Lecs, fall, M W F 10:10, W 3:35, spring, T R 10:10–11:25, R 3:35.
An introduction to modern solid-state physics, including lattice structure, lattice vibrations, thermal properties, electron theory of metals and semiconductors, magnetic properties, and superconductivity. At the level of *Introduction to Solid State Physics*, by Kittel (fall term), and Solid State Physics, by Ashcroft and Mermin (spring term).

480–489 Special Topics Seminar
Spring. 2 and 3 credits. Limited to senior physics majors and those who receive permission of instructor. S-U grades only.
Hours to be arranged. One selected topic of current interest is studied. Students participate in organization and presentation of material.

480 Computational Physics
Spring. 3 credits, S-U only. Prerequisites: Math 421–423 or equivalent, and the ability to write programs in any computer language. No previous knowledge of numerical analysis is assumed.
Lec T R 10:10–11:35. S. Teukolsky.
Course content is essentially identical to Physics 680, but a different grading system will be used for undergraduates.

490 Independent Study in Physics
Fall or spring. 1–3 credits. Ordinarily limited to seniors. Prerequisite: permission of professor who will direct proposed work. Copy of request for independent study form must be filed with physics department course coordinator. Individual project work (reading or laboratory) in any branch of physics.

500 Informal Graduate Laboratory
Fall, spring, or summer. Variable credit.

510 Advanced Experimental Physics
Fall, spring, or summer. 3 credits.
Labs, T W 1:25–4:25. Fall, R. H. Siemann; spring, D. L. Hartill.
About seventy different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, nuclear physics. Students perform four to eight experiments selected to meet individual needs. Independent work is stressed.

520 Projects in Experimental Physics
Fall, spring, or summer. 1–3 credits. To be supervised by faculty member. Students must advise department course coordinator of faculty member responsible for their project. Prerequisite: Physics 510.
Projects of modern topical interest that involve some independent development work by student. Opportunity for more initiative in experimental work than is possible in Physics 510.

[525 Physics of Black Holes, White Dwarfs, and Neutron Stars (also Astronomy 511, High-Energy Astrophysics)
Fall. 4 credits. Not offered 1990–91.
Lecs, T R 1:25–2:40. S. L. Shapiro.
The formation of compact objects: neutrino and gravitational radiation from supernova collapse and neutron stars. Equilibrium configurations, equations of state, stability criteria, and mass limits. The influence of rotation and magnetic fields. Pulsar phenomena. Mass flow in binary systems; spherical and disk accretion; high-temperature radiation processes. Compact X-ray sources and X-ray bursts. Emphasis will be on the application of fundamental physical principles to compact objects. Topics in diverse areas of physics will be discussed: solid-state physics, nuclear physics, relativity, fluid dynamics, high-energy physics, etc. No astronomy or general relativity prerequisites. Text: *Physics of Black Holes, White Dwarfs, and Neutron Stars*, by Shapiro and Teukolsky.]

551 Classical Mechanics
Fall. 3 credits. Prerequisite: an undergraduate course in classical mechanics at the level of books by K. Symon or J. B. Marion.
Lecs, T R 10:10, R 2:30. E. D. Siggia.
Lagrangian and Hamiltonian formulation of classical mechanics, with modern applications in nonlinear dynamics. Foundations will be taught at the level of *Mechanics*, by Landau and Lifshitz.

553–554 General Relativity (also Astronomy 509–510)
553, fall; 554, spring. 4 credits. Prerequisite: knowledge of special relativity at the level of Classical Mechanics, by Goldstein. Offered alternate years.
Lecs, T R 1:25–2:40. S. L. Shapiro.
Physics 553 is a systematic introduction to Einstein's theory, with emphasis on modern coordinate-free methods of computation. Topics include review of special relativity, modern differential geometry, foundations of general relativity, laws of physics in the presence of a gravitational field, experimental tests of gravitation theories. At the level of *Gravitation*, by Misner. Physics 554 is a continuation of 553 that emphasizes applications to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves, cosmology.

561 Classical Electrodynamics
Fall. 3 credits.
Lecs, T R 8:30–9:55, one sec per week. D. R. Yennie.
Maxwell's equations, electromagnetic potentials, electrodynamics of continuous media (selected topics), special relativity, radiation theory. At the level of *Classical Electrodynamics*, by Jackson.

562 Statistical Mechanics
Spring. 4 credits. Primarily for graduate students. Prerequisites: a good knowledge of quantum mechanics (at the level of Merzbacher), classical mechanics (at the level of Marion), and statistical mechanics (at the level of Rief).

Lecs, T R 8:30–9:55. N. W. Ashcroft.
Thermodynamic functions, equations of state; Second Law phase equilibria; thermodynamic inequalities; kinetic theory, Boltzmann's equation, transport theory. Microstates, ensembles, partition functions, and phase-space averaging. Chemical equilibria. Quantum statistical mechanics, Fermi-Dirac and Bose-Einstein distributions; application to Bose and Fermi systems. Fundamentals of statistical mechanics: density matrix, reduced distribution, Wigner function, correlation functions and fluctuations. Advanced topics include Ising model, lattice gases, and spin systems; and introduction to critical phenomena. At the level of *Statistical Mechanics*, by Huang, and *Statistical Mechanics*, by Pathria.

572 Quantum Mechanics I
Fall or spring. 4 credits.

Lecs, fall, M W F 9:05, T-M. Yan; spring, M W F 11:15. D. Cassel.
The formulation of quantum mechanics in terms of states and operators. Symmetries and the theory of angular momentum. Stationary and time-dependent perturbation theory. Fermi's golden rule and variational methods. The elements of scattering theory. At a level between *Quantum Mechanics*, by Merzbacher, and *Quantum Mechanics*, by Landau and Lifshitz. Familiarity with elementary aspects of the Schroedinger equation is assumed, including its application to simple systems such as the hydrogen atom.

574 Quantum Mechanics II
Fall or spring. 4 credits. Required of all Ph.D. majors in theoretical physics.

Lecs, fall, M W F 9:05; spring, M W F 11:15. Fall, H. Tye; spring, G. P. Lepage.
Discussion of various applications of quantum mechanics, such as collision theory, theory of spectra of atoms and molecules, theory of solids, second quantization, emission of radiation, relativistic quantum mechanics. At the level of *Lectures on Quantum Mechanics*, by Gordon Baym.

635 Solid-State Physics I
Fall. 3 credits. First semester of a two-semester sequence of solid-state physics for graduate students who have had the equivalent of Physics 572 and 562 and some prior exposure to solid-state physics, such as Physics 454.

Lecs, T R 11:40–12:55. C. P. Franck.
A survey of the basic phenomenological knowledge of condensed matter physics, mainly dealing with solids. Probable topics include equilibrium properties such as structure and phase transitions as well as transport phenomena such as electrical and thermal conductivity. Discussions at the level of *Solid State Physics*, by N. W. Ashcroft and N. D. Mermin.

636 Solid-State Physics II
Spring. 3 credits.

Lecs, T R 11:40–12:55. C. Henley.
Much in condensed matter physics is not covered in Ashcroft and Mermin or included in Physics 635. Topics will be chosen from: broken symmetries, elementary excitations, and topological defects; critical phenomena, the onset of chaos, and the renormalization group; first order phase transitions, nucleation, and dendritic growth; broken gauge symmetries, superconductors and superfluids, the fractional quantum Hall effect; disordered systems, spin glasses, localization, and percolation theory.

645 High-Energy Particle Physics
Fall. 3 credits.

Lecs, M W F 11:15. K. Gottfried.
Introduction to the physics of baryons, mesons, and leptons. Strong, electromagnetic, and weak interactions. Relevance of symmetry laws to particle physics. Introduction to the quark model. Unification of weak and electromagnetic interactions. At the level of *Introduction to High Energy Physics*, by Perkins.

646 High-Energy Particle Physics
Spring. 3 credits.

Lecs, T R 2:55–4:10. K. Berkelman.
Topics of current interest, such as high-energy electron and neutrino interactions, electron positron annihilation, and high-energy hadronic reactions, are surveyed. Lectures and reading material are at the level of *Introduction to High Energy Physics*, by Perkins.

Note: Only S-U grades will be given in courses numbered 650 or above.

651 Relativistic Quantum Field Theory I
Fall. 3 credits. S-U grades only.

Lecs, M W F 10:10. T. Kinoshita.
Introduction to relativistic field theories, with emphasis on applications to quantum electrodynamics. Topics to be covered include canonical field quantization, perturbation theory, calculation of cross sections for elementary processes, renormalization, and applications to non-electromagnetic interactions.

652 Relativistic Quantum Field Theory II
Spring. 3 credits. S-U grades only.

Lecs, T R 10:10–11:35. B. Greene.
This course is a continuation of Physics 651 and introduces more advanced methods and concepts in quantum field theory. Topics include functional integral methods, quantization of non-abelian gauge theories, the renormalization group, dispersion relations, and spontaneous symmetry breaking. Applications to the electroweak theory and quantum chromodynamics are emphasized.

653 Statistical Physics
Fall. 3 credits. Normally taken by graduate students in their second or later years. Prerequisites: competence in the basic principles of quantum mechanics, statistical mechanics, and thermodynamics. S-U grades only.

Lecs, T R 8:30–9:55. M. Nelkin.
Survey of topics in modern statistical physics, including the theory of simple classical and quantum fluids; the theory of ordered systems such as superfluids and superconductors; kinetic theory and the Boltmann equation; phenomenological Fermi liquid theory and hydrodynamics; theories of inhomogeneous systems; scaling theories and phase transitions. The contents of the course vary with the current interests of the instructor.

654 Theory of Many-Particle Systems
Spring. 3 credits. Prerequisites: Physics 562, 574, 635, 636, and 653. S-U grades only.

Lecs, W F 2:30–4. E. D. Siggia.
Equilibrium and transport properties of microscopic systems of many particles studied at zero and finite temperatures. Thermodynamic Green's function techniques introduced and applied to such topics as normal and superconducting. Fermi systems, superfluidity, magnetism, insulating crystals.

661 Advanced Topics in High Energy Particle Theory
Fall. 3 credits. Prerequisites: Physics 652. S-U grades only.

Lecs, M W F 10:10. A. LeClair.
This course will present advanced topics of current research interest. Subject matter will vary from year to year. Some likely topics are two-dimensional conformal field theory with applications to string theory and condensed matter physics, applications of the electroweak theory, lattice guage theory, mathematical methods (e.g. group theory), perturbative quantum chromodynamics, anomalies and geometry, current algebra, and phenomenological issues beyond the standard model.

[665 Topics in Theoretical Astrophysics (also Astronomy 555)
Fall. 4 credits. S-U grades only. Not offered 1990–91.

Lecs, M W F 2:30. E. E. Salpeter.
Usually concentrates on the theory of the interstellar medium. At the level of Spitzer's *The Physical Processes in the Interstellar Medium.*]

[667 Theory of Stellar Structure and Evolution (also Astronomy 560)
Fall. 4 credits. S-U grades only. Not offered 1990–91.

Lec, M W F 1:25. E. E. Salpeter.
Summary of observational facts on stars; dimensional analysis; nuclear reactions and energy, transport in stellar interiors; models for static and evolving stars. At the level of *Principles of Stellar Energy and Nucleosynthesis*, by Clayton.]

680–689 Special Topics
Offerings are announced each term. Typical topics are group theory, analyticity in particle physics, weak interactions, superfluids, stellar evolution, plasma physics, cosmic rays, general relativity, low-temperature physics, X-ray spectroscopy or diffraction, magnetic resonance, phase transitions, and the renormalization group.

680 Computational Physics
Spring. 3 credits. S-U only. Prerequisites: The course assumes a good background in the standard "mathematical methods for physics," and the ability to write programs in any computer language. No previous knowledge of numerical analysis is assumed.

Lecs T R 10:10–11:35. S. Teukolsky.
A course designed to familiarize students with numerical techniques for solving diverse problems in physics and related fields. The problems will be drawn from many different branches of physics, but the emphasis will be on common techniques of solution. Numerical techniques discussed in the course will include ordinary and partial differential equations, linear algebra and eigenvalue problems, Monte Carlo techniques, solving nonlinear equations, fast Fourier transforms, etc. In contrast to traditional numerical analysis courses, the flavor of the course will be "how-to," rather than theoretical. No theorems will be proved. Students will be expected to solve, both individually and in small teams, assigned numerical exercises. Text: *Numerical Recipes: The Art of Scientific Computing*, by Press, Flannery, Teukolsky, and Vetterling.

690 Independent Study in Physics
Fall or spring. Variable credit. Students must advise department course coordinator of faculty member responsible for their project. S-U grades only. Special graduate study in some branch of physics, either theoretical or experimental, under the direction of any professional member of the staff.

PORTUGUESE

See Modern Languages and Linguistics.

PSYCHOLOGY

D. Bem, S. Bem, E. M. Blass, U. Bronfenbrenner, W. Collins, J. Cutting, R. Darlington, T. DeVoogd, D. Dunning, H. M. Feinstein, D. Field, B. L. Finlay, E. J. Gibson, T. D. Gilovich, B. P. Halpern, A. M. Isen, R. E. Johnston, F. Keil, K. Keil, C. Krumhansl, H. S. Kurtzman, W. W. Lambert, H. Levin, D. Levitsky, J. B. Maas, R. D. Mack, H. Porte, D. T. Regan, E. A. Regan, T. A. Ryan, E. Spelke, B. Strupp

The major areas of psychology represented in the department are human experimental psychology, biopsychology, and personality and social psychology. These areas are very broadly defined, and the courses are quite diverse. Biopsychology includes such things as animal learning, neuropsychology, interactions between hormones, other biochemical processes, and behavior. Human experimental psychology includes such courses as cognition, perception, memory, and psycholinguistics. Personality and social psychology is represented by courses and fieldwork in psychopathology as well as courses in social psychology and personality (such as theories of personality, beliefs and attitudes, and sex roles). In addition to the three major areas mentioned above, the department also emphasizes the statistical and logical analysis of psychological data and problems.

The Major

Prerequisites for admission to the major are:

1) any three courses in psychology (students often begin with Psychology 101);
2) no grade below C+ in any psychology course; and
3) acceptance by the Majors and Advising Committee of the Department of Psychology.

Application forms may be obtained at the department office and should be filed two weeks before the pre–course enrollment period.

Requirements for the major are:

1) a total of 40 credits in psychology (including prerequisites), from which students majoring in psychology are expected to choose, in consultation with their advisers, a range of courses that covers the basic processes in psychology (laboratory and/or field experience is recommended); and
2) demonstration of proficiency in statistics before the beginning of the senior year. (See the section below on the statistics requirement.)

Normally it is expected that all undergraduate psychology majors will take at least one course in each of the following three areas of psychology:

1) **Human experimental psychology**
2) **Biopsychology**
3) **Social, personality, and abnormal psychology**

The following classification of Department of Psychology offerings is intended to help students and their advisers choose courses that will ensure that such breadth is achieved.

1) **Human experimental psychology:** Psychology 205, 209, 214, 215, 305, 308, 309, 313, 314, 316, 342, 345, 370, 412, 415, 416, 417, 418, 436, 492, 605, 609, 612, 614, 615, 616, 618, 642, 670, 692, 709, 713, 715, 717.
2) **Biopsychology:** Psychology 123, 276, 307, 322, 324, 326, 332, 361, 375, 396, 422, 425, 429, 492, 607, 622, 625, 626, 629, 675, 676, 692, 696, 722.
3) **Social, personality, and abnormal psychology:** Psychology 255, 265, 275, 277, 280, 325, 327, 328, 329, 379, 383, 389, 402, 404, 426, 450, 467, 468, 469, 481, 482, 488, 489, 491, 650, 689, 691.

The major adviser determines to which group, if any, the following courses may be applied.

4) **Other courses:** Psychology 101, 103, 347, 350, 387, 410, 440, 465, 470, 471, 472, 473, 475, 476, 478, 479, 490.

With the permission of the adviser, courses in other departments may be accepted toward the major requirements.

Fieldwork, independent study, and teaching. The department requires students to observe the following limits on fieldwork, independent study, and teaching.

1) Undergraduates may not serve as teaching assistants for psychology courses if they are serving as teaching assistants for any other course during the same semester.
2) An undergraduate psychology major cannot apply more than 12 of the credits earned in independent study (including honors work) and fieldwork toward the 40 credits required by the major.

Statistics requirement. Proficiency in statistics can be demonstrated in any one of the several ways listed below.

1) Passing Psychology 350.
2) Passing an approved course or course sequence in statistics in some other department at Cornell. The approved list of courses and sequences may change. It has usually included Education 352 and 353, Industrial and Labor Relations 210 and 211, and Sociology 301. Requests that a particular course be added to this list may be made to Professor Gilovich.
3) Passing a course or course sequence in statistics at some other college, university, or college-level summer school. The course or sequence must be equivalent to at least 6 semester credits. The description of the course from the college catalog and the title and author of the textbook used must be submitted to Professor Gilovich for approval.
4) Passing an exemption examination. This examination can be given at virtually any time during the academic year if the student gives notice at least one week before. Students who have completed a theoretical statistics course in a department of mathematics or engineering and who wish to demonstrate competence in applied statistics usually find this option the easiest. Students planning this option should discuss it in advance with Professor Gilovich.

Concentration in biopsychology. Psychology majors interested in psychology as a biological science can elect to specialize in biopsychology. Students in this concentration must meet all of the general requirements for the major in psychology and must also demonstrate a solid background in biology; the physical sciences, including at least introductory chemistry; and mathematics. Students will design with their advisers an integrated program in biopsychology built around courses on physiological, chemical, anatomical, and ecological determinants of human and nonhuman behavior offered by the Department of Psychology. Additional courses in physiology, anatomy, biochemistry, neurochemistry, neurobiology, and behavioral biology may be designated as part of the psychology major after consultation between the student and his or her biopsychology adviser.

Concentration in personality and social psychology. This concentration is offered in cooperation with the Department of Sociology. Psychology majors who wish to specialize in social psychology are expected to meet the general requirements set by their department, including statistics. To ensure a solid interdisciplinary grounding, students in the concentration will be permitted to include some major courses in sociology and related fields. Advisers will assist students in the selection of a coherent set of courses from social organization, cultural anthropology, experimental psychology, social methodology, and several aspects of personality and social psychology. Seniors in the concentration may elect advanced and graduate seminars, with the permission of the instructor.

Undergraduate honors program. The honors program is designed for those exceptionally able students who wish to pursue an intensive and independent program of research in psychology. Successful participation in this program serves as evidence of the student's facility in the two most important skills of an academic psychologist: the capacity to acquire and integrate a substantial body of theoretical and factual material and the ability to engage in creative research activity. All qualified students planning on a graduate education in psychology or other academic fields should consider the honors program seriously. The program offers most students the closest contact and consultation with faculty that they will receive during their time at Cornell.

The core of the honors program is a research project that the student carries out in close collaboration with a faculty member in the field of psychology. It is assumed that most students will do so while enrolled in Psychology 470 (Undergraduate Research in Psychology). A written report of the research is to be given to the chair of the honors committee (currently Professor Dunning) toward the end of the last semester of the student's senior year.

An oral defense of the thesis is then given before a committee of three faculty members, and the student presents his or her work in a public forum. Final honors standing (summa cum laude, magna cum laude, cum laude) is indicated on the student's diploma. The T. A. Ryan Award, accompanied by a cash prize, is awarded to the student who conducts the best honors project in a given year.

A student may formally apply to the honors program at any time during the senior year provided that she or he is actively engaged in independent research. However, students must do so by the second week of November. Applications should be given to Professor Dunning and should be made directly by the student.

Distribution Requirement

The distribution requirement in the social sciences is satisfied by any two courses in psychology with the exception of Psychology 123, 276, 307, 322, 324, 326, 332, 350, 361, 396, 422, 425, 429, 451, 471, 472, 473, 475, 476, 479, 492, 607, 622, 625, 626, 629, 676, 696, and 722.

Courses

101 Introduction to Psychology: The Frontiers of Psychological Inquiry
Fall. 3 credits. Students may not receive credit for both Psychology 101 and Education 110. Students who would like to take a discussion seminar should also enroll in Psychology 103.
M W F 10:10. J. B. Maas. Prelims: 7:30 p.m., Oct. 1, Nov. 5.
The study of human behavior. Topics include brain functioning and mind control, psychophysiology of sleep and dreaming, psychological testing, perception, learning, cognition, memory, language, motivation, personality, abnormal behavior, psychotherapy, social psychology, and other aspects of applied psychology. Emphasis is on developing skills to critically evaluate claims made about human behavior.

103 Introductory Psychology Seminars
Fall. 1 credit. Limited to 400 students. Prerequisite: concurrent enrollment in Psychology 101.
Hours to be arranged; 32 different time options. Staff.
A weekly seminar that may be taken in addition to Psychology 101 to provide an in-depth exploration of selected areas in the field of psychology. Involves extensive discussion and a term paper related to the seminar topic. Choice of seminar topics and meeting times will be available at the second lecture of Psychology 101.

109 Freshman Writing Seminar: The Science of Dreaming Sleep
Fall. 3 credits. Prerequisite: AP biology and chemistry. Limited to 17 students.
T R 11:40–12:55. H. Porte.
This is a course in the *science* of dreaming sleep. Topics will include the phenomenology and neurobiology of rapid eye movement ("paradoxical") sleep; the REM sleep disorder, narcolepsy; the sense and nonsense of dreams; the problems of dream theory and dream interpretation; animals and people who act out their dreams.

123 Introduction to Biopsychology
Fall. 3 credits. May not be taken for credit by students who are registered in or have completed one or more courses offered by the Section of Neurobiology and Behavior of the Division of Biological Sciences or two or more biopsychology courses.
M W F 10:10. E. A. Regan.
The biology of behavior, including both evolutionary and physiological approaches to behavior. Human behavior is discussed whenever possible, but there is also extensive discussion of the behavior of nonhuman species. Specific topics include the structure, function, and development of the nervous system, stress and disease, sleep, genetic and chemical models of mental disorder, and hormones and sexual behavior; biological bases of learning, cognition, communication, and language; and the ecology and evolution of social organization and social development.

Introductory courses in cognitive psychology. Each of the following four courses (205, 209, 214, 215) provides an introduction to a major area of study within cognitive psychology. These courses are independent of one another, and none has any prerequisites. Students may take any one of the courses or any combination of them (including all four). Courses may be taken in any order or simultaneously.

205 Perception
Spring. 3 credits. Open to first-year students. Graduate students, see Psychology 605.
T R 2:55–4:10. J. Cutting.
One of four introductory courses in cognitive psychology. Basic perceptual concepts and phenomena are discussed with emphasis on stimulus variables and sensory mechanisms. All sensory modalities are considered. Visual and auditory perception are discussed in detail.

209 Developmental Psychology
Spring. 4 credits. Graduate students, see Psychology 709.
T R 1:25–2:40; sec to be arranged. E. Spelke.
One of four introductory courses in cognitive psychology. A comprehensive introduction to current thinking and research in developmental psychology. The course focuses on development of action, development of perception and knowledge, and development of language, morality, and other aspects of human culture.

214 Knowledge and Reasoning
Spring. 3 credits. Sophomore standing required. Graduate students, see Psychology 614.
M W F 1:25. C. Krumhansl.
One of four introductory courses in cognitive psychology. A survey of the following topics: visual and auditory memory, imagery, attention, memory for language, reasoning, decision making, and intelligence.

215 Psycholinguistics
Fall. 3 or 4 credits (4-credit option involves term paper). Graduate students, see Psychology 715.
M W F 11:15. H. S. Kurtzman.
One of four introductory courses in cognitive psychology. Introduction to the psychological study of language. Covers basic linguistic theory and contemporary research into language comprehension, production, and acquisition.

255 Psychology and Medicine
Fall. 3 credits. Prerequisite: Psychology 101. Limited to 40 students. Sophomores and juniors.
T R 11:40–12:55. H. Levin.
This course treats the implications of psychological theory and research for selected contemporary issues in medicine. The topics to be covered include: who are the people who choose medicine as a profession—family background, political and social beliefs. Profiles of various medical specialties (e.g., pediatrics, psychiatry, radiology, surgery). Satisfactions and frustrations in a medical career. Communication between doctors and patients. Diagnosis as decision making with incomplete information. The use of expert systems in medicine. Attitude and behavior change as related to drugs, smoking, and obesity. Psychneuroimmunology. The relations of personality to heart disease and longevity. This course will not concern psychopathology.

265 Psychology and Law
Fall. 3 credits. Prerequisite: Psychology 101.
M W F 1:25. D. Dunning.
This course examines the implications of psychological theory and methods for law and the criminal justice system. We concentrate on psychological research on legal topics (e.g., confession, eyewitness testimony, jury decision making, homicide, aggression, the prison system), social issues (e.g., death penalty, affirmative action), as well as on psychologists as participants in the legal system (e.g., assessing insanity and dangerousness and for expert testimony).

275 Introduction to Personality Psychology
Fall. 3 credits. Prerequisite: an introductory psychology course.
T R 10:10–11:25. D. Bem.
An introduction to research and theory in personality psychology, emphasizing contemporary approaches. Topics include the dynamics, structure, and assessment of personality as well as personality development and change. Biological and sociocultural influences on personality are also considered.

[276 Motivation (also Nutritional Science 276)
Spring. 3 credits. Graduate students, see Psychology 676/Nutritional Science 676.
T R 10:10–11:25. E. Blass.
The course surveys traditional and contemporary approaches to motivational behavior from Aristotle to Freud to Skinner to Lorenz. It also draws upon field studies, laboratory analyses, clinical cases and developmental stages to establish a scientific basis for motivation analysis. Normal and pathological feedings will serve as a target behavior.

277 Psychology of Sex Roles (also Women's Studies 277)
Spring. 3 credits. Limited to 300 students.
T R 11:40–12:55. S. Bem.
The course addresses the question of why and how adult women and men come to differ in their overall life styles, work and family roles, personality patterns, cognitive abilities, etc. This broad question is examined from five perspectives: (a) the psychoanalytic perspective, (b) the biological perspective, (c) the historical and cultural evolutionary perspective, (d) the child development perspective, and (e) the social-psychological and contemporaneous perspective. Each of these perspectives is also brought to bear on more specialized phenomena relating to the psychology of sex roles, including psychological androgyny, women's conflict over achievement, the male sex role, equalitarian marriage relationships, gender-liberated child-rearing, female sexuality, homosexuality, and transsexualism.

280 Introduction to Social Psychology
Spring. 3 or 4 credits; the additional (or fourth) credit is given for the completion of a group research project and write-up. Prerequisite: an introductory psychology course.
T R 10:10–11:25. D. Bem.
An introduction to research and theory in social psychology. Topics include processing of social information; social influence, persuasion, and attitude change; social interaction and group phenomena. The application of social psychological knowledge to current events will also be discussed.

[305 Visual Perception
Fall. 4 credits. Limited to 20 students. Prerequisite: Psychology 205 or permission of instructor. Not offered 1990–91.
M W F 1:25–2:15. J. Cutting.
A detailed examination of theories and processes in visual perception. Topics will include the perception of color, form, and motion; perceptual constancies; adaptation; pattern perception; and photography, television, and film.]

[307 Chemosensory Perception
Fall. 3 or 4 credits; the optional (or fourth) credit is for an independent laboratory project. Registration for the 4-credit option requires permission of the instructor; students will read, analyze, and discuss difficult original literature in the areas covered. Offered alternate years. Not offered 1990–91. Graduate students, see Psychology 607.
T R 9:05. B. P. Halpern.
An examination of basic theory, data, and processes for perception of the chemosensory environment. Topics include psychophysical methods for human and nonhuman studies, stimulus control, chemosensory function and development in neonates, role of chemosensory function in food choices, chemosensory communication, effects of pollution of the chemosensory environment, and possible consequences of chemosensory dysfunctions. At the level of *Clinical Measurement of Taste and Smell*, edited by H. L. Meiselman and R. S. Rivlin, and *Sensory Analysis of Foods*, edited by J. R. Piggott.]

[308 Perceptual Learning
Fall. 3 credits. Prerequisite: Psychology 205, 209, or 305, or permission of instructor. Not offered 1990–91.]

309 Development of Perception and Representation
Fall. 3 credits. Prerequisite: Psychology 205, 209, 214, or 305, or permission of instructor. Graduate students, see Psychology 609.
T R 1:25–2:40. E. Spelke.
An introduction to theories and research on the origins and development of knowledge of the immediately surrounding world. The course focuses on knowledge of the world as an arrangement in space and time, knowledge of the world as a space that can be encountered through multiple sensory modes, knowledge of the world as a place that can be acted upon, and organization of the world into meaningful objects and events.

[313 Perceptual and Cognitive Processes
Spring. 4 credits. Prerequisite: Psychology 205 or 214 or permission of instructor. Not offered 1990–91. Graduate students, see Psychology 713.
R 1:25–4:25. Staff.
A critical examination of selected topics in the area of perceptual and higher mental processes. We will read, discuss, and critically analyze original experimental reports and theoretical articles.]

[314 The Social Psychology of Language
Spring. 4 credits. Prerequisite: a course in psycholinguistics or social or personality psychology, or permission of instructor. Not offered 1990–91.
T R 2:55–4:10. Staff.
We are aware that one talks differently to children than to adults, to foreigners than to native speakers, to people we like than to those we detest, to people whose intelligence we respect compared to those we think are idiots. Speech varies by social setting; by the relationships between people; by formality, friendship, affection; and by the purposes of the communication: deception, persuasion, propaganda, etc. What are the rules of social language? How do we acquire the abilities to vary language appropriately and to understand the meanings of such variations?]

[316 Auditory Perception
Spring. 3 or 4 credits; the 4-credit option involves a laboratory project or paper. Prerequisite: Psychology 205, 209, 214, or 215 (other psychology, linguistics, or biology courses could serve as prerequisite with permission of the instructor). Not offered 1990–91.
Lecs, T R 2:30–4:25; lab, hours to be arranged. Staff.
Basic approaches to the perception of auditory information, with special consideration of complex patterns such as speech, music, and environmental sounds.]

[322 Hormones and Behavior (also Biological Sciences 322)
Spring. 3 credits. Limited to juniors and seniors; open to sophomores only by permission. Prerequisites: one year of introductory biology plus a course in psychology or Biological Sciences 221 or 222. S-U grades optional. Offered alternate years. Some years (but by no means all) a 4-credit option is available, which involves a one-hour section once a week, in which students will be expected to participate in discussion and read original papers in the field. This option, if available, is announced the first day of class; all students should preregister for 3 credits only. Not offered 1990–91. Graduate students, see Psychology 722.
T R 10:10–11:30. E. A. Reagan, R. E. Johnston.
The relationship between endocrine and neuroendocrine systems and the behavior of animals, including humans. Major emphasis is on sexual, parental, and aggressive behavior.]

324 Biopsychology Laboratory (also Biological Sciences 324)
Fall. 4 credits. Limited to 25 juniors and seniors. Prerequisites: Psychology 123 or Biological Sciences 221 or 222, and permission of instructor. S-U grades optional.
T R 1:25–4:25. T. DeVoogd.
Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included.

325 Introductory Psychopathology
Fall. 3 credits. Prerequisite: a course in introductory psychology. Students who would like to take a discussion seminar should also enroll in Psychology 329. May be taken concurrently with Psychology 327. Enrollment in Psychology 327 is limited.
T R 1:25–2:40. R. D. Mack.
A survey of the various forms of psychopathology, child and adult, as they relate to the experiences of human growth and development. Presents a description of the major syndromes, investigations, theories of etiology, and approaches to treatment.

326 Evolution of Human Behavior
Fall. 4 credits. Prerequisite: Psychology 123, or an introductory biology course, or an introductory anthropology course. Graduate students, see Psychology 626.
T R 2:55–4:10. R. E. Johnston.
A broad comparative approach to the behavior of animals and humans with special emphasis on the evolution of human behavior. Topics covered will vary but will include some of the following: human evolution, evolutionary and sociobiological theory, animal communication, non-verbal communication, language, cognitive capacities, social behavior and organization, cooperation and altruism, sexual behavior, mating and marriage systems, aggression, warfare.

327 Fieldwork in Psychopathology and the Helping Relationship
Fall. 2 credits. Prerequisites: Psychology 325 or concurrent registration in 325 and permission of instructor. S-U grades only. Students do not enroll in advance for this course. Field placement assignments are made in Psychology 325 during the first two weeks of the semester. Students who have already taken Psychology 325 must contact the instructor during the first week of the semester. Enrollment is limited by the fieldwork placements available. Fee, $25.
T R 12:20–1:10. K. Keil.
An introductory fieldwork course for students currently enrolled in, or who have taken, Psychology 325. Fieldwork placements include the school system, psychiatric institutions, halfway houses, and other mental health-oriented facilities. In addition to fieldwork, weekly supervisory/seminar meetings are held to discuss fieldwork issues and assigned readings.

328 Continuing Fieldwork in Psychopathology and the Helping Relationship
Fall or spring. 2 credits each term. Prerequisites: Psychology 325, 327, and permission of instructor. S-U grades only. May not be taken more than twice. Students do not enroll in advance for this course. Students in Psychology 327 should inform their teaching assistant before the end of the semester of their desire to take Psychology 328. Students not currently in a field placement who want to take Psychology 328 should contact the instructor during the first week of the semester. Field placement assignments will be made during the first two weeks of the semester. Enrollment is limited by the fieldwork placements available. Fee, $25.
T R 12:20–1:10. K. Keil and staff.
Designed to allow students who have begun fieldwork as part of Psychology 327 to continue their field placements under supervision and for academic credit. A limited number of students may be allowed to begin their fieldwork with Psychology 328 but only with permission of the instructor.

