

New York Agricultural Experiment Station.

GENEVA, N. Y.

NOTICE CONCERNING BULLETINS 170 AND 174.

Bulletin No. 170, Diseases and Insects Injurious to Fruits, and No. 174, Fumigation of Nursery Stock, will not be regularly distributed.

Bulletin No. 170 has been prepared as a means of answering in a comprehensive way the numerous inquiries which are constantly coming to the Station concerning the more common diseases and insects affecting the orchards and other fruit plantations of the State. This will not be sent to the entire mailing list because by so doing many copies of a costly publication will be wasted on persons not interested in its contents. It is being mailed to the members of the three principal horticultural societies in the State and to the nurserymen. There are doubtless others who should receive it and it will be promptly mailed to any one requesting it.

Bulletin No. 174 gives detailed instructions for the fumigation of nursery stock with hydrocyanic acid gas for the destruction of San Jose scale and other insects liable to be distributed on such stock. It does not deal with methods of eradication or repression of the scale in orchards or on other growing plants, but only with the insecticidal treatment of stock on its way from the nursery to the planter or grafter. This bulletin is being distributed to the nurserymen and handlers of nursery stock; but will also be sent, upon request, to any one who desires to fumigate stock to be planted.

Send a postal card request giving plainly your name and address and the number of the bulletin you desire.
