credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Carpooling to the Vertebrate Collections at Research Park is necessary several times during the semester. Fee, \$15. Lec, M W F 12:20; lab, M T or W 1:25-4:25; 1 weekend field trip required. Offered alternate years. Not offered 2000-2001. Staff.

Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics,

ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.]

**BIOES 472 Herpetology**

Spring. 4 credits. Limited to 35 students. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Fee, \$30. Lects, T R 12:20; labs, T R 1:25–4:25; occasional field trips and special projects. Offered alternate years. H. W. Greene.

Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory topics include systematics, morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

**[BIOES 473 Ecology of Agricultural Systems (also CSS [SCAS] 473)]**

Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. During the first 6 weeks of class, the Thursday meetings may run to 5:00 because of field trips. Lects and discs, T R 2:30–3:45. Not offered 2000–2001. Offered alternate years; next offered fall 2002. A. G. Power, E. C. M. Fernandes.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.]

**BIOES 474 Laboratory and Field Methods in Human Biology (also ANTHR 474)**

Spring. 5 credits. Limited to 16 students. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Recommended: permission of instructor by preregistering in E231 Corson. Independent research project required. Lects and labs, T R 10:10–12:05; additional hours TBA. Offered alternate years. K. A. R. Kennedy.

Practical exercises and demonstrations of modern approaches to the methodology of biological anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal subjects, paleopathology, skeletal maturation, and relevant field techniques for the archaeologist and forensic anthropologist.

**BIOES 475 Ornithology**

Fall. 4 credits. Limited to 30 students. Prerequisite: permission of instructor by preregistering in E235 Corson. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Carpooling to the Vertebrate Collections at Research Park is necessary once a week. Fee, \$15.

Lects and labs, T R 12:20–4:25; occasional field trips and special projects. Offered alternate years. D. W. Winkler.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

**BIOES 476 Biology of Fishes**

Fall. 4 credits. Limited to 24 students. Recommended: BIOES 274 or equivalent experience in vertebrate zoology. S-U grades optional, with permission of instructor. A small lab fee may be required. Lects, M W F 10:10; lab, M 1:25–4:25; with additional lab time TBA; 2 field trips. Offered alternate years. A. R. McCune.

An introduction to the study of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local species. Two field trips, including one full day weekend trip required. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

**BIOES 478 Ecosystem Biology**

Spring. 4 credits. Prerequisite: BIOES 261 or equivalent. S-U grades optional. Lects and discs, T R 10:10–12:05. Offered alternate years. L. O. Hedin, R. W. Howarth.

Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental change from an ecosystem perspective.

**BIOES 479 Paleobiology (also GEOL 479)**

Fall. 4 credits. Prerequisites: one year of introductory biology for majors and either BIOES 274, GEOL 375, BIOES 373, or permission of instructor. S-U grades optional. Lects, M W F 12:20; lab TBA. W. Allmon.

A survey of the principles and practice of paleontology and the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.

**BIOES 490 Topics in Marine Biology**

Spring. 2 credits. May be repeated for credit. Primarily for undergraduates. Limited to 15 students. Prerequisite: permission of instructor. S-U grades optional. Lec, F 2:30–4:25. J. Morin and M. Shulman.

Seminar courses on selected topics in marine biology; may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.

**[BIOES 660 Field Studies in Ecology and Systematics]**

Fall or spring. Variable credit. Prerequisites: BIOES 261, a taxon-oriented course, and permission of instructor. S-U grades optional, with permission of instructor. Lects and field trips TBA. Estimated costs: to be announced. Not offered 2000–2001. Staff.

This course provides students with opportunities to learn field techniques and new biotas by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.]

**[Section 01: Life Histories of Marine and Freshwater Invertebrates]**

Fall. 2 credits. Prerequisite: undergraduates must have previous experience or course work with marine or freshwater invertebrates. Two extended weekend field trips in early September and October. Fee, \$100 (to help cover transportation and housing at Shoals Marine Laboratory). Offered alternate years. Not offered 2000–2001. C. D. Harvell, N. G. Hairston, Jr.

Field trips to the Shoals Marine Laboratory and Shackson Point Field Station. Students employ experimental approaches to study the evolution of invertebrate life histories.]

**[Section 02: Graduate Field Course in Ecology]**

Spring. 3 credits. Restricted to graduate students. A fee will be required to help cover food and lodging for trip to Florida. Offered alternate years. Not offered 2000–2001. P. L. Marks, R. B. Root.

The course is designed to give graduate students experience in defining questions and designing field investigations. The class is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems including sand pine scrub, cattle ranches, cypress swamps, everglades, and coral reefs.]

**BIOES 661 Environmental Policy (also ALS 661 and B&SOC 461)**

Fall and spring. 3 credits each term. (Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem, R 2:30–4:30. D. Pimentel.

This course focuses on complex environmental issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*. Thus far, every study has been published.

**[BIOES 665 Limnology Seminar]**

Spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem TBA. Offered alternate years. Not offered 2000–2001. N. G. Hairston, Jr.

A seminar course on advanced topics in freshwater ecology.]

**[BIOES 668 Principles of Biogeochemistry]**

Spring. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science. Permission of instructor required for undergraduates. S-U grades optional. Lects and discs, T R 10:10-12:05. Offered alternate years. Not offered 2000-2001. R. W. Howarth, L. O. Hedin.

Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.]

**[BIOES 669 Plant Ecology Seminar]**

Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional. Sem TBA. M. A. Geber.

Includes review of current literature, student research, and selected topics of interest to participants.

**[BIOES 670 Graduate Seminar in Vertebrate Biology]**

Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Sem TBA. Not offered 2000-2001. Staff.

Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.]

**[BIOES 671 Palaeoanthropology of South Asia (also ANTHRO 671 and ASIAN 620)]**

Fall. 3 credits. Limited to 15 students. Lec, M 2:30-3:20; sem, W 7:30-9:30 P.M. K. A. R. Kennedy.

The course explores recent developments in the prehistoric archaeology, palaeo-ecology, and biological anthropology of the ancient peoples of India, Pakistan, Sri Lanka, and the bordering countries. Issues of origin and decline of the Indus Civilization, fossil record of early humans in the Indian subcontinent, and current research topics are discussed.

**[BIOES 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)]**

Fall. 3 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lec, M 2:30; sem and disc, W 7:30-9:30 P.M. Not offered 2000-2001. Offered alternate years. Next offered fall 2002. K. A. R. Kennedy.

A survey of the historical background of present-day concepts of human evolutionary variations and adaptations in space and time. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.]

**[BIOES 760 Special Topics in Evolution and Ecology]**

Fall or spring. 1-3 credits. May be repeated for credit. Enrollment limited. S-U grades

optional, with permission of instructor. Hours TBA. Staff.

Independent or group intensive study of special topics of current interest. Content varies and is arranged between student and staff member.

**[BIOES 763 Workshop in Biogeochemistry]**

Fall or spring. 1 credit. May be repeated for credit. Limited to 15 students. Prerequisite: BIOES 668. S-U grades only. Workshop and disc, TBA. Staff.

Provides a workshop-forum in which graduate students interact with invited world-leaders in biogeochemistry. Workshop topics will change each semester. A one-week workshop will be preceded by seven, one-hour preparatory discussions of readings.

**[BIOES 767 Current Topics in Ecology and Evolutionary Biology]**

Fall. 4 credits. Prerequisite: permission of instructor required for undergraduates. S-U grades only. Lects and discs, T R 10:10-12:05. Staff.

Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

**[BIOES 899 M.S. Thesis Research]**

Fall or spring. 1-15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology. S-U grades optional. Hours TBA. E&EB Field Faculty.

Thesis research conducted by an M.S. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

**[BIOES 999 Ph.D. Dissertation Research]**

Fall or spring. 1-15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology as a Ph.D. student. S-U grades optional. Hours TBA. E&EB Field Faculty.

Dissertation research conducted by a Ph.D. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

**GENETICS AND DEVELOPMENT (BIOGD)****[BIOGD 184 Understanding Genetics]**

Spring. 3 credits. May not be taken for credit after BIOGD 281 or 282. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements for any program of study in the biological sciences major. S-U grades optional. Lects, M W F 2:30. Offered alternate years. T. D. Fox.

An introduction to genetics for students majoring in fields other than biology. Genetics is a rapidly developing science that is providing insight into all aspects of biology and practical tools which increasingly affect our lives. The course shows how major conclusions about inheritance have been derived from the experimental evidence, drawing on examples from the biology of humans, other animals, plants, fungi, and bacteria. It also illustrates current and future applications of genetic discoveries. For example, the basic principles of inheritance, in conjunction with methods for the isolation and detection of specific gene fragments, is used to understand the detection of genetic diseases and the identification of individuals (DNA fingerprinting). Other topics to be covered include the origin of mutations, use of genetic methods to alter the properties of organisms and the influence of inheritance on behavior.

**[BIOGD 281 Genetics]**

Fall, spring, or summer (8-week session).

5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. No admittance after first week of classes. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Lects, T R 10:10-12:05; lab, T W or F 2:30-4:25; additional hours TBA. Problem-solving sessions strongly recommended, T or W 8:30-9:45 (additional session TBA if necessary). P. J. Bruns, T. D. Fox, M. L. Goldberg, R. J. MacIntyre.

A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genes in populations, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in *Drosophila*.

**[BIOGD 282 Human Genetics]**

Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Each discussion limited to 25 students. Prerequisite: 1 year of introductory biology or equivalent; permission of instructor required for students who have taken BIOGD 281. S-U grades optional. Lects, M W 10:10 (Lecs, also F 10:10 first 3 weeks only); disc, R 10:10 or F 10:10 or 11:15. M. Goldberg. Spring 2001 Lecturer M. Goldberg, thereafter switching to a fall course. Taught alternate years by P. Bruns (Fall 01/Goldberg, fall 02/Bruns).

A course designed for nonmajors. Lecturers provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

**BIOGD 385 Developmental Biology**

Fall. 3 credits. Prerequisite: BIOGD 281. Lec, M W F 11:15. K. J. Kempthues. An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

**BIOGD 387 Developmental Aspects of Evolution**

Spring. 2 credits. Prerequisite: BIOGD 281. S-U grades optional. Lec, T R TBA. Offered alternate years. A. W. Blackler. An examination of the developmental mechanisms that underlie evolutionary change and organismal diversity and of the developmental constraints that contribute to evolutionary conservatism.

**BIOGD 389 Embryology**

Spring. 3 credits. Preference given to seniors. Prerequisites: 1 year of introductory biology and a knowledge of mammalian adult anatomy. Lec, T R 10:10; labs, T or R 2-4:25. A. W. Blackler.

A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue and organ levels. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy and preparation for medical studies.

**[BIOGD 450 Vertebrate Development]**

Spring. 3 credits. Prerequisite: Introductory Biology. S-U and letter grades. Lec, T R 11:40-12:55. Not offered 2000-2001. Offered spring 2002.

This course is designed to examine the development of characteristics that make vertebrates unique. The course will start with an introduction to recent evolutionary and molecular approaches to understanding the rise of vertebrate structures. The development of vertebrate structures, such as neural crest, specialized sense organs, and limbs, will be examined in detail with emphasis on the cellular and molecular events controlling their development.]

**BIOGD 480 Seminar in Developmental Biology**

Spring. 1 credit. May be repeated for credit. Limited to upper-class students. Prerequisite: BIOGD 281. S-U grades only. Seminar TBA. Staff.

**BIOGD 481 Population Genetics**

Fall. 4 credits. Prerequisite: BIOGD 281, BIOES 278, or equivalents. Lec, M W F 10:10; disc, M 2:30 or T 1:25. C. F. Aquadro. Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural

populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

**BIOGD 482 Human Genetics and Society**

Fall. 3 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying molecular biology and genetics. Prerequisites: BIOGD 281 and BIOBM 330 or 333 or 331 and 332, and permission of instructor. S-U grades optional. Disc, T 2:30-4:25 and R 2:30-3:30. R. A. Calvo.

Presentation of some of the science and technology, plus discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics considered are assisted reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, and therapy for genetic diseases. Students lead many discussions. There is a major writing component in the course.

**BIOGD 483 Molecular Aspects of Development**

Spring. 3 credits. Prerequisites: BIOGD 281; BIOBM 332 or 330 or 333; and BIOGD 385 or permission of instructor. Lec, T R 2:30-4:00. Offered alternate years. M. F. Wolfner.

An advanced course in developmental biology, with emphasis on the molecular events underlying developmental processes. Simultaneously, a molecular biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational and post-translational regulation of gene expression and cellular events such as signal transduction and cell-cell communication. Numerous developmental systems are discussed and analyzed in microorganisms, plants and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice, frogs, and humans. Course readings include original research articles. Discussion emphasizes specific experiments and approaches, results and their interpretation.

**[BIOGD 484 Molecular Evolution]**

Spring. 3 credits. Prerequisites: BIOGD 281 and organic chemistry. Lec, M W 8:40-9:55. Offered alternate years. Not offered 2000-2001. R. J. MacIntyre.

An analysis of evolutionary changes in genes and their protein products. Theories on the evolution of the genetic code, the construction of phylogenetic trees from biochemical data and the role of gene duplications in evolution are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes, including the evolution of satellite DNA sequences and transposable elements.]

**BIOGD 485 Bacterial Genetics (also BIOMI 485)**

Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 331 and 332 or 333. Lec, W 7:30-9:25 P.M. Staff.

For course description, see BIOMI 485.

**BIOGD 486 Advanced Eukaryotic Genetics**

Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 281, BIOBM 330 or 333 or 331 and 332. S-U grades optional. Lec, T 12:20-2:15 and R 12:20-1:10; disc R 1:25-2:15 or F 11:15-12:05. E. E. Alani.

The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosome segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

**BIOGD 600 Development of Sensory Systems**

Spring. 2 credits. Prerequisites: introductory biology, genetics, development, and neurobiology, or permission of instructor. S-U grades. Offered alternate years. Lec, M 7:00-8:40 P.M. K. Whitlock.

This course will explore the unique and shared mechanisms used in sensory system development of both vertebrates and invertebrates. The first class of the course will provide a general introduction to the development of sensory systems in vertebrates and invertebrates. Following classes will involve the reading of current and classic papers in sensory system development. Students will choose a topic and articles from a list provided by the instructor. Students will be responsible for an oral presentation and short paper.

**[BIOGD 682 Fertilization and the Early Embryo]**

Spring. 2 credits. Prerequisites: BIOGD 281; BIOBM 332, 330 or 333; and BIOGD 385 or permission of instructor. Lec, R 2:30-4:25. Offered alternate years.

Not offered 2000-2001. M. F. Wolfner. This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization (sperm/egg binding, sperm entry into egg), pronuclear fusion, egg activation, initiation and terminating the cleavage, division period, cytoplasmic determinants, changes in nuclear and cytoplasmic architecture.]

**[BIOGD 684 Advanced Topics in Population Genetics]**

Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 481 or equivalent and written permission of instructor. S-U grades optional. Lec, T 2:30-4:25. Not offered 2000-2001. Offered alternate years. Next offered spring 2001. C. F. Aquadro.

An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.]

**[BIOGD 685 Advanced Bacterial Genetics (BIOMI 485)]**

Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent,

BIOBM 330 or 331 and 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lec, W 7:30-9:25; disc, R 10:10-11:00. Not offered 2000-2001. Staff.

For course description, see BIOMI 685.]

#### **BIODG 687 Developmental Genetics**

Fall. 2 credits. Limited to 20 students.

Prerequisites: BIODG 281 and 385 or their equivalents. S-U grades optional. Lec TBA. Offered alternate years. K. J. Kemphues.

Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in fruitflies, nematodes, mice and fish. Possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are encouraged to discuss each topic in class.

#### **BIODG 780 Current Topics in Genetics**

Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics, written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor. Seminar TBA. Staff.

#### **BIODG 781 Problems in Genetics and Development**

Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc TBA. Staff.

An introduction to the research literature in selected areas through weekly problem sets and discussions.

#### **BIODG 782-783 Current Genetics/Development Topics**

Spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only. Lectures and seminars on specialized topics to be announced. Staff.

#### **BIODG 786 Research Seminar in Genetics and Development**

Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Sem, W 12:20-1:30. Staff.

Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

#### **BIODG 787 Seminar in Genetics and Development**

Fall and spring. 1 credit. Limited to graduate students in Genetics and Development. S-U grades only. Sem, M 4-5:00. Staff.

Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

## **MICROBIOLOGY (BIOMI)**

#### **[BIOMI 192 Microorganisms on the Planet Earth**

Summer. 3 credits. May not be taken for credit after BIOMI 290. S-U grades optional. Lec, M W F 11:15. Not offered 2000-2001. R. P. Mortlock.

A course in microbiology designed to introduce students, who have a limited background in science, to the microorganisms that populate our planet earth. Among the microorganisms studied are the bacteria, the archaeobacteria, some of the single-celled plants and animals, and the viruses. Topics covered are the basic nature of microorganisms, their evolution on earth, their composition and growth, their role in the ecology of this planet, their role in human history and disease, and their use in bioengineering. This course is not a prerequisite for advanced courses in microbiology.]

#### **BIOMI 290 General Microbiology Lectures**

Fall, spring, or summer (6-week session). 2 or 3 credits (2 credits if taken after BIOMI 192). Prerequisites: 1 year of introductory biology for majors and 1 year of college chemistry, or equivalent. Recommended: concurrent registration in BIOMI 291. Lec, M W F 11:15. Staff.

A comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Applied aspects of microbiology are also covered such as biotechnology, the role of microorganisms in environmental processes, and medical microbiology.

#### **BIOMI 291 General Microbiology Laboratory**

Fall or spring, 2 credits. Summer (6-week session), 2 credits. Prerequisite: concurrent or previous enrollment in BIOMI 290. Lec, F 12:20; labs, M W 12:20-2:15 or 2:30-4:25, or T R 10:10-12:05, 12:20-2:15, or 2:30-4:25. C. M. Rehkugler.

A study of the basic principles and techniques of laboratory practice in microbiology, and

fundamentals necessary for further work in the subject.

#### **BIOMI 292 General Microbiology Discussion**

Spring. 1 credit. Prerequisite: concurrent or previous enrollment in BIOMI 290. S-U grades only. Disc TBA. C. M. Rehkugler. A series of discussion groups in specialized areas of microbiology to complement BIOMI 290.

#### **BIOMI 391 Advanced Microbiology Laboratory**

Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOBM 330 or 331 or 333.

Preference given to biological sciences students in the microbiology program of study. Lab, M W 1:25-4:25; disc, F 1:25.

J. B. Russell, W. C. Ghiorse, J. P. Shapleigh, S. H. Zinder.

A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: (1) ecology, (2) physiology, (3) genetics, and (4) structure and function. Students are encouraged to take this course during their third year of study.

#### **BIOMI 394 Applied and Food Microbiology (also FOOD 394)**

Fall. 2-3 credits. Prerequisites: BIOMI 290-291. M W F 12:20-1:10. C. A. Batt.

Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course will present a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes will be reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnology applications.

#### **[BIOMI 397 Environmental Microbiology**

Fall. 3 credits. Prerequisite: BIOES 261 or BIOMI 290 or SCAS 260 or permission of instructor. Lec, M W F 10:10. Not offered 2000-2001. W. C. Ghiorse.

The biology, behavior, diversity, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.]

#### **BIOMI 404 Pathogenic Bacteriology and Mycology (also VETMI 404)**

Spring. 2 or 3 credits (3 credits with lecture and seminar with permission of instructor for undergraduates). Prerequisites: BIOMI 290 and 291. Strongly recommended: BIO G 305. Lec, M W 10:10; sem, F 10:10. Offered alternate years. M. Wiedmann.

This is a course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The emphasis of this course is infection and disease pathogenesis. Topics include disease causality; interactions of host, pathogen and environment, including immunity to bacteria and fungi; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current

and classic literature related to microbial pathophysiology on the cellular and molecular level.

**BIOMI 408 Viruses and Disease I (also VETMI 408)**

Spring. 2 credits. Prerequisites: BIOMI 290, 291; BIO G 305; and permission of instructor. Recommended: BIOGD 281.

Lecs, M W 7:30 P.M. Offered alternate years. J. Casey.

The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

**BIOMI 409 Viruses and Disease II (also VETMI 409)**

Fall. 2 credits. Prerequisites: BIOMI 290 and 291. Recommended: BIOMI 408, BIOBM 330-332, BIOBM 432. Lec, T R 2:30-3:20 P.M. Offered alternate years. G. Whittaker.

This course will be complementary to BIOMI 408, Viruses and Disease I, and will emphasize RNA viruses. The course will be complete in its own right. As such, completion of BIOMI 408 is not a requirement, but is encouraged. The structure and classification of viruses, virus entry, genome replication and assembly will be studied with particular emphasis on virus-host cell interactions. Vaccination, chemotherapy and evolution of viruses will also be discussed.

**BIOMI 414 Bacterial Diversity**

Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOBM 330 or 331 or 333. Lec, M W F 11:15. Offered alternate years. Spring 2001/odd. S. H. Zinder.

A consideration of the physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny and taxonomy, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

**[BIOMI 416 Bacterial Physiology]**

Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOBM 330 or 331 or 333, or their equivalents. Lec, M W F 11:15. Offered alternate years. Spring 2002/even. J. P. Shapleigh.

The concern is with the physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.]

**BIOMI 417 Medical Parasitology (also VETMI 431)**

Fall. 2 credits. Prerequisites: courses pertaining to zoology and biology. Lec, T R 3:35-4:25. Offered alternate years. D. Bowman.

A systematic study of anthropol, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasitisms.

**BIOMI 418 Microbial Ecology**

Spring. 3 credits. Prerequisites: BIOMI 290 and 291, or BIOMI 398 and instructor's permission, and BIOBM 330 or 331 and 332. Lec, M W F 10:10-11. E. R. Angert.

Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course will introduce current biochemical and macromolecule sequence-based methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

**BIOMI 420 Microbial Genomics**

Spring. 2 credits. Prerequisites: BIOMI 290, BIO G 281, BIOBM 330, or equivalent. Offered odd years. Lec, T R 10:10-11:25.

J. P. Shapleigh and J. D. Helmann.

Genomic information is revolutionizing biology. We will discuss the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics will include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

**BIOMI 485 Bacterial Genetics**

Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 331 and 332 or 333. Lec, W 7:30-9:25 P.M. Staff.

Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants; genetic exchange, recombination and mapping; complementation, epistasis and suppression; transposons; gene expression and regulation; and genetics of bacterial pathogenesis.

**BIOMI 610 Introduction to Chemical and Environmental Toxicology (also TOX 610)**

Fall. 3 credits. Prerequisite: graduate standing in the field or consent of the instructor. Letter grades. Lec, M W F 11:15-12:05. A. Hay.

Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Special attention will be given to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins will be examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.

**BIOMI 652 (Section 02) Molecular Plant-Microbe Interactions (BIOPL 652, Sec 03)**

Spring. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331 or 333, and BIOPL 653 (section 01) or their equivalents. S-U grades optional. Lec, M W F 10:10 (12 lecs) first third of semester. S. C. Winans. For course description, see BIOPL 652, Sec 03.

**BIOMI 690 Prokaryotic Biology**

Fall and spring 2000-2001. 4 weeks/8 lectures. 1 credit/section to be offered. T R. Time TBA.

**Section 1—Microbial Structure and Function**

Fall. J. P. Shapleigh. Discussion of those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This will include external structures, such as cell wall, flagella, pili, and peptidoglycan and

internal structures such as specialized vesicles and other large complexes.

**Section 2—Microbial Genetics**

Fall. J. D. Helmann.

Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, transposition, recombination, repair, and mutagenesis.

**Section 3—Microbial Physiology/Diversity**

Fall. S. H. Zinder.

An overview of prokaryotic physiological diversity. The major energy producing pathways of bacteria and their phylogenetic distributions among both bacteria and archaea are reviewed. Topics include fermentation, respiration, photosynthesis, and pathways of carbon and nitrogen fixation.

**Section 4—Microbial Pathogenesis**

Spring. S. C. Winans.

An introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples will include bacterial pathogens of both animals and plants.

**Section 5—Environmental Microbiology**

Spring. E. L. Madsen.

A core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. The crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere will be discussed.

**BIOMI 791 Advanced Topics in Microbiology**

Fall or spring. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Disc, T 4-5:00. Staff.

Reading and presentation by graduate students of current literature in selected areas of modern microbiology.

**BIOMI 795-796 Current Topics in Microbiology**

Fall, 795; spring, 796. 1/2 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lec, TBA. Staff.

Lectures and seminars on special topics in microbiology.

**BIOMI 797 Scientific Communication Skills**

Fall and spring. 1 credit each semester. F 2:30-3:20.

The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students will be asked to present topical seminars that will be critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations will be emphasized. Taken by students in the Graduate Field of Microbiology during their first two semesters, a third semester is optional.

**BIOMI 798 Graduate Research Seminar in Microbiology**

Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. F 1:25-2:15. Staff.

Required of all graduate students in the Field of Microbiology. All graduate students in the Field of Microbiology are required to attend BIOMI 798 and are required to present a seminar concerning their research at least once each year.

**BIOMI 799 Microbiology Seminar**

Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Sem TBA. Staff.

**NEUROBIOLOGY AND BEHAVIOR (BIONB)****BIONB 111 Brain, Mind, and Behavior (also PSYCH 111 and COGST 111)**

Spring. 3 credits. Intended for freshmen and sophomores in the humanities and social sciences. S-U grades optional. Lects, M W 9:05, disc F 9:05. E. Adkins Regan and R. R. Hoy.

The course is about issues that relate consciousness, awareness, attention, perception, cognition, and emotion to the mechanistic workings of the brain and hormonal system. The course will cover elementary neurophysiology, neuroanatomy, hormone physiology, ethology, plus relevant topics from psychology and clinical neurology. The

course is for freshmen and presupposes no biology or psychology background; no prerequisites; it is not for biology majors.

**BIONB 221 Neurobiology and Behavior I: Introduction to Behavior**

Fall. 3, 4, or 5 credits (4 credits with one discussion per week; 5 credits with two discussions per week and participation in the Writing in the Majors program). 4- or 5-credit option required of students in the neurobiology and behavior program of study. Each 4-credit discussion section is limited to 20 students, with preference given to students studying neurobiology and behavior. Enrollment in the 5-credit option is limited to 15 students. Students may not preregister for the 5-credit option; interested students complete an application form on the first day of class. Not open to freshmen. Prerequisite: 1 year of introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Lects, M W F 12:20; disc TBA. H. K. Reeve and staff.

A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.

**BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology**

Spring. 3 or 4 credits (4 credits with discussion and written projects). 4-credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: 1 year of introductory biology for majors and 1 year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Lects, M W F 12:20; disc TBA. A. H. Bass and staff.

A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

**BIONB 322 Hormones and Behavior (also PSYCH 322)**

Spring. 3 credits; 2 lectures plus a section in which students will read and discuss original papers in the field, give an oral presentation, and write a term paper. Limited to juniors and seniors. Prerequisite: (1 of the following): (a) PSYCH 223 or (b) BIONB 221 or (c) BIONB 222 or (d) one year of introductory biology plus a course in psychology. S-U grades optional, but not recommended. Lec M W F 11:15. E. Adkins Regan.

A major focus of the course will be comparative and evolutionary approaches to the study of the relationship between reproductive hormones and sexual behavior in vertebrates, including humans. Also included will be hormonal contributions to parental behavior, aggression, stress, learning and memory, and biological rhythms.

**BIONB 324 Biopsychology Laboratory (also PSYCH 324)**

Fall. 4 credits. Limited to 20 upperclass students. Prerequisites: laboratory experience in biology or psychology. BIONB 221 and 222 or PSYCH 123 and 222; and permission of instructor. Labs, T R 1:25-4:25. T. DeVoogd.

Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

**BIONB 325 Neurodiseases—Molecular Aspects**

Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOGD 281, BIOBM 330, or 331; co-registration in one of the two is acceptable. S-U grades optional. Lects, T R 9:05; disc, T 1:30 or 2:30. T. R. Podleski.

The intent of this course is to teach students how to use recombinant DNA techniques for the study of neurodiseases. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using these techniques, for example, Alzheimer's, Huntington's, Prion diseases, schizophrenia, depression, disorders affecting ion channels, and muscular dystrophies. Emphasis is placed on how these studies provide a useful approach to studying the mammalian nervous system by exposing the functions of genes that would be difficult to identify in other ways.

**[BIONB 326 The Visual System**

Spring. 4 credits. Prerequisite: BIONB 222 or BIOAP 311, or permission of instructor. S-U grades optional. Lects, M W F 10:10; disc, 1 hour each week TBA. Offered alternate years. Not offered 2000-2001. H. C. Howland.

The visual systems of vertebrates are discussed in breadth and depth. Topics covered include the optics of eyes, retinal neurophysiology, structure and function of higher visual centers, and ocular development.]

**BIONB 328 Biopsychology of Learning and Memory (also PSYCH 332)**

Spring. 3 credits. Prerequisites: 1 year of biology and either a course in biopsychology or BIONB 222. Lects, M W F 11:15. T. DeVoogd.

This course surveys the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics include invertebrate, "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings are from primary literature.

**BIONB 392 Drugs and the Brain**

Spring. 4 credits. Prerequisites: BIONB 222 or equivalent with permission of instructor. S-U grades optional. Lects, T R 10:10-11:25; disc TBA. Offered alternate years. R. Harris-Warrick.

An introduction to neuropharmacology. After a brief introduction to pharmacology, there is discussion of the major neurotransmitter families. Topics include the biological actions of the major psychoactive drugs on the brain, including cocaine, amphetamines, alcohol, psychedelics, marijuana, antidepressants and antipsychotics.

**[BIONB 396 Introduction to Sensory Systems (also PSYCH 396 and 696)]**

Spring. 4 credits. Limited to 25 students. Prerequisites: An introductory course in biology or biopsychology, plus a second course in behavior or biopsychology or cognitive science or neuroscience or perception. Students are expected to have knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Lects, M W F 10:10. Offered alternate years. Not offered 2000–2001. B. P. Halpern.

This course covers both those characteristics of sensory systems that are common across living organisms and those sensory properties that represent adaptations of animals to particular habitats, environments, or niches. The principles and limitations of major methods used to examine sensory systems will be considered. Emphasis will be on somesthetic, visual, and auditory systems. This course will be taught using the Socratic method, in which the instructor asks questions of the students. Students will be assigned original literature in the form of printed or electronic journal articles or reviews, and will be expected to come to each class having read, thought about, and prepared to discuss the assigned readings and other assigned information resources. A course packet of reproduced articles, textbooks, a course web site, and other Internet sites will be used. Students will submit brief analyses of, and comments and questions on, all assignments by E-mail to the course's electronic mailing list a day before each class meeting. The mailing list will distribute submissions to all members of the class and to the instructor. In addition to these brief tri-weekly written exercises, a web site or a term paper on a topic germane to the course will be required. All examinations will be in take-home format. At the level of "From Sound to Synapse" by C. D. Geisler; "The Retina", by J. E. Dowling. [courseinfo.cit.cornell.edu/courses/psych\\_nbb\\_396/](http://courseinfo.cit.cornell.edu/courses/psych_nbb_396/)

**[BIONB 420/720 Topics in Neurobiology and Behavior]**

Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. TBA. Staff. Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. Topics, instructors, and time of organizational meetings are listed in the catalog supplement issued at the beginning of the semester.

**[Molecular Neurobiology 420–02 (undergraduates) 720–05 (graduates) (also BIOBM 435-01/735-01)]**

Fall. 2 credits. Limited to 40 students. S-U and letter grades. Prerequisites: BIOBM 330 or 332 (or equivalent molecular biology course), and BIONB 222 (or equivalent neurobiology course). For graduate students with a strong background in one of those areas, the prerequisite in the other area is waived. Lects, R 12:20–2:25, and seminars F 4:00–5:30 (five times during the semester).

R. Harris-Warrick, M. Wolfner, and staff. Five leading international experts will come to Cornell for public seminars that describe recent advances in data and theory at the intersection between neurobiology and molecular biology. Topic coverage will center around the structure and function of ion channels and neurotransmitter receptors.

During the Thursday class meeting prior to each expert's visit, students and course faculty will present and discuss recent papers by the upcoming speaker. The following week, students will be required to attend two one-hour seminars by the speaker (Thursday at 12:20 P.M. and Friday at 4 P.M.) and a one-hour in-depth discussion meeting with the speaker after the Thursday seminar.

**[BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431 and 631)]**

Fall. 3 or 4 credits. The 4-credit option involves a term paper or creation of a relevant web site. Limited to 25 students. Prerequisites: an introductory course in biology or psychology, plus a second course in perception or neurobiology or cognitive science or biopsychology. T R 10:10–11:25. B. P. Halpern.

A literature-based examination of post-maturation changes in the perceptual, structural, and physiological characteristics of somesthetic, visual, auditory, and chemosensory systems. Emphasis will be on human data, with nonhuman information included when especially relevant. Quality of Life issues will be included. Current developments in human sensory prosthetic devices, and in regeneration or replacement of receptor structures or organs, will be examined. Brief written statements by E-mail of questions and problems related to each set of assigned readings will be required in advance of each class meeting, and will be automatically distributed to all members of the class. This course will be taught using the Socratic Method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with the subject matter of the course. Readings will be from the CourseInfo site: [courseinfo.cit.cornell.edu/courses/psych431\\_nbb421/](http://courseinfo.cit.cornell.edu/courses/psych431_nbb421/), from Internet sites, from a course packet, and from materials on reserve. Students are expected to come to each class having already done and thought about the assigned readings, and to take an active part in every class. All examinations will be take-home.

**[BIONB 422 Modeling Behavioral Evolution]**

Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, 1 year of calculus, 1 course in probability or statistics, and permission of instructor (Office: W309 Mudd Hall; phone: 254-4352). This course is open to advanced undergraduates and graduate students. S-U grades optional. Lects, T R 2:30–4:00; computer lab, 1 class period per week TBA. Offered alternate years. H. K. Reeve.

This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students learn to assess critically recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in

novel directions. The *Mathematica* software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

**[BIONB 424 Neuroethology (also PSYCH 424)]**

Spring. 3 credits. Prerequisites: BIONB 221 and 222. S-U grades optional. Lects, T 9:05–11:05; R 9:05–9:55. Offered alternate years.

Not offered 2000–2001. C. D. Hopkins. In the 1950s through the 1970s, ethologists attempted to understand the mechanisms of animal behavior through the use of comparative methods, evolutionary analysis, careful observations of animals in their native habitats, and clever experimentation. Now, with the explosion of knowledge and techniques in the neurosciences, many of the ethologist's mechanisms are being explained in terms of neural systems. This course reviews the status of research in neuroethology, including mechanisms of behavior in insects and in vertebrates, and their underlying neural systems. In addition, the course reviews studies of the neural systems involved in decision making, in initiating action, and in coordinating fixed acts.]

**[BIONB 425 Molecular Neurophysiology]**

Spring. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional. Lects, T R 2:55–4:10. Offered alternate years. D. McCobb.

Course focuses on ion channels, the primary proteins generating cellular electrical signals function in nerve cells and other excitable cells (e.g., muscle, heart, glands). The latest electrophysiological and molecular genetic experiments will be reviewed. Diversity of electrophysiology deriving from channel structure and expression patterns will be considered in the contexts of behavior and behavioral plasticity (learning), neural development, and channel evolution. Course format includes written and oral presentations, reviewing scientific literature in selected areas, and proposing new experiments.

**[BIONB 426 Animal Communication]**

Spring. 4 credits. Limited to 50 students. Prerequisite: BIONB 221. Letter grade only. Lects, T R 2:30–4:25; disc, 1 hour each week TBA. Not offered 2000–2001. T. D. Seeley.

A detailed examination of the study of communication by non-human animals. The course begins with an exploration of different conceptual frameworks used in the study of communication, then turns to specific studies of the mechanisms, ontogeny, functional design, and evolutionary history of the signaling systems used by animals. The class considers how communication provides humans with a window on the minds of other animals. Readings are drawn from the primary literature.]

**[BIONB 427 Animal Social Behavior]**

Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOES 261 or 278, and advance permission of instructor. S-U grades optional, with permission of instructor. Lects and discs, T R 2:30–4:25. Offered alternate years. Not offered 2000–2001. S. T. Emlen.

An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, communication, mating

systems, sexual selection, sex ratios, inbreeding and outbreeding, altruism, kin recognition, and conflict and cooperation in animal societies.]

#### **[BIONB 428 Topics in Behavior]**

Fall or spring. 2-4 credits. (Credits based on number of lectures and/or field exercises as outlined in the division's catalog course supplement and subject to approval through the associate director's office.) May be repeated for credit.

Primarily for undergraduates. S-U grades optional. Not offered 2000-2001.

Courses on selected topics in behavior; can include lecture and seminar courses; may include laboratory. Past topics have included animal orientation, insect behavior, bio-rhythms, and communication. Topics, instructors, and time of organizational meeting are listed in the division's catalog supplement issued at the beginning of each semester.]

#### **[BIONB 429 Olfaction and Taste: Structure and Function (also PSYCH 429)]**

Spring. 3 or 4 credits (4 credits with term paper or research project, which can, but need not, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 629. Prerequisite: a 300-level course in biopsychology or equivalent. Lecs, T R 9:05. Offered alternate years. Not offered 2000-2001. B. P. Halpern.

The structural and functional characteristics of olfaction and taste are explored by reading and discussing current literature in these areas. Structure is examined at the light levels of electron microscopes as well as at the molecular level. Function is examined primarily in its neurophysiological and biochemical aspects. The emphasis is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms. A textbook and a course packet of reproduced articles are used. At the level of *Smell and Taste in Health and Disease*, edited by T. V. Getchell, R. L. Doty, L. M. Bartoshuk, and J. B. Snow; *The Neurobiology of Taste and Smell*, edited by T. E. Finger and W. L. Silver.]

#### **[BIONB 430 Experimental Molecular Neurobiology]**

Spring. 2 credits. Limited to 12 students. Prerequisites: co-meeting with BIOBM 430 lab. Mandatory registration via web page: [www.bio.cornell.edu/biochem/biobm/signup.html](http://www.bio.cornell.edu/biochem/biobm/signup.html). Letter grade only. Disc, 1 hour each week on day other than lab day; Lab T or R all day, or M and W afternoons, to be coordinated with other BIOBM 430 sections. Offered alternate years. D. L. Deitcher.

Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, and DNA sequencing. Experiments will emphasize how molecular techniques can be applied to studying neurobiological problems.

#### **[BIONB 440 Electronics in Neurobiology]**

Fall. 4 credits. Limited to juniors, seniors, and graduate students. Prerequisites: a calculus course. S-U grades optional. Lecs, T R 8:40-9:55. Lab, W 1:25-4:25. Offered alternate years. Not offered 2000-2001. B. R. Land.

The course will emphasize understanding of the electrical functioning of the nervous

system and will enable students to build instrumentation to study the nervous system. It will be taught by mathematical analysis, simulation, and construction of circuit examples drawn from practical neurobiological instrumentation problems and the electronic basis of neurons.]

#### **[BIONB 441 Computers in Neurobiology]**

Fall. 4 credits. Limited to juniors, seniors, and graduate students. Prerequisites: a calculus course. S-U grades optional. Lecs, T R 8:40-9:55. Lab, W 1:25-4:25. Offered alternate years. B. R. Land.

This course is an introduction to computer instrumentation techniques and data reduction. It will give a basic understanding of the techniques used for coupling a biological experiment to a computer. It will include techniques to convert raw data to scientific visualization. Some computer modeling examples drawn from practical neurobiological problems will be done.

#### **[BIONB 470 Biophysical Methods (also A&EP 470 and VETPR 470)]**

Spring. 3 credits. Prerequisites: basic knowledge of and interest in physics and mathematics is expected, but strong efforts are made to give an intuitive understanding of the mathematics and physics involved. Some knowledge of physical chemistry, molecular and cell biology, or neurobiology will be helpful. Depending on individual background, all students will find certain aspects easy and other aspects demanding. Letter grades only. Lecs, T R 8:40-9:55. M. Lindau.

An overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics include light microscopy, fluorescence microscopy, Fourier optics and image processing, confocal and multiphoton microscopy, phase contrast, electron microscopy, x-ray diffraction and protein structure determination, NMR, spectroscopy, resonance energy transfer, membrane biophysics, electrophysiology, fluctuation analysis, patch-clamp, molecular biology of ion channels, rapid kinetics, caged compounds, capacitance measurements, amperometry, optical traps, and molecular force measurements. The course format will include assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

#### **[BIONB 491 Principles of Neurophysiology]**

Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades for graduate students with permission of instructor. Lecs, M W 10:10; lab, M or T 12:20-4:25; additional hours TBA. B. R. Johnson.

A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze motor neuron and sensory receptor firing

properties, and examine the cellular basis for resting and action potentials and synaptic transmission. A variety of preparations are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.

#### **[BIONB 492 Sensory Function (also PSYCH 492 and 692)]**

Spring. 4 credits. Limited to 25 students. Prerequisite: A 300-level course in biopsychology, or BIONB 222, or BIOAP 311, or equivalent. Students are expected to have knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Lecs, M W F 10:10. Offered alternate years. H. C. Howland, B. P. Halpern.

In general, this course will cover classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory processing, location of stimulus sources in space, the development of sensory systems, and nonclassical topics such as electroreception and internal chemoreceptors. Both human and nonhuman systems will be discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information will be treated, and the processing of this information will follow into the central nervous system.

#### **[BIONB 493 Developmental Neurobiology]**

Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional, with permission of instructor. Lecs, T R 2:55-4:10. R. Booker.

Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

#### **[BIONB 494 Comparative Vertebrate Neuroanatomy]**

Spring. 3 credits. Intended for juniors, seniors, and graduate students. Prerequisite: BIONB 222 or equivalent. S-U grades optional. Lecs, T R 10:10-11:30. Offered alternate years. Not offered 2000-2001. A. H. Bass.

Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.]

#### **[BIONB 495 Molecular and Genetic Approaches to Neuroscience]**

Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: BIONB 222 and BIOBM 330 or 332. Letter grade only. Lecs, T R 2:55-4:10. Offered alternate years. Not offered 2000-2001. D. Deitcher.

Focus of the course is on how different molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine original research articles. Topics include ligand-gated channels, potassium channels, seven membrane spanning receptors, development of the neuromuscular junction, neurotransmitter release, second messengers, and learning and memory.]

**[BIONB 496 Bioacoustic Signals in Animals and Man]**

Spring. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: 1 year of introductory biology, PHYS 101-102 or 207-208, and permission of instructor. S-U grades optional. Lecs, M W 9:05; lab TBA. Offered alternate years. Not offered 2000-2001. C. W. Clark, R. R. Hoy.

Humans and most terrestrial animals live in a world of sound. Acoustic signals mediate social interactions and predator-prey behavior. This course teaches students about animal acoustical communication by introducing them to the different communication systems that are based on sound. The course presents the physical properties of sound, the physiological mechanisms of sound production and hearing, and an analysis of the behavioral context of signaling. In the laboratory students learn how to record, synthesize, and analyze acoustic signals with the aid of tape recorders and the Macintosh computer. Laboratories are designed around the lecture material and provide "real-world" exercises designed to stimulate discovery of the fundamental principles described in class. Class research projects on a selected topic in bioacoustics are required. The laboratory is based on software instrumentation running on a Macintosh II platform equipped with A/D-D/A data acquisition boards.]

**[BIONB 623 Chemical Communication (also CHEM 622)]**

Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: 1 year of introductory biology for majors or equivalent, course work in biochemistry, and CHEM 358 or equivalent. Lecs, M W 10:10; disc, F 10:10. Offered alternate years. T. Eisner, J. Meinwald, W. L. Roelofs, and guest lecturers.

The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles.

**[BIONB 626 Sex Differences in Brain and Behavior (also PSYCH 524)]**

Spring. 2 credits. Limited to 12 students. Prerequisite: BIONB 322 or permission of instructor. Discs and sems TBA. T. J. DeVogd.

A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

**[BIONB 720 Seminar in Advanced Topics in Neurobiology and Behavior]**

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem TBA. Staff and students.

Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by

faculty or students to the chair of the Department of Neurobiology and Behavior.

**[BIONB 721 Introductory Graduate Survey in Neurobiology and Behavior]**

Fall. 2 credits. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only. Lecs and discs, TBA. Staff. Lectures, readings, and discussion to introduce first-year graduate students to the research activities of the faculty in the Graduate Field of Neurobiology and Behavior. Class meets weekly for two hours. Students will also prepare a research proposal on a potential topic for their thesis research (in the format of an NSF or NIH grant). This proposal will be prepared in consultation with one or more relevant faculty members.

**[BIONB 723 Advanced Topics in Animal Behavior]**

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem TBA. Not offered 2000-2001. Staff.

A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.]

**[BIONB 724 Field Methods in Animal Behavior]**

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem and fieldwork TBA. Not offered 2000-2001. Staff.

A seminar-field experience course designed for first-year graduate students in animal behavior. Weekly seminars discussing field methodology, data collection, and hypothesis testing are followed by an intensive period (10 days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.]

**[BIONB 725 Behavioral Ecology Workshop]**

Fall. 2 credits. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Seminar TBA. Offered alternate years.

J. W. Bradbury, S. L. Vehrencamp. A hands-on workshop designed to familiarize graduate students with quantitative techniques as applied to behavioral ecology. Only one technique area will be considered in a given year. Possible areas include spatial statistics, multivariate statistics, bioacoustical analysis, and event analysis. The material covered in the first weeks will attempt to bring everyone, regardless of background, up to a common starting point. All participants will be expected to do weekly homework, prepare an introduction to one sub-area, and create homework problems for that sub-area. The topic for a given semester is listed in the catalog supplement issued at the beginning of the semester.

**[BIONB 790 Advanced Topics in Cellular and Molecular Neurobiology]**

Fall or spring. Variable credit. May be repeated for credit. Limited to graduate students and advanced undergraduates studying neurobiology and behavior. Prerequisite: BIONB 222. S-U grades optional. Lecs and sem TBA. Not offered 2000-2001. Staff.

A lecture-seminar course on selected topics in cellular and molecular neurobiology. Students read original papers in the scientific literature and lead discussions of these articles. Suggestions for topics may be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.]

**[BIONB 792 Advanced Laboratory in Cellular and Molecular Neurobiology]**

Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students. Prerequisites: BIOBM 330 or 331 or equivalent, BIONB 491 or equivalent, and written permission of instructor. S-U grades optional. Lab TBA. Not offered 2000-2001. Staff.

A two-week intensive laboratory course designed to provide experience with a specific technique currently used in cellular and molecular neurobiology. The technique under study and instructor in charge vary from semester to semester and are listed in the division's catalog supplement issued at the beginning of the semester.]

**[BIONB 793 Advanced Topics in Integrative Neurobiology]**

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Lecs and discs TBA. Not offered 2000-2001. Staff.

A course designed to provide in-depth knowledge of current research in anatomical and physiological bases of vertebrate and invertebrate behavior. Readings are primarily from specialty books and selected journal articles. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.]

**[BIONB 794 Advanced Laboratory Techniques in Integrative Neurobiology]**

Fall or spring. Variable credit. May be repeated for credit. Prerequisite: permission of instructor based upon a personal interview. Lab TBA. Not offered 2000-2001. Staff.

A laboratory in the integrative, or neuroethological, approach to studies of animal behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.]

## PLANT BIOLOGY (BIOPL)

### BIOPL 240 Green World/Blue Planet

Spring. 3 credits. S-U grades optional. Lects, T R 1:25-2:40. K. J. Niklas, E. R. Turgeon, T. G. Owens.

The course focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

### BIOPL 241 Introductory Botany

Fall. 3 credits. Lects, T R 9:05; lab, M T W or R 1:25-4:25, or M W 7:30-10:30 P.M. K. J. Niklas.

Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. *Those who register for an evening laboratory are still required to attend the afternoon field trips.*

### BIOPL 242 Plant Physiology, Lectures

Spring. 3 credits. S-U grades optional. Primarily for undergraduates in agricultural sciences, but also for any biological sciences students wanting to know about plant function. Suitable as a second-level course for nonmajors to satisfy the biology distribution requirement. Prerequisites: 1 year of introductory biology and/or BIOPL 241. Recommended: 1 year of introductory chemistry. Concurrent enrollment in BIOPL 244 required of plant science undergraduates and highly recommended for other science majors. May not be taken for credit after BIOPL 342 except by written permission of instructor. Evening prelims Feb. 22 and March 29. Lects, M W F 10:10. P. J. Davies.

How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics

include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.

### BIOPL 243 Taxonomy of Cultivated Plants (also HORT 243)

Fall. 3 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lects, M W 10:10; labs, W 2-4:25. Offered alternate years. M. A. Luckow.

A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

### BIOPL 244 Plant Physiology, Laboratory

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 242. May not be taken for credit after BIOPL 344. Disc and lab, M T or W 12:20-4:25. T. Silva.

Experiments exemplify concepts covered in BIOPL 242 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

### BIOPL 245 Plant Biology

Summer (6-week session). 3 credits. Limited to 24 students. Lects, M-F 11:30-12:45; labs, M W 2-5:00. T. Silva.

Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas which are available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

### BIOPL 247 Ethnobiology

Fall. 3 credits. S-U grades optional. Lects, T R 11:15; disc, R 12:20 or 1:25, or F 12:20. D. M. Bates.

A consideration of the principles, methods, and issues of ethnobiology. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.

### BIOPL 248 Taxonomy of Vascular Plants

Spring. 4 credits. Prerequisite: 1 year of introductory biology. May not be taken for credit after BIOPL 243. S-U grades optional. Lects, M W F 9:05; lab, W or R 1:25-4:25. J. I. Davis.

An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular

plant diversity, with particular attention to the flowering plants.

### BIOPL 340 Methods in Chemical Prospecting

Spring. 2 credits. Prerequisites: Intro Biology (BIOG 101-104, 105-106, 107-108) required. Completion or concurrent enrollment in organic chemistry, recommended. Lab TBA. Offered alternate years. E. Rodriguez and M. Aregullin.

Student participants will learn theory and methodologies, including biological assays and other techniques, related to investigation of natural products from the biological world, and apply these methodologies to individual research projects. Each student will present results of their research in a poster session, in addition to preparing a scientific report.

### BIOPL 342 Plant Physiology, Lectures

Spring. 3 credits. Prerequisites: 1 year of introductory biology and either concurrent enrollment in BIOPL 344 or written permission of instructor. May not be taken for credit after BIOPL 242 unless written permission is obtained from instructor. Lects, T R 10:10-11:25. T. G. Owens.

An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

### BIOPL 343 Molecular Biology and Genetic Engineering of Plants

Spring. 2 credits. Prerequisite: 1 year general biology or permission of instructor. S-U grades optional. Lects, T R 11:15. M. E. Nasrallah.

An introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. The course emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed at undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

### BIOPL 344 Plant Physiology, Laboratory

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 342. May not be taken for credit after BIOPL 244. Similar to BIOPL 244 but at a more advanced level. Lab, R 1:25-4:25; disc, R 12:20. T. Silva.

Experiments exemplify concepts covered in BIOPL 342 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

### [BIOPL 345 Plant Anatomy

Fall. 4 credits. Limited to 15 students. Prerequisite: 1 year of introductory biology or a semester of botany. Lects, M W 9:05; labs, M W 2-4:25. Offered alternate years. Not offered 2000-2001. Staff.

A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.]

**BIOPL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants**

Spring. 2 credits. Limited to 24 students. Prerequisite: BIOPL 343 or permission of instructor. Concurrent enrollment is BIOPL 343 is encouraged. S-U grades optional. Lab, W 12:25–4:25. M. E. Nasrallah.

A companion to BIOPL 343 with laboratory activities that focus on the practice of plant biotechnology. Students will transfer genes to plants by a variety of methods, and will analyze their expression in the host genome by use of reporter gene assays, and by the preparation and analysis of nucleic acids.

**[BIOPL 348 The Healing Forest]**

Spring. 2 credits. Prerequisites: introductory biology or plant biology or permission of instructor. Lec/disc, R 2:30–4:25. Offered alternate years. Not offered 2000–2001. D. M. Bates, E. Rodriguez.

An ethnobotanical consideration of the role of plants in traditional and western medicine. Studies of indigenous and lay societies illustrate the ecological, systematic, biochemical, and cultural aspects of herbal medicines and are placed in the broader context of such interdependent themes as the conservation of biological and cultural diversity, human health, bioprospecting, compensation for indigenous knowledge, and sustainable development.]

**BIOPL 440 Phylogenetic Systematics**

Spring. 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lec, T R 10:10; labs, T R 2:00–4:25. Offered alternate years. K. C. Nixon.

Basic and advanced theory and methods of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

**[BIOPL 441 Systematics and Evolution of Crops]**

Fall. 2 credits. Prerequisite: an advanced-level course in the plant sciences with taxonomic content or permission of instructor. Lec, R 12:20–2:15. Offered alternate years. Not offered 2000–2001. Staff.

An integrated study of the systematics and evolution of agronomic and horticultural species. Processes of domestication, the evolutionary history of selected cultigens, the nature of weeds and land races, classification and nomenclature as applied to cultivated plants, and underexploited plant resources are among the topics considered.]

**[BIOPL 442 Current Topics in Ethnobiology]**

Fall. 2 or 4 credits (4 credits with an independent research component and term paper). Prerequisites: BIOPL 247, 348, or permission of instructor. Lec/disc, T 2:30–4:25. Offered alternate years. E. Rodriguez, Not offered 2000–2001. D. M. Bates.

Explorations of the interrelationships of plants and animals with humans from a wide range of perspectives. Topics considered are contemporary issues, theory, and methodology of ethnobotany and ethnobiology, and the role of plants and animals in human lives, in subsistence and exchange, and in thought.]

**BIOPL 443 Topics and Research Methods in Systematics**

Fall or spring. 1–2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. Staff.