329 Introductory Psychopathology Seminars
Fall. 1 credit. Limited to 90 students. Prerequisite: must be concurrently enrolled in Psychology 325. Letter grade only.
Hours to be arranged; 9 different time options. Staff.
A weekly seminar/discussion section that may be taken in addition to Psychology 325 to provide an in-depth exploration of selected areas in the field of psychopathology. Topics vary from year to year and may include such areas as depression, schizophrenia, psychotherapy, sex-roles and psychopathology, etc. Involves extensive discussion and several short papers related to the seminar topic. Choice of seminar topics and meeting times will be available at the second or third lecture of Psychology 325.

332 Biopsychology of Learning and Memory
Spring. 3 credits. Prerequisites: one year of biology and either a biopsychology class or Biological Sciences 222.
M W F 11:15. T. DeVoogd.
This course will survey the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics will include invertebrate, "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings will be from primary literature.

342 Human Perception: Applications to Computer Graphic Art and Visual Display
Fall. 3 credits. Prerequisite: Psychology 101. Psychology 205 strongly recommended. Graduate students, see Psychology 642.
T R 11:40–12:55. D. Field.
Our present technology allows us to transmit and display information over a variety of media. To make the most of these media, it is important to consider the limitations and abilities of the human observer. The course will consider a number of applied aspects of human perception with an emphasis on the display of visual information. Topics to be covered include: "Three-dimensional" display systems, color theory, spatial and temporal limitations of the visual systems, attempts at subliminal communication, and "visual" effects in film and television.

[347 Psychology of Visual Communications
Spring. 4 credits. Limited to 12 students. Prerequisites: Psychology 101 and permission of instructor. Not offered 1990–91.
T 10:10–12:05; lab to be arranged.
J. B. Maas.
An exploration of theories of perception, attitude, and behavior change as they relate to the effectiveness of visually based communication systems. Emphasis is on an empirical examination of the factors that determine the nature and effectiveness of pictorial representations of educational messages in non-print media.]

350 Statistics and Research Design
Fall. 4 credits. Prerequisite: a course in the behavioral sciences.
M W F 9:05. T. D. Gilovich.
Acquaints the student with the elements of statistical description (measures of average, variation, correlation, etc.) and, more importantly, develops an understanding of statistical inference. Emphasis is placed on those statistical methods of principal relevance to psychology and related social sciences.

361 Biochemistry and Human Behavior (also Nutritional Sciences 361)
Fall. 3 credits. Prerequisites: Biological Sciences 101–102, Chemistry 103–104, Psychology 123, or permission of instructor. S-U grades optional.
M W F 9:05. B. Strupp.
The course is intended to survey the scientific literature on the role of the brain and body biochemical changes as determinants of human behavior. The topics covered include action and effects of psychopharmacologic agents, biology of learning and memory, the role of abnormal biochemistry in cognitive disorders, biochemical theories of psychosis, and effects of nutrition on behavior. A fundamental knowledge of human biology and chemistry is essential.

370 Language and Cognition (also Linguistics 370)
Spring. 4 credits. Prerequisites: Linguistics 101 or 264, or Psychology 215, or permission of one of the instructors. Graduate students, see Psychology 670.
T R 1:25–2:40. J. Bowers, H. Kurtzman.
Examination of current research on selected topics in language from both linguistic and psychological perspectives. Topics may include: universal grammar and language acquisition, syntactic parsing, word recognition, sentence production, aphasia, and schizophrenic language.

[375 Developmental Psychobiology: Motivational Processes (also Nutritional Sciences 375)
Fall. 3 credits. Prerequisite: Psychology 276 or Nutritional Sciences 276. Graduate students, see Psychology 675/Nutritional Sciences 675. Not offered 1990–91; next offered 1991–92.
T R 10:10–11:25. E. Blass.
This course focuses on maturational and experiential influences on motivational processes in animals and humans. Emphasis is placed on the mechanisms underlying mother-infant interactions, and the development of feeding, drinking, and reproduction behaviors.]

[379 Social Cognition
Spring. 4 credits. Prerequisite: one course in social or cognitive psychology or permission of instructor. Not offered 1990–91.
T R 10:10–11:25. Staff.
The focus of this course is on experimental research that applies cognitive principles to the study of social psychological phenomena. The course begins with an overview of research methodology (no prior knowledge in this area is required). Readings and discussion center around the following topics: (1) the organization and representation of social information; (2) assessing the causes of social behavior; and (3) sources of error and bias in human judgment. Course requirements include an examination, a midterm paper, and a final project.]

[383 Social Interaction (also Sociology 383)
Spring. 4 credits. Prerequisite: a course in social psychology. Not offered 1990–91.
M W 2:30–4:25. D. Hayes.
Fine-grain analyses of social behavior, its structure, changes, and determinants. Extensive practice in analysis of filmed and taped interactions. Student research is required throughout the course.]

[387 Health and Disease (also Biology and Society 327 and German Studies 327)
Fall. 4 credits. Limited to 20 students. Not offered 1990–91. Next offered 1991–92.
Hours to be arranged. S. L. Gilman and faculty team.
Everyone knows what health and disease are. Or do they? This Common Learning course on health and disease will explore some of the cultural, psychological, philosophical, anthropological, medical, economic, and political dimensions of these concepts to show how various models of disease function in contexts from business to engineering, from the military to the medical profession. The course will be divided into two segments: the first will examine the general implications of concepts of health and illness; the second will study these general principles as reflected in the definition, treatment, and mythmaking surrounding one specific disease: schizophrenia. The course will draw on specialists from throughout the university.]

[389 Reading Freud: Race, Gender, and Psychoanalysis (also Comparative Literature 347, English 347, German Studies 347)
Fall. 3 credits. Not offered 1990–91. Next offered 1991–92.
F 1:25–3:20. S. L. Gilman.
This course will read a series of texts from the formative works of Sigmund Freud (beginning with the *Studies in Hysteria* and concluding with Freud's reading of the Schreber autobiography). These readings will be placed within the tension existing at the turn of the century between concept of the biology of race and biology of gender. Close attention will be paid to the cultural, scientific, as well as polemical literature on the ideas of race and gender from the biological writings of the late nineteenth century. The course will also provide an introduction to the basic concepts of Freudian psychoanalytic theory. The class will consist of a one-hour lecture and a one-hour discussion group. All of the primary readings are available in English.]

[396 Introduction to Sensory Systems (also Biological Sciences 396)
Spring. 3 or 4 credits (4 credits with term paper). Registration for the 4-credit option requires permission of instructor. Prerequisites: an introductory course in biology or biopsychology, plus a second course in neurobiology or behavior or perception or cognition or biopsychology. Students will be expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. No auditors. Offered alternate years. Not offered 1990–91. Graduate students, see Psychology 696.

M W F 9:05. B. P. Halpern.

The course will be taught using the Socratic method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties which represent adaptations of animals to particular habitats or environments. The principles and limitations of major methods used to examine sensory systems will be considered. General principles of sensory systems, and auditory, visual, and somesthetic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, thermoreception) will be selected for special attention. At the level of *An Introduction to the Physiology of Hearing*, by J. O. Pickles; *Photoreceptors: Their Role in Vision*, by A. Fein and E. Z. Szuts; *Comparative Studies of Hearing in Vertebrates*, edited by A. N. Popper and R. R. Fay; and "Information Processing in Cutaneous Mechanoreceptors," Fed. Proc., 42:1983.]

[402 Current Research on Psychopathology: Depression
Spring. 4 credits. Limited to 20 students. Prerequisite: Psychology 325 or HDFS 270. Not offered 1990–91.

W 1:25–4. K. Keil.

Current research and theory on the nature and etiology of depression. Approaches from various perspectives (biological, psychological, socio-cultural) are considered. Minimal attention to psychotherapy and symptomatology.]

404 Psychopathology and the Family
Spring. 4 credits. Limited to 20 students. Prerequisite: Psychology 325 or HDFS 270.

W 1:25–4. K. Keil.

This course will explore familial influences on the development of abnormal behavior. It will examine how psychological, biological, and cultural factors in a family might contribute to such disorders as anorexia nervosa, depression, sexual abuse, psychopathy, and psychosomatic illnesses. Emphasis will be placed on early childhood experiences in the family and their impact on the development of later psychopathology. The course will also discuss how the evolution of family structures in more recent times (e.g., the rise in day care and divorce) influences the individual. Family therapy approaches and techniques will also be examined.

410 Undergraduate Seminar in Psychology
Fall or spring. 2 credits. Written permission of section instructor required for registration. Nonmajors may be admitted, but psychology majors are given priority.

Hours to be arranged. Staff.

Information on specific sections for each term, including instructor, prerequisites, and time and place, may be obtained from the Department of Psychology office, 211 Uris Hall.

412 Human Experimental Psychology Laboratory
Spring. 4 credits. Limited to 20 students. Prerequisite: permission of instructor. Recommended, some experience in programming and one course in experimental psychology. Graduate students, see Psychology 612.

T R 11:40–12:55. D. Field.

A laboratory course using current methods in experimentation in perception and cognitive psychology. Students will attempt to replicate several classic experiments and also develop one independent project. Computers will be available and used in most of the experiments. Projects will be selected from the areas of visual perception, pattern recognition, memory, language and concept learning.

[415 Concepts, Categories, and Word Meanings
Fall. 4 credits. Prerequisites: Psychology 205, 209, 214, or 215, or permission of instructor. Not offered 1990–91. Graduate students, see Psychology 615.

T 1:25–4. F. Keil.

A consideration of what types of categories are psychologically important, of how they are represented and used through concepts, and of how concept structure and semantic structure are interrelated. Different models of concept structure and categorization processes are evaluated, as are models of conceptual change and concept acquisition. Other topics include: relations between concepts and broader knowledge representation systems such as scripts, mental models, and intuitive theories; relative roles of associative information and beliefs in concept structure; categorization in other species; neuropsychological studies of categorization; comparisons of categorization systems across cultures; and comparisons of concept structures across different types of categories.]

[416 Psychology of Language
Spring. 4 credits. Prerequisite: some background in psycholinguistics or linguistics. Not offered 1990–91. Graduate students, see Psychology 616.

T R 1:25–2:40. H. S. Kurtzman.

Each year the course focuses on one or two major theoretical issues in current psycholinguistics. An intensive critical examination is made of the relevant literature from psychology, linguistics, and artificial intelligence. The issues are considered not only at the detailed level of specific hypotheses and evidence but also in relation to broader theoretical trends in the field.]

[417 The Origins of Thought and Knowledge
Spring. 4 credits. Prerequisites: Psychology 205, 209, 214, or 215, or permission of instructor. Graduate students, see Psychology 717. Not offered 1990–91.

T 1:25–4:05. F. Keil.

An in-depth analysis of current theories concerning the growth of thought and knowledge in childhood. Several controversies will be discussed in detail, including: Are mental abilities organized in local domains or modules that have their own patterns of development, or is cognitive development a more general process? Do comparative studies with other species and evolutionary models provide any useful insights into cognitive development in humans? Are there qualitative restructurings of thought and knowledge with development, or is the process more continuous in nature? What restrictions should these developmental considerations place on models of thought and knowledge in adults?]

418 Psychology of Music
Fall. 3 or 4 credits, depending on whether student elects to do an independent project. Prerequisites: junior or senior standing with major in psychology or music and some background in both, or permission of instructor. Graduate students, see Psychology 618.

T R 1:25–2:40. C. Krumhansl.

Detailed analysis of topics in the psychology of music, including theories of consonance, perception of tonal-harmonic structure, memory for music, and effects of musical training. Emphasis given to experimental methodologies.

[422 Developmental Biopsychology
Fall. 4 credits. Prerequisites: a course in introductory biology and a course in biopsychology or neurobiology (such as Psychology 123 or Biological Sciences 221). Not offered 1990–91. Graduate students, see Psychology 622.

M W F 9:05. B. L. Finlay.

We will discuss the relationship of the development and evolution of the brain to the development of behavior. Topics include normal neuroembryology; how neurons are generated, find targets, and establish connections; the emergence of reflexive and complex behavior; how experience affects the developing brain; evolutionary perspectives on the development of perception, memory, and communication systems; and abnormal development.]

[425 Brain and Behavior
Fall. 3 or 4 credits (4-credit option includes a discussion section and requires an additional paper). Prerequisites: a course in introductory biology and a course in biopsychology or neurobiology (such as Psychology 123 or Biological Sciences 221). Not offered 1990–91. Next offered Fall 1991. Graduate students, see Psychology 625.

M W F 9:05. B. L. Finlay.

We will study the relation between structure and function in the central nervous system. Human neuropsychology and the contribution of work in animal nervous systems to the understanding of the human nervous system will be stressed. Some topics to be discussed include visual and somatosensory perception, organization of motor activity, emotion and motivation, psychosurgery, and memory and language.]

[426 Seminar and Practicum in Psychopathology
Spring. 4 credits. Limited to 16 students. Prerequisite: Psychology 325; permission of instructor required in all cases. Student should apply to the course during preregistration in fall semester; acceptance will be announced before the end of the fall semester. Not offered 1990–91.
T R 2:30–4:25. R. D. Mack.
A seminar and practicum course for advanced students who have mastered the fundamental concepts of personality and psychopathology. An opportunity to explore in depth issues in personality and psychopathology, particularly as they relate to issues of development, fantasy, attachment, and sex roles. Includes an experimental component involving self-disclosure, peer counseling, and group process. The goal: an integration of education and personal growth. It is recommended that students take Psychology 328, the fieldwork course, in conjunction with this seminar.]

[429 Olfaction and Taste: Structure and Function (also Biological Sciences 429)
Fall. 3 or 4 credits (4-credit option requires a term paper or research project. The research project can, but does not need to, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Prerequisite: one 300-level course in biopsychology or equivalent. Not offered 1990–91. Graduate students, see Psychology 629.
T R 9:05. B. P. Halpern.
The structural and functional characteristics of olfaction and taste will be explored by reading and discussing current literature in these areas. Structure will be examined at the light levels of electron microscopes as well as at the molecular level. Function will be primarily neurophysiological and biochemical aspects. The emphasis will be on vertebrates, especially air-breathing vertebrates in the case of olfaction, but there will be some coverage of invertebrate forms.]

436 Language Development (also Human Development and Family Studies 436 and Linguistics 436)
Spring. 4 credits. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. Open to undergraduates and graduate students. S-U grades optional. Offered alternate years.
T R 11:40–12:55. B. Lust.
This course surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental linguistic issues of universal grammar and the biological foundations for acquisition are discussed, as are the issues of relations between language and thought. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

440 Sleep and Dreaming
Spring. 4 credits. Prerequisites: advanced undergraduate standing and Psychology 101 and 123 or another course in biopsychology or neurobiology.
T R 1:25–2:40. H. Porte.
The course will emphasize equally the neurobiology of sleep and the psychology of dreaming. Students will study the anatomy and physiology of the states and rhythms of sleep, the functions of sleep, and the phylogeny and ontogeny of sleep as topics in the biology of behavioral state. Insomnia and hypersomnia, narcolepsy, sleep disorder in endogenous depression, "jet lag," sleep at the wrong time and doing the wrong thing in sleep (running for example, or fighting, or eating) will be presented as errors in the basic rhythms, mechanisms and behavioral components of sleep. In the second half of the course students will examine the data of dreams and hypnagogic experience—including their own—in relation to sleep processes. From this perspective, students will evaluate theories of dreaming from Freud's to Francis Crick's, and will consider whether dreaming is meaningful or meaningless, encrypted or transparent, and better remembered or better forgotten.

450 Bio-historical Construction of Gender and Sexuality (also Women's Studies 450, Psychology 650, and Women's Studies 650)
Fall. 4 credits. Prerequisite: Psychology 277/ Women's Studies 277 or permission of instructor. Limited to 12 seniors and graduate students. No preregistration; interested students should attend the first class session. Graduate students, see Psychology/Women's Studies 650.
W 2:30–4:30. S. Bem.
This seminar is designed to bridge the divide between biological/essentialist perspectives on gender and sexuality, and historical/social constructionist perspectives. It is very interdisciplinary, covering material from biology, history, anthropology, law, sociology, psychology, psychiatry, philosophy, and feminist theory. Part 1 considers how biology and history have interacted in Western culture to produce both social institutions and discourses that have embedded within them the following three organizing principles or "cultural lenses": (a) biological determinism, (b) androcentrism, and (c) gender polarization (including the stigmatizing of homosexuality). Part 2 considers how the individuals living within such a cultural context are transformed from being male or female newborns to being "masculine" and "feminine" adults. Part 3 considers possibilities for both social and personal change.

[465 Mathematical Psychology
Spring. 4 credits. Prerequisites: one year of college mathematics (finite mathematics or calculus), a course in probability or statistics, and a course in psychology. Not offered 1990–91.
T R 10:10–11: 40. Staff.
Mathematical approaches to psychological theory are discussed. Possible topics include choice and decision, signal detectability, measurement theory, scaling, stochastic models, and computer simulation.]

467 Seminar: The Examined Self—A Psychohistorical View
Spring. 4 credits. Prerequisites: 9 credits of psychology including Psychology 325 or equivalent, and permission of instructor before course enrollment.
T 1:25–3:25. H. M. Feinstein.
Based primarily on American autobiographies dating from the seventeenth century to the twentieth century, this seminar will explore the shifting interface between self and historical context. Students should be prepared to write and talk about their own lives as well as the historical figures selected for study.

[468 American Madness
Spring. 4 credits. Limited to 15 students. Prerequisites: Psychology 325 and permission of instructor. Not offered 1990–91.
T 1:25–3:25. H. M. Feinstein.
The seminar will be devoted to an analysis of insanity as a psychological and historical phenomenon. Selected writings by the mentally ill and their definers will be studied.]

469 Psychotherapy: Its Nature and Influence
Spring. 4 credits. Limited to senior psychology majors. Prerequisites: Psychology 325 or equivalent and permission of instructor during preregistration.
W 7–10 p.m. R. D. Mack.
A seminar on the nature of psychotherapy. Issues related to therapeutic goals, differing views of the nature of man, ethical concerns, and research problems are also considered. Experiential and role-playing exercises in class and three hours per week of peer counseling outside of class are integral parts of the seminar experience.

470 Undergraduate Research in Psychology
Fall or spring. 1–4 credits. S-U grades optional. Written permission from the staff member who will supervise the work and assign the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology.
Hours to be arranged. Staff.
Practice in planning, conducting, and reporting independent laboratory, field, and/or library research.

471 Advanced Undergraduate Research in Psychology
Fall or spring. 1-4 credits. S-U grades optional. Written permission of the staff member who will supervise the work and assign the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology.
Hours to be arranged. Staff.
Advanced experience in planning, conducting, and reporting independent laboratory, field, and/or library research. One, and preferably two, semesters of Psychology 470 is required. The research should be more independent and/or involve more demanding technical skills than that carried out in Psychology 470.

472 Multiple Regression
Spring, weeks 1–7. 2 credits. Prerequisite: one solid semester of introductory statistics. Analysis of variance is helpful but not required.
M W F 10:10. R. Darlington.
Uses and pitfalls of multiple regression in causal analysis, path analysis, and prediction. Emphasis on analyzing data collected under uncontrolled conditions. Includes colinearity, indicator variables, sets, adjusted and shrunken R2, suppressors, hierarchical analysis, overcontrol, experimental design. Very little hand computation; uses MYSTAT computer program.

473 General Linear Model
Spring, weeks 8–14. 2 credits. Prerequisite: Psychology 472 or equivalent.
M W F 10:10. R. Darlington.
Includes multicategorical variables, corrections for multiple tests, diagnostic methods, nonlinear relationships, interaction, main and simple effects, nesting, repeated measures, and MANOVA. Emphasizes MYSTAT, and SYSTAT, briefly discusses SAS PROC REG and SAS PROC GLM.

[475 Multivariate Analysis of Psychological Data
Fall. 2 credits. Prerequisite: Psychology 472 or permission of instructor. Not offered 1990–91.
R 10:10–12:05. R. Darlington.
Most of the course concerns relative advantages of factor analysis and newer competing techniques for discovering hidden patterns in correlational data. Uses SYSTAT, SAS PROC FACTOR and PROC PRINCOMP. Also includes brief discussions of MANOVA, logit analysis, logistic regression, canonical correlation analysis, and multidimensional scaling.]

[476 Representation of Structure in Data
Fall. 3 credits. Prerequisites: one year of college mathematics (finite mathematics or calculus) and a course in the social sciences. Not offered 1990–91.
W 2:30–4:30. Staff.
Representations of preferences, dominance data, psychological distances, and similarities will be discussed. Topics include unidimensional and multidimensional scaling, unfolding, individual differences scaling, hierarchical clustering, and graph-theoretic analysis.]

478 Psychometric Theory
Fall, weeks 1–10. 3 credits. Prerequisite: Psychology 472 or permission of instructor.
T R 10:10–12:05. R. Darlington.
Statistical methods relevant to the use, construction, and evaluation of psychological tests.

479 Multisample Secondary Analysis
Fall, weeks 11–14. 1 credit. Prerequisite: Psychology 350 or equivalent.
T R 10:10–12:05. R. Darlington.
Statistical methods for analyzing and integrating the results of many independent studies on related topics.

481 Advanced Social Psychology
Fall. 4 credits. Limited to 20 students. Prerequisite: a course in social psychology or permission of instructor.
T R 10:10–11:25. D. T. Regan.
Selected topics in social psychology are examined in depth with an emphasis on the relationship between experimental research and the development of theory. Readings will be mostly primary sources. Among the theoretical approaches to social behavior we may discuss are social comparison theory, cognitive dissonance, attribution processes and social judgment, social exchange theory, and biological perspectives.

482 Death and Dying
Spring. 4 credits. Limited to 20 juniors and seniors. Prerequisites: 6 credits in sociology or psychology.
T R 2:30–4:25. W. Collins.
Issues of death and dying in modern American society are explored from the perspectives of psychology, sociology, and the health-related professions. Possible inadequacies in current practice are examined and alternatives discussed.

488 Human Development in Context (also Human Development and Family Studies 488)
Spring. 4 credits. Open to juniors, seniors, and graduate students. Prerequisites: one course in statistics (which may be taken simultaneously) and two courses in the social sciences, or one in human biology and one in the social sciences.
T R 2:30–4:25. U. Bronfenbrenner.
The course examines highlights of what is known about human development in the actual settings in which human beings live and grow. The material presented reveals how development in its various aspects—cognitive, emotional, and social—occurs through the progressive interplay between the maturing capacities and characteristics of an active, exploring, thinking human organism and the changing situational, cultural, and historical contexts in which the person lives. Particular emphasis is given to the role of the family, peer group, school, workplace, community, and social structure and belief systems of the larger society. Course work is carried out primarily through the analysis of selected studies that shed light on critical issues in development. The main focus is not on specific findings but on key processes and principles of development to which the findings point. Students are offered guidance and experience in analyzing and evaluating research reports, with particular emphasis on the nature and intellectual excitement of the scientific process and on the implications of scientific knowledge for public policy and practice. The course is organized in terms of successive stages in the life course. At each stage the material presented will emphasize change and continuity in the two-way developmental processes taking place between a biologically maturing person and the progressively more complex environments into which the person moves through the life.

[489 Seminar: Selected Topics in Social Psychology and Personality (also Sociology 489)
Spring. 3 credits. Prerequisites: one course in psychology or one course in sociology or permission of instructor. Not offered 1990–91. Graduate students, see Psychology 689.
Hours to be arranged. D. Bem.
The specific topics of discussion vary, but the general emphasis is on a critical examination of the study of individuals in social contexts.]

[490 History and Systems of Psychology
Fall. 4 credits. Intended for juniors, seniors, and graduate students, majors and nonmajors. Prerequisites: at least three courses in psychology or related fields or permission of instructor. Not offered 1990–91.
W 2–4:30. Staff.
The course aims to acquaint students with the recent history of psychology and to help them to identify important trends and underlying assumptions in contemporary writings. After a discussion of relevant nineteenth-century developments, a number of the major historical systems will be surveyed: the introspectionist, functionalist, behaviorist, and Gestalt psychologies; psychoanalysis; and cognitive psychology. Emphasis will be on the ideas that have shaped modern psychology.]

491 Research Methods in Psychology
Spring. 4 credits. Enrollment limited to 25 students. Recommended: permission of instructor, Psychology 350, experience in upper-division psychology courses, or graduate standing. Graduate students, see Psychology 691.
T R 10:10–11:25. D. Dunning.
An intensive examination of the basic research methods used in social, personality, cognitive, and developmental psychology. The course will focus on designing and conducting experiments, i.e., how to turn vague theories into concrete and testable notions, evaluate studies, avoid common pitfalls, and, finally, remain ethical. Beyond learning methods of "correct" and rigorous experimentation, we will also discuss what makes a research study actually interesting. The course will, in addition, cover test construction, survey methods, and "quasi experiments." Students will concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

492 Sensory Function (also Biological Sciences 492)
Spring. 4 credits. Prerequisite: a 300-level course in biopsychology, or Biological Sciences 222 or 311, or permission of the instructors. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Offered alternate years. Graduate students, see Psychology 692.
M W F 10:10; sec, hours to be arranged.
H. C. Howland, B. P. Halpern.
This course covers classical topics in sensory function such as vision, hearing, touch and balance, as well as some more modern topics like sensory coding, location of stimulus sources in space, and the development of sensory systems. Both human and nonhuman systems are discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information are treated, and the processing of this information is followed into the central nervous system. At the level of *The Senses*, edited by Barlow and Mollon, and *An Introduction to the Physiology of Hearing*, 2nd edition, by Pickles.

Advanced Courses and Seminars

Advanced seminars are primarily for graduate students, but with the permission of the instructor they may be taken by qualified undergraduates. The selection of seminars to be offered each term is determined by the needs of the students.

A supplement describing these advanced seminars is available at the beginning of each semester and can be obtained from the department office. The following courses may be offered either term and carry 4 credits unless otherwise indicated.

502 Professional Writing in Psychology

510–511 Perception

512–514 Visual Perception

513 Learning

515 Motivation

517 Language and Thinking

518 Psycholinguistics

519–520 Cognition

521 Psychobiology

522 Topics in Perception and Cognition

523 Physiological Psychology

524 Sex Differences in Brain and Behavior (also Biological Sciences 626)
Spring. 2 credits. Limited to 12 seniors and graduate students.
Hours to be arranged. T. DeVoogd.
A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

525 Mathematical Psychology

531 History of Psychology

535 Animal Behavior

541 Statistical Methods

543 Psychological Tests

544 Topics in Psychopathology and Personality

545 Methods in Social Psychology

547 Methods of Child Study

551 Distinguished Speakers

561 Human Development and Behavior

580 Experimental Social Psychology (also Sociology 580)

591 Educational Psychology

595 Teaching of Psychology

596 Improvement of College Teaching

600 General Research Seminar
Fall or spring. No credit.

605 Perception (also Psychology 205)
Spring. 4 credits.
T R 2:55–4:10. J. Cutting.

[607 Chemosensory Perception (also Psychology 307)
Fall. 4 credits. Not offered 1990–91.
T R 9:05. B. P. Halpern.]

609 Development of Perception (also Psychology 309)
Fall. 4 credits.
T R 1:25–2:40. E. S. Spelke.

[612 Human Experimental Psychology Laboratory (also Psychology 412)
4 credits. Not offered 1990–91.
T R 11:40–12:55. D. Field.]

[613 Obesity and the Regulation of Body Weight (also Nutritional Sciences 315)
Spring. 3 credits. Limited to 30 students. Prerequisites: one course in psychology and one course in nutrition. Undergraduate students may register with permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
T R 1:30–3. D. Levitsky.
This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.]

614 Knowledge and Reasoning (also Psychology 214)
Spring. 4 credits.
T R 1:25–2:40. C. Krumhansl.

[615 Concepts, Categories, and Word Meaning (also Psychology 415)
Fall. 4 credits. Not offered 1990–91.
T 1:25–4:05. F. Keil.]

[616 Psychology of Language (also Psychology 416)
Spring. 4 credits. Not offered 1990–91.
T R 1:25–2:40. H. Kurtzman.]

618 Psychology of Music (also Psychology 418)
Fall. 4 credits.
T R 1:25–2:40. C. Krumhansl.

[622 Developmental Biopsychology (also Psychology 422)
Fall. 4 credits. Not offered 1990–91.
M W F 9:05. B. L. Finlay.]

[625 Brain and Behavior (also Psychology 425)
Fall. 4 credits. Not offered 1990–91. Next offered fall 1991.
M W F 9:05. B. L. Finlay.]

626 Evolution of Human Behavior (also Psychology 326)
Fall. 4 credits.
T R 2:55–4:10. R. Johnston.

[629 Olfaction and Taste: Structure and Function (also Psychology 429 and Biological Sciences 429)
Fall. 4 credits. Not offered 1990–91.
T R 9:05. B. P. Halpern.]

650 Bio-historical Construction of Gender and Sexuality (also Psychology 450 and Women's Studies 450 and Women's Studies 650)
Fall. 4 credits.
W 2:30–4:30. S. Bem.

670 Language and Cognition (also Psychology 370 and Linguistics 370)
Spring. 4 credits.
T R 1:25–2:40. J. Bowers, H. S. Kurtzman.

675 Developmental Psychobiology: Motivational Processes (also Psychology 375, Nutritional Sciences 375 and Nutritional Sciences 675)
Fall. 4 credits.
T R 10:10–11:25. E. Blass.

676 Motivation (also Psychology 276, Nutritional Sciences 276, and Nutritional Sciences 676).
Spring. 4 credits.
T R 10:10–11:25. E. Blass.

683 Seminar in Interaction (also Sociology 683)

[685 Sex Differences and Sex Roles (also Sociology 685 and Women's Studies 685)
Not offered 1990–91.
Staff.]

[689 Seminar: Selected Topics in Social Psychology and Personality (also Psychology 489 and Sociology 489)
Spring. 4 credits. Not offered 1990–91.
Hours to be arranged. D. Bem.]

691 Research Methods in Psychology (also Psychology 491)
Spring. 4 credits.
T R 10:10–11:25. D. Dunning.

692 Sensory Function (also Psychology 492 and Biological Sciences 492)
Spring. 4 credits.
M W F 10:10. H. C. Howland, B. P. Halpern.

[696 Introduction to Sensory Systems (also Psychology 396 and Biological Sciences 396)
Spring. 4 credits. Not offered 1990–91.
M W F 9:05. B. P. Halpern.]

700 Research in Biopsychology

709 Developmental Psychology (also Psychology 209)
Spring. 4 credits.
T R 1:25–2:40. E. Spelke.

710 Research in Human Experimental Psychology

[713 Perceptual and Cognitive Processes (also Psychology 313)
Spring. 4 credits. Not offered 1990–91.
R 1:25–4:25. Staff.]

715 Psycholinguistics (also Psychology 215)
Fall. 4 credits.
M W F 11:15–12:05. H. S. Kurtzman.

[717 The Origins of Thought and Knowledge (also Psychology 417)
Spring. 4 credits. Not offered 1990–91.
T 1:25–4:00. F. Keil.]

720 Research in Social Psychology and Personality

[722 Hormones and Behavior (also Psychology 322 and Biological Sciences 322)
Spring. 4 credits. Not offered 1990–91.
T R 10:10–11:25. E. A. Regan, R. Johnston.]

773 Proseminar in Cognitive Studies I (also Cognitive Studies 773, Philosophy 773, Linguistics 773, and Computer Science 773)

Fall. 2 credits.

R 1:25–2:40. Staff (taught jointly by faculty from Cornell's Cognitive Studies Program, representing fields of computer science, linguistics, psychology and philosophy).

This is the first term of a year-long lecture-and-discussion course that is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its representation, acquisition, and use. Topics may include the psychology of perception and cognition; the philosophy of mind, language, and knowledge; the phonology, syntax, and semantics of natural language; computational approaches to natural language processing, vision and reasoning; parallel distributed processing, and neuropsychology.

[774 Proseminar in Cognitive Studies II (also Computer Science 774, Linguistics 774 and Philosophy 774)

Spring. 2 credits.

R 1:25–2:40. Staff (taught jointly by faculty from Cornell's Cognitive Studies Program, representing fields of computer science, linguistics, philosophy, and psychology.)

This is the second half of a year-long lecture-and-discussion course that is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its representation, its acquisition, and its use. Topics may include the psychology of perception and cognition; the philosophy of mind, language, and knowledge; the phonology, syntax, and semantics of natural language; computational approaches to natural language processing, vision and reasoning; parallel distributed processing, and neuropsychology.

900 Doctoral Thesis Research in Biopsychology

910 Doctoral Thesis Research in Human Experimental Psychology

920 Doctoral Thesis Research in Social Psychology and Personality

Summer Session Courses

The following courses are also frequently offered in the summer session, though not necessarily by the same instructor as during the academic year. Not all of these courses will be offered in a particular summer. Information regarding these courses and additional summer session offerings in psychology is available from the department before the end of the fall semester.

101 Introduction to Psychology: The Frontiers of Psychological Inquiry

123 Introduction to Biopsychology

128 Introduction to Psychology: Personality and Social Behavior

215 Psycholinguistics

265 Psychology and Law

280 Introduction to Social Psychology

281 Interpersonal Relations and Small Groups (also Sociology 281)

325 Introductory Psychopathology

350 Statistics and Research Design

380 Community Mental Health

469 Psychotherapy: Its Nature and Influence

Special Programs

The Department of Psychology, in conjunction with Human Service Studies, the Field Study Office of the College of Human Ecology, and the Tel-Aviv University School of Social Work will periodically offer an eight-week summer program in Community Health. The course will include three weeks at Cornell and five weeks in Israel. It may be taken for 10–12 credits. For further information, contact Ronald Mack in the Department of Psychology.

ROMANCE STUDIES

The Department of Romance Studies (Alice Colby-Hall, chair) offers courses in French literature, Italian literature, and Spanish literature. In addition, the department's program includes courses in French and Spanish languages, French linguistics, semiotics, and courses in French, Italian, and Hispanic culture. Through its course offerings and opportunities for independent study, the department seeks to encourage study of the interactions of the Romance literatures among themselves, with other literatures, and with other fields of inquiry.

French

J. Bëreaud (director of undergraduate studies, 265 Goldwin Smith Hall, 255-6407), A. Berger, A. M. Colby-Hall, N. Furman, D. I. Grossvogel, R. Klein, P. Lewis, J. Ngate, K. Perry, A. Seznec, S. Tarrow, L. R. Waugh.

The Major

The major in French is designed to give students proficiency in the oral and written language, to acquaint them with French literature and culture, and to develop skills in literary and linguistic analysis.

While prospective majors should try to plan their programs as far ahead as possible, no student will be refused admission merely because of a late start. It is even possible for a student to begin French at Cornell and become a major. Students wishing to major in French literature should consult the director of undergraduate studies of the Department of Romance Studies, Professor J. Bëreaud, who will admit them to the major. After their admission students will choose an adviser from among the French faculty. Students interested in a major in French linguistics should read the description of the major under Modern Languages and Linguistics—French.

The Core

1) All majors are expected to acquire a sound degree of competence in language. This competence is demonstrated by the successful completion of French 312 or by the passing of a special examination to be taken no later than the end of the junior year. A typical program will involve two semesters of language at the 200 level (to be taken no later than the end of the sophomore year) and two semesters of language at the 300 level (French 311–312). Students may bypass any part of the sequence through placement examinations.
2) In addition, all majors are expected to take French 201 and 202. At least one of these should be completed successfully no later than the end of the sophomore year.

The Options

1) The successful completion of six courses in French literature or civilization at the 300 level or above. These courses will be selected in consultation with the student's major adviser and will normally include at least one course from each of the three major periods of French literature (Medieval to Renaissance, the seventeenth and eighteenth centuries, and the nineteenth and twentieth centuries).
2) The successful completion of two related courses in one of the following: (a) French literature; (b) French linguistics; (c) French history, culture, music, or history of art or architecture; (d) courses in linguistic theory, history of language, psycholinguistics, or philosophy of language.

Study Abroad in France

French majors or other interested students may study in France for one or two semesters during their junior year. Opting for one of several study-abroad plans recognized by the departments of Romance Studies and Modern Languages and Linguistics facilitates the transfer of credit. Information about these plans is available from the director of undergraduate studies.

Students interested in studying in France are encouraged to consider the special benefits offered by EDUCO, the program in Paris cosponsored by Cornell and by Duke University. EDUCO offers advanced students a challenging course of study and the experience of total immersion in French life and culture in Paris. Participants in this program spend the year or the semester as fully matriculated students at the University of Paris and other institutions of higher learning in Paris, including the Institut d'Etudes Politiques (Sciences Po), selecting courses in many fields from the regular university course offerings. Students begin the academic year with an intensive three-week orientation into French history, society, and daily life. While it is possible to enroll in the EDUCO Program for one semester, admission will be given first to students planning to study abroad for the full academic year.

EDUCO maintains a center in Paris with appropriate support staff. The resident director, chosen annually from the Cornell and Duke faculties, teaches a special seminar each semester, provides academic advice, and helps ensure the quality of the courses. The center, which includes a small library and word-processing facilities, is regularly used by students for special tutorials, seminars, and lectures, as well as informal gatherings.

Honors. The honors program encourages well-qualified students majoring in French literature to do independent work in French outside the structure of courses. The preparation of the senior honors essay, generally spread over two terms, provides a unique learning opportunity, since it allows for wide reading, and extensive rewriting to a degree not possible in the case of course papers.

No special seminars or courses are required of honors students, but they will have regular meetings with the faculty advisers who have

agreed to supervise their work. They may receive course credit by enrolling in French 429–430, but these independent study courses must be taken in addition to the courses that meet the minimum requirements for the major. At the end of the senior year each honors student is examined orally on the honors essay by a jury consisting of his or her faculty adviser and two other faculty members. The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

Fees. Depending on the course, a small fee may be charged for copies of texts used in course work.

Language and Linguistics

Most language courses and French linguistics courses are offered by Modern Languages and Linguistics. Further language courses (conversation and advanced level), French linguistics courses, and all literature courses are listed below.

Note: Students placed in the 200-level courses have the option of taking language and/or literature courses; see listings under "Literature" for descriptions of the literature courses, any of which may be taken concurrently with 203–204 (offered by Modern Languages and Linguistics) or 200 described below.

200 Intermediate Course: Language and Literature
Fall or spring. 3 credits. Prerequisite: qualification in French with a CPT score no higher than 629. Offered by the Department of Romance Studies. Conducted in French.
Fall: M W F 10:10, 11:15, or T R 10:10–11:25, S. Tarrow and staff; spring: M W F 10:10 or 12:20. S. Tarrow and staff.
Designed to provide an introduction to contemporary French culture and literature. Texts read and discussed are selected for their cultural and humanistic value. One-third of class time is devoted to grammar review, with emphasis on reading and writing skills.

210 Intermediate French Conversation
Fall or spring. 2 credits. Limited to 15 students. Prerequisite: French 203 or 211 or equivalence (Q+) on the Cornell Advanced Standing Examination (CASE).
Fall: T R 8:40–9:55, 11:40–12:55, or 1:25–2:40. A. Berger and staff. Spring: T R 8:40–9:55 or 10:10–11:25. J. Bereaud and staff.
The course is based on audio-visual materials used in class; slides and recordings will accompany extensive discussions. A modest amount of reading each week will aim at increasing students' active vocabulary.

310 Advanced French Conversation
Spring. 2 credits. Limited to 15 students. Priority given to seniors. Prerequisite: French 204 or 212 or Cornell Advanced Standing Examination (CASE) placement of Q++.
T R 11:40–12:55, or 1:25–2:40. J. Bereaud and staff.
This course is based on discussion of articles published in the French press (L'Express magazine). A few recordings and films will also be used.

311 Advanced French
Fall. 4 credits. Limited to 15 students. Prerequisite: French 204 or 212 or placement by the Cornell Advanced Standing Examination (CASE).
M W F 11:15, staff; M W F 12:20, staff; T R 1:25–2:40. A. Berger.
All-skills course. Detailed study of present-day syntax. Reading and discussion of texts of cultural relevance. Weekly papers.

312 Advanced French
Spring. 4 credits. Limited to 15 students. Prerequisite: French 311 or placement by the Cornell Advanced Standing Examination (CASE).
M W F 10:10 or 11:15. J. Bereaud and staff.
Continuation of work done in French 311. Less emphasis will be placed on study of grammar, more on the examination of texts, on questions of style, and on oral presentation by students. Weekly papers.

400 Semiotics and Language (also Comparative Literature 410 and Linguistics 400)
Spring. 4 credits. Prerequisite: some background in an area relevant to semiotics—e.g., linguistics, philosophy, literature, psychology, or anthropology—or permission of the instructor.
Hours to be announced. L. Waugh.
An introduction to the study of semiotics in general and to particular semiotic theories (for example, those of Saussure, Peirce, Barthes, Jakobson) and to language as a semiotic system. The particular topics to be discussed will depend on the interests of the students.

[408 Linguistic Structure of French I (also Linguistics 408)
4 credits. Not offered 1990–91.]

410 Structure of French II (also French 410 Modern Languages and Linguistics)
Fall. 4 credits. Prerequisite: Permission of instructor.
Hours to be announced. L. Waugh.
A synchronic study and analysis of modern French, with emphasis on semantics, pragmatics, and discourse analysis.

[424 Composition and Style
4 credits. Not offered 1990–91.]

[604 Contemporary Theories of French Grammar
4 credits. Not offered 1990–91.]

Literature

[105 Freshman Writing Seminar: The French Novel
3 credits. Not offered 1990–91.]

106 Freshman Seminar: Women Writers in France
Spring. 3 credits.
T R 10:10–11:25. K. Perry.
Within or against a given frame of reference not created by themselves or by other women, these authors create their own version of tradition (courtly love, Catholic doctrine, the Western political or philosophical traditions). This course will explore what these new perspectives reveal about society and what conflicting views and versions of society tell us about any "frame" of interpretation. Authors to be studied will include: Marie de France, Christine de Pizan, Louise Labé, Marguerite de Navarre, Madame de Lafayette, George Sand, Simone de Beauvoir, Marguerite Duras. Students will write essays based on these different "frames."

[107 Freshman Writing Seminar: Readings in Modern Literature
3 credits. Not offered 1990–91.]

109 Freshman Writing Seminar: Techniques of Interpretation: An Introduction to Semiotics
Fall or spring. 3 credits.
Fall: M W F 9:05 or T R 1:25–2:40.
Spring: T R 10:10–11:25. D. Polachek and staff.
In its broadest meaning semiotics is the study of signs that carry information: roadside signs, fashions, advertisements, publicity posters, literary modes. This course, which does not presuppose prior technical knowledge, will introduce the students to a critical reading of signs: the signifier (the concrete expression of the sign) and the signified (the message) and their various interactions. Exercises will be essays on how to analyze various signs taken from practical experience, such as advertisements from magazines or TV or from cultural phenomena (fashion codes, artistic modes).

201 Introduction to French Literature
Fall, spring, or summer. 3 credits. Prerequisite: a CPT score of 600 or higher or a 200-level language course. French 201 serves as a prerequisite for all 300-level courses in French literature and is required of all majors. The course is divided into small sections. Some are taught entirely in French; the others are taught in English. (For times of the all-French sections, see the supplemental course description available in Goldwin Smith Hall 283.) Readings for all sections are the same and all in French. Papers may be written in French or in English.
Fall: M W F 9:05, staff; M W F 10:10, staff; M W F 11:15, K. Perry; M W F 12:20, staff; T R 2:55–4:10, staff. Spring: M W F 10:10, J. Bereaud; M W F 11:15, staff; M W F 12:20, staff; M W F 1:25, staff; T R 11:40–12:55, staff.
Stress is on the development of reading skills and, more generally, on cultural, sociological, and aesthetic implications of the texts. Readings will include works by major nineteenth- and twentieth-century authors in each of three principal genres: poetry, theatre, and novel.

202 Studies in French Literature
Fall or spring. 3 credits. Prerequisite: French 201 or a CPT achievement score of 650 or more (students who have not taken French 201 should obtain consent of instructor; those with scores in the 560–649 range should see the description of French 200 and 201). Required of all majors, but not limited to them. Conducted in French.
Fall: M W F 12:20 or T R 10:10–11:25. D. Polachek and staff. Spring: M W F 11:15 or 1:25 or T R 10:10–11:25. A. Berger and staff.
Study of the classic literature of seventeenth-century France (Corneille, Racine, Molière, Madame de Lafayette) and its immediate forebears (Montaigne) and successors in the Enlightenment (Voltaire, Rousseau, Diderot, Beaumarchais). Special attention will be paid to the connections between classicism and humanistic trends.

[309 Mystery and the Mystery Story (also Comparative Literature 309)
4 credits. Not offered 1990–91.]

[318 Music and Poetry in France: Late Middle Ages and Renaissance (also French 618 and Music 373/673)
4 credits. Not offered 1990–91.]

[320 French Civilization
4 credits. Not offered 1990–91.]

[325 The Modern French Novel: A Form in Search of Itself
4 credits. Not offered 1990–91.]

[329 Francophone Caribbean Literature
4 credits. Not offered 1990–91.]

[330 Francophone African Literature
4 credits. Not offered 1990–91.]

331 Masterpieces of French Drama I: The Classical Era
Spring. 4 credits.
T R 1:25–2:40. D. Polachek.
This course aims both to introduce the student to the history of French theatre from its medieval origins to the French Revolution and to discuss in detail the several major plays of the "neo-classical period." Dramatists whose works will be read will include, from the seventeenth century, Corneille, Racine, and Molière, and from the eighteenth century, Marivaux and Beaumarchais.

[332 Masterpieces of French Drama II: The Comic in the Modern Era
4 credits. Not offered 1990–91.]

[333 Contemporary French Thought
4 credits. Not offered 1990–91.]

334 The Novel as Masterwork
Spring. 4 credits. Prerequisite: French 201 or permission of instructor. Conducted in French.
T R 10:10–11:25. N. Furman.
The second in a series of three courses that survey the French novel, this course traces the evolution of the genre in the nineteenth century. Major works of Stendhal, Balzac, Flaubert, and Zola will be emphasized.

[335 Romance to Revolution: The French Novel before 1789
4 credits. Not offered 1990–91.]

[338 French Poetry from Its Origins to the Revolution of 1789
4 credits. Not offered 1990–91.]

[354 New Prose, Old Prose
4 credits. Not offered 1990–91.]

356 Lyon and Paris in the Sixteenth Century
Fall. 4 credits.
M W F 1:25. K. Perry.
Through the works of Marot, Scève, Labé, Marguerite de Navarre, Rabelais, Ronsard, and Du Bellay, this course will explore the birth and decline of the "School of Lyon" and the rise of the Pléiade in relation to several social and historical problems. These works reveal the role of the repression of Protestantism in the demise of Lyon as a cultural center, as well as the initial importance of women authors for the French Renaissance, and the later exclusion of women from Parisian culture. Such issues will help to explain the early importance of Lyon and the later dominance of Paris, as well as to place the literature in an historical context. Readings and discussions in French.

[358 Gustave Flaubert
4 credits. Not offered 1990–91.]

[362 Poems, Institutions, and Other Fictions in the Realm of Francis the First (also History 362)
4 credits. Not offered 1990–91.]

[369 Comic Theater in the Seventeenth Century
4 credits. Not offered 1990–91.]

370 Perspectives on the Age of Enlightenment: "Enlightened" Literature
Fall. 4 credits.
T R 10:10–11:25. A. Berger.
Through a reading of various works of the French eighteenth century (by Montesquieu, Voltaire, Diderot, Rousseau, and Sade), we will study the emergence of new literary discourses and practices aiming at a "secularisation" of the literary field, in conjunction with the ideological and epistemological changes that took place under the name of Enlightenment.

[371 Eighteenth-Century Theater
4 credits. Not offered 1990–91.]

[372 Reading Order of Tragedy
4 credits. Not offered 1990–91.]

[375 Eighteenth-Century Novel
4 credits. Not offered 1990–91.]

[379 Victor Hugo—Romantic Movement
4 credits. Not offered 1990–91.]

[380 Introduction to French Romanticism
4 credits. Not offered 1990–91.]

[388 The French Lyric Romance from Symbolism to Surrealism
4 credits. Not offered 1990–91.]

[389 French Romanticism (also Women's Studies 493)
4 credits. Not offered 1990–91.]

[390 Modern French Criticism
4 credits. Not offered 1990–91.]

394 Sartre and Existentialism
Spring. 4 credits. Prerequisite: French 201, 202.
M W F 9:05. D. Grossvogel.
Existential thought, literary strategy, social consciousness, and criticism as reflected in the writings of Sartre.

[395 Camus and His Contemporaries
4 credits. Not offered 1990–91.]

396 The Contemporary French Novel: 1950 to the Present
Spring. 4 credits. Prerequisite: French 201 or permission of instructor.
T R 11:40–12:55. S. Tarrow.
The course will focus on novels written after 1960, tracing the development of new forms of the genre and new voices in the repertoire. Works by well-known authors such as Camus, Robbe-Grillet, and Duras will be accompanied by those of North African and immigrant writers. Issues of language and identity will be considered in the context of European intepreters and an increasingly multicultural society. Weekly readings, two short essays, and a final paper are required.

[398 Six French Poets
4 credits. Not offered 1990–91.]

[404 Cogito Ergo Sum: Thought and Existence from Descartes to Sartre (also Comparative Literature 404 and Romance Studies 404)
4 credits. Not offered 1990–91.]

419–420 Special Topics in French Literature
419, fall; 420, spring. 2–4 credits each term.
Prerequisite: permission of instructor.
Staff.
Guided independent study of special topics.

[422 Three Ages of Theater (also Comparative Literature 422)
4 credits. Not offered 1990–91.]

429–430 Honors Work in French
429, fall; 430, spring. 4 credits each term, with permission of the adviser. Open to juniors and seniors. Consult the director of the honors program, A. Berger.

[435 Césaire et Lautréamont
4 credits. Not offered 1990–91.]

[436 Francophone African Fiction (also French 636)
4 credits. Not offered 1990–91.]

[438 La Poésie de la Négritude (also French 638)
4 credits. Not offered 1990–91.]

439 Oral and Written Traditions in Africa (also Society for the Humanities 439 and Comparative Literature 439)
Fall. 4 credits.
M 2:30–4:25. J. Ngate.
Organized around but not limited to two major African epics, *Soundjata* and *Chaka*, this course will enable us to investigate the nature, the validity, and the implications of many francophone African writers' claims to being modern versions of the *griots* of the oral tradition. Reading knowledge of French recommended.

440 African Cityscapes: Urbanization and Its Literary Representations (also Society for the Humanities 440 and Comparative Literature 440)
Spring. 4 credits.
F 12:20–2:15. J. Ngate.
The course will seek to make sense of the evolving fate of the city in African literature in French: from being presented almost exclusively as a deathtrap for the colonized, the city has now become that ambiguous space in which it is increasingly difficult to say what it means to be African. Reading knowledge of French recommended.

447 Medieval Literature
Fall. 4 credits. Prerequisite: French 201 or permission of instructor.
T 2:30–4:25. A. Colby-Hall.
This course is designed to give students facility in reading Old French and an appreciation of two major genres of medieval French literature: the epic and the theater.

[448 Medieval Literature
4 credits. Not offered 1990–91. Next offered 1992–93.]

[452 Theatre in Sixteenth-Century France
4 credits. Not offered 1990–91.]

[453 Masterpieces of French Renaissance Prose
4 credits. Not offered 1990–91.]

[454 Montaigne
4 credits. Not offered 1990–91.]

[455 Rabelais
4 credits. Not offered 1990–91.]

456 Diverse Poetries in Sixteenth-Century France
4 credits. Not offered 1990–91.]

458 Baroque Poetry in France
Spring. 4 credits. Conducted in French.
T R 2:55–4:10. K. Perry.
Through the works of Théodore Agrippa d'Aubigné, Théophile de Viau, Saint-Amant, and others, we will explore the social and aesthetic reasons for the genesis and development of such a revolutionary mode of writing. What is the place of such a movement in French cultural history; in particular, how does this movement confront political and religious issues? How do these poets situate themselves in relation to *libertin* philosophy? What is the place of violence and horror in baroque aesthetics and ideology? We will explore how baroque writers develop a new poetics to cope with such issues.

[459 Petrarchism and the Lyric Experience in France (also French 659)
4 credits. Not offered 1990–91.]

[460 The Moralist Tradition (also French 660)
4 credits. Not offered 1990–91.]

[461 The Theater of Molière
4 credits. Not offered 1990–91.]

[462 Racine
4 credits. Not offered 1990–91.]

[470 Perspectives on the Age of Enlightenment
4 credits. Not offered 1990–91.]

[473 Diderot and the Enlightenment
4 credits. Not offered 1990–91.]

[485 Reading Workshop: The Short Story
4 credits. Not offered 1990–91.]

[487 Rimbaud and the Question of Reading
4 credits. Not offered 1990–91.]

[488 Baudelaire
4 credits. Not offered 1990–91.]

493 French Feminisms (also Women's Studies 493)
Fall. 4 credits. Conducted in English.
T R 1:25–2:40. N. Furman.
In this course we will examine the political, theoretical, and literary concerns of contemporary French writers who have addressed *"la question de la femme/la question du féminin."* Readings will include representative texts by Simone de Beauvoir, Monique Wittig, Julia Kristeva, Jacques Lacan, Luce Irigaray, Jacques Derrida, and Hélène Cixous.

[494 Surrealism
4 credits. Not offered 1990–91.]

[496 The Early Twentieth-Century French Novel (also Comparative Literature 496)
4 credits. Not offered 1990–91.]

[497 Poetry since Baudelaire
4 credits. Not offered 1990–91.]

[498 Dostoevsky, Mann, and Gide (also Comparative Literature 498)
4 credits. Not offered 1990–91.]

[499 Fiction and Film in France (also Comparative Literature 499)
4 credits. Not offered 1990–91.]

[596 Colette: Can She Be a Subject of Masculine Discussion in the '80s?
4 credits. Not offered 1990–91.]

[607 Proseminar: The Interpretation of Texts
4 credits. Not offered 1990–91.]

[608 Proseminar
4 credits. Not offered 1990–91.]

[618 Music and Poetry in France: Late Middle Ages and Renaissance (also French 318 and Music 373/673)
4 credits. Not offered 1990–91.]

[628 "Un coup de dés": Mallarmé and His Critics
4 credits. Not offered 1990–91.]

629 History of the French Language (also French 401 Modern Languages)
Spring. 4 credits. Prerequisite: Qualification in French and Linguistics 101, or permission of instructor.
M W F 2:30. A. Colby-Hall.
Diachronic development of French from Latin, with emphasis on phonological and morphological change. Course work includes problems in reconstruction, textual analyses, discussions of theoretical topics, and external history.

[636 Francophone African Fiction (also French 436)
4 credits. Not offered 1990–91.]

[638 La Poésie de la Négritude (also French 438)
4 credits. Not offered 1990–91.]

639–640 Special Topics in French Literature
639, fall; 640, spring. 4 credits each term.
Staff.
Guided independent study for graduate students.

[644 Medieval Seminar: The Old French Epic
4 credits. Not offered 1990–91.]

[646 Medieval Seminar: Villon
4 credits. Not offered 1990–91.]

[648 Medieval Seminar: Le Roman de la Rose
4 credits. Not offered 1990–91.]

[659 Petrarchism and the Lyric Experience in France (also French 459)
4 credits. Not offered 1990–91.]

[660 The Moralist Tradition (also French 460)
4 credits. Not offered 1990–91.]

[661 Racine and His Critics
4 credits. Not offered 1990–91.]

662 Racine
Fall. 4 credits. Conducted in French.
T 2:30–4:25. P. Lewis.
Racine's plays will be read in chronological order; extracts from his other works will be considered occasionally, in relation to the theater. The principal emphasis will fall on four major tragedies—*Andromaque, Britannicus, Iphigénie,* and *Phèdre*—to which two full sessions will be accorded. Discussion will address diverse critical interpretations of the Racinian corpus and of these four plays, including phenomenological (Starobinski), psychoanalytic (Mauron and Doubrovsky), semiotic (Pavel), structuralist (Barthes), sociological (Goldmann), theatrical (Schérer), and thematic (Hubert) perspectives.

[663 La Fontaine and Perrault: Fables, Tales, and Narrative Traps
4 credits. Not offered 1990–91.]

[665 The Emergence of Aesthetics
4 credits. Not offered 1990–91.]

[666 Seventeenth-Century Seminar: Moralities in Fiction: The Classical Moment (also Comparative Literature 666)
4 credits. Not offered 1990–91.]

[669 Seventeenth-Century Seminar: Illusion and Representation
4 credits. Not offered 1990–91.]

676 The Libertine Novel
Spring. 4 credits. Conducted in French.
W 2:30–4:25. A. Berger.
From Montesquieu and Crébillon to Sade, we will study the rise of the libertine novel in eighteenth-century France. Foucault writes that this type of novel marks the beginning of the "epoch of sexuality." We will try to understand what is at stake in this new staging of "sexuality." The assertion of the supremacy of desire over social rules and values participated in the undermining of the theological and patriarchal order. We will inquire about the extent of this process as we discuss the place and representation of women's desire in these novels.

[679 Comedy and Philosophy in the French Enlightenment
4 credits. Not offered 1990–91.]

[685 Stendhal, Balzac, Flaubert (also Comparative Literature 610)
4 credits. Not offered 1990–91.]

[687 Poetry and the Threat of Modernity: The Case of Rimbaud
4 credits. Not offered 1990–91.]

[688 Gerard de Nerval
4 credits. Not offered 1990–91.]

689 Bohemians and Dandies
Spring. 4 credits. Conducted in French.
F 1:25–3:20. N. Furman.
The counterculture of the nineteenth century will be studied in the works of such writers as Bertrand, Gautier, Nerval, Villers de L'Isle-Adam, Huysmans, Valles, and Jarry.

[690 Andre Gide (also Comparative Literature 695)
4 credits. Not offered 1990–91.]

[691 Laughter
4 credits. Not offered 1990–91.]

[692 Sartre and Genet
4 credits. Not offered 1990–91.]

[693 Nineteenth-Century Seminar
4 credits. Not offered 1990–91.]

[694 Surrealism
4 credits. Not offered 1990–91.]

696 Proust and Mystery
Spring. 4 credits. Prerequisite: Two French literature courses or graduate status.
M 1:25–3:20. D. Grossvogel.
If mystery is what arouses curiosity through the unexplained, the inexplicable, or merely the secret, three possibilities exist for literature: the text as discussion of ontological evidence; as rehearsal of the ontological scene; or as the education of that sense for the sake of a game. The course proposes to read hefty chunks of *A la recherche* as the focus of these three concerns and against their other forms in other kinds of literature.

Italian

A. Grossvogel (director of undergraduate studies, 261 Goldwin Smith Hall, 255-4264), M. Migiel

The Major

Students who wish to major in Italian should choose a faculty member to serve as a major adviser; the general plan and the details of the student's course of study will be worked out in consultation with the adviser. Italian majors are encouraged to take courses in related subjects such as history, art history, music, philosophy, anthropology, classics, linguistics, and other modern languages and literatures. While a major often occupies only the junior and senior years, it is wise for students to seek faculty advice about the major as early as possible.

Students who elect to major in Italian ordinarily should have completed Italian 201 by the end of their sophomore year. Exemptions can be made on the basis of an examination. Students majoring in Italian are expected to become conversant with a fair portion of the masterworks of Italian literature, to acquaint themselves with the outlines of Italian literary history, and to develop some skill in literary analysis. To this end, students will be expected to complete successfully 32 credits of Italian literature courses at the 300 level or higher, with papers to be written in Italian or English. Required courses for the major are Italian 303, 304, and 334. Italian 402, History of the Italian Language, and 403, Linguistic Structure of Italian, may be counted toward the 32 credits required for the major (an introductory linguistics course is a prerequisite of Italian 402 and 403).

Students majoring in Italian will also be expected to acquire competence in the handling of the language. That competence may be demonstrated by passing an oral and written examination to be arranged with the adviser.

Italian majors will also be required to complete successfully two courses in related fields (for example, Italian history, Italian art history, literary theory).

Italian majors may study in Italy, generally during their junior year, under any of those study-abroad plans organized by American universities that allow the transfer of grades and credit, such as the Cornell program in Rome.

The College of Architecture, Art, and Planning maintains a program open to all qualified students attending Cornell. The program is housed in the sixteenth-century Palazzo Massimo, designed by the architect Baldassare Peruzzi, on the Corso Vittorio Emanuele, in the heart of Rome. Students may enroll for a semester in the fall or spring. Courses regularly taught at the Palazzo Massimo include Italian language (beginning and intermediate); Architecture 300, 401, 402, 500, 502, Design Studio; Architecture 338 and 399, Special Topics in Architectural History; Architecture 458, Special Projects in Design Communications; Architecture 367, Contemporary Italian Culture; Architecture 510, Thesis Introduction; Art 251, 311, 322, and 371; and History of Art 371, Renaissance and Baroque Art in Rome.

To be eligible, students must have completed the first two years of their curriculum requirements and be in good academic standing.

Fees. Depending on the course, a small fee may be charged for copies of texts for course work.

Literature

Most language courses and Italian linguistics courses are offered by Modern Languages and Linguistics. Advanced language courses and all literature courses are listed below.

109 FWS: Italian Literature Revisited
Fall or spring. 3 credits.
T R 11:40–12:55. M. Migiel and staff.
The permanent presence of early Italian literature in our cultural heritage results not only from the continued popularity of the original works, but also from their recurrence in later literature and art. In this course, we will read selections from early Italian literature (especially Dante's *Divine Comedy*, Petrarch's *Canzoniere*, and Boccaccio's *Decameron*) and we will study the way in which authors and artists from the Renaissance to the present day (including Shakespeare, Pasolini, Levi and Voznesenskaya) have taken early Italian literature to be a source of inspiration for their own works. We will consider the cultural, ideological, and aesthetic implications of adaptations of literary source materials. Particular attention will be given to the ways in which an artist uses literary models to interpret contemporary social and historical reality and to define his or her place in the artistic tradition. All foreign texts will be read in English translation.

201 Introduction to Italian Literature
Fall or spring. 3 credits. Prerequisite: permission of instructor. Conducted in Italian.
M W F 10:10. M. Migiel and staff.
Exploration of the cultural, sociological, and aesthetic implications of Italian literary texts. Emphasis on the development of students' oral, written, and reading skills. Readings will include prose, poetry, and drama written by major Italian authors.

303 Introduction to Medieval and Renaissance Literature
Spring. 4 credits. Prerequisite: 201 or permission of the instructor.
Hours to be announced. M. Migiel.
The course will focus on the major figures and texts of medieval and Renaissance literature with an eye on the wider cultural context of Italy. We will begin with readings and discussions of the poets of the Sweet New Style (Guinizelli, Cavalcanti, and Dante) and selections from Petrarch's *Canzoniere* and Boccaccio's *Decameron*. Finally we shall look at some poems of Michelangelo, one canto from Ariosto's *Orlando Furioso*, and Machiavelli's *The Prince*.

[304 Introduction to Modern Italian Literature
4 credits. Not offered 1990–91.]

[322 Italian Civilization: Literature and Regionalism
4 credits. Not offered 1990–91.]

[334 Dante's Divine Comedy (also Italian 634)
4 credits. Not offered 1990–91.]

[340 Literature and Society in the Italian Renaissance
4 credits. Not offered 1990–91.]

[354 Italian Humanism (also Italian 654)
4 credits. Not offered 1990–91.]

[357 The Italian Renaissance Epic
4 credits. Not offered 1990–91.]

[370 Eighteenth-Century Thought
4 credits. Not offered 1990–91.]

[381 Narrative of Verga, D'Annunzio, Svevo, and Pirandello (also Italian 581)
4 credits. Not offered 1990–91.]

[384 Early Modern Italian Autobiography (also Italian 684)
4 credits. Not offered 1990–91.]

390 Literature to Cinema
Fall. 4 credits. Conducted in English.
T R 2:30–4:25. A. Grossvogel.
A study of the ways literary language has influenced Italian cinema. The films to be screened will be by Antonioni, Bertolucci, Bolognini, De Sica, Pasolini, Rossellini, Taviani, Visconti, and Zurlini. The works of literature to be read in conjunction with these films will include selections from Boccaccio's *Decameron* and from the narrative works of Bassani, Borges, Buzzati, Cortázar, Mann, Moravia, Tomasi di Lampedusa, and Verga.

[391 The Theater of Verga, D'Annunzio, Svevo, and Pirandello (also Italian 691)
4 credits. Not offered 1990–91.]

[393 Narrative and Ideology in Contemporary Italian Literature (also Italian 693 and Comparative Literature 393)
4 credits. Not offered 1990–91.]

[395 Readings in Contemporary Italian Fiction
4 credits. Not offered 1990–91.]

399 Cinema to Literature
Spring. 4 credits. Conducted in English.
T R 2:30–4:25. A. Grossvogel.
The course will consist of a comparative study of selected films by Fellini, Antonioni, Visconti, and others and of works by major contemporary writers such as Montale, Ungaretti, Saba, Gadda, and Calvino. These authors' similarities and contrasts in invention, style, and techniques will be explored to illustrate the evolution of contemporary aesthetics in cinematography and poetry in Italy.

419–420 Special Topics in Italian Literature
419, fall; 420, spring. 2–4 credits each term. Prerequisite: permission of instructor.
Staff.
Guided independent study of specific topics.

[427 Dante: *La Divina Commedia*
4 credits. Not offered 1990–91.]

428 Dante: *La Divina Commedia*
4 credits. Prerequisite: Permission of instructor. Conducted in Italian.
T 2:30–4:25. M. Migiel.
Intensive study of Dante's *Divina Commedia*, with an introduction to relevant critical and methodological issues.

429–430 Honors in Italian Literature
429 fall; 430, spring. 4 credits each term. Limited to seniors. Prerequisite: permission of instructor.
A. Grossvogel.

[437 Petrarch: *Canzoniere*
4 credits. Not offered 1990–91.]

[445 Boccaccio (also Italian 645)
4 credits. Not offered 1990–91.]

[448 Italian Lyric Poetry, 1255–1600: The Formation of the Canon
4 credits. Not offered 1990–91.]

[458 Tasso
4 credits. Not offered 1990–91.]

472 Eighteenth-Century Italian Theater: From Melodrama to Tragedy
Fall. 4 credits.
T R 11:40–12:55. A. Grossvogel.
The readings for this course will focus on the dramatic works of Goldoni and Alfieri, the two major Italian playwrights of the eighteenth century. Carolo Gozzi's *fiabe*, Metastasio's melodrama, Chiari's parodies, and the last sparks of the *commedia dell'arte* will also be examined to illustrate the pervasive character of dramatic expression in Italian literary and artistic life of the time. Attention will be given to Goldoni's role in the reform of the theater and to the bitter controversy he had to face.

[474 Opera (also German 374/674 and Music 374/674)
4 credits. Not offered 1990–91.]

[485 The Nineteenth Century: Foscolo, Manzoni, Leopardi
4 credits. Not offered 1990–91.]

[488 Giacomo Leopardi and Nineteenth-Century Poetry
4 credits. Not offered 1990–91.]

[495 Readings in Contemporary Italian Fiction
4 credits. Not offered 1990–91.]

[496 Futurism in Italy and Europe
4 credits. Not offered 1990–91.]

[497 Modern Italian Poetry: D'Annunzio to Montale
4 credits. Not offered 1990–91.]

498 Eugenio Montale and Contemporary Italian Poetry
Spring. 4 credits.
W 2:30–4:25. A. Grossvogel.
A reading of Montale's poetry—*Ossi di seppia, Le Occasioni, La Bufera e altro, Satura, Diari*—against the screen of the poetry of some of his contemporaries; D'Annunzio, Ungaretti, Saba, Quasimodo.

[557 The Italian Renaissance Epic
4 credits. Not offered 1990–91.]