A series of one-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

**BIOPL 444 Plant Cell Biology**

Fall. 4 credits. Limited to 24 students. Prerequisites: 1 year of introductory biology or permission of instructor. Lec, M W F 9:05; lab, M or W 1:25–4:25. R. O. Wayne.

Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

**[BIOPL 445 Photosynthesis]**

Fall. 3 credits. Prerequisites: 1 year of college chemistry and mathematics. Recommended: 1 year of college physics and plant physiology. Lec, M W F 10:10. Offered alternate years. Not offered 2000–2001. T. G. Owens.

An introduction to the processes of photosynthesis in plants, algae and bacteria. An interdisciplinary approach is emphasized incorporating biochemical, biophysical, physiological and molecular perspectives. The course will cover the range of processes involved in photosynthesis beginning with light harvesting and primary photochemistry through electron transport and inorganic carbon fixation. Emphasis will be placed on the regulation of photosynthesis from the cellular to the whole-plant level.]

**[BIOPL 447 Molecular Systematics]**

Fall. 3 credits. Prerequisites: BIOES 278 or BIOGD 281 or BIOBM 332, or written permission of instructor. Lec, T R 8:30–9:55. Offered alternate years. Not offered 2000–2001. J. J. Doyle.

The theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organellar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.]

**BIOPL 448 Plant Evolution and the Fossil Record**

Spring. 3 credits. Prerequisite: BIOPL 241 or equivalent, or permission of instructor. Lec, T R 9:05; lab, R 12:20–2:15. Offered alternate years. K. J. Niklas, W. L. Crepet.

An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

**BIOPL 452 Systematics of Tropical Plants**

Spring. 3 credits. Prerequisite: BIOPL 243 or BIOPL 248. Letter grades only. Lec, M W

10:10; lab, T 1:25–4:25. Offered every three years. K. C. Nixon.

The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context in lectures, discussions, and laboratory, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families.

**[BIOPL 453 Principles and Practice of Historical Biogeography (also ENTOM 453)]**

Fall. 3 credits. Prerequisite: a course in systematics or permission of instructor. S-U grades optional. Lec, T R 10:10; lab/disc, R 2:30–4:25. Offered alternate years. Not offered 2000–2001. J. K. Liebherr, M. A. Luckow.

This course provides a comprehensive survey of the current methods and techniques used in historical biogeography, and the development of modern biogeographic theory in the context of classical and ecological methods of analysis. Brief summaries of geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. The laboratories focus on hands-on computer applications of modern techniques and discussion of controversial issues in biogeography.]

**BIOPL 454 Systematics of Tropical Plants: Field Laboratory**

Spring break. 1 credit. Limited to 15 students. Prerequisite: concurrent enrollment in BIOPL 452 or permission of instructor. Letter grades only. Offered every three years. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library. K. C. Nixon.

An intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis on field identification combined with laboratory analysis of available materials in a "whole-biology" context.

**BIOPL 641 Laboratory in Plant Molecular Biology (also BIOBM 641)**

Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. Students (including graduate students) strongly advised to preregister by Nov. 29, in the Section of Plant Biology main office (Room 228, Plant Science Building). S-U grades optional. Lab, T 9:05–4:30. J. B. Nasrallah, M. R. Hanson.

Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

**BIOPL 642 Plant Mineral Nutrition (also CSS [SCAS] 642)**

Spring. 3 credits. Prerequisite: BIOPL 342 or equivalent. Lec, M W F 10:10. Offered alternate years. L. V. Kochian, R. M. Welch.

A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.

**[BIOPL 643 Plant Physiology, Advanced Laboratory Techniques]**

Spring. 4 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. S-U grades only. Requires minimum enrollment of 6 students. Lab, T or W 8-5:00; disc, M 4:30-5:30. Offered alternate years. Not offered 2000-2001. Staff.

An introduction to some modern methods in experimental plant biology. A partial list of techniques used includes fluorescence measurements, infrared CO<sub>2</sub> analysis, gel electrophoresis and Western blots, cellular electrode measurements, microtiter plate technology for enzyme assays, sensitive growth measurements, HPLC and GC-MS, and computer interfacing with laboratory equipment.]

**[BIOPL 644 Regulatory Factors in Plant Growth and Development]**

Spring. 1-2 credits (1 credit per section). Prerequisites: BIOPL 242 or 342 or equivalent, or permission of instructor. Two modules, which can be taken together or in isolation. These mesh with BIOPL 652-03 and BIOPL 653-04 (Molecular Aspects of Plant Development II and I respectively). S-U grades optional. Offered alternate years. Not offered 2000-2001.

**Section 01 Plant Hormones**

1 credit. Lects M W F 9:05 (14 lecs).  
P. J. Davies.

Plant Hormones: their role in plant growth and development, analysis, biosynthesis and mode of action, including signal transduction, examined from a physiological, biochemical and molecular point of view. The course covers auxin, gibberellin, cytokinin, ethylene, abscisic acid, brassinosteroids and other compounds as appropriate.

**Sec 02 Phytochrome and Photomorphogenesis**

1 credit. Lects M W F 9:05 (12 lecs).  
P. J. Davies.

A study of the regulation of plant growth and development by light as perceived through the pigments phytochrome and cryptochrome. This will include the biochemistry and molecular biology of phytochrome and the way in which phytochrome modulates plant growth, including molecular and genetic analysis of its effects and the mechanisms by which it acts. The role of phytochrome in detecting and modulating growth in natural and agricultural environments will also be covered.]

**BIOPL 647 Seminar in Systematic Botany**

Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional. Sem, T 12:20. Bailey Hortorium staff.

Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

**[BIOPL 648 Plant Biochemistry]**

Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Lects, M W F 9:05. Offered alternate years. Not offered 2000-2001. T. G. Owens and staff.

Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates,

organic acids, phenolic compounds, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.]

**[BIOPL 649 Physiology of Ion and Water Transport in Plants]**

Fall. 1-3 credits (1 credit per section). Prerequisite: BIOPL 342 or equivalent, or permission of the instructor. Three modules that may be taken independently, although section 01 is recommended before taking section 02. Offered alternate years. Not offered 2000-2001.  
R. M. Spanswick.

**Section 01 Basic Principles of Ion Transport and Electrophysiology**

1 credit. Lects T R 10:10-11:30 (9 lecs).

The biophysical basis of ion transport across cell membranes, including membrane structure, ion fluxes and their measurement, the thermodynamic criterion for active transport, and the relationship between ion transport and the electrical properties of cell membranes.

**Section 02 Ion Transport in Plants**

1 credit. Lects T R 10:10-11:30 (9 lecs).

Transport of the major ions in plant cells and whole plants. Properties of proton ATPases and their relationship to the transport of ions, sugars, and amino acids at the plasma membrane and tonoplast. Ion channels in plant cell membranes. Intercellular ion transport via plasmodesmata. Long distance ion transport in higher plants.

**Section 03 Water Transport in Plants**

1 credit. Lects T R 10:10-11:30 (9 lecs).

Water relations of plant cells and tissues using water potential terminology. Permeability of plant cells to water and the role of aquaporins. Transport of water through whole plants, including transpiration, stomatal physiology and the effects of water stress.]

**BIOPL 651 Quantitative Whole-Plant Physiology**

Fall. 3 credits. Prerequisites: introductory physics, calculus, and plant physiology. S-U grades only. Lects, T R 10:10-11:30. Offered alternate years. R. M. Spanswick.

An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.

**BIOPL 652 Plant Molecular Biology II**

Spring. 1-4 credits (1 credit per section). Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331. S-U grades optional. A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

**Section 01 Molecular Plant-Pathogen Interactions (also PLPA 662)**

1 credit. Lects, M W F 10:10 (12 lecs) Jan. 24-Feb. 19. T. P. Delaney, A. R. Collmer, S. G. Lazarowitz.

An examination of the molecular properties that control the development of host-parasite interactions in both microorganisms (bacteria, viruses, and fungi) and higher plants. Contemporary theories describing the genetic

and molecular mechanisms of microbial pathogenesis and plant resistance are discussed.

**Section 02 Molecular Plant-Microbe Interactions (BIOMI 652)**

1 credit. S-U grades optional. Lects, M W F 12:20 (12 lecs) Jan. 24-Feb. 19. S. C. Winans.

Course focuses on the interactions of *Agrobacteria* and *Rhizobia* with plants. Topics on *Agrobacterium*-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis and use of *Agrobacterium* to produce transgenic plants. Topics on *Rhizobium*-plant interactions include regulation of nitrogenase activity and expression, organization and function of the *sym* plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

**Section 03 Molecular Aspects of Plant Development II**

1 credit. S-U grades optional. Lects, M W F 10:10 (12 lecs) Feb. 21-Mar. 26.  
S. H. Howell.

The molecular genetics of plant development. This module focuses on vegetative development and includes topics such as the development of the shoot, root, and vasculature and the operation of the vegetative shoot apical meristem. The module is a companion to BIOPL 653, Sec 04 (Plant Development I), which covers molecular aspects of reproductive development.

**Section 04 Plant Gene Evolution and Phylogeny**

1 credit. Lects, M W F 1:25 (12 lecs) Mar. 28-Apr. 23. J. J. Doyle.

Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.

**BIOPL 653 Plant Molecular Biology I**

Fall. 1-5 credits (1 credit per section). Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331. S-U grades optional. Coordinator: S. H. Howell.

A series of four-week modules on specialized topics.

**Section 01 Concepts and Techniques in Plant Molecular Biology (also PLPA 663.01)**

1 credit. Lects, M W F 10:10 (12 lecs) Aug. 30-Sept. 25. T. P. Delaney, G. B. Martin.

This is an introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences, and serves as a prerequisite to other modules in the BIOPL 653 (fall) and BIOPL 652 (spring) series. The course is divided into two sections: 1) Gene discovery, which covers genetic, molecular, and genomics approaches to the isolation of plant genes; and 2) Gene characterization, which covers DNA sequencing, DNA and RNA blotting, use of gene databases, and various approaches to producing transgenic plants. Emphasis is on understanding the appropriate approach that is needed for different experiments.

**Section 02 Plant Biotechnology (also PLBR 653.2 and PLPA 663)**

1 credit. Lecs, M W F 1:25 (12 lecs) Sept. 27–Oct. 25. M. Zaitlin, E. D. Earle.

This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

**Section 03 Plant Genome Organization (also PLBR 653.3)**

1 credit. S-U grades optional. Lecs, M W F 10:10 (12 lecs). Sept. 27–Oct. 25. Offered alternate years. S. D. Tanksley.

The structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

**Section 04 Molecular Aspects of Plant Development I**

1 credit. Lecs, M W F 10:10 (12 lecs) Oct. 27–Nov. 22. J. B. Nasrallah.

This module focuses on the molecular genetics of plant reproduction. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include the establishment of pattern during floral morphogenesis, cell death and sex determination, gamete development, cell-cell signaling during pollination, and fertilization. The module is a companion to BIOPL 652, Sec 02 (Molecular Aspects of Plant Development II), which covers molecular aspects of vegetative development.

**Section 05 Molecular Biology of Plant Organelles**

1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Oct. 27–Nov. 27.

M. R. Hanson (odd years), D. B. Stern (even years).

An in-depth examination of the molecular biology of plant mitochondria (odd years) and plastids (even years). Topics include the organization, evolution, and expression of organelle genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organelle proteins. Special topics include mitochondrially-encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nucleus-organelle interactions.

**[Section 06 Molecular Breeding and Genetic Diversity]**

1 credit. Lecs M W F 10:10 (12 lecs).

Offered alternate years. Not offered 2000–2001. S. D. Tanksley, S. Kresovitch.

Application of DNA markers to the evaluation of genetic diversity in natural populations and germplasm collection as well as the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students will learn how to design and execute experiments for identification of quantitative trait loci (QTLs) as well as how to apply molecular markers to plant and animal

breeding programs. Strategies will also be taught for the use of DNA polymorphisms in the management of genetic resources.]

**[BIOPL 654 Botanical Nomenclature]**

Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Lec and disc TBA. Offered alternate years. Not offered 2000–2001. Staff.

An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.]

**[BIOPL 656 Topics in Plant Evolution]**

Spring. 1 credit. Prerequisite: BIOPL 448 or equivalent background in evolution, or written permission of instructor. Lab and disc TBA. Offered alternate years. Not offered 2000–2001. K. J. Niklas.

A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.]

**BIOPL 740 Plant Biology Seminar**

Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology. Sem, F 11:15. Staff.

Lectures on current research in plant biology, presented by visitors and staff.

**BIOPL 741 Problems in Plant Cell and Molecular Biology**

Fall. 2 credits. Limited to first- and second-year graduate students in the Plant Cell and Molecular Biology Program. Disc TBA. Staff.

An introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

**BIOPL 742 Current Topics in Plant Molecular Biology**

Fall or spring. 1 credit. Enrollment is limited. Primarily for graduate students, with preference given to majors or minors in plant molecular biology; written permission of instructor required for undergraduates. S-U grades only. Sem, 1 hour each week TBA. P. J. Davies.

Fall topic: molecular aspects of plant hormone biosynthesis, signal transduction and action. A seminar with critical presentation and discussion by students of original research papers concerning the molecular biology of plants. Staff direction varies each year and is announced a semester in advance.

**BIOPL 743 Current Research in Plant Cell and Molecular Biology**

Fall. 1 credit. Limited to graduate students; written permission from a member of the Plant Cell and Molecular Biology Program or by permission of coordinator required for undergraduates. Disc TBA. Staff.

An introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

**BIOPL 745 Current Topics in Systematics**

Fall. 1 credit. Limited to graduate students, except by permission of instructor. S-U grades optional. Disc, T 12:20. Bailey Hortorium staff.

A seminar with presentations and discussion by students of original research papers in systematic biology.

**BIOPL 746 Research Seminar in Systematic Botany**

Spring. 1 credit. Limited to graduate students, except by permission of instructor. Disc, T 12:20. Bailey Hortorium staff.

A student-led seminar presentation based on his or her thesis research or a related topic.

**BIOPL 749 Graduate Research in Botany**

Fall or spring. Variable credit. May be repeated for credit. S-U grades optional. Hours TBA. Staff.

Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

**BIOPL 840 Current Topics in Plant Physiology**

Fall or spring. 2 credits. May be repeated for credit. S-U grades only. Sem TBA. Staff.

Fall topic: molecular aspects of plant hormone biosynthesis, signal transduction and action. Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

Undergraduate Research in Biology (Biological Sciences [BIO G] 499)

**COURSES IN MARINE SCIENCE**

Cornell offers an extensive listing of undergraduate courses in marine science.

Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology offered through the Division of Biological Sciences, the undergraduate specialization in Ocean Sciences offered through the Science of Earth Systems Program, and the summer program of courses offered by the Shoals Marine Laboratory. Further information on these programs can be found at the Cornell Marine Programs Office, G14 Stimson Hall, or on their web site, [www.sml.cornell.edu](http://www.sml.cornell.edu).

**Undergraduate Specialization in Marine Biology and Oceanography**

Biological Sciences majors in the ecology and evolutionary biology program of study have the option of specializing their program of study in the area of marine biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program

of study requirements, students in marine biology are encouraged to enroll in the following courses:

- 1) BIOES 154, The Sea: An Introduction to Oceanography,
- 2) BIOSM 364, Field Marine Science, BIOSM 375 Field Marine Biology and Ecology or a 400-level BIOSM field course at the Shoals Marine Laboratory,
- 3) BIOES 462, Marine Ecology.

#### Undergraduate Specialization in Ocean Sciences

Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

- 1) BIOES 373 Marine Invertebrate Zoology
- 2) BIOES 457 Limnology
- 3) BIOES 462 Marine Ecology
- 4) BIOES 478 Ecosystem Biology
- 5) BIOSM 303 Ecology of Marine Fishes
- 6) BIOSM 308 Marine Microbial Ecology
- 7) BIOSM 309 Climates and Ecosystems
- 8) BIOSM 329 Ecology of Animal Behavior
- 9) BIOSM 364 Field Marine Science
- 10) BIOSM 365 Underwater Research
- 11) BIOSM 366 SEA: Introduction to Oceanography
- 12) BIOSM 369 SEA: Oceanography I
- 13) BIOSM 370 SEA: Oceanography II
- 14) BIOSM 371 SEA: Oceanography III
- 15) BIOSM 374 An Introduction to Field Ornithology
- 16) BIOSM 375 Field Marine Biology and Ecology
- 17) BIOSM 413 Experimental Marine Ecology
- 18) BIOSM 418 Tropical Marine Science
- 19) BIOSM 449 Seaweeds, Plankton and Seagrass
- 20) BIOSM 376 Marine Invertebrate Zoology (note: not the same as BIOES 373)
- 21) BIOSM 477 Marine Vertebrates
- 22) GEOL 375 Sedimentology and Stratigraphy
- 23) GEOL 455 Geochemistry
- 24) GEOL 475 Special Topics in Oceanography
- 25) GEOL 479 Paleobiology
- 26) NTRES 306 Coastal and Oceanic Law and Policy
- 27) NTRES 417 Wetland Resources

Students in both marine science specializations are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience.

## SHOALS MARINE LABORATORY (BIOSM)

G14 Stimson Hall, 255-3717

The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates, beginning graduate students, and other interested adults a unique opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but **not** concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the Laboratory's 47-foot research vessel, *John M. Kingsbury*. Field experience is an integral component of all courses, using Appledore's extensive intertidal and subtidal zones, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only based on their academic excellence, but also on their teaching ability in the field. In addition, numerous guest lecturers include engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA). SML and SEA offer a joint SEA/Island semester for 18 credits, which combines both programs (BIOSM 364, 366, 367, 368, 372).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

#### BIOSM 160 The Oceanography of the Gulf of Maine

Summer. 4 credits. Limited to 24 students. A special 2-week course offered aboard an SEA vessel and at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, contact the SML office, G14 Stimson Hall or the Sea Education

Association office at P.O. Box 6, Woods Hole, MA, 02543. Daily lecns, labs, and fieldwork for 2 weeks. SML faculty.

An exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend 10 days aboard the Sea Education Association's sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory to collect data characteristic of the Isles of Shoals coastal environment.

#### BIOSM 161 Introduction to Field Marine Science

Summer. 4 credits. S-U grades optional. A special 2-week course offered in cooperation with Rider University at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. Apply directly to Rider University, College of Continuing Studies. Contact Dr. Richard Alexander for application and information at: Alexander@enigma.rider.edu, (609) 895-5422. Offered alternate years.

This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds and urchin barrens.

#### BIOSM 204 Biological Illustration

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily sessions for 1 week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

#### BIOSM 303 Ecology of Marine Fishes

Summer. 4 credits. Prerequisite: 1 year of college-level biology. SCUBA certification recommended, not required. S-U grades optional. A special 2-week course offered at Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecns and fieldwork for 2 weeks. SML staff.

This course presents principles, models, and methods for analysis of dynamics of fish populations and communities, and analysis of current research emphasizing theory and its potential uses in fisheries' management. Lab and field activities emphasize collection and analysis of data from the Gulf of Maine and adjacent estuarine habitats.

**BIOSM 308 Marine Microbial Ecology**

Summer. 4 credits. Prerequisite: 1 year of college-level biology. S-U grades optional. A special 2-week course offered at Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. SML staff.

This course examines the fundamental role of marine microbial communities in the function of the biosphere. Lectures survey bacterial, protozoan, and micrometazoan assemblages from Arctic to deep sea vent communities. Laboratory exercises cover several principal techniques of field microbial ecology and explore the rich marine microbial environment surrounding the Isles of Shoals.

**BIOSM 309 Climates and Ecosystems**

Summer. 4 credits. Prerequisite: 1 year of college-level biology; background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. On-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

**BIOSM 329 Ecology of Animal Behavior**

Summer. 4 credits. Prerequisite: 1 year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

**[BIOSM 363 Marine Biology for Teachers**

Summer. 3 or 4 credits (4-credit option: additional 4 days for individual research). Primarily for teachers, grades 6 through 12, but open to others with teaching experience. Prerequisite: 1 year of introductory college biology. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 10 days. Offered alternate years. Not offered 2000-2001. SML faculty.

Designed to give an overview of living marine organisms (algae, invertebrates, fishes, marine mammals, and shorebirds) and of the environment they inhabit. Fieldwork is

emphasized. Occasional lectures and films deal with additional topics such as coastal-zone problems, marine fisheries, economics of marine organisms, and educational resources of the marine environment.]

**BIOSM 364 Field Marine Science (FMS)**

Summer. 6 credits. Prerequisite: 1 year of college biology. S-U grades optional. A special 4-week course offered twice each summer at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. 3 core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty.

Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMS places additional emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical) and marine geology. FMBE (BIOSM 375) places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

**BIOSM 365 Underwater Research**

Summer. 4 credits. Prerequisites: 1 year of college-level biology, recognized scuba certification, and a medical examination. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. Team-taught by 3 faculty members with occasional guest lecturers. Not for recreational divers.

Course covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasis is on subtidal ecological research. Requirements include critical evaluation of several journal articles and production of a research proposal.

**BIOSM 374 Field Ornithology (An Introduction)**

Summer. 4 credits. Prerequisite: 1 year of college-level biology. S-U grades optional. A special 2-week course offered at Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. SML staff.

An introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. The course focuses on field work designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques,

territory mapping, banding, behavioral observations, and creating a field notebook.

**BIOSM 375 Field Marine Biology and Ecology (FMBE)**

Summer. 6 credits. Prerequisites: 1 full year of college level biology. S-U grades optional. A 4-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G-14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty.

Designed for students seeking an introduction to the marine sciences and marine ecology; FMBE emphasizes field work in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FMBE places a special emphasis on the ecology of the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms. Students may not take FMBE after taking FMS (BIOSM 364).

**BIOSM 376 Marine Invertebrate Zoology**

Summer. 6 credits. Prerequisite: 1 year of introductory biology and permission of instructors. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. Emphasis is placed on the evolution of form and function, and the ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. Appledore Island's unique location provides an excellent venue for the study of freshly collected and *in situ* representatives of most of the major phyla.

**BIOSM 402 Marine Pollution**

Summer. 4 credits. Prerequisites: 1 year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. Offered alternate years. SML faculty.

An introduction to marine pollutants; their sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulatory programs. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.

**BIOSM 413 Experimental Marine Ecology**

Summer. 6 credits. Prerequisite: 1 year of college level biology; experience in ecology or physiology recommended. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; acclimation and tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and *in vivo* functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

**BIOSM 418 Tropical Marine Science (plus BIOSM 499)**

Summer. 8 credits and 4 credits of research. Limited to 12 students. Prerequisites: 1 year college-level biology; recognized SCUBA certification; medical exam; and permission of instructor. A special 8-week course offered in Akumal, Mexico. For more details, contact Shoals Marine Laboratory, G-14 Stimson Hall, 255-3717. For certified divers only. Lec/lab, 2 weeks; 6 weeks monitoring study and individual research projects, including data analysis on computers. SML faculty.

In addition to lectures and laboratories covering the basic principles of coral reef ecology, students participate in a coral reef monitoring survey. Following two weeks of course work, students engage in independent research projects.

**BIOSM 449 Seaweeds, Plankton and Seagrass: the Ecology and Systematics of Marine Plants**

Summer. 4 credits. Prerequisite: BIOSM 364 or 1 year of introductory biology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily labs, and fieldwork for 2 weeks. SML faculty.

An overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

**GEOL 475 Special Topics in Oceanography: Satellite Remote Sensing in Biological Oceanography**

Summer. 6 credits. Prerequisites: 1 course in oceanography and/or marine biology, or permission of the instructor. Strong computer skills are desired. S-U grades optional. A special 4-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. and on campus at Cornell University. For more details and an application, consult the SML office, G14 Stimson Hall. Daily labs, and fieldwork for 4 weeks. SML faculty.

"Remote Sensing" provides hands-on research experience in hydrologic optics and satellite remote sensing to advanced undergraduate and beginning graduate students. The course is comprised of four principal parts, each

taught by a separate team of instructors at two different locations: Part 1 (nine days) will be conducted at Shoals Marine Laboratory and aboard the *R/V Kingsbury* in waters surrounding the Isles of Shoals. Part 1 will be devoted to the theory and measurement of seawater optical properties, emphasizing the dependency of apparent optical property on chlorophyll and dissolved organic matter concentrations. Parts 2-4 (19 days) will be conducted at the Science of Earth Systems' computer laboratory on the Cornell campus. Part 2 will cover satellite remote sensing of the apparent optical properties of seawater with an emphasis on processing SeaWiFS data using SeaDAS software and IDL programming language. Part 3 addresses satellite remote sensing of physical oceanographic processes that influence ecosystem dynamics with an emphasis on AVHRR-derived sea-surface temperature and SSM/I-derived ocean winds. Part 4 is devoted to independent projects; student will attempt to integrate SeaWiFS, AVHRR, and SSM/I data in order to address questions of biological-physical interactions.

**BIOSM 477 Marine Vertebrates**

Summer. 6 credits. Prerequisites: a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily labs, and fieldwork for 3 weeks. SML faculty.

Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine, elasmobranch physiology, interpretation of life history and parameters from otolith microstructure, teleost skeleto-muscular structure and function, population biology and the contemporary Gulf of Maine fishery, Mesozoic marine reptiles, the biology of sea turtles in cold water, coloniality in sea birds, avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

**BIOSM 490 Topics in Marine Biology**

Summer. 1-2 credits. Prerequisite: 1 year of introductory biology and permission of instructors. S-U grades optional. A special course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. and on campus at Cornell University. For more details, consult the SML office, G14 Stimson Hall. Daily labs, and fieldwork for 3 weeks. SML faculty.

Seminar courses on selected topics in marine biology. Students and faculty will explore recent research through reading of the primary literature. The course may also include a lab or field trips. Offered in spring semester for two credits with a two-hour discussion per week. Offered at the Shoals Marine Laboratory (summer) for one credit with four one-hour discussions per week for four weeks.

**BIOSM 495 Research Methods in Marine Biology**

Summer. 1 credit. Prerequisite: concurrent enrollment in BIOSM 499, or permission of instructor. Primarily for undergraduates. A special 8 week course offered at the Shoals Marine Laboratory (SML). For more details and an application, consult the SML office, G14 Stimson Hall. Weekly seminars for 8 weeks. J. G. Morin and M. J. Shulman.

Seminar course on research methodology, experimental design, statistical analyses, and scientific writing. The course is designed to assist students in the research they are conducting while enrolled in BIOSM 499.

**BIOSM 499 Research in Biology**

Summer. Credits variable (2 credits/7 days on site). For more details and an application, consult the SML Office, G14 Stimson Hall.

**Section A: Independent Biological Research:**

Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be set with application materials.

**Research Experiences for Undergraduates (REU)**

0 credit. The National Science Foundation (NSF) Research Experiences for Undergraduates (REU) program provides support for undergraduates to pursue supervised, independent research projects at the Shoals Marine Laboratory. Nine students will be selected from a competitive, national pool to participate in the eight-week summer program. For more information and an application, please contact the SML office, G14 Stimson Hall, or view SML's web site at: [www.sml.cornell.edu](http://www.sml.cornell.edu)

**[ARKEO 319 Archaeology Underwater**

Summer. 2 credits. Prerequisites: recognized scuba certification and a medical examination required for students engaging in underwater research; also open to non-divers. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily labs, and fieldwork for 1 week. Offered alternate years. Not offered 2000-2001. SML faculty.

An introduction to the subject and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for actual on-site experience in search, site recognition, survey, and recording. The course also covers the history and development of the subject, the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but are not divers or sufficiently experienced in scuba.)

**GEOL 213 Marine and Coastal Geology**

Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily labs, and fieldwork for 1 week. SML faculty.

This course examines the complete history of the Isles of Shoals from Paleozoic intrusion, deformation and metamorphism to recent glaciation, sea-level change and wave erosion. Students will learn basic surveying and mapping techniques using the Brunton compass, plevel/stadia rod, autolevel and GPS. Sea kayaks will be used for inter-island travel and explorations of the islands. No previous kayak experience is required. Field efforts will focus on creating a series of thematic maps depicting island characteristics such as topography, bedrock geology and structure, vegetation and land use patterns.

#### **NTRES 306 Coastal and Oceanic Law and Policy**

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs and disc for 1 week. SML faculty.

Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

#### **NTRES 417 Wetland Resources**

Summer. 2 credits. Prerequisite: 1 year of college-level biology. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork. SML faculty.

An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

#### **BIOES 373 Biology of the Marine Invertebrates**

Fall (but taken in the previous summer at the Shoals Marine Laboratory (SML)). 4 credits. Limited to 30 students. Prerequisite: 1 year of introductory biology for majors. Permission of faculty required for 2001 because it will be off campus. 2-week, full-time course. Daily and evening lectures, laboratories, and field work. Offered alternate years. Not offered summer of 2000, but will be summer of 2001. C. D. Harvell, J. G. Morin, SML faculty.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. By being taught at the Shoals Marine Laboratory, students are exposed to a wealth of marine and terrestrial invertebrates

in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and *in situ* representatives of most of the major phyla.

#### **BIOSM 366-372 SEA Semester**

In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. *This sequence is repeated approximately once every two months throughout the year.* Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, MA, receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the R/V *Westward* or the R/V *Corwith Cramer*. Enrollment is open to both men and women judged capable of benefiting from SEA semester; a student must have successfully completed **at least one college-level laboratory science course** (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session. **No prior sailing experience is necessary.** Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, or call SEA directly at 800-552-3633. Program costs are to be paid in place of regular Cornell tuition and fees: tuition for the entire 17-credit SEA Semester, approximately 14,000 which includes room and board at SEA.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

#### **Shore Component (six weeks)**

##### **BIOSM 366 SEA Introduction to Oceanography**

3 credits. Prerequisite: concurrent enrollment in BIOSM 367 and 368.

A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

##### **BIOSM 367 SEA Introduction to Maritime Studies**

3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 368.

An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

##### **BIOSM 368 SEA Introduction to Nautical Science**

3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 367.

An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial, and electronic), naval

architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

#### **Sea Component (six weeks)**

Courses 369, 370 and 372 take place aboard the R/V *Westward*, a 125-foot steel auxiliary-powered staysail schooner built in 1961, or the R/V *Corwith Cramer*, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of 34. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to 24 students round out the complement.

#### **BIOSM 369 SEA Practical Oceanography I**

4 credits. Prerequisite: BIOSM 366.

Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

#### **BIOSM 370 SEA Practical Oceanography II**

4 credits. Prerequisites: BIOSM 368 and 369.

Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

#### **BIOSM 372 SEA Practical Oceanography III**

Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368.

Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

## FACULTY ROSTER

## COLLEGE OF ENGINEERING

### ADMINISTRATION

John E. Hopcroft, dean

Michael S. Isaacson, associate dean for research and graduate studies

Michael Kelley, associate dean for professional development

Mark K. Spiro, associate dean for strategic initiatives

Deborah Cox, assistant dean for student services

Cathy Long, assistant dean for administration

Marsha Pickens, assistant dean for alumni affairs and development

### FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural and biological engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of special interest in engineering include the following:

*Center for Applied Mathematics.* A cross-disciplinary center that administers a graduate program.

*Center for Manufacturing Enterprise.* A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.

*Center for Radiophysics and Space Research.* An interdisciplinary unit that facilitates research in astronomy and the space sciences.

*Center for Theory and Simulation in Science and Engineering.* A supercomputer facility used for advanced research in engineering and the physical and biological sciences.

*Cornell Electronic Packaging Alliance.* A cooperative venture involving Cornell and several corporations in the areas of computing and microelectronics, organized to undertake precompetitive, interdisciplinary research in electronic packaging.

*Cornell High Energy Synchrotron Source (CHESS).* A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

*Cornell Nanofabrication Facility* (part of the National Science Foundation funded National Nanofabrication Users Network). A center that provides equipment and services for research in the science, engineering, and technology of nanometer scale structures for electronic, chemical, physical, and biological applications.

*Cornell Waste Management Institute.* A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.

*Institute for the Study of the Continents.* An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.

*Laboratory of Plasma Studies.* A center for interdisciplinary research in plasma physics and lasers.

*Cornell Center for Materials Research.* An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment.

*National Astronomy and Ionosphere Center.* The world's largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico.

*National Earthquake Engineering Research Center.* A facility recently established by the National Science Foundation and a group of universities in New York State to study response and design of structures in earthquake environments.

*National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics.* A resource that develops novel measurement and optical instrumentation for solving biophysical problems.

*Power Systems Engineering Research Center.* A research and instructional program centered in a laboratory that has a complete real-time model of an electric power system.

*Program of Computer Graphics.* An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.

*Program on Science, Technology, and Society.* A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.

*SRC Program on Microscience and Technology.* A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.

*Ward Laboratory of Nuclear Engineering.* Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.

The programs listed on this page are sponsored by College of Engineering units and several are industry affiliated. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer scale structures.

### DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and the special announcement *Graduate Study in Engineering and Applied Science*. The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

### UNDERGRADUATE STUDY

Bachelor of Science (B.S.) degrees are offered in the following areas:

Agricultural and Biological Engineering†  
Chemical Engineering  
Civil Engineering  
College Program  
Computer Science  
Electrical Engineering  
Engineering Physics  
Geological Sciences  
Materials Science and Engineering  
Mechanical Engineering  
Operations Research and Engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and the Engineering Advising office. Subsequently most students enter *field* programs, which are described separately for each academic area. Criteria for entrance into the field programs are described in the section titled "Affiliation with a Field Program." Alternatively students may enter the *College Program* (described below), which permits them to pursue a course of study adapted to individual interests.

Students interested in bioengineering may arrange a suitable curriculum through the bioengineering option in one of the field programs or through the College Program. Students interested in supplementing their field program with formal study in another traditional area of engineering may wish to consider one of the engineering minors offered by the college. Information about both the bioengineering option and engineering minors is available in the Engineering Advising Office, 167 Olin Hall. Students interested in environmental engineering and science may pursue the environmental option offered by the School of Civil and Environmental Engineering and the Department of Agricultural and Biological Engineering, or the science of earth systems (SES) option offered by the Department of Geological Sciences.

\*Agricultural and biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

†To major in agricultural and biological engineering students normally enroll in the College of Agriculture and Life Sciences for the first three years, and jointly in that college and the College of Engineering for the final year. Students initially enrolled in the College of Engineering, however, may affiliate with the field of agricultural and biological engineering and complete the degree solely within that college.

## Requirements for Graduation

To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. Students must meet the Common Curriculum as explained below. (Further explanation of the revised Common Curriculum and field flow charts are provided in the 2000–2001 edition of *The Engineering Undergraduate Handbook*.)

Course Category	Credits
1) Mathematics	16
2) Physics (depending on field)	8–12
3) Chemistry (depending on field)	4–8
4) First-Year writing seminar*	6
5) Computer programming†	4
6) Engineering distribution (3 courses)	
a. One Introduction to Engineering (ENGRI)	3
b. Two other engineering distribution courses (ENGRD)	6
7) Liberal studies distribution (6 courses)	18 (min.)
8) Approved electives	6
9) Field program	
a. Field required courses	30 cr. min.
b. Field approved electives	9
c. Courses outside the field	9

\*One writing-intensive technical course or a course in technical or scientific writing must

also be taken; this course may simultaneously satisfy some other requirement.

†One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirement, such as an engineering distribution course, an approved elective, or a field program course.

From 123 to 133 credits are required for graduation; the specific number of required credits will vary depending on which field program is chosen (see field curricula for specific field requirements). Two terms of physical education must be taken in the freshman year and students must demonstrate proficiency in swimming to satisfy a university requirement.

## Mathematics

The normal program in mathematics includes MATH 191 (or 190), 192, 293, and 294. Every student must attain a grade of at least C- in MATH 191 (or 190), 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Failure to achieve at least a C- the second time around will generally result in dismissal from the engineering program. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

## Physics

The normal program in physics includes PHYS 112, 213, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students are required to have attained a minimum grade of C- in MATH 191 or equivalent before taking PHYS 112. The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite (e.g., C- in MATH 192 before taking PHYS 213, or C- in MATH 293 before taking PHYS 214). Students in the field programs of ABEN, CHEME, CEE, COM S, GEOL (geoscience and SES options), or OR&E may substitute CHEM 208 for PHYS 214.

## Chemistry

CHEM 211 or 207 is required for all students.

CHEM 211 is a course designed for students who do not intend any further study in chemistry. Typically, CHEM 211 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213, and 214) first may postpone CHEM 211 until the sophomore year.

In general, students intending to affiliate with the following departments and schools usually take CHEM 211: Applied and Engineering Physics, Civil Engineering (not students in the environmental engineering option), Computer Science, Electrical and Computer Engineering, Materials Science and Engineering, Mechanical and Aerospace Engineering, and Operations Research and Industrial Engineering. Students considering Chemical Engineering must take CHEM 207 in the fall of their freshman year, to be followed by CHEM 208 in the spring term. All students considering the environmental option in Civil Engineering, Agricultural and Biological Engineering, the science of earth systems option in Earth and Atmospheric

Sciences, or a health-related career such as medicine, should take the CHEM 207–208 sequence.

## First-Year Writing Seminars

Each semester of their freshman year, students choose a First-Year Writing Seminar from among more than one hundred courses offered by over thirty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

## Technical Writing

The ability to communicate is essential to successful professional practice. In addition to taking two First-Year Writing Seminars, engineering students must have a significant amount of instruction and practice in technical or scientific writing. They can fulfill this technical-writing requirement by enrolling in an Engineering Communications course (e.g., ENGRD 334 or ENGRD 350), selected courses in the Communications department (COMM 260, 263, or 352), or an approved writing-intensive engineering course, including

- ABEN 493 (with coregistration in ABEN 450 or ABEN 473)
- ENGRD/A&EP 264
- CHEME 432
- M&AE 427
- MS&E 435
- MS&E 443–444

For information about other options for fulfilling the writing requirement, please consult the Engineering Advising Office, 167 Olin Hall or contact the Engineering Communications Program, 465 Hollister Hall.

## Computing

In either the first or second term of their freshman year, students normally take COM S 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 453, ABEN 475, ENGRD/COM S 211, ENGRD/COM S 222, ENGRD/CEE 241, ENGRD/A&EP 264, ELE E 423, M&AE 470, M&AE 479, M&AE 575, and M&AE 578. The recommended choice for students intending to enter the field program in Engineering Physics is ENGRD 264; in Chemical Engineering, ENGRD 211, 222, or 241; in Civil Engineering, ENGRD 241; in Computer Science, ENGRD 211; in Electrical Engineering, ENGRD 211; in Mechanical Engineering, M&AE 470, M&AE 479, M&AE 575, or M&AE 578; and in Operations Research and Engineering, ENGRD 211.

## Engineering Distribution

Three engineering distribution courses (nine credits) are required. One course must be an Introduction to Engineering Course (designated by ENGRI) to be taken by the student during their freshman year. The Introduction to Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem solving context. See the Introduction to Engineering Course listing for current course offerings.

The other two distribution courses must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

- 1) *Scientific computing*  
ENGRD 211, Computers and Programming  
ENGRD 222, Introduction to Scientific Computation  
ENGRD 241, Engineering Computation
- 2) *Materials science*  
ENGRD 261, Introduction to Mechanical Properties of Materials
- 3) *Mechanics*  
ENGRD 202, Mechanics of Solids  
ENGRD 203, Dynamics

Students in the field program in Engineering Physics may substitute A&EP 333 for ENGRD 203.

- 4) *Probability and statistics*  
ENGRD 270, Basic Engineering Probability and Statistics

Students in the field program in Electrical Engineering may substitute ELE E 310 for ENGRD 270. Students in the field program in Engineering Physics may substitute ELE E 310 or MATH 471 for ENGRD 270. Students in the field programs in Civil Engineering and Agricultural and Biological Engineering may substitute CEE 304 for ENGRD 270.

- 5) *Electrical sciences*  
ENGRD 210, Introduction to Circuits for Electrical and Computer Engineers  
ENGRD 231, Introduction to Digital Systems  
ENGRD 264, Computer-Instrumentation Design
- 6) *Thermodynamics and energy balances*  
ENGRD 219, Mass and Energy Balances  
ENGRD 221, Thermodynamics
- 7) *Earth and life sciences*  
ENGRD 201, Introduction to the Physics and Chemistry of the Earth  
ENGRD 250, Engineering Applications in Biological Systems
- 8) *Biology and chemistry*  
BIO G 101 and 103, Biological Sciences, Lecture and Laboratory  
BIO G 105, Introductory Biology  
BIO G 107, General Biology (summer only)  
CHEM 389, Physical Chemistry I

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

Agricultural and Biological Engineering: ENGRD 202  
Chemical Engineering: ENGRD 219  
Civil Engineering: ENGRD 202  
Computer Science: ENGRD 211  
Electrical Engineering: ENGRD 231 (co-enrollment in ELE E 232 strongly recommended)  
Geological Sciences: ENGRD 201  
Materials Science and Engineering: ENGRD 261  
Mechanical Engineering: ENGRD 202  
Operations Research and Engineering: ENGRD 270

### Liberal Studies Distribution

The six required liberal studies courses (totaling at least 18 credits) may be chosen from approved courses in four categories: (a) humanities or history, (b) social sciences, (c) foreign languages, and (d) expressive arts. (No First-Year Writing Seminar may be used to meet the liberal studies requirement.)

- At least two courses must be chosen from category (a).
- At least two courses in either category (a), (b), or (d) must be from the same field of study. One of these courses must be at or above the 200-level or be an explicit prerequisite of the other.

Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact the Engineering Advising Office.

#### a) Humanities or History

American Studies 101, 201, 202  
Architecture 131, 132, 181, 182, 382  
Art 317, 318  
Africana Studies 202, 204, 205, 211, 280, 285, 304, 310, 361, 370, 381, 404, 422, 425, 431, 432, 435, 455, 475, 483  
Anthropology 290, 451, 452, 453, 455  
Archeology (courses in Old World Archeology and 493)  
Asian Studies (courses in Asian art, literature, religion, or cultural history)  
Biology and Society 205, 206  
Classics (all courses except 285, 356, 360, 361, and language courses)  
Collective Bargaining, Labor Law, and Labor History 100, 101, 384, 385, 386, 482, 488  
Communication 426  
Comparative Literature (all courses)  
Economics 315, 323, 324, 325, 326  
Engineering ENGRG 198, 250, 298, 360  
English (all courses except ENGL 285 and writing courses, whose numbers end in the 80s; e.g., 288, 289, 382, etc.)  
French Literature (all courses)  
German Literature (all courses)  
History (all courses)  
History of Art (all courses)  
Industrial and Labor Relations Interdepartmental Course 451  
International and Comparative Labor Relations 430  
Italian Literature (all courses)  
Jewish Studies 274, 351, 352  
Labor Economics 448  
Music (only introductory, music theory, music history, and digital music courses)  
Natural Resources 407  
Near Eastern Studies (courses listed under history, civilization, or literature)  
Philosophy (all courses except courses in logic and PHIL 383)  
Religious Studies 101

#### Russian Literature (all courses)

Science and Technology Studies 201, 205, 206, 233, 250, 281, 282, 283, 287, 292, 355, 360, 433, 444, 447, 525, 687, 711

#### Spanish Literature (all courses)

Theater Arts (only courses in Theater Studies, film analysis, and history)

Women's Studies 227, 238, 251, 264, 273, 307, 341, 348, 363, 365, 366, 374, 390, 404, 406, 408, 426, 433, 444, 445, 451, 455, 474, 493

#### b) Social Sciences

Africana Studies 171, 172, 191, 220, 231, 271, 280, 290, 300, 301, 311, 380, 410, 420, 451, 459, 478, 479

Agricultural Economics (ARME) 100, 250, 430, 431, 432, 450, 451, 464

Anthropology (all courses except 101 and courses in Biological and Ecological Anthropology)

Archeology (all courses except those in Methodology and Technology)

Architecture 342

Asian American Studies 110

Asian Studies (courses in Asian anthropology, economics, government, linguistics, or sociology)

Biology and Society 201, 301, 406, 407

City and Regional Planning 100, 101, 314, 361, 382, 404, 442

Communication 116, 120, 240, 410, 420

Design and Environmental Analysis 150, 250

Economics (all courses except 315, 317, 318, 319, 320, 321, 326. Engineering students should generally take ECON 301-302 and not 101-102, unless they have had no calculus.)

Education 210, 212, 271, 311, 317, 322, 360, 413, 477

Government (all courses)

Human Development and Family Studies (all courses)

International and Comparative Labor Relations (all courses)

Labor Economics (all courses except 345 and 448)

Linguistics (all courses)

Natural Resources 350, 400

Organizational Behavior (all courses)

Policy Analysis and Management (all courses except 305, 323, 326, 371, 424, 425, 606, and 607)

Psychology (all courses except 223, 307, 322, 324, 326, 332, 350, 361, 396, 422, 425, 426, 429, 465, 470, 471, 472, 473, 475, 476, 478, 479, 480, 491, 492)

Rural Sociology (all courses)

Science and Technology Studies: 311, 350, 360, 390, 391, 401, 407, 411, 427, 453, 483, 490, 645, 664, 700

Sociology (all courses)

Textiles and Apparel 245

Women's Studies 210, 218, 220, 238, 244, 277, 281, 297, 305, 321, 353, 362, 365, 366, 372, 406, 408, 425, 428, 438, 450, 454, 463, 468, 479, 480, 493

**c) Foreign Language**

This category includes all foreign language courses; if two or more foreign language courses are used to fulfill part of the liberal studies requirement, they must be a sequence of courses in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Speakers of languages other than English may obtain up to six advanced placement credits equal to two courses according to these rules.

**d) Expressive Arts**

Africana Studies 303, 425, 430

Art (studio courses)

Biological Sciences 208, 209

Communications (all courses except 116, 120, 314, 410, 416, 420, 426, 465)

Design and Environmental Analysis 101, 102

Engineering (all Engineering Communications courses, which are designated ENGRD)

English (expository and creative writing courses, whose numbers end in the 80's, e.g., 288, 289, 382, etc.)

Floriculture (courses in Freehand Drawing and Scientific Illustration)

Industrial and Labor Relations 452

Music (courses in musical performance, musical organizations and ensembles; three one-credit courses equals one course)

Science and Technology Studies 352

Theater Arts (all courses except those listed in category (a) above)

**Electives**

- Approved electives—six credits required (approved by the academic adviser)

Because these courses should help develop and broaden the skills of the engineer, advisers will generally accept the following as approved electives:

1. One Introduction to Engineering course (ENGRI).
  2. Engineering distribution courses.
  3. Courses stressing written or oral communication.
  4. Upper-level engineering courses.
  5. Advanced courses in mathematics.
  6. Rigorous courses in the biological and physical sciences.
  7. Courses in business, economics, or language (when they serve the student's educational and academic objectives).
  8. Courses that expand the field program or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)
- Field approved electives—nine credits (approved by engineering field program faculty and field faculty advisers). Students should refer to the field program curricula for descriptions of courses that meet this category.
  - To ensure breadth of engineering studies, field programs will also include nine credits of courses outside the field.

**Social Issues of Technology**

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, and approved electives, students are urged to consider courses listed in the "Science and Technology Studies" undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

**Engineering Advising Office**

From the time that students enter the college as freshmen until they are affiliated with a major field or the College Program before the second term of the sophomore year, they are under the administration of the Engineering Advising Office, which implements the academic policies of the College Curriculum Governing Board. The office offers general advising and counseling services and serves as the primary resource center for undergraduate students in the college. The Engineering Minority Programs office and the Women's Programs in Engineering office provide additional specialized services.

**Freshman Year Requirements**

By the end of the freshman year, engineering students are expected to have completed (or received credit for) the following core requirements:

- MATH 191 (or 190) and MATH 192
- Two of the following: CHEM 211, 207, 208, PHYS 112, 213, 214\*
- COM S 100
- Two First-Year Writing Seminars
- One Introduction to Engineering course (ENGRI designation)
- Two Physical Education courses

\*Students with an interest in pre-med (or other health-related careers), Agricultural and Biological Engineering, Chemical Engineering, the environmental option in Civil Engineering, or the science of earth systems option in Geological Sciences should enroll in the CHEM 207–208 sequence during their freshman year.

**Affiliation with a Field Program**

Students must apply for affiliation with a field program during the first term of their sophomore year, although earlier affiliation may be granted at the discretion of the field. This is done by visiting the undergraduate field consultant's office in the field of their choice and completing the Application for Field Affiliation form. To affiliate with a field program, students must (1) have a 2.0 cumulative grade point average and (2) have satisfied the field's course and grade requirements as specified below:

(Please note that fields may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

<i>Field Program</i>	<i>Courses and Minimum Grade Requirements</i>
Agricultural & Biological Engineering	No more than one grade below C- in mathematics and science courses and ABEN 151 or equivalent

Chemical Engineering

No more than one grade below C- in chemistry, mathematics, physics, or chemical engineering courses and a 2.2 GPA in mathematics, science, and chemical engineering courses

Civil Engineering

A 2.0 GPA in all engineering and science courses and a grade of C- or better in ENGRD 202 (for students in the environmental option who do not take ENGRD 202 prior to affiliation, a grade of C- or better in CHEM 208 is required)

Computer Science

Completion of MATH 293, ENGRD/COM S 211, and COM S 280; a grade of C or better in all COM S courses (excluding COM S 100), with the overall average of these courses being not less than 2.7; a grade of C or better in all MATH classes, with an overall average of these courses being no less than 2.7; an overall GPA of 2.5 or better recommended. (In the event of repeated courses, both grades will be counted in the averages used for affiliation.)

Electrical Engineering

Good academic standing in the College of Engineering; a grade of C or better in MATH 293 and PHYS 213. Repeated technical courses used to satisfy this requirement require field approval.

Engineering Physics

A grade of B- or better in all required mathematics and physics courses

Geological Sciences

Good academic standing in the College of Engineering

Materials Science & Engineering

A grade of C- or better in all physics and chemistry courses and a grade of C or better in ENGRD 261.

Mechanical Engineering

A grade of C- or better in mathematics and science courses and ENGRD 202

Operations Research & Engineering

A grade of C- or better in MATH 191 and 192, and a 2.0 GPA in all mathematics, science, and engineering courses (both overall and in the term immediately prior to affiliation)

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

**SPECIAL PROGRAMS****Dual Degree Option**

A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and

either a Bachelor of Arts or Bachelor of Fine Arts degree can be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art, and Planning may apply and, after acceptance of their application, begin the dual degree program in their second or third year. Those interested should contact the appropriate coordinators of dual degree programs at the following locations: 55 Goldwin Smith Hall (for Arts and Sciences); or 135 East Sibley (for Architecture, Art, and Planning); and the Director of Engineering Advising, 167 Olin Hall.

### Double Major in Engineering

The Double Major option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years. Students affiliate with one field following normal procedures and then petition to enter a second field before the end of their junior year. All the requirements of both fields must be satisfied. Further information is available from the Engineering Advising Office, 167 Olin Hall, and the individual field consultant offices.

### College Program

Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives cannot be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work.

Students apply to enter the College Program by the end of the first term of the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere. Normally, students applying to the College Program should have a 3.0 cumulative grade point average.

Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and an educationally related minor. The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected nonengineering area. The combinations must clearly form an engineering education in scope and in substance and should include engineering design and synthesis as well as engineering sciences. In addition to 48 credits in the major and minor subjects, including at least 32 credits in engineering courses, each program includes the normally required courses in humanities and social sciences and approved electives.

Further information about the College Program may be obtained from the Director of Engineering Advising, 167 Olin Hall.

Important note: because no single standardized curriculum exists, the College Program is not accredited. College Program students who intend to seek legal licensing as a Professional Engineer should be aware that this non-accredited degree program will require additional education, work, and/or experience

to qualify for eligibility to take the Fundamentals of Engineering examination, and may affect acceptance into engineering graduate programs.

### Engineering Minors

The Engineering Minor is a supplement to the regular bachelor's degree programs in the college, including the College Program, and recognizes formal study of a particular technical subject area in engineering normally outside the student's major. Therefore, it may be necessary for some students choosing to complete the requirements for an engineering minor to spend more than the traditional eight semesters to complete their studies at Cornell. In many cases, however, courses fulfilling minor requirements may also satisfy other degree requirements (e.g., distribution courses, approved electives, or field-approved electives). Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell.

To complete an engineering minor, an undergraduate engineering student must

- be enrolled in a major field program that approves the participation of its affiliates in the desired minor.
- successfully complete all the requirements for a bachelor of science degree in engineering.
- satisfactorily complete six courses (18 credit minimum) as stipulated in a college-approved minor offered by an engineering school or department other than that which offers the student's major.

Students may apply for certification of an engineering minor at any time after the necessary coursework has been completed in accordance with published standards. Students who receive certification in an approved engineering minor will be recognized by means of an official notation on their Cornell transcript following graduation.

The College of Engineering currently offers minors in the following areas (offering departments are indicated in parentheses):

- Applied Mathematics (T&AM)
- Biomedical Engineering (T&AM)
- Civil Infrastructure (CEE)
- Electrical and Computer Engineering (ECE)
- Engineering Management (CEE)
- Engineering Statistics (OR&IE)
- Environmental Engineering (ABEN/CEE)
- Geological Sciences (EAS)
- Industrial Systems and Information Technology (OR&IE)
- Materials Science and Engineering (MS&E)
- Mechanical Engineering (M&AE)
- Operations Research and Management Science (OR&IE)

Additional information on specific minors can be found in the departmental sections of this publication, *The Engineering Undergraduate Handbook*, the undergraduate field office of the department offering the minor, and the Engineering Advising Office.

### Bioengineering Option

Students who elect this option will graduate with a B.S. degree in one of the traditional fields and with an administrative note on their transcript formally recognizing their efforts in bioengineering.

The requirements for completion of the option are four courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGRG 501). These courses can simultaneously satisfy other degree requirements and are not necessarily four additional courses. These four courses must be selected from two categories: science-based courses and bioengineering courses. At least one course must be from the science-based course list and at least two (totalling at least six credits) from the bioengineering course list. Each student interested in the bioengineering option can request (through the Engineering Undergraduate Programs office) a faculty consultant who will assist the student in course selection for this option. The bioengineering faculty consultant is in addition to the student's regular academic adviser.