[581 Narrative of Verga, D'Annunzio, Svevo, and Pirandello (also Italian 381)
4 credits. Not offered 1990–91.]

[634 Dante's *Divine Comedy* (also Italian 334)
4 credits. Not offered 1990–91.]

639–640 Special Topics in Italian Literature
639, fall; 640, spring. 4 credits each term.
Staff.

[645 Boccaccio (also Italian 445)
4 credits. Not offered 1990–91.]

[654 Italian Humanism (also Italian 354)
4 credits. Not offered 1990–91.]

[684 Early Modern Italian Autobiography (also Italian 384)
4 credits. Not offered 1990–91.]

[691 Theater of Verga, D'Annunzio, Svevo, and Pirandello
4 credits. Not offered 1990–91.]

[693 Narrative and Ideology (also Italian 393 and Comparative Literature 393)
4 credits. Not offered 1990–91.]

Fall. 4 credits.
T 2:30–4:25. C. Arroyo.
A study of texts such as *Language, The Origins of the Work of Art, The Letter on Humanism*, and others that have been influential in contemporary criticism.

Spanish

D. Castillo, U. J. DeWinter, J. W. Kronik, A. Monegal, C. Moron-Arroyo, J. Piedra, M. Stycos, J. Tittler (director of undergraduate studies, 286 Goldwin Smith Hall, 255-4048)

The Major

The major is designed to give students proficiency in the oral and written language, to acquaint them with Hispanic culture, and to develop their skill in literary and linguistic analysis. Satisfactory completion of the major should enable students to meet language and literature requirements for teaching, to continue with graduate work in Spanish or other appropriate disciplines, or to satisfy standards for acceptance into the training programs of the government, social agencies, and business concerns. A Spanish major combined with another discipline may also allow a student to undertake preprofessional training for graduate study in law or medicine. Students interested in a Spanish major are encouraged to seek faculty advice as early as possible. For acceptance into the major, students should consult the director of undergraduate studies in Spanish—Professor Tittler (286 Goldwin Smith Hall)—who will admit them to the major and choose an adviser from the Spanish faculty. Spanish majors will then work out a plan of study in consultation with their advisers. Previous training and interests as well as vocational goals will be taken into account when the student's program of courses is determined.

Spanish 201 and 204 or 212 (or equivalent) are prerequisite to entering the major in Spanish. All majors will normally include the following core courses in their programs:

1) Spanish 315–316–318
2) Spanish 311 and 312 (or equivalent)

Spanish majors have great flexibility in devising their programs of study and areas of concentration. Some typical options of the major are:

1) Spanish literature, for which the program of study normally includes at least 20 credits of Spanish literature beyond the core courses. Literature majors are strongly urged to include in their programs courses in all the major periods of Hispanic literature.
2) A combination of literature and linguistics.
3) Either of the above options with certain courses in other disciplines counted toward the major. Whichever option a student chooses, he or she is encouraged to enrich the major program by including a variety of courses from related fields or by combining Spanish with related fields such as history, philosophy, sociology, anthropology, art, music, Classics, English, comparative literature, and other foreign languages and literatures. The interdepartmental programs in Latin American Studies and Hispanic American Studies sponsor relevant courses in a variety of areas.

The J. G. White Prize and Scholarships are available annually to students who achieve excellence in Spanish.

For the major in Spanish linguistics, see Modern Languages and Linguistics—Spanish.

Study abroad in Spain. Cornell and the University of Michigan cosponsor an academic year in Spain program. Students enrolled in this program spend the first four weeks before the fall semester begins in a residential college located on the campus of the University of Madrid, where they take a course in Spanish language and contemporary society and take advantage of special lectures and field trips in Madrid and Castile. This course carries three credits. In early October the program moves to Seville, where students enroll in as many regular classes at the University of Seville as their language competency and general education permit. Their academic work is supplemented by courses designed explicitly for the program by Seville faculty, as well as a seminar regularly offered by the resident director, who is chosen from the faculty of either Cornell or Michigan. The special courses normally include history of art and architecture, Spanish composition and syntax, and modern Spanish history. In Seville students live with selected families or in a few cases in "colegios mayores." Cornell-Michigan also maintains a center in Seville, which is used by students for special seminars, tutorials, lectures, and informal gatherings.

Applicants are expected to have attained at least proficiency in Spanish prior to departure. Students are strongly encouraged to study abroad for the entire year rather than for one semester. Students interested in the study abroad program should consult with the Cornell Abroad office for further information.

Honors. Honors in Spanish may be achieved by superior students who want to undertake guided independent reading and research in an area of their choice. Students in the senior year select a member of the Spanish faculty to supervise their work and direct the writing of their honors essays (see Spanish 429–430).

Fees. Depending on the course, a small fee may be charged for film use or for copies of texts for course work.

Language

Most language courses and Spanish linguistic courses are offered by Modern Languages and Linguistics. Advanced language courses and all literature courses are listed below.

Note: Students placed in the 200-level courses have the option of taking language and/or literature courses; see listing under Spanish 201 for description of the literature course that may be taken concurrently with the 203–204 (offered by Modern Languages and Linguistics) or 211–212 language courses described below.

[211 Intermediate Spanish
3 credits. Not offered 1990–91.]

[212 Intermediate Spanish
3 credits. Not offered 1990–91.]

311 Advanced Composition and Conversation
Fall. 4 credits. Prerequisite: Spanish 204 or 212 or equivalent.
M W F 10:10, A. Monegal, or M W F 12:20, M. Stycos.
Advanced language skills, developed through reading, grammar review, and intensive practice in speaking, writing, and translation. Analysis of present-day Spanish usage in a wide variety of oral and written texts.

312 Advanced Composition and Conversation
Spring. 4 credits. Continuation of Spanish 311 but may be taken separately. Required of Spanish majors.
M W F 12:20, M. Stycos, or T R 11:40–12:55, A. Monegal.
Readings and class discussion will focus on the stylistic analysis of modern texts. Increased emphasis, through weekly essays, on students' development of an effective Spanish prose style.

Literature

[105 Freshman Seminar. Paradise Lost: Biculturalism in America (also English 168)
3 credits. Not offered 1990–91.]

[106 Freshman Seminar: Searching for Self in Hispanic Fiction
3 credits. Not offered 1990–91.]

107 Freshman Seminar: The Literature of American Hispanic/Ethnic Women Writers
Fall. 3 credits.
T R 11:40–12:55. L. Carrillo.
What does it mean to be both female and ethnic in twentieth-century America? How have American women writers of Mexican, Puerto Rican, African, and Asian heritages responded to both their traditional ethnic cultures and to the broad Anglo-Saxon, Protestant culture in which they have had to live and breathe? We will read a sampling of literature written by representative ethnic women writers to examine ways in which they have presented the theme of the interaction between traditional ethnic culture and the American tradition in defining the female ethnic experience. We will consider such topics as the impact of language, gender roles, family, and church upon women of color, together with the mechanisms that evolve to settle the often competing demands of each cultural tradition. Readings may include such works as Nicholasa Mohr's *Rituals of Survival*; Sandra Cisneros's *The House on Mango Street* or Helena Maria Viramontes' *The Moths and Other Stories*; Toni Morrison's *Sula*; Amy Tang's *The Joy Luck Club* or Maxine Hong Kingston's *The Woman Warrior*. Writing assignments will consist of analytical essays on the readings.

[109 Freshman Seminar: Revolution and Literature in Latin America
3 credits. Not offered 1990–91.]

119 Freshman Seminar: Letters From El Barrio: A Sense of Place in Hispanic American Fiction
Spring. 3 credits.
T R 11:40–12:55. L. Carrillo.
In this seminar we will focus upon the portrayal of "el barrio"—the Hispanic American neighborhood/community—as a potent sense of place in Puerto Rican, Cuban, and Mexican American/Chicano fiction. Our concern will be to analyze and critique the portrayal of both rural and urban fictional barrios, from the Texas valley to New York's Spanish Harlem and Miami's Little Havana, as these locales affect such literary elements as language, imagery, character presentation/motivation, and narrative structure. Discussions will center on an analysis of the choices each writer makes as she or he creates a vision of the Hispanic community. Readings from works such as Piri Thomas's *Down These Mean Streets*, Nicolasa Mohr's *Nilda* or *In Nueva York*, Sandra Cisneros's *House on Mango Street*, Denise Chávez's *The Last of the Menu Girls*, Tomás Rivera's *"...And the Earth Did Not Part,"* and Roberto Fernández's *Raining Backwards*. Written work will involve critical/analytical essays of the readings.

125 Freshman Writing Seminar: The City in Hispanic Novels
Fall or spring. 3 credits.
Fall: M W F 1:25. Spring: M W F 10:10.
D. Castillo and staff.
The recent boom in Hispanic fiction has frequently been accompanied by a shift in focus from rural to urban concerns. We will tour several representative Hispanic cities—New York, Mexico City, Havana, Buenos Aires—through careful reading (in English translation) of novels by Carlos Fuentes, G. Cabrera Infante, Manuel Puig, Julio Cortázar, Piri Thomas, and Juan Goytisolo. Supplementary materials may include maps, tourist guides, and newspapers.

[126 Freshman Seminar: The Complex Fate—Self-Identity in the Literature of United States Hispanic and Other Ethnic Groups
3 credits. Not offered 1990–91.]

[130 Freshman Seminar: Old World, New World—The Discovery and Conquest of America in Hispanic Literature
3 credits. Not offered 1990–91.]

201 Introduction to Hispanic Literature
Fall or spring. 3 credits. Prerequisite: qualification in Spanish or permission of instructor. The course is divided into small sections and is conducted mainly in Spanish. (Fulfills both the language proficiency requirement and, followed by a 300-level Spanish literature course, the humanities distribution requirement. The literature course that normally follows Spanish 201 is either 315, 316, or 318.)
Fall: M W F 9:05, 11:15, 12:20 or T R 10:10–11:25. Spring: M W F 9:05, 10:10, 11:15 or T R 10:10–11:25. M. Stycos and staff.
An intermediate reading course designed to improve reading, writing, speaking, and comprehension skills in Spanish through the reading and discussion of contemporary literary works of various genres (narrative prose, drama, poetry) from Spain and Spanish America. Emphasis is placed on the development of fluency in reading and of critical and analytical abilities. The cultural, sociological, and aesthetic implications of texts by authors such as Borges, Cortázar, Fuentes, García Márquez, García Lorca, and Cela are considered.

[313 Spanish Civilization
4 credits. Not offered 1990–91.]
Note: Spanish 315, 316, 317, and 318 can be taken in any order. Prerequisite: Spanish 201 or 4 years of high school Spanish or permission of instructor.

315 Readings in Sixteenth- and Seventeenth-Century Hispanic Literature
Spring. 4 credits. Prerequisite: Spanish 201, four years of high school Spanish, or permission of instructor. This course is not a prerequisite for Spanish 316 or 318.
T R 10:10–11:25. C. Arroyo.
Readings and discussion of representative texts of the period from both Spain and her colonies in the New World: Garcilaso de la Vega, Lazarillo de Tormes, San Juan de la Cruz, Cervantes, Lope de Vega, Calderón, and others.

316 Readings in Modern Spanish Literature
Fall. 4 credits. Prerequisite: Spanish 201 or 4 years of high school Spanish or permission of instructor. Taught in Spanish.
M W F 1:25 or T R 10:10–11:25 or T R 1:25–2:40. J. Tittler and staff.
Readings and discussion of representative texts from Spain from the romantic period to the present. Bécquer, Galdós, Unamuno, García Lorca, Cela, and others.

317 Readings in Colonial Spanish-American Literature
Fall. 4 credits.
T R 2:55–4:10. J. Piedra.
Early masterpieces of Spanish American literature from the "chronicles of discovery" to the first novels. The paradoxical relationship between the historical and literary forms, as well as the serious and the humorous contents, that characterizes writings from the journals of Columbus to those of the pícaros.

318 Readings in Spanish-American Literature
Spring. 4 credits.
M W F 12:20, J. Piedra; T R 8:40–9:55, J. Tittler; or T R 1:25–2:40, D. Castillo.
Readings and discussion of representative texts of the nineteenth and twentieth centuries from Spanish America: Darío, Borges, Neruda, Paz, Cortázar, García Márquez, and others.

[323 Readings in Latin American Civilization
4 credits. Not offered 1990–91.]

Note: The prerequisite for the following courses, unless otherwise indicated, is Spanish 315, 316, or 318, or permission of instructor.

332 The Modern Drama in Spanish America
Fall. 4 credits. Conducted in Spanish.
T R 1:25–2:40. J. Kronik.
A study of significant plays from several Spanish-American countries, including Puerto Rico, with emphasis on the contemporary scene. Consideration will be given to the tensions between the expression of a Spanish-American social identity and the influence of vanguard currents such as the absurd, the epic theater, and the theater of cruelty.

[333 The Spanish-American Short Story
4 credits. Not offered 1990–91.]

[345 Contemporary Spanish-American Novel
4 credits. Not offered 1990–91.]

[346 Hispanic Caribbean Culture and Literature
4 credits. Not offered 1990–91.]

347 Spanish America in Black and White
Fall. 4 credits.
T R 10:10–11:25. J. Piedra.
This course explores the relationship between "black" and "white" cultures in Spanish America, as well as the application of neo-African cultural strategies to the study of not necessarily Afro-conscious Spanish American literature from the twentieth century.

[351 Spanish Drama of the Golden Age
4 credits. Not offered 1990–91.]

[356 Spanish Lyric Poetry of the Golden Age
4 credits. Not offered 1990–91.]

[368 The Birth of the Novel in Spain
4 credits. Not offered 1990–91.]

[375 The Picaresque Novel in European Perspective
4 credits. Not offered 1990–91.]

[376 The Contemporary Spanish Novel
4 credits. Not offered 1990–91.]

[385 Studies in Spanish Realism and Naturalism
4 credits. Not offered 1990–91.]

[389 The Generation of 1898
4 credits. Not offered 1990–91.]

[390 Fiction of Modern Hispanic Women (also Women's Studies 390)
4 credits. Not offered 1990–91.]

[391 The Post-Civil War Drama in Spain
4 credits. Not offered 1990–91.]

[392 The Spanish Vanguard Theater: Lorca and Valle-Inclán
4 credits. Not offered 1990–91.]

393 Modern Spanish Short Fiction
Fall. 4 credits. Conducted in Spanish.
M W F 12:20. A Monegal.
This course will study the evolution of the short story in Spain, from the nineteenth century to the present, both as an autonomous, though marginal, tradition and in relation to other forms of prose writing that determine its definition as a genre, in particular poetic prose and the short novel. Readings include works by Bécquer, Clarín, Pardo Bazán, Valle-Inclán, Unamuno, Gómez de la Serna, Larrea, Cernuda, Aub, Ayala, Delibes, Aldecoa, Matute, Martín Gaite, Goytisolo, Puértolas, and Fernández Cubas.

394 Trans-Atlantic Renaissance (also Comparative Literature 394)
Spring. 4 credits.
M W F 2:30. J. Piedra.
A comparative look, in English, at Renaissance masterpieces from Europe and Spanish America, according to the following themes: Mapping Strategies (Vespucci, Columbus); Epic Proportions (Camões, Silvestre de Balboa); Conciliatory Manners (Castiglione, Inca Garcilaso); Suspicious Natures (Lope, Bernal); Cultural Imperatives (Montaigne, Torquemada); Dictatorial Blueprints (Macchiavelli, Cortés); Shipwrecking States (Shakespeare, Sigüenza y Góngora).

[395 The Novel in Spain after the Civil War
4 credits. Not offered 1990–91.]

[396 Modern U.S.-Hispanic Prose Fiction
4 credits. Not offered 1990–91.]

397 Colombian Literature
Spring. 4 credits. Prerequisite: Spanish 318 or equivalent. Conducted in Spanish.
T R 11:40–12:55. J. Tittler.
Readings from the rich Colombian tradition will include such renowned texts as Isaacs' *María*, Rivera's *La vorágine*, and García Márquez's *El amor en los tiempos del cólera*, as well as works by authors of national prominence, such as León de Greiff, Porfirio Barba-Jacob, Enrique Buenaventura, Alvaro Cepeda Samudio, and Gustavo Alvarez Gardeazábal. Several "Neo-Colombian" (U.S. Hispanic) authors, such as Jaime Manrique, Silvio Martínez Palau, and Andrés Berger, will also be included.

[398 Post-Revolutionary Mexican Novel
4 credits. Not offered 1990–91.]

[399 Spanish Film
4 credits. Not offered 1990–91.]

[415 The Black Within: Hispanic Race and Literature
3 credits. Not offered 1990–91.]

419–420 Special Topics in Hispanic Literature
419, fall; 420, spring. 2–4 credits each term.
Prerequisite: permission of instructor.
Staff.
Guided independent study of specific topics. For undergraduates interested in special problems not covered in courses.

429–430 Honors Work in Hispanic Literature
429, fall; 430, spring. 4 credits each term.
Limited to seniors. Prerequisite: permission of instructor.
J. Piedra.

[440 Medieval Spanish Literature
4 credits. Not offered 1990–91.]

[450 Literature of Conquest
4 credits. Not offered 1990–91.]

451 Spanish Theater of the Golden Age
Fall. 4 credits. Prerequisite: For graduates, juniors, and seniors. Conducted in Spanish.
T R 11:40–12:55. C. Arroyo.
A reading of twelve classical plays, including the canonical ones, such as *El burlador de Sevilla* and *La vida es sueño*. Also discussion on the origins of the Spanish "comedia" and of Lope de Vega's *Arte nuevo de hacer comedias*.

[455 Cervantes: *Don Quijote*
4 credits. Not offered 1990–91.]

[466 Golden-Age Spanish Short Fiction
4 credits. Not offered 1990–91.]

[469 Mystics and Moralists
4 credits. Not offered 1990–91.]

[479 Colonial Spanish-American Literature: Voices of the Colonized
4 credits. Not offered 1990–91.]

[481 Eighteenth- and Nineteenth-Century Spanish Drama
4 credits. Not offered 1990–91.]

[485 The Nineteenth-Century Spanish Novel: Galdós and Clarín
4 credits. Not offered 1990–91.]

[488 The Novel in Early Twentieth-Century Spain
4 credits. Not offered 1990–91.]

[489 Hispanic Romanticism
4 credits. Not offered 1990–91.]

[490 Surrealism in Spain
4 credits. Not offered 1990–91.]

491 The Poetics of Tragedy in Contemporary Spanish Drama
Spring. 4 credits. Conducted in Spanish.
T 2:30–4:25. A Monegal.
Examines redefinitions of tragedy by three twentieth-century Spanish playwrights: Unamuno, Valle-Inclán, and García Lorca. The dramatic and theoretical formulations of their poetics will be analyzed in comparison with classical models. Reference will be made to precedents in the Spanish tradition and to later manifestations of the tragic mode in the works of Buero Vallejo, Sastre, and Arrabal.

492 Latin-American Women Writers (also Women's Studies 481 and Comparative Literature 482)
Spring. 4 credits. Conducted in English.
T R 10:10–11:25. D. Castillo.
This course will provide a sampler of novels and short stories by and about Latin-American women. We will look at the question of self-construction and issues such as the social and political concerns involved in a specifically Latin-American feminine identity. All works will be read in translation. (Romance Studies students should read originals of the works from the Spanish.) Authors may include writers like Luisa Valenzuela (Argentina) and Rigoberta Menchú (Guatemala), Helena Parente Cunha and Clarice Lispector (Brazil), Helena María Viramontes and the Anzaldúa/Moraga anthology *This Bridge Called My Back* (U.S.A.), and Simone Schwarz-Bart (Guadalupe).

[495 Gabriel García Márquez
4 credits. Not offered 1990–91.]

496 The Fiction of Manuel Puig
4 credits. Not offered 1990–91.]

[497 Spanish Poetry and Poetics
4 credits. Not offered 1990–91.]

[498 Mallarmé in Latin America
4 credits. Not offered 1990–91.]

[499 Borges (also Comparative Literature 499)
4 credits. Not offered 1990–91.]

639–640 Special Topics in Hispanic Literature
639, fall; 640, spring. 4 credits each term.
Staff.

667 Seminar in Golden Age Literature: Golden Age Poetry and Poetics
4 credits. Not offered 1990–91.]

669 Mystics and Moralists
Spring. 4 credits.
R 2:30–4:25. C. Arroyo.
Reading of Francisco de Osuna, Spanish Erasmianism, St. Teresa of Jesus, Fr. Luis de Lêon, and St. John of the Cross, preceded by an anthology of medieval mysticism in which we pursue the emergence of the mystical systems and terminology. The decline of mysticism in Spain around 1600 and the emergence of a moralist literature. The impact of Justus Lipsius's new humanism, "French Learning"; J. Barclay; their presence in Quevedo and Gracián. The baroque generations, the origin of the terms criticism and gusto.

[686 Seminar in Nineteenth-Century Spanish Literature
4 credits. Not offered 1990–91.]

[690 Hispanic Feminisms (also Women's Studies 692)
4 credits. Not offered 1990–91.]

[694 Seminar in Modern Spanish Literature
4 credits. Not offered 1990–91.]

695 Postmodern Spanish American Fiction
Fall. 4 credit hours. Prerequisite: Permission of instructor. Conducted in Spanish.
W 2:30–4:25. J. Tittler.
Within the context of diverse theories on the modern and the postmodern in Western literature and culture, the seminar will set in dialogue the works of such contemporary authors as García Márquez, Fuentes, Cortázar, Donoso, and Arenas. We shall be investigating the relation between the postmodern condition and such phenomena as the avant-garde, the neobaroque, the postboom, and popular culture, to name a few.

RUMANIAN

See Department of Modern Languages and Linguistics.

RUSSIAN

L. H. Babby, E. W. Browne, P. Carden (director of undergraduate studies [literature], 235 Goldwin Smith Hall, 255-8348), G. Gibian, R. L. Leed (director of undergraduate studies [language and linguistics], 302 Morrill Hall, 255-2322), N. Pollak, M. Scammell, S. Senderovich, G. Shapiro

The Russian Major

Russian majors study Russian language, literature, and linguistics, emphasizing their specific interests. It is desirable, although not necessary, for prospective majors to complete Russian 101–102, 201–202, and 203–204 as freshmen and sophomores, since these courses are prerequisites to most of the junior and senior courses that count toward the major. Students may be admitted to the major upon satisfactory completion of Russian 102 or the equivalent. Students who elect to major in Russian should consult both Professor Carden and Professor Leed as soon as possible. For a major in Russian, students will be required to complete (1) Russian 301–302 or 303–304 or the equivalent, and (2) 18 credits from 300- and 400-level literature and linguistics courses, of which 12 credits must be in literature in the original Russian.

Certain courses may, with the permission of the instructor, be taken for one additional hour's credit. Such courses will involve a one-hour section each week with work in the Russian language. These courses count one hour each of credit toward the 12 courses of Russian literature in the original language required for the major.

Study Abroad

Cornell is an affiliated institution in the Council on International Educational Exchange program for Russian language study at Leningrad State University. Cornell students also frequently go on the American Council of Teachers of Russian program in Moscow and other Russian language programs. Opportunities are available for study during the summer, a single semester, or the full year. Further information is available from Professor Wayles Browne.

Honors. Students taking honors in Russian undertake individual reading and research and write an honors essay.

Fees. Depending on the course, a small fee may be charged for photocopied texts for course work.

Freshman writing seminar requirement. The following courses will satisfy the freshman writing seminar requirement: Russian 103, 104, 105, and 108.

Russian and Soviet Studies Major

See "Special Programs and Interdisciplinary Studies," which follows the department listings.

Russian Literature

P. Carden (director of undergraduate studies, 235 Goldwin Smith Hall, 255-8348), G. Gibian, N. Pollak, M. Scammell (chair), S. Senderovich, G. Shapiro.

The Department of Russian Literature offers a variety of courses: some with readings in English translation, others in the original Russian, or both. The connection between Russian history, society, and literature is particularly close, so instruction and discussion in class often include a variety of topics, such as culture and intellectual history, as well as literature. Several courses are interdisciplinary, cosponsored with the departments of History, Economics, Government, Comparative Literature, etc. Students interested in majoring in Russian are strongly urged to take Russian 101–102 as soon as possible, preferably in their first year, or by their second at the latest.

Russian 203–204, offered by the Department of Modern Languages and Linguistics, and Russian 201–202, offered by the Department of Russian Literature, complete basic language instruction and introduce students to literature. A further sequence of literature courses in Russian follows Russian 202.

For further information about courses and majors, see Modern Languages and Linguistics.

103 Freshman Writing Seminar: Classics of Russian Thought and Literature
Fall or spring. 3 credits.
M W F 11:15 or 12:20. Staff.
Russian society has always seen its literature as having a mission important to the development of the nation. In this course we will examine Russian literature as it participates in the debate, whither Russia? We will look in particular at the conflict between the Slavophiles, those who thought Russia had its own unique destiny, and the Westernizers, those who thought Russia should look to the West for a model in its development. We will be reading such Russian authors as Turgenev, Dostoevsky, Herzen, and Solzhenitsyn in English translation. The course will examine the rhetorical means each author uses to make his argument. All reading is in English translation.

104 Freshman Writing Seminar: Nineteenth-Century Russian Literary Masterpieces
Fall or spring. 3 credits.
Fall: M W F 9:05 or T R 10:10–11:25. P. Carden and staff. Spring: T R 10:10–11:25. Staff.
This course will introduce students to a broad selection of the major works of the Russian literary tradition. Our emphasis will be on what makes each work interesting as writing, what themes have been particularly interesting to Russians, and how we recognize the distinctive voice of each of the writers we are studying. Among the authors read are Pushkin, Gogol, Turgenev, Dostoevsky, Tolstoy, and Chekhov. All reading is in English translation.

105 Freshman Writing Seminar: Twentieth-Century Russian Literary Masterpieces
Fall or spring. 3 credits.
Fall: M W F 10:10–11:00. Spring: M W F 2:30–3:20. Staff.
Russian literature in the twentieth century has endured many ups and downs. At times it has produced great masterpieces of modern art. At times it has been forced into the dry mode of "socialist realism," in which it had to voice the ideas forced upon it by a totalitarian government. Russian authors have been glorified as the voice of the nation, and they have also perished in concentration camps in the far north of Siberia. In this course we will read a representative selection of these authors, including those who took the path of art, those who bent to the "social command," and those who assumed a politically dissident stance. Among the authors read will be Babel, Pasternak, Olesha, and Solzhenitsyn. All reading is in English translation.

[108 Freshman Writing Seminar: 100 Years of Russian Fiction (1830–1930)
Fall. 3 credits. Not offered 1990–91.
M W F 10:10. N. Pollak.
What is the "truth" of the work of fiction? Native responses to Russian literature in the nineteenth and twentieth centuries have included two apparently antithetical—and

passionately proclaimed—responses to this question. According to one view, that truth lies in the ideal content of the work, its fidelity to "objective" reality, and its social relevance. According to the other view, which arose in part as a response and counterweight to the first, the truth is inseparable from the stylistic aspects of the work. In reading short fiction by such writers as Pushkin, Gogol, Tolstoy, Chekhov, and Babel, we will attempt to examine the ways each of them asserts his conception of the truth—and the ways these approaches must overlap in the determination of the complex truth that is the work of art.]

201–202 Readings in Russian Literature
201, fall; 202, spring. 3 credits each term. Prerequisites: qualification in Russian; 201 is prerequisite to 202. Open to freshmen.
Fall: M W F 1:25 or 2:30. N. Pollak.
Spring: M W F 10:10. G. Shapiro.
These courses are designed as the initial courses students take after qualification in Russian and are conducted mainly in Russian. Considerable guidance is provided, however, and there is no presumption of fluency. The goals of the courses are to introduce students to Russian literature in the original, to sample differing literary styles, and to accomplish both with minimal recourse to English in class. Several short papers in Russian and English will be assigned. Readings from nineteenth- and twentieth-century masters of prose and verse such as Pushkin, Lermontov, Tiutchev, Tolstoy, Chekhov, Babel, and Zoshchenko.

[207 Themes from Russian Culture
Fall. 3 credits. Not offered 1990–91.
M W 9:05. G. Shapiro.
This course is based on lectures, discussions, and audio-visual presentations (slides, tapes, films). It includes within its scope various aspects of Russian culture such as literature, art, music, religion, philosophy, and social thought from its very beginnings through the eighteenth century. The course is designed to give undergraduates a broad familiarity with the cultural traditions of the country which plays a major role in the world today. Russian culture will be presented as part of Western civilization with attention given to its distinctive character. The basic texts are literary works of moderate length in English translation.]

208 Themes from Russian Culture II
Spring. 3 credits.
M W F 9:05. G. Shapiro.
This course is based on lectures, discussions, and audiovisual presentations (slides, tapes, films). It includes various aspects of Russian culture such as literature, art, music, religion, philosophy, and social thought over the last two hundred years. The course is designed to give undergraduates a broad familiarity with the cultural traditions of the country that plays a major role in the world today. Russian culture will be presented as part of Western civilization with attention given to its distinctive character. The basic texts are literary works of moderate length in English translation.

[314 Intellectual Background of Russian Literature, 1825–1930
Not offered 1990–91.]

[329 Eastern Europe Today: Economics, Government, Culture (also Economics 329 and Government 326)
Fall. 4 credits. Not offered 1990–91.
T R 2:55–4:10. G. Gibian, M. Rush, G. Staller.
Introductory interdisciplinary survey of Poland, Hungary, Czechoslovakia, and Yugoslavia since World War II, with emphasis on contemporary developments. The goals of the course are to examine differences among East European countries as well as common elements.]

[330 The Soviet Union: Politics, Economics, and Culture (also Economics 330 and Government 330)
Spring. 4 credits. Not offered 1990–91.
T R 2:55–4:10. G. Gibian, M. Rush, G. Staller.
Interdisciplinary survey of the U.S.S.R. since the Revolution, with emphasis on contemporary developments.]

331 Introduction to Russian Poetry
Fall. 4 credits. Prerequisites: Russian 202 or equivalent and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students.
T R 11:40–12:55. S. Senderovich.
A survey of Russian poetry with primary emphasis on the analysis of individual poems by major poets.

[332 Russian Theatre and Drama
Not offered 1990–91.]

[333 Twentieth-Century Russian Poetry
Spring. 4 credits. Not offered 1990–91.
T R 11:40–12:55. N. Pollak.
Close readings of lyrics by major twentieth-century poets. All reading is in Russian. Geared towards undergraduates.]

334 The Russian Short Story
Spring. 4 credits. Prerequisites: Russian 202 or equivalent and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students.
T R 2:55–4:10. P. Carden.
A survey of two centuries of Russian story telling. Emphasis on the analysis of individual stories by major writers, on narrative structure, and on related landmarks of Russian literary criticism.

[335 Gogol
Spring. 4 credits. There may be a special section for students who read Russian; if they are Russian majors, they may count this course as one in the original language. Also open to graduate students. Not offered 1990–91.
M W 2:30–3:45. Staff.
Selected works of Gogol read closely and viewed in relation to his life and to the literature of his time. Readings in English translation.]

[350 Education and the Western Literary Tradition (also Comparative Literature 350 and College Scholar 350)
Spring. 4 credits. Not offered 1990–91.
M W F 10:10. P. Carden.
A major philosophical tradition has conceived of education as encompassing the whole of our lives. What we should do or be is seen as the result of every choice we make. The whole of our human contacts is understood as a school in which we form ourselves. This all-encompassing vision of education has been embodied in the works of the great philosopher-fantasts who use the forms of fiction to explore fundamental issues of education. In this course we will examine several key philosophical fantasies, among them Plato's *Republic*, Rousseau's *Emile*, and Tolstoy's *War and Peace*. Our aim will be to understand how the discourse on education became a central part of our Western tradition.]

367 The Russian Novel
Fall. 4 credits. Also open to graduate students. Special discussion section for students who read Russian.
T R 2:55–4:10. G. Gibian.
Realism and modernism. The prosaics of Russian writers of the nineteenth and twentieth centuries. Novels and short stories by Gogol, Turgenev, Tolstoy, Dostoevsky, Chekhov, Solzhenitsyn, and others. Readings in English translation.

368 Soviet Literature from Revolutionary Times to "Glasnost"
Spring. 4 credits. Also open to graduate students. There will be a special section for students who read Russian.
T R 1:25–2:40. M. Scammell.
An introductory survey of Soviet literature, beginning with the revolutionary fervor of the twenties, continuing through the dark days of the thirties and the war years of the forties, and ending with an account of Khrushchev's "thaw," the rise of the dissident movement and the introduction of "glasnost." Writers and movements to be discussed include Mayakovsky and the Futurists; Zamyatin, Platonov and anti-utopian fiction; Gorky and Socialist Realism; Gulag literature; Pasternak; Solzhenitsyn and the dissidents; the meaning of "glasnost."

[369 Dostoevsky (also Comparative Literature 383)
Fall. 4 credits. Not offered 1990–91.]

[371 Literature of the Third Wave
Spring. 4 credits. Not offered 1990–91.
M W 11:15 plus 1 hour to be arranged. M. Scammell.
The literature of the "third emigration." A survey of recent Russian literature by writers who have voluntarily or involuntarily left the Soviet Union during the past fifteen years. Among the authors discussed will be Solzhenitsyn, Sinyavsky, Brodsky, Zinoviev, Sokolov, Aksyonov, Vionovich, Limonov, Vladimov, Maximov, Aleshkovsky, Dovlatov, and Gorbanevskaya. Some consideration will be given to the influences of emigre publishing houses and literary magazines on the development of contemporary Russian literature and literary and political issues being debated by emigre literary circles.]

[373 Chekhov
Fall. 4 credits. Not offered 1990–91. A special section is offered for students who read Russian.
T R 11:40–12:55. S. Senderovich.
Reading and discussion of Chekhov's works, with emphasis on the short story. The course is designed for non-specialists as well as literature majors. A variety of approaches will be employed; informal lectures and discussions.]