A list of approved courses is available in the Engineering Advising Office, 167 Olin Hall or in the Engineering Undergraduate Programs Office, 222 Carpenter Hall.

### International Programs

All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today's engineers. In keeping with the university goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. For further information on these and other opportunities to add an international dimension to your undergraduate education, see the staff in the Engineering Advising Office, 167 Olin Hall. Information on co-op programs abroad is available from the Engineering Professional Programs Office in 146 Olin Hall.

### Engineering Communications Program

The Engineering Communications Program (ECP) provides instruction in the written, oral, and visual presentation of technical and scientific information. Engineering Communications, ENGRG 350, and Communications for Engineering Managers, ENGRG 335, are three-credit seminars that give students a thorough introduction to these areas. These courses use material from the engineering and business workplace, and many assignments are based on actual events and professional situations. Students learn to direct their writing and presentations to different audiences that have varying roles and levels of expertise. They learn about effective teamwork and deal with organizational and ethical issues in the communications they encounter and produce. Classes have lively discussion, and the limited size of sections ensures close attention to individual students' work. Occasionally, the program's instructors offer courses or independent studies in topics of special interest. ECP courses fulfill the college's technical writing requirement (see Requirements for Graduation).

In addition to offering communications seminars, the program works with the engineering fields to integrate communications instruction into technical courses. The program presents workshops and lectures on relevant communications topics and helps to develop assignments, instructional materials, and assessment strategies for writing and oral presentations. The goal of these writing-intensive efforts is to strengthen students' understanding of engineering course material and increase their ability to communicate it.

The ECP also gives presentations to student groups on effective writing, oral communication, and teamwork and has been involved in innovative educational projects such as Peer Teaching in Engineering (ENGRG 470), a collaborative learning initiative in physics, mathematics, chemistry, and engineering design. The program awards several annual prizes for writing, oral presentation, and teamwork. For further information, contact the director, 465 Hollister Hall.

### Engineering Cooperative Education Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Education Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

To be eligible, a student must have been enrolled at Cornell for four semesters prior to working, with a cumulative GPA of 2.7 or higher. (Students in Computer Science and Agricultural and Biological Engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of participating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Professional Programs Office, 146 Olin Hall.

### MASTER OF ENGINEERING DEGREE PROGRAMS

One-year Master of Engineering (M.Eng.) programs are offered in 13 fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. More information is available through the Master of

Engineering web site: [www.engineering.cornell.edu/EngProfProg](http://www.engineering.cornell.edu/EngProfProg). The M.Eng. degrees and the academic fields under which they are described are listed below.

**M.Eng. (Aerospace):** Mechanical and Aerospace Engineering

**M.Eng. (Agricultural and Biological):** Agricultural and Biological Engineering

**M.Eng. (Chemical):** Chemical Engineering

**M.Eng. (Civil & Environmental):** Civil and Environmental Engineering

**M.Eng. (Computer Science):** Computer Science

**M.Eng. (Electrical):** Electrical and Computer Engineering

**M.Eng. (Engineering Physics):** Applied and Engineering Physics

**M.Eng. (Geology):** Earth and Atmospheric Sciences

**M.Eng. (Materials):** Materials Science and Engineering

**M.Eng. (Mechanical):** Mechanical and Aerospace Engineering

**M.Eng. (Engineering Mechanics):** Theoretical and Applied Mechanics

**M.Eng. (Nuclear):** Nuclear Science and Engineering

**M.Eng. (OR&IE):** Operations Research and Industrial Engineering

Candidates for a professional master's degree who wish to specialize in areas related to manufacturing may avail themselves of two special programs. The manufacturing systems engineering option may be centered in any one of the fields listed above. This option is attested to by a Dean's Certificate in addition to a diploma at the time of graduation. An industrial internship program provides opportunities to combine on-campus education with off-campus industrial experience.

An M.Eng. option of potential interest to engineers from all fields is the program in Engineering Management, offered by the School of Civil and Environmental Engineering. This option is described in the section related to the M.Eng. (Civil & Environmental) degree.

Cornell engineering graduates in the upper half of their class will generally be admitted to M.Eng. programs; however, requirements for admission vary by field. Superior Cornell students who will have between one and eight credits remaining in their last undergraduate semester may petition their field representative for early admission to the M.Eng. program. Other applicants must have a baccalaureate degree or its equivalent from a college or university of recognized standing, in an area of engineering or science that is judged appropriate for the proposed field of study. They must also present evidence of undergraduate preparation equivalent to that provided by a Cornell undergraduate engineering education, a transcript, two letters of recommendation, and a statement of academic purpose. A candidate who is admitted with an undergraduate background that is judged inadequate must make up any deficiencies in addition to fulfilling the regular course requirements for the degree. Most fields require applicants from other under-

graduate institutions to submit the results of the Graduate Record Examination (GRE) aptitude tests. All applicants from foreign universities must submit GRE scores and must have an adequate command of the English language. Financial aid providing partial support is available for very highly qualified candidates, primarily those who are residents of the United States.

### Cooperative Programs with the Johnson Graduate School of Management

Outstanding students with relevant work experience may be admitted to one of two joint Master of Engineering and Master of Business Administration degree programs. One, which Cornell students enter during their undergraduate career, makes it possible to earn the B.S., M.Eng., and M.B.A. in six years—one year less than such a program would normally require. The second program, which is available to students who already hold baccalaureate degrees from Cornell or other institutions, requires five semesters and leads to both the M.Eng. and M.B.A. Students are required to apply for admission to both the College of Engineering and the Johnson Graduate School of Business Management.

Students interested in deferring admissions to the Johnson Graduate School of Business Management may be eligible for the Knight Scholarship Award. Upon completion of the M.Eng. degree, Knight Program students spend three to five years in relevant full-time work experience before starting the M.B.A. program. More information about the Knight program or admission to the joint degree programs may be obtained from the Office of Engineering Professional Programs, 146 Olin Hall.

## ACADEMIC PROCEDURES AND POLICIES

### Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

- (1) Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB);
- (2) General Certificate of Education (GCE) Advanced ("A") Level Examinations;
- (3) International Baccalaureate (IB) Higher Level Examinations; or
- (4) Cornell's departmental placement examinations, given during orientation week prior to the beginning of fall-term classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways.

- 1) They may enroll in a more advanced course in the same subject right away.
- 2) They may substitute an elective course from a different area.

- 3) They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

### Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

**Mathematics:** MATH 191 (or 190), 192, 293, and 294 are required.

*First-term math (MATH 191).* AP credit may be earned by:

- a score of 3, 4, or 5 on the CEEB BC exam, or
- a score of 5 on the CEEB AB exam, or
- a passing score on the Cornell departmental exam for first-term math.

*First-year math (through MATH 192).* AP credit may be earned by:

- a passing score on the Cornell departmental exam for first-year math.

**Physics:** PHYS 112 and 213 are required.

*PHYS 112.* AP credit may be earned by:

- a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
- a score of 5 on the CEEB B exam *only* if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
- a passing score on the Cornell departmental exam for PHYS 112.

Note: Students who have received credit for PHYS 112 **may not** enroll in PHYS 213 unless concurrently enrolled in MATH 293.

*PHYS 213.* Students receiving a 5 on the Electricity and Magnetism portion of the C exam may choose to accept AP credit for PHYS 213 or placement in PHYS 217 with no AP credit for PHYS 213. For advice or more information contact Professor Joseph Rogers (607-255-8158), the departmental representative.

**Chemistry:** CHEM 207 or CHEM 211 is required.

*CHEM 207 or CHEM 211.* AP credits may be earned by:

- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for Chemistry.

Note: students who are successful in obtaining AP credit for CHEM 207 and who are considering majors in Chemical Engineering or Materials Science and Engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. You may want to discuss this option with your faculty adviser.

**Computing:** COM S 100 is required. AP credit may be earned by:

- a score of 4 or 5 on the CEEB A or AB exam, or

- a passing score on the Cornell departmental exam for COM S 100.

**Biology:** Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:

- eight credits will be offered to students who receive a 5 on the CEEB AP exam;
- six credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

**First-Year Writing Seminar:** Two First-Year Writing Seminars (for a total of six credits) are required.

- AP credit for one First-Year Writing Seminar may be earned by a score of 5 on either of the CEEB AP English exams.

Students who earn a score of 4 on the AP English Literature and Composition exam will be offered three credits which may be applied toward the Humanity/History category of the Liberal Studies distribution requirement.

Students who earn a score of 4 on the AP English Language and Composition exam will be offered three credits which may be applied toward the Expressive Arts category of the Liberal Studies distribution requirement.

**Liberal Studies Distribution:** Six courses beyond two First-Year Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the humanities or social sciences cannot be used to fulfill the "upper level" liberal studies requirements.

**Modern Languages:** Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 650 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the students to six credits which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may meet an approved elective requirement, contingent on discussions with the faculty adviser.

### Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

#### General Certificate of Education Advanced Level Examination (GCE "A")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered

equivalent in standard to GCE "A" Levels.

Subject	Marks	Credit
Biology	A or B	8 credits
Chemistry	A	8 credits (CHEM 207 and 208)
	B	4 credits (CHEM 207)
Mathematics	A or B	8 credits (MATH 191/190 and 192)
	C	4 credits (MATH 191/190)
Physics	A or B	4 credits for PHYS 112; 4 additional credits for PHYS 213 are granted to a combination of grades of A or B and a minimum of 8 Advanced Placement (or advanced standing) credits in mathematics.

### International Baccalaureate (IB) Higher Level Examination

Subject	Marks	Credit
Biology	7	8 credits
	6	6 credits
Chemistry	6 or 7	4 credits (CHEM 207 or CHEM 211)
Computer Science	6 or 7	4 credits (COM S 100)
Mathematics	6 or 7	8 credits (engineering students must consult with the math department to determine prerequisite for placement in third-semester math course.)
Physics	6 or 7	4 credits (PHYS 112)

Note: Advanced Placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

### General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.
2. All AP examinations are normally taken and scored before fall-term classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to the Engineering Advising Office, 167 Olin Hall. Those who wish to take departmental examinations should do so during Orientation Week;

permission to take these tests after the start of fall-term classes must be requested in a written petition to the College's Committee on Academic Standards, Petitions, and Credit (ASPAC).

A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet *Advanced Placement and Transfer Credit for First-Year Engineering Students*, which may be obtained from the Engineering Advising Office, 167 Olin Hall.

### Transfer Credit

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, students must complete and submit a Transfer Credit Form (one form for each request), accompanied by a course description. (Transfer Credit Forms are available from the Engineering Advising or Registrar's offices and should be submitted prior to enrollment.) An official transcript from the offering institution (bearing the institutional seal and registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.
- To apply for transfer credit to satisfy requirements in mathematics, science, engineering courses, or First-Year Writing Seminars, a student must receive approval from the department offering an equivalent course at Cornell. The department certifying the course may require course materials, textbooks used, etc., in addition to the course description before approving the course.
- Departmental approval is not required to apply for transfer credit which satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in the Engineering Advising Office.
- Cornell does not award credit for courses in which a student has earned a grade of less than C; schools and departments may stipulate a higher minimum grade.
- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination, as described in the Advanced Credit section.
- Following matriculation, students may apply up to 18 credits of transfer and/or Cornell extramural credit toward bachelor's degree requirements.

- Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements.
- No more than 72 total transfer credits (combination of those taken both before and after matriculation) may be used to meet graduation requirements.
- Summer session courses taken at Cornell are not considered transfer credit.
- A more detailed description of the college's regulations governing transfer credit may be found in the pamphlet, *Advanced Placement and Transfer Credit for First-Year Engineering Students*, as well as *The Engineering Undergraduate Handbook*, both available from the Engineering Advising Office, 167 Olin Hall.

### Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing changes somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means varies from field to field.

Requirements for freshman engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

- At least 12 credits passed, including at least two courses from mathematics, science, and/or engineering
- A C- or better in the mathematics course
- A semester average of 2.0 or higher
- No F, U, or INC grades

Requirements for second-semester freshman and first-semester sophomores to be in good standing are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

- At least 14 credits passed in courses that meet engineering degree requirements
- A C- or better in the mathematics course, if one was taken
- A semester average of 2.0 or higher
- No F, U, or INC grades

### Academic Progress

The total number of credits required for graduation range from 123 to 133, depending on the field program. Therefore, an average semester credit load ranges from approximately 15 to 17 credits.

Because mathematics is pivotal to the study and practice of engineering, students must earn a grade of C- or better in MATH 191 (or 190), 192, 293, and 294. Those who fail to meet this standard are allowed to repeat a course once in the following semester. Failure

to achieve at least a C- the second time will generally result in withdrawal from the College of Engineering. Physics and advanced mathematics courses often have mathematics prerequisites, and having to repeat the prerequisite course may delay progress in the physics and mathematics curricula.

### Dean's List

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor are determined by the dean of the college. For 2000–2001, the requirement is a semester average of 3.4 or higher (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S-U). Students may earn Dean's List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean's List status receive certificates from the Engineering Registrar's Office, and the honor is noted on the transcript.

### Graduating with Distinction and Honors Program

#### Graduating with Distinction

Meritorious students graduating with a Bachelor of Science degree from the College of Engineering may also be designated *cum laude*, *magna cum laude*, or *summa cum laude*.

- Cum laude will be awarded to all engineering students with an overall GPA  $\geq 3.5$ . Cum laude will also be awarded to all engineering students who received a semester GPA  $\geq 3.5$  in each of the last four semesters of attendance at Cornell; in each of these semesters, at least 12 letter graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for pro-rated tuition in their final semester will be awarded cum laude if they received a semester GPA  $\geq 3.5$  in their last semester and meet the conditions above in the prior four semesters. (The change in the cum laude policy will become effective for the class graduating in May 2001.)
- Magna cum laude will be awarded to all engineering students with an overall GPA  $\geq 3.75$  (based on all credits taken at Cornell).
- Summa cum laude will be awarded to all engineering students with an overall GPA  $\geq 4.0$  (based on all credits taken at Cornell).

Note: All GPA calculations are minimums and are not rounded.

#### Field Honors Program

To be eligible for field honors, a student must enter a program with and maintain a cumulative GPA of  $\geq 3.5$ . If the student's major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may recommend that a student graduate with the additional diploma and transcript notation of "With Honors." For more specific information, see the field program outline in this catalog.

## S-U Grades

Many courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of C- or better in a course will receive a grade of S; those earning less than C- receive a grade of U. (Any course in which a U grade is received does not count toward graduation requirements.)

Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must have previously completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
- Students may only elect to enroll S-U in one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course.)

The choice of grading option for any course is initially made during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed Add/Drop Form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option.

## Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are on a voluntary leave of absence are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the bachelor's degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad Office, 474 Uris Hall. Programs should be planned in consultation with the staff of the Engineering Advising Office, who can provide information on credit-evaluation policies and assist in the petitioning process.

## Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not

guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division Office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with the Engineering Advising Office.

Students who wish to transfer into the College of Engineering can apply at the Engineering Advising Office—application forms are available in 167 Olin Hall. Students who would enter the college as second-semester sophomores or later must be accepted by a field program as part of the admission process. Students who would enter as a second-semester freshman or first-semester sophomore may be accepted into the college without the requirement of field affiliation but must be sponsored by a field program.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in the Engineering Advising Office, 167 Olin Hall.

## Leave of Absence

A leave of absence may be voluntary, medical, or required. A description of each follows:

**Voluntary Leave:** Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their fields. Unaffiliated students request leave through the Engineering Advising Office; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a field and while not in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

Leaves of absence are not generally granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a *minimum of six months*. If a leave is requested after the twelfth week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who owe money to the university are ineligible for leaves of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved *in advance* through a formal transfer petition. (See previous section of Transfer Credit for details.)

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing, at least six weeks

prior to the date the student plans to return to campus.

**Medical Leave:** Medical leaves are granted by the college only upon recommendation by a physician from Gannett Health Center. Such leaves are granted for at least six months and up to five years with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

**Required Leave:** A required leave of absence is imposed in cases where the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in several courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are only offered in the fall or the spring semester. Leaves are given when the probability of success is increased substantially by deferring the student's return by one semester (or, in unusual circumstances, one year).

## Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a field should request permission to rejoin in a letter to the Engineering Advising Office; affiliated students should contact their field office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

## Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

**Voluntary Withdrawal:** Students who voluntarily withdraw from the engineering degree program sever all connection with the college. Unaffiliated students who wish to withdraw should do so through the Engineering Advising Office. Affiliated students should contact their field office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

Any student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intra-university transfer process should be followed.

If students who have withdrawn subsequently wish to return, they must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends

on available space in the college and in the student's major field.

**Required Withdrawal:** Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action only withdraws them from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

## ENGINEERING CAREER SERVICES

Individual advising and group seminars are available for students who desire assistance in career and job-search matters. More than 300 national employers visit the campus annually to recruit technical graduates. Additional job opportunities are posted electronically. Both undergraduate and graduate students can use these services to pursue permanent or summer employment opportunities. Further information on all services is available from the Engineering Career Services Office, 201 Carpenter Hall (255-5006); [www.career.cornell.edu/ccs](http://www.career.cornell.edu/ccs).

## AGRICULTURAL AND BIOLOGICAL ENGINEERING

M. F. Walter, chair; B. A. Ahner, L. D. Albright, D. J. Aneshansley, A. J. Baeumner, J. A. Bartsch, J. R. Cooke, A. K. Datta, K. G. Gebremedhin, D. A. Haith, J. B. Hunter, L. H. Irwin, W. J. Jewell, C. D. Montemagno, J.-Y. Parlange, N. R. Scott, T. S. Steenhuis, M. B. Timmons, L. P. Walker

### Bachelor of Science Curriculum

Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, energy and biodiversity; and developing engineering systems that monitor, replace, or intervene in the biology of living organisms. The undergraduate engineering program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a Bachelor of Science degree and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in Agricultural and Biological Engineering are offered: environmental engineering, biological engineering, and food production and process engineering. All students, regardless of concentration, take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select application courses in the department in areas that include bioprocessing, soil and water

management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that strengthen their program, such as environmental sciences or biomedical engineering. Students planning for medical school also take additional lab-based courses in biology and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

The department also participates in a new interdisciplinary major, Science of Earth Systems (SES). Students in the joint program may minor in SES by taking 18 credits of engineering and science electives as part of their engineering program.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us, and within us. The biological revolution continues and it has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and who are interested in the challenges facing society. Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges. The department is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world.

For further details see the department's undergraduate programs publication, available at 207 Riley-Robb Hall, or contact the field's advising coordinator, Professor Jim Bartsch, at 255-2800.

The field program requirements are outlined below.

Basic Subjects	Credits
MATH 191 (or 190), 192, 293, 294, Calculus for Engineers and Engineering Mathematics	16
General Chemistry (207 and 208)	8
Physics I and II (112 and 213)	8
Introductory biological sciences	6 or 8
ABEN 151, Introduction to Computing	4
ABEN 200, Undergraduate Seminar	1
Engineering distribution (two courses, including ENGRD 202, Mechanics of Solids)	6
Liberal studies (two freshman seminars and at least two courses in humanities or history)	24

### Advanced and Applied Subjects

Engineering sciences in any field (must include fluid mechanics and thermodynamics), plus ABEN 250 and 350 (Engineering Applications in Biological Systems, Bio. & Env. Transport Processes), and a minimum of three agricultural and biological engineering courses (at least 9 credits) chosen from courses numbered 450 to 493

35-37

Environmental, biological, or agricultural sciences (at least 3 credits of biological sciences beyond the introductory level)

7

Approved electives (at least 3 credits in the College of Agriculture and Life Sciences)

6

Total (minimum)

123

## Agricultural and Biological Engineering Honors Program

### Eligibility

This program is only available to seniors registered in the College of Engineering.

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor's degree, have satisfactorily completed the honors program in the Department of Agricultural and Biological Engineering and have been recommended for the degree by the honors committee of the department. An honor's program student must enter with and maintain a cumulative GPA  $\geq 3.5$ .

### Content

An ABEN honors program shall consist of at least nine credits beyond the minimum required for graduation in ABEN. These nine credits shall be drawn from one or more of the following with at least four credit hours in the first category:

- A significant research experience or honors project under the direct supervision of an ABEN faculty member using ABEN 499, Undergraduate Research. A written senior honors thesis must be submitted as part of this component.
- A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department (e.g., ABEN 151 or 250) under ABEN 498, Undergraduate Teaching.
- Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, mathematics, biology, chemistry and physics at the 400+ and graduate level.

*Note:* no research, independent study, or teaching for which the student is paid may be counted toward the honors program.

### Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

### Procedures

Each applicant to the ABEN honors program must have an ABEN faculty adviser to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

### Minor in Environmental Engineering

(Offered in cooperation with the School of Civil and Environmental Engineering)

### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE. A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues. The requirements for the environmental engineering minor are outlined below. For further details consult the Agricultural and Biological Engineering Undergraduate Programs Office, 207 Riley-Robb Hall, or the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows.

Students must select courses from the following group listings, with at least one course from each group.

#### Group A. Environmental Engineering Processes:

CEE 351	Environmental Quality Engineering
CEE 352	Water Supply Engineering
CEE 451	Microbiology for Environmental Engineering
CEE 453	Laboratory Research in Environmental Engineering
ABEN 476	Solid Waste Engineering
ABEN 478	Ecological Engineering
CEE 644	Environmental Applications of Geotechnical Engineering
ABEN 651	Bioremediation
CEE 653	Water Chemistry for Environmental Engineering
CEE 655	Pollutant Transport and Transformation in the Environment
CEE 658	Sludge Treatment, Utilization, and Disposal
CEE 654	Aquatic Chemistry

#### Group B. Environmental Systems:

ENGRI 113*	Introduction to Environmental Systems (*May count only if taken before the student's junior year.)
ABEN 475	Environmental Systems Analysis
CEE 529	Water and Environmental Resources Problems and Policies
CEE 597	Risk Analysis and Management
CEE 623	Environmental Quality Systems Engineering
ABEN 678	Nonpoint Source Models

#### Group C. Hydraulics, Hydrology, and Environmental Fluid Mechanics:

CEE 331	Fluid Mechanics (CHEME 323 or M&AE 323 may be substituted for CEE 331)
CEE 332	Hydraulic Engineering
ABEN 371	Hydrology and the Environment
CEE 431/ ABEN 471	Geohydrology
CEE 432	Hydrology
CEE 435	Coastal Engineering
CEE 437	Experimental Methods in Fluid Dynamics
ABEN 473	Watershed Engineering
ABEN 474	Drainage and Irrigation Systems
CEE 633	Flow in Porous Media and Groundwater
CEE 655	Pollutant Transport and Transformation in the Environment
ABEN 671	Analysis of the Flow of Water and Chemicals in Soils
ABEN 672	Drainage

Academic Standards: A letter grade of C- or better in each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

### Master of Engineering (Agricultural and Biological) Degree Program

The program for the M.Eng. (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an extension of an undergraduate program in agricultural and biological engineering but can accommodate graduates of other engineering disciplines. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. At least three of the required 30 credits are earned for an engineering design project that culminates in a written and oral report.

A candidate for the M.Eng. (Agricultural and Biological) degree may choose to concentrate in one of the subareas of agricultural and biological engineering or take a broad program without specialization. The subareas include biological engineering, energy, environmental engineering, environmental management, food engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and

environment. Elective courses are chosen from among engineering subject areas relevant to the student's interests and design project. Courses in technical communication, mathematics, biology, and the physical sciences may also be taken as part of a coherent program. Master of Engineering students in agricultural and biological engineering can qualify for the Dean's Certificate in energy, manufacturing, or bioengineering by choosing their design project and a number of electives from the designated topic areas. More information is available from the ABEN Student Services Office, 207 Riley Robb Hall (255-2173), or by e-mail at abengradfield@cornell.edu.

### APPLIED AND ENGINEERING PHYSICS

R. A. Buhrman, director; F. W. Wise, associate director for undergraduate studies; A. L. Gaeta, director of graduate studies; B. W. Batterman, J. D. Brock, T. A. Cool, H. G. Craighead, H. H. Fleischmann, M. S. Isaacson, V. O. Kostroun, B. R. Kusse, M. Lindau, R. V. E. Lovelace, L. Pollack, J. Silcox, W. W. Webb; adjunct faculty: D. H. Bilderback; senior research associate: E. J. Kirkland

### Bachelor of Science Curriculum

The undergraduate engineering physics curriculum is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for engineering physics graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state device development, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mechanical engineering, medical physics, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The Engineering Physics program fosters this breadth of opportunity because it both

stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman Introduction to Engineering course); ENGRD/A&EP 264, Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330, Modern Experimental Optics (a junior/senior course); A&EP 363, Electronic Circuits (a sophomore/junior course); PHYS 410, Advanced Experimental Physics; and A&EP 438, Computational Engineering Physics (a senior computer laboratory).

Undergraduates who plan to enter the field program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. Students are also encouraged to take PHYS 112 or PHYS 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy the computing applications or technical writing requirement with the engineering distribution course ENGRD 264. Engineering physics students need to take only two engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A&EP 363 in the spring semester of the sophomore year. Students with one semester of advanced placement in math, who have received a grade of A- or better in MATH 192, may wish to explore accelerating their mathematics requirements so as to enroll in A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director.

In addition to the requirements of the Engineering Common Curriculum,\* the upperclass course requirements of the field program are as follows:

Course	Credits
A&EP 333, Mechanics of Particles and Solid Bodies	4
A&EP 355, Intermediate Electromagnetism	4
A&EP 356, Intermediate Electrodynamics	4
A&EP 361, Introductory Quantum Mechanics	4
A&EP 363, Electronic Circuits	4
A&EP 423, Statistical Thermodynamics	4
A&EP 434, Continuum Physics	4
PHYS 410, Advanced Experimental Physics	4
A&EP 321, Mathematical Physics I; or MATH 421 (applied mathematics)	4
A&EP 322, Mathematical Physics II; or MATH 422 (applied mathematics)	4
Applications of quantum mechanics†	3 or 4
Five field-approved electives (15–19 credits), of which four must be technical. The technical electives are expected to be upper-level courses (300 or above).	

Total field credits=58 credit hours minimum.

\*The Engineering Common Curriculum allows students to take only four courses each semester of their freshman year if they so desire. This course load is fully consistent with the requirements of the EP major, but entering

students with strong preparation are encouraged to consider taking an additional course during one or both semesters of the freshman year so that they may have additional flexibility in developing a strong, individualized educational program in their latter years, and for allowing options such as a semester or year abroad or early graduation.

†Some courses (though the list is not all-inclusive) that will satisfy this requirement are PHYS 444, Nuclear and High-Energy Particle Physics; PHYS 454, Introductory Solid-State Physics; A&EP 438, Computational Engineering Physics; A&EP 440, Quantum and Nonlinear Optics; A&EP 609, Nuclear Physics for Applications; ELE E 430, Lasers and Optical Electronics; and ELE E 531, Quantum Electronics I.

Two of the four credits of PHYS 410 required for the BS degree in Engineering Physics can be satisfied by successfully completing A&EP/PHYS 330. The remaining two credits of PHYS 410 can then be satisfied by taking PHYS 400 for two credits, provided that the experiments completed in PHYS 400 do not overlap with those in A&EP/PHYS 330. (A list of experiments that are not appropriate will be prepared by A&EP faculty and made available in the A&EP office.) If a student chooses this option, A&EP/PHYS 330 may also count as a technical elective, provided the remaining three technical electives are four credits each.

‡If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

**Choosing elective courses.** A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics majors are encouraged to work closely with their adviser to develop a coherent academic program that is in accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor Frank W. Wise.

Electives need not be all formal course work: qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design

projects in areas in which faculty members are active.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics Program requires that a minimum GPA of 2.7 (B-) be attained in all physics and mathematics courses taken by a student before entering the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each semester a grade-point average for that semester of at least 2.3.

### Engineering Physics Honors Program Eligibility

The Bachelor of Science degree with honors will be conferred upon those students who, while completing the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA  $\geq 3.5$ .

### Content

The student must

1. Complete at least eight credits of field approved electives at the 400-level or higher and receive a minimum grade of an A- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.
2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. The minimum enrollment is to be two credits in the first semester and four credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

### Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

### Procedures

Before enrolling in A&EP 490, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies.

cies in the proposal. The proposed research project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A- is necessary for successful completion of the honors requirement.

### Master of Engineering (Engineering Physics) Degree Program

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanostructure science and technology, device physics, materials characterization, or software engineering. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to nano-structure science and technology. Core courses in this specialty include the micro-characterization of materials (A&EP 661) and the microprocessing and microfabrication of materials (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics, nanostructure technology, or optoelectronics. Another area of study may be applied optics where core courses can be chosen from applied physics, electrical engineering, and physics.

Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

- 1) a design project in applied science or engineering with a written final report (not less than 6 nor more than 12 credits)
- 2) an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
- 3) a required special-topics seminar course (one credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. Its purpose is to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng. (Engineering Physics) degree program should contact Professor Bruce Kusse.

### APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

### CHEMICAL ENGINEERING

M. L. Shuler, director; A. B. Anton, P. Clancy, C. Cohen, T. M. Duncan, J. R. Engstrom, F. A. Escobedo, P. Harriott, D. L. Koch, K. H. Lee, W. L. Olbricht, W. M. Saltzman, P. H. Steen

### Bachelor of Science Curriculum

The undergraduate field program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program take CHEM 208 during the freshman year. The program for the last three years, for students who have taken an Introduction to Engineering course during the first year is as follows:

<i>Semester 3</i>	<i>Credits</i>
MATH 293, Engineering Mathematics	4
PHYS 213, Electricity and Magnetism	4
CHEM 389, Physical Chemistry I (engineering distribution)	4
ENGRD 219, Mass and Energy Balances (engineering distribution)	3
Humanities or social sciences	3
<i>Semester 4</i>	
MATH 294, Engineering Mathematics	4
CHEM 290-391, Physical Chemistry (field)	6
ENGRD 222 or 241	3
Humanities or social sciences	3
<i>Semester 5</i>	
CHEM 357, Introductory Organic Chemistry	3
CHEM 251, Organic Chemistry Laboratory	2
CHEME 313, Chemical Engineering Thermodynamics	4
CHEME 323, Fluid Mechanics	3
Humanities or social sciences	3
<i>Semester 6</i>	
Applied Science elective†	3
CHEME 301, Nonresident Lectures	1
CHEME 324, Heat and Mass Transfer	3
CHEME 332, Analysis of Separation Processes	3
CHEME 372, Introduction to Process Dynamics and Control	1
CHEME 390, Reaction Kinetics and Reactor Design	3
Humanities or social sciences	3
<i>Semester 7</i>	
CHEME 432, Chemical Engineering Laboratory	4
Electives*	9
Humanities or Social Sciences	3
<i>Semester 8</i>	
CHEME 462, Chemical Process Design	4
Humanities or social sciences	3
Electives*	3
Approved elective	3

\*The electives in semester seven and eight comprise six credits of field approved electives, and six credits of advanced CHEME electives. Advanced CHEME electives include any CHEME course 400+ level, except CHEME 490, 491, and 492.

†Applied science electives include BIOMI 290, General Microbiology Lectures; BIOBM 330, 331, 332, and 333, Principles of Biochemistry; CEE 654, Aquatic Chemistry; CHEME 480,

Chemical Processing of Electronic Materials; CHEME 640, Polymeric Materials; FOOD 409, Food Chemistry; MS&E 206, Atomic and Molecular Structure of Matter; MS&E 306, Electrical, Optical, and Magnetic Properties of Materials; MS&E 541, Microprocessing of Materials; MS&E 531, Introduction to Ceramics; MS&E 521, Properties of Solid Polymers; T&AM 310, Advanced Engineering Analysis I; any A&EP course numbered 333 or above; any CHEM course numbered 301 or above; any PHYS course numbered 300 or above.

### Master of Engineering (Chemical) Degree Program

The professional master's degree, M.Eng. (Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

Specific requirements include

- 1) two courses in advanced chemical engineering fundamentals chosen from CHEME 711, 713, 731, 732, and 751
- 2) two courses in applied chemical engineering science chosen from CHEME 480, 520, 564, 566, 640, 643, 656, and 661
- 3) a minimum of three credits of a design project, CHEME 565

Dean's certificate programs in Bioengineering, Engineering Management, Energy Engineering, and Manufacturing are available. A program offered jointly with the Food Science Department is also available, leading to both the Master of Engineering and the Master of Professional Studies degrees.

## CIVIL AND ENVIRONMENTAL ENGINEERING

J. F. Abel, S. L. Billington, J. J. Bisogni, Jr., W. H. Brutsaert, E. A. Cowen, R. A. Davidson, R. I. Dick, L. B. Dworsky, J. M. Gossett, M. D. Grigoriu, D. A. Haith, K. C. Hover, A. R. Inghraffa, F. H. Kulhawy, L. W. Lion, P. L-F. Liu, D. P. Loucks, A. H. Meyburg, L. K. Nozick, T. D. O'Rourke, K. D. Papoulia, T. Peköz, W. D. Philpot, M. J. Sansalone, R. E. Schuler, C. A. Shoemaker, J. R. Stedinger, H. E. Stewart, M. A. Turnquist, R. N. White

### Bachelor of Science Curriculum

The School of Civil and Environmental Engineering (CEE) offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options leading to the B.S. degree: civil engineering or environmental engineering. Within civil engineering, while it is not necessary to do so, students may concentrate in structural engineering, geotechnical engineering, fluid mechanics and hydrology, water resource systems, or transportation. The environmental engineering curriculum emphasizes study of environmental engineering, water resource systems, and fluid mechanics and hydrology. Sample curricula are available in the CEE Undergraduate Program Office, 221 Hollister Hall.

### Requirements for Admission to the Field:

Students planning to enter the field program in Civil and Environmental Engineering are required to complete the following courses before or during the first semester of the sophomore year with a grade of C- or better: for the civil option, ENGRD 202, Mechanics of Solids; for the environmental option, either ENGRD 202, Mechanics of Solids or CHEM 208, General Chemistry. In addition, the field requires a cumulative grade point average of at least 2.0 both overall and in engineering and sciences courses.

### Recommended Engineering Distribution Courses:

Students in the environmental option are required to take ENGRD 202 (Mechanics of Solids), as an engineering distribution course. The second engineering distribution may be selected according to their interests, and the following engineering distribution courses are recommended: ENGRD 201 Introduction to the Physics and Chemistry of the Earth, ENGRD 219 Mass and Energy Balances, ENGRD 221 Thermodynamics, ENGRD 250 Engineering Applications in Biological Systems, BIO G 101 and 103 Biological Sciences Lecture and Laboratory, BIO G 105 Introduction to Biology, BIO G 107 General Biology, or CHEM 389 Physical Chemistry.

Recommended engineering distribution courses for students planning to enter the civil engineering option are:

ENGRD 261, Introduction to Mechanical Properties of Materials, for students interested in structural engineering or civil engineering materials;

ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering;

ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology;

ENGRD 211, Computers and Programming, for students interested in transportation;

ENGRD 241, Engineering Computation,\* for all students.

### Field Program:

#### Civil Engineering Option

For the field program in Civil Engineering, students may elect to substitute CHEM 208 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum.

Core Courses	Credits
ENGRD 203, Dynamics	3
ENGRD 241, Engineering Computation*	3
CEE 304, Uncertainty Analysis in Engineering†	4
CEE 323, Engineering Economics and Management	3
CEE 331, Fluid Mechanics	4
CEE 341, Introduction to Geotechnical Engineering	4
CEE 351, Environmental Quality Engineering**	3
CEE 361, Introduction to Transportation Engineering**	3
CEE 371, Structural Behavior	4

Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRC or approved communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective from a department or school other than Civil and Environmental Engineering.

\*ENGRD 241 can be used to satisfy both the computer application requirement and a field program requirement. If a student elects to use this course as a second distribution course, the student must take an additional field-approved elective to fulfill the core course requirements.

†ENGRD 270 may be accepted (by petition) as a substitute for CEE 304 in the field program, but only if ENGRD 270 is taken before entry into the field, or in some special cases where co-op or study abroad programs necessitate such a substitution.

\*\*Students may substitute CEE 372 Structural Analysis for either CEE 351 or CEE 361 if they also take CEE 473 or CEE 474. However, CEE 372 cannot count as both a core course and a field-approved elective.

#### Environmental Engineering Option

These option requirements apply to all students in the Classes of 2002 and later. For the field program in Environmental Engineering, students must take CHEM 208 in place of PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum:

Core Courses	Credits
Introductory Biology‡ (BIO G 101 & 103, BIO G 105, or BIO G 107)	4
ENGRD 241, Engineering Computation*	3
CEE 304, Uncertainty Analysis in Engineering†	4
CEE 323, Engineering Economics and Management	3
CEE 331, Fluid Mechanics	4
CEE 341, Introduction to Geotechnical Engineering	4
CEE 351, Environmental Quality Engineering	3
CEE 451, Microbiology for Environmental Engineering§	3
CEE 453, Laboratory Research in Environmental Engineering	3
ABEN 475, Environmental Systems Analysis	3

Additional requirements include one‡ field-approved elective and three design electives from an approved list of courses that is available in the CEE Undergraduate Program office. In addition, students must complete one technical communications course from among the courses designated ENGRC or approved communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective.

‡The requirement for students prior to the class of 2002 is two field-approved electives and no requirement for a core course in introductory biology.

§Students planning graduate level study in environmental engineering may take BIOMI 290 Introduction to Microbiology in place of CEE 451. These students should also take CHEM 257 or CHEM 357 Introduction to Organic Chemistry as an approved elective.

## Civil and Environmental Engineering Honors Program

### Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the faculty of the school. An honors program student must enter with and maintain a cumulative GPA  $\geq 3.5$ .

### Content

A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in CEE. These nine credits shall be drawn from one or more of the following components:

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400: Senior Honors Thesis (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.
2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering (i.e., ENGRG 470: Peer Teaching in Engineering or CEE 401: Undergraduate Teaching in CEE (1-3 credits per/semester).
3. Advanced or graduate courses at the 500-level or above.

The minimum number of credits in any component included in a program should be two. No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

### Timing

All interested students must apply no later than the beginning of the first semester of their senior year, but are encouraged to apply as early as the first semester of their junior year. All honors program students must be in the program for at least two semesters prior to graduation.

### Procedures

Each applicant to the CEE honors program must have a faculty adviser or faculty mentor to supervise the student's individual program. (This need not be the student's faculty adviser.) The application to the program shall be a letter from the student describing the specific proposed honors program and include the explicit approval of the faculty adviser and the honors adviser. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

## Engineering Minor Programs

The School of Civil and Environmental Engineering currently offers three engineering minor programs: civil infrastructure, engineering management, and environmental

engineering (offered in cooperation with the Department of Agricultural and Biological Engineering). Descriptions and requirements for each program follow:

## Minor in Civil Infrastructure

### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the civil infrastructure minor: ABEN, A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE.

The minor in civil infrastructure is intended to introduce engineering undergraduates to the engineering methodologies of mechanics, materials, analysis, design, and construction and to show how these are used in solving problems in the development maintenance and operation of the built environment which is vital for any modern economy.

The requirements for the civil infrastructure minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

- I. Required Course: ENGRD 202 Mechanics of Solids
- II. Additional Courses: choose any 5 (groupings are for information only)\*

### Geotechnical Engineering

- CEE 341 Introduction to Geotechnical Engineering
- CEE 640 Foundation Engineering
- CEE 641 Retaining Structures and Slopes
- CEE 644 Environmental Applications of Geotechnical Engineering

### Structural Engineering

- CEE 371 Structural Behavior
- CEE 372 Structural Analysis
- CEE 473 Design of Concrete Structures
- CEE 474 Design of Steel Structures
- CEE 476 Physical and Computational Material Simulation

ABEN 481 Design of Wood Structures

CEE 672 Fundamentals of Structural Mechanics

CEE 673 Advanced Structural Analysis

### Other Related Courses

- CEE 332 Hydraulic Engineering
- CEE 361 Introduction to Transportation Engineering
- CEE 595 Construction Planning and Operations

\* Other CEE courses approved by petition in advance.

Academic Standards: A letter grade of C or better for each course in the minor.

## Minor in Engineering Management

### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in

the engineering management minor: ABEN, A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

The requirements for the engineering management minor are outlined below. For further details, consult the Civil and Environmental Engineering Undergraduate Programs Offices, 221 Hollister Hall.

### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

#### I. Required Courses (3):

- CEE 304† Uncertainty Analysis in Engineering
- or ENGRD 270 Basic Engineering Probability and Statistics
- or ELE E 310 Introduction to Probability and Random Signals
- CEE 323 Engineering Economics and Management
- OR&IE 350 Financial and Managerial Accounting
- II. Additional Courses—choose any 3\*
- CEE 490 Management Practice in Project Engineering
- CEE 593 Engineering Management Methods I: Data, Information, and Modeling
- CEE 594 Engineering Management Methods II: Managing Uncertain Systems
- CEE 595 Construction Planning and Operations
- CEE 597 Risk Analysis and Management
- NBA 401 Entrepreneurship for Engineers

\*Other courses approved by petition in advance.

†T&AM 310 may not be substituted for CEE 304.

Academic Standards: a letter grade of C or better for each course in the minor.

## Minor in Environmental Engineering

(Offered in cooperation with the Department of Agricultural and Biological Engineering)

### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries and coastal areas. This minor encourages engineering

students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

The requirements for the environmental engineering minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall, or the Agricultural and Biological Engineering Undergraduate Programs Office, 207 Riley-Robb Hall.

### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

- II. Students must select courses from the following group listings, with at least one course from each group.

#### Group A. Environmental Engineering Processes:

- CEE 351 Environmental Quality Engineering
- CEE 352 Water Supply Engineering
- CEE 451 Microbiology for Environmental Engineering
- CEE 453 Laboratory Research in Environmental Engineering
- ABEN 476 Solid Waste Engineering
- ABEN 478 Ecological Engineering
- CEE 644 Environmental Applications of Geotechnical Engineering
- ABEN 651 Bioremediation
- CEE 653 Water Chemistry for Environmental Engineering
- CEE 655 Pollutant Transport and Transformation in the Environment
- CEE 658 Sludge Treatment, Utilization, and Disposal
- CEE 654 Aquatic Chemistry

#### Group B. Environmental Systems:

ENGR 113\* Introduction to Environmental Systems (\*May count only if taken before the student's junior year.)

- ABEN 475 Environmental Systems Analysis
- CEE 529 Water and Environmental Resources Problems and Policies
- CEE 597 Risk Analysis and Management
- CEE 623 Environmental Quality Systems Engineering
- ABEN 678 Nonpoint Source Models

#### Group C. Hydraulics, Hydrology, and Environmental Fluid Mechanics:

- CEE 331 Fluid Mechanics (CHEM 323 or M&AE 323 may be substituted for CEE 331)
- CEE 332 Hydraulic Engineering
- ABEN 371 Hydrology and the Environment
- CEE 431/ABEN 471 Geohydrology
- CEE 432 Hydrology
- CEE 435 Coastal Engineering
- CEE 437 Experimental Methods in Fluid Dynamics

ABEN 473 Watershed Engineering

ABEN 474 Drainage and Irrigation Systems

CEE 633 Flow in Porous Media and Groundwater

CEE 655 Transport, Mixing, and Transformation in the Environment

ABEN 671 Analysis of the Flow of Water and Chemicals in Soils

ABEN 672 Drainage

Academic Standards: A letter grade of C- or better in each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

### Master of Engineering (Civil) Degree Program

The M.Eng. (Civil) degree program is a 30-credit (usually 10-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional (design-option) or managerial (management-option) practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, with some options indicating an intensive, full-time session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

- 1) Three courses, one in professional engineering practice (CEE 590) and a two-course design project (CEE 501 and 502).
- 2) Specialization in a major concentration area—three to five courses in either environmental engineering, environmental fluid mechanics/hydrology, geotechnical engineering, structural engineering, transportation management, or water resources and environmental systems engineering.
- 3) Technical electives.
- 4) Study in a related area or areas.

Courses taken as technical electives or in the related subject area(s) may consist of graduate or advanced courses in fields related to the major concentration area, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

- 1) Five courses: Project Management (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).
- 2) One course in finance, accounting, or engineering economics, as appropriate given a student's background.
- 3) One course in individual and/or organizational behavior from a recommended list.
- 4) Three courses from a disciplinary or functional specialization, subject to adviser's approval.

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering for details.

### COMPUTER SCIENCE

C. Van Loan, chair; B. Arms, K. Birman, C. Cardie, T. Coleman, R. L. Constable, A. Demers, R. Elber, J. Gehrke, D. Greenberg, J. Halpern, J. Hartmanis, J. E. Hopcroft, D. Huttenlocher, J. Kleinberg, D. Kozen, L. Lee, G. Morrisett, A. Myers, K. Pingali, F. B. Schneider, B. Selman, P. Seshadri, D. Shmoys, E. Tardos, R. Teitelbaum, S. Toueg, S. Vavasis, T. vonEicken, R. Zabih

#### Bachelor of Science Curriculum

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

For the most current and accurate details, visit our web site at [www.cs.cornell.edu/ugrad](http://www.cs.cornell.edu/ugrad)

#### The Major

Computer Science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- four semesters of calculus (MATH 191–192–293–294 or 111–122 (or 112)–221–222)
- two semesters of introductory computer programming (COM S 100 and ENGRD 211)
- a seven-course computer science core (ENGRD 222, COM S 280, 314, 381, 414, and 482)
- two 400+ computer science electives, totaling at least six credits
- a computer science project course (COM S 413, 415, 418, 433, 473, 501, 514, 519, or 664)
- a mathematical elective course (OR&IE 270, MATH 300+, T&AM 300+, etc.)
- two 300+ courses (field approved electives) that are technical in nature and total at least six credits
- a three-course specialization in a topic area other than computer science. These courses must be numbered 300-level or greater.

Note: All of the field electives described above must be courses of three or more credit hours, with the exception of the COM S project course, which may be two credits.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study and employment in any technical area and any professional area such as business, law, or medicine. With the adviser, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of liberal education.

## Computer Science Honors Program

### Eligibility

The Bachelor of Science degree *with honors* will be granted to students who, in addition to having completed the requirements for a bachelor degree, have:

- qualified for *latin* honors in the College of Engineering (basically, a cumulative GPA  $\geq 3.5$ )
- at least eight credits of COM S course work at or above the 500-level
- at least six credits of COM S 490 (independent research) spread over two semesters, with a grade of A- or better each term.

See the COM S undergraduate web site for more information on eligibility:  
[www.cs.cornell.edu/ugrad](http://www.cs.cornell.edu/ugrad)

### Content

Honors courses may not be used to satisfy the COM S 400+ elective requirement, the COM S project requirement, the math or field approved electives, or the specialization.

### Timing

Honors' determinations are made during the senior year. Students wanting to be considered for field honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: [ugrad@cs.cornell.edu](mailto:ugrad@cs.cornell.edu). The subject line for this message should read "HONORS TRACK." Related questions may be addressed to the ugrad e-mail alias, or candidates can call or stop by 303 Upson Hall, 255-0982.

### Preparation

Arrangements for doing COM S 490 research should be made directly with faculty members in the department. Students are encouraged to discuss potential contacts with their advisers and/or browse the department's web page at [www.cs.cornell.edu](http://www.cs.cornell.edu) for specific leads on research opportunities.

The Department of Computer Science reserves the right to make changes to the honors program requirements at any time. Generally speaking, all members of the same graduating class in COM S will be subject to the same honors criteria.

## Master of Engineering (Computer Science) Degree Program

The M.Eng. program in computer science is a one-year program that can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of

computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program in computer science includes several upper-division and graduate courses and a faculty-supervised project. The course and project requirements are flexible and allow students to build up a program that closely matches their interests. In particular, slightly under half the courses may be taken outside the computer science department (for example, many students choose to take several business administration courses). Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell seniors may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semester. It applies to students who have at least one credit and no more than eight credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. "early admit" program.

For more information about the M.Eng. program in computer science and the early admission option for Cornell seniors, please consult our web page at [www.cs.cornell.edu/grad/meng](http://www.cs.cornell.edu/grad/meng).

## Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students can consult with their adviser, the undergraduate office in 303 Upson Hall, or the Johnson School directly.

## EARTH AND ATMOSPHERIC SCIENCES

(Formerly the Departments of Geological Sciences and part of Soil, Crop, and Atmospheric Sciences)

B. L. Isacks, chair; S. J. Riha, associate chair; Directors of Undergraduate Studies: K. H. Cook (Science of Earth Systems), R. W. Kay (Geological Sciences), and D. S. Wilks (Atmospheric Science); R. W. Allmendinger, W. D. Allmon, M. Barazangi, J. M. Bird, L. D. Brown,

L. M. Cathles, J. L. Cisne, S. J. Colucci, L. A. Derry, C. H. Greene, T. E. Jordan, S. Mahlburg Kay, M. C. Kelley, W. W. Knapp, F. H. T. Rhodes, D. L. Turcotte, W. M. White, M. W. Wysocki

## Bachelor of Science Curriculum

We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is also a powerful planet, with geologic hazards such as earthquakes, hurricanes, and volcanic eruptions that alter the course of history with little prior warning. As the human population grows, understanding the earth and its resources becomes progressively more important for both future policymakers and ordinary citizens. Because the human need to understand the earth is so pervasive, we provide our students with three tracks covering the spectrum of modern earth sciences.

The Department of Earth and Atmospheric Sciences offers an undergraduate engineering program which permits students to pursue one of three options leading to a B.S. degree in geological sciences: the geoscience option, the atmospheric science option, and the science of earth systems (SES) option. The geoscience option emphasizes the structure, composition, and evolution of our planet; the atmospheric science option covers the planetary processes producing weather and climate; and the SES option is concerned with processes on and near the earth's surface where the interactions of water, life, rock, and air produce our planetary environment. An engineering minor is available in one or a combination of these programs.

## Atmospheric Science Option

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes, and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. The atmospheric science option satisfies both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist, which also qualifies graduates for positions in private-sector forecasting and environmental consulting firms. The option also provides excellent preparation for graduate work in atmospheric science and related fields.

Students following the atmospheric science option are required to take ENGRD 270 as the engineering distribution course. The field program includes required introductory courses in atmospheric science (EAS 131) and EAS 250 (Instrumentation and Observations). Many of the upper division field courses require EAS 341 (Atmospheric Thermodynamics and Hydrostatics) and EAS 342 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required field program courses are EAS 331 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 435 (Statistical Methods in Meteorology), and EAS 447 (Physical Meteorology). Field-approved electives may be chosen from other EAS courses or from

selected upper-division courses offered in other departments.

### Geoscience Option

The geoscience option reveals Earth's turbulent history from the formation of our solar system to the plate tectonic cycles that dominate Earth's present behavior. That history is highlighted by the co-evolution of life and the Earth system—from the origin of life to the modern inter-glacial phase during which our species has so proliferated. Topics of study also include the fundamental processes responsible for earthquakes, volcanic eruptions, and mountain building. The geoscience option prepares students for advanced study in geology, geophysics, geochemistry, and geobiology, and careers in mineral and petroleum exploration or in environmental geology. Alternatively, it is a valuable major for a pre-law or pre-med program or in preparation for a career in K–12 education.

The geoscience option stresses a balanced overview of geology with considerable flexibility and a degree of specialization achieved by careful selection of field-approved electives. Students are required to take ENGRD/EAS 201 as an engineering distribution course. For students interested in geobiology or paleontology, BIO G 101/103–102/104 (or BIO G 109–110) are recommended. CHEM 208 may be substituted for PHYS 214.

The geoscience option requires the following courses: the introductory outdoor field course; EAS 210, and the five core courses, EAS 326, 355, 356, 375, and 388. Two additional EAS field-required courses and at least one field-approved elective must be EAS 300 through 600-level courses. The core courses may be taken in any reasonable sequence, except that EAS 355, which is offered in the fall, should be taken before EAS 356, which is offered in the spring. EAS 326, 355, 356, and 375 should be taken relatively early in the major program.

In addition, a requirement for an advanced outdoor field experience may be met by completing one of the following four-credit options: (a) EAS 417 (Field Mapping in Argentina, 3 credits) and EAS 491–492 (based on field observations) for a combined four-credit minimum; (b) EAS 437 (Geophysical Field Methods, 3 credits) plus at least one credit of EAS 491 or 492 using geophysical techniques from EAS 434; (c) EAS 491–492 (Undergraduate Research, two credits each) with a significant component of field work; or (d) an approved outdoor field course taught by another college or university (four-credit minimum).

A selection of field-approved electives may provide specializations in geophysics, geochemistry (including petrology and mineralogy), geobiology (paleontology), and geology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses. Students who want a more general background or want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the same field. The field-approved electives outside the field may be

chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300-level or above. Students may request substitution of EAS 491 and 492, Undergraduate Research, for a fourth-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.

In addition to course work, students learn by involvement in research projects. Facilities include equipment for processing seismic signals and digital images of the earth's surface, instruments for highly precise isotope and element analyses, and extensive libraries of earthquake records, satellite images, and exploration seismic records. High-pressure, high-temperature mineral physics research uses the diamond anvil cell and the Cornell High Energy Synchrotron Source (CHESS). Undergraduates have served as field assistants for faculty members and graduate students in Argentina, British Columbia, the Aleutian Islands, Scotland, Switzerland, Tibet, and Barbados. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

### Science of Earth Systems (SES) Option

The science of earth systems (SES) option provides an integrated view of Earth processes critical to the understanding of our environment. This scientific understanding is the primary foundation used to determine to what degree human societies can modify or adapt to future change. The SES option is for students interested in careers and/or graduate study in any of the earth system sciences or a future in environmental law, environmental engineering, science teaching, or environmental public policy. The SES option enables students in the College of Engineering to take part in the multi-disciplinary, intercollege program in the Science of Earth Systems. Collaborations with other departments provide breadth and depth to the program.

The SES option emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the Earth system including the lithosphere, biosphere, hydrosphere, and atmosphere.

Students are required to take a second semester of chemistry, two semesters of introductory biology, and ENGRD 201 (Physics and Chemistry of the Earth) as one of the engineering distribution courses. The option requires a set of three core courses, normally taken in the junior or senior years, which provide breadth and integration. An additional set of five intermediate to advanced courses are selected to provide depth and a degree of specialization. These courses permit the student to specialize in such areas as climate dynamics, biogeochemistry, ocean sciences, environmental geosciences, ecological systems, hydrological sciences, and soil sciences.

The field requirements for the SES option are summarized as follows. CHEM 208 and ENGRD 201/EAS 201 are required. The field program includes BIO G 101/103–102/104 (or BIO G 109–110), BIOES 261, the three SES core courses listed below, five additional courses selected with the adviser's approval to provide specialization in one or a combination of the areas covered by SES, and an additional field-approved elective. Two of the specialization courses will count as field-required courses, and three as field-approved electives. At least three of the field-approved electives

must be non-EAS courses. The three SES core courses are:

- EAS 302 Evolution of the Earth System—Spring. 4 credits
- EAS 321 Biogeochemistry (also NTRES 321)—Fall. 4 credits
- EAS 331 Climate Dynamics (also ASTRO 331)—Fall. 4 credits

Areas of specialization include (but are not limited to) the following:

- Biogeochemistry
- Climate dynamics
- Ecological systems
- Environmental biophysics
- Environmental geology
- Hydrological sciences
- Soil science
- Ocean sciences

In addition to faculty in or associated with the Department of Earth and Atmospheric Sciences, faculty currently associated with the SES program include the following: W. Brutsaert (CEE); P. Gierasch (ASTRO); L. Hedin (EEB); R. Howarth (EEB, EAS); J.-Y. Parlange (ABEN); J. Yavitt (NTRES).

### Earth and Atmospheric Science Honors Program

#### Eligibility

The Bachelor of Science degree (in geological sciences) with honors will be granted to students who, in addition to having completed the requirements for a bachelor's degree, have satisfactorily completed the honors program in Earth and Atmospheric Sciences and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA  $\geq 3.5$ .

#### Content

In addition to the minimum requirements, a student must

1. take at least nine credits above the minimum required for graduating and approved by the upperclass adviser;
2. have a written proposal of the honors project accepted by his or her faculty adviser and the director of undergraduate studies;
3. complete an honors thesis involving research (EAS 491–492 or 499, two or more credits each) of breadth, depth, and quality.

#### Timing

A student interested in completing an honors thesis must, by the beginning of the seventh semester, have a written proposal of the honors project accepted by the student's adviser and the director of undergraduate studies.

#### Procedures

Each applicant to the Earth and Atmospheric Sciences honors program must have a faculty adviser to supervise the honors thesis research. Written approval by the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

## Minor in Geological Sciences

### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Geological Sciences minor: ABEN, A&EP, CEE, CHEME, COM S, ECE, M&AE, MS&E, OR&IE.

Whereas many engineering students will encounter and have to understand the natural operating systems of Earth in their professions, the tools and techniques used by earth scientists to understand these solid and fluid systems over the widest scales of space and time are of use to a wide cross-section of engineering students. This minor is designed to give a flexible set of options for students looking to complement training in their major field with a core education in Geological Sciences.

The requirements for the Geological Sciences minor are outlined below. For further details consult the Undergraduate Programs Office, 2122 Sneek Hall.

### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

- I. Choose one or two of these three courses:
  - ENGRD 201 Introduction to the Physics and Chemistry of the Earth
  - EAS 210 Introduction to Field Methods in Geological Sciences
  - EAS 203 Natural Hazards and the Science of Complexity
- II. Choose at least two courses from the following list of core courses:
  - EAS 302 Evolution of the Earth System
  - EAS 321 Introduction to Biogeochemistry
  - EAS 326 Structural Geology
  - EAS 355 Mineralogy
  - EAS 356 Petrology and Geochemistry
  - EAS 375 Sedimentology and Stratigraphy
  - EAS 388 Geophysics and Geotectonics
- III. To complete the minor, these three to four courses are to be supplemented with two to three additional EAS courses at the 300-level or higher. These may include, for example, additional courses from the above list of core courses, undergraduate research courses, and outdoor field courses.

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

## ELECTRICAL AND COMPUTER ENGINEERING

J. S. Thorp, director; J. M. Ballantyne, T. Berger, A. W. Bojanczyk, M. Burtischer, H.-D. Chiang, D. F. Delchamps, L. F. Eastman, D. T. Farley, T. L. Fine, Z. Haas, D. A. Hammer, M. Heinrich, S. S. Hemami, C. R. Johnson, Jr., E. Kan, M. C. Kelley, P. M. Kintner, R. Kline, K. T. Kornegay, J. P. Krusius, R. L. Liboff, R. Manohar, B. A. Minch, J. A. Nation, T. W. Parks, A. Phillips Jr., C. R. Pollock, A. P. Reeves,

C. E. Seyler, Jr., J. R. Shealy, E. Speight, M. G. Spencer, R. N. Sudan, C. L. Tang, R. J. Thomas, N. Tien, S. Tiwari, L. Tong, V. Veeravalli, S. B. Wicker

### Bachelor of Science Curriculum

The Department of Electrical and Computer Engineering offers an undergraduate field program which leads to a B.S. degree in electrical engineering. The curriculum provides a foundation which reflects the broad scope of this engineering discipline.

Concentrations include computer engineering and digital systems; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric and space physics; and semiconductor devices and applications.

### Electrical Engineering Field Program

Students planning to enter the field program in Electrical Engineering must take ENGRD 231 as an engineering distribution course. The fall of the sophomore year is the preferred term for ENGRD 231/ELE E 232 for students without advanced standing in mathematics. Electrical engineering students with an interest in computer engineering are encouraged to take ENGRD 211 as an engineering distribution course prior to entry into the field program. In addition, the field program normally begins in the spring of the sophomore year, as shown below. All of these courses (except ELE E 210 and ENGRD 231) are taught only once each academic year, either spring or fall, as indicated in the course descriptions.

Course	Credits
<i>Field Required Courses</i>	
ELE E 210, Introduction to Circuits for Electrical and Computer Engineers	3
ELE E 215, Introductory Integrated Circuits Laboratory	1
ELE E 232, Digital Systems Design Laboratory	1
ELE E 301, Signals and Systems I	4
ELE E 303, Electromagnetic Fields and Waves	4
ELE E 315, Electronic Circuit Design	4
<i>Field Approved Electives (36-credit minimum in the following categories)</i>	
Advanced Electrical and Computer Engineering Electives† (8 courses)	24 minimum
Outside ECE Electives‡ (3 courses)	9 minimum
Total minimum field credits	53

ELE E 310 can be taken in place of ENGRD 270 or T&AM 310 to satisfy the college application of probability and statistics requirement.

†These electives must include three 400-level electrical and computer engineering laboratory courses and at least two additional courses at the 400-level or above. The remaining electives may not include independent project courses, such as ELE E 391, 392, 491, or 492, and must be at the 300-level or above in Electrical and Computer Engineering.

Courses that meet the laboratory requirement are described in the online ECE Handbook. (The list is dynamic and changes frequently. Always refer to the latest information in the ECE Web Handbook.)

‡Must include one course at the 300-level or above (see *Electrical and Computer Engineering Web Handbook* for details).

All students graduating with a B.S. degree must fulfill the engineering design requirement. To meet this requirement, students must demonstrate that they have completed courses that contain at least 16 credits of engineering design. A table listing the engineering design content of all relevant electrical and computer engineering and computer science courses is available through the department web handbook pages at [www.ee.cornell.edu/](http://www.ee.cornell.edu/).

Undergraduate specialization is achieved through the various electrical and computer engineering elective courses, as well as other courses in related technical fields within engineering, mathematics, the physical sciences, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

An electrical and computer engineering honors program also exists for those students who so desire and meet the program entrance requirements. The honors program requires an additional senior ELE E course, a required senior year directed reading course, or a design project, or ENGRG 470, and completion of the honors seminar. Details are available via the electrical and computer engineering homepage located through the web at [www.ee.cornell.edu/](http://www.ee.cornell.edu/).

All students majoring in electrical engineering are expected to meet the following academic standards:

1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than C- may be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical and computer engineering course.
3. Students must complete satisfactorily ELE E 210, ELE E 215, MATH 294, and PHYS 214 by the end of the sophomore year in the field program of Electrical Engineering, and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the *Electrical and Computer Engineering Web Handbook* to remain active participants.

## Electrical and Computer Engineering Honors Program

### Eligibility, Entry, and Continuation

A student must apply to enter the ECE Honors Program and may do so as early as the beginning of the fifth semester or as late as the end of the sixth semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose cumulative GPA falls below 3.5 at the end of any semester will be dropped from the honors program by College of Engineering regulations. There is an additional requirement (see Honors Seminar) for entry into the program after the end of the fifth semester.

### Honors Seminar

Any student in the honors program is required to take (or to have taken) an honors seminar during his or her junior year. The Honors Seminar is a two-credit semester-course (offered spring only) consisting of a weekly series of introductory research lectures by electrical and computer engineering faculty members. Each honors seminar enrollee will be required to write a number of short papers on topics covered in the lecture series. Many electrical and computer engineering faculty members will give a lecture or short series of lectures as part of the Honors Seminar. Students in the honors program and students with a cumulative GPA of at least 3.5 who are considering entering the honors program must receive letter grades for the Honors Seminar.

### Honors Project

Any student in the honors program is required to accumulate at least three credit hours from a senior year honors project consisting either of design, ENGRG 470, or directed reading. All honors projects emphasize the development of communication skills. Design- and reading-oriented honors projects require explicitly a written submission summarizing and concluding the project.

### Additional Coursework

Any student in the honors program is required to take at least three credit hours of advanced (senior level) ECE coursework that has at least a 300-level prerequisite. These credit hours are in addition to any credit hours required as part of the ELE E field program.

The program described above requires honors program participants to amass at least nine credit hours over and above the 128 credit hours required for a B.S. degree; thus an honors degree requires a minimum of 137 credit hours.

### Minor in Electrical and Computer Engineering

#### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the electrical and computer engineering minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, M&AE, MS&E\*, OR&IE. (\*MS&E students planning to pursue this minor must receive prior written approval from both MS&E and ECE, via petition.)

The School of Electrical and Computer Engineering offers a minor to students who wish to complement their major field by obtaining a background in electrical and computer engineering. The minor offers the opportunity to study analog and digital circuits, signals and systems, electromagnetic fields, and additionally specialize at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, or space engineering.

The requirements for the electrical and computer engineering minor are outlined below. For further details consult the Electrical and Computer Engineering Undergraduate Programs Office, 222 Phillips Hall.

#### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

#### I. Required Courses:

- ELE E 210 Introduction to Circuits for Electrical and Computer Engineers
- and ELE E 215 Introductory Integrated Circuits Laboratory (ELE E 210 and 215 count as one course)
- ENGRD 231 Introduction to Digital Systems
- and ELE E 232 Digital Systems Design Laboratory (ENGRD 231 and 232 count as one course)

#### II. Two of the following:

- ELE E 301 Signals and Systems I
- ELE E 303 Electromagnetic Fields and Waves
- ELE E 315 Electronic Circuit Design

#### III. One other ELE E course at the 300 level or above (3 credit minimum)

#### IV. One other ELE E course at the 400 level or above (3 credit minimum)

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.3 or better for all courses in the minor.

### Master of Engineering (Electrical) Degree Program

The M.Eng. (Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the Master of Science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including a minimum of four courses in electrical engineering. An electrical engineering design project is also required and may account for three to eight credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the eight-credit maximum and increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Undergraduate students with advanced standing frequently take one or more graduate-level courses prior to graduation and may actually begin accumulating credit toward the Master of Electrical Engineering program in their last semester of undergraduate work. Application of credits taken while an undergraduate at Cornell must be approved in advance of the last semester of undergraduate work.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical Engineering Program web site at [www.ee.cornell.edu/MENG/index.html](http://www.ee.cornell.edu/MENG/index.html).

## MATERIALS SCIENCE AND ENGINEERING

C. K. Ober, director, D. G. Ast, S. P. Baker, J. M. Blakely, R. Dieckmann, E. P. Giannelis, D. T. Grubb, G. G. Malliaras, A. L. Ruoff, S. L. Sass, Y. Suzuki, M. O. Thompson, U. B. Wiesner

### Bachelor of Science Curriculum

Students majoring in materials science and engineering are required to take ENGRD 261, Introduction to Mechanical Properties of Materials, before affiliating with the field. It is strongly recommended that this course be taken as an engineering distribution during the sophomore year. The field program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes.

In the field, students are required to complete a series of electives to develop both breadth and specialization in sub-areas of the field including, for example, solid state, metallic materials, ceramic materials, polymeric materials, electronic materials, biomaterials, or computational materials science. These requirements are satisfied through a series of technical electives in the junior and senior years, selected from multiple engineering and science departments. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The requirements for a Bachelor of Science degree in materials science and engineering are:

1. Completion of the common engineering curriculum including liberal studies electives
2. ENGRD 261, Introduction to Mechanical Properties of Materials
3. Completion of 12 required field courses:
  - ENGRD 202 Mechanics of Solids
  - MS&E 204 Materials Chemistry
  - MS&E 206 Atomic and Molecular Structure of Matter
  - MS&E 302 Mechanical Properties of Materials, Processing, and Design
  - MS&E 303 Thermodynamics of Condensed Systems
  - MS&E 304 Kinetics, Diffusion, and Phase Transformations
  - MS&E 305 Electronic Structure of Matter
  - MS&E 306 Electronic, Optical and Magnetic Properties of Materials
  - MS&E 307 Materials Design Concepts I
  - MS&E 403/405 Senior Materials Lab I or Senior Thesis I
  - MS&E 404/406 Senior Materials Lab II or Senior Thesis II
  - MS&E 407 Materials Design Concepts II
4. Depth in one specialization developed through three technical electives
5. Breadth developed through two technical electives in different specialization areas
6. One of the depth or breadth electives must be taken from outside MS&E

## 7. One additional outside technical elective

To continue in good standing in the Field of Materials Science and Engineering, students must

1. Maintain a 2.0 term average for all semesters.
2. Maintain an average of 2.3, with no grade below C, in the department's core curriculum.
3. Complete ENGRD 261 with a minimum of C prior to affiliation.

The department's core curriculum consists of ENGRD 261, the 12 required field courses, and the five technical electives constituting the depth and breadth requirements.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. Curricula leading to the double-major degree must be approved by both of the departments involved and students are urged to plan such curricula as early as possible to avoid scheduling conflicts.

## Materials Science and Engineering Honors Program

### Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in materials science and engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with, and maintain, a cumulative GPA above 3.5.

### Content

The requirements for an honors degree in materials science and engineering are:

1. Students must complete at least nine credits beyond the minimum required for graduation in materials science and engineering. This increases the minimum number of credits for graduation with honors to 137. These additional courses must be technical in nature, i.e., in engineering, mathematics, chemistry, and physics at the 400- and graduate-level, with selected courses at the 300-level. All courses satisfying this requirement must be approved by the upper class adviser.
2. Senior honors thesis (MS&E 405/406) with a grade of at least A.

Note: Undergraduates typically enter the honors program at the beginning of their senior year (seventh semester) and thus must have a cumulative GPA equal to or greater than 3.5 at that point.

### Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member to work on a senior honors thesis during the second semester of their junior year. A student must be in the program for at least two semesters prior to graduation.

## Procedures

Each application to the materials science and engineering honors program must have a faculty adviser to supervise the honors program. Written approval of the faculty member who will direct the research is required. After the student's grade-point average is verified, the student will be officially enrolled in the honors program.

## Minor in Materials Science and Engineering

### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the materials science and engineering minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, OR&IE.

Material properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides engineers in related fields with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

The requirements for the materials science and engineering minor are outlined below. For further details, consult the Materials Science and Engineering Undergraduate Program Office, 210 Bard Hall.

### Requirements

To complete the minor, students must take at least six courses (minimum of 18 credits), chosen as follows:

1. ENGRD 261 Introduction to Mechanical Properties of Materials
2. Two of:
  - MS&E 204 Materials Chemistry
  - MS&E 206 Atomic and Molecular Structure of Matter
  - MS&E 302 Mechanical Properties of Materials, Processing, and Design
  - MS&E 303 Thermodynamics of Condensed Systems
  - MS&E 304 Kinetics, Diffusion, and Phase Transformations
  - MS&E 305 Electronic Structure of Matter
  - MS&E 306 Electronic, Optical, and Magnetic Properties of Materials
3. Three electives chosen from:

Any MS&E course at the 300-level or above

Selected courses in materials properties and processing (at the 300-level or above) from A&EP, CHEME, CEE, ELE E, M&AE, PHYS, and CHEM, as approved by the MS&E undergraduate coordinator.

Academic Standards: A letter grade of C or better for each course in the minor.

## Master of Engineering (Materials) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials) program. This program consists of 30 credits, including course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the

supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One three-credit technical elective must include advanced mathematics (modeling, computer application, or computer modeling), beyond the MS&E undergraduate requirements.

## MECHANICAL AND AEROSPACE ENGINEERING

S. Leibovich, director; P. L. Auer, C. T. Avedisian, D. L. Bartel, J. F. Booker, J. R. Callister, D. A. Caughey, R. D'Andrea, P. R. Dawson, P. C. T. deBoer, E. M. Fisher, A. R. George, F. C. Gouldin, C. Hui, M. Y. Louge, J. L. Lumley, M. P. Miller, F. C. Moon, F. K. Moore, S. Mukherjee, R. M. Phelan, S. L. Phoenix, S. B. Pope, M. L. Psiaki, E. L. Resler, Jr., A. Ruina, W. Sachse, S.E. Shen, K. E. Torrance, F. Valero-Cuevas, M. C. H. van der Meulen, H. B. Voelcker, K. K. Wang, Z. Warhaft, C. H. K. Williamson, N. Zabarar, A. Zehnder

Members of the faculty of the graduate Fields of Aerospace Engineering and Mechanical Engineering are listed in the *Announcement of the Graduate School*.

## Bachelor of Science Curriculum in Mechanical Engineering

The upperclass field program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

*Mechanical systems, design, and materials processing* is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration are mechanical design and analysis, vehicle engineering, biomechanics, and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

*Engineering of fluids, energy, and heat-transfer systems* is concerned with the efficient conversion of energy in electric power generation and aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and with the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering; heat, energy, and power engineering; and thermo-fluid sciences.

The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term sophomore students who plan to enter the Mechanical Engineering program take ENGRD

202 (also T&AM 202) as an engineering distribution course. They also are encouraged to take ENGRD 221 (also M&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course. Occasionally because of study abroad or requirements for second majors or pre-med, students cannot complete all of the required sophomore courses on schedule. In such cases students should delay ENGRD 221 until the first semester of the junior year. The Sibley School supports students with unusual requirements, but any delays or substitutions must be discussed with and receive approval from the student's adviser.

The course requirements for the degree of Bachelor of Science in Mechanical Engineering are as follows:

1. Completion of the Common Curriculum. During the upperclass years this will typically mean earning credit for five humanities or social science courses.
2. Completion of the field requirements, which consist of eleven required courses (beyond ENGRD 202 already mentioned), and five field approved elective courses.

The eleven required courses are:

M&AE 212, Mechanical Properties and Processing of Engineering Materials

M&AE 221, Thermodynamics

M&AE 225, Mechanical Design and Synthesis

T&AM 203, Dynamics

ELE E 210, Introduction to Circuits for Electrical and Computer Engineers

M&AE 323, Introductory Fluid Mechanics

M&AE 324, Heat Transfer

M&AE 325, Mechanical Design and Analysis

M&AE 326, System Dynamics

M&AE 427, Fluids/Heat Transfer Laboratory

M&AE 428, Engineering Design

### Electives

Students should use the flexibility provided by the field approved electives, approved electives, and humanities/social sciences electives to develop a program to meet their specific goals.

### Field Approved Electives

The upper-level program includes five field approved electives. Using these five courses, the student must satisfy the following requirements.

At least three of the courses must be upper-level (300+) M&AE courses. Of these three, two must satisfy a concentration chosen by the student. Typically these are two courses chosen from an appropriate subset of the school's upper-class offering. However, students may petition for approval of two related courses to form a custom concentration.

The standard concentrations are:

Fluids/Aerospace Engineering, M&AE 305, 306, 423, 506, 507

Thermo-Fluids M&AE 423, 449, 506

Materials Processing M&AE 412, 514

Mechanical Systems M&AE 412, 417, 470, 478, 479, 565

Vehicle Engineering M&AE 306, 386, 449, 486, 506, 507

Biomechanics M&AE 463, 464, 565

Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year.

Typically this list includes M&AE 401, 412, 470, 479, and 486.

Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be any upper level M&AE course.

One of the courses must be an approved upper-level mathematics course taken after MATH 294. The course must include some material on statistics. Currently, the approved courses are T&AM 310 and OR&IE 270.

One of the field approved electives can be viewed as a technical elective and may be any course at an appropriate level, chosen from engineering, mathematics, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Note that courses in economics, business, and organizational behavior are not accepted. Advisers may approve such courses as approved electives.

### Approved Electives

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences.

Recommendation on humanities/social sciences electives

Students are encouraged to build a program that includes studies in

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science

aesthetics

economics

architecture

An additional graduation requirement of the field program is proof of elementary competence in technical drawing. The demonstration of competence is expected before completion of M&AE 325, Mechanical Design and Analysis. This proof may be given in a number of ways, including satisfactory completion of

- a technical drawing course in high school or in a community college,
- ENGRG 102, Drawing and Engineering Design,
- another technical drawing course at Cornell, or
- a departmental examination.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 479.

The writing requirement of the Common Curriculum is satisfied by M&AE 427.

Introduction to Circuits for Electrical and Computer Engineers (ELE E 210) may be replaced or supplemented by Electronic Circuits (PHYS 360).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

More detailed materials describing the Mechanical Engineering Program can be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.

### Minor in Mechanical Engineering Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the mechanical engineering minor: ABEN, A&EP, CHEME, CEE, COM S, EAS, ECE, MS&E, OR&IE.

### Requirements

To complete the minor, the student must choose at least six courses (minimum of 18 credits) from among the following: M&AE courses at the 200-level or above; ENGRD 202, Mechanics of Solids; ENGRD 203, Dynamics.

Rules for selecting Courses:

- (1) The selection of courses must satisfy the following three requirements.
  - a) At least two courses must be numbered above 300.
  - b) At least one course must be either (1) numbered above 500 or (2) numbered above 326 and have as its prerequisite ENGRD 202, ENGRD 203, or an M&AE course.
  - c) Each course must be worth at least three credits.
- (2) Substitutions of courses other than M&AE (or ENGRD 202 and 203) will not be accepted as part of the M&AE minor. However, some instructors of M&AE courses will accept non-M&AE courses as substitute prerequisites for their courses, or may choose to waive prerequisites in some circumstances. Students should check with the course instructor.

Academic Standards: A letter grade of C- or better for each course in the minor.

Examples of typical minor programs are as follows:

Typical focus in Fluids/Thermal Systems:

The following four courses:

ENGRD 202 Mechanics of Solids

ENGRD 203 Dynamics

ENGRD 221 Thermodynamics

M&AE 323 Introductory Fluid Mechanics

Plus two of the following, of which at least one course must satisfy requirement 1b:

M&AE 305 Introduction to Aeronautics

M&AE 324 Heat Transfer

M&AE 423 Intermediate Fluid Dynamics

M&AE 427 Fluids/Heat Transfer Laboratory

M&AE 449 Combustion Engines

M&AE 490 Special Investigations in Mechanical and Aerospace Engineering

M&AE 491 Design Projects in Mechanical and Aerospace Engineering

M&AE 506 Aerospace Propulsion Systems

M&AE 507 Dynamics of Flight Vehicles

M&AE 543 Combustion Processes

Typical focus in Mechanical Systems/Design:

The following two courses:

ENGRD 202 Mechanics of Solids

ENGRD 203 Dynamics

One or more of the following:

M&AE 212 Mechanical Properties and Processing of Engineering Materials

M&AE 225 Mechanical Design and Synthesis

M&AE 325 Mechanical Design and Analysis

M&AE 326 System Dynamics

The remainder from this list, of which at least one course must satisfy requirement 1b:

M&AE 306 Spacecraft Engineering

M&AE 386/486 Automotive Engineering

M&AE 412 Smash and Crash: Mechanics of Large Deformations

M&AE 417 Introduction to Robotics: Dynamics, Control, Design

M&AE 464 Design for Manufacture

M&AE 478 Feedback Control Systems

M&AE 490 Special Investigations in Mechanical and Aerospace Engineering

M&AE 491 Design Projects in Mechanical and Aerospace Engineering

M&AE 514 Design for Manufacture and Assembly

M&AE 565 Biomechanical Systems—Analysis and Design

M&AE 570 Applied Dynamics

### Preparation in Aerospace Engineering

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering

concentration such as M&AE 305, 306, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

### Master of Engineering (Aerospace) Degree Program

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, acoustics and noise, turbulent flows, non-equilibrium flows, combustion, dynamics and control, CFD, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. Any subsequent changes must also be approved by the committee. An individual student's curriculum includes a four- to eight-credit design course, consisting of a minimum of 12 credits in aerospace engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have an aerospace engineering design focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of six credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

### Master of Engineering (Mechanical) Degree Program

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, CFD, CAE, CAD, CAM, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. Any subsequent changes must also be approved by the committee. An individual student's curriculum includes a four- to eight-credit design course, a minimum of 12 credits in mechanical engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

All courses that constitute the major concentration must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of six credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the manufacturing, energy, or electronic packaging option programs leading to special dean's certificates in those areas.

## NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, V. O. Kostroun, and K. Unlü

### Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives

within regular field programs (such as those in engineering physics, materials science and engineering, computer science, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

### Master of Engineering (Nuclear) Degree Program

The two-term curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Center for Nuclear Sciences are described in the *Announcement of the Graduate School*.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses, or equivalents, are included in the 30-credit program:

#### Fall term

NS&E 509, Nuclear Physics for Applications

A&EP 612, Nuclear Reactor Theory

A&EP 633, Nuclear Engineering

Technical elective

#### Spring term

NS&E 551, Nuclear Measurements in Research

NS&E 545, Energy Seminar

Technical elective

Engineering design project

Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

A&EP 606/ELE E 581, Introduction to Plasma Physics (fall, 4 credits)

A&EP 607/ELE E 582, Basic Plasma Physics (spring, 4 credits)

A&EP 661, Microcharacterization (fall, 3 credits)

ELE E 457, Silicon Device Fundamentals (fall, 4 credits with lab)

ELE E 471/M&AE 478/CHEM 372, Feedback Control Systems (fall, 4 credits)

MS&E 459, Physics of Modern Materials Analysis (spring, 3 credits)

MS&E 603, Analytical Techniques for Materials Science (spring, 4 credits)

NS&E 484/A&EP 484/ELE E 484/M&AE 459, Introduction to Controlled Fusion: Principles and Technology (spring, 3 credits)

NS&E 521, Radiation Effects in Materials (fall, 1-3 credits)

### OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

K. B. Athreya, A. Avramidis, L. J. Billera, R. G. Bland, R. Cleary, M. J. Eisner, P. L. Jackson, R. A. Jarow, W. L. Maxwell, J. A. Muckstadt, N. Prabhu, P. Protter, J. Renegar, S. I. Resnick, R. Roundy, D. Ruppert, G. Samorodnitsky, L. W. Schruben, D. Shmoys, E. Slate, E. Tardos, M. J. Todd, L. E. Trotter, Jr., B. W. Turnbull, L. I. Weiss

### Bachelor of Science Curriculum in Operations Research and Engineering

The program is designed to provide a broad education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. The program prepares students for a wide range of careers including operations research, industrial engineering, entrepreneurship, information technology, operations management, consulting, financial engineering, financial services, and management.

The foundation of the B.S. curriculum is the development of basic skills in calculus, statistics, probability, mathematical programming, and computer science. Required courses in manufacturing systems and simulation build on these skills and provide engineering design experiences. The curriculum culminates in a major engineering design experience in one of two required OR&IE electives, OR&IE 416 or 480.

Because of the wide range of career goals among our students, the B.S. program is designed with a minimum of required courses and a large number of required electives. Students should consult with their field advisers to select electives that best meet their future goals.

The program is accredited as a "nontraditional" program by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). The faculty have not sought accreditation of the B.S. curriculum as a program in industrial engineering. Industrial engineering curricula, while excellent for preparing industrial engineers, do not have the flexibility that the wide range of our students requires. Nonetheless, by proper selection of field electives, graduates of the B.S. program can and do become highly successful and competent industrial engineers. (Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.)

A student who intends to enter the field program in Operations Research and Engineering should plan to take Basic Engineering Probability and Statistics (ENGRD 270) after completing MATH 192. Early consultation with a faculty member of the

school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&IE field program and the typical terms in which they are taken are as follows:

<i>Term 2, 3, or 4</i>	<i>Credits</i>
ENGRD 211, Computers & Programming	3

<i>Term 5</i>	
OR&IE 320, Optimization I	4
OR&IE 350, Financial and Managerial Accounting	4
OR&IE 360, Engineering Probability and Statistics II	4
A course in humanities and social sciences	3
Field-approved elective	3

<i>Term 6</i>	
OR&IE 310, Industrial Systems Analysis (may be taken in term 4)	4
OR&IE 321, Optimization II	4
OR&IE 361, Introductory Engineering Stochastic Processes I	4
Behavioral science (organizational behavior)†	3
Course in humanities and social sciences	3

†The behavioral science requirement can be satisfied by any one of several courses, including the Johnson Graduate School of Management (JGSM) course, NCC 554 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, and ILROB 170, 171, and 320.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

	<i>Minimum credits</i>
OR&IE 581, Simulation Modeling	2
OR&IE 582, Simulation Analysis	2
To satisfy the ABET design requirement, students are required to take either OR&IE 416 or 480.	
Three upperclass OR&IE electives as described below	9
Two field-approved electives (at least 3 credits must be outside OR&IE)	6
Two courses in humanities and social sciences	6
Two approved electives	6

Available OR&IE electives are as follows:

Manufacturing and distribution systems: OR&IE 414, 416, 451, 480, 481, 518, 524, 525, and 562 and JGSM NBA 641

Optimization methods: OR&IE 431, 432, 434, 435, and 436

Applied probability and statistics: OR&IE 462, 474, 476 (2 credits), 561, 563, 575 (2 credits), 576 (2 credits) and 577

Scholastic requirements for the field are a passing grade in every course; a grade of C- or better in each of ENGRD 211 and 270, OR&IE 310, 320, 321, 350, 360, and 361; an overall average of at least 2.0 for each term the student is enrolled in the school; an average of 2.0 or better for OR&IE field courses; and satisfactory progress toward the completion of the degree requirements. The

student's performance is reviewed at the conclusion of each term.

## Operations Research and Engineering Honors Program

### Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Operations Research and Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA  $\geq 3.5$ .

### Content

An OR&E honors program shall consist of at least nine credits beyond the minimum required for graduation in OR&E, so that no part of the honors program can also be used to satisfy graduation requirements. The nine credits shall be from one or more of the following with at least four hours in the first category:

1. Advanced courses in OR&IE at the 500-level or above.
2. A significant research experience or honors project under the direct supervision of an OR&IE faculty member using OR&IE 499: OR&IE Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in OR&IE using OR&IE 490: Teaching in OR&IE, or ENGRG 470: Undergraduate Engineering Teaching.

### Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the program for at least two semesters before graduation.

### Procedures

Each application to the OR&E honors program must have a faculty adviser to supervise the honors program. The honors adviser need not be the student's faculty adviser. The application to the program shall be a letter from the student describing the specific proposed honors program and including the explicit approval of the honors adviser. Each program must be approved by the associate director, and any changes to the student's program must also be approved by the associate director of undergraduate studies.

## Engineering Minor Programs

The School of Operations Research and Industrial Engineering currently offers three engineering minor programs: engineering statistics, industrial systems and information technology, and operations research and management science. (A student may not receive credit for more than one minor offered by the School of Operations Research and Industrial Engineering.) Descriptions and requirements for each program follow:

## Minor in Engineering Statistics

### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the engineering statistics minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E.

This minor requires the student to develop expertise in engineering statistics. The goal of the program is to provide the student with a firm understanding of statistical principles and engineering applications, and the ability to apply this knowledge in real-world situations.

The requirements for the engineering statistics minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 202 Rhodes Hall.

### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

#### I. Required Courses:

ENGRD 270 Basic Engineering Probability & Statistics

OR&IE 360 or ELE E 310 Basic Engineering Probability & Statistics II or Introduction to Probability & Random Signals

#### II. Four courses (11 credits minimum) taken from the following list\*:

OR&IE 361 or ELE E 411 Introductory Engineering Stochastic Processes I or Random Signals in Communications/Signal Processing

OR&IE 476 Applied Linear Statistical Models

OR&IE 576 Regression

OR&IE 563 Applied Time Series Analysis

OR&IE 565 Applied Financial Engineering

OR&IE 575 Experimental Design

OR&IE 577 Quality Control

OR&IE 581 Simulation Modeling

OR&IE 582 Simulation Analysis

MATH 472 or BTRY 409 Basic Probability or Theory of Statistics

BTRY 602 Statistical Methods II

BTRY 603 or ILRST 411 Statistical Methods III or Statistical Analysis of Qualitative Data

ILRST 310 Statistical Sampling

ILRST 314 Graphical Methods for Data Analysis

ILRST 410 Techniques of Multivariate Analysis

\*Other course options approved by petition in advance. The student should be aware that some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

Academic Standards: a letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

## Minor in Industrial Systems and Information Technology

### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the industrial systems and information technology minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E.

The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools from information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives, and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and service operations. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.

The requirements for the industrial systems and information technology minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 200 Rhodes Hall.

### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

#### I. At least three of the following:

ENGRD 270 Basic Engineering Probability and Statistics

OR&IE 320 Optimization I

OR&IE 310 Industrial Systems Analysis

OR&IE 480 Information Technology for Operations Research and Industrial Technology

#### II. The remaining courses/credit hours from the following:

OR&IE 350 Financial and Managerial Accounting

OR&IE 416 Design of Manufacturing Systems

OR&IE 451 Economic Analysis of Engineering Systems

OR&IE 525 Production Planning and Scheduling Theory and Practice

OR&IE 552 Revenue Management

OR&IE 577 Quality Control

OR&IE 581 Simulation Modeling

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

## Minor in Operations Research and Management Science

### Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the operations research and management science minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E.

The field of operations research and management science (OR/MS) aims to provide rational bases for decision making by seeking to understand and model complex situations and to use this understanding to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools for OR/MS, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is that the student should obtain a broad knowledge of these fundamentals, rather than train the student in a particular application domain. This way the student can adjust their advanced courses and pursue either methodological or application oriented areas of greatest interest and relevance to the overall educational goals of their program.

The requirements for the operations research and management science minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 200 Rhodes Hall.

### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

- I. Choose three courses from the following list:

ENGRD 270 Basic Engineering Probability and Statistics

OR&IE 320 Optimization I

OR&IE 321 Optimization II

OR&IE 360 Engineering Probability and Statistics II

OR&IE 361 Introduction Engineering Stochastic Processes I

OR&IE 581 Simulation Modeling

OR&IE 582 Simulation Analysis

- II. These courses are to be supplemented with additional OR&IE courses at the 300 level or higher, so that entire program includes at least six courses and at least 18 credits. For example, taking the remaining three options on this list would suffice.

Academic Standards: a letter grade of C- or better for each course in the minor and a cumulative GPA of or better for all courses in the minor.

### Master of Engineering (OR&IE) Degree Program

This two-semester professional degree program stresses applications of operations research and industrial engineering. The centerpiece of the program is a team-based project on a real problem. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of systems in manufacturing, information, finance, and nonprofit organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng. (OR&IE) program is intended for three groups of students: graduates of the undergraduate field program in OR&E who wish to expand their practical knowledge of the field; Cornell

undergraduates in other math-based fields who want to broaden their exposure to OR&IE; and qualified non-Cornellians with strong backgrounds from other programs in the United States and abroad.

To ensure completion of the program in two semesters, the entering student should have completed courses in probability and statistics and in computer science, as well as four semesters of mathematics, through differential equations, linear algebra, and multivariate calculus.

Program requirements include a core of OR&IE courses plus technical electives chosen from a broad array of offerings. The choice of a particular elective sequence plus a specific project course results in completion of one of several options within the program. These include the applied operations research option, the manufacturing option, the financial engineering option, the systems engineering option, the information technology option, and the Semester in Manufacturing. These options are offered jointly with various other Cornell departments and schools and provide the opportunity to interact on projects and in class with specialists in other engineering fields and in business. Many students select the applied operations research option, offered only by OR&IE, which has project teams made up entirely of OR&IE M.Eng. students and which offers the broadest choice of elective courses. Students interested in an option other than the applied operations research option should obtain further information from the following: manufacturing option, Center for Manufacturing Enterprise, 103 Frank H. T. Rhodes Hall, 607-255-7757; financial option and information technology option, 201 Frank H. T. Rhodes Hall, Semester in Manufacturing option, 304 Sage Hall, 607-255-4691; systems engineering option, 218 Upson Hall, 607-255-0710.

- I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Engineering:

Fall term	Credits
OR&IE 516, Case Studies	1
OR&IE 893, Applied OR&IE Colloquium	1
M.Eng. Project	1
Technical electives	12

#### Spring term

OR&IE 894, Applied OR&IE Colloquium	1
M.Eng. Project	minimum of 4
Technical electives	9

- II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&IE 520, 523, and 560 will take other OR&IE electives in their place):

Fall term	Credits
OR&IE 560, Engineering Probability and Statistics II	4
OR&IE 520, Optimization I	4
OR&IE 522, Topics in Linear Optimization	1
OR&IE 516, Case Studies	1
OR&IE 580, Design and Analysis of Simulated Systems	4
OR&IE 893, Applied OR&IE Colloquium	1
M. Eng. Project	1

#### Spring term

OR&IE 523, Introduction to Stochastic Processes I	4
OR&IE 894, Applied OR&IE Colloquium	1
M.Eng. Project	minimum of 4
Technical electives	6

For both of the above pro forma schedules, at least 12 credit hours of the specified electives must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering. For scheduling reasons, some options may require an additional summer, depending on the student's preparations.

A minimum of 30 credit hours are required to complete this program. Additional program requirements exist and are described in the *Master of Engineering Handbook*, which is available in Room 201, Frank H. T. Rhodes Hall and on the web at [www.orie.cornell.edu](http://www.orie.cornell.edu).

The project requirement can be filled in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, hospitals, and other service industries.

### Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in operations research and engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M. Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M. Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it on coming to Cornell. This accelerated program often incorporates the Twelve-Month M.B.A. Program of the Johnson Graduate School of Management.

An advantage for OR&E majors is that as part of their undergraduate and/or M. Eng. curriculum, they study several subjects that are required for the M.B.A. degree. (This is because modern management is concerned with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing these systems.) This early start on meeting the business-degree requirements permits degrees in two years rather than the three years such a program would normally take.

The details of planning courses for this program should be discussed with the admissions office of the Johnson Graduate School of Management. Since 95 percent of the students in the Johnson Graduate School of Management have work experience, there will typically be a gap for work experience between the M. Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M. Eng. portion.

Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, Frank H. T. Rhodes Hall, and at the admissions office of the Johnson Graduate School of Management.

## STATISTICAL SCIENCE DEPARTMENT

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog (see p. 15).

## THEORETICAL AND APPLIED MECHANICS

J. T. Jenkins, chair; J. A. Burns, K. B. Cady, C. Castillo-Chavez, H. D. Conway, J. M. Guckenheimer, E. W. Hart, T. J. Healey, C. Y. Hui, S. Mukherjee, Y. H. Pao, S. L. Phoenix, R. H. Rand, P. Rosakis, A. L. Ruina, W. H. Sachse, S. Strogatz, Z. J. Wang, A. Zehnder

### Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

### College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

### Minor in Applied Mathematics

Engineering undergraduates affiliated with the following fields are eligible to participate in the Applied Mathematics minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE.

#### Requirements

To complete the minor, the student must take at least six courses beyond MATH 294, to be chosen as follows:

- No more than one course may be chosen from any one of the groups 1, 2, 3, or 4.
- At least three courses must be chosen from groups 5 and 6.
- No more than one 200-level course may be chosen.
- No more than one course may be chosen which is offered by the student's major department.

#### 1. Analysis

T&AM 310 Advanced Engineering Analysis I  
MATH 321 Applicable Analysis  
MATH 420 Applicable Analysis

A&EP 321 Mathematical Physics I

#### 2. Computational Methods

COM S/ENGRD 222 Introduction to Scientific Computation  
CEE/ENGRD 241 Engineering Computation  
ABEN 449 Computational Tools for Engineers  
OR&IE 320 Optimization I

#### 3. Probability and Statistics

OR&IE/ENGRD 270 Basic Engineering Probability and Statistics  
OR&IE 360 Engineering Probability and Statistics II  
ELE E 310 Introduction to Probability and Random Signals  
CEE 304 Uncertainty Analysis in Engineering  
MATH 371 Basic Probability

#### 4. Applications

A&EP 333 Mechanics of Particles and Solid Bodies  
CHEME 323 Fluid Mechanics  
CEE 331 Fluid Mechanics  
CEE 371 Structural Behavior  
ELE E 425 Digital Signal Processing  
MS&E 303 Thermodynamics of Condensed Systems  
M&AE 323 Introductory Fluid Mechanics

#### 5. Advanced Courses

—Only one of the following three may be chosen:

T&AM 311 Advanced Engineering Analysis II  
MATH 422 Applicable Analysis II  
A&EP 322 Mathematical Physics II

—Only one of the following two may be chosen:

ELE E 411 Random Signals in Communications and Signal Processing  
OR&IE 361 Introductory Engineering Stochastic Processes I

—Only one of the following two may be chosen:

COM S 381 Introduction to Theory of Computing  
COM S 481 Introduction to Theory of Computing  
COM S 482 Introduction to the Design of Algorithms  
OR&IE 321 Optimization II  
OR&IE 431 Discrete Models  
OR&IE 435 Introduction to Game Theory  
OR&IE 462 Introductory Engineering Stochastic Processes II  
ELE E 522 Nonlinear Systems: Analysis, Stability, Control, and Applications

—Only one of the following two may be chosen:

M&AE 571 Applied Dynamics  
T&AM 570 Intermediate Dynamics  
T&AM 578 Nonlinear Dynamics and Chaos

6. Math Courses—Any 300+ level course offered by the mathematics department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:

- MATH 321 or MATH 420, if any course from group 1 is chosen
- MATH 371, if any course from group 3 is chosen
- MATH 422, if T&AM 311, MATH 422, or A&EP 322 are chosen from group 5

Academic Standards: A letter grade of C or better for each course in the minor.

### Minor in Biomedical Engineering

**Eligibility**  
All undergraduates in the College of Engineering are eligible to participate in the biomedical engineering minor, unless they are also pursuing the bioengineering option. (Students may participate in either the bioengineering option OR the biomedical engineering minor, but not both.)

#### Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits) from the five groups listed below, with at least one course from each group. At least four of the six courses must be from outside the student's major. In addition, all students must take ENGRG 501, Bioengineering Seminar (1 credit).

Required Course: ENGRG 501, Bioengineering Seminar (1 credit)

#### I. Biomaterials and Biomechanics

ABEN 365 (3) Properties of Biological Materials  
MS&E 265 (3) or TXA 439 (2) Biological Materials and Their Synthetic Replacements  
M&AE 565 (3) Biomechanical Systems—Analysis and Design  
M&AE 664 (3) Mechanics of Bone  
ENGRG 605.3 (1) Biomaterials  
ENGRG 606.1 (1) Artificial Organs and Tissue Engineering  
ENGRG 606.3 (1) Biomechanics of Musculoskeletal Systems

#### II. Biomedical Systems

ABEN 453 (3) Computer-Aided Engineering: Applications to Biomedical and Food Processes  
CHEME 481 (3) Biomedical Engineering  
ABEN 454 (3) Physiological Engineering  
ENGRG 605.1 (1) Cellular Dynamics and Cancer  
ENGRG 605.2 (1) Physiological Systems

#### III. Instrumentation

ABEN 418 (3) Introduction to Biotechnology  
ELE E 432 (3) MicroElectro Mechanical Systems (MEMS)  
ELE E 593 (3) Bioelectric Signal Analysis and Processing  
ABEN 450 (4) Bioinstrumentation  
ENGRG 606.2 (1) Biomedical Instrumentation and Diagnosis

## IV. Molecular and Cell Biology

- BIOGD 281 (5) Genetics  
 BIOGD 282 (2-3) Human Genetics  
 BIOMI 290 (3) Microbiology  
 BIOAP 316 (4) Cellular Physiology  
 BIOBM 330-333 (2-4) Principles of Biochemistry  
 BIOBM 432 (3) Survey of Cell Biology

## V. Physiology

- BIOAP 212 (3) Human Physiology  
 BIOAP 311 (3) Introductory Animal Physiology  
 BIOAP 313 (4) Histology: The Biology of the Tissues  
 BIOGD 389 (3) Embryology  
 BIONB 222 (3-4) Neurobiology and Behavior II: Introduction to Neurobiology  
 AN SC 427 (3) Fundamentals of Endocrinology

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Note: ENGRG 605-606 and MAE 664 are graduate courses with limited enrollment. First preference will be given to graduate students.

### Master of Engineering (Engineering Mechanics) Degree Program

Composite materials designed to meet specific requirements of weight, strength, and rigidity are used increasingly in the manufacture of everyday structures and components. The Master of Engineering (Engineering Mechanics) degree program focuses on the mechanical behavior of advanced composite materials and structures and prepares students to play a role in the development of this new technology. Students from diverse engineering backgrounds, such as mechanics, structures, and materials, as well as aerospace and biomedical engineering, can normally complete the requirements for the professional Master of Engineering degree in one year.

The degree program requires satisfactory completion of 30 credits of course work, including 12 credits of courses that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least six must be earned in T&AM. Up to 10 credits will be awarded for an individual project involving composites. The balance of the required credits may be earned in elective courses chosen from those in the course listing below or others approved by the student's adviser.

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.

## ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.

Engineering Communications	ENGRG
Engineering Distribution	ENGRD
Engineering General Interest	ENGRG
Introduction to Engineering	ENGRI
Agricultural and Biological Engineering	ABEN
Applied and Engineering Physics	A&EP
Chemical Engineering	CHEME
Civil and Environmental Engineering	CEE
Computer Science	COM S
Earth and Atmospheric Sciences (formerly Geological Sciences)	EAS
Electrical and Computer Engineering	ELE E
Materials Science and Engineering	MS&E
Mechanical and Aerospace Engineering	M&AE
Nuclear Science and Engineering	NS&E
Operations Research and Industrial Engineering	OR&IE
Theoretical and Applied Mechanics	T&AM

## ENGINEERING COMMON COURSES

### Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program, develop writing and oral presentation skills relevant to engineers.

#### ENGRG 301 Writing in Engineering

TBA. 1 credit. Prerequisite: permission of instructor. Can be used to satisfy requirements in expressive arts as a free or approved elective. *This course can only be taken in conjunction with a "writing-intensive" engineering class.*

Some "writing-intensive" engineering classes may require students to enroll in this supplementary course. Instructors from the Engineering Communications Program work with engineering faculty members to prepare students for writing assignments. Intended to strengthen understanding of the course content while enhancing communications skills. May be taken more than once, with different engineering courses.

#### ENGRG 333 Topics in Engineering Communications

TBA. 3 credits.

Topics vary as the need and interest arise. Sample topics are: introductory technical communications, graphic presentation of engineering material, desktop publishing, information technologies, advanced problems in engineering communications, technology, and the law. Fulfills the college technical writing requirement.

#### ENGRG 334 Independent Study in Engineering Communications

TBA. Variable credits (1-3).

Students work closely with a Communications Program instructor to pursue an aspect of

professional communications not available through regular course work. Projects may involve writing technical documentation, creating user manuals, analyzing and producing technical graphics, or reading and writing about problems in engineering practice. Interested students should contact the Engineering Communications Program.

#### ENGRG 335 Communications For Engineering Managers

TBA. 3 credits. Limited to 20 students per section. Prerequisite: two First-Year Writing Seminars.

This interactive workshop focuses on communications in organizational contexts common to engineering graduates. ENGRG 335 helps students to produce effective business and technical communication—written, oral, and visual. Topics include internal and external communications; balancing visual and verbal elements in documents and presentations; teamwork and leadership; running and attending meetings; management strategies; communicating to colleagues, superiors, subordinates, and clients. Through case studies and other readings, students develop writing and management strategies that they apply in individual and collaborative assignments. By completing brief written exercises, formal and informal presentations, and a larger team project, students learn how to develop information, organize and support ideas, and address a variety of audiences. Fulfills the college technical writing requirement. Note: because space is limited, seniors are given priority.

#### ENGRG 350 Engineering Communications

Fall, spring, summer TBA. 3 credits. Prerequisite: two First-Year Writing Seminars. Limited to 20 students per section.

Engineering graduates spend much of their time conveying technical information to a variety of audiences. They write a range of documents, give oral presentations, and use visuals to enhance their writing and talks. These important tasks can seem daunting and burdensome; ENGRG 350 aims to make them manageable and interesting. This course draws on material from professional settings to help students develop effective processes for drafting, editing, and revising documents; communicating specialized information in different contexts; working in teams; and addressing relevant organizational and ethical issues. Students learn to communicate effectively through diverse assignments and a longer term project of their choice (for example, a research paper, feasibility study, or users' manual). The course material generates lively discussion, and the limited class size ensures close attention to each student's work. Fulfills the college technical writing requirement.

### Engineering Distribution Courses

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or corequisites.

#### ENGRD 201 Introduction to the Physics and Chemistry of the Earth (also GEOL/EAS 201)

Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Cathles.

Formation of the solar system: accretion and evolution of the earth. The rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes. The hydrologic cycle: runoff, floods and sedimentation, groundwater flow, contaminant transport. Weathering cycle: chemical cycles, CO<sub>2</sub> (weathering), rock cycle, controls on global temperature (CO<sub>2</sub> or ocean currents), oil and mineral resources.

#### **ENGRD 202 Mechanics of Solids (also T&AM 202)**

Fall, spring, 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.

Principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, plane stress; Mohr's circle; bending and torsion of bars; buckling and plastic behavior.

#### **ENGRD 203 Dynamics (also T&AM 203)**

Fall, spring, 3 credits. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor.

Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

#### **ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers (also ELE E 210)**

Fall, spring, 3 credits. Corequisites: MATH 293 and PHYS 213.

A first course in electrical circuits, establishing the fundamental properties of circuits with application to high-speed computers and modern electronics. Topics include node and mesh analysis applied to CMOS circuit design, transient response and its impact on computer speed, sinusoids, resonance, complex impedance, and operational amplifiers.

#### **ENGRD 211 Computers and Programming (also COM S 211)**

Fall, spring, summer, 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, analysis of algorithms, and an introduction to elementary graph theory and graph algorithms. Java is the principal programming language. Knowledge of classes and objects is assumed.

#### **ENGRD 219 Mass and Energy Balances (also CHEME 219)**

Fall, 3 credits. Corequisite: physical chemistry or permission of instructor. K. H. Lee.

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems.

#### **ENGRD 221 Thermodynamics (also M&AE 221)**

Fall, spring, summer TBA. 3 credits.

Prerequisites: MATH 192 and PHYS 112.

The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, vapor and gas power systems, refrigeration, and heat pump systems. Thermodynamics relations for simple, compressible substances. Gaseous reactions. Examples and problems will be related to contemporary aspects of power generation and broader environmental issues.

#### **ENGRD 222 Introduction to Scientific Computation (also COM S 222)**

Spring, summer, 3 credits. Prerequisites: COM S 100 and (MATH 222 or 294).

An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation.

#### **ENGRD 231 Introduction to Digital Systems**

Fall, spring, 3 credits. Prerequisite: COM S 100.

An introduction to basic principles, design techniques, and methodology for communication, computer, and information systems, which process digital data streams. Includes Boolean algebra, integrated circuit components, switching circuits, and systems which provide computation, data, voice, and video service.

#### **ENGRD 241 Engineering Computation (also CEE 241)**

Fall, spring, 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294. (Completion of MATH 294 is suggested.) W. Philpot.

This course introduces the discipline of numerical methods while developing programming and graphics proficiency with MATLAB and spreadsheets. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations, truncation and round-off errors, condition numbers, operation counts, convergence, and stability. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, regression, interpolation, numerical differentiation and integration, and ordinary differential equations. The context and solution of partial differential equations are broached. Applications are drawn from different areas of engineering.

#### **ENGRD 250 Engineering Applications in Biological Systems (also ABEN 250)**

Fall, 3 credits. Corequisite: MATH 293. Recommended for the sophomore year. B. A. Ahner.

Case studies of engineering problems in agricultural, biological, and environmental systems, including bioremediation, crop production, environmental controls, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

#### **ENGRD 261 Introduction to Mechanical Properties of Materials (also MS&E 261)**

Fall, 3 credits. S. P. Baker.

The mechanical properties of materials (strength, stiffness, toughness, ductility, etc.) and their physical origins are examined. The relationship of the elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials. Effects of time and temperature. Considerations for design and optimal performance of materials and engineered objects.

#### **ENGRD 264 Computer-Instrumentation Design (also A&EP 264)**

Fall, spring, 3 credits. Prerequisites: COM S 100, 1 lec, 1 lab.

This course covers the use of a small computer in an engineering or scientific research laboratory. Various experiments are performed using a PC (Pentium III, 450 MHz CPU) running Windows 98. The experiments and devices to be investigated include: input and output ports, analog to digital converters (ADC), digital to analog converters (DAC), thermistors, optical sensors, digital temperature control, nonlinear least squares curve fitting of experimental data, thermal diffusion, and viscosity of fluids. A second goal of this course is to develop effective written communication skills in the context of science and engineering. A number of rhetorical principles will be presented that can produce clarity in communication without oversimplifying scientific issues. Students will prepare progress reports, technical reports, and formal articles based on the experiments.