[375 Literature of the Soviet Period, 1917–1945
Fall. 4 credits. Prerequisite: permission of instructor. Also open to graduate students. Russian majors may do part or all of the reading in Russian by prior agreement with the instructor. Not offered 1990–91.
T R 11:40–12:55. M. Scammell.
A survey of the development of Russian literature during the second quarter of the twentieth century, with the emphasis on attempts to create a purely Soviet literature but also taking into account the achievements of non-Soviet writers, including emigres and the so-called fellow travelers.]

[376 Literature of the Soviet Period, 1945–1985
Spring. 4 credits. Prerequisite: permission of instructor. Also open to graduate students. Russian majors may do part or all of the reading in Russian by prior agreement with the instructor. Not offered 1990–91.
T R 11:40–12:55. M. Scammell.
A survey of the development of Soviet literature after World War II, including the thaw, the literature of the Gulag, the rise of the dissident movement, and the creation of the "third emigration."]

[379 The Russian Connection (also Comparative Literature 379)
Spring. 4 credits. Not offered 1990–91.
T R 2:55–4:10. P. Carden.
We will examine the development of a Russian psychological literature of the interior self in its interrelationship with European literature. Using early examples of psychological prose such as Rousseau's *Confessions* and Benjamin Constant's *Adolphe*, we will examine the connection to Russian prose of the romantic period in Pushkin's *Queen of Spades* and Lermontov's *Hero of Our Time*. We will compare Hoffmann's and Gogol's employment of the fantastic to probe the more obscure sides of the psyche. After reading Stendhal's *Charterhouse of Parma*, we will turn to two of the most significant psychological novels of the Russian tradition, Tolstoy's *War and Peace* and Dostoevsky's *The Idiot*. All reading is in English translation.]

[380 Soviet Dissident Literature
Fall. 4 credits. Not offered 1990–91.
T R 1:25–2:40. M. Scammell.
Study of the dissident movement. Defining the meaning of the term; political dissidence and cultural and literary dissidence; and religious dissident movement. The writings of Siniavsky-Tertz, Pasternak's *Doctor Zhivago*, and other figures of the past two generations. This course is intended for students of government and society in general, not only for students of Russian literature.]

[388 Ideas and Form in Novels of Social Inquiry (also Comparative Literature 388)
Spring. 4 credits. Not offered 1990–91.
M W F 9:05. G. Gibian.
From the French Revolution to the present. Problems of relations between politics and the writer. Literary representations of conflict between political ideologies (ideas of revolution, justice, nationalism) and private needs (art, nature, love, order). Marx, Flaubert, Dostoevsky, Conrad, Trotsky, Lenin, V. S. Naipaul, Richard Wright, Solzhenitsyn, Kundera, and others. Some poetry will also be included.]

[389 Modern Literature in Poland, Czechoslovakia, Hungary, and Yugoslavia (also Comparative Literature 389)
Spring. 4 credits. Not offered 1990–91.
T R 11:40–12:55. G. Gibian
The course will focus on novels and short stories, but some consideration will also be given to drama and poetry. No knowledge of Eastern European languages is required; the reading will be done in English translation. Primary emphasis will be on the texts as literary works of art, but attention will also be given to historical and political background.]

[390 The Power of Nationalism: Expressions of National Feelings in Politics, Literature, History, and the Arts (also Comparative Literature 390)
Fall. 4 credits. Not offered 1990–91.
T R 2:55–4:10. G. Gibian and others.
The course will deal with various aspects of the general subject of national identity and feeling. In addition to studying the political phenomenon of nationalism, we will also study the roles played by national awareness in the perception of one's identity, the self-images of national character, stereotypes of national and ethnic qualities, and the relation between a sense of belonging to a nation and various other groups. Case studies of several nations and ethnic groups. There will be guest lecturers.]

393 Honors Essay Tutorial
Fall or spring. 4 credits.
Hours to be arranged. Staff.

[400 Reading the Great Tradition
Fall. 4 credits. Prerequisite: Russian 202 or equivalent. Recommended: a course at the 300 or 400 level in which reading has been done in Russian. This course may be counted toward the 12 credits of Russian literature in the original language required for the Russian major. Not offered 1990–91.
T R 2:55–4:10. Staff.
The course is designed to improve the reading facility of advanced undergraduates and beginning graduate students by reading selected works of Russian literature in the original and paying close attention to their stylistic qualities. Works of contemporary Russian authors, both those officially approved and dissidents, those in the Soviet Union and those in emigration, will be read.]

[409 Russian Stylistics
Fall. 4 credits. Not offered 1990–91. Also open to graduate students. Prerequisite: three years of Russian.
T R 1:25–2:40. S. Senderovich.
A few steps beyond normative grammar. Introduction to the subtleties of idiomatic Russian on the levels of morphology, syntax, vocabulary, and phraseology. Introduction to the genres of live colloquial and written language. Development of writing skills through short assignments and their analyses. First notions of literary stylistics and their practical application.]

[415 Postsymbolist Russian Poetry
Spring. 4 credits. Open to graduate students. Prerequisite: permission of instructor. Not offered 1990–91.
M W 2:30–4. N. Pollak.
We will examine works by three poets in the first quarter of this century: Innokentij Annenskij, the Symbolist whom the Acmeists considered their mentor; Osip Mandelstam, a founding Acmeist; and Boris Pasternak, associated, at least for a time, with the Futurists. Through close readings of their verse, and also critical prose and manifestos, we will attempt to determine some of the general features that link poets of such diverse orientations in the years following the crisis of Symbolism. We will also outline the features that distinguish them as representative of their respective movements.]

431 Contemporary Russian Prose
Fall. 4 credits. Prerequisites: Russian 301–302 or 303–304, and permission of instructor. This course may be counted towards the 12 credits of Russian literature in the original language for the Russian major. Graduate students may audit the course.
T R 2:55–4:10. M. Scammell.
Close readings of selected short stories by Babel, Zamyatin, Bulgakov, Zoshchenko, Olesha, Platonov, Kazakov, Solzhenitsyn, and others. The emphasis will be on achieving a thorough understanding of modern literary Russian and polishing reading skills. This course is specifically intended for third- and fourth-year Russian majors.

432 Pushkin
Spring. 4 credits. Prerequisites: Russian 202 or equivalent, and permission of instructor. This course may be counted towards the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students.
T R 11:40–12:55. G. Gibian.
Reading in the original language and discussion of selected works by Pushkin: lyrics, narrative poems, and Eugene Onegin.

491 Reading Course: Russian Literature in the Original Language
Fall or spring. 1 credit each term. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
This course is to be taken in conjunction with any Russian literature course in English translation. Students will receive one credit for reading and discussing works in Russian in addition to their normal course work.

492 Supervised Reading in Russian Literature
Fall or spring. 1–4 credits each term.
Hours to be arranged. Staff.

[498 Russian Symbolism (also 698)
Fall. 4 credits. Not offered 1990–91.
M 2:30–4:30 and W 2:30–3:20. P. Carden.
Around 1886 the trends in French culture represented by Baudelaire and Mallarme crystallized into a new cultural movement, called in some of its aspects the Decadence and in others Symbolism. The new sentiments about the nature of art spread throughout Europe, drawing in England, the Scandinavian countries, Germany, and Russia. The first stirrings of Symbolism were in the ascendant in Russian cultural life and it remained the dominant force until 1910. Our task will be to study the phenomenon of Symbolism as it touched the arts in Russia, including not only literature, but dance, theater, and the visual arts. Since Symbolism was a movement that cut across national boundaries, we will study the seminal works of European art that created the climate in which Russian Symbolism was conceived and came to maturity.]

[499 Russian Modernism (also 699)
Spring. 4 credits. Not offered 1990–91.
M 2:30–4:30 and W 2:30–3:20. P. Carden.
We will be investigating the rich and innovative period of the avant-garde in Russia from 1910 to 1925. In addition to examining outstanding works in a variety of forms, we will look at the movements, social context, and ties to the European avant-garde. Among the writers whose works we will examine are Blok, Bely, Mayakovsky, Khlebnikov, Pilnyak and Babel. We will examine theater through the Futurist performance piece, "Victory Over the Sun," through Meyerhold's productions of Mayakovsky's plays and other experimental pieces, and through mass spectacles. We will discuss the film theories of Eisenstein and Dziga Vertov and see several of their films. In the visual arts we will be examining the experiments of Larionov and Goncharova, Malevich, Kandinsky, and Tatlin. We will also look at the photomontage of Rodchenko.]

Graduate Seminars

[600 Proseminar: Research Methodology in Russian Literature
Fall. 4 credits. Not offered 1990–91.
W 3:45–5:45. P. Carden.
This course is intended for graduate students beyond the first-year level who want a more advanced training in research methodology. Among the topics to be covered are the research library, its resources and obstacles; bibliography of Russian literature and culture; Russian archives, what they contain and how to use them; finding and evaluating information; reading criticism analytically; evaluating different editions of an author's works; editing and revising a paper to meet professional standards of cogency and format. Each student should be working concurrently on a paper, which might be an upgrading of a seminar paper, a draft of the master's essay, or a chapter of the dissertation.]

603 Graduate Seminar: Neglected Masterpieces of Short Russian Prose
Spring. 4 credits.
T R 2:55–4:10. G. Gibian.
Nineteenth- and twentieth-century works chosen according to the needs of the students enrolled. Stress on skills useful in teaching Russian literature.

611 Supervised Reading and Research
Fall or spring. 2–4 credits. Prerequisite: permission of the department.
Hours to be arranged. Staff.

[615 Postsymbolist Russian Poetry
Not offered 1990–91.
For description see Russian 415.]

[617–618 Russian Stylistics I and II
Not offered 1990–91.]

[619 Seventeenth-Century Russian Literature
Fall. 4 credits. Not offered 1990–91.
F 2:30–4:30. G. Shapiro.
Seventeenth-century Russian literature is often studied together with Medieval literature. Is such an arrangement justified, or does seventeenth-century literature have its own problematic that makes it worth studying separately? In scholarship the seventeenth century is referred to as the Age of Baroque. Did Muscovite Russia experience its own Baroque, and, if so, what are its unique features? These and other important issues will be addressed in the seminar. In the course of the seminar a variety of concepts, genres, and themes characteristic for the epoch will be discussed. We will read the works of such authors as Simeon Polotsky, Silvester Medvedev, Karion Istomin, and the archpriest Avvakum.]

[620 Twentieth-Century Russian Poetry
Spring. 4 credits. Not offered 1990–91. Open to advanced undergraduates with permission of instructor.
W 3:35–5:35. N. Pollak.
An in-depth study of the writings of selected twentieth-century poets. Authors may include Blok, Mandelstam, Pasternak, Tsvetayeva, and Khlebnikov.]

621 Old Russian Literature
Fall. 4 credits.
T 4:15–6:15. S. Senderovich.
A survey.

[622 Eighteenth-Century Literature
Spring. 4 credits. Not offered 1990–91.
T 4–6. S. Senderovich.
Introduction to the first century of modern Russian literature. Cultural identity of the age: Baroque, Neo-Classicism, Enlightenment, Sentimentalism. Reading of representative texts of the major writers of the century: Trediakovsky, Lomonosov, Sumarokov, Novikov, Karamzin, etc. Main connections with nineteenth-century literature: roots, evolution, intertextuality.]

[623 Early Nineteenth-Century Literature
Not offered 1990–91.]

[624 Russian Romanticism
Fall. 4 credits. Taught in Russian. Not offered 1990–91.
T 4:15–6:15. S. Senderovich.
A survey of concepts, themes, genres, and main individual contributions in Russian literature of the Age of Romanticism. The Age of Romanticism encompasses the first four decades of the nineteenth century. Zhukovsky, Batiushkov, Pushkin, Baratynsky, Gogol, and Lermontov are the major representatives of this style and the most important period of Russian literature. The emphasis is on poetry, its historical and theoretical problems. It was, above all, the golden age of Russian poetry, which prepared and deeply influenced the following age of great Russian prose. Turgenev, Tolstoy, Dostoevsky, and Chekhov are full of allusions to the texts of the golden age and cannot be properly understood without it.]

[625 Russian Realism
Spring. 4 credits. Not offered 1990–91. Also open to advanced undergraduates with permission of instructor.
R 3:35–5:35. P. Carden.
A study of the development of psychological realism in Russian prose of the nineteenth century, with some attention to the poetic tradition. In addition to reading representative works, we will pay attention to the historical background of the period. We will approach the works through the critical writings of several important theorists, in particular those of Lydia Ginzburg.]

[626 The Tradition of Russian Poetry
Fall. 4 credits.
F 2:30–4:30. N. Pollak.
This course will examine a selection of poems that have been particularly important for the tradition of Russian literature in the nineteenth and twentieth centuries. Our focus will include critical and literary responses to these poems as well as close readings.]

[630 Gogol
Spring. 4 credits. Not offered 1990–91. Taught in Russian.
W 4:15–6:15. G. Shapiro.
Gogol's artistic career from his "Ukrainian" cycles to *Dead Souls*. We will examine representative works from each of the major divisions of Gogol's early work, in particular from his cycles *Evenings on a Farm near Dikanka and Mirgorod*, and will trace the writer's development toward his magnum opus, *Dead Souls*. Although some of the readings will be done in English to enable the class to cover a significant amount of material, the class work will be focused on close analysis of the Russian text.]

635 Russian Literary Criticism of the Twentieth Century (also Comparative Literature 635)
Fall. 4 credits.
W 3:35–5:35. P. Carden.
A survey of twentieth-century Russian contributions to critical theory and practice. Texts by the symbolists, the formalists, the school of Bakhtin, the folklorists, and the structuralists will be read and analyzed. A reading knowledge of Russian is desirable, although alternative readings in English translation can be arranged for otherwise qualified students.

[669 Seminar: Dostoevsky
Fall. 4 credits. Not offered 1990–91. Also open to advanced undergraduates.
R 4:15–6:15. G. Gibian.
Study of representative works from various periods of Dostoevsky's life, from *Poor Folk* and *The Double* to *The Brothers Karamazov*, including some articles, speeches, and parts of *The Diary of a Writer* against the context of nineteenth-century Western European and Russian literature. A variety of critical and scholarly approaches (from Russian formalists to 1980s Western scholars) will be sampled and evaluated.]

671 Seminar in Nineteenth-Century Russian Literature
Spring. 4 credits.
W 3:35–5:35. P. Carden.
Topic: A careful study of the Russian text of Tolstoy's *Voina i mir*, making use of the drafts of the novel and the sources used by Tolstoy. We will also consider the novel in the light of various theories of narrative.

[672 Seminar in Twentieth-Century Russian Literature
Spring. 4 credits. Open to advanced undergraduates. Not offered 1990–91.]

[673 The Russian Nabokov
Fall. 4 credits. Not offered 1990–91. Also open to advanced undergraduates.
R 4:15–6:15. M. Scammell.
Vladimir Nabokov wrote much verse, several plays, numerous short stories, and nine novels in Russian before switching to English. He is a major Russian writer of the twentieth century. This seminar will examine his work in the context of modern Russian literature, concentrating in particular on the novels. Knowledge of Russian is highly desirable, but all the works discussed also exist in English translation.]

[674 Solzhenitsyn
Fall. 4 credits. Not offered 1990–91.
R 4:15. M. Scammell.]

[675 Literature of the Soviet Period, 1917–1945
Fall. 4 credits. Not offered 1990–91.
W 4–6. G. Gibian.
Study of the main works as well as the chronological development of all literary genres. Twofold approach: as it looked at the time; and how it looks from the perspective of hindsight: rehabilitations and revisionisms of the "glasnost" period. From Babel and Mayakovsky to Bulgakov, Sholokov, and Zoshchenko; from Futurism through Emigration and Writing for the Drawer to Socialistic Realism.]

676 Literature of the Soviet Period, 1945–1985
Spring. 4 credits. R 4:15–6:15 p.m.
M. Scammell.

[698 Russian Symbolism
Fall. 4 credits. Not offered 1990–91.
M 2:30–4:30, W 2:30–3:20. P. Carden.
For course description, see 498.]

[699 Russian Modernism
Spring. 4 credits. Not offered 1990–91.
M 2:30–4:30, W 2:30–3:20. P. Carden.
For course description, see 499.]

[701 Proseminar: Methods in Research and Criticism
Not offered 1990–91.]

SOCIOLOGY

R. L. Breiger, chair; S. Caldwell, J. Freeman, M. Hannan, D. P. Hayes, R. McGinnis, M. McPherson, P. Moen, V. Nee, S. Olzak, B. C. Rosen, L. Smith-Lovin, D. Stark, J. M. Stycos, D. Weakliem, R. M. Williams, Jr.

The subject matter of sociology is human social organization and institutions. The Department of Sociology offers courses in social organization that include (among other issues) examination of inequality on the basis of race, ethnicity, income, and occupation; political behavior and public policy; relations and affect in small groups; and contemporary social movements for change. Courses that analyze institutions include the family, politics and questions of public policy, the analysis of voluntary organizations, and the study of networks of political and organizational action.

The Department of Sociology offers the opportunity to develop fundamental theoretical insight and advanced research skills appropriate for the study of social behavior and institutions. Graduates of the department take up careers in university, government, and business settings and in law, management, architecture, and other professions seeking men and women who demonstrate a disciplined understanding of society and social issues.

Sociology Courses for Non-Majors

The social sciences provide students with particularly effective ways to understand the complexities of modern life. For many students, the undergraduate years are a last opportunity to gain the insights these fields have to offer. The Department of Sociology is continuing to design an array of beginning and advanced courses that convey a broad understanding of the methods and insights of sociological analysis—courses that will be of particular interest to undergraduates who may not major in sociology. First- and second-year students should note that the introductory courses (101, 103, 104) provide substantial focus on the sociological analysis of major issues of public life. A wide selection of general education courses is available at the 200 level. Advanced undergraduates who are majors in other fields should also see, in particular, the descriptions of Sociology 310 (fall), Sociology 315 (fall), and Sociology 335 (spring), for which there are no prerequisites other than junior or senior status.

Related Courses in Other Departments

Students interested in sociology should consult the course lists of the other social science departments in the College of Arts and Sciences and of these other departments: Organizational Behavior (College of Industrial and Labor Relations), Human Development and Family Studies (College of Human Ecology), and Rural Sociology (College of Agriculture and Life Sciences).

The Major

Requirements for general sociology: (1) 101 and any other 100-level course (excluding Freshman Writing Seminar) with a 2.5 minimum grade-point average; (2) no later than the junior year, the 301 and 303 methods courses; (3) one course in the department at the 400 level or higher (491 is recommended); and (4) 20 additional credits in sociology, of which 9 may be taken in related departments if approved by the student's adviser.

Requirements for Social Relations: This major is offered jointly by the departments of Anthropology and Sociology. See page 318 for a description and a list of requirements.

Requirements for honors: Potential honor students are encouraged to begin taking the methods and statistics courses during their sophomore year and to take at least 2 credits of Sociology 491, Independent Study, during their junior year. Honors students take Sociology 495–496 during their senior year. Graduation with honors requires a cumulative average of at least B+ in all sociology courses and the successful completion of an oral defense of the honors thesis. Interested students should consult the director of undergraduate studies no later than the second semester of their junior year.

Cornell-in-Washington program. Qualified sociology majors may include a semester in the Cornell-in-Washington program, in which students take courses and undertake a closely supervised internship. For further information, see p. 21.

Supervised research. Qualified sociology majors are invited to participate with faculty members in conducting research. Such projects are usually initiated in one of two ways: the student may offer to assist the faculty member in an ongoing project, or the student may request that the faculty member supervise the execution of a project conceived by the student. In either case the student should enroll in Sociology 491. Interested students may direct inquiries to any faculty member.

Society and Economy Concentration

Sociology majors or students in other disciplines who wish to prepare for graduate study in any of the social sciences or in a profession (business, management, or law) may elect to acquire a concentration in society and economy. This program is designed to provide training in economic sociology, formal organizations, and social science methods. The requirements for the concentration in society and economy are: (1) three of the following courses in economic sociology and formal organizations: 245, 324, 350, 365, 372, 444; and (2) two of the following courses in methods: 301, 420, 460. For further information, consult Professor Victor Nee, 330 Uris Hall.

Introductory Couses

101 Introduction to Sociology
Fall or spring. 3 credits.
M W 11:15–12:05 plus one sec. Fall: S. Caldwell; spring: M. Hannan.
With a focus on public issues that might in any semester include collective violence, markets and organizations, and social policies aimed at lowering the rate of poverty, this course provides an introduction to theory and research in sociology and demonstrates how the insights and methods of sociological analysis can be brought to bear in understanding major issues of public life. The goal is to convey a sense of the interrelations between the formulation of theories about social behavior and the collection and analysis of data in order to evaluate those theories. Instead of simply describing research, this course provides "hands-on" experience in analyzing sociological problems. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

103 Introduction to Sociology: Microsociology
Fall. 3 credits.
M W F 9:05–9:55. D. P. Hayes.
An introduction to microsociology, focusing on concepts and theory of social processes within small groups, including the family. Emphasis is on leadership, conformity, social influence, cooperation and competition, distributive justice, and micro analyses of interaction.

104 Class, Race, and Ethnicity
Spring. 3 credits.
T R 10:10–11:25. S. Olzak.
What is the relationship between race and social class? To what extent does discrimination produce barriers to achievement and attainment for African Americans, Hispanics, Asians, and other immigrants in American society? Why are some groups more likely to be the targets of ethnic and racial hostility than others? This course uses sociological analyses to answer these questions about the nature of race, ethnic, and social class in our society and others. This course is designed as an introduction to the sociology of inequality, and is primarily for freshmen and sophomores.

[106 Family and Work
Fall. 3 credits. Not offered 1990–91.
T 10:10–11:25, plus one section.
L. Smith-Lovin.
The events of the past 30 years have profoundly transformed arrangements governing love, work, and their routinization in households and employment. In this course, students will look at data from census and time use studies showing what has changed and what has remained relatively stable. Sociological theories that explain these trends will be examined. Students will have the opportunity to test their own ideas with analyses of data from a national survey. The impact of sociological ideas for public issues like child care, welfare policy, sex discrimination statutes, and comparable worth will be discussed. This course is primarily for freshmen and sophomores.]

General Education Courses

202 Writing in the Social Sciences (also Writing 202)
Fall or spring. 3 credits. Limited to 17 students. Prerequisite: at least one social science course.
Fall: T R 11:40–12:55; spring: T R 10:10–11:25. K. Hjortshoj.
This course offers students the opportunity to strengthen their writing, become more aware of the diverse writing styles and strategies used in the social sciences, and experiment with new approaches to composition and revision. Students will benefit from detailed written comments on their work and from extensive discussion of student writing in class. Initial writing and reading assignments will explore styles of description, the ways in which writers adapt their work to different audiences, the differences between academic and popular writing in a particular field, and methods of revision. Subsequent assignments will include the interpretation of primary data, the review of a documentary film, and writing based on research literature in a field of the student's choice. The instructor will hold frequent individual conferences with students to discuss finished essays and work in progress. During the semester students will write, and often revise, 8 to 10 papers—about 40 pages of finished work.

205 Population Dynamics (also Rural Sociology 201)
Spring. 3 credits.
T R 1:25–2:40. J. M. Stycos.
An introduction to population studies, which includes the determinants and consequences of population change. The primary focus is on the influences of demographic dynamics on society and the economy, with emphasis on marriage, family formation, mortality, crime and deviance, migration, and marketing behavior.

240 Personality and Social Change
Spring. 3 credits.
T R 1:25–2:40. B. C. Rosen.
An analysis of social and psychological factors that affect and reflect social change. Topics to be examined will include models of man and society, national character, modern melancholy, feminism, family and sex roles, industrialism, economic development, and psychocultural conflict.

[243 Family
Fall. 3 credits. Not offered 1990–91.
T R 10:10–11, plus one sec. B. C. Rosen.
A social and historical analysis of the family both in the West and cross-culturally. Specific areas examined include sex roles, socialization, mate selection, sex and sexual controls, internal familial processes, divorce, disorganization, and social change.]

[245 Inequality in America
Fall. 4 credits. Not offered 1990–91.
T R 10:10–11:25. S. Olzak.
This course deals with sociological explanations for various forms of social and economic inequality, particularly inequalities associated with class and work. We will describe systems of inequality, analyze various theoretical explanations for those systems, and examine the various structures designed to reduce or eliminate inequality.]

265 Hispanic Americans
Spring. 3 credits (4-credit option available).
T R 2:55–4:10. H. Velez.
Analysis of the present-day Hispanic experience in the United States. An examination of sociohistorical backgrounds as well as the economic, psychological, and political factors that converge to shape and influence a Hispanic group-identity in the United States. Perspectives are developed for understanding the diverse Hispanic migrations, the plight of Hispanics in urban and rural areas, and the unique problems faced by the different Hispanic groups. Groups studied include Dominicans, Chicanos, Cubans, and Puerto Ricans.

277 Psychology of Sex Roles (also Psychology 277 and Women's Studies 277)
Spring. 3 credits. Limited to 300 students. Prerequisite: an introductory psychology course.
T R 11:40–12:55. S. Bem.
This course addresses the question of why and how adult women and men come to differ in their overall life styles, work and family roles, personality patterns, cognitive abilities, etc. This broad question is examined from five perspectives: (a) the psychoanalytic perspective, (b) the biological perspective, (c) the historical and cultural evolutionary perspective, (d) the child development perspective, and (e) the social-psychological and contemporaneous perspective. Each of these perspectives is also brought to bear on more specialized phenomena relating to the psychology of sex roles, including psychological androgyny, women's conflict over achievement, the male sex role, equalitarian marriage relationships, gender-liberated child-rearing, female sexuality, homosexuality, and transsexualism.

283 Groups and Relationships (also Psychology 283)
Summer and winter session. 4 credits.
Enrollment limited to ten men and ten women.
Summer M W 7–10 p.m.; winter session: M-F 9–12 a.m. L. Meltzer.
Small groups (such as teams and committees) and dyadic relationships (such as friends and lovers) are studied via games, exercises, and demonstrations. An out-of-class group project involving self-study is an integral part of the course. The goal is increased sensitivity to group processes, heightened awareness of the effects we have on others, and an understanding of how person-to-person processes relate to larger societal phenomena.

285 Social Psychology of Modernization
Fall. 3 credits.
T R 10:10–11:25. B. Rosen.
This course analyzes the changes taking place in newly industrializing countries around the world. It seeks to increase the student's understanding of the psycho-social forces that cause social change by modifying social behavior and personality. Particular attention will be paid to the roles of industrialization, social behavior, and emotional needs in the modernization process.

Methods and Statistics Courses

301 Evaluating Statistical Evidence
Fall. 4 credits.
M W 10:10–11, plus one section.
R. L. Breiger.
A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

303 Design and Measurement
Fall. 4 credits. Prerequisite: a course in sociology.
T R 2:30–4:25. D. P. Hayes.
Foundations of sociological analysis; issues arising from using humans as data sources; the quality of our primary data; methods of its collection; research designs in wide use and their limitations; pragmatic considerations in doing research on humans, organizations, communities, and nations.

Intermediate Courses

310 Sociology of War and Peace
Fall. 4 credits.
T R 1:25–2:40. R. M. Williams, Jr.
Every human group, community, or society presents many examples of altruism, helping, cooperation, agreement, and social harmony. Each grouping or society also manifests numerous examples of competition, rivalry, opposition, disagreement, conflict, and violence. Both conflict and cooperation are permanent and common aspects of the human condition. Collective conflicts, especially wars and revolutions, are frequent and dramatic events. But "peace" and "war" are equally active social processes, not passive happenings. This course describes various commonly accepted but erroneous notions of the causes and consequences of war and deterrence. It deals with the major theories concerning the sources of war in international and intranational social systems. The last half of the course analyzes the modes, techniques, and outcomes of efforts to restrict, regulate, and resolve international conflicts.

315 Sociology and Politics of Science
Fall. 3 credits.
T R 1:25–2:40. R. McGinnis.
This course explores the social structure of science, career patterns of scientists, and the role of government in shaping and continuing them.

[324 Organizations and Associations
Fall. 3 credits. Prerequisite: two courses in sociology. Not offered 1990–91.
T R 11:40–12:55. M. McPherson.
This course provides an overview of the literature on social organization as it bears on the formation, maintenance, and dissolution of formal organizations. These organizations are extremely diverse, ranging from large multinational firms to neighborhood improvement groups. Throughout the course we will seek to discover the theoretical similarities among these diverse forms. We will be reading from the literature on firms, unions, voluntary associations, churches, political groups, and other types of organizations. We will study how these organizations relate to one another, how individuals come to join them, and the process by which they grow and decline.]

335 Industrial and Post–Industrial Society
Spring. 4 credits. Open to juniors and seniors in any department. No prerequisites.
T R 1:25–2:40. D. Weakliem.
Service and information–based industries are steadily growing in all modern societies. Many people claim that this development fundamentally changes social structure, social conflict, politics, and culture. Others say that post–industrial society is just a continuation of industrial society. This course will explore issues concerning post–industrial society: for example, are traditional social categories such as class or religion giving way to new divisions? It will explore theories of post–industrial society and allow students to test them with data on recent changes in social conditions.

348 Sociology of Law
Fall. 4 credits.
M W F 1:25. C. Bohmer.
Legal decisions and legal practices viewed within the context of society's institutions and customs. Topics vary from semester to semester but deal with issues such as civil rights versus society's rights, variations in permissible sexual practices in different cultures, the social organization of police departments and its effects on justice and equity, changing divorce laws in relation to changes in the status of women, the role of psychiatry in the legal process, and judicial attitudes toward rape victims.

[350 Organizations, Individuals, and Social Structure
Spring. 4 credits. Prerequisite: one course in sociology. Not offered 1990–91.
T R 10:10–11:25. D. Weakliem.
Organizations are composed of people, but at the same time they can be regarded as actors in their own right, distinct from their members. This course introduces recent sociological theory and research on the relations among organizations and between organizations and individuals. Topics include the reasons for organization, effects on social conflict, stratification among organizations, and the extent to which organizations represent their members' interests. Examples will be taken from firms, labor unions, and political organizations.]

[364 Race and Ethnicity
Spring. 4 credits. Not offered 1990–91.
T R 1:25–2:40. S. Olzak.
This course examines the sociology of race and ethnic relations in the United States, Western Europe, South Africa, and other settings. The topics covered include the role of immigration and competition, the dynamics of upward mobility for some (but not all) ethnic-racial groups in the United States, the sociology and politics of ethnic-racial caste systems such as apartheid in South Africa, and the dynamics of ethnic boundaries in developing countries compared to those in underdeveloped countries.]

[365 Comparative Perspectives on Socialist Societies and Economies
Fall. 3 credits. Open to juniors and seniors in any department. No prerequisites. Not offered 1990–91.
W 2:30–4:25. V. Nee.
This course focuses on analyzing the relationship between state, economy, and society in socialist societies. Particular attention is given to the tensions between planning and market, equality and equity, center and locality, bureaucratic domination and individual choice, and ideology and dissent. What are the problems in state-socialist societies and what are the dynamics and limits of reform movements? What are the areas of difference and convergence in the patterns of state, market, and household relations in capitalist and socialist societies? Readings will draw primarily on case studies of the Chinese, Eastern European, and Soviet experiences.]

366 Socialist Societies Today
Spring. 4 credits.
T R 11:40–12:55. D. Stark.
This course examines the problems and prospects of restructuring the socialist societies and economies of Eastern Europe. Themes include social inequality, changing patterns of work organization, and political participation.

[369 Contemporary Chinese Society
Spring. 4 credits. Not offered 1990–91.
T R 2:55–4:10. V. Nee.
This course provides an introduction to Chinese society, its social organization, and its institutions. Since 1949 the various development models China has pursued have had differing consequences for society. What effects have they had on societal change—on stratification, community development, politics, the economy, work, schooling, family life, the position of women, personal relationships, and the meaning of life and values? What lessons can we draw from the Chinese experiences in implementing state-directed social change? How do we assess their accomplishments and failures? Recent field research on China will be cited.]

372 Sex Discrimination: Law and Social Policy (also Women's Studies 372 and Government 306)
Spring. 4 credits.
M W F 10:10. C. Bohmer.
This course will cover the legal and social trends in the area of sex discrimination. It will examine the relationship between feminist consciousness and developments in gender-related constitutional law. We will discuss the meaning of sex discrimination in the context of various areas of importance and examine the role of the law in redressing or perpetuating social and legal inequities.

385 Personality and Social Systems
Spring. 3 credits. Prerequisite: one course in any social science. Enrollment limited to 20 students.
T 10:10–12:40. B. Rosen.
A discussion seminar. Perspectives will be developed for understanding personality and behavior in a cultural context. A number of theories and conceptual approaches that have been used to understand the relationship between personality and social systems will be critically examined. Some themes in contemporary American culture will be discussed.

Advanced Courses

The following courses are intended for advanced undergraduates with substantial preparation as well as for graduate students in sociology and related disciplines. The normal prerequisite for all 400-level courses is one introductory course plus 301 (or an equivalent statistics course). Students who are not sure whether their background is sufficient for a particular course should consult the professor in charge.

[405 Sociology of Emotions
Spring. 4 credits. Prerequisite: at least one of Sociology 101,103, or 205. Not offered 1990–91.
M 1:25–4. L. Smith-Lovin.
The seminar examines (1) theories that explain emotional response as a function of social interaction and (2) the impact of emotional displays on social processes such as attribution, labeling, and identity maintenance. Sociological approaches to emotion are compared with psychological and biological views. Readings include classic works as well as current theory and research. Student research is an integral part of the course.]

420 Mathematics for Social Scientists
Fall. 2–4 credits.
M W 1:25–3:20; lab, F 1:25–3:20.
R. McGinnis.
Elementary matrix algebra, probability theory, and calculus.

[426 Policy Research
Spring. 3 credits (4-credit option available). Prerequisite: a course in multivariate methods. Not offered 1990–91.
R 9–11. S. Caldwell.
Examines the distinctive character of that social research which is sponsored and carried out explicitly for the purpose of informing policy. Intended especially for students considering nonacademic careers. Draws frequently from case studies to probe the methodological requirements, substantive flavor, and partisan context of applied research and also to identify the institutional actors involved in its sponsorship, production, and use.]

[444 Contemporary Research in Social Stratification
Fall. 4 credits. Not offered 1990–91.
R. L. Breiger.
Stratification and mobility as paired concepts requiring mutual articulation. The interplay of structure (occupational groups, labor markets, organizational demographics, social classes) and process (tracking, career trajectories, socioeconomic attainment).]

[460 Field Research in Sociology
Spring. 3 credits. Not offered 1990–91.
M 3:35–5:30. V. Nee.
This course will deal with the organization and execution of studies of social life in naturally occurring settings—through participant observation and various forms of interviewing, as well as through the analysis of personal and historical documents. After a brief discussion of selected issues in the methodology and social research, attention will center on a critical examination of five published studies—to ascertain in each case just what the investigator was trying to do and the extent to which he or she succeeded. During the

semester each student will be expected to develop a detailed study design and to do whatever preliminary tasks that are necessary. This may be a doctoral dissertation, an M.A. research project, or some other inquiry on a problem of personal interest.]

463 Political Sociology
Spring. 4 credits. Prerequisite: Any two courses in sociology and/or government.
T R 10:10–11:25. D. Weakliem.
Analyzes the relation between politics and social structure, focusing on contemporary capitalist democracies. Considers classical and contemporary views on social class and politics. Topics include ideology, voting behavior, and recent changes in class structure.

[468 Women and Achievement
Fall. 3 credits. Not offered 1990–91.
T 1:30–3:30. B. C. Rosen.
An analysis of social and psychological factors affecting female achievement. Topics will include women in the labor force, sex differences in children's achievement, the impact of sex roles on the socialization of competence and achievement among women, and the impact of marriage and the family on career choice and occupational achievement.]

491 Independent Study
Fall or spring. 1–4 credits. For undergraduates who wish to obtain research experience or to do extensive reading on a special topic. Interested students must submit a petition, available at the departmental offices, 314–318 Uris Hall. Permission to enroll for independent study will be granted only to students who present an acceptable prospectus and secure agreement of a faculty member to serve as supervisor for the project throughout the term. Graduate students should enroll in 891–892.

495 Honors Research
Fall or spring. 4 credits. Limited to sociology majors in their senior year. Prerequisite: permission of instructor.
Hours to be arranged. Staff.

496 Honors Thesis: Senior Year
Fall or spring. 4 credits. Prerequisite: Sociology 495.
Hours to be arranged. Staff.

497 Social Relations Seminar (also Anthropology 495)
Spring. 4 credits. Limited to seniors majoring in social relations.
Hours to be arranged. T. Kirsch.

Graduate Core Courses

These courses are primarily for graduate students in sociology but may be taken by other graduate students with permission of the instructor. Graduate students in sociology will normally take each of the five courses listed below, but with the concurrence of their special committees other arrangements may be made.

501 Basic Problems in Sociology I
Fall. 4 credits.
R 2:30–4:30. D. Stark.
Analysis of theory shaping current sociological research. Examination of several central problems in sociological inquiry provides an occasion for understanding tensions and continuities between classical and contemporary approaches, for indicating the prospects for unifying microsociological and macrosociological orientations, and for developing a critical appreciation of efforts to integrate theory and research.

502 Basic Problems in Sociology II
Spring. 4 credits.
T 10:10–12:05. R. Breiger.
Analysis of theoretical perspectives shaping current sociological research. A continuation of Sociology 501.

505 Research Methods I: Logic of Social Inference
Fall. 4 credits. Prerequisite: a first course in statistics and probability.
M W 2:30–4:25 plus a weekly lab.
S. Caldwell.
The stages and logic of social inquiry, using the formal language of multivariate regression, with emphasis on applications. Threats to inference—and techniques for meeting such threats—are examined within each stage of inquiry: conceptualization; measurement; design; specifying, exploring, testing and evaluating models; dissemination and influence of results. Scope includes survey, comparative-historical, and experimental styles. Work load includes weekly lab exercises with data, attention to subject-matter, articles, and a research proposal. The first course in a three-course methods sequence (505–507).

506 Research Methods in Sociology II
Spring. 4 credits. Prerequisite: Sociology 420 or 505 or equivalent.
M W 1:25–3:20. M. Hannan.
A survey of methods for analyzing sociological data, including measurement error models, confirmatory factor analysis, panel models, and general structural equation methods. Readings from the sociological research literature will illustrate various methods. Periodic assignments on micro and mainframe computers will integrate theory, method, and data.

507 Research Methods in Sociology III
Fall. 4 credits. Prerequisite: Sociology 506.
M 2:30–5. D. Weakliem.
The statistical analysis of temporal change. Major topics are time-series and event-history (survival) analysis, with some discussion of panel data.

Graduate Seminars

These seminars are primarily for graduate students but may be taken by qualified advanced undergraduates who have permission of the instructor. Which seminars are to be offered any term is determined in part by the interests of the students, but it is unlikely that any seminar will be offered more frequently than every other year. The list below indicates seminars that are likely to be offered in 1990–91, but others may be added and some may be deleted. Students should check with the department before each term.

509 Seminar on Sociology of Organizations (also Management NRE 509)
Fall. 4 credits.
Hours to be arranged. J. Freeman.
This course explores current research on organizations. The current literature can be broken up into four subareas: (1) population ecology of organizations (the class will read Hannan and Freeman, *Organizational Ecology*); (2) institutional theory; (3) organizations as mechanisms of social stratification (including work on occupational mobility and internal labor markets); and (4) economics of organization (including such topics as agency theory, transaction costs, and economic approaches to collective action). These areas will be explored in depth reflecting student interest. For each, stress will be placed on the opportunities for empirical research and limitations of operationalization.

[513 Social Networks and Social Structure
Spring. 4 credits. Not offered 1990–91.
T 10:10–12:05. R. L. Breiger.
A critical survey of theories and techniques of structural analysis in sociology, centering on the usefulness of social network analysis in providing integration of studies at different levels of generality. Applications in the areas of the sociology of organizations, community studies, social stratification, and dependence relations among nations. Emphasis on the mutual relevance of theories and operation research procedures.]

[517 The Sociology and Demography of Science and Technology
Spring. 4 credits. Not offered 1990–91.
F 1:25–3:20. R. McGinnis.]

525 Workshop in Event Analysis
Fall. 4 credits.
W 2:30–4:25. S. Olzak.
Research workshop for selected undergraduates and graduate students with research experience in social movements and collective action. Emphasis on data collection, research design, and data analysis of events in the study of collective action. Enrollment with permission of instructor.

[551 Seminar in Collective Action
Spring. 4 credits. Not offered 1990–91.
R 3–5. S. Olzak.
Examination of current research and theory in collective action, including neo-Marxist, resource mobilization, breakdown, and competition perspectives of the rise and fall of collective action and social movements. Comparison of different methods of data collection and analysis, including examination of recent event-history methods applied to collective-action research.]

[563 Contemporary Research in Political Sociology
Spring. 4 credits. Not offered 1990–91.
W 3:15–5:45. D. Weakliem.
Considers research from several theoretical perspectives in political sociology. The main focus will be on contemporary society, but some historical work may be included. Topics may include state economy relations, class structure and politics, and political ideology, among others.]

[565 Seminar on Voluntary Associations
Spring. 4 credits. Not offered 1990–91.
T 3–5:30. M. McPherson.
This is a study of the literature on voluntary associations, which can be described as groups that are not business, government, or family. The literature reflects the extreme diversity of the subject: there are thousands of references in sociology, political science, anthropology, psychology, economics, and related areas. The course will draw on readings from a broad selection of these sources, beginning with some of the earliest references and finishing with some modern empirical and theoretical work.]

[582 Models of Social Action
Spring. 4 credits. Not offered 1990–91.
T 9:30–12. L. Smith-Lovin.
This course introduces students to models that link meaning, knowledge, and social behavior. Three types of models will be explored: (1) models that relate social structure to shared knowledge; (2) production system approaches, which view knowledge as a role program; and (3) cybernetic models, which suggest that meaning and behavior can be described as a negative feedback system. Related work on knowledge representation in psychology, linguistics, and artificial intelligence will be reviewed.]

591 Special Seminars in Sociology
Fall and spring. 2–4 credits.
Hours to be arranged. Staff.
These graduate seminars will be offered irregularly. Topics, credit, and instructors will vary from semester to semester. Students should look at the sociology department bulletin board at the beginning of each semester for possible offerings.

606–607 Sociology Colloquium
Fall and spring. No credit. Required of all graduate students. Juniors and seniors are encouraged to attend.
F 2:30–5. Staff.
A series of talks representative of current research interests in sociology, given by distinguished visitors and faculty members.

608 Proseminar in Sociology
Fall. One credit. Required of all first-semester graduate students.
Hour to be arranged. Staff.
Discussions on the state of sociology and on the interests of the members of the field, given by members of the field.

[620 Processes in Small Groups
Spring. 4 credits. Not offered 1990–91.
W 2:30–5. L. Smith-Lovin.
Analysis of processes in small groups, including communication, cohesiveness, norm development, group culture, conformity, deviance, status differentiation, leadership, power, and productivity. The seminar will cover both theory and research methods in the investigation of groups in face-to-face interaction.]

[625 Seminar on Organization Ecology
Fall. 4 credits. Prerequisite: coregistration in Sociology 507 or permission of instructor. Not offered 1990–91.
M 12:20–2:15. M. Hannan.
Considers theory and research on the ecology of organizations with an emphasis on contemporary developments. Issues treated include evolution of organizational forms, interactions of competitive and institutional processes, density dependence in vital rates, niche width dynamics, and the evolution of size distributions.]

[627 Models of Error
Spring. 4 credits. Not offered 1990–91.
T 2:55–5:30. M. McPherson.
This is a methods seminar that focuses on solutions to the classical problems of estimation in linear models: measurement error in the independent variables, specification error, reciprocal effects, multiple indicators, unmeasured variables, correlated errors, and the like. The goal of the course will be to gain facility in the use of now-standard solutions to these problems, such as the LISREL model, the EOS approach, and such variants as LINCS. Both mainframe- and micro-based applications will be explored. We will integrate both theory and practice by studying the underlying statistical models and applying them to standard datasets. The standard core methods sequence will be ample preparation for this course.]

645 Seminar in Race and Ethnic Relations
Fall. 4 credits.
T 2:30–4:25. S. Olzak.
Evaluation of recent theory and research on race and ethnic religions, including analysis of the dynamics of the ethnic boundaries, and causes and consequences of ethnic collective action. We will also examine features of ethnic stratification, mobilization, separatism, and related forms of ethnic conflict and protest movements.

[681 Special Topics in Social Psychology
Fall. 4 credits. Not offered 1990–91.
T 1:25–4:10. L. Smith-Lovin.
This course will treat current research issues on the interrelationship of identity, behavior, and emotion. We will focus particularly on applying theories of interaction to small group contexts. Theoretical work that attempts to relate task and socio-emotional behavior in groups will be critiqued. The seminar will emphasize students' own theoretical work and research design.]

[683 Social Interaction (also Psychology 683)
Spring. 4 credits. Not offered 1990–91.
M 2:30–5. D. P. Hayes.
Seminar: topic to be announced.]

891–892 Graduate Research
891, fall; 892, spring. Up to 4 credits each term, to be arranged. Prerequisite: graduate status and permission of a faculty member willing to supervise the project.

895–896 Thesis Research
895, fall; 896, spring. Up to 6 credits each term, to be arranged. Prerequisite: permission of thesis director.

Summer Session

The following courses are frequently offered in the summer session, though not necessarily by the same instructor as during the academic year. Not all of these courses will be offered in a particular summer. Information regarding these courses and additional summer session offerings in sociology is available from the department.

101 Introduction to Sociology

103 Introduction to Sociology: Microsociology

283 Groups and Relationships

Related Courses in Other Departments

Families in Modern Society (HDFS 150)
3 credits.
P. Moen.

Population Policy (Rural Sociology 418)
3 credits.
J. M. Stycos.

The Professions: Organization and Control (ILR 427)
4 credits.
P. Tolbert.

THEATRE ARTS

Theatre, Film, and Dance

B. Levitt, Chairman; R. Archer, S. Banes, D. Bathrick, S. Brookhouse, N. Carroll, J. Chu, D. Feldshuh, D. Fredericksen, E. Gainor, P. Gill, K. Grant, P. Guion, D. Hall, M. Hays, J. Johnson, J. Moon, J. Morgenroth, C. Orr, M. Rivchin, P. Saul, J. Self, A. Van Dyke and R. Wilson

Through its courses and production laboratories, the department provides students with a wide range of opportunities in theatre, dance, and film. It offers a theatre arts major with concentration in theatre or film and a major in dance. These majors educate students in accordance with the general liberal arts ethic of the college. The programs in dance and film and the advanced undergraduate training program in theatre give some measure of professional preparation in those arts as well. The department encourages academic and studio participation by students from all disciplines and also provides the Cornell community with an opportunity to take part in its productions on an extracurricular basis.

Theatre Arts Major

Theatre Concentration

The theatre concentration offers studies in the history of theatre, dramatic theory and criticism, playwriting, acting, directing, design/technology, and stage management.

Course requirements for theatre concentration: **Credits**

1) **TA 240** and **TA 241** (two-semester introduction to theatre) 8

   TA 250 Introduction to Theatre Design and Technology 4

   TA 280 Introduction to Acting 3

2) Four laboratory courses distributed as follows: **Credits**

   TA 151 Production Lab I 1-3

   TA 153, TA 253, or **TA 353** Stage Management Lab I, II, or III 1-3

   TA 155 Rehearsal and Performance or **TA 151** in a different area 1-3

   TA 251 or **TA 351** Production Lab II or III 1-4

3) Four courses in the area of Theatre Studies chosen in the following manner:

   Two courses selected from TA 331 through 399 8

   Two courses selected from TA 400 or above 8

4) Three courses (at least 9 credits) in other Theatre Arts courses chosen in consultation with the faculty advisor. Course taken to qualify for admission to the Advanced Undergraduate Training Program (described below) may also be used to fulfill this requirement.

5) Courses in which a student receives a grade below "C" cannot be used to fulfill the requirements for a Theatre Arts major.

The Advanced Undergraduate Training Program

The department offers advanced training in acting, directing, playwriting, design/technology, and stage management to students who qualify on the basis of outstanding achievement in coursework. Criteria for admission to the AUTP is by the completion of the appropriate "track" of courses and invitation of the faculty. The program provides students with intensive study in theatre as well as the opportunity to collaborate with professional faculty and guest artists. Department productions will be chosen to offer a unique experience to the individual student selected for the program. (For specific requirements please see listing of courses at end of department listings.)

Film

The study of film began in this department in the 1930s and continues to be based here. However, in the interim years it has also spread into a significant number of other departments in the college: Africana studies, anthropology, Asian studies, comparative literature, English, German studies, history, psychology, and romance studies. This proliferation of courses has been accompanied by a comparable proliferation of perspectives and faculty concerns, e.g., the relationship of national cinemas to national literatures and specific cultures, film to myth and ideology, the use of film as historical evidence, film's efficacy as a rhetorical medium, and film's contribution to perennial issues in aesthetics, the history of the arts, and studies in cognition.

This richness of courses and perspectives is matched by the ways in which students may make film the focus of their undergraduate studies. The four currently being used are as follows: 1) concentrating on film within a Theatre Arts major; 2) constructing an individually tailored Independent Major in film (including the possibility of placing film in tandem with another medium or discipline); 3) focusing on film as a College Scholar; and 4) concentrating in Visual Studies. Students interested in option 4 should consult Marilyn Rivchin (Theatre Arts) and/or Robert Ascher (Anthropology). Students interested in options 2 or 3 should consult Don Fredericksen (Theatre Arts) and Lynne Abel (director, College Scholar and Independent Major programs). Students interested in the first option should first consult Alison Van Dyke (director, Undergraduate Studies, Theatre Arts) and then one of the department's film faculty.

Film Concentration Requirements

Credits

The department's film concentration requires a total of 50 credits in film, theatre, and related courses.

1. **TA 274** Introduction to Film Analysis 4
2. *One* of the following theatre courses:

   TA 250 Fundamentals of Theatre Design/Technology 4

   TA 280 Introduction to Acting 3

   TA 398 Directing I (prerequisite TA 280) 4
3. A core of *three* film courses:

   TA 375 History and Theory of Commercial Narrative Film 4

   TA 376 History and Theory of Documentary and Experimental Film 4

   TA 377 Fundamentals of 16mm Filmmaking 4
4. *Four* courses (16 credits) in film offered by Theatre Arts as below, or by other departments (with consent of adviser):

   TA 313 The Japanese Film 4

   TA 378 Russian Film of 20s and French Film of 60s 4

   TA 379 International Documentary from 1945 to present 4

   TA 396 German Film 4

   TA 413 Film and Performance 4

   TA 450 Seminar on Ethnographic Film 4

   TA 475 Seminar in the Cinema I 4

   TA 476 Seminar in the Cinema II 4

   TA 477 Intermediate Film Projects 4

   TA 494 Advanced Film Production 4

   TA 653 Myth onto Film 4
5) 15 credits of related coursework in or outside of Theatre Arts (approved by adviser)
6) With a grade of less than C, a course cannot be used toward the concentration

Film Study Abroad

The College of Arts and Sciences, through this department and in consort with seventeen other colleges and universities, offers up to a full year's study at the Inter-University Center for Film and Critical Studies in Paris, France. The center's program is theoretical, critical, and historical. It is most useful to students pursuing a major in film studies and serves as an intensive supplement to their Cornell film courses. Fluency in French is required, and Theatre Arts 274, 375, and 376 are prerequisites. Inquiries should be addressed to Professor Fredericksen, Cornell's liaison with the center.

The Dance Program

The dance program offers courses in dance technique, improvisation, composition, performance, anatomical analysis of movement, and the history, theory, and criticism of dance. Technique courses include modern dance at four levels and ballet at three levels. Other dance forms, such as tap, historical dances, Japanese Noh, Indian, Javanese, and African dance are offered on a rotating basis. Courses in ballroom dance taken through the Physical Education program supplement these offerings. Technique classes develop strength, flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with clarity of rhythm, body design, and expression. The more advanced courses require the ability to perform complex phrases in various styles. Students may earn up to four academic credits (one each semester) in level III and IV technique only (see TA 304, 306, and 308). Students may also satisfy the physical education requirement by taking dance technique classes in the dance program. The schedule for all dance technique classes is available in the main office of the Center for Theatre Arts. Registration for technique classes takes place in Teagle Hall. Students taking technique for academic credit must also register through their own colleges.

The faculty offer rehearsal and performance workshops in which they choreograph and rehearse original dances, performed in public concert. Admission to rehearsal and performance classes is by audition. Students may receive one academic credit (S-U grades only) when performing in student-faculty concerts by registering for TA 155.

The Dance Major

To be admitted to the major, students must have completed two technique courses in modern dance or ballet (at level II or above for the performance/composition concentration) and TA 201 (dance improvisation). It is also recommended that TA 250 and Music 105, both requirements for the major, be taken before the junior year. The dance major offers two options for concentration: 1) composition and performance (studio); 2) history, theory, and criticism (academic). The following requirements are expected of majors in both concentrations.

Prerequisites for the major:

Two technique courses in modern dance or ballet (at level II or above for the performance/composition concentration)

TA 201 Dance Improvisation

Requirements for the major:	**Credits**
Music 105 (or substitute at the appropriate level)	3
One course in historical, tap, jazz, ballroom, or non-Western dance	0–3
TA 210 Beginning Dance Composition and Music Resources	3
TA 250 Fundamentals of Design and Technology	4
TA 314–315 Western Dance History	8
TA 418 or other 400-level academic dance course	4
TA 155 Rehearsal and Performance	1

Additional requirements for the studio concentration:	**Credits**
Two semesters each of ballet and modern dance technique	0–4
(in addition to the prerequisite) **TA 310–311** Intermediate Projects in Dance Composition	6
TA 312 Physical Analysis of Movement	3
TA 410–411 Advanced Dance Composition	6

Students concentrating in the studio option will be expected to perform in at least two concerts and to present at least two of their own dances, in addition to the senior project.

Additional requirements for the academic concentration:	**Credits**
A total of at least two semesters each of ballet and modern dance	0–2
techniques (including prerequisite) Dance history, theory, criticism, and aesthetics courses	8
TA 490 (senior paper)	4

For both options, additional credits, for a total of 45, should be selected in consultation with the advisor. Of the 45 credits, at least 32 must be at the 300 level or higher.

Department Courses

Theatre Courses

240 Introduction to Western Theatre I
Fall. 4 credits.
T R 10:10-11:25. E. Gainor.
A survey of the major developments in the theatre—playwriting, acting, staging, architecture, and dramaturgy—in Classical Greece and Rome, medieval and Renaissance Europe. Representative plays will be read and discussed in their theatrical context.

241 Introduction to Western Theatre II
Spring. 4 credits.
T R 10:10-11:25. E. Gainor.
A survey of the major developments in the theatre–playwriting, acting, staging, architecture, and dramaturgy–since 1642. Among the areas considered will be French Neoclassicism, the English Restoration, the eighteenth and nineteenth centuries in England, France, and Germany and the modern international stage. Representative plays will be read and discussed in their theatrical context.

Theatre Studies Courses

[130 American Myth in Drama
Fall or spring. 3 credits.
M W 11:15-12:05. Staff. Not offered 1990–91.
This course examines the images of America presented on the twentieth-century stage. How do Americans view themselves? How are they seen by foreign dramatists? To what ends do dramatists use the American myth?]

140 From Script to Stage: Writing about the Theatrical Process
Fall and spring. 3 credits.
Section 01: M W F 12:20–1:10. G. Pettit.
In this course students will explore and write about the process through which drama becomes theatre and examine how the idea of "theatre" has changed over the centuries. Students will be asked to apply the rhetorical strategies of theatre to their own essay writing. Texts will include Theatre Cornell productions.

Section 02: M W F 12:10–1:10. S. Keller.
Since the time of Plato, critics have debated the function of theatre: does it entertain, instruct, or both? The last century, however, has witnessed the proposal of a new function for theatre, that of empowering the people with a means to give voice to their desires, hopes, fears, and, above all, to their demands for political and social change. Similarly, several new production processes, such as the collective process of the Living Theatre, have emerged over the last century to challenge the traditional mode of production. Through the reading and viewing of plays and musicals by Tennessee Williams, The Living Theatre, Arthur Laurents and Stephen Sondheim, Bertolt Brecht, and others, students are required to explore in their essays questions such as What is the purpose of theatre? Does purpose determine process or vice versa? What is the role of the audience in a particular process? Texts will include Theatre Cornell productions.

160 Vietnam and the American Theatre
Fall and spring. 3 credits Limited enrollment.
T R 10:10–11:25. B. Wright.
The Vietnam War has spawned a diverse range of dramatic texts and events. This course will investigate some central questions regarding this dramaturgy, such as: What types of theatrical events developed from the Vietnam War? How did this dramaturgy reflect attitudes about the war? How did it change over time? Where did it go in the 1970s and early 1980s? Why has there been a recent resurgence of theatrical interest in this topic? The class will investigate plays by David Rabe, Michael Weller, The Living Theatre, The Bread and Puppet Theatre, and others, in addition to various Happenings and events. Students will read and discuss the dramaturgy as the basis for their critical assignments. Additional required screenings in evening several times during the semester.

[325 Classic and Renaissance Drama (also Comparative Literature 352)
Spring. 4 credits.
A. Caputi. Not offered 1990–91.
A study of the major traditions in Western drama from the beginnings among the Greeks to the Renaissance in England and Spain. The work will consist of both lectures and discussions, focusing primarily on a close reading of the plays. But we shall also give attention to the physical conditions of production and to social and political contexts. Among the authors to be read will be Aeschylus, Sophocles, Euripides, Aristophanes, Marlowe, Shakespeare, and Lope de Vega.]

[326 European Drama, 1660 to 1900 (also Comparative Literature 353)
Spring. 4 credits.
M W F 9:05–9:55. A. Caputi. Not offered 1990–91.
Readings from major dramatists from Corneille to Chekhov, including such authors as Moliere, Congreve, Marivaux, Goldoni, Gozzi, Schiller, Kieist, Gogol, Ostrovski, and Ibsen.]

327 Modern Drama (also Comparative Literature 354)
Spring. 4 credits.
M W 11:15–12:05. M. Hays.
Readings in European drama from Ibsen to the present.

[331 The Classical Theatre
Fall. 4 credits. Prerequisite: Theatre Arts 240 or permission of instructor. Not offered 1990–91.
An examination of major developments in the theatre—acting, staging, dramaturgy—and the historical background to these developments in Greek and Roman society. Representative plays will be read and discussed in their theatrical text.]

[332 Medieval and Renaissance Theatre
Spring. 4 credits. Prerequisite: Theatre Arts 240 or permission of instructor. Not offered 1990–91.
A study of theatrical styles and production modes. Topics include the medieval liturgical and secular stages, the Renaissance court and public stages on the Continent and in England and the professionalization of the theatre. Representative plays will be read and discussed in their theatrical context.]

[333 From the Neo-classical Theatre to the Well-Made Play
Fall. 4 credits. Prerequisite: Theatre Arts 240 or 241.
M W 2:30–4:00. M. Hays. Not offered 1990–91.
A study of theatrical styles and production modes. Topics include the English Restoration and French Neoclassical theatres, the European court theatre, romanticism in the theatre, and the rise of standing commercial theatre companies. Representative plays will be read and discussed in their theatrical context.]

[335 The Modern and Contemporary Theatre
Fall. 4 credits. Prerequisites: Theatre Arts 240 or permission of instructor.
T R 12:10–1:25. E. Gainor. Not offered 1990–91.
A study of theatrical styles and production modes. Examination of advances in acting, directing, design, and dramaturgy in theory and in practice from the late nineteenth century through the present day. Representative plays will be read and discussed in their theatrical context.]

336 American Drama and Theatre (also English 336)
Spring. 4 credits.
T R 1:25–2:40. E. Gainor.
Topic for 1991: Major dramatists of the contemporary American Theatre.

[338 Japanese Theatre (also Asian Studies 338)
Fall. 3 credits. Not offered 1990–91.
W 2:30–4. K. Brazell.
A study of traditional forms of Japanese theatre. Topics will include ritual and theatre, noh and kyogen, kabuki and the puppet theatres, and contemporary theatrical use of traditional forms. Special emphasis will be placed on dramaturgy, acting styles, performance aesthetics, and theories of performer training.]

400 Shakespeare: From Table to Stage
Fall. 4 credits.
T R 12:20–2:15. E. Gainor and R. Wilson.
Prerequisites: TA 240, 280, and 281.
This class is a combination of play analysis and performance focused on the special problems encountered in Shakespeare's dramatic material. Plays to be studied are: *Richard II*, *Romeo and Juliet*, and *A Midsummer Night's Dream*. The first two weeks will be devoted to historical background, analysis of Shakespeare's language and scansion, physical and vocal exercises, and relevant literary issues. Each play will then be examined in four-week blocks, with time divided between script analysis and scene work. Requirements will include the performance of monologues and scenes and the writing of three papers. Limited to 15 students.

415 Mass Culture (also Society for the Humanities 415)
Fall. 3 credits.
W 2:30–5:30. J. Feuer.
This seminar will approach the subject of popular culture from the perspective of contemporary critical theory. We will focus upon the products of the U.S. mass culture industry (e.g., films, TV, music, fashion), with an emphasis on the analysis of television. We will consider both the varying theoretical approaches to mass culture and specific studies of forms of mass culture using these approaches. Case studies might include: romance novels, James Bond, teen films, TV and postmodernism, TV soap operas, MTV, made-for-TV movies, and others. The course readings will be chosen primarily from recent studies which, although theoretical in nature, focus upon *specific* cultural phenomena and often synthesize several theoretical models.

417 Fascism and Mass Culture (also German Studies 417, Comparative Literature 417, Society for the Humanities 417)
Fall. 4 credits. Taught in English for advanced undergraduate and graduate students.
W 3:35–5:30. D. Bathrick.
This course will study the role and evolution of mass culture in the Third Reich between 1933 and 1945. In so doing, I will seek to demonstrate why and how the Nazis were able to use forms of aesthetic representation and mass media communication to establish and maintain political control during this period. Three things will be emphasized: 1) A comparative approach that will explore the similarities and differences in the developments of mass-mediated culture during the 1930s within liberal/capitalist, communist/Stalinist, and fascist societies; 2) a focus upon the "aestheticizing of politics" (Walter Benjamin) by the Nazis as the key to understanding their appropriation of mass culture as a mode of domination; 3) and, finally, as a main part of the course, a study of individual cultural documents of mass culture. This will include careful interpretive analysis of films (*Jud Süss*, *Triumph of the Will*, *Baron Munchhausen*), literature (popular novels, utopian novels, poetry, etc.), theatre (the Nazi use of the classics such as Shakespeare, Goethe, Schiller; Nazi plays) art (a study of Nazi painters—(Arno Brekker, etc.).

[431 Theory of the Theatre and Drama I
Fall. 4 credits. Prerequisite: some theatre history and dramatic literature work at the 300 level or permission of instructor. Not offered 1990–91.
M 2:30–4:25. M. Hays.
A study of various theories of dramatic form and theatrical presentation from Aristotle and Horace to Goethe and Schiller.]

[432 Theory of the Theatre and Drama II
Spring. 4 credits. Prerequisites: Course work in theatre history or dramatic literature at the 300 level or permission of instructor.
M 2:30–4:25. M. Hays. Not offered 1990–91.
An examination of dramatic theory and its performance context from Schiller to the present.]

[433 Dramaturgy: Play and Period
Spring. 4 credits.
T 12:20–2:15. E. Gainor. Not offered 1990–91.
Is there a "female dramaturgy"? What is the female tradition in the theatre? The course will explore these questions through an investigation of texts by women dramatists, including Hrotsvitha, Aphra Behn, and Caryl Churchill, as well as theory by such critics as Sue Ellen Case and Jill Dolan.]

[434 Theatre and Society
Fall. 4 credits. Prerequisite: permission of instructor or some work in theatre history or dramatic literature at the 300 level. Not offered 1990–91.
M 3:30–5:00. M. Hays.
An exploration of the ways in which the theatre serves to formulate cultural and aesthetic norms.]

435 Special Topics
Visiting faculty.

[438 East and West German Drama
Fall. 4 credits. Not offered 1990–91.
W 1:25–3:25. D. Bathrick.
This course will cover the major historical and textual developments in German theatre from the end of World War II to the present. Leading dramatists from West and East Germany, Switzerland, and Austria (Brecht, Frisch, Durrenmatt, Weiiss, Hochhuth, Muller, Braun, Kroetz, Handke, and others) will be treated in the light of the political events and aesthetic-dramaturgical traditions from which they emerge and with which they are taking issue.]

440 Issues in Community-Based Arts
Fall. 4 credits. Limited to 25 students. Permission of instructor.
M 4–6, hours in the field to be arranged.
J. O'Neal, B. Levitt, J. Salmons-Rue.
The course combines participation in a campus or community project and a weekly seminar that will survey theories and practices in community-based arts. Community-based art forms in general, and storytelling in particular, will be explored. The process of program planning and implementation, as well as the context (cultural, demographic, organizational) will be examined in relationship to field experiences. Artists from Junebug Theatre and Roadside Theatre Companies will participate in seminar discussions and collaborate with students on the projects.

[455 Topics in Aesthetics/Horror
Spring.
W 4:15–6:15. N. Carroll. Not offered 1990–91.
This course focuses on the genre of horror and seeks to explore its nature, its characteristic effects and structures, its imagery and its narrative forms, its social implications and the nature of the pleasures it affords audiences. The primary text for the course will be Paradoxes of the Heart: The Philosophy of Horror by Noel Carroll, along with selected readings by Burke, Lovecraft, King, Twitchell, Heller, and Waller. Philosophical articles on the topics of how it is possible to fear fictions and on how one can derive pleasure from what is distressing will also be examined. Plays, films, novels, and short stories will also be discussed on a weekly basis in class in terms of the ways in which they shed light on the genre as a whole.]

494 History of Avant-Garde Theatre
Spring. 4 credits. No prerequisite, but a basic knowledge of theatre history is expected.
W 2–4:25. S. Banes.
This course will examine the history of avant-garde theatre from its roots in Wagner's notion of the *Gesamtkunstwerk*, through the experiments of the Symbolists, Italian and Russian Futurists, Expressionists, Constructivists, Dadaists, Surrealists, and various later exponents of art-theatre in the twentieth century, up to the downtown loft, gallery, and cabaret performance art of the 1980s. Students may elect to research and reconstruct a historical performance as a final project. Some outside film screenings will be required.

633 Seminar in Theatre History
Fall. 4 credits.
W 12:20–2:15. M. Hays.
Advanced work in a specific area of theatre history.

[636 Seminar in Dramatic Criticism
Fall. 4 credits. Prerequisite: Permission of instructor.
T 2:30–4. M. Hays. Not offered 1990–91.
Critical approaches to the drama.]

637 Seminar in Dramatic Theory
Spring. 4 credits. Prerequisite: Permission of instructor.
W 2:30–4. M. Hays.
Recent developments in dramatic theory.

[648 East and West German Drama: Post 1945 (also German Studies 438)
Fall. 3 credits. Not offered 1990–91.
W 1:25–3:25. D. Bathrick.
This course will cover the major historical and textual developments in German theatre from the end of World War II to the present. Leading dramatists from West and East Germany, Switzerland, and Austria (Brecht, Frisch, Durrenmatt, Weiiss, Hochhuth, Muller, Braun, Kroetz, Handke, and others) will be treated in the light of the political events and aesthetic-dramaturgical traditions from which they emerge and with which they are taking issue.]