#### **ENGRD 270 Basic Engineering Probability and Statistics**

Fall, spring, summer, 3 credits. Pre- or corequisite: MATH 293.

This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are included. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

#### **Courses of General Interest**

Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

#### **ENGRG 102 Drawing and Engineering Design (also M&AE 102)**

Fall, spring, 1 credit. Half-term course offered twice each semester. Enrollment limited to 30 students each half-term. Recommended for students without mechanical drawing experience. Letter grade required for students majoring in M&AE; S-U grades optional for all others.

Introduction to sketching, drawing, and graphic techniques useful in design, analysis, and presentation of ideas. Computer-aided design is integral to the course-work and final design project.

#### **ENGRG 150 Engineering Seminar**

Fall, 1 credit. First-year students only. S-U grades only.

Engineering freshmen meet weekly with their faculty advisers to discuss a range of engineering topics. Discussions may include the engineering curriculum and student programs, what different types of engineers

do, the character of engineering careers, active research areas in the college and in engineering in general, and study and examination skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

**ENGRG 198 Introduction to the Electronic Revolution (also ELE E 198)**

Summer only. 3 credits. Cannot be taken in addition to ENGRG 298.

This course is an introductory survey of the development of information technologies in the United States from the 1830s to the present. Students focus on the themes of the social process of invention, the federal government's role in promoting and regulating technological change, and the relationship between technological and social change in regard to the history of the telegraph, telephone, radio, television, computers, and the Internet. The themes of gender and technology and the relationship between science and technology will be addressed throughout the course. Laboratory demonstrations of current research in information technology at Cornell will be given in some afternoon sessions.

**ENGRG 250 Technology in Society (also ELE E 250, HIST 250, S&TS 250)**

Fall. 3 credits. A humanities elective for engineering students. Not offered 2000–2001.

This course will investigate the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's regulation of technology, the origins of mass production, and the spread of the automobile and microelectronics cultures in the United States.

**ENGRG 298 Inventing an Information Society (also ELE E 298 and S&TS 292)**

Spring. 3 credits. Approved for humanities distribution. Cannot be taken for credit after ENGRG 198/ELE E 198. May not be offered 2000–2001.

Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers, and the Internet. Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

**ENGRG 323 Engineering Economics and Management (also CEE 323)**

Spring, usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Loucks.

Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

**ENGRG 360 Ethical Issues in Engineering (also S&TS 360)**

Spring. 3 credits. A humanities elective for engineering students. Open to sophomores. May not be offered 2000–2001.

A discussion of ethical issues encountered in engineering practice, such as the rights of engineers in corporations, responsibility for actions, whistleblowing, conflicts of interest, and decision making based on cost-benefit analysis. Codes of ethics and ethical theory will be used to sort out conflicts the engineer may feel toward public safety, professional standards, employers, colleagues, and family. Students will present a case study to the class.

**ENGRG 461 Entrepreneurship For Engineers (also M&AE 461)**

Fall. 3 credits. Enrollment open to upper class engineers; others with permission of instructor.

For description, see M&AE 461.

**ENGRG 470 Peer Teaching in Engineering**

Fall. 3 credits.

This class provides students with training and support while they facilitate a freshman/sophomore Academic Excellence Workshop (AEW). AEW's run parallel to courses in math, physics, chemistry, and engineering design. The course introduces students to concepts such as cooperative learning, education theory, teaching practices, and group dynamics. Students learn to understand and work with gender and cultural issues as they intersect the learning process. ENGRG 470, if taken for credit, is an approved elective and may be applied toward the honors program in electrical and computer engineering. Students may request pay rather than credit for the training and facilitation components.

**ENGRG 501 Bioengineering Seminar**

Fall, spring. 1 credit. For juniors, seniors, and graduate students only. K. H. Lee.

Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions. Sessions may occasionally be held outside of scheduled times.

**ENGRG 605 Fundamentals of Biomedical Engineering I (also CHEME 605)**

Fall. 1–4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEME 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler.

A series of four-week modules on specialized topics.

**605.1 Cellular Dynamics and Cancer**

1 credit. Meets first third of term. Lec. T R 1:25–2:40. W. L. Olbricht and staff.

Basic concepts of cell biology. Mathematical models of cell cycle, receptor-mediated signaling, and cell adhesion. Conceptual approaches for engineering solutions to cancer.

**605.2 Physiological Systems**

1 credit. Meets second third of term. Lec. T R 1:25–2:40. W. L. Olbricht.

Emphasis on development of physiologically-based pharmacokinetic models for drug

delivery and on models of cardiovascular system, particularly blood flow.

**605.3 Biomaterials**

1 credit. Meets final third of term. Lec. T R 1:25–2:40. C. C. Chu.

The main objective of the biomaterials module is to provide students with an effective background in a wide range of biomaterials that include polymers, metals/alloys, and ceramics and that are currently used in human body repair. After student's completion of this module, they should have the basic and some in-depth knowledge of what biomaterials are made of, how biomaterials contribute to the saving of human lives, the criteria of materials for biomedical use, biocompatibility, failure modes of biomaterials, and the current R&D activities in biomaterials, challenges that biomaterials are facing, and future direction of R&D in biomaterials.

**605.4 Biomedical Engineering Project**

1 credit. Meets final third of term. T 3:35–4:25. M. L. Shuler.

Students will work in teams on a design problem of their choice related to development of a biomedical device or procedure. Each team will prepare a written report.

**ENGRG 606 Fundamentals of Biomedical Engineering II (also CHEME 606)**

Spring. 1–4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent.

Undergraduates must have permission of instructor and have completed ABEN 454, CHEME 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler.

A series of one and two-credit modules on specialized topics.

**606.1 Artificial Organs and Tissue Engineering**

1 credit. Prerequisite: ENGRG 605, Section 03 (Biomaterials). Meets first third of term.

Lec. T R 1:25–2:40. W. L. Olbricht and staff.

An introduction to the use of cells, biological molecules, and synthetic materials as the basis for building artificial organs and encouraging tissue regeneration. The section will discuss the physiological and engineering issues underlying the use of synthetic, extracorporeal systems (e.g., membrane-based dialysis devices), composite implantable materials (e.g., drug-delivery systems and nerve regeneration guides), and hybrid cell/polymer implantable systems (e.g., engineered tissues).

**606.2 Biomedical Instrumentation and Diagnosis**

1 credit. Lec. Meets second third of term.

Preregistration with the instructor before end of fall 2000 term is required. T R 1:25–2:40. C. D. Montemagno.

Perspective on the use of advanced instrumentation for the diagnosis and treatment of disease and the investigation of fundamental biological processes. The basic theory and application of different microscopic and spectroscopic methods, imaging tomographies, and micro-electromechanical devices to biological systems will be explored. A two-day trip to Cornell University Medical Center to learn techniques of functional MRI is required.

**606.3 Biomechanics of Musculoskeletal Systems**

2 credits. Meets final third of term. Lec. T R 1:25–4:40. D. L. Bartel, C. E. Farnum.

Integrated lecture/laboratory experience. The anatomy and function of the canine hindlimb

will be explored in dissection laboratories and through demonstration of a non-invasive technique, computed tomography. Methods of approximating functional joint loads will be discussed, and physical testing will be demonstrated. A computer model of the stifle (knee) joint will be created by combining knowledge of the anatomy and the mechanical environment.

### Introduction to Engineering Courses

Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

#### ENGRI 110 The Laser and Its Applications in Science, Technology, and Medicine (also A&EP 110)

Fall, spring. 3 credits.

The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, and Raman spectroscopy.

#### ENGRI 111 Electronic Materials for the Information Age (also MS&E 111)

Fall. 3 credits. G. Malliaras.

The electronics revolution sweeping society today is a direct result of advanced developments in optically and electrically active materials. This course examines how the properties of modern electronic materials, including metals, semiconductors, insulators, and novel organic materials have enabled and driven new applications. Examples will be drawn from the microelectronics, telecommunications, and consumer markets.

#### ENGRI 112 Introduction to Chemical Engineering (also CHEME 112)

Fall. 3 credits. Limited to freshmen. T. M. Duncan.

Design and analysis of processes involving chemical change. Strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical engineering. Methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

#### ENGRI 113 Introduction to Environmental Systems (also CEE 113)

Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students. M. L. Weber-Shirk.

We will explore the environmental engineering systems that make New York City possible. We will discuss the engineering required to provide clean water and to remove the garbage from NYC sidewalks. We will evaluate NYC's current strategies and future options as their watersheds become more populated and their landfill is closed. See [www.cce.cornell.edu/cee113/](http://www.cce.cornell.edu/cee113/) for more information.

#### ENGRI 114 An Introduction to Electrical Circuit Engineering Design

Spring. 3 credits.

This course introduces students to the basic principles of electric circuit analysis and design. In the laboratory students will work in pairs on a focused series of electronic circuit experiments which are relevant to the course design project. A team of four to five students will then design and construct a working AM radio transmitter-receiver system.

#### ENGRI 115 Engineering Applications of Operations Research

Fall, spring. 3 credits. Enrollment not open to OR&E upper-class majors.

An introduction to the problems and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems can be found, and several standard solution techniques. In the computer laboratory, students will encounter problem simulations and use some standard software packages.

#### ENGRI 116 Modern Structures (also CEE 116)

Fall. 3 credits. A. R. Ingraffea.

An introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structures carry loads. Concepts are illustrated by a series of case studies of major structures such as bridges, skyscrapers, long-span structures, and shell structures. The philosophy of engineering design and lessons learned from structural failures and earthquakes are discussed. A semester project involves the design and construction of a small balsa-wood bridge.

#### ENGRI 117 Introduction to Mechanical Engineering (also M&AE 117)

Fall or spring, to be determined. 3 credits.

Two lectures and one lab per week.

An introduction to the wide range of topics of current interest in mechanical engineering.

#### ENGRI 118 Design Integration: A Portable CD Player (also MS&E 118 and T&AM 118)

Spring. 3 credits. W. Sachse.

This course examines the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

#### ENGRI 119 Biomaterials for the Skeletal System (also MS&E 119)

Fall. 3 credits. D. T. Grubb.

Biomaterials are at the intersection of biology and engineering. We will explore natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments will be used as examples, with their metal, plastic, and ceramic replacements. Topics covered include strength, corrosion, toxicity, wear, and bio-compatibility. Case studies of design will lead to consideration of regulatory approval requirements and legal liability issues.

#### ENGRI 120 Introduction to Biomedical Engineering (also CHEME 120)

Fall. 3 credits. W. M. Saltzman.

Introduction to the fundamental science and engineering that spawned the biotechnology

revolution—technologies of cell cultures, DNA, and antibodies—and the relationship between biomedical science, bioengineering, and the growing biomedical product industry. Case studies of the development of biotechnical processes, from discovery to clinical use, will include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.

#### ENGRI 121 Fission, Fusion, and Radiation (also A&EP 121 and NS&E 121)

Spring. 3 credits. S-U grades optional for students outside the College of Engineering. K. B. Cady.

Lecture-laboratory course on (1) the physical nature and biological effects of nuclear radiation; (2) benefits and hazards of nuclear energy; (3) light-water reactors, breeder reactors, and fusion reactors; and (4) uses of nuclear radiation in research. Laboratory demonstrations involve Cornell's research reactor; detection of nuclear radiation; activation analysis using gamma-ray spectroscopy; neutron radiography; and pulsed power generators for fusion research.

#### ENGRI 122 Earthquake! (also GEOL/EAS 122)

Spring. 3 credits. L. D. Brown.

The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes, and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

#### ENGRI 124 Designing Materials for the Computer (also MS&E 124)

Spring. 3 credits. 3 lectures. C. K. Ober.

Introduces the materials, processes and properties of the semiconductors, polymers, ceramics, and metals used in the microelectronics industry to form integrated circuits, electronic devices, and displays. This course examines lithographic processing, metallization, diffusion, ion implantation, oxidation, and other processes used in fabricating electronic devices, and their packages. The technology of displays will be discussed including liquid crystal displays and light emitting devices.

#### ENGRI 126 Introduction to Telecommunications

Fall. 3 credits.

This course introduces the technologies that underlie wired and wireless telecommunication systems. The course begins with an introduction to telephony and the public switched telephone network. Modems and cellular telephony are then introduced, along with ISDN and BISDN. The course concludes with an introduction to ATM and TCP/IP. The course will include both lectures and laboratory demonstrations. The students will have the opportunity to design communication systems, and to determine their performance through simulations.

#### ENGRI 127 Introduction to Entrepreneurship and Enterprise Engineering (also M&AE 127)

Spring. 3 credits.

This course provides a solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify

and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources will be covered. Technical topics such as the engineering design process, product realization, and technology forecasting will be discussed. Guest lecturers will provide material for analysis and class discussion.

**ENGRI 185 Art, Archaeology, and Analysis (also ARKEO 285, ART 372, ARTH 200, GEOL/EAS 200, and PHYS 200)**

Spring. 3 credits. 3 lectures. R. Kay. An interdepartmental course on the use of techniques of science and engineering in cultural research. Applications of physical and physiological principles to the study of archaeological artifacts and works of art. Historical and technical aspects of artistic creation. Analyses by modern methods to deduce geographical origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for Engineering.

## AGRICULTURAL AND BIOLOGICAL ENGINEERING

For complete course descriptions, see the Agricultural and Biological Engineering listing in the College of Agriculture and Life Sciences section or visit the department web site, [www.aben.cornell.edu](http://www.aben.cornell.edu).

**ABEN 151 Introduction to Computing**

Fall. 4 credits. Prerequisite: MATH 191 or equivalent (coregistration permissible). Each lab and recitation section limited to 22 students.

**ABEN 152 Computer Applications for Engineers**

Spring. 3 credits. Prerequisites: ABEN 151 or equivalent, MATH 191.

Course is comprised of three one-credit modules: (1) MATLAB; (2) spreadsheets; and (3) presentation graphics.

**ABEN 200 The ABEN Experience**

Spring. 1 credit. S-U grades optional.

**ABEN 250 Engineering Applications in Biological Systems (also ENGRD 250)**

Fall. 3 credits. Corequisite: MATH 293. Recommended for the sophomore year.

For description, see ENGRD 250.

**ABEN 299 Sustainable Development: A Web-Based Course**

Spring. 3 credits. Prerequisite: sophomore standing and above. S-U grades optional.

**ABEN 300 Career Development**

Spring. 1 credit. Prerequisites: ABEN 200 or permission of instructor. S-U grades optional.

**ABEN 301 Energy Systems**

Spring. 3 credits. Prerequisite: college physics.

**ABEN 350 Biological and Environmental Transport Processes**

Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (coregistration permissible).

**ABEN 365 Properties of Biological Materials**

Spring. 3 credits. Prerequisites: ENGRD 202 (coregistration permissible). S-U grades optional.

**ABEN 367 Introduction to Biological Engineering**

Fall. 3 credits. Prerequisites: 1 year each calculus and introductory biology; minimum 1 term each college chemistry and physics. S-U grades optional. Not open to freshmen.

**ABEN 371 Hydrology and the Environment (also GEOL/EAS 204)**

Spring. 3 credits. Prerequisite: 1 course in calculus.

**[ABEN 411 Biomass Processing: Modelling and Analysis]**

Spring. 3 credits. Prerequisites: ABEN 250, ABEN 350 (or any course in heat and mass transport), BIOBM 331, 332, or BIOMI 290. Not offered 2000–2001.]

**ABEN 418 Introduction to Biotechnology**

Fall. 3 credits. Prerequisites: ABEN 350 (coregistration permissible), biochemistry, microbiology, fluid mechanics, or permission of instructor.

**ABEN 425 Science and Technology of Environmental Management**

Fall. 3 credits. Open to seniors and graduate students only. Letter grades only.

**ABEN 427 Water Sampling and Measurement**

Fall. 3 credits. Prerequisites: soils and/or fluids or hydrology courses and MATH 191.

**ABEN 435 Principles of Aquaculture**

Spring. 3 credits. Prerequisite: minimum junior standing.

**[ABEN 450 Bioinstrumentation]**

Fall. 4 credits. Prerequisites: linear differential equations, physics or electrical science, computer programming, and use of spreadsheets. Not offered 2000–2001.]

**ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes**

Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or COM S 100) and heat and mass transfer (ABEN 350 or equivalent).

**ABEN 454 Physiological Engineering**

Fall. 3 credits. Corequisite: fluid mechanics.

**ABEN 456 Biomechanics of Plants**

Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology, and 1 year of calculus, or permission of instructor. S-U grades optional.

**ABEN 471 Geohydrology (also CEE 431 and GEOL/EAS 445)**

Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202.

For description, see CEE 431.

**ABEN 473 Watershed Engineering**

Fall. 3 credits. Prerequisite: fluid mechanics or hydrology.

**ABEN 474 Drainage and Irrigation Design**

Spring. 3 credits. Prerequisites: fluid mechanics or hydrology.

**ABEN 475 Environmental Systems Analysis**

Fall. 3 credits. Prerequisites: MATLAB and 2 years of calculus.

**ABEN 476 Solid Waste Engineering**

Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry.

**ABEN 478 Ecological Engineering**

Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent.

**ABEN 481 LRFD-Based Engineering of Wood Structures**

Spring. 3 credits. Prerequisite: ENGRD 202.

**ABEN 482 Biothermal Engineering**

Spring. 3 credits. Prerequisites: ABEN 250 and 350, or equivalent.

**ABEN 493 Technical Writing for Engineers**

Fall. 1 credit. Prerequisites: coregistration with ABEN 450 or ABEN 473.

**ABEN 494 Special Topics in Agricultural and Biological Engineering**

Fall, spring. 1–4 credits. S-U grades optional.

**ABEN 496 Senior Design in Agricultural and Geological Engineering**

Fall, spring. 1–3 credits. Prerequisite: senior standing in ABEN engineering program or permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

**ABEN 497 Individual Study in Agricultural and Biological Engineering**

Fall, spring. 1–4 credits. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. S-U grades optional. Completed independent study form (available in 140 Roberts Hall) is required to register.

**ABEN 498 Undergraduate Teaching**

Fall, spring. 1–4 credits. Prerequisite: written permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

**ABEN 499 Undergraduate Research**

Fall, spring. 1–3 credits. Prerequisites: written permission of instructor; adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Completed independent study form (available in 140 Roberts Hall) is required to register.

**ABEN 551/552 Agricultural and Biological Engineering Design Project**

Fall, 551; spring, 552. 3–6 credits. Prerequisite: admission to the M.Eng. (Agricultural and Biological) degree program.

**ABEN 651 Bioremediation: Engineering Organisms to Clean Up the Environment**

Spring. 3 credits. Prerequisites: BIOMI 290 or BIOMI 398 or BIOMI 331 or permission of instructor.

**[ABEN 652 Instrumentation: Sensors and Transducers]**

Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of instructor. Not offered 2000-2001.]

**ABEN 655 Thermodynamics and Its Applications**

Spring. 3 credits. Prerequisite: MATH 293 or equivalent.

**ABEN 671 Analysis of the Flow of Water and Chemicals in Soils**

Fall. 3 credits. Prerequisites: 4 calculus courses and fluid mechanics.

**ABEN 672 Drainage**

Spring. 4 credits. Prerequisites: ABEN 471 or ABEN 473. S-U grades optional. Offered alternate years.

**ABEN 673 Sustainable Development Seminar**

Spring. 1-3 credits. Prerequisite: upper division undergraduate and graduate students or permission of instructor.

**ABEN 678 Nonpoint Source Models**

Spring. 3 credits. Prerequisites: computer programming and calculus.

**ABEN 685 Biological Engineering Analysis**

Spring. 4 credits. Prerequisite: T&AM 310 or permission of instructor.

**ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering**

Fall, spring. 1-4 credits. S-U grades optional.

**ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering**

Fall, spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional.

**ABEN 700 General Seminar**

Fall. 1 credit. S-U grades only.

**ABEN 750 Orientation to Graduate Study**

Fall. 1 credit. S-U grades only. Limited to newly joining graduate students.

**ABEN 754 Watershed Management**

Spring. 2-3 credits. Prerequisite: graduate standing or permission of instructor.

**ABEN 771 Soil and Water Engineering Seminar**

Fall, spring. 1-3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional.

**ABEN 781 Structures and Related Topics Seminar**

Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

**ABEN 785 Biological Engineering Seminar**

Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

**ABEN 800 Master's-Level Thesis Research**

Fall, spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades only.

**ABEN 900 Graduate-Level Thesis Research**

Fall, spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades only. Variable credit for Ph.D. research before the "A" exam is passed.

**ABEN 901 Doctoral-Level Thesis Research**

Fall, spring. 1-15 credits. Prerequisite: passing of Admission Candidacy Exam and permission of adviser. S-U grades only.

**APPLIED AND ENGINEERING PHYSICS****A&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGRI 110)**

Fall, spring. 3 credits.

This is a course in the Introduction to Engineering series. For description, see ENGRI 110.

**A&EP 121 Fission, Fusion, and Radiation (also ENGRI 121 and NS&E 121)**

Spring. 3 credits. S-U grades optional for students outside the College of Engineering. K. B. Cady.

This is a course in the Introduction to Engineering series. For description, see ENGRI 121.

**A&EP 217 Electricity and Magnetism (also PHYS 217)**

Fall, spring. 4 credits. Prerequisites: approval of student's adviser and permission of the instructor; coregistration in PHYS 216 or knowledge of special relativity at the level of PHYS 116; MATH 192 or equivalent and coregistration in MATH 293 or equivalent. Staff.

Intended for students who have done well in PHYS 112 or 116 (or the equivalent) and in mathematics who desire a more analytic treatment than that of PHYS 213. At the level of *Electricity and Magnetism*, by Purcell. Recommended for prospective engineering physics majors. A placement quiz may be given early in the semester, permitting those students who find the material too abstract or analytical to transfer into PHYS 213 without difficulty.

**A&EP 264 Computer-Instrumentation Design (also ENGRD 264)**

Fall, spring. 3 credits. Prerequisites: COM S 100. 1 lec, 1 lab.

For description, see ENGRD 264.

**A&EP 321 Mathematical Physics I**

Fall, summer. 4 credits. Prerequisite: MATH 294. Intended for upper-level undergraduates in the physical sciences.

Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping: Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: *Mathematical Methods for Physicists*, by Arfken; *Mathematical Physics*, by Butkov.

**A&EP 322 Mathematical Physics II**

Spring. 4 credits. Prerequisite: A&EP 321. Second of the 2-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.

Partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant, and covariant representations; group theory, matrix representations, class and character. Texts: *Mathematical Methods for Physicists*, by Arfken; *Mathematical Physics*, by Butkov.

**A&EP 330 Modern Experimental Optics (see also PHYS 330)**

Fall. 4 credits. Enrollment limited.

Prerequisites: PHYS 214 or equivalent. E. Bodenschatz.

A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. The students will also be introduced to digital imaging and image processing techniques.

**A&EP 333 Mechanics of Particles and Solid Bodies**

Fall, summer. 4 credits. Prerequisites:

PHYS 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor.

Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; basic introduction to relativistic mechanics. Emphasis on mathematical treatments, physical concepts, and applications. (On the level of *Classical Dynamics*, by Marion and Thornton).

**A&EP 355 Intermediate Electromagnetism**

Fall, summer. 4 credits. Prerequisites:

PHYS 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor.

Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quasistatics, and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

**A&EP 356 Intermediate Electrodynamics**

Spring. 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor.

Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis on physical concepts and developing ability to design/analyze microwave circuits and antenna arrays.

**A&EP 361 Introductory Quantum Mechanics**

Spring. 4 credits. Prerequisites: A&EP 333 or PHYS 318; coregistration in A&EP 322 or equivalent and in A&EP 356 or PHYS 326.

A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

**A&EP 363 Electronic Circuits (also PHYS 360)**

Fall, spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded. 1 lec, 2 labs. Fall:

E. Kirkland; spring: J. Alexander.

Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

**A&EP 403 Introduction to Nuclear Science and Engineering (also ELE E 403, M&AE 458, and NS&E 403)**

Fall. 3 credits. Prerequisite: PHYS 214 and MATH 294.

For description see NS&E 403.

**A&EP 423 Statistical Thermodynamics**

Fall. 4 credits. Prerequisite: introductory 3-semester physics sequence plus 1 year of junior-level mathematics.

Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of *Thermal Physics*, by Kittel and Kroemer, and *Statistical Physics*, by Rosser.

**A&EP 434 Continuum Physics**

Spring. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent.

Elasticity and Fluid Mechanics: basic phenomena of elasticity, simple beams, stress and strain tensors, materials equations, equations of motion, general beam equations, waves; fluids: basic phenomena, Navier Stokes equation, scaling laws, Reynolds and Froude numbers, Poiseuille flows, Stokes drag on sphere, boundary layers, inviscid and incompressible flows, potential flow, conservation laws, Bernoulli equation, vorticity and circulation, life of wings, jets, instabilities, introduction to turbulence. Projects in combination with AEP 438 possible. At the level of Lai, Rubin and Krempf, *Continuum Mechanics*, and Triton, *Introduction to Fluid Mechanics*.

**A&EP 438 Computational Engineering Physics**

Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; coregistration in 361 permitted.

Numerical computation (derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) will be introduced and applied to engineering physics problems that cannot be solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

**A&EP 440 Quantum and Nonlinear Optics**

Spring. 4 credits. Prerequisites: A&EP 356, A&EP 361, or equivalent.

An introduction to the fundamentals of the interaction of laser light with matter. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, self-focusing, optical bistability, propagation of ultrashort pulses, solitons, optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and stimulated scattering, ultra-intense laser-matter interactions.

**A&EP 450 Introductory Solid State Physics (also PHYS 454)**

Fall. 4 credits. Prerequisites: some exposure to quantum mechanics at the level of PHYS 443, A&EP 361, or CHEM 793 is highly desirable but not absolutely required.

An introduction to the physics of crystalline solids. Crystal structures; electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Optical properties, magnetism, and superconductivity are covered as time allows. The majority of the course will address the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of *Introduction to Solid State Physics* by Kittel, or *Solid State Physics* by Ashcroft and Mermin.

**A&EP 470 Biophysical Methods (also BIONB 470)**

Spring. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through the sophomore level; some knowledge of cellular biology helpful but not required. Letter grades only.

An overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics covered will include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format will include assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

**A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M&AE 459, and NS&E 484)**

Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand.

For description, see NS&E 484.

**A&EP 490 Independent Study in Engineering Physics**

Fall, spring. Credit TBA.

Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details TBA with respective faculty member.

**A&EP 550 Applied Solid State Physics**

Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 (or equivalent).

Directed at students who have had an introductory course in solid state physics at the level of Kittel. This course will concentrate on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course will stress the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of *Introduction to Applied Solid State Physics* by Dalven.

**A&EP 606 Introduction to Plasma Physics (also ELE E 581)**

Fall. 4 credits. Prerequisites: ELE E 303 or equivalent. First-year graduate-level course; open to exceptional seniors.

For description, see ELE E 581.

**A&EP 607 Advanced Plasma Physics (also ELE E 582)**

Spring. 4 credits. Prerequisites: ELE E 581 and A&EP 606. Offered on demand.

For description, see ELE E 582.

**A&EP 633 Nuclear Reactor Engineering (also NS&E 633)**

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.

For description, see NS&E 633.

**A&EP 661 Microcharacterization**

Fall. 3 credits. Prerequisites: introductory 3-semester physics sequence or an introductory course in modern physics. At the senior/first-year graduate level.

The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterization is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.

**A&EP 662 Micro/Nano-fabrication and Processing**

Spring. 3 credits.

An introduction to the fundamentals of micro and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micromechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

**A&EP 663 Nanobiotechnology (also BIO G 663 and MS&E 563)**

Spring. 3 credits. Letter grade only. C. Batt and H. Craighead.

A graduate-level course that will cover the basics of biology and the principles and practice of microfabrication techniques. The course will focus on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving will be one of the course requirements. The course will be held twice weekly with 75-minute classes. All lectures will be teleconferenced to our NBTC associate institutes.

**A&EP 711 Principles of Diffraction (also MS&E 671)**

Spring. 3 credits. Letter grades only. J. D. Brock.

This course is a graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic will be using the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis will be placed on issues related to synchrotron X-ray sources. Specific topics that will be covered in the course include: elastic and inelastic scattering; diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

**A&EP 751 M ENG Project**

Fall, spring. 6-12 credits TBA. Required for candidates for the M.Eng. (Engineering Physics) degree.

Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

**A&EP 753 Special Topics Seminar in Applied Physics**

Fall. 1 credit. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics.

Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in

a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

**CHEMICAL ENGINEERING****CHEME 112 Introduction to Chemical Engineering (also ENGRI 112)**

Fall. 3 credits. Limited to freshmen.

T. M. Duncan.

This is a course in the Introduction to Engineering series. For description, see ENGRI 112.

**CHEME 120 Introduction to Biomedical Engineering (also ENGRI 120)**

Fall. 3 credits. W. M. Saltzman.

This is a course in the Introduction to Engineering series. For description, see ENGRI 120.

**CHEME 219 Mass and Energy Balances (also ENGRD 219)**

Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor. K. H. Lee.

For description, see ENGRD 219.

**CHEME 301 Nonresident Lectures**

Spring. 1 credit. P. Clancy.

Lecturers from industry and from selected departments of the university provide information to assist students in their post-graduate plans.

**CHEME 313 Chemical Engineering Thermodynamics**

Fall. 4 credits. Corequisite: physical chemistry. F. A. Escobedo.

A study of the first and second laws and their consequences for chemical systems. Thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; power cycles and refrigeration.

**CHEME 323 Fluid Mechanics**

Fall. 3 credits. Prerequisites: CHEME 219 and engineering mathematics sequence. P. H. Steen.

Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

**CHEME 324 Heat and Mass Transfer**

Spring. 3 credits. Prerequisite: CHEME 323. W. L. Olbricht.

Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

**CHEME 332 Analysis of Separation Processes**

Spring. 3 credits. Prerequisites: CHEME 313 and 323. P. Clancy.

Analysis of separation processes involving phase equilibria and mass transfer. Phase equilibria; binary and multicomponent distillation; liquid-liquid extraction; gas absorption, absorption, membrane separations.

**CHEME 372 Introduction to Process Dynamics and Control**

Spring. 1 credit. Prerequisites: CHEME 313 and 323. A. B. Anton

Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

**CHEME 390 Reaction Kinetics and Reactor Design**

Spring. 3 credits. Prerequisites: CHEME 313 and 323. D. L. Koch.

A study of chemical reaction kinetics and principles of reactor design for chemical processes.

**CHEME 391 Physical Chemistry II (also CHEM 391)**

For description, see CHEM 391.

**CHEME 432 Chemical Engineering Laboratory**

Fall. 4 credits. Prerequisites: CHEME 323, 324, 332, and 390. K. E. Ackley and staff.

Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

**CHEME 462 Chemical Process Design**

Spring. 4 credits. Prerequisite: CHEME 432. K. E. Ackley and staff.

A consideration of process and economic alternatives in selected chemical processes; design and assessment.

**CHEME 472 Feedback Control Systems (also ELE E 471 and M&AE 478)**

Fall. 4 credits. Prerequisites: CHEME 372, ELE E 301, M&amp;AE 326, or permission of instructor. A. B. Anton.

For description, see M&amp;AE 478.

**CHEME 480 Chemical Processing of Electronic Materials**

Spring. 3 credits. A. B. Anton.

Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermochemistry of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.

**CHEME 481 Biomedical Engineering**

Spring. 3 credits. Prerequisite: CHEME 324 or equivalent or permission of instructor. W. M. Saltzman.

Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (ECG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

**CHEME 490 Undergraduate Projects in Chemical Engineering**

Fall, spring. Variable credit.

Research or studies on special problems in chemical engineering.

**CHEME 491 Undergraduate Teaching in Chemical Engineering**

Fall, spring. 1 credit. T. M. Duncan and M. Ackley.

Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

**CHEME 492 Research Principles and Practices**

Spring. 1 credit. T. M. Duncan.

Introduces research procedures, including documenting and reporting research (writing and speaking), experimental design, data analysis, visual display of quantitative information, serendipity (capitalizing on accidents), inadvertent self-deception (recognizing and avoiding). Also includes social aspects of research, such as professional ethics, applying to graduate school, and graduate student life.

**CHEME 520 Chemical, Polymer, Biomedical, and Electronic Materials Processing**

Fall, spring. 1–6 credits (1 credit per section).

**520.1 An Overview of Chemical Processing**

1 credit. Meets first third of term.

T. M. Duncan.

An introduction to chemical engineering design and analysis-mathematical modeling, graphical methods and dynamic scaling. Open to nonchemical engineers only.

**520.2 Introduction to Biomedical Engineering**

1 credit. Meets first third of term.

W. M. Saltzman.

Meets concurrently with CHEME 481.

**520.3 Introduction to Electronic Materials Processing**

1 credit. Meets first third of term.

A. B. Anton.

Meets concurrently with CHEME 480.

**520.4 Introduction to Polymer Processing**

1 credit. Meets final third of term.

C. Cohen.

Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

**520.5 Chemical Engineering Processing Units and Equipment**

1 credit. Meets second third of term.

K. E. Ackley and A. M. Center.

A hands-on survey of standard chemical processing equipment-structure and operation—with emphasis on trouble-shooting techniques.

**520.6 Petroleum Refining**

1 credit. Meets final third of term.

A. M. Center.

The technical and business aspects of petroleum refining. Applications of chemical engineering principles for practical solutions to business needs.

**520.7 Process Control Strategies**

1 credit. Meets second third of term.

A. M. Center.

Analysis of multiple interacting dynamic systems in chemical processes. Measurement of process variables, examples of measurement and control applications, and determining optimal monitoring and control strategy.

**CHEME 562 Managing Chemical Process Design**

Fall. 1 or 2 credits. Prerequisite: CHEME 462. K. E. Ackley.

Guidance and evaluation of chemical process designs developed by teams of chemical engineers.

**CHEME 564 Design of Chemical Reactors**

Spring. 3 credits. Prerequisite: CHEME 390 or equivalent. P. Harriott.

Design, scale-up, and optimization of

chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

**CHEME 565 Design Project**

Fall, spring. 3 or 6 credits. Required for students in the M.Eng. (Chemical) program.

Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

**CHEME 572 Managing Business Development Solutions**

Fall. 3 credits. A. M. Center.

A case study approach to introduce the typical fundamental factors driving a business venture, to examine how to develop implementation strategies for the venture, and to learn the project management skills necessary to successfully implement the venture.

**CHEME 590 Special Projects in Chemical Engineering**

Fall, spring. Variable credit. Limited to graduate students.

Non-thesis research or studies on special problems in chemical engineering.

**CHEME 605 Fundamentals in Biomedical Engineering I (also ENGRG 605)**

Fall. 1–4 credits (1 credit per section).

Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEME 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.

For description, see ENGRG 605.

**CHEME 606 Fundamentals in Biomedical Engineering II (also ENGRG 606)**

Spring. 1–4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent.

Undergraduates must have permission of instructor and have completed ABEN 454, CHEME 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.

For description, see ENGRG 606.

**CHEME 640 Polymeric Materials**

Fall. 3 credits. F. Rodriguez.

Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

**CHEME 643 Introduction to Bioprocess Engineering**

Fall. 3 credits. Prerequisite: CHEME 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler.

A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

**[CHEME 656 Separations Using Membranes or Porous Solids]**

Spring. 3 credits. Prerequisites: CHEME 324 and 332. Not offered 2000–2001.

P. Harriott.

Diffusion of small molecules in gases, liquids, and solids. Membrane separation processes

including gas separation, pervaporation, reverse osmosis, and ultrafiltration. Purification of gases and liquids by adsorption, ion exchange, and chromatography.]

**CHEME 661 Air Pollution Control**

Spring. 3 credits. P. Harriott.

Origin of air pollutants, U.S. emission standards, dispersion equations. Design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

**CHEME 675 Synthetic Polymer Chemistry (also MS&E 622 and CHEME 671)**

Fall. 4 credits. Prerequisites: CHEME 359–360 or equivalent or permission of instructor.

For description, see CHEME 671.

**CHEME 711 Advanced Chemical Engineering Thermodynamics**

Fall. 3 credits. Prerequisite: CHEME 313 or equivalent. P. Clancy.

Postulatory approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problems in chemical engineering. Introduction to statistical mechanical ensembles, phase transitions, Monte Carlo methods, and theory of liquids.

**CHEME 713 Chemical Kinetics and Dynamics**

Spring. 3 credits. Prerequisite: CHEME 390 or equivalent. F. Escobedo.

Microscopic and macroscopic viewpoints. Connections between phenomenological chemical kinetics and molecular reaction dynamics. Reaction cross sections, potential energy surfaces, and dynamics of bimolecular collisions. Molecular beam scattering. Transition state theory. Unimolecular reaction dynamics. Complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation. Reactions in heterogeneous media. Free-radical mechanisms in combustion and pyrolysis.

**CHEME 731 Advanced Fluid Mechanics and Heat Transfer**

Fall. 3 credits. Prerequisites: CHEME 323 and 324 or equivalent. D. L. Koch.

Derivation of the equations of motion for Newtonian fluids. Low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer.

**CHEME 732 Diffusion and Mass Transfer**

Spring. 2 credits. Prerequisite: CHEME 731 or equivalent. P. H. Steen.

Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

**CHEME 741 Selected Topics in Biochemical Engineering**

Fall. 1 credit (may be repeated for credit). Prerequisite: CHEME 643 or permission of instructor. K. H. Lee, M. L. Shuler, and W. M. Saltzman.

Discussion of current topics and research in biochemical engineering for graduate students.

**[CHEME 745 Physical Polymer Science I]**  
Fall. 3 credits. Corequisite: CHEME 711 or equivalent. Offered alternate years; not offered 2000-2001. C. Cohen.

Thermodynamic properties of dilute, semidilute, and concentrated solutions from both classical and scaling approaches. Characterization techniques of dilute solutions: osmometry, light scattering, viscometry, and sedimentation. Rubber elasticity; mechanical and thermodynamic properties of gels. Polymer melts: equations of state and glass transition phenomena.]

**[CHEME 751 Mathematical Methods of Chemical Engineering Analysis]**

Fall. 4 credits. A. B. Anton.

Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

**[CHEME 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation]**

Fall. 3 credits. Prerequisite: CHEME 751 or equivalent. Offered alternate years; not offered 2000-2001. P. H. Steen.

Elements of stability and bifurcation theory. Branch-following techniques. Stability of discrete and continuous systems. Application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems.]

**[CHEME 790 Seminar]**

Fall, spring. 1 credit each term.

General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering.

**[CHEME 792 Principles and Practices of Graduate Research]**

Fall, spring. 1 credit. T. M. Duncan and staff.

A colloquium/discussion group series for first-year graduate students. Topics include the culture and responsibilities of graduate research and the professional community; the mechanics of conducting research (experimental design, data analysis, serendipity in research, avoiding self-deception), documenting research (lab notebooks, computer files), and reporting research (writing a technical paper and oral presentations).

**[CHEME 890 Thesis Research]**

Fall, spring. Variable credit.

Thesis research for the M.S. degree in chemical engineering.

**[CHEME 990 Thesis Research]**

Fall, spring. Variable credit.

Thesis research for the Ph.D. degree in chemical engineering.

## CIVIL AND ENVIRONMENTAL ENGINEERING

Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Systems Engineering and Information Technology. Within each mission area are several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission

areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

### General

CEE 113 Introduction to Environmental Systems (also ENGRI 113) (F,3cr.)

CEE 116 Modern Structures (also ENGRI 116) (F,3cr.)

CEE 241 Engineering Computation (also ENGRD 241) (F,S,3cr.)

CEE 304 Uncertainty Analysis in Engineering (F,4cr.)

CEE 308 Introduction to CADD (F,S,1cr.)

CEE 309 Special Topics in Civil and Environmental Engineering (F,S,var.)

CEE 323 Engineering Economics and Management (also ENGRG 323) (S,Su,3cr.)

CEE 400 Senior Honors Thesis (F,S,var.)

CEE 401 Undergraduate Engineering Teaching in CEE (F,S,var.)

### Civil Infrastructure

See also: CEE 116, CEE 241, CEE 304, CEE 308, CEE 503, and CEE 595

#### Geotechnical Engineering

CEE 341 Introduction to Geotechnical Engineering (S,4cr.)

CEE 501/502 Design Project in Geotech/Structures (F,S,3cr.)

CEE 602 Civil Infrastructure Seminar (F,1cr.)

CEE 640 Foundation Engineering (F,3cr.)

CEE 641 Retaining Structures and Slopes (S,3cr.)

CEE 644 Environmental Applications of Geotechnical Engineering (S,3cr.)

CEE 649 Special Topics in Geotechnical Engineering (F,S,var.)

CEE 740 Engineering Behavior of Soils (F,3cr.)

CEE 741 Rock Engineering (S,3cr.)

CEE 744 Advanced Foundation Engineering (S,2cr.)

CEE 745 Soil Dynamics (S,3cr.)

CEE 746 Embankment Dam Engineering (S,2cr.)

CEE 749 Research in Geotechnical Engineering (F,S, var.)

CEE 840 Thesis—Geotechnical Engineering (F,S,var.)

#### Structural Engineering

CEE 116 Modern Structures (F,3cr.)

CEE 371 Structural Behavior (S,4cr.)

CEE 372 Structural Analysis (F,Su,4cr.)

CEE 473 Design of Concrete Structures (S,4cr.)

CEE 474 Design of Steel Structures (S,4cr.)

CEE 475 Introduction to Composite Materials (S,4cr.)

CEE 476 Physical and Computational Material Simulation (S,4cr.)

CEE 501/502 Design Project in Geotech/Structures (F,S,3cr.)

CEE 602 Civil Infrastructure Seminar (F,S,1cr.)

CEE 671 Random Vibration (F,3cr.)

CEE 672 Fundamentals of Structural Mechanics (F,3cr.)

CEE 673 Advanced Structural Analysis (F,3cr.)

CEE 675 Concrete Materials and Construction (S,3cr.)

CEE 677 Stochastic Mechanics (F,3cr.)

CEE 770 Engineering Fracture Mechanics (F,3cr.)

CEE 772 Finite Element Analysis for Mechanical, Structural, and Aerospace Applications (S,3cr.)

CEE 774 Advanced Structural Concrete (F,3cr.)

CEE 775 Structural Concrete Systems (S,3cr.)

CEE 776 Advanced Design of Metal Structures (F,3cr.)

CEE 777 Advanced Behavior of Metal Structures (S,3cr.)

CEE 779 Structural Dynamics and Earthquake Engineering (S,3cr.)

CEE 783 Civil and Environmental Engineering Materials Project (F,S,var.)

CEE 785 Research in Structural Engineering (F,S,var.)

CEE 786 Special Topics in Structural Engineering (F,S,var.)

CEE 880 Thesis—Structural Engineering (F,S,var.)

### Environment

See also CEE 113, CEE 241, and CEE 304

#### Environmental Engineering

CEE 113 Introduction to Environmental Systems (F,3cr.)

CEE 351 Environmental Quality Engineering (S,3cr.)

CEE 352 Water Supply Engineering (F,3cr.)

CEE 451 Microbiology for Environmental Engineering (F,3cr.)

CEE 453 Laboratory Research in Environmental Engineering (S,3cr.)

CEE 501/502 Design Project in Environmental Engineering (F,S,3cr.)

CEE 601 Water Resources and Environmental Engineering Seminar (F,1cr.)

CEE 653 Water Chemistry for Environmental Engineering (F,3cr.)

CEE 654 Aquatic Chemistry (S,3cr.)

CEE 655 Transport, Mixing, and Transformation in the Environment (F,3cr.)

CEE 658 Sludge Treatment, Utilization, and Disposal (S,3cr.)

CEE 659 Environmental Quality Engineering Seminar (S,1cr.)

CEE 750 Research in Environmental Engineering (F,S,var.)

CEE 755 Physical/Chemical Processes (F,3cr.)

CEE 756 Biological Processes (S,3cr.)

CEE 757 Physical/Chemical Processes Laboratory (F,2cr.)

- CEE 758 Biological Processes Laboratory (S,2cr.)
- CEE 759 Special Topics in Environmental Engineering (F,S,var.)
- CEE 850 Thesis—Environmental Engineering (F,S,var.)

### **Environmental Systems**

See Systems Engineering and Information Technology mission areas for a listing of courses in Environmental and Public Systems.

### **Environmental Fluid Mechanics and Hydrology**

- CEE 331 Fluid Mechanics (F,Su,4cr.)
- CEE 332 Hydraulic Engineering (S,4cr.)
- CEE 431 Geohydrology (also GEOL 445 and ABEN 471) (F,3cr.)
- CEE 432 Hydrology (S,3cr.)
- CEE 435 Coastal Engineering (S,4cr.)
- CEE 437 Experimental Methods in Fluid Dynamics (S,3cr.)
- CEE 501/502 Design Project in Fluid Mechanics and Hydrology (F,S,3cr.)
- CEE 601 Water Resources and Environmental Engineering Seminar (F,1cr.)
- CEE 630 Advanced Fluid Mechanics (F,3cr.)
- CEE 631 Flow and Contaminant Transport Modeling in Groundwater (S,3cr.)
- CEE 632 Hydrology (S,3cr.)
- CEE 633 Flow in Porous Media and Groundwater (F,3cr.)
- CEE 634 Boundary Layer Meteorology (F,3cr.)
- CEE 635 Small and Finite Amplitude Water Waves (S,3cr.)
- CEE 636 Environmental Fluid Mechanics (S,3cr.)
- CEE 637 Experimental Methods in Fluid Dynamics (S,4cr.)
- CEE 638 Hydraulics Seminar (S,1cr.)
- CEE 639 Special Topics in Hydraulics (F,S,var.)
- CEE 655 Transport, Mixing, and Transformation in the Environment (F,3cr.)
- CEE 732 Computational Hydraulics (F,3cr.)
- CEE 735 Research in Hydraulics (F,S,var.)
- CEE 830 Thesis—Fluid Mechanics and Hydrology (F,S,var.)

### **Systems Engineering and Information Technology**

See also CEE 113, CEE 241, and CEE 304

### **Engineering Management**

- CEE 490 Management Practice in Project Engineering (S,3cr.)
- CEE 590 Project Management (F,S,4cr.)
- CEE 591 Engineering Management Project (F,3cr.)
- CEE 592 Engineering Management Project (S,3cr.)
- CEE 593 Engineering Management Methods I: Data, Information, and Modeling (F,3cr.)
- CEE 594 Engineering Management Methods II: Managing Uncertain Systems (S,3cr.)

- CEE 722 Environmental and Water Resources Systems Analysis Research (F,S,var.)
- CEE 729 Special Topics in Environmental and Water Resources Systems Analysis (F,S,var.)
- CEE 820 Thesis—Environmental and Water Resources Systems (F,S,var.)

### **Remote Sensing**

- CEE 411 Remote Sensing: Environmental Applications (also SCAS 411) (S,3cr.)
- CEE 610 Remote Sensing Fundamentals (F,3cr.)
- CEE 615 Digital Image Processing (S,3cr.)
- CEE 617 Project—Remote Sensing (F,S,var.)
- CEE 618 Special Topics—Remote Sensing (F,S,var.)
- CEE 710 Research—Remote Sensing (F,S,var.)
- CEE 810 Thesis—Remote Sensing (F,S,var.)

### **Systems Engineering**

- CEE 504 Applied Systems Engineering (also M&AE 591, ELE E 595, OR&IE 512) (F,3cr.)
- CEE 505 Applied Systems Engineering II (S,4cr.)
- CEE 509 Heuristic Methods of Optimization (also COM S 574) (S,3cr.)
- CEE 603 Systems Engineering and Information Technology Seminar (F,1cr.)

### **Transportation**

- CEE 361 Introduction to Transportation Engineering (S,Su,3cr.)
- CEE 463 Transportation and Information Technology (F,3cr.)
- CEE 464 Transportation Systems Design (S,3cr.)
- CEE 501/502 Design Project in Transportation (F,S,3cr.)

- CEE 561 Urban Transportation Planning and Modeling (F,3cr.)

- CEE 663 Transportation Network Analysis (S,3cr.)

- CEE 762 Transportation Research (F,S,var.)

- CEE 764 Special Topics in Transportation (F,S,var.)

- CEE 860 Thesis—Transportation Engineering (F,S,var.)

### **CEE 113 Introduction to Environmental Systems (also ENGR 113)**

Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students. M. Weber-Shirk. This is a course in the Introduction to Engineering series. For description, see ENGR 113.

### **CEE 116 Modern Structures (also ENGR 116)**

Fall. 3 credits. A. R. Ingrassia. This is a course in the Introduction to Engineering series. For description, see ENGR 116.

### **CEE 241 Engineering Computation (also ENGRD 241)**

Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294 (completion of MATH 294 is suggested). W. Philpot. For description, see ENGRD 241.

### **CEE 304 Uncertainty Analysis in Engineering**

Fall. 4 credits. CEE Engineering Co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. J. R. Stedinger.

Introduction to probability theory and statistical techniques, with examples from civil, environmental, agricultural, and related disciplines. Course covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, windspeed/flood distributions, and models of vehicle arrivals.

### **CEE 309 Special Topics in Civil and Environmental Engineering**

Fall, spring. 1–6 credits. Staff. Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

### **CEE 323 Engineering Economics and Management (also ENGRG 323)**

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Loucks.

For description, see ENGRG 323.

### **CEE 331 Fluid Mechanics**

Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: ENGRD 202 (may be taken concurrently). P. L.-F. Liu.

Hydrostatics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, open-channel flow. Elements of design in water supply systems, canals, and other hydraulic schemes.

**CEE 332 Hydraulic Engineering**

Spring. 4 credits. Prerequisite: CEE 331.

M. L. Weber-Shirk.

Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, and pollutant dispersal. Lectures supplemented by laboratory work and a design project. See [www.cee.cornell.edu/cee332/](http://www.cee.cornell.edu/cee332/) for details.

**CEE 341 Introduction to Geotechnical Engineering**

Spring. 4 credits. Prerequisite: ENGRD 202.

F. H. Kulhawy.

Soil as an engineering material. Chemical and physical nature of soil. Engineering properties of soil. Stresses and stress analysis of soil. Basic theory and design for water flow in soil, one-dimensional consolidation of clay and silts, and shear-strength problems. Introduction to slope stability, earth pressure, geosynthetics, and landfill and waste-containment issues. Introduction to laboratory testing. Synthesis of soil analysis and laboratory-test results for the design of engineering structures.

**CEE 351 Environmental Quality Engineering**

Spring. 3 credits. L. W. Lion.

Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

**CEE 352 Water Supply Engineering**

Fall. 3 credits. Prerequisites: CEE 351 and previous/concurrent enrollment in CEE 451 or BIOMI 290. R. I. Dick.

Analysis of contemporary threats to human health from water supplies. Criteria and standards for potable-water quality. Water-quality control theory. Design of water supply facilities.

**CEE 361 Introduction to Transportation Engineering**

Spring; usually offered in summer for Engineering Co-op Program. 3 credits.

A. H. Meyburg.

Introduction to technological, economic, and social aspects of transportation. Emphasis on design and functioning of transportation systems and their components. Supply-demand interactions; system planning, design, and management; traffic flow and control intersection and network analysis. Institutional and energy issues; environmental impacts.

**CEE 371 Structural Behavior**

Spring. 4 credits. Prerequisite: ENGRD 202.

A. R. Ingraffea.

Fundamental concepts of structural engineering: behavior, analysis, and design. Loads, structural materials, structural form, statically determinate analysis, approximate analysis of indeterminate systems. Use of interactive graphical analysis programs. Fundamentals of behavior of steel and concrete members. Introduction to limit states design.

**CEE 372 Structural Analysis**

Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: CEE 371. S. Billington.

Fundamentals of statically indeterminate structural analysis; methods of calculating

displacements; force and displacement methods of indeterminate analysis; matrix structural analysis; introduction to the finite element method; application of theory and methods to engineering analyses using educational and commercial software.

**CEE 400 Senior Honors Thesis**

Fall, spring. 1-6 credits. Staff.

Available to students admitted to the CEE Honors Program. Supervised research, study, and/or project work resulting in a written report or honors thesis.

**CEE 401 Undergraduate Engineering Teaching in CEE**

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.

Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

**CEE 411 Remote Sensing: Resource Inventory Methods (also SCAS 411)**

Spring. 3 credits. Prerequisite: permission of instructor. S. C. DeGloria.

For description, see SCAS 411.

**CEE 431 Geohydrology (also GEOL/EAS 445 and ABEN 471)**

Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. L. Cathles.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

**CEE 432 Hydrology**

Spring. 3 credits. Prerequisite: CEE 331.

Intended for undergraduates. Lectures concurrent with CEE 632. W. H. Brutsaert.

Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 632.

**[CEE 435 Coastal Engineering]**

Spring. 4 credits. Prerequisite: CEE 331.

Not offered 2000-2001. P. L.-F. Liu.

Introduction to water wave phenomena, including wave generation, shoaling, refraction, diffraction, and breaking. Applications of wave theories to engineering design problems such as forces on coastal structures and beach erosion in coastal zones. Lectures supplemented by four laboratory assignments and a design project.]

**[CEE 437 Experimental Methods in Fluid Dynamics]**

Spring. 3 credits. Not offered 2000-2001.

E. A. Cowen.

Same as CEE 637 but no project is required. For description, see CEE 637.]

**CEE 451 Microbiology for Environmental Engineering**

Fall. 3 credits. Prerequisite: 2 semesters of college chemistry. J. M. Gossett.

An introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Topics include nomenclature and principal reactions of organic compounds; characteristics of bacteria, fungi, algae, protozoa, and viruses relevant to water and wastewater; pathogens, disease, and immunity; environmental influences on microorganisms; bioenergetics; enzymes and metabolism; microbial genetics; and microbial ecology. This is an introductory course; consequently, it

is inappropriate for those who have taken BIOMI 290 or equivalent.

**CEE 453 Laboratory Research in Environmental Engineering**

Spring. 3 credits. Prerequisites: CEE 351 or permission of instructor.

M. L. Weber-Shirk.

Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment, risk assessment, and remediation; pollutant dispersion/transport in rivers; drinking water filtration for pathogen removal; oxygen sag in rivers; and biodegradation in landfills. Design of laboratory experiments, development of laboratory methods, and use of experimental data are emphasized. See [www.cee.cornell.edu/cee453/](http://www.cee.cornell.edu/cee453/) for more information.

**CEE 463 Transportation and Information Technology**

Fall. 3 credits. L. K. Nozick.

Improvements in the use of existing facilities has become an important objective in transportation planning. This course examines the role of computer and telecommunications technologies to achieve these improvements. Specific attention is focused on the development of analyses to evaluate the benefits of inclusion of these technologies in transportation systems.

**CEE 464 Transportation Systems Design**

Spring. 3 credits. Prerequisite: CEE 361.

Staff.

Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

**CEE 473 Design of Concrete Structures**

Spring. 4 credits. Corequisites: CEE 372 or permission of instructor. K. C. Hover.

Behavior and design of reinforced concrete and structures. Discussion of how forces are transferred through elements of building system. Semester project requiring the design of a reinforced concrete structure.

**CEE 474 Design of Steel Structures**

Spring. 4 credits. Prerequisite: CEE 372 or permission of instructor. T. Peköz.

Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

**CEE 475 Introduction to Composite Materials (also M&AE 455, MS&E 555, and T&AM 455)**

Spring. 4 credits. L. Phoenix.

For description, see T&AM 455.

**CEE 476 Physical and Computational Material Simulation**

Spring. 4 credits. Prerequisites: ENGRD 202, ENGRD 261, PHYS 214, CEE 372.

S. Billington.

This course is organized around material failure phenomena such as fracture, plastic yielding, and buckling. Each phenomenon is presented in terms of experimental observation of physical behavior, theories for prediction, and methods for computational simulation. Similar failure phenomena are seen in many materials at multiple length/time scales and under varying boundary conditions. Materials discussed include metals, plastics,

composites, concrete, smart materials, and aged materials for historic preservation.

**CEE 490 Management Practice in Project Engineering**

Spring. 3 credits. Prerequisite: permission of instructor. K. C. Hover.

An introduction to the principles of project management. Planning, organizing, communicating, scheduling, and controlling of engineering work done in project teams.

**CEE 501/502 Design Project**

Fall, spring. 3 credits each term. Required for students in the M.Eng. (Civil) program. Staff.

**CEE 501/502 Design Project in Geotech Structures**

Design of major civil engineering project. Planning and preliminary design during the fall term; final design completed in January intersession.

**CEE 501/502 Design Project in Environmental Fluid Mechanics and Hydrology**

Design of a major fluid mechanics/hydrology project.

**CEE 501/502 Design Project in Environmental Engineering**

Design of a major environmental engineering project.

**CEE 501/502 Design Project in Environmental Systems**

Design of a major environmental systems project.

**CEE 501/502 Design Project in Transportation Systems**

Design of a major transportation systems project. May work in conjunction with CEE 591/592 Engineering Management Project design group.

**CEE 504 Applied Systems Engineering I (also COM S 504, ELE E 512, M&AE 591, OR&IE 512)**

Fall. 3 credits. Prerequisite: permission of instructor. Staff.

For description, see M&AE 591.

**CEE 505 Applied Systems Engineering II (also COM S 505, ELE E 513, M&AE 592, OR&IE 513)**

Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ELE E 512, M&AE 591, or OR&IE 512). L. K. Nozick, P. Jackson, and R. Thomas.

For description, see M&AE 592.

**CEE 509 Heuristic Methods for Optimization (also COM S 574)**

Spring. 3 or 4 credits. Prerequisites: CEE/ENGRD 241 or COM S/ENGRD 211 or 222 or graduate standing, or permission of instructor. C. A. Shoemaker and B. Selman.

This course will describe a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, random walk, and direct search algorithms. Algorithms will be used to find values of discrete and/or continuous variables arising in optimization and model fitting. Applications will be discussed in a range of areas including some of the following: artificial intelligence, scheduling, protein folding, economic planning, water quality protection, telecommunications, and robotics. The advantages and disadvantages of heuristic search methods for both serial and parallel computation will be discussed in comparison to other optimization algorithms.

**CEE 528 Public Political Economy (also ECON 539)**

Spring. 4 credits. R. E. Schuler.

For description, see ECON 539.

**CEE 529 Water and Environmental Resources Problems and Policies**

Fall. 3 credits. Intended primarily for graduate engineering and non-engineering students but open to qualified upperclass students. Prerequisite: permission of instructor. D. J. Allee and L. B. Dworsky.

Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.

**CEE 561 Urban Transportation Planning and Modeling**

Fall. 3 credits. Prerequisites: CEE 361, statistics and probability, or permission of instructor. Designed for seniors with appropriate background and graduate students from CEE, CRP, and CIPA.

A. H. Meyburg.

This course is intended to expose interested students to modern transportation planning practice and to the analytical tools necessary to engage in this field. Emphasis will be on passenger transportation in the urban context. The course discusses the legislative, political, and economic contexts of urban transportation planning (UTP). It presents the travel demand estimation process and the associated models and approaches. Finally, it evaluates the forecasting results and assesses energy and environmental impacts. Student projects are an important element of the course.

**CEE 590 Project Management**

Fall, spring. 4 credits. Prerequisite: permission of instructor. A. H. Meyburg and F. J. Wayno.

A core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (methods for planning, scheduling, and control) and the "human" side (forming a project team, managing performance, resolving conflicts, etc.), with somewhat greater emphasis on the latter.

**CEE 591 Engineering Management Project**

Fall. 3 credits. Prerequisite: permission of instructor. Staff.

An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

**CEE 592 Engineering Management Project**

Spring. 3 credits. Prerequisite: permission of instructor. Staff.

A continuation of CEE 591.

**CEE 593 Engineering Management Methods I: Data, Information, and Modeling**

Fall. 3 credits. Prerequisites: CEE 323 and CEE 304 or equivalent. D. P. Loucks.

Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project design, scheduling, operation, quality control, forecasting, and resource allocation.

**CEE 594 Engineering Management Methods II: Managing Uncertain Systems**

Spring. 3 credits. Prerequisite: CEE 593 or permission of instructor. Staff.

Modeling and managing systems in which uncertainty is a major determinant of system behavior. Systems which are subject to breakdown, deterioration, and queuing. Simulation as a tool for analyzing uncertain systems. Projects and case studies to illustrate application of the methods.

**CEE 595 Construction Planning and Operations**

Fall. 3 credits. K. C. Hover.

A course on the fundamentals of construction planning: organization of the worksite, construction planning, scheduling, and cost estimating, bidding, temporary structures, applications of computer methods, and the relationships among owners, designers, contractors, suppliers, and developers.

**[CEE 596 Current Topics in Construction Management]**

Spring. 3 credits. Prerequisite: CEE 595 or equivalent. Not offered 2000–2001.

This course will focus on recent trends in the professional management of construction projects and organizations. It will draw from literature, practicing construction managers, software producers, and research. The course seeks to identify and evaluate trends and prepare students for management positions in engineering design and construction.]

**CEE 597 Risk Analysis and Management**

Spring. 3 credits. Prerequisite: CEE 304 or OR&IE 270 or equivalent. J. R. Stedinger.

Course develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the United States, transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

**CEE 601 Water Resources and Environmental Engineering Seminar**

Fall. 1 credit.

Presentation of topics of current interest.

**CEE 602 Civil Infrastructure Seminar**

Fall, spring. 1 credit. Required for first-year graduate students.

Presentation of topics of current interest.

**CEE 603 Systems Engineering and Information Technology Seminar**

Fall, spring. 1 credit.

Presentation of topics of current interest.

**CEE 610 Remote Sensing Fundamentals (also SCAS 660)**

Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot.

An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

**CEE 615 Digital Image Processing**

Spring. 3 credits. Prerequisites: facility with algebra and trigonometry (e.g., MATH 109) and statistics (e.g., CEE 304 or ARME 310), or permission of instructor. W. D. Philpot.

An introduction to digital image-processing concepts and techniques, with emphasis on

remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to hyperspectral data analysis. Assignments will require the use of image-processing software and graphics.

#### **CEE 617 Project—Remote Sensing**

On demand. 1–6 credits. W. D. Philpot. Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

#### **CEE 618 Special Topics—Remote Sensing**

On demand. 1–6 credits. W. D. Philpot. Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

#### **CEE 620 Water-Resources Systems Engineering**

Spring. 3 credits. Prerequisites: CEE 323 and CEE 593. D. P. Loucks.

Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

#### **CEE 621 Stochastic Hydrology**

Spring. 3 credits. Prerequisites: CEE 304 or permission of instructor. J. R. Stedinger. Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty objectives and hydrologic inputs. Statistical issues include maximum likelihood and moments estimators; censored datasets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operation optimization models.

#### **CEE 623 Environmental Quality Systems Engineering**

Fall. 3 credits. Prerequisites: MATH 294, optimization, and graduate standing or permission of instructor. C. A. Shoemaker. Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

#### **CEE 628 Environmental and Water Resources Systems Analysis Seminar**

Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker. Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

#### **[CEE 630 Advanced Fluid Mechanics**

Fall. 3 credits. Prerequisite: CEE 331. Not offered 2000–2001. Staff. Introduction to tensor analysis; conservation of mass, momentum, and energy. Rigorous

treatment includes study of exact solutions of Navier-Stokes equations. Asymptotic approximations at low and high Reynolds numbers. Similitude and modeling. Laminar diffusion of momentum, mass, and heat.]

#### **CEE 631 Flow and Contaminant Transport Modeling in Groundwater**

Spring. 3 credits. Prerequisites: MATH 294 or equivalent, ENGRD 241 or experience in numerical methods and programming, and elementary fluid mechanics.

P. L.-F. Liu.

Potential flows and their calculation. Numerical methods include finite difference, finite elements, and boundary elements. Fundamental equations of saturated and unsaturated flow in porous media. Flow in fractured media. Numerical modeling of transport in porous media. Diffusion and advective diffusion in one, two, and three dimensions. Anisotropy. Additional terms for reactive substances. The course will include the use of computer programs.

#### **CEE 632 Hydrology**

Spring. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert.

Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Physical and statistical prediction methods for design related to hydrologic processes. Hydrometeorology and evaporation. Infiltration and base flow. Surface runoff and channel routing. Linear and nonlinear hydrologic systems. Storage routing and unit hydrograph methods.

#### **[CEE 633 Flow in Porous Media and Groundwater**

Fall. 3 credits. Prerequisite: CEE 331. Not offered 2000–2001. W. H. Brutsaert.

Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells; drought flows; infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement; transient seepage in unsaturated materials.]

#### **CEE 634 Boundary Layer Meteorology**

Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. W. H. Brutsaert.

Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

#### **[CEE 635 Small and Finite Amplitude Water Waves**

Spring. 3 credits. Prerequisite: CEE 435 or equivalent. Not offered 2000–2001. P. L.-F. Liu.

Review of linear and nonlinear theories of ocean waves. Discussions on the applicability of different wave theories to engineering problems.]

#### **CEE 636 Environmental Fluid Mechanics**

Spring. 3 credits. E. A. Cowen.

Analytic and modeling perspectives of environmental flows. Mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence. Jets and plumes and their behavior in the environment. Turbulent

diffusion, shear flow dispersion, and wave-induced mixing processes. Applications to mixing processes in rivers, lakes, estuaries and the coastal ocean.

#### **[CEE 637 Experimental Methods in Fluid Dynamics**

Spring. 4 credits. Not offered 2000–2001. E. A. Cowen.

Introduction to experimental data collection and analysis, in the particular as they pertain to fluid flows. Computer based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis. Analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Laboratory experiments and a project.]

#### **CEE 638 Hydraulics Seminar**

Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. P. L.-F. Liu.

Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

#### **CEE 639 Special Topics in Hydraulics**

On demand. 1–6 credits. Staff.

Special topics in fluid mechanics, hydraulic engineering, or hydrology.

#### **CEE 640 Foundation Engineering**

Fall. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke.

Soil exploration, sampling, and in-situ testing techniques. Bearing capacity, stress distribution, and settlement. Design of shallow and deep foundations. Compaction and site preparation. Seepage and dewatering of foundation excavations.

#### **CEE 641 Retaining Structures and Slopes**

Spring. 3 credits. Prerequisite: CEE 341. Staff.

Earth pressure theories. Design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures. Stability of excavation, cut, and natural slopes. Design problems stressing application of course material under field conditions of engineering practice.

#### **CEE 644 Environmental Applications of Geotechnical Engineering**

Spring. 3 credits. Prerequisite: CEE 341 or equivalent. T. D. O'Rourke.

Principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

#### **CEE 649 Special Topics in Geotechnical Engineering**

On demand. 1–6 credits. Staff.

Supervised study of special topics not covered in the formal courses.

#### **CEE 653 Water Chemistry for Environmental Engineering**

Fall. 3 credits. Prerequisite: 1 semester of college chemistry or permission of instructor. L. W. Lion.

Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics,

acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

#### **CEE 654 Aquatic Chemistry**

Spring. 3 credits. Prerequisite: CEE 653 or CHEM 287–288. J. J. Bisogni.

Concepts of chemical equilibria applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 653.

#### **CEE 655 Transport, Mixing, and Transformation in the Environment**

Fall. 3 credits. Prerequisite: CEE 331. E. A. Cowen.

Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffuse, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

#### **CEE 658 Sludge Treatment, Utilization, and Disposal**

Spring. 3 credits. Prerequisite: CEE 352 or permission of instructor. R. I. Dick.

Analysis of the quantity and quality of residues produced from municipal and industrial water-supply and pollution-control facilities and other residue-producing processes. Alternatives for reclaiming or disposing of hazardous and nonhazardous residues. Performance of treatment processes for altering sludge properties prior to reuse or ultimate disposal. Considerations in selecting and integrating of sludge-management processes.

#### **CEE 659 Environmental Quality Engineering Seminar**

Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. Staff.

Presentation and discussion of current research in environmental engineering.

#### **[CEE 663 Transportation Network Analysis**

Spring. 3 credits. Prerequisites: CEE 463 or CEE 464, or permission of instructor. Not offered 2000–2001. M. A. Turnquist.

Topics in flow prediction and estimation for transportation networks, including equilibrium assignment, stochastic network loading, trip table estimation, dynamic vehicle allocation, and routing/scheduling models.]

#### **[CEE 671 Random Vibration**

Fall. 3 credits. Prerequisites: M&AE 326, CEE 779, and OR&IE 260; or equivalent and permission of the instructor. Not offered 2000–2001. M. D. Grigoriu.

Review of random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear

random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolmogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.]

#### **CEE 672 Fundamentals of Structural Mechanics**

Fall. 3 credits. K. D. Papoulia.

Theory of elasticity, energy principles, plate flexure, failure theories for structural design, beams on elastic foundation, finite-difference method, plate theory, introduction to finite-element method.

#### **CEE 673 Advanced Structural Analysis**

Fall. 3 credits. Prerequisites: CEE 372 and computer programming. J. F. Abel.

Matrix analysis of structures, computer programming of displacement (stiffness) method, use of interactive graphical analysis programs, solution methods, errors and accuracy, special analysis procedures, virtual work in matrix analysis, and introduction to nonlinear analysis and finite-element methods.

#### **[CEE 675 Concrete Materials and Construction**

Spring. 3 credits. Prerequisite: CEE 376 or equivalent. Offered alternate years. Not offered 2000–2001. K. C. Hover.

Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.]

#### **[CEE 692 Special Topics in Engineering Management**

On demand. 1–6 credits. Not offered 2000–2001. Staff.

Individually supervised study of one or more specialized topics not covered in regular courses.]

#### **CEE 694 Research in Engineering Management**

On demand. 1–6 credits. Staff.

The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

#### **CEE 710 Research—Remote Sensing**

On demand. 1–6 credits. W. D. Philpot.

For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

#### **CEE 722 Environmental and Water Resources Systems Analysis Research**

On demand. 1–6 credits. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken. Staff.

Investigations of particular environmental or water resources systems problems.

#### **CEE 729 Special Topics in Environmental or Water Resources Systems Analysis**

On demand. 1–6 credits. Staff.

Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

#### **[CEE 732 Computational Hydraulics**

Fall. 3 credits. Prerequisite: elementary fluid mechanics or permission of instructor. Offered alternate years. Not offered 2000–2001. Staff.

Numerical methods for solving hydraulics and fluid-mechanics problems. Solutions for elliptic, parabolic, and hyperbolic equations. Finite-difference, finite-element, and boundary-integral methods.]

#### **CEE 735 Research in Hydraulics**

On demand. 1–6 credits. Staff.

The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

#### **CEE 740 Engineering Behavior of Soils**

Fall. 3 credits. Prerequisite: CEE 341.

H. E. Stewart.

Detailed study of the physiochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils. Laboratory and field-testing methods for determining properties.

#### **CEE 741 Rock Engineering**

Spring. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology. Staff.

Geological and engineering classifications of intact rock, discontinuities, and rock masses. Laboratory and field evaluation of properties. Stress states and stress analysis. Design of foundations on, and openings in, rock masses. Analysis of the stability of rock slopes.

#### **CEE 744 Advanced Foundation Engineering**

Spring. 2 credits. Prerequisite: CEE 640. F. H. Kulhawy.

A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

#### **[CEE 745 Soil Dynamics**

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2000–2001.

H. E. Stewart.

Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Design of embankments and retaining structures under dynamic loading conditions.]

#### **[CEE 746 Embankment Dam Engineering**

Spring. 3 credits. Prerequisites: CEE 641 and 741, or permission of instructor. Not offered 2000–2001. F. H. Kulhawy.

Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.]

#### **CEE 749 Research in Geotechnical Engineering**

On demand. 1–6 credits. Staff.

For the student who wants to pursue a particular geotechnical topic in considerable depth.

**CEE 750 Research in Environmental Engineering**

On demand. 1-6 credits. Staff.

For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

**CEE 755 Physical/Chemical Processes**

Fall. 3 credits. Prerequisite: previous or concurrent enrollment in CEE 653 or permission of instructor. J. J. Bisogni.

Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

**CEE 756 Biological Processes**

Spring. 3 credits. Prerequisites: an introductory course in microbiology and CEE 755, or permission of instructor. J. M. Gossett.

Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Biokinetic analysis and design of biological treatment process.

**CEE 757 Physical/Chemical Processes Laboratory**

Fall. 2 credits. Prerequisite: concurrent enrollment in CEE 653 and CEE 755. J. J. Bisogni.

Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes; coagulation.

**CEE 758 Biological Processes Laboratory**

Spring. 2 credits. Prerequisite: concurrent enrollment in CEE 756. J. M. Gossett.

Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy; biochemical and chemical oxygen demand; biological treatability studies; enumeration of bacteria.

**CEE 759 Special Topics in Environmental Engineering**

On demand. 1-6 credits. Staff.

Supervised study in special topics not covered in formal courses.

**CEE 762 Transportation Research**

On demand. 1-6 credits. Staff.

In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

**CEE 764 Special Topics in Transportation**

On demand. 1-6 credits. Staff.

Advanced subject matter not covered in depth in other regular courses.

**[CEE 770 Engineering Fracture Mechanics**

Fall. 3 credits. Prerequisite: CEE 772 or permission of instructor. Offered alternate years. Not offered 2000-2001. R. Ingraffea.

Fundamentals of fracture-mechanics theory. Energy and stress-intensity approaches to fracture. Mixed-mode fracture. Fatigue-crack propagation. Finite- and boundary-element methods in fracture mechanics. Introduction to elastic-plastic fracture mechanics. Interactive computer graphics for fracture simulation. Laboratory techniques for fracture-toughness testing of metals, concrete, and rock.)

**CEE 772 Finite Element Analysis (also M&AE 680 and T&AM 666)**

Spring. 3 credits. Prerequisites: T&AM 663 or equivalent. Staff.

For description, see M&AE 680.

**[CEE 773 Structural Reliability**

Fall. 3 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 2000-2001. M. D. Grigoriu.

Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, elementary concepts of probabilistic fracture mechanics.]

**CEE 774 Advanced Structural Concrete**

Fall. 3 credits. Prerequisite: undergraduate concrete design course. S. Billington.

Behavior, analysis, and design of structural concrete with an introduction to prestressing; integration of material, component and system modeling, and simulation with structural design; course project integrating computer simulation and physical experimentation of a design.

**[CEE 775 Structural Concrete Systems**

Spring. 3 credits. Prerequisite: CEE 774. Offered alternate years. Not offered 2000-2001. S. Billington.

Behavior and design of structural concrete building and bridge systems. Risk assessment and repair and retrofit strategies for structural concrete systems vulnerable to deterioration and/or seismic loading.]

**CEE 776 Advanced Design of Metal Structures**

Fall. 3 credits. Prerequisite: CEE 374 or equivalent. T. Peköz.

Preliminary design of structural systems. Behavior and design of members and connections. Behavior and computer-aided design of building frames.

**[CEE 777 Advanced Behavior of Metal Structures**

Spring. 3 credits. Prerequisite: CEE 374 or equivalent. Not offered 2000-2001. T. Peköz.

Analysis of elastic and inelastic stability. Behavior and design of hot-rolled and cold-rolled steel and aluminum members, elements, and frames. Critical review of design specifications.]

**[CEE 779 Structural Dynamics and Earthquake Engineering**

Spring. 3 credits. Not offered 2000-2001. M. D. Grigoriu.

Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.]

**CEE 783 Civil and Environmental Engineering Materials Project**

On demand. 1-3 credits. Staff.

Individual projects or reading and study assignments involving engineering materials.

**CEE 785 Research in Structural Engineering**

On demand. 1-6 credits. Staff.

Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

**CEE 786 Special Topics in Structural Engineering**

On demand. 1-6 credits. Staff.

Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

**CEE 810 Thesis—Remote Sensing**

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. W. D. Philpot.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

**CEE 820 Thesis—Environmental and Water Resource Systems**

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

**CEE 830 Thesis—Fluid Mechanics and Hydrology**

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

**CEE 840 Thesis—Geotechnical Engineering**

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

**CEE 850 Thesis—Environmental Engineering**

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

**CEE 860 Thesis—Transportation Engineering**

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

**CEE 880 Thesis—Structural Engineering**

Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff.

A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

**COMPUTER SCIENCE**

The Department of Computer Science is part of both the College of Arts and Sciences and the College of Engineering.

**COM S 099 Fundamental Programming Concepts**

Fall, summer. 2 credits. No prerequisites. S-U grades only. Credit cannot be applied toward the Engineering degree.

This course is designed for students with virtually no programming experience. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience should not take this course.

**COM S 100 Introduction to Computer Programming**

Fall, spring, summer. 4 credits.

An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. There are two versions of the course. Both provide adequate preparation for COM S/ENGRD 211. Both versions are not offered every semester.

**COM S 100M Introduction to Computer Programming**

Corequisite: MATH 111, 191, or equivalent.

This version starts with a seven-week introduction to programming in MATLAB. Iteration, functions, and arrays are introduced. The second seven weeks of the course examines how these ideas are handled in the object-oriented framework provided by the Java programming language. Throughout the course, examples and assignments are chosen to give the student an appreciation for computational science and engineering. The pace of the course assumes that the student has no prior programming experience.

**COM S 100J Introduction to Computer Programming**

This course is a standard introduction to the Java programming language. The usual topics of iteration, functions, and arrays are introduced in the context of classes and objects. Although the course is self-contained, its pace makes it more suitable for students who have had some experience programming in high school with C, C++, Java, Pascal, etc. The course includes a two-week unit on MATLAB.

**COM S 101 Introduction to Cognitive Science (also COGST 101, LING 170, and PSYCH 102)**

Fall. 3 credits.

For description, see COGST 101.

**COM S 113 Introduction to C**

Fall, spring. 1 credit. Usually weeks 1–4. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only.

A brief introduction to the C programming language and standard libraries. Unix accounts will be made available for students wishing to use that system for projects, but familiarity with Unix is not required. (Projects may be done using any modern implementation of C). COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

**COM S 114 Unix Tools**

Fall, spring. 1 credit. Usually weeks 5–8.

Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

An introduction to Unix, emphasizing instruction in tools for file management, communication, process control, and program development. Knowledge of at least one programming language is expected. Projects assume no previous knowledge of Unix or expertise in any particular language.

**COM S 130 Creating Web Documents**

Fall. 3 credits.

Interactive on-line media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students having little or no computer background to tools and techniques for creating interactive documents. We will emphasize both questions of design and technical issues. This will involve thinking seriously about digital graphic impact and learning how to do some relatively simple programming with a scripting language (such as JavaScript). Topics covered will include HTML; JavaScript; interaction techniques (elementary DHTML); ways of coping with slow connections; the incorporation of sound, video, and images in web documents; ethics; and e-commerce.

**COM S 201 Cognitive Science in Context Laboratory (also COGST 201 and PSYCH 201)**

Fall or spring. 4 credits. Limited to 24 students. Prerequisite: concurrent or prior registration in Introduction to Cognitive Science (PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191) is suggested but not required. Knowledge of programming languages is not assumed. Fall, B. Halpern and staff; spring, D. Field and staff.

For description, see COGST 201.

**COM S 202 Transition to Java**

Fall, spring. Usually weeks 1–4. 1 credit.

Prerequisite: one semester-long programming course.

A brisk introduction to the Java programming language.

**COM S 211 Computers and Programming (also ENGRD 211)**

Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, analysis of algorithms, and an introduction to elementary graph theory and graph algorithms. Java is the principal programming language. Knowledge of classes and objects is assumed.

**COM S 213 C++ Programming**

Fall, spring. 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 113 first. S-U grades only.

An intermediate-level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take COM S 213 normally do not need to take COM S 113; 213 includes most of the material taught in 113.

**COM S 221 Numerical Methods in Computational Molecular Biology**

Fall. 3 credits. Prerequisites: At least 1 course in calculus, such as MATH 106, 111, or 191 and a course in linear algebra, such as MATH 221 or 294 or BTRY 417. No particular course in programming is required, but the student should have some familiarity with iteration, arrays, and procedures.

An introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting, linear equation solving, least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization will also be treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology.

**COM S 222 Introduction to Scientific Computation (also ENGRD 222)**

Spring, summer. 3 credits. Prerequisites:

COM S 100 and (MATH 222 or MATH 294).

An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation.

**COM S 230 Intermediate Web Design**

Spring. 3 credits. Enrollment may be limited. Prerequisite: COM S 130 or equivalent. Not offered every year; may be offered spring 2001.

Web programming requires the cooperation of two machines: the one in front of the viewer (the client) and the one delivering the content (the server). COM S 130 concentrates almost exclusively on the client side. The main emphasis in COM S 230 is learning about server side processing. We will, through a succession of projects, learn some CGI scripting (programming in PERL or the use of an integrated web site development tool such as ColdFusion); interactions with standard databases; techniques to enhance security, privacy, and reliability; and ways of incorporating other programs. There will again be emphasis on design issues. A major component of the course will be the creation of a substantial web site.

**COM S 280 Discrete Structures**

Fall, spring, 4 credits. Pre- or corequisite: COM S/ENGRD 211 or permission of instructor.

Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets; graphs; algebraic structures.

**COM S 312 Structure and Interpretation of Computer Programs**

Fall, spring, 4 credits. Prerequisite: COM S 211 or equivalent programming experience.

A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs.

**COM S 314 Computer Organization (also ELE E 314)**

Fall, spring, 4 credits. Prerequisite: COM S/ENGRD 211; COM 312 or ENGRD 231/ELE E 232 are recommended but not required.

Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students will learn assembly language programming and design a simple pipelined processor.

**COM S 381 Introduction to Theory of Computing**

Fall, summer, 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.

An introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

**[COM S 400 The Science of Programming**

Spring, 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year; next offering TBA.

The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types and contains an introduction to problems with concurrency. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.]

**COM S 409 Data Structures and Algorithms for Computational Science**

Spring, 4 credits. Prerequisite: COM S 211 or equivalent programming experience. This course is not open to COM S majors.

Data structures and algorithms with emphasis on those useful for computational science. This course is intended for students outside of the Department of Computer Science whose work involves a significant amount of computing. Topics include basic data structures as well as more advanced topics. Emphasis is placed on the use of abstract data types and on how best to select appropriate data structures.

**[COM S 411 Programming Languages and Logics**

Fall, 4 credits. Prerequisite: COM S 312 or permission of instructor. Not offered every year; semester TBA.

The major concepts of programming languages, with emphasis on synthesis and interpretation. Language-based programming methodologies, including object-oriented, functional, and logic programming. Design and criticism of programming languages. Type theory and typed lambda-calculus. Exercises in several unusual programming languages.]

**COM S 412 Introduction to Compilers and Translators**

Spring, 3 credits. Prerequisites: COMS/ENGRD 211, COM S 312 (or permission of instructor), and COM S 314. Corequisite: COM S 413.

An introduction to the specification and implementation of modern compilers. Topics covered include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages. The course entails a substantial compiler implementation project.

**COM S 413 Practicum in Compilers and Translators**

Spring, 2 credits. Corequisite: COM S 412. A compiler implementation project related to COMS 412.

**COM S 414 Systems Programming and Operating Systems**

Fall, summer, 3 credits. Prerequisite: COM S 211, 312 (or permission of instructor), and 314.

An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

**COM S 415 Practicum in Operating Systems**

Fall, 2 credits. Corequisite: COM S 414.

The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

**COM S 417 Computer Graphics and Visualization (also ARCH 374)**

Spring, 3 credits. Prerequisite: COM S/ENGRD 211.

An introduction to the principles of interactive computer graphics and scientific visualization. Topics include surface modeling, animation, perspective transformations, hidden-line and hidden-surface algorithms, lighting models, image synthesis, and application to scientific data analysis.

**COM S 418 Practicum in Computer Graphics (also ARCH 375)**

Spring, 2 credits. Enrollment limited. Permission of instructor. Recommended: COM S 314. Corequisite: COM S 417.

Programming assignments dealing with interactive computer graphics and visualization of scientific data.

**COM S 421 Numerical Analysis**

Fall, 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.

Modern algorithms for systems of linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel computation.

**COM S 432 Introduction to Database Systems**

Fall, 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 312 (or permission of instructor). Recommended: COM S 213 and strong programming skills in C, C++ or Java.

Introduction to modern relational database systems. The course emphasizes practical knowledge about the internals of database systems and includes several large programming assignments. Topics include the relational model, SQL, index structures, query evaluation, query optimization, database design, security, and transaction management.

**COM S 433 Practicum in Database Systems**

Fall, 2 credits. Corequisite: COM S 432.

Design and implementation of an electronic commerce system. Technologies include Java Servlets, Active Server Pages, Java Server Pages, JDBC, and ODBC.

**[COM S 444 Distributed Systems and Algorithms**

Fall, 4 credits. Pre- or corequisite: COM S 414 or permission of instructor. Not offered every year.

The fundamentals of distributed systems and algorithms. Topics include the problems, methodologies, and paradigms necessary for understanding and designing distributed applications, with an emphasis on fault-tolerant computing. Theoretical concepts will be complemented with practical examples of their application in current distributed systems.]

**COM S 472 Foundations of Artificial Intelligence**

Fall, 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 (or equivalent).

A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

**COM S 473 Practicum in Artificial Intelligence**

Fall, 2 credits. Corequisite: COM S 472.

Project portion of COM S 472. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetic algorithms, planning, and truth maintenance.

**COM S 478 Machine Learning**

Spring. 3 credits. Prerequisites: COM S/ENGRD 211, COM S 280, and COM S 312. This course presents an introduction to machine learning, the study of computer algorithms that improve automatically through experience. Topics to be covered will include some or all of the following: concept learning, decision tree learning, propositional and first-order rule learning, bayesian learning, instance-based learning, analytical learning, genetic algorithms, reinforcement learning, unsupervised learning, computational learning theory, and methods for empirical evaluation of learning algorithms.

**COM S 481 Introduction to Theory of Computing**

Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.

A faster-moving and deeper version of COM S 381.

**COM S 482 Introduction to Analysis of Algorithms**

Spring, summer. 4 credits. Prerequisites: COM S 211, 280, 312, and either 381 or 481, or permission of instructor.

Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

**COM S 483 Quantum Information Processing (also PHYS 481 and 681)**

Fall. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers.

For description, see PHYS 481.

**COM S 486 Applied Logic (also MATH 486)**

Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science.

Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

**COM S 490 Independent Reading and Research**

Fall, spring. 1-4 credits. Independent reading and research for undergraduates.

**COM S 501 Software Engineering**

Fall. 4 credits. Prerequisite: COM S 211 or 410 and experience programming in Java or C++.

An introduction to the problems of specifying, designing, and building large, reliable software systems and the methods, languages, and tools used in modern software development. Topics include requirements analysis, software life-cycle models, software analysis and design, verification and validation, reliability, engineering ethics, and professionalism. The emphasis is on object-oriented design and program development. Includes team projects for real clients.

**COM S 502 Computing Methods for Digital Libraries**

Spring. 3 credits. Prerequisites: COM S 211 or 410 and some familiarity with the technology of web sites.

This course examines the application of computer science methods in digital libraries. A central topic is the representation of complex information in computer systems, including object models and metadata. Closely related topics include how to discover and deliver information over heterogeneous distributed systems and how to preserve intellectual information over worldwide networks for long periods of time. A theme that runs through the course is the interplay between computing and people, including the legal, social, and economic context.

**COM S 504 Applied Systems Engineering I (also CEE 504, ELE E 512, M&AE 591, OR&IE 512)**

Fall. 3 credits. Prerequisite: permission of instructor.

For description, see M&AE 591.

**COM S 505 Applied Systems Engineering II (also CEE 505, ELE E 513, M&AE 592, OR&IE 513)**

Spring. 3 credits. Prerequisite: Applied System Engineering I (CEE 504, COM S 504, ELE E 512, M&AE 591, OR&IE 512)

For description, see M&AE 592.

**COM S 513 System Security**

Spring. 4 credits. Prerequisites: COM S 414 or 519 and familiarity with JAVA programming language.

This course discusses security and survivability for computers and communications networks. The course will include discussions of policy issues (e.g. the national debates on cryptography policy) as well as the discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Mechanisms for authorization and authentication as well as cryptographic protocols will be covered.

**COM S 514 Intermediate Computer Systems**

Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor.

This course focuses on practical issues in designing and implementing distributed software. Topics vary depending upon instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by coregistering in COM S 490, 515, or 790.

**COM S 515 Practicum in Systems**

Fall or spring. 1-2 credits. Corequisite: COM S 514.

The practical aspects of modern software systems are studied through the design and implementation of a significant system. Students may work alone or in teams. The project varies from year to year at the discretion of the instructor. Some students take COM S 490 or 790 instead of COM S 515.

**COM S 519 Engineering Computer Networks**

Fall. 4 credits. Prerequisites: COM S 314 or permission of instructor. Not offered every year.

Introduction to telephone, IP, and ATM networks. Techniques for system design and protocol layers. Detailed introduction to networking protocols in the areas of multiple access, switching, scheduling, routing, naming and addressing, error control, flow control, and traffic management. Overview of important protocols in the Internet and telephone networks. Protocol implementation techniques. The course is project-oriented and requires familiarity with C programming.

**COM S 522 Computational Tools and Methods for Finance**

Spring. 4 credits. Prerequisites: programming experience (e.g., C, FORTRAN, or MATLAB), some knowledge of numerical methods, especially numerical linear algebra. Not offered every year.

This course provides a hands-on introduction to computational methods and tools used in finance. We study both the underlying methods and efficient implementation. The MATLAB Financial Toolbox, along with additional MATLAB tools, will be used extensively. The underlying numerical techniques discussed include nonlinear least-squares procedures (regression), basic linear algebra, linear and nonlinear optimization, finite-difference methods for PDEs, quadratic programming (and linear complementarity problems), specialized tree (and lattice) evaluation methods.

**COM S 574 Heuristic Methods for Optimization (also CEE 509)**

Spring. 3 or 4 credits. Prerequisites: COM S/ENGRD 211 or 222 or CEE/ENGRD 241, or graduate standing, or permission of instructor. C. A. Shoemaker and B. Selman.

This course will describe a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, random walk, and direct search algorithms. Algorithms will be used to find values of discrete and/or continuous variables arising in optimization and model fitting. Applications will be discussed in a range of areas including some of the following: artificial intelligence, scheduling, protein folding, economic planning, water quality protection, telecommunications, and robotics. The advantages and disadvantages of heuristic search methods for both serial and parallel computation will be discussed in comparison to other optimization algorithms.

**COM S 601 System Concepts**

Fall. 3 credits. Prerequisites: open to students enrolled in the COM S Ph.D. program.

This course teaches broadly applicable principles of computing system design and analysis. For example, the principle of locality of reference used in caching, virtual memory, and network service hints. Such broadly applicable abstractions will be discussed along with their implementations in a variety of settings. Case studies from the systems literature will be employed throughout.

**COM S 611 Advanced Programming Languages**

Fall. 4 credits. Graduate standing or permission of instructor.

A study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program

transformations, programming logic, and applications to programming methodology.

**COM S 612 Compiler Design for High-Performance Architectures**

Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, dataflow analysis, efficient solution of dataflow equations, dependence tests, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multi-processors: shared- and distributed-memory architectures, latency tolerance and avoidance, loop transformations to enhance parallelism and locality of reference.

**COM S 613 Concurrent Programming**

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Not offered every year; semester TBA.

Advanced techniques in, and models of, concurrent systems. Synchronization of concurrent processes; parallel programming languages; deadlock; verification.

**COM S 614 Advanced Systems**

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

**[COM S 618 Principles of Distributed Computing—Message-Passing]**

Fall. 4 credits. Prerequisites: mathematical maturity and some basic knowledge of distributed systems. Offered in odd-numbered years; not offered 2000–2001.

This course focuses on research in message-passing distributed computing. It covers the fundamental problems and presents some of the latest results and open questions in message-passing systems. Problems will be viewed from a theoretical standpoint with an emphasis on precise specifications, proofs of correctness, upper and lower bounds on various complexity measures and impossibility results.]

**[COM S 619 Principles of Distributed Computing—Shared Memory]**

Fall. 4 credits. Prerequisites: mathematical maturity and some basic knowledge of distributed systems. Offered in even-numbered years; not offered 2000–2001.

This course focuses on research in shared-memory distributed computing. It covers fundamental problems and paradigms of shared-memory systems. Topics include linearizability and other models of consistency, nonblocking and wait-free computation, universal constructions of wait-free objects, the atomic snapshot problem, the k-set consensus problem, bounded concurrent timestamps, etc.]

**COM S 621 Matrix Computations**

Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are

considered. The MATLAB system is used extensively.

**COM S 622 Numerical Optimization and Nonlinear Algebraic Equations**

Spring. 4 credits. Prerequisite: COM S 621. Offered in odd-numbered years.

Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

**[COM S 624 Numerical Solution of Differential Equations]**

Spring. 4 credits. Prerequisites: previous exposure to numerical analysis (e.g., COM S 421 or 621) and differential equations, and knowledge of MATLAB. Offered in even-numbered years; not offered 2000–2001.

Finite difference methods for the solution of ordinary and partial differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, finite element methods, Hamiltonian problems, and computational issues such as mesh generation and sparse matrix computation for PDEs.]

**COM S 626 Computational Molecular Biology**

Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations and nonlinear optimization methods.

Problems and algorithms in computational molecular biology. Topics include sequences (alignment, scoring functions, complexity of searches and alignment, secondary structure prediction, families, and function), the protein folding problem (lattice models, lattice searches, the HP model, chemical potentials, statistical potentials, funnels, complexity and model verification, global optimization, homology, threading), and the dynamics of complex biosystems (the Molecular Dynamics method, long range forces, statistics of flexible systems, reduced models).

**COM S 632 Advanced Database Systems**

Spring. 4 credits. Prerequisite: COM S 432/433 or permission of instructor.

A variety of advanced issues ranging from transaction management to query processing to data mining. Extensive paper reading and discussion. Development of a term project with research content.

**COM S 664 Machine Vision**

Spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent.

An introduction to computer vision. The following topics will be covered: edge detection, image segmentation, stereopsis, motion and optical flow, shape reconstruction, shape representations and extracting shapes from images, model-based recognition. Students will be required to implement several of the algorithms covered in the course and evaluate them on both synthetic and real images.

**COM S 671 Introduction to Automated Reasoning**

Fall. 4 credits. Prerequisite: (COM S 611 and graduate standing) or permission of instructor.

Topics in modern logic needed to understand and use automated reasoning systems such as HOL, Nuprl, and PVS. Special emphasis on type theory and logic and on tactic-oriented theorem proving.

**COM S 672 Advanced Artificial Intelligence**

Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.

Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

**COM S 674 Natural Language Understanding**

Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. Not offered every year.

This course presents an introduction to natural language processing, the primary concern of which is the study of human language use from a computational perspective. The course will cover syntactic analysis, semantic interpretation, and discourse processing, via symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, finite-state methods, mildly context-sensitive formalisms, deductive approaches to interpretation, machine translation, and machine learning of natural language.

**[COM S 676 Reasoning about Knowledge]**

Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered even-numbered years; not offered 2000–2001.

Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues: common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, and modeling resource-bounded reasoning, and connections to game theory.]

**[COM S 677 Reasoning about Uncertainty]**

Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered odd-numbered years; not offered 2000–2001.

Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and probability, probability and adversaries, conditional logics of normality, Bayesian networks, qualitative approaches to uncer-

tainty, going from statistical information to degrees of belief, decision theory.]

**COM S 681 Analysis of Algorithms**

Fall. 4 credits. Prerequisite: (COM S 381 or 481 and graduate standing) or permission of instructor.

Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, randomized reducibilities. Additional topics such as parallel algorithms and efficient data structures.

**COM S 682 Theory of Computing**

Spring. 4 credits. Prerequisite: (COM S 381 or 481) and (COM S 482 or 681) or permission of instructor.

Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

**COM S 686 Logics of Programs**

Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486.

Topics in logics of programs and program verification. Possible topics include: Floyd/Hoare logic, modal logic, dynamic logic, temporal logic, process logic, automata on infinite objects and their relation to program logics, the Rabin tree theorem, the modal mu-calculus, games and alternating automata, applications to type inference, set constraints, Kleene algebra.

**COM S 709 Computer Science Colloquium**

Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.

A weekly meeting for the discussion and study of important topics in the field.

**COM S 713 Seminar in Systems and Methodology**

Fall, spring. 4 credits. Prerequisites: a graduate course employing formal reasoning such as COM S 611, 613, 671, a logic course, or permission of instructor. Not offered every year; semester TBA.

Discussion of contemporary issues in the design and analysis of computing systems. Emphasis on the proper use of rigor, models, and formalism.

**COM S 715 Seminar in Programming Refinement Logics**

Fall, spring. 4 credits. Prerequisite: permission of instructor.

Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

**COM S 717 Topics in Parallel Architectures**

Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year; semester TBA.

Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

**COM S 719 Seminar in Programming Languages**

Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

**COM S 722 Topics in Numerical Analysis**

Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester TBA.

Topics are chosen at instructor's discretion.

**COM S 729 Seminar in Numerical Analysis**

Fall, spring. 1-4 credits (TBA). Prerequisite: permission of instructor. S-U grades only.

**COM S 754 Systems Research Seminar**

Fall, spring. 1 credit. S-U grades only.

**COM S 772 Seminar in Artificial Intelligence**

Fall, spring. 4 credits. Prerequisites: permission of instructor. S-U grades only.

**COM S 773/774 Proseminar in Cognitive Studies I & II (also COGST, PHIL, LING, and PSY 773/774)**

Fall, 773; spring, 774. 4 credits. For description, see COGST 773/774.

**COM S 775 Seminar in Natural Language Understanding**

Fall, spring. 2 credits. Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

**COM S 789 Seminar in Theory of Algorithms and Computing**

Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

**COM S 790 Special Investigations in Computer Science**

Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only.

Independent research or Master of Engineering project.

**COM S 890 Special Investigations in Computer Science**

Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Master of Science degree research.

**COM S 990 Special Investigations in Computer Science**

Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

## EARTH AND ATMOSPHERIC SCIENCES

(Course listings formerly under Geological Sciences and Soil, Crop, and Atmospheric Sciences)

### Courses

For complete course descriptions, see the Earth and Atmospheric Sciences listing in the College of Agriculture and Life Sciences section. Students should note that the EAS designation does not yet appear in the university's enrollment software. Therefore, those who wish to enroll in an EAS class should register under the GEOL or SCAS department designation or in an appropriate cross-listed course, as indicated below.

**EAS 101 Introductory Geological Sciences (enroll in GEOL 101)**

Fall, spring, summer. 3 credits. Fall, staff; spring, J. M. Bird; summer, W. Brice.

**EAS 102 Evolution of the Earth and Life (enroll in GEOL 102 or BIO G 170)**

Spring. 3 credits. J. L. Cisne.

**EAS 104 The Sea: An Introduction to Oceanography (enroll in GEOL 104 or BIOES 154)**

Spring, summer. 3-4 credits (4 credits with lab section). Spring: C. H. Greene, W. M. White; summer: J. Chiment.

**EAS 105 Writing on Rocks (First-Year Writing Seminar) (enroll in GEOL 105)**

Fall. 3 credits. J. Chiment. See First-Year Seminar Handbook for description.

**EAS 106 Vertebrate Fossil Preparation (enroll in GEOL 106)**

Spring. 1 credit. Prerequisites: 1 introductory geology course or concurrent enrollment, class size is limited. J. Chiment.

**EAS 107 How the Earth Works (enroll in GEOL 107)**

Fall. 1 credit. J. L. Cisne.

**EAS 109 Dinosaurs (enroll in GEOL 109)**

Fall. 1 credit. J. L. Cisne.

**EAS 111 To Know the Earth and Build a Habitable Planet (enroll in GEOL 111)**

Fall. 3 credits. J. M. Bird.

**EAS 122 Earthquake! (enroll in GEOL or ENGR 122)**

Spring. 3 credits. L. D. Brown. This is a course in the Introduction to Engineering series. For description, see ENGR 122.

**EAS 131 Basic Principles of Meteorology (enroll in SCAS 131)**

Fall. 3 credits. M. W. Wysocki.

**EAS 150 Introduction to Fortran Programming (enroll in SCAS 353)**

Fall. 3 credits. M. W. Wysocki.

**EAS 200 Art, Archaeology, and Analysis (enroll in GEOL 200, ARKEO 285, ARTH 200, ENGR 185, or PHYS 200)**

Spring. 3 credits. R. W. Kay. This is a course in the Introduction to Engineering series. For description, see ENGR 185.

**EAS 201 Introduction to the Physics and Chemistry of the Earth (enroll in GEOL or ENGRD 201)**

Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Cathles.

**[EAS 203 Natural Hazards and the Science of Complexity (enroll in GEOL 203)]**

Fall. 3 credits. Prerequisites: 1 calculus course. Not offered 2000-2001. D. L. Turcotte.]

**EAS 204 Ocean Sciences Laboratory (enroll in GEOL 204)**

Spring. 3 credits. Prerequisite or corequisite: BIOES 154/EAS 104. C. H. Greene, B. W. Monger.

**EAS 210 Introduction to Field Methods in Geological Sciences (enroll in GEOL 210)**

Fall. 3 credits. Prerequisites: EAS (GEOL) 101 or 201, or permission of instructor. 1 lecture, Saturday field trips. S. M. Kay.

**EAS 212 Caribbean Field Trip (enroll in GEOL 212)**

Spring. 2 credits. Prerequisite: permission of instructor. Enrollment limited to 15. Approximate cost \$1,100. L. D. Brown.

**EAS 213 Marine and Coastal Geology (enroll in GEOL 213)**

Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. Staff.

**EAS 250 Meteorological Observations and Instruments (enroll in SCAS 250)**

Spring. 3 credits. Prerequisite: EAS 131. M. W. Wysocki.

**EAS 260 Soil Science (enroll in SCAS 260)**

Fall. 4 credits. S-U grades optional. S. J. Riha.

**EAS 296 Forecast Competition (enroll in SCAS 296)**

Fall and spring. 1 credit. S-U grades only. Prerequisite: sophomore undergraduate standing in atmospheric science, or permission of instructor. D. S. Wilks.

**EAS 302 Evolution of the Earth System (enroll in GEOL 302)**

Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. W. M. White, W. D. Allmon, B. L. Isacks.

**EAS 315 Geomorphology (enroll in GEOL 315)**

Fall. 4 credits. Prerequisite: 1 of the following: a 3-credit EAS or SES course, or EAS 260. T. E. Jordan and B. L. Isacks.

**EAS 321 Introduction to Biogeochemistry (enroll in GEOL or NTRES 321)**

Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry, J. Yavitt.

**EAS 326 Structural Geology (enroll in GEOL 326)**

Spring. 4 credits. Prerequisite: MATH 112, EAS 101, or 201, or permission of instructor. R. W. Allmendinger.

**EAS 331 Climate Dynamics (enroll in SCAS 331 or ASTRO 331)**

Fall. 4 credits. Prerequisite: MATH 112 or 192 or equivalent. K. H. Cook, P. J. Gierasch.

**[EAS 334 Microclimatology (enroll in SCAS 334)]**

Spring. 3 credits. Prerequisite: a course in physics. Offered alternate years; not offered 2000-2001. D. S. Wilks.]

**EAS 341 Atmospheric Thermodynamics and Hydrostatics (enroll in SCAS 341)**

Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. W. W. Knapp.

**EAS 342 Atmospheric Dynamics (enroll in SCAS 342)**

Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook.

**EAS 352 Synoptic Meteorology I (enroll in SCAS 352)**

Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. M. W. Wysocki.

**EAS 355 Mineralogy (enroll in GEOL 355)**

Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay.

**EAS 356 Petrology and Geochemistry (enroll in GEOL 356)**

Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.

**EAS 375 Sedimentology and Stratigraphy (enroll in GEOL 375)**

Fall. 4 credits. Prerequisite: EAS 101 or 201. J. L. Cisne.

**EAS 388 Geophysics and Geotectonics (enroll in GEOL 388)**

Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.

**[EAS 411 Satellite Remote Sensing in Geosciences (enroll in GEOL 411)]**

Fall. 3 credits. Prerequisite: permission of instructor. Not offered 2000-2001. B. L. Isacks.]

**EAS 417 Field Mapping in Argentina (enroll in GEOL 417)**

Summer. 3 credits. Prerequisites: EAS 210 and 326; Spanish desirable, but not required. S. Mahlburg Kay.

**[EAS 423 Petroleum Geology (enroll in GEOL 423)]**

Fall. 3 credits. Recommended: EAS 326. Offered alternate years; not offered 2000-2001.]

**[EAS 434 Reflection Seismology (enroll in GEOL 434)]**

Spring. 4 credits. Prerequisites: MATH 192 and PHY 208, 213, or equivalent. Not offered 2000-2001. L. D. Brown.]

**EAS 435 Statistical Methods in Meteorology (enroll in SCAS 435)**

Fall. 3 credits. Prerequisites: an introductory course in statistics (e.g., BTRY 215 or ARME 210) and calculus. D. S. Wilks.

**EAS 437 Geophysical Field Methods (enroll in GEOL 437)**

Fall. 3 credits. Prerequisite: PHYS 213 or 208, or permission of instructor. L. D. Brown.

**[EAS 444 Tropical Meteorology (enroll in SCAS 444)]**

Spring. 3 credits. Prerequisite: EAS 342 or instructor's approval. Offered alternate years; not offered 2000-2001. K. H. Cook.]

**EAS 445 Hydrology and the Environment (enroll in GEOL 445, ABEN 471, or CEE 431)**

Fall. 3 credits. Prerequisites: MATH 294 and ENGR 202. W. Brutsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis. For description, see CEE 431.

**[EAS 446 Modeling the Earth System (also EAS 646) (enroll in SCAS 446)]**

Spring. 3 credits. Prerequisite: programming knowledge and instructor's approval. Not offered 2000-2001. K. H. Cook.]

**[EAS 447 Physical Meteorology (enroll in SCAS 447)]**

Fall. 3 credits. Prerequisites: 1 year each of calculus and physics. M W F 10:10. Offered

alternate years; not offered 2000-2001. W. W. Knapp.]

**EAS 451 Synoptic Meteorology II (enroll in SCAS 451)**

Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci.

**EAS 453 Advanced Petrology (enroll in GEOL 453)**

Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. R. W. Kay.

**EAS 454 Advanced Mineralogy (enroll in GEOL 454)**

Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. W. A. Bassett.

**[EAS 455 Geochemistry (enroll in GEOL 455)]**

Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years; not offered 2000-2001. W. M. White.]

**[EAS 456 Mesoscale Meteorology (enroll in SCAS 456)]**

Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Not offered 2000-2001.]

**EAS 457 Atmospheric Air Pollution (enroll in SCAS 457)**

Fall. 3 credits. Prerequisites: EAS 341 or 1 course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years. M. W. Wysocki.

**EAS 458 Volcanology (enroll in GEOL 458)**

Spring. 3 credits. Corequisite: EAS 356 or equivalent. Offered alternate years. R. W. Kay and W. M. White.

**EAS 462 Marine Ecological Processes (enroll in GEOL or BIOES 462)**

Spring. 3 credits. Limited to 75 students. Prerequisite: BIOES 261. Offered alternate years. C. D. Harvell, C. H. Greene.

**EAS 475 Special Topics in Oceanography (enroll in GEOL 475)**

Spring, summer. 2-5 var. credits. Prerequisites: EAS 104 or BIOES 154, and permission of instructor. C. H. Greene.

**EAS 476 Sedimentary Basins: Tectonics and Mechanics (enroll in GEOL 476)**

Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. T. E. Jordan.

**[EAS 478 Advanced Stratigraphy (enroll in GEOL 478)]**

Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years; not offered 2000-2001. T. E. Jordan.]