[655 Advanced Topics in Aesthetics/ Comic Theory
Fall. 4 credits.
W 4:15–6:15. N. Carroll. Not offered 1990–91.
This seminar will examine traditional and contemporary theories of laughter and humor, including writings by Plato, Aristotle, Cicero, Hazlitt, Spencer, Freud, Bergson, Roger Scruton, Stanley Cavell, Ronald deSousa, Ted Cohen, and John Morreall, among others. The course will attempt to isolate the nature and structure of jokes, puns, riddles, farces, parodies, satires, caricatures, sight gags, cartoons, and a gamut of comic forms, including stand-up monologues and informal badinage. Selected films, plays, club recordings, novels, short stories, cartoons, and videos will be studied to ground our theorizing empirically. The ethical, social, and political ramifications of humor will also be a concern of the course.]

[656 Race and Theatre in America (also English 656)
Spring. 4 credits.
T 3:30–5:30. B. Jeyifo. Not offered 1990–91.
The course will explore the representation(s) of race in selected periods and movements of dramatic writing and theatrical performance in America. Drawing both on conventional dramatic theories of "types" and "masks" and poststructuralism theories of "otherness" and "difference," the course will study important dramatic texts and performance forms which have made race such a historically crucial dimension of the American theatre. One major area of our exploration will be the changing patterns of the politics of representations of race in the American theatre. Class discussion will draw on supplementary materials such as films, video, and slides.]

[678 Theory and Practice of Modern Drama
Spring. 4 credits.
W 3:35. D. Bathrick Not offered 1990–91.
The course will explore different theories of modern drama (Szondi, Brecht, Artaud, etc.) and discuss these on the basis of a number of representative works of modern drama. The point will be to trace the interchange between theory formation and dramatic practice.]

[679 Bertolt Brecht in Context (also German Studies 679 and Comparative Literature 679)
Spring. 4 credits. Requirements: seminar paper that will form the basis for an oral presentation for class discussion.
D. Bathrick. Not offered 1990–91.
Brecht's theory and dramatic praxis will be examined in the light of a two-fold contexts: (1) the relation of selected plays and writings to the historical contingencies of the Weimar and exile periods in which they emerged; (2) in later periods: an analysis of the reception and various readings of these same works by later writers and critical publics in West Germany, East Germany, and the United States as a way of understanding the changing nature of aesthetic values in the postwar period. Special attention will be given to the importance of Marxism for Brecht's art, as well as to the author's role as a representative of the cultural avant-garde.]

[698 Performing the Sixties
Fall. 4 credits.
T 4:15–6:15. S. Banes. Not offered 1990–91.
During the 1960s, the roots of postmodernism in the arts were planted as artists and critics posed fundamental questions about the relationship between "high" and "low" culture; about the interdisciplinarity of art forms; and about the relationship between art and community. Performance itself became the key site of artistic investigation for artists in various media. This seminar will examine performance practice in the 1960s, focusing on the avant-garde in the early part of the decade as a harbinger of the cultural explosion later in the decade. We will look at Happenings and Fluxus, as new genres of performance generated by the cultural milieu of this era; at the beginnings of postmodern dance and the Off-Off Broadway movement; at underground film; at new genres, later in the decade, of the spectacle of anti-war protest and guerrilla theatre; and at the broader context of popular culture and its appropriations by the avant-garde. An in-class presentation of an original research project will be required, as will some outside film screenings (times to be arranged).]

Acting

155 Rehearsal and Performance
Fall or spring. 1–2 credits. 1 credit per production experience per term up to 2 credits per term. Students must register for the course in the term in which credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the department's scheduled auditions or who are assigned assistant director positions after obtaining director's approval. Students should add this course only after they have been assigned roles. S-U grades only.
Staff.
The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.

280 Introduction to Acting
Fall or spring. 3 credits. Each section is limited to 16 students. Registration only through department roster in the registrar's office, Center for Theatre Arts.
01 T R 2:30–4:25 (primarily for prospective majors and those interested in extended study of acting), A. Van Dyke. 02 T R 12:20–2:15, staff. 03 M W 12:20–2:15, K. Grant. 04 M W 2:30–4:25, staff. 05 T R 2:30–4:25, staff. 06 M W 10:10–12:05, staff. 07 M W 2:30–4:25, staff.
An introduction to an actor's technique and performance skills, exploring the elements necessary to begin training as an actor, i.e., observation, concentration, and imagination. Focus will be on physical and vocal exercises, improvisation, and text and character. There is required play reading, play attendance, and some scene study.

281 Acting I
Fall or spring. 3 credits. Each section limited to 14 students. Prerequisites: Theatre Arts 280 and audition. Registration only through department roster in registrar's office, the Center for Theatre Arts.
01 T R 10:10–12:05, A. Van Dyke.
02 T R 12:20–2:15, K. Grant.
Practical exploration of the actor's craft through improvisation and exercises in physical and psychological action. Scene study utilizing the plays of Williams, Inge, and Miller.

[282 Introduction to Voice and Speech for Performance
Fall or spring. 2 credits.
Staff. Not offered 1990–91.
Study and practice in the development of the speaking voice with emphasis on tone quality, breathing, articulation, and practice of standard American English pronunciation. Some oral interpretation of poetic, narrative, and dramatic text.]

[283 Voice and Speech for Performance
Spring. 2 credits. Limited to 12 students. Primarily for department majors. Prerequisites: TA 282. Not offered 1990–91.
Registration only through department roster in the main office of the Center for Theatre Arts.
Development of the speaking voice with additional emphasis on dramatic interpretation.]

[284 Speech and Dialects for Performance
Fall. 3 credits. Limited to 12 students. Not offered 1990–91. Primarily for department majors or advance undergraduate training program candidates. Prerequisites: TA 280, 281.
Registration only through department roster in the main office of the Center for Theatre Arts.
Development of speech and dialects in dramatic text.]

287 Summer Acting Workshop
Summer. 3 credits. Limited to 16 students in a section. Fee for theatre admissions, $10.
An introduction to the processes of acting. Practice in training techniques, rehearsal procedures, and methodology. Productions of the Hangar Theatre company attended and used as performance examples. Includes visits by guest artists and Hangar Theatre company members.

380 Acting II
Fall. 3 credits. Prerequisite: TA 281 and audition.
T R 10:10–12:05. R. Wilson.
A continuation of Acting I. Special consideration will be given to verse and drama and plays in transition.

381 Acting III: Advanced Scene Study
Spring. 3 credits. Prerequisite: TA 280, 281, 380, and permission of instructor.
R. Wilson.
This course focuses on advanced problems in language and period style (carriage, bows, and curtsies). Monologues and scenes will be drawn from these playwrights: Shakespeare, Moliere, Shaw/Coward, Sheridan/Goldsmith/Wycherly, and Aeschylus/Euripedes.

385 Skills, Techniques, and Approaches to Performance
Spring. 2 credits. Prerequisites: Theatre Arts 281 and permission of instructor.
Hours to be announced. K. Grant.
This course will focus on exercises and techniques designed to aid the students in developing the range of their physical skills in order to deepen their understanding of their bodies and its value to their work in rehearsal and performance. The students will be encouraged to explore basic principles of movement and gain an appreciation for how their physical choices can be used to create more complete characterizations. The curriculum will include: tension/relaxation, breath, alignment and flexibility work in conjunction with exercises using neutral and expressive mask techniques.

Directing

155 Rehearsal and Performance
Fall or spring. 1–2 credits. 1 credit per production experience per term up to 2 credits per term. Students must register for the course in the term in which credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the department's scheduled auditions or who are assigned assistant director positions after obtaining director's approval. Students should add this course only after they have been assigned roles. S-U grades only.
Staff.
The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.

398 Fundamentals of Directing I
Fall. 3 credits. Limited to 12 students. Prerequisite: Theatre Arts 280 and permission of instructor.
M W 12:20–2:15. D. Feldshuh.
Focused, practical exercises to teach the student the fundamental staging techniques that bring a written text to theatrical life. A core objective of the course is to increase the student's awareness of why and how certain stage events communicate effectively to an audience. Each student will direct a number of exercises as well as a short scene.

498 Fundamentals of Directing II
Spring. 4 credits. Enrollment strictly limited. Prerequisite: Theatre Arts 280 and 398, and permission of instructor.
M W 12:20–2:15 plus lab time to be arranged. D. Feldshuh.
The course builds on the staging techniques learned in Fundamentals of Directing I. In this course each student will direct a series of projects and public presentations focusing on specific directoral challenges. The student will develop an increased ability to articulate and defend directoral choices and learn to work with actors on a diverse range of material. The course is open to graduate and undergraduate students. Directors will cast from a company of actors to be auditioned early in the semester. Each actor in the company will earn one or two credits as part of Theatre Arts 155.

499 Seminar in Directing
Fall or spring. 1–4 credits. Prerequisites: Theatre Arts 240, 250, 280, 398, 498, and permission of instructor.
Hours to be arranged. D. Feldshuh.
This seminar will give the student the opportunity to direct a full evening of theatre. It may also involve an internship with a prominent director on campus and a final paper focusing on a specific aspect of directing.

Playwriting

348 Playwriting
Fall. 4 credits. Prerequisite: permission of instructor.
T R 2:55–4:10. J. O'Neal and B. Levitt.
A laboratory for the discussion of student plays. Following exercises in dramatic structure and technique, students will be expected to write two or three one-act plays.

349 Advanced Playwriting
Spring. 4 credits. Prerequisite: Theatre Arts 348.
T R 2:30–3:45. R. Wilson.
A continuation of Theatre Arts 348, culminating in the composition of a full-length play.

497 Seminar in Playwriting
Fall. 1–4 credits. Prerequisite: Theatre Arts 348 and 349 or permission of instructor.
To be announced. W. Soyinka and B. Levitt.
This seminar will provide the student with the opportunity to collaborate with faculty directors, designers, and actors in the production of his/her own work. The course will include a final paper and faculty critique of the manuscript and the production process.

Design, Technology and Stage Management

Design

120 The Unfashionable Human Body
Fall. 3 credits.
T R 2:55–4:10. J. Johnson.
At an early age we learn the magic power of dress. There are many theories about why we wear clothes: protection from the elements, love of ornamentation, sexual attraction, and modesty, to name a few. Whatever the reason(s), our dissatisfaction with the human body expresses itself in all cultures, and that expression is endlessly changing.

Students will explore the various theories, look at examples from decoration to distortion (i.e., masks, corsets, tattoos, and fads) and write about how society addresses (or undresses) "the unfashionable human body."

250 Fundamentals of Theatre Design and Technology
Fall and spring. 4 credits. Not open to first term freshman. Limited to 12 students. A minimum of one credit of Production Lab (TA 151 or 251) is strongly recommended concurrently.
M W F 12:20–2:15. R. Archer, J. Johnson, J. Moon, P. Gill, D. Hall. C. Orr.
An introduction to design and technology in the theatre. Lectures, discussion, and project work introduce the visual principles of designing scenery, costumes, lighting and sound, and the technical process of realizing designs on stage. Students are required to purchase materials, which the instructors will specify (approximate cost, $35).

362 Lighting Design Studio I
Fall. 4 credits. Students are required to purchase materials which the instructor will specify (approximate cost $25.00). Prerequisite: TA 252 and 340 or permission of instructor.
T R 12:20–2:15. P. Gill.
An examination of the fundamental theories of color and the physical characteristics of light. Through discussion and a series of projects in the light lab this course examines the role of light as a flexible, expressive art medium; its visual nature and dramatic impact, and the intuitive nature of the successful approach to lighting the dramatic text.

364 Scenic Design Studio
Fall and spring. 4 credits. Students are required to purchase materials which the instructor will specify (approximate cost: $50.00). Prerequisite: TA 340 and 354 or permission of instructor.
M W 10:10–12:05. J. Moon.
An exploration of the process of designing scenery for the stage: analysis of the dramatic text, use of research and imagery, theatre architecture, communication techniques, and materials for building the scenic model. Four required design projects will use the major stage forms and involve the design and construction of full color scale models. Each project will represent a formative period in the history of dramatic literature and theatre architecture. May be repeated for credit.

366 Costume Design Studio
Spring. 4 credits. Students are required to purchase materials which the instructor will specify (approximate cost: $50.00). Prerequisite: TA 356 or permission of instructor.
T R 10:10–12:05. J. Johnson.
Design of costumes for the theatre, concentrating on script and character analysis, period research, design elements, figure drawing and rendering skills, and understanding production style. May be repeated for credit.

368 Sound Design Studio
Spring. 4 credits. Limited enrollment to 6 students. Prerequisite: TA 252 and TA 250 or permission of instructor. Students are required to purchase supplies (approximate cost $30.00).
T R 10:10–12:05. C. Hatcher.
The use of sound as a medium of design for the theatre; research and creation of sound score, recording and engineering techniques, live effects and projects in live and studio sound production.

462 Lighting Design Studio II
Spring. 4 credits. Prerequisite: TA 362 or permission of instructor. Limited to 6 students.
T R 12:20–2:15. P. Gill.
A concentration on the individual development of the lighting designer. Advanced projects and research tailored to each student, combined with design competition entries in many fields and an in-depth study of the aesthetics of lighting in all areas of environmental design.

Technology

252 Technical Production Studio I
Fall. 2 credits. A minimum of one credit of production laboratory (TA 151 or 251) is required concurrently.
T R 10:10–12:05. C. Hatcher, M. Figursky.
Stage Lighting Technology: The practical aspects of lighting technology: stage electrics, equipment, organization, techniques, and paperwork will be explored through projects, lecture, and class discussion. Stage Sound Technology: The practical aspects of sound technology: equipment set-up, organization, recording techniques and paperwork will be explored through projects, lecture, and class discussion.

[254 Theatrical Make-up Studio
Spring. 3 credits. Students are required to purchase make-up kits which the instructor will provide (approximate cost $30.00). Prerequisite: permission of instructor. Not offered 1990–91.
T R 2:30–4:25. J. Johnson.
Basic techniques of make-up for the stage including corrective, old age, and fantasy; use of prosthetics, wigs, hair and hairpieces.]

256 Technical Production Studio II
Spring. 2 credits. A minimum of one credit of production laboratory (TA 151 or 251) is required concurrently. Limited to 6 students. Students are required to purchase materials which the instructor will specify (approximate cost $25.00). Prerequisite: TA 250 or permission of instructor.
T R 10:10–12:05. J. Gallager, G. Bakke.
Scene Painting: Techniques of paint and set decoration for the stage including large format layout, grid systems, transfer methods, color mixing and matching, dye painting, airbrush and spray systems are a traditional approach to scenic art. Stage Properties: The design and construction of scenic, hand and costume props, concentrating on period research and accuracy of detail, use of various materials, crafts and construction techniques, and painting and finishing.

340 Theatrical Drafting and Technical Drawing Studio
Fall. 3 credits. Limited to 6 students. Prerequisite: Theatre Arts 250 or permission of instructor.
M W F 9:05–9:55. S. Brookhouse.
Implementation of the fundamentals of drafting and technical drawing. Introduction of the concept of an individual style in the approach to drafting for the theatre. A series of projects to familiarize students with the convention and process of visualization and drafting.

354 Stagecraft Studio
Spring. 3 credits. A minimum of one credit of production laboratory (TA 151 or 251) is strongly recommended concurrently. Prerequisite: TA 250 or permission of instructor.
M W 10:10–12:05. R. Archer.
An exploration of the techniques and practice of theatre operation, scenic construction, stage mechanics, rigging, painting, and model building.

356 Costume Construction Studio
Fall and spring. 3 credits. A minimum of one credit of production laboratory (TA 151 or 251) is strongly recommended concurrently. Prerequisite: TA 250 or permission of instructor
M W 2:30–4:25. C. Orr.
A project/lecture/discussion class in costume research, patterning, cutting, construction, and fitting.

Stage Management

153 Stage Management Production Laboratory I
Fall and spring. 1–3 credits. May be repeated for credit. Before registering, students must attend orientation meeting in the Proscenium theatre at the Center for Theatre Arts at 7:30 p.m. on the first Tuesday of classes.
P. Guion.
Practical production experience in theatrical production as an assistant stage manager for a smaller scale production under the supervision of the faculty production stage manager. Theatre Arts 370 complements this course.

253 Stage Management Laboratory II
Fall and spring. 1–3 credits. May be repeated for credit. Before registering, students must attend orientation meeting in the Proscenium theatre at the Center for Theatre Arts at 7:30 p.m. on the first Tuesday of classes.
P. Guion.
Practical experience in theatrical production as assistant stage manager for a large scale production under the supervision of the faculty production stage manager. TA 370 complements this course.

353 Stage Management Laboratory III
Fall and spring. 1–3 credits. May be repeated for credit. Before registering, students must attend orientation meeting in the Proscenium theatre at the Center for Theatre Arts at 7:30 p.m. on the first Tuesday of classes. Prerequisite: permission of the instructor.
P. Guion.
Practical experience in theatrical production as stage manager for a small scale production under the supervision of the faculty production stage manager. TA 370 complements this course.

370 Stage Management Studio
Fall and spring. 1 credit. Prerequisite: TA 250 or 280. T 2:30–4:25
P. Guion.
Introduction to the concepts and techniques of stage management as they relate to specific areas of production. Development of relevant communication skills and an understanding of the production process as experienced by a working stage manager or assistant stage manager. TA 153, 253, and 353 complement this course.

453 Stage Management Laboratory IV
Fall and spring. 1–3 credits. May be repeated for credit. Before registering, students must attend orientation meeting in the Proscenium theatre at the Center for Theatre Arts at 7:30 p.m. on the first Tuesday of classes. Prerequisite: permission of instructor.
P. Guion.
Practical experience in theatrical production as stage manager for a large-scale production under the supervision of the faculty production stage manager.

Production Laboratories

151 Production Laboratory I
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the proscenium theatre.
S. Brookhouse, M. Figursky, J. Gallager, D. Hall, C. Hatcher, C. Orr.
Practical experience in theatrical production. Students register for sections by areas of interest. 01 Scenery, 02 Costumes, 03 Properties, 04 Lighting, 05 Sound, 06 Stage Crew. No prerequisites or experience required.

251 Production Laboratory II
Fall and spring. 1–3 credits.
S. Brookhouse, M. Figursky, J. Gallager, D. Hall, C. Hatcher, C. Miltenberger, C. Orr.
Practical experience in theatrical production, in a position of major responsibilities on the production staff. Prerequisite: TA 151 or permission of instructor. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the Proscenium theatre. Students register for sections by areas of interest: 01 Scenery, 02 Costumes, 03 Properties, 04 Lighting, 05 Sound.

351 Production Laboratory III
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the Proscenium theatre. Students register for sections by areas of interest: 01 Scenery, 02 Costumes, 03 Properties, 04 Lighting, 05 Sound. Prerequisite: Permission of instructor.
R. Archer, C. Hatcher, P. Gill, J. Moon, C. Orr.
Practical experience in theatrical production, in a position of major responsibility on the production staff or as assistant to a faculty or guest designer.

451 Production Laboratory IV
Fall and spring. 1–4 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the Proscenium theatre. Students register for sections by areas of interest: 01 Scenery, 02 Costumes, 03 Properties, 04 Lighting, 05 Sound. Prerequisite: permission of instructor.
P. Gill, C. Hatcher, J. Johnson, J. Moon.
Practical experience in theatrical production, in the position of designer or in another position of major responsibility on the production staff.

Internships

485 Undergraduate Internship
Summer. 1–6 credits. Prerequisite: permission of AUTP faculty.
Program of supervised experience with a noted professional company or individual either in the United States or abroad chosen in consultation with the faculty advisor.

FILM

274 Introduction to Film Analysis: Meaning and Value
Fall or occasionally summer. 4 credits. Limited to thirty-five students.
T R 10:10–12:05. D. Fredericksen.
An intensive consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial narrative, documentary, and personal film modes. Prospective film majors should enroll in their sophomore year.

313 The Japanese Film (also Asian Studies 313)
Spring. 4 credits.
Screenings, M W 4:30; lec, W 11:15; sec F 11:15, 12:20, or 1:25. J. M. Swanberg.
After an introduction to methods of film analysis, the course presents a sequence of ten films by noted Japanese directors. The aim of the course is twofold: to enhance appreciation of film as an art form and to use the formal analysis of films to yield insights into Japanese society and culture. Particular attention is given to areas in which Japanese film, influenced by traditional arts and aesthetic principles, has resisted Hollywood editing codes.

375 History and Theory of the Commercial Narrative Film
Fall. 4 credits. Fee for screening expenses, $10 (paid in class).
T R 1:25–4:25. D. Fredericksen.
Consideration of the broad patterns of narration in the history of the commercial narrative film, viewed as an artistic medium and as a system requiring the massive consumption of artifacts. Emphasis placed upon the early articulation of a cinematic means of narration, realism as an artistic style, the nature and functions of popular film, and the modes of modernist and post-modernist narration. Major figures discussed include Griffith, Eisenstein, Murnau, Von Stroheim, Dreyer, Chaplin, Renoir, Ford, Hitchcock, Welles, Antonioni, Fellini, Bergman, Bunuel, Resnais, Godard, and Herzog. Students majoring in film should have taken Theatre Arts 274 previously.

[376 History and Theory of Documentary and Experimental Film.
Fall. 4 credits. Fee for screening expenses, $10 (paid in class). Prerequisite: Theatre Arts 274 is strongly recommended, but not required. Not offered 1990–91. Next offered 1991–1992.
T R 1:25–4:25. D. Fredericksen.
The history and theory of documentary form up to the end of World War II. Major figures covered include Vertov, Flaherty, Ivens, Grierson, Lorentz, Riefenstahl, Capra, Hurwitz, and Jennings. Within the history and theory of the experimental and personal film form, emphases are: the avant-garde of the twenties in Germany, France, U.S.S.R., and the U.S., the movement toward documentary practice in the thirties, and American experimental and personal film from the forties to the present. Major figures covered in this latter period include Deren, Brakhage, Baillie, Belson, the Whitneys, Hill, and Mekas.]

377 Fundamentals of 16mm Filmmaking
Fall and spring. 4 credits. Limited to 12 students. Intended for juniors and seniors (who may need to sign up a year or more in advance). Prerequisite: Theatre Arts 274 and permission of instructor. Fee for maintenance costs, $50 (paid in class). The average cost to each student for materials and processing is $300.
M W F 2–4:25. M. Rivchin.
A hands-on course in the basics of 16mm filmmaking techniques, requiring no prior experience. Each student will complete a number of short film projects to explore narrative, experimental, documentary, animation, and abstract genres. A longer, final sound film project will be screened publicly.

[378 Russian Film of the 1920s and French Film of the 1960s
Spring. 4 credits. Fee for screening expenses, $10 (paid in class). Prerequisite: Theatre Arts 375 is strongly recommended, but not required. Not offered 1990–91. Next offered 1992–93.
T R 1:25–4:25. D. Fredericksen.
An intensive treatment of two distinct periods of innovation in film theory and history. Emphasis on working relationship between theory and practice. Major figures include Eisenstein, Pudovkin, Vertov, Dovzhenko, Room, Godard, Truffaut, Resnais, Eustache, Rivette, and Bresson.]

[379 International Documentary Film from 1945 to present
Spring. 4 credits. Prerequisite: Theatre Arts 376. Fee for screening expenses, $10 (this fee is paid in class). Not offered 1990–91. Next offered 1991–92.
T R 1:25–4:25. D. Fredericksen.
Emphasis on the contemporary documentary film as a sociopolitical force, as an ethnographic tool within and without a filmmaker's own culture, and as an artistic form with a distinct history and set of theatrical questions. Major figures, structures, and movements covered include Jennings, Rouquier, Leacock, Maile, Rouch, Solanas, national film boards, Challenge for Change, direct cinema, cinema verite, and revolutionary documentary of the Third World.]

[396 German Film (also Comparative Literature 396 and German Studies 396)
Fall. 4 credits. Requirements: participation in class discussion, one paper, midterm, and final. Not offered 1990–91.
T R 11:40–12:55; screenings, T 4:30.
D. Bathrick.
The goal of the course is to explore the form and context of German film in relation to the cultural and sociopolitical context of which it is a part. Accordingly, the material discussed will be divided into three major periods: Weimar film, 1918–1933; Nazi film, 1933–45; postwar film, 1945–present. Readings and lectures will be devoted to formal and cultural developments in the history of German film as well as interpretive analysis of selected individual films. In both lectures and discussions, particular emphasis will be placed on helping students develop an appropriate method of viewing and analyzing films.]

[413 Film and Performance
Fall. 4 credits. Prerequisite: permission of both instructors. Previous work in at least one appropriate medium. Not offered 1990–91.
T R 2:30–4:25. M. Rivchin and staff.
This course is designed to encourage interdisciplinary connections among the students of the theatre, dance, and film programs in the Department. The course will focus on one program (dance, acting, or directing) and how it relates to film and video media. Students will work collaboratively to produce new work in both performance and recorded modes.]

[414 Contemporary Film Theory (also Society for the Humanities 411, English 410, and Women's Studies 431).
Fall. 3 credits.
T 11:10–1:05. C. Penley.
This course will survey the major figures and ideas that have shaped contemporary film theory: Christian Metz's semiotics of the cinema, Raymond Bellour and Thierry Kuntzel's textual analyses of film, Jean-Louis Baudry's "Apparatus" theories. Stephen Heath's work on narrative and ideology and Laura Mulvey's feminist and psychoanalytic approach to describing spectatorship. In addition, the course will cover the most important revisions and refutations of those theories by feminists, Marxists, neo-formalists, deconstructionists, cognitive theorists, cultural studies and popular culture scholars, and so on. Attention will also be given to the social and institutional forces that have shaped this relatively new and volatile discipline.

416 Cinema and the Humanism of Commodity (also Society for the Humanities 416 and Women's Studies 436).
Spring. 3 credits.
T 12:20–2:15. T. Minh-ha.
Media production plays a primary role in maintaining a system of depoliticized multicultural diversity, which keeps each marginal group in a definable place as the latter is urged to provide the expected "difference." The seminar will emphasize issues of race and gender in representation, focusing on works that challenge conventional notions of subjectivity, of audience, and of interpretation in relation to film making, film viewing, and the cinematic apparatus. It will discuss the effect of social multiplication of images through which the whole world, in the name of humanism, is gathered within the fold of the known and the visible, and becomes appropriable.

[450 Seminar on Ethnographic Film (also Anthropology 450)
Spring. 4 credits. Limited by appropriate screening space. Not offered 1990–91.
T 10:10–12:35. R. Ascher.
When the first ethnographic film was screened in 1895, its maker saw in motion pictures a promise for the greater understanding among peoples. Has the promise been fulfilled? Responses to this question are examined through study of the debates about the place of film within what Margaret Mead called "a discipline of words." Going further, we enlarge the frame and consider ethnographic film in the light of general film theory, history, criticism, aesthetics, and ethics. Selected, relatively short films are viewed, leaving ample time for discussion and the development of a critical vocabulary.]

474 Advanced Film Projects
Summer. 4 credits. Limited to 12 students. Prerequisite: TA 280, 281, or 377 or equivalent and permission of instructor. Maintenance fee, $50.
M. Rivchin.
Students work in small crews to produce a short dramatic film and/or short documentary film, using synchronous sound filming and editing equipment. Equipment is provided, but students must pay for film and processing (average cost, $250).

[475 Seminar in the Cinema I (also College Scholar Seminar)
Spring. 4 credits. Not offered 1990–91. Next offered 1991–92.
T R 10:10–12:05. D. Fredericksen.
Topics for 1992: Jung, film, and the process of self-knowledge. "Know thyself": this has been called our culture's most enduring psychological need, and it has been frequently offered as the *raison d'etre* for liberal studies. C. G. Jung's answer to how one might "know oneself" is based on his claim that "image is psyche" and his informing metaphor is depth. The seminar will trace the elaborations of this position in Jung, James Hillman, Russell Lockhart, and Murray Stein. It will also test the critical capacities of this position with respect to film images given us by Bergman, Fellini, Brakhage, Gunvor Nelson, Suzan Pitt, Larry Jordan, Bruce Baille, and others. The manner in which Jung's claim might provide an archetypal and imaginal alternative to current approaches to liberal studies will be asked throughout the seminar; the nature of education will thereby become a central theme of the semester's work.]

[476 Seminar in the Cinema II
Spring. 4 credits. Not offered 1990–91. Next offered 1992–93.
T R 9:05–12:05. D. Fredericksen.
Topic for 1993: to be announced.]

477 Intermediate Film Projects
Spring. 4 credits. Limited to 8 students. Prerequisite: Theatre Arts 377 or equivalent, and permission of instructor. Fee for maintenance costs, $50 (this fee is paid in class). The minimum cost to each student for materials and processing is $500. Students retain ownership of their films.
MW 10:10–12:05. M. Rivchin.
The development and completion of individual projects, with emphasis on personal and documentary modes. Includes preparation of an original script or storyboard, direction, cinematography, synchronous-sound recording, editing, and follow-through to a composite print.

653 Myth onto Film (also Anthropology 653)
Fall. 4 credits. Open to undergraduate and graduate students with permission of instructor. Enrollment limited by available studio space and equipment. Prerequisite: some knowledge of any one of the following: anthropology, filmmaking, mythology, graphics, drawing, and painting.
T 2–4:25. R. Ascher.
In myths, whales fly, pebbles throw themselves across streams, and trees are transformed into women. Toward the end of visualizing myths—in particular the myths of other people—we explore the possibilities of animated film. The technique used is cameraless animation; that is, we draw and paint, frame by frame, directly onto motion picture film. The intellectual problem is to visualize the myths of others so that they are comprehensible to us but are not thought to be of us. Reading includes introductory works on both myth and animation, and there is background reading on the particular myth that is committed to film.

[699 German Film Theory (also German Studies 699 and Comparative Literature 699)
Spring. 4 credits.
R 1:25–3:20. D. Bathrick. Not offered 1990–91. Offered occasionally.
This course will examine critically the writings of major German film theories from the Weimar period to the present. Works by Bela Balazs, Rudolf Arnhelm, Siegfried Kracauer, Walter Benjamin, Theodor Adorno, Max Horkheimer, Alexander Kluge, H. J. Syberberg, Gertrud Koch, Thomas Elsaesser, and others will be read and discussed in light of the following considerations: What are the cultural and political contexts out of which these ideas emerge and how are these theories addressing these contexts? How do these theories relate to the work coming out of other national traditions at the same time or to current debates in feminist, formalist, postmodern, or poststructuralist film theory. There will be film showings.]

DANCE

123 Ballet I (also Physical Education 423)
Fall and spring. 0 credit.
Theatre Arts and Physical Education registration at Teagle Hall only.
Fall: M W 3:10–3:40; Spring: to be announced. P. Saul.
The fundamentals of classical ballet technique. Material covered includes all of the exercises at the barre, and elementary work in the areas of port de bras, adage and allegro. Satisfies the PE requirement.

124 Modern Dance I (also Physical Education 424)
Fall and spring. 0 credit. Theatre Arts and Physical Educaction registration at Teagle Hall only.
Fall. Sec. 01 M W 1:30–3:00. J. Chu. Sec. 02 T R 1:30–3:00. Staff. Spring times to be announced.
The fundamentals of modern dance technique. Elementary dance movement phrases, with attention to rhythm, placement, and vitality of performance. Satisfies the PE requirement.

[150 Writing About Dance
Spring. 3 credits. Not offered 1990–91.
T R 10:10–11:25. S. Banes.
In this freshman writing seminar, dance is analyzed as a system of nonverbal communication. We will explore methods of categorizing and describing human behavior such as kinesics, proxemics, and choreometrics; examine the function of dance in society; and study specific dance styles. Although in class we will work from film or video recordings, attending live dance performances will be an integral part of the course.]

155 Rehearsal and Performance
Fall and/or spring. 1–2 credits. 1 credit per production experience per term up to 2 credits per term. Students must register for the course in the term in which credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the department's scheduled auditions or who are assigned assistant director positions after obtaining director's approval. Students should add this course only after they have been assigned roles. S-U grades only.
Staff.
The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.

[200 Introduction to Dance
Spring and summer. 3 credits. Not offered 1990–91.
T R 1:25–2:40. J. Morgenroth.
Introduction to aesthetics and theoretical issues in Western theatrical dancing, with emphasis on the twentieth century. Viewing of films, live performances, and videotapes and discussion of readings. Two papers.]

201 Dance Improvisation
Fall. 3 credits. Limited to 12 students. Concurrent enrollment in a dance technique class at the appropriate level is required. Registration only through department roster in the main office of the Center for Theatre Arts.
T R 3:10–4:40. J. Morgenroth
Exploration of movement invention and group composition through structured dance improvisation. Live musical accompaniment.

202 Contemporary Dance
Spring. 3 credits.
T R 1:25–2:40. S. Banes.
This introductory course surveys the current scene in dance culture. The focus is on American dance (including Euro-American, African-American, Asian-American, and Hispanic dance), although some attention will be given to developments in Europe (such as Pina Bausch), Asia (such as Butoh), and Africa (such as Highlife). Through lectures, readings, class discussions, research projects, and viewings of videotapes, films, and live performances, the course will analyze theatrical dancing (from ballet to modern, postmodern, and tap) as well as social dancing (from breakdancing to voguing and lambada) in the 1980s and 1990s.

206 Making Dances to Music
Fall. 3 credits. Limited to 10 students. Concurrent enrollment in a dance technique class at the appropriate level is required. Registration only through department roster in the main office of the Center for Theatre Arts. No prerequisites.
M W F 12:20–1:10. P. Saul.
In this course music is used as the point of departure for composing movement. Materials for a personal movement vocabulary are discovered through in-class improvisation. Assigned experimental studies composed out-of-class are critiqued and then reworked. At the end of the semester selected studies are performed at an informal studio showing. Students are expected to attend campus dance performances for class discussion. Films and videotapes are viewed.

[209 Introduction to African Dance (also AS&RC 209)
Fall. 3 credits. Not offered 1990–91.
T R 10:10–11:25. F. Ajayi.
An introduction to ancient African dance forms, origins, socio-economic and political significance; the state of the dances, changes and continuing relevance in contemporary times. This course will look at the evolution and significance of contemporary dance forms.]