**EAS 479 Paleobiology (enroll in GEOL or BIOES 479)**

Fall. 3 credits. Prerequisites: 1 year of introductory biology for majors and either BIOES 274, 373, EAS 375, or permission of instructor. W. Allmon.

**EAS 481 Senior Survey of Earth Systems (enroll in GEOL 481)**

Fall. 3 credits. Limited to seniors majoring in geological science. J. M. Bird.

**EAS 483 Environmental Biophysics (enroll in SCAS 483)**

Spring. 3 credits. Offered alternate years. Prerequisite: EAS/SCAS 260 or equivalent, or permission of instructor. S. J. Riha.

**EAS 491-492 Undergraduate Research (enroll in GEOL 491/492)**

Fall, spring. 1-4 credits. Staff.

**EAS 494 Special Topics in Atmospheric Science (enroll in SCAS 494)**

Fall, spring. 8 credits maximum. S-U grades optional. Undergraduate level.

**EAS 496 Internship Experience (enroll in SCAS 496)**

Fall, spring. 1-2 credits. S-U grades only.

**EAS 497 Individual Study in Atmospheric Science (enroll in SCAS 497)**

Fall, spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form.

**EAS 498 Teaching Experience in Atmospheric Science (enroll in SCAS 498)**

Fall, spring. 1-5 credits. S-U grades optional. Students must register with an Independent Study form.

**EAS 499 Undergraduate Research in Atmospheric Science (enroll in SCAS 499)**

Fall, spring. Credit by arrangement. Students must register with an Independent Study form.

**EAS 500 Design Project in Geohydrology (enroll in GEOL 500)**

Fall, spring. 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters. L. M. Cathles.

**EAS 502 Case Histories in Groundwater Analysis (enroll in GEOL 502)**

Spring. 4 credits. L. M. Cathles.

**[EAS 622 Advanced Structural Geology I (enroll in GEOL 622)]**

Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years; not offered 2000-2001. R. W. Allmendinger.]

**EAS 624 Advanced Structural Geology II (enroll in GEOL 624)**

Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.

**EAS 628 Geology of Orogenic Belts (enroll in GEOL 628)**

Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

**[EAS 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics (enroll in GEOL 634)]**

Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years; not offered 2000-2001. D. L. Turcotte.]

**EAS 635 Advanced Statistical Meteorology (enroll in SCAS 635)**

Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. D. S. Wilks.

**EAS 636 Advanced Geophysics II: Quantitative Geodynamics (enroll in GEOL 636)**

Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. D. L. Turcotte.

**EAS 641 Analysis of Biogeochemical Systems (enroll in GEOL 641)**

Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry.

**[EAS 646 Modeling the Earth System (also EAS 446) (enroll in SCAS 646)]**

Spring. 3 credits. Prerequisite: programming knowledge and instructor's approval. Not offered 2000-2001. K. H. Cook.]

**EAS 651 Advanced Atmospheric Thermodynamics (enroll in SCAS or ASTRO 651)**

Fall. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. K. H. Cook, P. J. Gierasch, S. J. Colucci.

**EAS 652 Advanced Atmospheric Dynamics (enroll in SCAS or ASTRO 652)**

Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. S. J. Colucci, K. H. Cook, P. J. Gierasch.

**[EAS 656 Isotope Geochemistry (enroll in GEOL 656)]**

Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years; not offered 2000-2001. W. M. White.]

**[EAS 675 Modeling the Soil-Plant-Atmosphere System (enroll in SCAS 675)]**

Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. Offered alternate years; not offered 2000-2001. S. J. Riha.]

**EAS 681 Geotectonics (enroll in GEOL 681)**

Fall. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

**EAS 692 Special Topics in Atmospheric Science (enroll in SCAS 692)**

Fall, spring. 1-6 credits. S-U grades optional.

**EAS 695 Computer Methods in Geological Sciences (enroll in GEOL 695)**

Fall, spring. 3 credits. L. Brown, B. L. Isacks.

**EAS 700-799 Seminars and Special Work (enroll in GEOL 700-799)**

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Advanced work on original investigations in geological sciences. Topics change from term to term. Contact appropriate professor for more information.

**EAS 722 Advanced Topics in Structural Geology (enroll in GEOL 722)**

R. W. Allmendinger.

**EAS 731 Plate Tectonics and Geology (enroll in GEOL 731)**

J. M. Bird.

**EAS 733 Fractals and Chaos—Independent Studies (enroll in GEOL 733)**

D. L. Turcotte.

**EAS 751 Petrology and Geochemistry (enroll in GEOL 751)**

S. Mahlburg Kay, R. W. Kay.

**EAS 753 Advanced Topics in Mineral Physics (enroll in GEOL 753)**

W. A. Bassett.

**EAS 755 Advanced Topics in Petrology and Tectonics (enroll in GEOL 755)**

J. M. Bird, W. A. Bassett.

**EAS 757 Current Research in Petrology (enroll in GEOL 757)**

S. Mahlburg Kay, R. W. Kay.

**EAS 762 Advanced Topics in Petroleum Exploration (enroll in GEOL 762)**

Fall. W. B. Travers.

**EAS 771 Advanced Topics in Sedimentology and Stratigraphy (enroll in GEOL 771)**

T. E. Jordan.

**EAS 773 Paleobiology (enroll in GEOL 773)**

J. L. Cisne.

**EAS 775 Advanced Topics in Oceanography (enroll in GEOL 775)**

Spring. C. H. Greene.

**EAS 780 Earthquake Record Reading (enroll in GEOL 780)**

Fall. M. Barazangi.

**EAS 781 Geophysics, Exploration, Seismology (enroll in GEOL 781)**

L. D. Brown.

**EAS 783 Advanced Topics in Geophysics (enroll in GEOL 783)**

B. L. Isacks.

**EAS 789 Lithospheric Seismology (enroll in GEOL 789)**

L. D. Brown. COCORP Seminar.

**EAS 793 Andes-Himalaya Seminar (enroll in GEOL 793)**

S. Mahlburg Kay, R. W. Allmendinger, B. L. Isacks, T. E. Jordan.

**EAS 795 Low Temperature Geochemistry (enroll in GEOL 795)**

Offered spring 2001 only. L. A. Derry.

**EAS 796 Geochemistry of the Solid Earth (enroll in GEOL 796)**

W. M. White.

**EAS 797 Fluid-Rock Interactions (enroll in GEOL 797)**

L. M. Cathles.

**EAS 799 Soil, Water, and Geology Seminar (enroll in GEOL 799)**

L. M. Cathles, T. S. Steenhuis.

**EAS 850 Master's-Level Thesis Research in Atmospheric Science (enroll in SCAS 850)**

Fall, spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

**EAS 950 Graduate-Level Dissertation Research in Atmospheric Science (enroll in SCAS 950)**

Fall, spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.

**EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science (enroll in SCAS 951)**

Fall, spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.

## ELECTRICAL ENGINEERING

**ELE E 198 Introduction to the Electronic Revolution (also ENGRG 198)**

Summer only. 3 credits. This course cannot be taken in addition to ENGRG 298. For description, see ENGRG 198.

**ELE E 210 Introduction to Circuits for Electrical and Computer Engineers (also ENGRD 210)**

Fall, spring. 3 credits. Corequisites: MATH 293 and PHYS 213.

A first course in electrical circuits, establishing the fundamental properties of circuits with application to high-speed computers and modern electronics. Topics include node and mesh analysis applied to CMOS circuit design, transient response and its impact on computer speed, sinusoids, resonance, complex impedance, and operational amplifiers.

**ELE E 215 Introductory Integrated Circuits Laboratory**

Fall, spring. 1 credit. Pre- or corequisite: ENGRD 210.

Laboratory course to develop skills with modern instrumentation, and to explore the design and operation of electrical circuits used in computers, amplifiers, and signal processing.

**ELE E 232 Digital Systems Design Laboratory**

Fall, spring. 1 credit. Pre- or corequisite: ENGRD 231.

An introduction to digital systems design using computer-aided design (CAD) tools. Students complete a sequence of eight experiments covering combinational logic, sequential circuits, counters, data transfer and micro-controller design. Hands-on experience is provided by designing, implementing and testing an 8 bit microcontroller using a field programmable gate array (FPGA).

**[ELE E 250 Technology in Society (also ENGRG 250, HIST 250 and S&TS 250)]**

Fall. 3 credits. A humanities elective for engineering students. Not offered 2000-2001.

For description, see ENGRG 250.]

**ELE E 291-292 Sophomore Electrical and Computer Engineering Project**

291, fall; 292, spring. 1-8 credits. Limited to sophomores in Engineering.

Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration and submit request for Independent Project form to the Electrical Engineering Undergraduate Office.

**[ELE E 298 Inventing an Information Society (also ENGRG 298 and S&TS 292)]**

Spring. 3 credits. Approved for humanities distribution. May not be offered 2000-2001.

For description, see ENGRG 298.]

**ELE E 301 Signals and Systems I**

Fall. 4 credits. Prerequisites: a grade of at least C+ in ENGRD 210 and C in MATH 293 and 294.

Continuous-time signals and linear time-invariant systems, continuous-time convolu-

tion and impulse response, Fourier series and transforms of continuous-time signals, the Sampling Theorem, amplitude modulation and time- and frequency-division multiplexing, bilateral Laplace transforms and applications, discrete-time convolution and z-transforms with applications to discrete-time linear time-invariant systems.

**ELE E 302 Signals and Systems II: Discrete-Time Systems and Signal Processing**

Spring. 4 credits. Prerequisite: ELE E 301.

Review of discrete-time convolution and bilateral z-transforms with discrete-time linear time-invariant systems applications. Unilateral z-transforms and difference equations. Discrete-time Fourier transforms. Sampling and reconstruction of continuous-time signals. DFTs and FFTs and attendant computational issues. Introduction to digital filter design techniques with special emphasis on: linear-phase FIR filters; FIR filter design using windowing, frequency sampling, and least squares; and IIR filter design using impulse invariance and bilinear transformation.

**ELE E 303 Electromagnetic Fields and Waves**

Fall. 4 credits. Prerequisites: grades of C or better in PHYS 213, 214, and MATH 294.

Maxwell's equations in differential form; wave equation; plane electromagnetic waves; phase and group velocities; Poynting's theorem, complex dielectric constant; wave reflection and transmission; guided waves on transmission lines; transient pulse propagation; elementary dipole antenna; analysis of wireless communication links.

**ELE E 306 Fundamentals of Quantum and Solid-State Electronics**

Spring. 4 credits. Prerequisites: PHYS 214 and MATH 294.

Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

**ELE E 310 Introduction to Probability and Random Signals**

Spring. 4 credits. Prerequisite: MATH 294.

This course may be used in place of ENGRD 270 to help satisfy the engineering distribution requirement.

Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability, and characteristic functions; nonlinear transformations of data; expectation and correlation; and the central limit theorem.

**ELE E 311 Electrical and Computer Engineering Honors Seminar**

Spring. 2 credits variable.

Students registered for this course are required to attend all of the colloquia lectures. Summary papers are required. Honors students who take the seminar for letter grade are required to write two summary papers for two credits. Non-honors students, who must take the seminar pass/fail, are required to

write one summary paper for one credit. Each summary paper reviews a topic presented during the term.

**ELE E 314 Computer Organization (also COM S 314)**

Fall, spring. 4 credits. Prerequisites: COM S/ENGRD 211; COM S 312 or ENGRD 231/ ELE E 232 are recommended, but not required.

For description, see COM S 314.

**ELE E 315 Electronic Circuit Design**

Fall, spring. 4 credits. Prerequisites ELE E 210 and ELE E 215.

Design of electronic circuits for computers, signal processing, communication, microelectronics, optoelectronics, measurements, and control.

**ELE E 328 Dynamic Systems in Communication and Control**

Spring. 3 credits. Prerequisite: ELE E 301.

Task-driven introduction to discrete-time dynamic system analysis and design, with emphasis on digital communication and control systems. Format is to introduce a particular design task, abstract it to a linear algebra problem, solve it numerically using MATLAB, and study solution in terms of original application. Applications of interest: network and modem echo cancellation for full-duplex transmission, terrestrial microwave radio channel multipath equalization for wireless communication, satellite-tracking antenna azimuth control, and effect of re-transmit protocols on distribution of steady-state communication network flows.

**ELE E 391-392 Junior Electrical and Computer Engineering Project**

Fall, 391; spring, 392. 1-8 credits. Limited to juniors in Engineering.

Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration and submit a Request for Independent Project form to the Electrical Engineering Undergraduate Office.

**ELE E 403 Introduction to Nuclear Science and Engineering (also A&EP 403, M&AE 458, and NS&E 403)**

Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.

For description, see NS&E 403.

**ELE E 407 Quantum Electronics**

Fall. 4 credits. Prerequisite: some previous knowledge of quantum mechanics.

Angular momentum; effective potential; spin states; atom-radiation interaction; oscillator strengths; LCAO; lattice waves; thermal properties of xtals; thermal energy; metals; electron and phonon contributions to specific heat; metallic conductivity; thermal conduction in metals; electron and hole E vs k curves; effective mass; E(k) surface and m\* from cyclotron resonance; k-p expansion; plasma dispersion relation; EM waves in a metal; plasmons; polaritons (TO phonons + EM wave); LST relation; surface and interface plasmons; optical properties of xtals; excitons (Mott-Wannier and Frenkel); polarizability; Landau theory ferroelectric transition; piezoelectricity. Elements of superconductivity: Josephson Junction and the SQUID device. Schottky and Frenkel defects; Schottky barrier;

heterostructures and solid-state lasing; resonant tunnel diode; optical detectors. Conduction in amorphous media.

**ELE E 411 Random Signals in Communications and Signal Processing**

Fall. 3 credits. Prerequisite: ELE E 301 and 310 or equivalent.

Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queueing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

**ELE E 412-413 Hybrid Electric Vehicle**

Spring, 412; fall, 413.

The Cornell Hybrid Electric Vehicle (CUHEV) Project focuses on the design, development, testing, and competition of a Hybrid Electric Vehicle through a team structure. Students work in teams that include powertrain, business, fairing, ergonomics, control, alternate power unit, and suspension. Students are required to design an entire vehicle and to plan and execute its manufacture. The vehicle is competed in a national competition, usually in late May each year. There are two to three design reviews, weekly presentations and team leader meetings in addition to any meetings the teams require to complete the project. There is a team selection process so students interested in the project should contact team leaders or a faculty adviser prior to registering for the course.

**ELE E 415 Global Position System Theory and Design (also M&AE 415)**

Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 303 or permission of the instructor.

A laboratory course using the Global Positioning System as a model for examining space-based engineering systems. The course consists of lectures, laboratories, and a design project. The laboratory is based on a GPS engine development system and covers the navigation solution, receiver design and function, and differential GPS.

**ELE E 423 Computer Methods in Digital Signal Processing**

Spring. 4 credits. Prerequisite: ELE E 301 or ELE E 328; basic knowledge of C/C++ helpful. Satisfies undergraduate computer-applications requirement.

Basic computational techniques used in signal processing and communications. Fast algorithms for multidimensional transforms. Solution of structured systems of linear equations. Algorithms for linear least squares estimation problems. Influence of quantization and finite precision arithmetic on the accuracy of numerical methods. Influence of the architecture of modern microprocessors on the design and performance of numerical algorithms.

**ELE E 425 Digital Signal Processing**

Fall. 4 credits. Prerequisites: ELE E 301, ELE E 302, and ELE E 310.

An advanced course in digital signal processing. Topics include sampling, A/D and D/A conversion, digital filter design and implementation, multirate DSP including sampling rate conversion and filter bank theory, Wiener filtering, spectral estimation, introduction to two-dimensional sampling, and Fourier techniques.

**ELE E 426 Applications of Signal Processing**

Spring. 3 or 4 credits. Prerequisite: ELE E 425.

Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

**ELE E 430 Lasers and Optical Electronics**

Fall. 4 credits with lab; may be taken for 3 credits without lab. Prerequisite: ELE E 303 or equivalent.

An introduction to the operation and application of lasers. Material covered includes diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, laser design. Applications of coherent radiation to nonlinear optics, communication, and research will be discussed.

**ELE E 432 MicroElectro Mechanical Systems (MEMS)**

Spring. 3 credits. Prerequisite: ELE E 315 or permission of instructor.

Introductory course to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS including materials, microstructures, devices and simple microelectromechanical systems, scaling electronic and mechanical systems to the micrometer/nm-scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

**ELE E 433 Microwave Integrated Circuits**

Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: ELE E 303 and ELE E 306.

An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz). Topics include: computer-aided design, automated microwave measurement techniques, optoelectronic applications, and GaAs monolithic microwave integrated circuits. Six two-week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

**ELE E 438 VLSI Digital System Design**

Spring. 4 credits. Prerequisites: ENGRD 231 and ELE E 315.

CMOS VLSI digital system design from both the circuit and system viewpoints. Topics include the CMOS transistor, scalable design rules, design styles, circuit implementation of common digital functional modules, physical layout techniques, system design both for high performance and for low power, timing and interconnect issues, and overall strategy of digital design methodology and testing.

**ELE E 445 Computer Networks and Telecommunications**

Fall. 4 credits. Prerequisites: ELE E 314 (or COM S 314) and a course in probability. Design, analysis, and implementation of computer and communication networks and systems. This is a basic course in networking. Examples of topics that will be covered include data transmission and data encoding, data link control, circuit vs. packet switching, Asynchronous Transfer Mode, local area

network technology, network interconnections, protocol design (OSI and IP), network security, and multimedia. Emphasis will be placed on performance evaluation.

**ELE E 450 Electric Power Systems**

Spring. 3 credits.

The objective is to acquaint the student with modern electric power system operation and control. Aspects of the restructuring of the industry and its implications for planning and operation objectives and methods will be explored. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics, and system protection.

**ELE E 453 Analog Integrated Circuit Design**

Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 315 or equivalent. ELE E 457 recommended as a corequisite.

Overview of devices available to analog integrated-circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and operational transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis will be placed on design-oriented analysis techniques.

**ELE E 457 Silicon Device Fundamentals**

Fall. 4 credits with lab. Prerequisite: ELE E 315 and ELE E 306 or equivalent.

Fundamentals on semiconductor carrier statistics, band diagrams, and transport. The device physics, modeling, simulation, and measurement on pn-junction diodes, Schottky diodes, photodiodes, MOS capacitor, MOSFET, and bipolar transistors (BJT). An emphasis will be put on the MOSFET physics for advanced VLSI technology. Six labs cover detailed IV and CV measurements and modeling on devices in the wafer level and in standard packages.

**[ELE E 462 Artificial Intelligence and Expert Systems for Telecommunication Networks**

Spring. 3 credits. Prerequisite: ELE E 310 or some familiarity with random variables.

May not be offered 2000-2001.

In the last two or three years a surprising number of connections between AI and telecommunications have been identified. Significant discoveries in the area of wireless systems (e.g. a variety of network control algorithms) have been found to be straightforward restatements of old results from the field of Artificial Intelligence. (We may hope that the reverse is the case, as well.) It also is becoming clear that, to provide an acceptable level of performance, the next generation of wireless multimedia systems will need some degree of predictive "cognitive" capacity. This senior/introductory graduate course focuses on the expert system side of AI. It has been designed to provide a foundation in the development and analysis of expert systems with an emphasis on telecommunications engineering applications. The students will develop a background in the theory of expert systems, and then be given an opportunity to apply their knowledge in an area of their choice. Areas of discussion will include: rule-based expert systems, probabilistic systems,

Bayesian networks, and the propagation of evidence.]

#### **ELE E 467 Telecommunication Systems I**

Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 302.

An introduction to modulation and demodulation techniques. Topics include: signal representation and filtering; amplitude modulation (AM); frequency modulation (FM); pulse amplitude modulation (PAM); pulse-code modulation (PCM); channel noise effects; and synchronization.

#### **ELE E 468 Telecommunication Systems II**

Spring. 4 credits. Prerequisite: ELE E 467 or permission of instructor. Suggested prerequisite: ELE E 411.

Fundamentals of digital communications. Topics include: digital source coding, Huffman coding, sampling, quantization, analog source coding; optimum receivers for digital transmission through additive white Gaussian noise (AWGN) channels, matched filters; channel capacity and error control coding; digital transmission through bandlimited AWGN channels, inter-symbol interference (ISI), equalization techniques; phase-locked loops (PLL); trellis-coded modulation (TCM); spread-spectrum communication systems.

#### **ELE E 471 Feedback Control Systems (also CHEME 472 and M&AE 478)**

Fall. 4 credits. Prerequisites: CHEME 372, ELE E 301, M&AE 326, or permission of instructor.

For description, see M&AE 478.

#### **ELE E 475 Computer Architecture**

Fall. 4 credits. Prerequisites: ELE E 314 or COM S 314.

Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchies. Students will learn the issues and tradeoffs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level.

#### **ELE E 476 Digital Systems Design Using Microcontrollers**

Spring. 4 credits. Prerequisite: ELE E 314 or COM S 314 (ELE E 315 strongly recommended).

Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs will design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

#### **ELE E 482 Plasma Processing of Electronic Materials (also MS&E 544)**

Spring. 3 credits. Prerequisites: PHYS 213 and 214 or their equivalents. Offered on demand.

Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas,

collision phenomena, diffusive processes, plasma chemistry, and surface processes. Examples and their applications to electronic materials processing will be discussed in detail.

#### **ELE E 484 Introduction to Controlled Fusion: Principles and Technology (also A&EP 484, M&AE 459, and NS&E 484)**

Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand.

For description, see NS&E 484.

#### **ELE E 486 Electromagnetic Waves and Communication**

Spring. 3 credits. Prerequisite: ELE E 303.

This course is recommended for students who wish to obtain a greater understanding of the fundamentals of guided waves, high data rate electronics and wireless communication. Topics to be covered will include: vector and scalar potentials, transmission lines, waveguides, fiber optics, antenna arrays, and propagation in different environments including interference and diffraction.

#### **ELE E 487 Introduction to Antennas and Radar**

Fall. 3 credits. Prerequisites: ELE E 301 and ELE E 486 (or a grade of B or better in ELE E 303).

Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, aperture antennas and aperture synthesis. Fundamentals of radar, including detection, tracking, Doppler shifts, sampling, range and frequency aliasing. Synthetic aperture radars and remote sensing from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects; radar astronomy techniques.

#### **ELE E 488 RF Circuits and Systems**

Spring. 3 credits. Prerequisites: ELE E 315 or equivalent. 2 design credits. Lab credit.

Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis. Five laboratory sessions.

#### **ELE E 490 Practicum in Systems Engineering**

Spring. 3 credits. 1 credit of Engineering Design.

Concepts involved with bringing an engineered product to reality. The course employs techniques from Systems Engineering along with a knowledge of the Internet, computer networks, microprocessor systems, and semiconductor devices, to create a plan for a specific engineered product: a web-based home security, control, and monitoring device. Students will gain a working knowledge of system design concepts including product cycle, design cycle, product specification, UL safety issues, new product testing, RFI, and product test. We also develop the full details of a business plan through product launch and support. A final team product mock-up is required as are weekly team presentations. Teams must contain students from ELE E, M&AE, OR&IE, and COM S. Each 490 student must also present at least one weekly lecture on an assigned topic.

#### **ELE E 491-492 Senior Electrical and Computer Engineering Project**

Fall, 491; spring, 492. 1-8 credits. Limited to seniors in Engineering.

Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration for this course and submit a request for an independent project form to the Electrical Engineering undergraduate office.

#### **ELE E 495 Introduction to Point and Space Groups (also MS&E 575)**

Fall. 2 credits. S-U grades only. R. L. Liboff.

Topics include definition of groups; classes, subgroups, character tables, bases, irreducible representations, great orthogonality theorem, symmetry group, Cayley's theorem, Young diagrams, cosets and invariant subgroups, the factor group, space groups, translation and crystallographic point groups, the star of  $k$  and the group of  $k$ , and application to solid state and semiconducting materials.

#### **ELE E 498 Global Position System Projects**

Fall, spring. Variable credits. Prerequisite: ELE E 415 or permission of instructor.

Projects using the Global Positioning System or GPS receivers are offered. Projects vary from semester to semester and typically either explore receiver design, hardware issues, or hardware and system performance. Students are welcome to suggest their own projects.

#### **ELE E 495-499 Special Topics in Electrical and Computer Engineering**

1-4 credits.

Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

#### **ELE E 512 Applied Systems Engineering I (also CEE 504, COM S 504, M&AE 591, OR&IE 512)**

Fall. 3 credits. Prerequisite: permission of instructor.

For description, see M&AE 591.

#### **ELE E 513 Applied Systems Engineering II (also CEE 505, COM S 505, M&AE 592, OR&IE 513)**

Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ELE E 512, M&AE 591, or OR&IE 512).

For description, see M&AE 592.

#### **ELE E 515-516 Applied Signal Processing Systems Design**

515, fall; 516, spring. Variable credits.

Project-level design of systems in the area of signal processing and general instrumentation, including digital signal processing hardware, audio, speech, and analog interfacing. Students pursue individual projects and coordinate ideas and resources with other students with related interest.

#### **ELE E 521 Theory of Linear Systems**

Fall. 4 credits. Prerequisite: ELE E 302 or permission of instructor. Recommended: a good background in linear algebra and linear differential equations.

State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization

theory. At the level of *Linear Systems*, by T. Kailath.

#### **ELE E 525 Adaptive Filtering in Communication Systems**

Spring. 4 credits. Required prerequisite: ELE E 328; recommended prerequisite: ELE E 468.

Fundamentals of theory for adaptive filters intended for digital communication systems applications. Wired and wireless communication systems tasks (such as channel equalization, echo cancellation, smart antennas, and interference rejection) are used to motivate adaptive filter design issues of current interest. Assignments will consist of reports on adaptive digital filter algorithms and their simulated evaluation.

#### **ELE E 526 Signal Representation and Modelling**

Spring. 4 credits. Prerequisites: ELE E 425. Sampling and signal reconstruction. Approximation theory. Linear inversion theory. Exponential signal modelling. Multirate filter banks, wavelets, and lifting. Laboratory experiments with speech and image signals.

#### **[ELE E 530 Fiber and Integrated Optics]**

Spring. 4 credits with lab. Prerequisite: ELE E 303 or equivalent. Not offered 2000–2001.

Physical principles of optical waveguides, optical sources and detectors, noise, modulators, and sensing. Wave equation solutions to the mode structure in waveguides, mode coupling, dispersion and bandwidth limitations, optical sources based on semiconductors, detectors and noise, modulation techniques, nonlinear effects in optical waveguides, and optical sensors.]

#### **ELE E 531 Quantum Electronics I**

Fall. 4 credits. Prerequisites: ELE E 306 and 407, or PHYS 443.

A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interaction of radiation and matter, including emission, absorption, scattering, and basic spectroscopic properties of key laser media; theory of the laser, including methods of achieving population inversions, dispersive effects, and laser oscillation spectrum.

#### **[ELE E 533 Semiconductor Lasers]**

Spring. 3 credits. Prerequisites: ELE E 430, ELE E 457, or permission of instructor. Not offered 2000–2001.

Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper will be required.]

#### **[ELE E 535 Semiconductor Physics]**

Fall. 4 credits. Prerequisites: ELE E 457 and 407, or permission of instructor. Not offered 2000–2001.

Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystal structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, surface and interface effects. On the level of *Compound Semiconductor Device Physics* by S. Tiwari.]

#### **ELE E 536 Micro/Nanofabrication Technology**

Spring. 4 credits. 3 credits without lab with permission. Prerequisites: ELE E 453, or ELE E 457 or ELE E 439 or equivalent, or permission of instructor.

Fabrication of ultra-large scale integrated circuits (ULSI), microelectromechanics (MEMS), active matrix liquid crystal displays (AMLCD), and optoelectronic integrated circuits (OEIC). Lithography, diffusion, ion implantation, thin film deposition, etching, metallization, and precision assembly. Process integration for CMOS, BiCMOS, ECL, MEMS, AMLCD's, and OEIC's. Hands-on microfabrication laboratory with full MOS/MEMS process.]

#### **ELE E 537 Electronic System Packaging**

Fall. 4 credits. 3 credits without project with permission of instructor. Prerequisites: ENGRD 231 and ELE E 315 or ELE E 453 or ELE E 457 or ELE E 439 or equivalent or permission of instructor.

Physical integration of circuits, chips, packages, modules, boards, and cabinets into electronic systems. Computer, communication, and wireless systems. Portable, desktop, and cabinet level computers. Handset, base station, and switch level communication systems. Physical architecture; electrical and optical signal distribution; power and ground distribution; signal integrity, electromagnetic interference (EMI), and electromagnetic compatibility (EMC); low power and mixed signal circuit/system design; energy management and cooling; assembly and manufacturing; measurements; computer and wireless system case studies.

#### **ELE E 539 Advanced Digital Integrated Circuits**

Fall and spring. 5 credits. Required prerequisite: ELE E 439.

This course aims to convey a knowledge of advanced concepts on circuit design for digital LSI and VLSI components in state-of-the-art CMOS technologies. Emphasis is on the circuit design, optimization, and layout of either very high speed, high density or low power circuits for use in applications such as microprocessors, signal and multimedia processors, memory and periphery. Special attention will be devoted to the most important challenges facing digital circuit designers today and in the coming decade, being the impact of scaling, deep submicron effects, interconnect, signal integrity, power distribution and consumption, and timing. This year, special attention will be given to the following topics: high performance design techniques, low power design techniques, and the impact of interconnect. This will be reflected in both the lectures and the desired projects.

#### **[ELE E 542 Parallel Processing]**

Spring. 3 credits. May not be offered 2000–2001.

Parallel computer systems that are designed to provide a high computation rate for large specific problems are studied. Topics include computer architecture, interconnection networks, performance characterization, basic algorithms, and parallel programming techniques. Recent multicomputers and massively parallel processors are also discussed.]

#### **[ELE E 546 Introduction to Color Imaging Science]**

Spring. 4 credits. Prerequisite: ELE E 302. Not offered 2000–2001.

An introduction to the acquisition, processing, and display of digital color images. Fundamentals of image formation, color matching functions, color spaces, calibration of scanners, printers, and digital cameras.]

#### **ELE E 547 Computer Vision**

Fall. 4 credits. Prerequisites: ELE E 302 (or COM S 280 and 314) or consent of instructor.

Computer acquisition and analysis of image data with emphasis on techniques for robot vision. This course will concentrate on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms will be required.

#### **[ELE E 548 Digital Image Processing]**

Spring. 3 credits. Prerequisites: ELE E 411, ELE E 425, familiarity with linear algebra. Not offered 2000–2001.

Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration. Special attention is allocated to compression. Equal emphasis will be placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.]

#### **[ELE E 549 Visual Motion Seminar]**

Spring. 1 credit. May not be offered 2000–2001.

This seminar will provide an overview of motion as used in both coding and analysis of digital video, through examination of motion estimation and motion segmentation techniques. Topics include an introduction to digital video, techniques for computing motion, both block-based and pixel-based motion estimation, MPEG motion coding, Hausdorff-based motion estimation, motion-based tracking, and various techniques for motion segmentation. An emphasis will be placed on recent research results.]

#### **ELE E 554 Advanced Analog VLSI Circuit Design**

Spring. 4 credits. Prerequisite: ELE E 453. Advanced analog integrated circuit and system design. Topics will include integrated continuous-time filter design, translinear circuits and systems, dynamic analog techniques, integrated discrete-time filter design, and Nyquist-rate data converter design.

#### **ELE E 558 Compound Semiconductor Electronics**

Spring. 4 credits with lab. Prerequisite: ELE E 457 or equivalent.

Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of

compound semiconductor devices.

**[ELE E 561 Error-Control Codes]**

Spring. 4 credits. Prerequisite: ELE E 301 or ELE E 521 or equivalent. A strong familiarity with linear algebra is assumed. Not offered 2000-2001.

An introduction to the theory of algebraic error-control codes. Topics include: Hamming codes, group codes, the standard array, minimum-distance decoding, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for error-correcting codes. The construction and decoding of Bose-Ray) Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Computer methods for the study of the structure and algorithms for error-control are used.]

**ELE E 562 Fundamental Information Theory**

Fall. 4 credits. Prerequisite: ELE E 310 or equivalent.

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

**ELE E 563 Communication Networks**

Spring. 4 credits. Prerequisite: ELE E 411 or permission of instructor.

Classical line-switched communication networks: point-process models for offered traffic; blocking and queueing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets. Flow control and capacity assignment algorithms, ATM networks.

**ELE E 565 Statistical Signal Processing**

Fall. 4 credits. Prerequisite: ELE E 411.

This course introduces basic theory and techniques in parameter estimation and statistical signal processing. For estimating deterministic parameters, we consider minimum variance unbiased estimation, Cramer-Rao lower bound, linear models, best linear unbiased estimators, maximum likelihood (ML) estimation, least squares methods, recursive estimation, and methods of moments. For estimating random parameters, we discuss minimum mean square error (MMSE) estimation, and maximum a posteriori (MAP) estimation, Wold decomposition and spectral factorization, Wiener and Kalman filters. Finally, as applications of basic estimation theory, we examine channel and signal estimation techniques for digital communications. Applications in array signal processing and frequency estimation are discussed throughout the course.

**ELE E 566 Wireless Networks**

Spring. 4 credits. Prerequisites: ELE E 445 and ELE E 411.

An introductory course in mobile and wireless networks. The course is targeted mainly at the graduate level, but is open to undergraduates as well. The course covers fundamental techniques and protocols in the design and operation of the first, second, and third generation of wireless networks. Examples of related topics include cellular systems, medium access control, control of a mobile session and a mobile call, signaling in mobile networks, mobility management techniques,

common air interfaces (AMPS, IS-136, IS-95, GSM), wireless data (CDPD, Mobitex), satellite communication, ad hoc networks (Bluetooth), Internet Mobility, Personal Communication Services (PCS), etc.

**ELE E 567 Topics in Digital Communications**

Spring. 2 credits. Prerequisites: ELE E 562. Fundamental topics in modern digital communication. Analytical and computational tools required to understand modern data conversion, transmission, and storage systems. Possible topics include: PCM, DPCM, PAM, PSK, FSK, matched filtering, equalization, line codes, trellis codes, Viterbi decoding, applications to audio, video, and magnetic recording. Vector quantization and universal data compression including LZ, LZW, and arithmetic coding, applied to files, speech, images, and video.

**ELE E 568 Mobile Communication Systems**

Spring. 4 credits. Prerequisites: ELE E 411 and ELE E 467; corequisite: ELE E 468. Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include: cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

**ELE E 571 Asynchronous VLSI Design**

Fall. 3 credits. Prerequisite: ELE E 314 or COM S 314.

An introductory course in asynchronous design. The course is targeted at the graduate and advanced undergraduate level. The course will be about the design of clockless digital circuits whose correct operation is relatively independent of delays in gates and wires. Emphasis will be placed on the synthesis of circuits by program transformations. Topics include: circuits as concurrent programs, delay-insensitive design techniques, synthesis of circuits from programs, timing analysis and performance optimization, pipelining, and case studies of complex asynchronous designs.

**ELE E 572 Parallel Computer Architecture**

Spring. 3 credits. Prerequisite: ELE E 475. Principles and tradeoffs in the design of parallel architectures. Emphasis on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

**ELE E 577 Feedforward Neural Networks**

Fall. 4 credits. Prerequisite: ELE E 310. Feedforward neural networks (multi-layer perceptrons) are computing systems formed out of many highly interconnected nonlinear memoryless elements that are arranged in a parallel architecture that is loosely modeled on that of the brain. Our focus is on their roles as pattern classifiers, signal processors, estimators, and forecasters and on their role in communication systems. We explore neural networks through mathematical analyses and extensive simulation studies using MATLAB.

**ELE E 581 Introduction to Plasma Physics (also A&EP 606)**

Fall. 4 credits. Prerequisite: ELE E 303 or equivalent. First-year graduate-level course; open to exceptional seniors.

Plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; elementary applications to space physics, plasma technology, and controlled fusion.

**ELE E 582 Advanced Plasma Physics (also A&EP 607)**

Spring. 4 credits. Prerequisites: ELE E 581 or A&EP 606. Offered on demand.

Boltzmann and Vlasov Equations; dielectric tensor; waves in hot-magnetized plasma; Landau and cyclotron damping; microinstabilities; drift waves, low-frequency stability; test particles, Cerenkov emission; fluctuations; collisional effects; applications.

**[ELE E 583 Electrodynamics]**

Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 304 or equivalent. 3 lecs. May not be offered 2000-2001.

Maxwell's equations, electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Lienard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation. Electrodynamics of dispersive dielectric and magnetic media. At the level of *Classical Electrodynamics*, by Jackson.]

**[ELE E 584 Microwave Theory]**

Spring. 4 credits. Prerequisites: ELE E 301 and 304 or equivalent. 3 lecs, 1 rec. May not be offered 2000-2001.

Theory of passive microwave devices. Modal analysis of inhomogeneous waveguides and cavities. Waveguide excitation, perturbation theory. Nonreciprocal waveguide devices. Scattering matrix analysis of multiport junctions, resonant cavities, directional couplers, circulators. Periodic waveguides, coupled-mode theory.]

**[ELE E 585 Ionospheric and Magnetospheric Physics]**

Fall. 3 credits. Prerequisites: Physics through 214 or equivalent, introductory chemistry, ELE E 486 or equivalent. Not offered 2000-2001.

The structure and dynamics of the ionosphere and magnetosphere; charged particle production, loss and transport; coupling to the neutral atmosphere; ionospheric instabilities; high-latitude currents and plasma convection; solar wind and magnetic storms; particle acceleration processes; waves in the ionosphere and magnetosphere.]

**ELE E 587 Energy Seminar (also NS&E 545 and M&AE 545)**

Fall, spring. 1 credit. May be taken for credit both semesters. For description, see NS&E 545.

**[ELE E 588 Advanced Radio Wave Propagation and Scattering]**

Spring. 3 credits. Prerequisite: ELE E 487 or permission of instructor. Not offered every year; not offered 2000-2001.

Propagation in a plasma (the ionosphere) with a magnetic field, WKB theory (for a slowly varying medium), and full wave theory (near the level of reflection). Theory of scattering from random media, particularly "incoherent"

scattering from a plasma in thermal equilibrium and the radar techniques used to measure the properties of this scatter.]

**ELE E 591 Advanced Device Physics and Device Integration**

Fall. 4 credits. Prerequisites: ELE E 457 and ELE E 535, or permission of instructor.

An integrated study of properties of micro- and nano-scale electronic and optical devices with emphasis on implementation in circuits. Topics include fundamental properties, scaling and limits, effect of design on digital or analog circuit operation, effect of variations, nano-scale quantum and size effects, and unification of the needs of circuits (integration, low power, high speed, high frequency, etc.) with device behavior. Devices include transistors and memories in silicon and silicon-on-insulator, and small optical structures.

**ELE E 593 Bioelectric Signal Analysis and Processing**

Fall. 3 credits. Prerequisites: some knowledge of basic analog circuit design, and a simple, working knowledge of MATLAB.

Measurement and computer-aided analysis of low-level biological signals in the presence of background noise. A/D conversion, filtering, signal conditioning, and data compression techniques will be investigated. The human surface ECG forms the signal source in much of the course, and so basic electrocardiography will be covered. Pattern classification and nonlinear dynamical system analysis will be introduced. Four major team design and analysis projects are required in lieu of examinations.

**ELE E 594 Nonlinear Computation and Applications in Circuits, Signals, and Systems**

Spring. 3 credits. Prerequisites: MATH 293 and MATH 294.

This project-oriented course will familiarize students with the many applications of nonlinear analysis in today's engineering design world. The course will stress concepts in relation to contemporary design problems. Applications to information technologies, neural networks, digital communication systems that use chaos techniques, stability of nonlinear systems, and human ECG arrhythmia analysis and prediction will demonstrate the range of engineering analysis and design situations to which these techniques apply.

**ELE E 595-599 Advanced Topics in Electrical and Computer Engineering**

Fall, spring. 1-4 credits.

Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

**ELE E 597 Wireless Information Seminar**

Spring. 2 credits. Prerequisites/corequisites: ELE E 411, ELE E 445, and ELE E 566.

The purpose of the seminar is to expose the students to new directions in the area of wireless networks. The seminar is a mixture of presentations given by students and other invited speakers. Each student will be required to research in depth a topic and subsequently deliver a talk. The topics will be arranged with the instructor.

**ELE E 598 RF Integrated Circuit Design**

Fall, spring. 4 credits. Prerequisites: ELE E 488, ELE E 453, and ELE E 438 or ELE E 539 are required.

The course aims to convey practical knowledge of advanced concepts related to the

design radio-frequency (RF) integrated circuits in modern silicon and silicon germanium (SiGe) technologies. Emphasis is on the circuit architecture, design, trade-offs, optimization, and layout of RF integrated circuits for use in wireless applications. Special attention will be devoted to the most important challenges facing RF circuit designers today, such as the impact of scaling, deep submicron effects, noise, and power distribution and consumption. Low noise amplifier, power amplifier, and high performance mixer design is also emphasized. The basic components in a transmitter or receiver circuit will be covered as well as how to design and assemble them to form an RF integrated circuit.

**ELE E 599 Wiener and Kalman Filtering**

Fall. 4 credits.

Wiener and Kalman filters both in continuous and discrete time for filtering and smoothing applications. Linear least squares estimates and Wiener filters. The innovations approach. Discrete and continuous-time Kalman filters and derivations using innovations. Steady state behavior. Fast algorithms.

**ELE E 602 Graduate Seminar in Telecommunications and Information Processing**

Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering.

This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for discussion. Student will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

**ELE E 604 Graduate Seminar in RF, Antenna, and Space Science Systems**

Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering.

This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

**ELE E 606 Graduate Seminar in Semiconductor and Microelectromechanical Systems**

Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering.

This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

**ELE E 608 Graduate Seminar in Computer and Digital Systems**

Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering.

This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for

discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

**ELE E 610 Graduate Seminar in Medical Electronics and Analysis Systems**

Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering.

This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

**ELE E 691-692 Electrical and Computer Engineering Colloquium**

Fall, 691; spring, 692. 1 credit each term.

For students enrolled in the graduate field of Electrical Engineering.

Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Reports required.

**ELE E 693-694 Master of Engineering Design**

Fall, 693; spring, 694. 1-8 credits. For students enrolled in the M.Eng. (Electrical) degree program. Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

**ELE E 695-699 Graduate Topics in Electrical and Computer Engineering**

1-4 credits.

Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned. See M.Eng. office for course registration procedure.

**ELE E 791-792 Thesis Research**

Fall, 791; spring, 792. 1-15 credits. For students enrolled in the master's or doctoral program.

## MATERIALS SCIENCE AND ENGINEERING

### Undergraduate Courses

**MS&E 111 Electronic Materials for the Information Age (also ENGRI 111)**

Fall. 3 credits. G. Mallaras.

This is a course in the Introduction to Engineering series. For description, see ENGRI 111.

**MS&E 118 Design Integration: A Portable CD Player (also ENGRI 118 and T&AM 118)**

Spring. 3 credits. W. Sachse.

This is a course in the Introduction to Engineering series. For description, see ENGRI 118.

**MS&E 119 Biomaterials for the Skeletal Systems (also ENGR1 119)**

Fall. 3 credits. D. T. Grubb.

This is a course in the Introduction to Engineering series. For description, see ENGR1 119.

**MS&E 124 Designing Materials for the Computer**

Spring. 3 credits. 3 lectures. C. K. Ober.

This is a course in the Introduction to Engineering series. For description, see ENGR1 124.

**MS&E 204 Materials Chemistry**

Spring. 3 credits. U. B. Wiesner.

This course is designed to give a molecular understanding of materials properties with emphasis on general concepts. In the first part, fundamental concepts of quantum chemistry, group theory, and organic chemistry are outlined reflecting the interdisciplinary nature of materials science. In the second part, examples demonstrate how these concepts are used in current materials research involving nano-biotechnology, organic optoelectronics, self-assembling materials, or nano-ceramics.

**MS&E 206 Atomic and Molecular Structure of Matter**

Spring. 3 credits. S. L. Sass.

Bonding in materials; crystal structures and symmetry; defects. Crystal planes and directions; stereographic projections. Techniques for structural analysis: direct and diffraction methods. X-ray and electron diffraction. Electron microscopy.

**MS&E 261 Introduction to Mechanical Properties of Materials (also ENGRD 261)**

Fall. 3 credits. S. P. Baker.

For description, see ENGRD 261.

**[MS&E 265 Biological Materials and Their Synthetic Replacements**

Fall. 3 credits. Not offered 2000-2001.

From contact lenses and false teeth to arterial implants and hip joints, a tremendous range of synthetic materials are used in contact with the body to replace or supplement natural biological materials. The course will consider a number of biological systems and describe the properties and structure of the natural materials. Requirements for candidate replacement materials will be discussed, with historical and current solutions. These involve material properties such as strength and corrosion resistance as well as toxicity and bio-compatibility. Design constraints, including methods of production, economics, regulatory approval, and legal liabilities will also be considered.]

**MS&E 281 The Substance of Civilization—Materials through the Ages**

Spring. 3 credits. 2 lectures, 1 lab. S. L. Sass.

Materials have enabled revolutionary advances in how we live, work, fight, travel, and play; hence the naming of eras after them—Stone, Bronze, and Iron Ages. This course explores the role of materials in the development of the modern industrial Western civilization by putting technology into a historical context and examining the advances made possible by innovations with materials, starting with the Stone Age. Interconnections between crucial innovations and historical events are identified and explored. Lectures, demonstrations, and hands-on laboratory experiments will

elucidate the origin of the unique properties of materials such as polymers, ceramics, metals, and glass. This course is designed to fulfill the science requirement in the College of Arts and Sciences.

**MS&E 291-292 Research Involvement IIa and IIb**

291, fall; 292, spring. 3 credits each term.

Prerequisite: approval of department. Staff. Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-term affiliation with a research group.

**MS&E 302 Mechanical Properties of Materials, Processing, and Design (also MS&E 582)**

Spring. 3 credits. Prerequisite: MS&amp;E 206.

Corequisite: MS&E 304, or permission of instructor. A. L. Ruoff.

Stress, strain, and the basics of concepts in deformation and fracture for metals, polymers, and ceramics. Analysis of important mechanical properties such as plastic flow, creep, fatigue, fracture toughness, and rupture. Application of these principles to the design of improved materials and engineering structures.

**MS&E 303 Thermodynamics of Condensed Systems (also MS&E 583)**

Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson.

The three laws of thermodynamics are introduced as the fundamental basis for thermal and chemical equilibrium. Statistical mechanics extensions are developed for calculations of entropy and specific heat capacities. These principles are applied to understanding phase equilibria and phase diagrams, heterogeneous reactions, solutions, electrochemical processes, surfaces, and defects.

**MS&E 304 Kinetics, Diffusion, and Phase Transformations (also MS&E 584)**

Spring. 4 credits. Prerequisite: MS&amp;E 303 or permission of instructor. R. Dieckmann.

Introduction to electrochemistry, atomic motion, and diffusion. Applications and design involving nucleation and growth of new phases in vapors, liquids, and solids; solidification, crystal growth, corrosion, recrystallization, gas-metal reactions, and thermomechanical processing to produce desired microstructures and properties. One-third of course involves examples of design and control of processes.

**MS&E 305 Electronic Structure of Matter (also MS&E 585)**

Fall. 3 credits. Prerequisite: MS&amp;E 206 or permission of instructor. J. M. Blakely.

This course covers quantum theory and electronic structure as it applies to electron conduction. Basic principles of wave mechanics. Electrons in crystals. Electronic structure of metals, semiconductors, and insulators. Conductivity of solids: electronic and ionic contributions; effects of an electric field on electrons in periodic potentials; sources of electron scattering, atomic vibrations, and defects.

**MS&E 306 Electronic, Optical, and Magnetic Properties of Materials (also MS&E 586)**

Spring. 3 credits. Prerequisites: MS&amp;E 305 or permission of instructor. Y. Suzuki.

This course covers electrical, optical, and magnetic phenomena that are found in crystalline solid materials. Conduction in metals, semiconductors, and insulators. Design of semiconductor properties by doping. Properties of semiconductor devices (p-n junctions and transistors). Absorption, emission, luminescence. Principles and design of magnetic and superconducting materials for relevant applications. Dielectric properties. Ionic conductivity.

**MS&E 307 Materials Design Concept I**

Fall. 1 credit. C. K. Ober.

For description, see MS&E 407.

**MS&E 391-392 Research Involvement IIIa and IIIb**

391, fall; 392, spring. 3 credits each term.

Prerequisite: approval of department. Staff. For description, see MS&E 291. May be continuation or a 1-term affiliation with a research group.

**MS&E 403-404 Senior Materials Laboratory I and II**

403, fall; 404 spring. 3 credits each term.

D. T. Grubb.

Practical laboratory covering the analysis and characterization of materials and processing. Emphasis on design of experiments for evaluation of materials' properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

**MS&E 405-406 Senior Thesis I and II**

405, fall; 406 spring. 4 credits each term.

D. T. Grubb.

Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty member prior to beginning the senior year. Approved thesis topics will normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Both semesters must be taken to complete the laboratory requirement. This course is required for graduation with honors.

**MS&E 407 Materials Design Concepts II**

Fall. 2 credits. C. K. Ober.

Develops design in the field of materials science using Dieter's *Engineering Design*, Ashby's *Materials Selection in Engineering Design*, and other sources. Innovation, patent searching, and ASTM standards. Speakers from industry and other institutions lecture on case studies of design problems. Students give short oral presentation and written reports. Study includes prior art literature, materials selection, and some modeling, as well as discussion of broader economic, regulatory, environmental, and liability concerns that may arise. In 407, students are required to develop a design-study project.

**MS&E 491-492 Research Involvement IVa and IVb**

491 fall, 492, spring. 3 credits each term.

Prerequisite: approval of department. Staff. For description, see MS&E 291. May be continuation or a one-term affiliation with a research group.

**MS&E 495 Undergraduate Teaching Involvement**

Fall, spring. Variable credit. Staff.  
This course will give credit to students who help in the laboratory portions of ENGR 111, 119 or 124, ENGRD 261 or MS&E 281. The number of credits earned will be determined by the teaching load and will typically be 1–3 credits.

**[MS&E 512 Mechanical Properties of Thin Films]**

Spring. 3 credits. Offered alternate years; not offered 2000–2001. S. P. Baker.  
Mechanical properties which are unique to materials in the form of thin films (typical thickness 1 micrometer and less) and micrometer scale structures. Mechanics of two-dimensional structures. Stress and mechanical property measurement methods in small dimensions. Microstructural development in thin films. Elastic, plastic, and fracture response of films and constrained volumes.]

**MS&E 521 Properties of Solid Polymers**

Fall. 3 credits. Prerequisite: ENGRD 261.  
Corequisite: MS&E 303 or permission of instructor. C. K. Ober.  
Synthetic and natural polymers for engineering applications. Production and characterization of long-chain molecules. Gelation and networks, rubber elasticity, elastomers, and thermosetting resins. Amorphous and crystalline thermoplastics and their structure. Time- and temperature-dependent elastic properties of polymers. Glass transition and secondary relaxations. Plastic deformation and molecular orientation.

**MS&E 523 Physics of Soft Materials**

Fall. 3 credits. Offered alternate years.  
U. B. Wiesner.  
The course will cover general aspects of the structure, order, and dynamics of soft materials. Typical representatives of this class of materials are polymers and liquid crystals and many examples will deal with these materials. After describing structural aspects of different materials, a general formalism for the description of order in terms of orientation distribution functions will be introduced. Examples will be given for the measurement of order parameters for partially ordered materials derived using group theoretical approaches. Finally, the dynamics of soft materials is discussed. Besides transport and flow, behavior aspects of the local dynamics of soft materials are presented. Using examples of modern multidimensional spectroscopic techniques, the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented.

**[MS&E 524 Materials Chemistry of Synthetic Polymeric Materials]**

Spring. 3 credits. Prerequisite: MS&E 521 or permission of instructor. Offered alternate years; not offered 2000–2001. C. K. Ober.  
Preparation of synthetic polymers by step- and chain-growth polymerization: condensation; free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and kinetic aspects of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Special topics will include liquid crystalline polymers, photoreactive, and supermolecular chemistry. At the level of *Principles of Polymerization*, by Odian.]

**[MS&E 525 Organic Optoelectronics]**

Fall. 3 credits. Offered alternate years; not offered 2000–2001. G. G. Malliaras.  
Overview of relevant materials from small aromatic molecules to conjugated polymers. Focuses on optoelectronic properties including photophysics (absorption, emission, photogeneration, recombination), charge transport (doping, hopping, disorder, charge injection), and elements of nonlinear optics. Optoelectronics applications (such as electrophotography, light emitting diodes, lasers, photovoltaic cells, thin film transistors) will also be discussed.]

**[MS&E 531 Introduction to Ceramics]**

Fall. 3 credits. Offered alternate years; not offered 2000–2001.  
Ceramic processes and products, crystal structures, structure of glasses, point defects (point-defect chemistry and relation to non-stoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids: heterogeneous reactions, reactions between different solids, point-defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.]

**[MS&E 532 Glass, Ceramic, and Glass-Ceramic Materials: Critical Components in Technologies]**

Spring. 3 credits. Offered alternate years; not offered 2000–2001.  
Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photosensitive materials, and powder processing and sintering of ceramics will be discussed. Course taught with industrial participation.]

**[MS&E 541 Microprocessing of Materials]**

Fall. 3 credits. Offered alternate years; not offered 2000–2001. D. G. Ast.  
Materials and processing steps involved in the production of integrated circuits and other microdevices. Science, engineering, and design of processes to produce a specific device, such as a DRAM or CMOS inverter. Emphasis is on silicon, with extensions to compound semiconductors. All fabrication steps are considered, from single crystal growth and wafer production, to characterization, testing, and yield calculations. Major topics are thermal oxidation of silicon; chemical vapor deposition of thin films; diffusion; ion implantation; resists, and the principles of lithography using UV, electrons, X-rays; and wet/dry etching.]

**MS&E 542 Materials Design in Electronic Packaging**

Spring. 3 credits. Staff.  
Design, materials, and manufacturing needs for packaging technology from chip to board. Principles involved in key areas of materials science and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

**MS&E 543 Thin-Film Materials Science**

Fall. 3 credits. Offered alternate years.  
D. G. Ast.  
This course is a fundamental approach to thin-film science that will cover deposition of films,

growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and interdiffusion and reaction in thin films. The course will begin with the structure and thermodynamics of surfaces and ultrathin films. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, metallic silicides, and aluminides will be presented.

**MS&E 544 Plasma Processing of Electronic Materials (also ELE E 482)**

Spring. 3 credits. Prerequisites: PHYS 213 and 214 or their equivalents. Offered on demand.  
For description, see ELE E 482.

**MS&E 545 Magnetic Materials**

Fall. 3 credits. Prerequisites: PHYS 213 and 214, or equivalent. Offered alternate years.  
Y. Suzuki.

This course covers the fundamentals of magnetic phenomena and specific magnetic materials and their use in modern applications. Magnetization phenomena, the origin of magnetism in a material, magnetic domains, and magnetic anisotropy will be included in the fundamentals. Specific magnetic materials and their applications include: ferromagnetism in thin films and fine particles, amorphous magnetic materials; magnetic recording, magnetic circuits.

**MS&E 555 Introduction to Composite Materials (also CEE 475, M&AE 455, and T&AM 455)**

Spring. 4 credits.  
For description, see T&AM 455.

**MS&E 563 Nanobiotechnology (also A&EP 663 and BIO G 663)**

Spring. 3 credits.  
For description, see A&EP 663.

**MS&E 571 Physics of Modern Materials Analysis**

Spring. 3 credits. D. T. Grubb.  
Survey of modern analytical techniques used to determine composition and structure of near-surface and bulk materials. Interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation. Techniques covered include ion scattering, Auger electron spectroscopy, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, and X-ray techniques. Selection and design of experiments.

**MS&E 575 Introduction to Point and Space Groups (also ELE E 495)**

Fall. 2 credits. S-U grades only. R. L. Liboff.  
For description, see ELE E 495.

**Graduate Professional Courses****MS&E 501-502 Special Project**

501, fall; 502, spring. 6 credits each term.  
Master of Engineering research project.

**MS&E 582 Mechanical Properties of Materials, Processing, and Design (also MS&E 302)**

Spring. 3 credits. Corequisite: MS&E 584, or permission of instructor. A. L. Ruoff.  
For description, see MS&E 302.

**MS&E 583 Thermodynamics of Condensed Systems (also MS&E 303)**

Fall. 4 credits. M. O. Thompson.  
For description, see MS&E 303.

**MS&E 584 Kinetics, Diffusion, and Phase Transformations (also MS&E 304)**

Spring. 4 credits. Prerequisite: MS&E 583 or permission of instructor. R. Dieckmann.  
For description, see MS&E 304.

**MS&E 585 Electronic Structure of Matter (also MS&E 305)**

Fall. 3 credits. J. M. Blakely.  
For description, see MS&E 305.

**MS&E 586 Electronic, Optical, and Magnetic Properties of Materials (also MS&E 306)**

Spring. 3 credits. Prerequisite: MS&E 585 or permission of instructor. Y. Suzuki.  
For description, see MS&E 306.

**Graduate Core Courses****MS&E 601 Thermodynamics of Materials**

Fall. 3 credits. Prerequisite: course in thermodynamics at level of MS&E 303.  
M. O. Thompson.

Basic statistical thermodynamics, partition functions and thermodynamic state functions, distributions, laws of thermodynamics, free-energy functions and conditions of equilibrium, chemical reactions, statistics of electrons in crystals, heat capacity, heterogeneous systems and phase transitions, and lattice models of 1-, 2-, and 3-dimensional interacting systems. Statistical thermodynamics of alloys, free-energy and phase diagrams, order-disorder phenomena, point defects in crystals, and statistical thermodynamics of interfaces.

**MS&E 602 Elasticity, Plastic Flow, and Fractures**

Spring. 3 credits. Offered alternate years.  
S. P. Baker.

Micromechanical modeling of mechanical behavior. A materials-science approach to modeling combines concepts from continuum mechanics, thermodynamics, kinetics, and atomic structure. Topics include: elastic properties of crystals, deformation mechanisms from ambient temperature to very high temperature over a wide range of strain rates, fracture in brittle materials, fracture in ductile materials, fracture at elevated temperatures, crack tip phenomena, and composite materials.

**MS&E 603 Analytical Techniques for Materials Science (also MS&E 571)**

Spring. 3 credits. D. T. Grubb.  
For description, see MS&E 571.

**MS&E 604 Kinetics of Reactions in Condensed Matter**

Fall. 3 credits. A. L. Ruoff.  
Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in metallic and ionic solids. Phase stability and transformations; nucleation and growth, spinodal decomposition and displacive transformations. Phase coarsening processes, recrystallization, and grain growth. Diffusion-controlled growth, interfacial reactions, moving boundary problems. Grain-boundary migration controlled kinetics. At the level of *Diffusion in the Condensed State*, by Kirkaldy and Young.

**Related Course in Another Department**

Introductory Solid-State Physics (PHYS 454)

**Further Graduate Courses****MS&E 621 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 607)**

Spring. 4 credits. Prerequisite: CHEM 605 or permission of instructor. F. DiSalvo.  
For description, see CHEM 607.

**MS&E 622 Synthetic Polymer Chemistry (also CHEM 675 and CHEM 671)**

Spring. 4 credits. Prerequisites: CHEM 359-360 or equivalent or permission of instructor.  
For description, see CHEM 671.

**[MS&E 631 Solid-State Reactions]**

Fall. 3 credits. Offered alternate years; not offered 2000-2001. R. Dieckmann.  
Point defects (thermal disorder, component-activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, grain boundaries transport in solids (definition and different types of diffusion coefficients, reference frames, mechanisms of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes, Fick's laws), point-defect relaxation (migration controlled, phase-boundary-reaction controlled), interdiffusion, solid-state reactions involving compound formation (oxidation of metals, reactions between solids), demixing of materials in potential gradients, and selected solid-state processes (internal reactions, etc.).]

**[MS&E 632 Solid State Electrochemistry]**

Fall. 3 credits. Prerequisite: MS&E 631 or permission of instructor. Not offered 2000-2001.

Disorder in solids; thermodynamic quantities or quasi-free electrons and electron defects in semiconductors; mobility, diffusion, and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes, and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations; technical applications of solid electrolytes. At the level of *Electrochemistry of Solids* by H. Rickert.]

**MS&E 655 Composite Materials (also M&AE 655 and T&AM 655)**

Spring. 4 credits.  
For description, see T&AM 655.

**MS&E 671 Principles of Diffraction (also A&EP 711)**

Spring. 3 credits. Letter grades only.  
J. D. Brock.  
For description, see A&EP 711.

**[MS&E 672 Transmission Electron Microscopy]**

Spring. 3 credits. Prerequisite: MS&E 206 or equivalent. Offered alternate years; not offered 2000-2001. S. L. Sass.

This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include microscope optics and conventional and high resolution image formation. Special emphasis is placed on electron diffraction (formation and analysis of spot patterns, Kikuchi patterns, and convergent beam patterns), and obtaining useful images of crystal defects. Practical

requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, the contrast transfer function theory of phase contrast, and image modeling and image analysis for quantitative interpretation of data. Current text is *Transmission Electron Microscopy* by D. B. Williams and C. B. Carter.]

**MS&E 681 Surfaces and Interfaces in Materials**

Spring. 3 credits. Offered alternate years.  
J. M. Blakely.

This course deals with special topics in the field of surface and interface science. Some knowledge of basic statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes will be assumed. The following are the main topics: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface steps, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation, and other surface reactions.

**Specialty Courses****MS&E 800 Research in Materials Science**

Fall, spring. Credit to be arranged. Staff.  
Independent research in materials science under the guidance of a member of the staff.

**MS&E 801 Materials Science and Engineering Colloquium**

Fall and spring. 1 credit each term. Credit limited to graduate students. Staff.  
Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

**MS&E 802 Materials Science Research Seminars**

Fall, spring. 2 credits each term. For graduate students involved in research projects. Staff.  
Short presentations on research in progress by students and staff.

**MECHANICAL AND AEROSPACE ENGINEERING****General and Required Courses****M&AE 101 Naval Ship Systems**

For description, see NAV S 202.

**M&AE 102 Drawing and Engineering Design (also ENGRG 102)**

Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to 32 students each half term. Recommended for students without previous mechanical drawing experience. Letter grades required for students majoring in M&AE; S-U grades optional for all others.

For description, see ENGRG 102.

**M&AE 117 Introduction to Mechanical Engineering (also ENGRG 117)**

Fall or spring, to be determined. 3 credits. 2 lectures and 1 lab per week.

This is a course in the Introduction to Engineering series. For description, see ENGR1 117.

**M&AE 127 Introduction to Entrepreneurship and Enterprise Engineering (also ENGR1 127)**

Spring. 3 credits.

This is a course in the Introduction to Engineering series which provides a solid introduction to the entrepreneurial process to students in engineering. For description, see ENGR1 127.

**M&AE 212 Mechanical Properties and Processing of Engineering Materials**

Spring. 4 credits. Prerequisite: ENGRD 202.

Introduction to the broad range of mechanical behavior of materials and their processing; atomic bonding and crystalline structures; point and line defects, plastic deformation of crystals and polycrystals; hardening behavior and basic elements of plasticity; equilibrium microstructural development and time-dependent phase transformations; bulk deformation processes; the ideal work and slab analysis methods; failure of materials; materials selection.

**M&AE 221 Thermodynamics (also ENGRD 221)**

Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 192 and PHYS 112.

For description, see ENGRD 221.

**M&AE 225 Mechanical Synthesis**

Spring. 3 credits. Prerequisite: ENGRD 202. Pre- or corequisites: ENGRD 203 and ENGRD 221. Lab fee.

A hands-on introduction to the mechanical design process. Basic prototyping skills developed using machine tools. Mechanical dissection used to demonstrate successful product design and function. Design projects provide experience from conceptualization through prototype construction and testing.

**M&AE 323 Introductory Fluid Mechanics**

Fall. Usually offered in Engineering Cooperative Program also. 4 credits. Prerequisites: ENGRD 202 and 203 and coregistration in 221, or permission of instructor.

Physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers, introduction to compressible flow.

**M&AE 324 Heat Transfer**

Spring. May also be offered in Engineering Cooperative Program. 3 credits. Prerequisite: M&AE 323 or permission of instructor.

Topics include conduction of heat in steady and unsteady situations; surfaces with fins and systems with heat sources; forced and natural convection of heat arising from flow around bodies and through ducts; heat exchangers; emission and absorption of radiation; and radiative transfer between surfaces.

**M&AE 325 Mechanical Design and Analysis**

Fall. Usually offered in Engineering Cooperative Program also. 4 credits. Prerequisites: ENGRD 202, ENGRD 203, M&AE 212, and M&AE 225. Lab fee.

Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

**M&AE 326 System Dynamics**

Spring. May be offered in Engineering Cooperative Program. 4 credits. Prerequisite: MATH 294, ENGRD 203. Junior standing required.

Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.

**M&AE 427 Fluids/Heat Transfer Laboratory**

Fall. 3 credits. Prerequisites: M&AE 323, 324. Fulfills the technical writing requirement.

Laboratory exercises in methods, techniques, and instrumentation used in fluid mechanics and the thermal sciences. Measurements of temperature, heat transfer, viscosity, drag, fluid-flow rate, effects of turbulence, air foil stall, two-phase flows, and engine performance. Biweekly written assignments.

**M&AE 428 Seminar on Engineering Design**

Fall. 2 credits. Prerequisite: completion of 6 semesters in mechanical engineering or equivalent. S-U grades only.

This course is offered to illustrate the design 'process' in action. It consists of seminars by industrial and academic practitioners of design. Case studies are presented in weekly invited lectures from a wide range of disciplines, including thermo-fluid processes, manufacturing, energy, mechanical design, aerospace, and biological sciences. The invited lectures are supplemented by one or more design 'projects' in the semester, such as a competition to design an all-balsa indoor hand or catapult-launched glider for maximum duration.

**M&AE 591 Applied Systems Engineering I (also CEE 504, COM S 504, ELE E 512, OR&IE 512)**

Fall. 3 credits. Prerequisite: permission of instructor.

Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations, and the system life cycle.

**M&AE 592 Applied Systems Engineering II (also CEE 505, COM S 505, ELE E 513, OR&IE 513)**

Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ELE E 512, M&AE 591, or OR&IE 512).

An advanced course in the application of the systems engineering process to the design and operation of complex systems. It focuses on the descriptive and analytical tools of systems engineering including schematic databases, dynamic optimization, discrete event simulation, and risk analysis. Students work in teams on projects including space transportation and electric power systems design.

**Mechanical Systems, Design, Materials Processing, and Precision Engineering**

**M&AE 386 Automotive Engineering**

Spring. 3 credits. Prerequisite: M&AE 325 or permission of instructor.

Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles, trucks, and related vehicles. Power plant, drive line, brakes, aerodynamics, suspension, and structure. Other types of vehicles may be considered.

**[M&AE 412 Smash and Crash: Mechanics of Large Deformations]**

Fall. 4 credits. Prerequisites: M&AE 212, T&AM 202. Fulfills field design requirement. Not offered 2000-2001.

Severe loading is a defining feature of both materials processing and crash worthiness. Materials intentionally are stressed beyond their elastic limits, resulting in deformations that are not reversible. In materials processing, the desire is to change the shape to manufacture components; in crash worthiness, it is to absorb the vehicle's energy. In this course the fundamentals of plasticity are covered: yielding, flow laws, work hardening. Various solution methods, including bound theorems, are presented. The fundamentals are applied to localization, primary and secondary forming operations, and plastic buckling. Laboratory experiments deal with these topics and conclude with the individual design, construction, and testing of a crash cage.)

**M&AE 415 Global Position System Theory and Design (also ELE E 415)**

Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 303 or permission of instructor.

For description, see ELE E 415.

**M&AE 417 Introduction to Robotics: Dynamics, Control, Design**

Spring. 3 credits.

Introductory course in the analysis and control of mechanical manipulators. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators, trajectory control, and compliant motion control. Several experiments with a five axis manipulator arm as well as simulation and design using MATLAB and multibody codes will be used.

**M&AE 425 FSAE Automotive Design Project**

Fall, spring. 3 or 4 credits. Permission of instructor only.

Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems. Intended for M&AE or ELE E juniors and seniors, or by arrangement with instructor. (Usually 3 credits.)

**M&AE 426 FSAE Auto Design Project (Design Option)**

Fall, spring. 3 or 4 credits. Limited to M&AE seniors; permission of instructor only.

Senior design version of M&AE 425. For description, see M&AE 425.

**M&AE 440 Hybrid Electric Vehicle**

Fall, spring. 3 credits for team members; 4 credits for team leaders. Enrollment limited to a maximum of 4 semesters. Permission of instructor only.

Team work on the design and fabrication of a hybrid vehicle for national competition.

**M&AE 441 Hybrid Electric Vehicle (Design Option)**

Fall, spring. 3 or 4 credits. Limited to M&AE seniors; permission of instructor only.

Senior design version of M&AE 440. For description, see M&AE 440.

**M&AE 455 Introduction to Composite Materials (also CEE 475, MS&E 555, and T&AM 455)**

Spring. 4 credits.

For description, see T&AM 455.

**M&AE 461 Entrepreneurship for Engineers (also ENGRG 461)**

Fall. 3 credits. Enrollment open to upper class engineers; others with permission of instructor.

This course will examine issues and skills necessary to identify, evaluate, and start new business ventures. Topics include competition, strategy, writing a business plan, intellectual property, technology forecasting, product design and development, sources of capital, and manufacturing. Cases and guest lecturers will provide material for analysis and class discussion.

**[M&AE 463 Neuromuscular Biomechanics]**

Spring. 3 credits. Prerequisites: ENGRD 202 and 203, or permission of instructor.

Offered alternate years; not offered 2000-2001.

Modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Physiology of neurons and muscles introduced and related to the production of force and movement in biological systems. Representation of neuromuscular systems as simultaneous equations. Exploration of the muscular redundancy problem using optimization methods and general-purpose languages (such as *Mathematica* or *MATLAB*). Selected clinical applications.]

**M&AE 464 Orthopaedic Tissue Mechanics**

Spring. 3 credits. Prerequisites: ENGRD 202 and M&AE 325 or permission of instructor. Offered alternate years.

Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon introduced and related to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.

**[M&AE 469 Stress Analysis for Mechanical and Aerospace Design]**

Fall. 3 credits. Prerequisites: T&AM 202 and M&AE 325 or permission of instructor. Evening examinations. Not offered 2000-2001.

Study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to analysis and design of mechanical and aerospace systems and components. Review of mechanics fundamentals and their application to classical problems. Introduction to modern computational methods (such as the finite element method) for analysis of stress and deformation.]

**M&AE 470 Finite Element Analysis for Mechanical and Aerospace Design**

Spring. 3-4 credits. (4 credits as M&AE design elective for M&AE seniors) Prerequisite: senior standing or permission

of instructor. Evening examinations. Term project. Fulfills computer applications requirement for M&AE students.

Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Prediction of load, deflection, stress, strain, and temperature distributions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as *intuitive FEM* and *ANSYS*). Selected mechanical and aerospace applications.

**M&AE 478 Feedback Control Systems (also CHEME 472 and ELE E 471)**

Fall. 4 credits. Prerequisites: one of the following: CHEME 372, ELE E 301, M&AE 326, or permission of instructor.

Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes. Includes laboratory that examines modeling and control of representative dynamic systems.

**M&AE 479 Modeling and Simulation of Mechanical and Aerospace Systems (also M&AE 579)**

Fall. 3 or 4 credits. Prerequisite: senior engineering standing or permission of instructor. Evening examinations. Fulfills M&AE design elective if taken for 4 credits. Fulfills computer applications requirement for M&AE students. Limited enrollment of M&Eng. students by permission of instructor only. F. Valero-Cuevas.

Analysis and simulation of linear and nonlinear systems. Representation of discrete and distributed dynamical systems by state-variable models. Time- and frequency-domain simulation via general-purpose languages (such as *MATLAB* or *Mathematica*) and special-purpose simulation software (such as *Simulink*). Selected applications from diverse fields.

**M&AE 486 Automotive Engineering Design**

Spring. 4 credits. Prerequisite: senior standing. Fulfills field design requirement. For description, see M&AE 386.

**M&AE 514 Design for Manufacture and Assembly**

Fall. 3 or 4 credits; (4 credit option provides design credit for M&AE seniors). Prerequisites: ENGRG 102 and M&AE 212 or 412, and introductory probability and statistics, or permission of instructor.

Nominal DFMA (Design for Manufacture & Assembly) and variational DFMA are covered in two parallel streams. The nominal stream is based on readings in a popular text that surveys the characteristics of manufacturing and assembly processes that influence the design of parts and products. The second stream, covered through lectures and diverse reading, addresses dimensional variability and its control through parametric and geometric tolerances, dimensional metrology, and aspects of statistical quality and process control.

**M&AE 525 Mechatronics Systems Engineering Project**

Fall, spring. 4 credits each term (must be taken for 8 credits). Limited enrollment; engineering seniors and Master of Engineering students only. Corequisite: Applied Systems Engineering I or permission of instructor. Fulfills Master of Engineering project requirement, Systems Engineering Option project requirement, and undergraduate design elective.

Project-based introduction to systems engineering with a focus on system design, systems and technology integration, and systems analysis. Approximately 30 students from the various engineering disciplines will design, construct, and fully test several teams of fully autonomous, mobile robots. These teams will engage in head to head competitions at the end of the spring semester. There will be approximately six lectures per semester, and weekly group meetings with the instructor. The project involves vehicle design, real-time feedback control and trajectory generation, microprocessor design and implementation, wireless communication, computer vision, and artificial intelligence.

**[M&AE 565 Biomechanical Systems—Analysis and Design]**

Fall. 3 or 4 credits. Prerequisites: undergraduate courses in dynamics and strength of materials, (e.g. T&AM/ENGRD 202 and 203) and senior standing, graduate standing, or permission of instructor. Not offered 2000-2001.

Selected topics from the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering, especially bone-implant systems.]

**M&AE 570 Simulation of Mechanical and Aerospace Systems (also M&AE 470)**

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening examinations. Term project.

Graduate version of M&AE 470. For description, see M&AE 470.

**M&AE 571 Applied Dynamics**

Fall. 3 credits. Prerequisites: graduate standing, seniors with T&AM/ENGRD 203, M&AE 326 or permission of instructor. 2 lectures.

Introduction to multibody dynamics; dynamics of rigid bodies; Newton-Euler methods, Lagrangian dynamics, principle of virtual power (Kane-Jourdain methods); applications to robotics, space dynamics of satellites, electro-mechanical systems.

**M&AE 579 Modeling and Simulation of Mechanical and Aerospace Systems**

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening examinations. Term project. For description, see M&AE 479.

**M&AE 612 Materials Processing: Theory and Applications**

Fall. 4 credits. Prerequisite: graduate standing, or permission of instructor.

Basic principles governing the inelastic behavior of solids. Slab-analysis models and bound theorems for problems of forging, extrusion, and rolling. Analysis of sheet-metal forming including limit diagrams and springback. Defect initiation during forming processes. Basic solidification processes. Morphological instability of a solid/liquid interface, solidification microstructures, solute

redistribution, microsegregation, and macrosegregation. Thermomechanical defects in casting processes. Rapid solidification microstructures. Behavior and forming of metal alloys in the semisolid state.

**[M&AE 613 Computational Methods in Materials Processing]**

Spring. 4 credits. Prerequisite: M&AE 612 or permission of instructor. Not offered 2000–2001.

Thermodynamic framework for inelastic constitutive models, temperature and rate dependence, phenomenology of plastic deformation. The finite-element method for rigid plastic flow analysis of extrusion, drawing, forging, rolling, and plate bending. Integration of viscoplastic models, geometry updating, boundary conditions, friction at tool/workpiece interface, modeling of incompressibility, iterative process, and applications to process design. Comparison of the flow formulation with an elasto-plastic analysis. Analysis of hot forming processes. Procedures for heat-transfer analysis. Preform design. Modeling of plastic anisotropy with applications to sheet forming. Modeling of heat flow and deformation on casting processes.]

**M&AE 615 Experiments in Materials Processing**

Fall. 4 credits. Prerequisite: M&AE 680 (finite elements) or permission of instructor.

This course will focus on experiments and simulations related to the mechanical properties of materials and materials processing. A general introduction to sensors and instrumentation for engineering measurements will also be included. Testing for mechanical properties/model parameter characterization and simple boundary value problems: linear elasticity, inelastic deformation, fatigue, and fracture, including rate and temperature effects. Process simulation experiments including forging, extrusion, rolling, and ironing may also be conducted. In addition, an emphasis will be placed on the experiment/simulation interface. Students will perform analyses including finite element modeling to correlate and predict materials behaviors observed in the experiments. These analyses include linear elasticity behavior, state variable plasticity modeling, and fracture mechanics.

**M&AE 655 Composite Materials (also MS&E 655 and T&AM 655)**

Spring. 4 credits.  
For description, see T&AM 655.

**M&AE 663 Advanced Topics in Neuromuscular Biomechanics**

Spring. 3 credits. Permission of instructor only. Offered alternate years.  
F. Valero-Cuevas.

Advanced topics in modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Mathematical representation of the functional interactions among neurons, muscles, and skeletal structures. Numerical prediction of force and movement in biological systems, and exploration of muscle coordination using optimization methods and general-purpose languages (such as Mathematica or MATLAB). Project-based investigation of clinically relevant topics.

**[M&AE 664 Mechanics of Bone]**

Spring. 3 credits. Prerequisites: graduate standing or permission of instructor.  
Offered alternate years; not offered 2000–2001.

This course will focus on current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechanics.]

**[M&AE 676 Model-Based Estimation]**

Fall. 3 credits. Prerequisites: linear algebra, differential equations, and MATLAB programming. Open to M.S./Ph.D.; others by permission of the instructor. Not offered 2000–2001.

This course covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured. The two main estimation methods that are presented are (a) least-squares estimation for general problems and (b) Kalman filtering for dynamic systems problems. Techniques for linear models are taught as are techniques for nonlinear models. Both theory and application are presented. The course includes a final programming project.]

**M&AE 677 Robust and Optimal Control**

Spring. 4 credits. Prerequisite: M&AE 478/ELE E 471/CHEME 472 (or equivalent), ELE E 521 (or equivalent), graduate standing, or permission of instructor.

An introduction to model based control of multi-input, multi-output systems. Emphasis on design techniques which result in closed loop systems that are insensitive to modeling errors and which achieve a pre-specified level of performance. Topics include  $L_p$  spaces and performance measures, model reduction and approximation,  $H_2$  and  $H_\infty$  optimal control, explicit models of system uncertainty, and the analysis of uncertain control systems. Most of the design and analysis tools developed in the course are in the form of linear matrix inequalities, or semidefinite programs. Each student will be expected (1) to give a presentation on a research paper, which will be chosen from a list provided by the instructor, OR (2) to complete a design project applying the techniques developed in the course.

**M&AE 680 Finite Element Analysis (also CEE 772 and T&AM 666)**

Fall. 3 credits. Prerequisites: T&AM 663 or equivalent.

Conceptual, theoretical, and practical bases for finite element analysis in engineering, with emphasis on structural, mechanical, and thermal problems. Focuses on the FEM as a method for numerically solving partial differential equations. Topics include: strong and weak problem forms; weighted-residual and variational formulations; formulation of elliptic, parabolic, hyperbolic, and eigenvalue problems; convergence and error estimation; and various kinds of elements. Also, an introduction to boundary element and mesh-free methods.

**Energy, Fluids, and Aerospace Engineering**

**M&AE 305 Introduction to Aeronautics**

Fall. 3 credits. Prerequisite: T&AM/ENGRD 203; limited to upperclass engineers, others with permission of instructor.

Introduction to aerodynamic design of aircraft. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Description and performance of reciprocating and jet propulsion engines; propeller theory. Design analyses focus on transonic passenger airplanes and small supersonic jets.

**M&AE 306 Spacecraft Engineering**

Spring. 3 credits. Upperclass engineering students.

Introduction to spacecraft design from launch, through orbital operation, to reentry. Topics covered include space missions, space environment, orbital mechanics, rocket theory, and reentry. Emphasis on satellites orbiting the Earth. Several guest lectures on current problems and trends in spacecraft operation and development.

**[M&AE 400 Components and Systems: Engineering in a Social Context (also S&TS 400)]**

Spring. 3 credits. Prerequisites: upperclass standing, 2 years of college physics. Serves as an approved elective but not as a field elective in mechanical engineering.  
Offered alternate years; not offered 2000–2001.

This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), supersonic transport, and the automobile and its effect on the environment, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.]

**[M&AE 401 Components and Systems: Engineering in a Social Context]**

Spring. 4 credits. Prerequisites: senior standing, 2 years of college physics. Fulfills field design requirement. Offered alternate years; not offered 2000–2001.  
For description, see M&AE 400.]

**M&AE 423 Intermediate Fluid Dynamics**

Spring. 3 credits. Prerequisite: M&AE 323. This course builds on the foundation of M&AE 323. Emphasis will be both on the calculation of real flows (both engineering and environmental) and fundamental principles. Topics covered will include some exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, stratified and rotating flows, fluid instabilities, turbulence, and chaos.

**M&AE 449 Combustion Engines**

Spring. 3 credits. Prerequisites: ENGRD 221 and M&AE 323.

Introduction to combustion engines, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, ideal-cycle analyses, deviations from ideal processes, engine breathing, combustion knock. Formation and control of undesirable exhaust emissions.

**M&AE 458 Introduction to Nuclear Science and Engineering (also A&EP 403, ELE E 403 and NS&E 403)**

Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.

For description, see NS&E 403.

**M&AE 459 Introduction to Controlled Fusion: Principles and Technology (also A&EP 484, ELE E 484, and NS&E 484)**

Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand.

For description, see NS&E 484.

**[M&AE 506 Aerospace Propulsion Systems]**

Spring. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Offered alternate years; not offered 2000-2001.

Application of thermodynamic and fluid-mechanic principles to design and performance analysis of aerospace systems. Jet propulsion principles, including rockets. Electric propulsion. Future possibilities for improved performance.]

**M&AE 507 Dynamics of Flight Vehicles**

Spring. 3 credits. Prerequisites: M&AE 305 and M&AE 323 or permission of instructor. Offered alternate years.

Introduction to stability and control of atmospheric-flight vehicles. Review of aerodynamic forces and methods for analysis of linear systems. Static stability and control. Small disturbance equations of unsteady motion. Dynamic stability of longitudinal and lateral-directional motions; transient response. At the level of *Dynamics of Flight: Stability and Control* by Etkin.

**M&AE 543 Combustion Processes**

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.

An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Thermochemistry, kinetics, vessel explosions, laminar premixed and diffusion flames, droplet combustion, and combustion of solids.

**M&AE 601 Foundations of Fluid Dynamics and Aerodynamics**

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

Foundations of fluid mechanics from an advanced viewpoint, including formulation of continuum fluid dynamics; surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids; sound waves, viscous flows, boundary layers, and potential flows.

**M&AE 602 Fluid Dynamics at High Reynolds Numbers**

Spring. 4 credits. Prerequisite: M&AE 601.

Navier-Stokes and Euler equations, integral formulas for fluid forces and moments on immersed bodies in compressible and incompressible viscous flows. Vorticity dynamics in compressible flows, Kelvin's theorem. Fjortoft's theorem, Helmholtz decomposition of vector fields. Singularities, vortex filaments, vortex sheets, Biot-Savart relations. Irrotational motion: representations

in terms of velocity or vector potentials. Topology of flows; general results in potential theory.

**[M&AE 603 Compressible Fluid Dynamics]**

Fall. 4 credits. Graduate standing or permission of instructor. Not offered 2000-2001.

Fundamentals of compressible gas dynamics are described using thermodynamics and fluid properties, together with isentropic and viscous and inviscid flow theories; normal and oblique shock-waves; Prandtl-Meyer expansion fans; sound waves and acoustics; and duct flows including effects of area, friction, and heat interaction. Applications include high-speed aerodynamics, including hypersonics combustor design.]

**M&AE 608 Physics of Fluids**

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

Behavior of a gas is considered at the microscopic level. Introduction to kinetic theory: velocity distribution, collisions, Boltzmann equation. Quantum theory: postulates of quantum mechanics, internal structure, rigid rotator, harmonic oscillator, one-electron atom. Statistical mechanics: partition functions, relation to thermodynamics, calculations of thermodynamic properties. Chemical rate processes.

**M&AE 636 Elements of Computational Aerodynamics**

Fall. 4 credits. Prerequisites: graduate standing and a graduate-level course in fluid mechanics.

Topics relevant to numerical solution of problems in aerodynamics and fluid mechanics. Analysis and application of computational techniques appropriate for solution of inviscid or high Reynolds number fluid flow problems. Course has common lectures with M&AE 736, but is more applications oriented and uses commercial software for all computational exercises.

**M&AE 643 Laminar Flames**

Spring. 2 credits. Prerequisite: graduate standing or permission of instructor.

Laminar flames are of practical importance in combustion systems, and they provide a complex example of laminar reactive flows. This course examines the behavior of laminar flames and the chemical and transport processes involved. The emphasis of the course is on using computational tools to calculate flame properties. The topics covered include thermodynamic equilibrium, chemical kinetics, reactor studies, conservation equations, transport properties, premixed flames, and nonpremixed flames.

**[M&AE 645 Turbulent Reactive Flows]**

Fall. 2 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; not offered 2000-2001.

Large turbulent reactive flows occur in combustion devices, the chemical process industry, the atmosphere, oceans, and elsewhere. In the last decade, substantial progress has been made in the understanding of these flows, through both experimental and computational approaches. This course focuses on turbulent, nonpremixed combustion and describes: the different phenomena involved, the basic processes and governing equations, experimental techniques and observations, and a broad range of modeling approaches. The material covered is relevant

to other single-phase turbulent reactive flows. Class meets, on average, once per week.]

**M&AE 651 Conduction and Radiation Heat Transfer**

Fall, weeks 1-7. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. K. E. Torrance.

An intermediate treatment of heat conduction and thermal radiation. Deductions from the first and second laws of thermodynamics. The conductive transport equation. Physical mechanism of thermal conductivity. Steady, transient, and some multidimensional conduction. The radiative transport equation. Surface and gas radiation properties. Radiant exchange between surfaces and volumes. Molecular and particulate scattering. Radiosity and volume integral formulations. At the level of, but extends, *Heat Transfer*, by Bejan.

**M&AE 652 Convection Heat Transfer**

Fall, weeks 8-14. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. K. E. Torrance.

An intermediate treatment of convection heat transfer. Governing equations developed in integral and differential forms. Boundary layers. Laminar and turbulent flows. Internal and external, forced and free convection. Entropy and system arguments for optimal design. Parameter identification. At the level of, but extends, *Heat Transfer*, by Bejan.

**[M&AE 732 Analysis of Turbulent Flows]**

Spring. 4 credits. Prerequisite: M&AE 601 or permission of instructor. Offered alternate years; not offered 2000-2001.

Study of methods for calculating the properties of turbulent flows. Characteristics of turbulent flows. Direct numerical simulations, and the closure problem. Reynolds-stress equation: effects of dissipation, anisotropy, deformation. Transported scalars. Probability density functions (pdfs): transport equations, relationship to second-order closures, stochastic modeling, and the Langevin equation. The course emphasizes comparison of theory with experiment. Large-eddy simulations: filtered and residual motions, Smagorinsky, and dynamic models.]

**[M&AE 733 Stability of Fluid Flow]**

Fall, on demand. 4 credits. S-U grades only. Prerequisite: graduate standing or permission of instructor. Not offered 2000-2001.

Basic stability and bifurcation theory in fluid systems. "Open" flow systems: inviscid Kelvin-Helmholtz, Rayleigh-Taylor instability, and capillary instability of liquid jets. Stability of parallel shear flows and of concentrated vortex flows. Spatial development of linearly unstable motion: "absolute" and "convective" instability. Thermal, double-diffusive, and related instabilities. Post-bifurcation behavior: the Ginzburg-Landau (Stewartson-Stuart) and Davey-Hocking-Stewartson amplitude equations. Phase dynamics and pattern formation. Stability of periodic motion: Floquet theory. Secondary instabilities; Eckhaus instability, Busse "balloons." Energy stability theory. Effects of symmetry. Taylor-Couette instability.]

**M&AE 734 Turbulence and Turbulent Flow**

Fall. 4 credits. Prerequisite: M&AE 601, graduate standing, or permission of instructor.

Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and

bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

**M&AE 736 Theory of Computational Aerodynamics**

Fall. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience. Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming a digital computer.

**[M&AE 737 Computational Fluid Mechanics and Heat Transfer**

Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some FORTRAN, C, or C++ programming experience. Offered alternate years; not offered 2000–2001.

Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.]

## Special Offerings

**M&AE 490 Special Investigations in Mechanical and Aerospace Engineering**

Fall, spring. Credit TBA. Limited to undergraduate students. Prerequisite: permission of instructor. Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

**M&AE 491 Design Projects in Mechanical and Aerospace Engineering**

Fall, spring. Credits TBA. Prerequisite or corequisite: M&AE 428. Fulfills field design requirement. Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses.

**M&AE 545 Energy Seminar (also ELE E 587 and NS&E 545)**

Fall, spring. 1 credit. May be taken for credit both semesters. For description, see NS&E 545.

**M&AE 594 Manufacturing Seminar (also OR&IE 893–894)**

Fall, spring. 1 credit. For description, see OR&IE 893–894.

**M&AE 690 Special Investigations in Mechanical and Aerospace Engineering**

Fall, spring. Credit TBA. Limited to graduate students.

**M&AE 695 Special Topics in Mechanical and Aerospace Engineering**

Fall, spring. Credit TBA. Graduate standing and permission of instructor. Special lectures by faculty members on topics of current research.

**M&AE 791 Mechanical and Aerospace Research Conference**

Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects.

Presentations on research in progress by faculty and students.

**M&AE 799 Mechanical and Aerospace Engineering Colloquium**

Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend.

Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

**M&AE 890 Research in Mechanical and Aerospace Engineering**

Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

**M&AE 990 Research in Mechanical and Aerospace Engineering**

Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

## NUCLEAR SCIENCE AND ENGINEERING

**NS&E 121 Fission, Fusion, and Radiation (also A&EP 121 and ENGRI 121)**

Spring. 3 credits. S-U grades optional for students outside the College of Engineering. K. B. Cady. This is a course in the Introduction to Engineering series. For description, see ENGRI 121.

**NS&E 403 Introduction to Nuclear Science and Engineering (also A&EP 403, ELE E 403, and M&AE 458)**

Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field. K. B. Cady.

Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of

*Introduction to Nuclear Engineering*, by Lamarsh, third edition.

**NS&E 484 Introduction to Controlled Fusion: Principles and Technology (also A&EP 484, ELE E 484, and M&AE 459)**

Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand. D. A. Hammer.

Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include: (1) fuels and conditions required for fusion power, and basic fusion-reactor concepts; (2) fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and (3) an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

**NS&E 509 Nuclear Physics for Applications**

Fall. 3 credits. Prerequisites: sophomore physics and math, or permission of instructor; some upper-division physics is desirable. Primarily for graduate students, especially those with a major or minor in Nuclear Science and Engineering; also open to qualified undergraduates. V.O. Kostroun.

A first course in nuclear physics. Systematic presentation of nuclear phenomena and processes that underlie applications ranging from nuclear power (fission and fusion), to nuclear astrophysics, to nuclear analytical methods for research in nonnuclear fields. Radioactivity, nuclear reactions, and interaction of radiation with matter. At the level of *Radiochemistry and Nuclear Methods of Analysis*, by Ehmann and Vance or *Nuclear and Radiochemistry*, by Friedlander, et al.

**NS&E 521 Radiation Effects in Materials**

Fall. 3 credits. Prerequisite: introductory course in nuclear science and materials science. K. Ünü. Radiation effects in fission and fusion reactors. Displacement of atoms by neutrons, electrons and ions, radiation induced defects, diffusion of point defects in the crystalline lattice, void swelling, and other radiation induced changes in mechanical properties of alloys. Radiation effects in fission and fusion reactor materials. Nuclear reactor fuels. At the level of *Fundamental Aspects of Nuclear Reactor Fuel Elements*, by D. R. Olander.

**NS&E 545 Energy Seminar (also ELE E 587 and M&AE 545)**

Fall, spring. 1 credit. May be taken for credit both semesters. K. Ünü. Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle will be discussed by faculty members from several departments in the university and by outside experts. Examples of topics to be surveyed are energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.

**NS&E 551 Nuclear Measurements in Research**

Spring. 3 credits. Prerequisite: PHYS 214 or 218, or permission of instructor; some upper-division physics desirable. Primarily for graduate students in archaeology,

geology, chemistry, biology, materials science, and other fields in which nuclear methods are used. Open to qualified undergraduates. K. Unl .

Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments. Experiments on radiation detection and measurement; electronic instrumentation, including computerized systems; activation analysis; and emerging applications such as prompt gamma analysis and neutron radiography. The TRIGA reactor is used. Emphasis is on methods used in non-nuclear fields. At the level of *Radiochemistry and Nuclear Methods of Analysis*, by Ehmann and Vance.

#### **NS&E 590 Independent Study**

Fall, spring. 1-4 credits. Grade option letter or S-U.

Independent study or project under guidance of a faculty member.

#### **NS&E 591 Project**

Fall, spring. 1-6 credits.

Master of Engineering or other project under guidance of a faculty member.

#### **NS&E 612 Nuclear Reactor Theory**

Fall. 4 credits. Prerequisites: 1 year of advanced calculus and some nuclear physics. K. B. Cady.

Physical theory of fission reactors; fission and neutron interactions with matter; theory of neutron diffusion; slowing down and thermalization; calculations of criticality and neutron-flux distribution in nuclear reactors; reactor kinetics. At the level of *Nuclear Reactor Theory*, by Lamarsh.

#### **NS&E 633 Nuclear Reactor Engineering (also A&EP 633)**

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.

The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

## OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

#### **OR&IE 310 Industrial Systems Analysis**

Spring. 4 credits. Prerequisite: ENGRD 270, or permission of instructor.

Design of production facilities, including engineering economy, materials handling process design, and facility layout. Operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control.

#### **OR&IE 320 Optimization I**

Fall. 4 credits. Prerequisite: MATH 221 or 294.

Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning. Introduction to interior-point methods for linear programming.

#### **OR&IE 321 Optimization II**

Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent.

A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

#### **OR&IE 350 Financial and Managerial Accounting**

Fall. 4 credits.

Principles of accounting, financial reports, financial-transactions analysis; financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, economic analysis of short-term decisions.

#### **OR&IE 360 Engineering Probability and Statistics II**

Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent.

This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

#### **OR&IE 361 Introductory Engineering Stochastic Processes I**

Spring. 4 credits. Prerequisite: OR&IE 360 or equivalent.

Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

#### **[OR&IE 414 Using Simulation Models for Engineering Design]**

Spring. 4 credits. Prerequisites: an undergraduate course in probability and statistics through regression analysis, computer programming skills with a working knowledge of or willingness to learn Java, C++, or C. Corequisites: graduate or senior level course in discrete event simulation. Not offered 2000-2001.

This course examines ways for engineers to exercise simulation models efficiently to gain information. The lectures will survey general techniques that are useful in most engineering and manufacturing disciplines; some specialized techniques will also be presented such as Infinitesimal Perturbation Analysis Gradient Estimation, Frequency Domain Screening, Multivariate Adaptive Regression Splines and Wavelets. Students will become familiar with a broad range of modeling strategies.]

#### **OR&IE 416 Design of Manufacturing Systems**

Fall. 4 credits. Senior OR&IE students only. Others by permission of instructor only.

Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical

methods for controlling inventories, planning production, and evaluating system performance will be presented in lectures. Lab fee \$15.

#### **[OR&IE 431 Discrete Models]**

Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211, or permission of instructor. Not offered 2000-2001.

Basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.]

#### **[OR&IE 432 Nonlinear Optimization]**

Spring. 4 credits. Prerequisite: OR&IE 320. Not offered 2000-2001.

Introduction to the practical and theoretical aspects of nonlinear optimization. Attention given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming; e.g., interior-point methods. Methods of numerical linear algebra introduced as needed.]

#### **[OR&IE 434 Optimization Modeling]**

Fall. 3 credits. Prerequisites: a grade of at least B- in OR&IE 321/521. Not offered 2000-2001.

The emphasis is on modeling complicated decision problems as linear programs, integer programs, or highly-structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.]

#### **OR&IE 435 Introduction to Game Theory**

Spring. 3 credits.

A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

#### **[OR&IE 436 A Mathematical Examination of Fair Representation]**

Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor. Not offered 2000-2001.

In this course we will study the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. At first blush it appears that there is a straightforward approach that must lead to a fair, or fairest apportionment, for any fixed house size and known populations. However, indivisibility of seats leads us to interesting mathematical questions and a long, rich, and fractious political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to some other realms where indivisible resources are to be allocated among competing constituencies.]

#### **OR&IE 451 Economic Analysis of Engineering Systems**

Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.

Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student group project.

**OR&IE 462 Introductory Engineering Stochastic Processes II**

Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent.

Stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

**OR&IE 473 Empirical Research Methods in Financial Engineering**

Spring. 3 credits. Prerequisites: ENGRD 270, OR&IE 360 and 361, or their equivalents.

This course represents an advanced study of empirical research methods in financial economics. We focus on the empirical techniques used most often in the analysis of financial markets and how they are applied to actual market data.

**OR&IE 474 Statistical Data Mining**

Fall. 3 credits. Prerequisites: OR&IE 360 and MATH 294 or equivalent; or permission of instructor.

This course will examine the statistical aspects of data mining, the effective analysis of large data sets. The first half of the course will cover the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half will connect these ideas to techniques being developed to handle the large data sets that are now routinely encountered in scientific and business applications. Assignments will be done using one or more statistical computing packages.

**OR&IE 476 Applied Linear Statistical Models**

Spring; weeks 1-7. 2 credits. Prerequisite: ENGRD 270.

Multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

**OR&IE 480 Information Technology**

Fall. 4 credits. Pre- or corequisites: COM S/ENGRD 211, plus either OR&IE 310 or OR&IE 350.

This course views information technology as the means by which computer science, operations research, and industrial engineering are brought to serve the operational and strategic needs of enterprises. As such, information technology encompasses communications systems, information architectures, data management, development methodologies, implementation projects (with the attendant organizational design, business process analysis, requirements analysis, systems and organizational design, and implementation planning steps), operations management, electronic commerce, and more. The course

takes the perspective of a professional who accesses existing computer data to analyze a problem or opportunity, uses computer tools to manage the data, develops an effective solution, and employs a computer application to implement the solution. This perspective introduces students to the ways in which information technology is currently being used throughout enterprises and how these uses are changing with the explosive growth of the Internet. The course uses lectures (including guest lectures by practitioners), cases, and laboratory exercises intended to make the general concepts concrete. The course centers around a design project, in which student teams develop a solution to a business problem of their choosing and prepare a memorandum with supporting technical, financial, and process detail.

**OR&IE 481 Delivering OR Solutions with Information Technology**

Spring; weeks 8-14. 2 credits. Prerequisites: OR&IE 480.

Study of ways in which information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, web-based techniques, collaborative software, and expert systems. Several real applications will be investigated.

**OR&IE 490 Teaching in OR&IE**

Fall, spring. Credit TBA. Prerequisite: permission of instructor.

This course involves working as a TA in an OR&IE course. The course instructor will assign credits (the guideline is 1 credit per 4 hours/week of work with a limit of 3 credits).

**OR&IE 499 OR&IE Project**

Fall, spring. Credit TBA. Prerequisite: permission of instructor.

Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the Associate Director.

**OR&IE 512 Applied Systems Engineering I (also CEE 504, COM S 504, ELE E 512, M&AE 591)**

Fall. 3 credits. Prerequisite: permission of instructor.

For description, see M&AE 591.

**OR&IE 513 Applied Systems Engineering II (also CEE 505, COM S 505, ELE E 513, M&AE 592)**

Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ELE E 512, M&AE 592, or OR&IE 512).

For description, see M&AE 592.

**OR&IE 515 Design of Manufacturing Systems**

Fall. 4 credits. Prerequisite: permission of instructor. Limited to graduate students in Engineering and the Business School.

For description, see OR&IE 416. Lab fee \$15.

**OR&IE 516 Case Studies**

Fall. 1 credit. Limited to M.Eng. students in OR&IE.

Students are presented with an unstructured problem that resembles a real-world situation. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

**OR&IE 518 Supply Chain Management**

Spring. 3 credits. Prerequisites: one of OR&IE 310, OR&IE 416, OR&IE 525, or OR&IE 562.

A supply chain is the scope of activities that convert raw materials (i.e., wheat) to finished products delivered to the end consumer (i.e., a box of cereal at the local P&C), usually spanning several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis on business processes, system dynamics, control, design, re-engineering. Relationship between the supply chain and the company's strategic position relative to its clients and its competition. Dimensions of inter-corporate relationships with partners, including decision-making, incentives, and risk.

**OR&IE 520 Operations Research I: Optimization I**

For description, see OR&IE 320.

**OR&IE 521 Optimization II**

For description, see OR&IE 321.

**OR&IE 522 Operations Research I: Topics in Linear Optimization**

Fall. 1 credit. Pre- or corequisite: OR&IE 520. Students who have already taken OR&IE 321 or 521 should not enroll.

Limited to M.Eng. students in OR&IE.

An extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

**OR&IE 523 Operations Research II: Introduction to Stochastic Processes I**

For description, see OR&IE 361.

**[OR&IE 524 Design of Manufacturing Systems II**

Spring; weeks 8-14. 2 credits. Prerequisites: OR&IE 562, OR&IE 416; or by permission of instructor. Not offered 2000-2001.

This project course focuses on the design and analysis of a global corporation's operations. Working in teams, students will examine issues pertaining to a prototype company on the following topics: information system design, marketing, strategy, location of facilities, organization design, manufacturing capacity, planning logistics, production planning, scheduling, inventory control, and financial analysis. Meetings between project teams and faculty will be substituted for some lectures or laboratories. Analytical methods appropriate for conducting analysis will be discussed in lectures.]

**OR&IE 525 Production Planning and Scheduling Theory and Practice**

Spring. 4 credits. Corequisite: OR&IE 320, OR&IE 360.

Production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus on setup time as a determinant of plans and schedules.

**OR&IE 528-529 Selected Topics in Applied Operations Research**

Fall, spring. Credit TBA. Prerequisite: permission of instructor.

Current topics dealing with applications of operations research.

**OR&IE 551 Economic Analysis of Engineering Systems**

Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.

Lectures concurrent with OR&IE 451. For description see OR&IE 451.

**[OR&IE 552 Revenue Management**

Spring; weeks 8-14. 2 credits. Prerequisites: thorough knowledge of OR&IE 360, familiarity and appreciation of time series and regression methods, and graduate standing. OR&IE 320/321 helpful but not required. Others by permission of instructor. Not offered 2000-2001.

Revenue Management (RM) concepts, models used in practice, and possible extensions; forecasting techniques, including time series methods, booking curves, and customer preference models; demand uncensoring; overbooking, optimization with emphasis on stochastic models of demand; benefit measurement; computational and technological issues; examples from the airline and other industries.]

**OR&IE 560 Engineering Probability and Statistics II**

For description, see OR&IE 360.

**OR&IE 561 Queuing Theory and Its Applications**

Fall. 3 credits. Prerequisite: OR&IE 361 or permission of instructor.

Basic queueing models; delay and loss systems; finite source, finite capacity, balking, reneging; systems in series and in parallel; FCFS versus LCFS; busy period problems; output; design and control problems; priority systems; queueing networks; the product formula; time sharing; server vacations; applications to equipment maintenance, computer operations and flexible manufacturing systems.

**OR&IE 562 Inventory Management**

Fall. 3 credits. Prerequisite: OR&IE 321, 361, or permission of instructor.

The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion of this course is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

**OR&IE 563 Applied Time-Series Analysis**

Fall. 3 credits. Prerequisites: OR&IE 361 and ENGRD 270, or permission of instructor.

The first part of this course treats regression methods to model seasonal and nonseasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

**OR&IE 564 Introductory Engineering Stochastic Processes II**

Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462.

For description, see OR&IE 462.

**OR&IE 565 Applied Financial Engineering**

Spring. 4 credits. Limited to M.Eng. students.

This course has two components: a sequence of lectures and a project. The course will be co-listed with the Johnson School and will be co-taught by one faculty member from each school. The lectures will be given by the faculty for the course and by invited speakers from the financial industry. The project will satisfy the M.Eng. project requirement.

**OR&IE 567 Semester in Manufacturing Management (also MBA 650)**

Spring. 15 credits. Enrollment limited to OR&IE M.Eng. students only.

For description, see MBA 650.

**OR&IE 575 Experimental Design**

Spring; weeks 8-14 (alternates with 576). 2 credits. Prerequisite: OR&IE 476.

Randomization, blocking, sample size determination, factorial designs, 2<sup>p</sup> full and fractional factorials, response surfaces, Latin squares, split plots, Taguchi designs. Engineering applications. Computing in MINITAB or SAS.

**[OR&IE 576 Regression**

Spring; weeks 8-14 (alternates with 575). 2 credits. Prerequisite: OR&IE 476. Not offered 2000-2001.

Nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, regression with correlated errors. Computing in MINITAB or SAS.]

**OR&IE 577 Quality Control**

Fall. 3 credits. Prerequisites: OR&IE/ENGRD 270.

Concepts and methods for process and acceptance control. Control charts for variables and attributes. Process capability analysis. Acceptance sampling. Continuous sampling plans. Life tests. Use of experimental design and Taguchi methods for off-line control.

**OR&IE 581 Simulation Modeling**

Fall; weeks 1-7. 2 credits. Prerequisites: programming experience and OR&IE 360 or permission of instructor. OR&IE 360 may be taken concurrently.

Models and digital computer programs to simulate the behavior of complex stochastic systems in time. Modeling time and randomness, simulation languages, generation of stochastic inputs (scalars and processes).

**OR&IE 582 Simulation Analysis**

Fall; weeks 8-14. 2 credits. Prerequisites: programming experience and OR&IE 360 or permission of instructor. OR&IE 360 may be taken concurrently.

Probabilistic and statistical methods for design of computer simulation experiments and analysis of their outputs. Initialization issues, analysis of simulation outputs, variance reduction methods, optimization through simulation.

**OR&IE 598 Master of Engineering Manufacturing Project**

Fall, spring. 5 credits. For M.Eng. students. Project course for M.Eng. students enrolled in the Manufacturing Option coordinated by the Center for Manufacturing Enterprise.

**OR&IE 599 Project**

Fall, 1 credit; spring, 5 credits. For M.Eng. students.

Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

**OR&IE 625 Scheduling Theory**

Fall. 3 credits.

Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

**OR&IE 630 Mathematical Programming I**

Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra.

A rigorous treatment of the theory and computational techniques of linear programming and its extensions, including formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma; exploiting special structure in the simplex method, and computational implementation.

**OR&IE 632 Nonlinear Programming**

Spring. 3 credits. Prerequisite: OR&IE 630.

Necessary and sufficient conditions for unconstrained and constrained optima. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).

**[OR&IE 633 Graph Theory and Network Flows**

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2000-2001.

Directed and undirected graphs. Bipartite graphs. Hamilton cycles and Euler tours. Connectedness, matching, and coloring. Flows in capacity-constrained networks. Maximum flow and minimum cost flow problems.]

**[OR&IE 635 Interior-Point Methods for Mathematical Programming**

Spring. 3 credits. Prerequisites: MATH 411 and OR&IE 630, or permission of instructor. Not offered 2000-2001.

Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discussion of the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms, and various ways of combining them. Emphasis on recent mathematical theory and the most modern viewpoints.]