210 Beginning Dance Composition and Music Resources
Spring. 3 credits. Concurrent enrollment in a dance technique class at the appropriate level is required. Registration only through the department roster in the main office of the Center for Theatre Arts.
MW 6:30–8:00. Staff.
Weekly assignments are designed to introduce students to basic elements of dance traditionally and currently used in the choreographic process. Problems are defined and explored through class improvisation as a way to encourage fresh, individual solutions. Students compose and present a series of short studies that are discussed and reworked before being performed at informal studio showings. One additional hour per week will be arranged for music-related activities. The music resource faculty will introduce the class to contemporary music for modern dance and orient the class regarding problems and possibilities with sound collaborations. Students are required to attend campus dance activities for class discussion.

231 Ballet II (also Physical Education 431)
Fall and spring. 0 credit. Theatre Arts and Physical Education registration at Teagle Hall only. Prerequisite: Theatre Arts 123 (Ballet I) or permission of instructor.
Fall: T R 3:10–4:40. Spring: to be announced. P. Saul.
A continuation of Ballet I for students with at least a year of dance training. In addition to more advanced forms of port de bras, adage and allegro, work is done on the pirouette. Satisfies the PE requirement.

232 Modern Dance II (also Physical Education 432)
Fall and spring. 0 credit. Theatre Arts and Physical Education registration at Teagle Hall only. Prerequisite: Modern Dance I or permission of instructor.
Fall. T R 1:30–3:00. J. Chu. Spring: to be announced.
A continuation of Modern Dance I, for students with at least a year of dance training. Practice of longer dance phrases, with attention to clarity of design, rhythm, and expression. Satisfies the physical education requirement.

233 Explorations in Movement and Performance A
Fall 1990. 0 credit. Limited to 20 students.
T R 4:50–6:20. J. Self.
This course delves into the possibilities of movement and performance, utilizing unconventional techniques such as animal movements, follow the leader games, improvisation and visualization. The course is physically demanding and requires an eagerness to investigate the nature of performance and explore unfamiliar territory in movement.

[272 Music and the Dance (also Music 272)
Spring. 3 or 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
T R 11:15–12:30. R. Harris-Warrick.
This course will explore selected topics in the interrelations between music and dance in the Western tradition. Some of the areas to be examined include the influence of dance movement on musical composition, composer-choreographer relationships, and a comparison of music composed for dancing with dance music composed for listening. Examples will be drawn from the Renaissance, the baroque period, and a modern era. Students will be asked to pursue an independent project.]

304 Ballet III (also Physical Education 434)
Fall and spring. 0 or 1 credit. May be repeated for up to 4 credits. Prerequisite: Ballet II or permission of instructor.
Fall: M W F 4:50–6:20. Spring: to be announced. P. Saul.
Study and practice of traditional training exercises and the classical ballet vocabulary; work is done on strengthening the body and using it as an expressive instrument.

305 Explorations in Movement and Performance B
Fall 1990. 0-1 V credit. Qualification based on dance experience. Limited to 15 students.
M W 6:30–8:00. J. Self.
This course delves into the possibilities of movement and performance, utilizing unconventional techniques such as animal movements, follow the leader games, improvisation and visualization. The course is physically demanding and requires an eagerness to investigate the nature of performance and explore unfamiliar territory in movement.

306 Modern Dance III (also Physical Education 436)
Fall and spring. 0 or 1 credit. May be repeated for up to 4 credits. Prerequisite: Modern Dance II or permission of instructor.
Fall: M W F 4:50–6:20. J. Morgenroth. Spring: to be announced.
Advanced work with rhythm, placement, and phrasing for students who are prepared to refine technical skills of dancing. Students will be physically and mentally challenged by lengthy, complex phrases and will be expected to bring the instructor's material to life.

[307 Asian Dance and Dance Drama (also Asian Studies 307)
Fall. 3 credits. May be repeated for credit. Section 1: Indian Dance, Section 2: Japanese Noh Theatre, Section 3: Indonesian Dance Theatre. Not offered 1990–91.
Hours to be arranged. Staff.
Readings, lectures, and practice sessions. On Fridays there will be lectures, demonstrations, and discussions. Videotapes and films will be shown. The Monday and Wednesday classes will consist of learning basic movement vocabulary and dances. No previous experience in dance is necessary.]

308 Modern Dance IV (also Physical Education 438)
Fall and spring. 0 or 1 credit. May be repeated for up to 4 credits. Prerequisite: Modern Dance III or permission of instructor.
T R F 4:50–6:20. J. Chu.
A continuation of, and supplement to, Theatre Arts 306/Physical Education 436.

[309 African Dance Aesthetics (also AS&RC 309)
Spring. 3 credits. Prerequisite: TA and AS&RC209 or permission of instructor. Not offered 1990–91.
T R 10:10–11:25. F. Ajayi.
An examination of African dance styles and forms within the cultural perspective of African peoples. Practical classes will consist of learning basic movement vocabulary, techniques, and dances, with lectures on the cultural world view of the people. Practical sessions will explore the dynamics of African dances as nonverbal artistic forms communicating a world view, with an end of semester studio showing. The course will concentrate particularly on West and East Africa.]

310 Intermediate Projects in Dance Composition I
Fall and Spring. 3 credits. Prerequisite: Theatre Arts 210.
Hours to be arranged. Staff.
Biweekly meetings for students working on intermediate choreographic projects to be presented in various performance situations. Work in progress will be critiqued by faculty and peers. Design problems in costuming and lighting will be approached, and students with particular interests in collaboration will have a forum in which to develop their ideas.

311 Intermediate Projects in Dance Composition II
Fall and spring. 3 credits. Prerequisite: Theatre Arts 310.
Hours to be arranged. Staff.
A continuation of Theatre Arts 310.

312 Physical Analysis of Movement
Spring. 3 credits.
T R 1:25–2:40. J. Morgenroth.
This course is an examination of human movement with particular attention to dance movement. Readings in Sweigard's Human Movement Potential. Guest lectures by experts in anatomy and health areas. Practical and laboratory work. Demonstration of dissection.

[314 Western Dance History I
Fall. 4 credits. Not offered 1990–91.
T R 11:15–12:30. S. Banes.
A survey of the history of dance from the Renaissance to the end of the nineteenth century with emphasis on the development of theatrical forms in Western culture. No prerequisites.]

[315 Western Dance History II
Spring. 4 credits. Not offered 1990–91.
T R 11:15–12:30. S. Banes.
A survey of the history of Western theatrical dance in the twentieth century. No prerequisites.]

[318 Historical Dances
Spring. 2 credits. Prerequisite: Ballet II or Modern Dance II. Not offered 1990–91.
Staff.
A sampling of the social dances from the Renaissance to the present, with emphasis on pinpointing basic differences in movement styles and customs in the various periods. A major part of class time will be spent learning and performing the dances.]

410 Advanced Dance Composition I
Fall and spring. 3 credits. Prerequisite: Theatre Arts 310 and 311.
Hours to be arranged. Staff.
Students work on advanced choreographic problems, to be presented in performance. Work in progress will be critiqued by faculty biweekly.

411 Advanced Dance Composition II
Fall and spring.
Hours to be arranged. Staff.
A continuation of Theatre Arts 410.

[418 Seminar in History of Dance
Spring. 4 credits. Prerequisite: Theatre Arts 315 or permission of instructor. Not offered 1990–91.
R 2:30–4:25. S. Banes.

490 Senior Paper in Dance
Spring. 4 credits. Prerequisite: Theatre Arts 418, senior standing.
Under faculty direction, the student will write a senior paper in dance history, criticism, or theory.

Tracks toward selection into the advanced undergraduate training program

Design, Technology, and Stage Management

Required for ALL individuals interested in a **Design**, **Technology**, or **Stage Management** track:
TA 151 and 251 Production Lab I and II (at least 2 combined credits)
TA 250 Fundamentals of Design and Technology

Required for Scenic Design emphasis:
TA 340 Theatrical Drafting and Technical Drawing Studio
TA 351 Production Lab III (at least 1 credit)
TA 354 Stagecraft Studio
TA 364 Scene Design Studio

Required for Costume Design emphasis:
TA 351 Production Lab III (at least 1 credit)
TA 356 Costume Construction Studio
TA 358 Theatrical Make-up Studio
TA 366 Costume Design Studio I & II

Required for Lighting Design emphasis:
TA 252 Technical Production Studio I
TA 340 Theatrical Drafting and Technical Drawing Studio
TA 351 Production Lab III (at least 1 credit)
TA 362 Lighting Design Studio I

Required for Sound Design emphasis:
TA 252 Technical Production Studio I
TA 351 Production Lab III (at least 1 credit)
TA 354 Stagecraft Studio
TA 368 Sound Design Studio

Required for Technical Direction emphasis:
TA 252 Technical Production Studio I
TA 340 Theatrical Drafting and Technical Drawing Studio
TA 351 Production Lab III (at least 1 credit)
TA 354 Stagecraft Studio

Required for Stage Management emphasis:
TA 253 and **TA 353** Stage Management Lab II and III
TA 280 Introduction to Acting
TA 370 Stage Management Studio
TA 398 Fundamentals of Directing I

Acting

Required for ALL individuals interested in an acting track:
TA 151 and **TA 251** Production Lab I and II (at least 2 combined credits)
TA 240/241 Introduction to Western Theatre (1 Semester ONLY)
TA 250 Fundamentals of Design and Technology
TA 280 Introduction to Acting

Required for Acting emphasis:
TA 281 Acting I
TA 282 Introduction to Voice and Speech for Performance
or
TA 284 Speech and Dialects for Performance
TA 380 Acting II
Be accepted into TA 381 Acting III

Directing

Required for ALL individuals interested in a directing track:
TA 151 and **TA 251** Production Lab I and II (at least 2 combined credits)
TA 240/TA 241 Introduction to Western Theatre (1 Semester ONLY)
TA 250 Fundamentals of Design and Technology
TA 280 Introduction to Acting

Required for Directing emphasis:
TA 398 Directing I
TA 498 Directing II

Playwriting

Required for ALL individuals interested in a playwriting track:
TA 240/TA 241 Introduction to Western Theatre (1 Semester ONLY)
TA 250 Fundamentals of Design and Technology
TA 280 Introduction to Acting

Required for Playwriting emphasis:
TA 348 Playwriting
TA 349 Advanced Playwriting

Students in the advanced undergraduate training program may also elect to take TA 485 (Undergraduate Internship) in addition to or in place of one production assignment.

TURKISH

See Department of Near Eastern Studies.

UKRAINIAN

See Department of Modern Languages and Linguistics.

VIETNAMESE

See Department of Modern Languages and Linguistics.

WRITING PROGRAM

See John S. Knight Writing Program, p. 311.

YIDDISH

See Department of Near Eastern Studies.

YORUBA

See Department of Modern Languages and Linguistics.

SPECIAL PROGRAMS AND INTERDISCIPLINARY STUDIES

Africana Studies and Research Center

R. Harris, director (255-5218); A. Adams, A. Appiah, B. Blacksher, W. Branch, V. Carstens, W. Cross, L. Edmondson, G. Fraser, H. Gates, A. Nanji, D. Ohadike, W. Soyinka, J. Turner, M. Williams. Offices: 310 Triphammer Road, 255-4625 or 255-4626.

The Africana Studies and Research Center is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, and the Caribbean. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and Swahili language and literature.

The center offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of Professional Studies (African and Afro-American), through the university's Graduate School.

A student may major in Africana studies; however, another attractive alternative is the center's joint major program. This program enables the student to complete a major in any of the other disciplines represented in the college while at the same time fulfilling requirements for a major in Africana Studies. This requires only a few more credits than is usually the case when one completes a single major course of study. Courses offered by the center are open to both majors and nonmajors and may be used to meet a number of college distribution requirements, such as freshman writing seminars, language (Swahili), expressive arts, humanities, social sciences, and history.

The center also brings distinguished visitors to the campus, sponsors a lecture series, and houses its own library.

The Africana Major

The undergraduate major offers interdisciplinary study of the fundamental dimensions of the Afro-American and African experiences. Because of the comprehensive nature of the program, it is to the students' advantage to declare themselves Africana majors as early as possible. The following are prerequisites for admission to the major.

Students should submit:

1) a statement of why they want to be an Africana studies major;
2) a tentative outline of the area of study they are considering (African or Afro-American) for the undergraduate concentration; and
3) a full transcript of courses taken and grades received.

The center's undergraduate faculty representative will review the applications and notify students within two weeks of the status of their request.

After acceptance as a major in the Africana Center, a student must maintain a C+ cumulative average in the center's courses while completing the major program. The Africana major must complete 36 credits in courses

offered by the center, to include the following four core courses: AS&RC 231, 290, 360, and 431. Beyond the core courses, the student must take 8 credits of center courses numbered 200 or above and 15 credits numbered 300 or above. Within this selection the student must take at least one of the following AS&RC courses: 203, 204, 283, or 301. The program of an undergraduate major may have a specifically Afro-American focus or a specifically African focus.

Joint Majors

The center encourages joint majors in the College of Arts and Sciences and in other colleges. Joint majors are individualized programs that must be worked out between the departments concerned. The center's undergraduate faculty representative, Professor Adams, will assist students in the design and coordination of joint major programs. However, in any joint major program, the center will require at least 16 credits be taken in Africana studies courses, including AS&RC 290.

Double Majors

In the case of double majors (as distinct from joint majors) students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

Certificate in African Studies

In conjunction with the Institute for African Development, the Africana Studies and Research Center administers an undergraduate Certificate in African Studies program. The certificate is offered as a minor concentration available to students in all of the undergraduate colleges at Cornell. Many of the courses in the program might be used to fulfill other course distribution requirements. By pursuing this certificate, students acquire an interdisciplinary understanding of Africa. After developing a foundation of knowledge on the culture, society, and development of Africa in the core course "Africa: The Continent and Its People," students pursue 15 credit hours in a humanities or development studies track or a combination of the two, including an additional core course, either "African Civilizations and Cultures" or "Contemporary African Development Issues." The requirements for the cetificate are a minimum of 18 credit hours, including the core courses. Students interested in the certificate program must contact Professor Adams (the center's undergraduate faculty representative) who will register them in the program and assign them a faculty adviser from their own college. The faculty adviser will be responsible for determining completion of the certificate requirements.

Honors. The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a report on the field experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a B- cumulative average in all courses and a B+ cumulative average in the center's courses. Each student accepted into the honors program will have an honors faculty committee consisting of the student's adviser and one additional faculty member, which is responsible for final evaluation of the student's work. The honors committee must approve the thesis or project before May 1 of the student's junior year. The completed thesis or project should be filed with the student's faculty committee by May 10 of the senior year.

Distribution Requirement

Two Africana Studies and Research Center courses from the appropriate group may be used in fulfillment of the following distribution requirements:

Social sciences: AS&RC 171, 172, 190, 191, 208, 231, 280, 290, 301, 302, 344, 345, 346, 351, 352, 400, 410, 420, 451, 460, 481, 484, 485, 495, 550, 551, 571.

History: AS&RC 203, 204, 205, 283, 344, 350, 360, 361, 370, 381, 405, 460, 471, 475, 482, 483, 490, 510.

Humanities: AS&RC 202, 211, 219, 422, 425, 431, 432, 450, 455, 525.

Expressive arts: AS&RC 209, 285, 303, 425, 430.

Freshman writing seminars: AS&RC 100.

Language Requirement

Swahili fulfills the College of Arts and Sciences language requirement. Successful completion of AS&RC 131, 132, 133, and 134 provides qualification in Swahili. Successful completion of AS&RC 202 gives proficiency in Swahili. Africana majors are not required to take Swahili, but the center recommends the study of Swahili to complete the language requirement.

Courses

131 Swahili
Fall. 4 credits.
T R 10:10–12:05; lab to be arranged.
A. Nanji.
Beginner's Swahili. Part 1—Grammar. Requires no knowledge of language.

132 Swahili
Spring. 4 credits. Prerequisite: Swahili 131.
T R 10:10–12:05. A. Nanji.
Continued study of the basic grammatical formation of the language and the introduction of reading material ranging from songs to short stories. A great many drills help develop the student's comprehension. Swahili tapes are highly used.

133 Swahili
Fall. 4 credits. Prerequisites: Swahili 131 and 132.
Arranged; language lab to be arranged.
A. Nanji.
Advanced study in reading and composition.

134 Swahili
Spring. 4 credits. Prerequisite: Swahili 133.
Arranged. A. Nanji.
In this course of the sequence more emphasis is placed on the development of reading ability and the acquisition of writing skills. Students are expected to read and comprehend selected Swahili stories and write compositions on chosen topics. Ample consideration is given to oral practice in the classroom.

171 Black Families and the Socialization of Black Children
Fall. 4 credits.
T R 2:55–4:10. W. Cross.
Survey of key psychological dimensions of the Black experience, covering such issues as (1) race and intelligence; (2) Black identity; (3) Black family structure; (4) Black English; (5) Black middle class; and (6) nature of Black psychology.

172 The Education of Black Americans: Historical and Contemporary Issues
Spring. 4 credits.
T R 2:55–4:10. W. Cross.
This is a course designed for freshmen and sophomores that will be devoted to the history of Black education and contemporary issues in Black education, such as the struggle for Black studies, the development of independent Black schools, and problems of public schools in Black communities.

190 Introduction to Modern African Political Systems
Fall. 4 credits. Offered alternate years.
M W 3:35–5. L. Edmondson.
This course directs attention to the salient characteristics of Africa's political systems and assesses the way in which continental and global factors impinge on development efforts. It is especially concerned with the impact of colonialism and the ongoing efforts by Africans to overcome its political and socioeconomic legacies. Among the specific issues to be discussed are problems of ethnic fragmentation, boundary problems, levels of political institutionalization, challenges of continental unity, neocolonialism and dependency, and Africa within the Third World and in the world system.

191 Africa: The Continent and Its People
Fall. 3 credits.
T R 11:40–12:55. L. Edmondson.
An introductory interdisciplinary course focusing on Africa's geographical, ecological, and demographic characteristics; indigenous institutions and values; the triple cultural heritage of Africanity, Islam, and Western civilization; main historical developments and transitions; contemporary political, economic, social, and cultural change. Africa's ties with the United States (from trans-Atlantic slavery to the present), its impact on the emerging world order, and its contribution to world civilization will also be explored.

202 Swahili Literature
Fall. 4 credits. Prerequisite: Swahili 134.
Offered on demand.
A. Nanji.
Students gain mastery over spoken Swahili and are introduced to the predominant Swahili literary forms.

203 History and Politics of Racism and Segregation
Fall. 4 credits.
M W 1:25–3:20. Staff.
A cross-cultural study in the historical context of the evolution of racist thought and practice in southern Africa and North America.

204 History and Politics of Racism and Segregation
Spring. 4 credits.
M W 11:15–1:10. L. Edmondson.
The course will deal with the historical patterns of racism and segregation using southern Africa and North America as case histories. The study will be undertaken within a theoretical framework that broadly defines racism and segregation and their implication.

205 African Civilizations and Culture
Spring. 3 credits.
T R 11:40–12:55. D. Ohadike.
May be used for history requirement. This course is concerned with the development of African civilizations and cultures from the earliest times to the present day, together with their contributions to world history. The aim is to promote the understanding of Africa and the appreciation of its cultural forms through the study of the continent's social, political, and economic structures. The approach is multidisciplinary. The course deals with the civilizations of North Africa, the Nile Basin, and Ethiopia (examples: Carthage, Egypt, Kush, and Meroa); the kingdoms and empires of Sub-Saharan Africa (examples: Ancient Ghana, Mali, Songhai, Oyo, Benin, Kongo, and Nwene Mutapa); African kinship systems; religions; healing systems, music, political philosophy, and mechanisms of social control. The course also looks at the impact of Islam and Christianity on the development of African cultures.

[208 Gender, Race, and Medical "Science"
Fall. 3 credits. Not offered 1990–91.
T R 11:40–12:55. G. Fraser (on leave, 1990–91).
The course will examine the social construction of race and gender in the medical sciences from the turn of the century to the present. Beginning with readings that propose a new view of scientific medicine as a system of signs and symbols and as culturally embedded, we will proceed to an examination of some of the following topics: racism and experimentation; the treatment of venereal disease and tuberculosis; the demise of social childbirth; the body as a medical product; menstruation as pathology; the monitored mind; women and psychiatry; the political economy of health care; medical authority; the training of medical students; political anatomy of the body; sites of resistance; alternative systems; and cross-cultural case studies.]

[209 Introduction to African Dance (also Theatre Arts 209)
Fall. 3 credits. Not offered 1990–91.
T R 10:10–11:25. F. Ajayi.
An introduction to ancient African dance forms, origins, socio-economic, and political significance; the state of the dances, changes, and continuing relevance in contemporary times. The course will also look at the evolution and significance of contemporary dance forms.]

211 West Indian Literature from Abroad
Fall. 3 credits.
T R 10:10–11:25. A. Adams.
"Writing home": writing by West Indians who have emigrated to North America, Europe, or Africa, but whose cultural, social, psychological, spiritual center of gravity remains the Caribbean (or its transplanted manifestation in the new domicile). Whether experienced as "exile," as with Lamming, "loneliness," as with Selvon, or as a search for the diasporic connection with the continent of ancestry, as with Conde, the West Indian literary artist abroad is, in some form, "writing home."

219 Issues in Black Literature
Fall. 4 credits. Offered alternate years.
An examination of literature written for Black children, including an analysis of the literature as it pertains to Black life from 1960 to the present. Students write a pamphlet containing their essays, fiction, and poetry and compile a bibliography of literature for Black children.

231 Black Political Thought
Fall. 3 credits. Offered in alternate years.
T R 11:40–12:55. J. Turner.
This is an introductory course that will review and analyze the major theoretical and ideological formulations developed and espoused by African-Americans in the struggle for liberation. This semester we will focus specifically on the political philosophy and historical significance of Malcolm X, and the work and movement of Marcus Garvey, as the prime movers of nationalism and pan-Africanism among Black people in this century. Such themes as slave resistance, nationalism, pan-Africanism, emigration, anti-imperialism, socialism and internal colonialism, and the political and social views of Black women will be discussed. Black political thought will be viewed in its development as responses to concrete conditions of oppression and expression.

280 Racism in American Society
Fall. 3 credits.
W 7:30–10 p.m. D. Barr and J. Turner.
This course will be a topical treatment of the history and theory of racism in the United States. The course will begin with an examination of basic concepts and theories of racism. From there we will examine the history of racial groups in America—African Americans, Native Americans, Asian Americans, and the Hispanic groups. Particular attention will be paid to the political economy of racism and the sociological and the psychological aspects of race relations in America, with specific reference to the differences and intersections of race, class, gender, and ethnicity.

283 Black Resistance: South Africa and North America
Fall. 4 credits. Offered alternate years.
Staff.
A study of Black political movements in South Africa and North America and their responses to the situations of race relations that formed the contexts of their operations.

285 Black Theater and Dramatic Literature
Fall. 3 credits.
T R 4:30–5:50. W. Branch.
This course is an introduction to the history of literature of Black drama. It also provides an opportunity for students to cultivate an interest in individual and group presentation of Black dramatic materials. Students who successfully complete this course will be granted preference for the limited enrollment in AS&RC 425 (Advanced Seminar in Black Theatre and Dramatic Literature), which produces a public performance in the spring.

290 The Sociology of the Black Experience
Fall. 3 credits.
T R 1:25–2:40. J. Turner.
An introductory course to the sociology of the Black experience and to the field of Afro-American studies. Required for all undergraduate students majoring at the Africana Center. The course surveys the early culture and development of Black people and their role in world civilization and concentrates on the cultural heritage and social experience of Black people in the United States in particular.

301 Oppression and the Psychology of the Black Social Movement
Spring. 4 credits.
R 10:10–12:05. W. Cross.
The focus of the course will be conversion experiences within the context of social movement. The development of political groups (for example, the Black Panther Party) and outstanding activist-intellectuals (such as Malcolm X) are used as reference points for discussion of social movement theory.

302 Social and Psychological Effects of Colonialization and Racism
Spring. 4 credits. Offered alternate years.
Staff.

303 Blacks in Communication Media
Spring. 3 credits.
W 2:30–5. W. Branch.
The focus is on the general theory of communications, the function of media in an industrialized society, and the social, racial, and class values implied in the communication process. There is a term paper and screenings of significant American and Third World films.

[309 African Dance Aesthetics: Practice and Theory
Spring. 3 credits. Not offered 1990–91.
T R 10:10–11:25.
An examination of the aesthetics of African dance styles and forms within the cultural perspectives of African peoples. Monday and Wednesday classes will consist of learning basic movement vocabulary and dances, with lectures and discussions on Fridays. Practical sessions will explore the dynamics of African dances as non-verbal artistic forms communicating a world view, with an end of semester studio showing. The course will concentrate particularly on West and East Africa.]

344 Neocolonialism and Government in Africa (The Politics of Public Administration)
Fall. 4 credits. Offered alternate years.
T R 1:25–2:15.
The course is designed to explain why Africa's public administrations in the postcolonial era have generally failed to move from the colonialist ethos to becoming primary instruments for initiating and guiding the processes of development. The reality of colonialism was bureaucratic centralism—the closest approximation to the ideal type of a pure administrative state specializing in law and order. Colonial administrations resembled armies in their paramilitary formation and ethos and were, indeed in a number of cases, the instruments of military men. Much attention focuses on the internal characteristics of bureaucratic organizations in Africa and their relationship to their social and political environments.

345 Afro-American Perspectives in Experimental Psychology (also Psychology 345)
Spring. 3 or 4 credits. Prerequisite: an introductory course in psychology or AS&RC 171. Offered alternate years.

346 African Socialism and Nation Building
Spring. 4 credits.
An exploration and critical analysis of the various theories of African socialism as propounded by theorists and practitioners. Those ideas, extending from Nyerere's Ujamaa (for example, traditional social and economic patterns of African society) to Nkrumah's scientific socialism (such as the desirability and practicality of the Marxian type of socialism in Africa) are compared.

350 The Black Woman: Social and Political History
Spring. 3 credits. Offered alternate years.
Hours to be arranged.
This course will address the social organizations, political protests, and political ideologies written by or about Black women in the United States, from the time of slavery to the 1980s. Topics will include the special role of Black women in slavery, the political-protest thought of Black women writers in the nineteenth and twentieth centuries (e.g., Ida B. Wells, Mary Church Terrell, Ella Baker, Mary McLeod Bethune, Eleanor Holmes Norton, Angela Davis), the emergence of Black feminism, and the various social-political controversies surrounding the relationship of Black women to both the civil rights and Black power movements.

352 Pan-Africanism and Contemporary Black Ideologies
Spring. 4 credits. Offered alternate years.
A historical study of pan-Africanism that reviews and analyzes the literature and activities of early Black pan-African theorists and movements.

360 Ancient African Nations and Civilizations
Fall. 3 credits. Offered alternate years.
M W F 1:25–3:20. Staff.
An introduction to African history beginning with early civilizations in pre-colonial Africa.

361 Introduction to Afro-American History (from African Background to the Twentieth Century)
Fall. 3 credits. Offered alternate years.
M W F 10:10–11. R. Harris.
Surveys the transition of Africans to America through the process of enslavement and their transformation into Afro-Americans. Explores the transition from slavery to freedom through the process of emancipation and the transformation of Afro-Americans from chattel slaves into rural peasants. Its purpose is to understand the internal dynamics of the Black experience from African origins to the age of segregation.

370 Afro-American History: The Twentieth Century
Spring. 3 credits. Offered alternate years.
M W F 12:20–1:10. R. Harris.
Examines the transition of Afro-Americans from countryside to city through the process of migration and urbanization and their transformation into industrial laborers. Probes the transition from segregation to civil rights through the process of protest and the transformation of Afro-Americans from second-class into first-class citizens. The purpose is to understand historical antecedents for the current socioeconomic, political, and cultural status of Afro-Americans.

381 Contemporary African History
Spring. 3 credits. Offered alternate years.
M W F 1:25–2:15. D. Ohadike.
A survey of the current problems on the African continent as they have appeared from 1500 to the present time. Important topics include the impact of the Atlantic slave trade, the European scramble of 1884, various forms of African resistance to colonial occupation in 1914, and the prospects of protracted social unrest in Africa south of the Zambezi River.

382 Comparative Slave Trade of Africans in the Americas
Fall. 3 credits. Offered alternate years.
T R 1:25–2:30.
The focus is on eighteenth- and nineteenth-century slave societies in Virginia and South Carolina and the eighteenth-century slave societies in San Domingue or Haiti and to some extent in Jamaica. The slave society in Cuba during the latter part of the nineteenth century is studied.

400 Political Economy of Ideology and Development in Africa
Spring. 4 credits. Offered alternate years.
T R 11:15–12:40. L. Edmondson.
An exploration of the processes of African underdevelopment, ranging from historical foundations to contemporary international dynamics. Rival theories of underdevelopment, contending models of development, and competing ideologies will be explored. Common African postures as manifested in the "Lagos Plan of Action for the Economic Development of Africa, 1980–2000" and in the north-south dialogue will also be assessed.

405 Political History of the Age of Booker T. Washington and W. E. B. DuBois
Spring. 4 credits. Offered alternate years.
A review of the intellectual and political history of the Black experience in the United States from 1890 to the eve of World War II. Although the course concentrates on two of the outstanding Black historical figures of the period, Booker T. Washington and W. E. B. DuBois, other personalities and leaders within Black social and political history will be examined—including Marcus Garvey, T. Thomas Fortune, A. Philip Randolph, Charles S. Johnson, William Monroe Trotter, and James Weldon Johnson. Major Black issues, such as the intellectual debates between DuBois and Washington, and DuBois versus Garvey, will constitute a critical part of the discussion.

410 Black Politics and the American Political System
Fall. 4 credits.
W 2:30–4:25. J. Turner.
The central thesis of African American politics has been its movements for political change and democratic access and human rights. This development since the seventeenth century is a complex political legacy. This course will conduct a close study of African American political practice and theoretical analysis of the American political system. Implications of the political systems for prospects and limitations to participation by Black people will be analyzed. Critical historical stages in the process of Black politics will be examined. The development of electoral offices in federal and statewide politics, and the significant urban political power bases giving rise to African American mayorality politics in critical industrial centers, as well as rural hamlets will center the course. Presidential politics—the Jesse Jackson campaigns—and new political formations including Black Republicans/conservatives will constitute the emphasis on contemporary events. The course will review the development of the literature in African American politics.

420 Social Policy and the Black Community:
Spring. 4 credits.
W 2:30–4:30. J. Turner.
The socioeconomic conditions of the Black urban community will be the central focus of the course. Community development models will be explored in relationship to the social needs of the Black populations. The changing configuration of internal organization of the Black community nationally will be examined.

422 African Literature
Fall. 4 credits.
M 1:25–3:55. A. Adams.
Women writers of Africa will be the focus of attention in this course. Questions of gender as well as complementary issues of equal importance in the artistic vision and expression of the woman writer in Africa will be considered in the works of Mariama Ba, Ama Ata Aldoo, Buchi Emecheta, Aminata Sow Fall, Bessie Head, as well as some "newer" writers. All works will be read in English.

425 Advanced Seminar in Black Theater and Dramatic Literature
Spring. 4 credits. Enrollment limited.
T R 4:30–5:50. W. Branch.
This course will be devoted to the study, rehearsal, production, and public performance of a play or plays drawn from the annals of Black American dramatic literature. Students will participate in all the various phases and categories of theatrical production, from acting to production crews to theater group management. A field trip to a Black theater attraction in New York City will also be arranged if possible. Students who have successfully completed AS&RC 285 (Black Theater and Dramatic Literature) will be granted preference for the limited enrollment in this course.

430 African American Creative Writing Seminar
4 credits.
T R 2:55–4:10. W. Branch.
This course will afford to a limited number of students who have expressed both interest and aptitude in creative writing the opportunity to concentrate on the production of a piece of writing in either fiction or drama that proceeds from an Afro-centric wellspring. In addition, students will gain critical standards of evaluation through the examination and discussion of "role-model" materials from African American literature and drama as well as considerations of the work of their fellow students in the seminar.

431 History of Afro-American Literature
Fall. 4 credits. Offered alternate years.
An extensive examination of the impact that Afro-American literature has had on describing, explaining, and projecting the Afro-American experience from 1619 to the present.

432 Modern Afro-American Literature
Spring. 4 credits. Offered alternate years.
A study of fiction by Black writers, focusing on the political and sociological component that influenced the development and growth of Black writing in relationship to literary themes and attitudes current in specific periods and movements from post–World War I to the present.

[450 Body Aesthetics or Body Politics: Images of the Woman in West African Art Forms
Fall. 3 credits. Not offered 1990–91.
W 12:20–2:15.
Examines the body image of the woman as represented in various West African art forms to determine the extent to which the art forms become mediums for: validating the prescribed status of the women in society, suppressing the actual perception of the woman, and re-evaluating the archetypal woman and presenting the woman from a different perspective.]

451 Politics and Social Change in the Caribbean
Fall. 4 credits.
T R 2:55–4:25. L. Edmondson. Offered alternate years.
A study of the historical, geostrategic, political, economic, and social (including racial and cultural) forces bearing on the domestic and international experiences of Caribbean societies. Special attention will be given to conflicting definitions and perceptions of the Caribbean; contending theories of Caribbean social structure and models of development; the continuing salience of struggles for change and transformation; prospects of regional integration; and Caribbean challenges to the global system, especially with regard to the region's relations with the United States in the context of the East-West conflict and its position in the Third World in the context of the North-South cleavage.

455 Modern Caribbean Literature
Spring. 4 credits.
M 1:25–3:55. A. Adams.
This course will examine the prose literature of the Caribbean islands. Through the reading of several novels and short stories from the various languages and cultural strains that comprise the Caribbean societies, students will study the points of commonality and the diversity within this body of literature. The recurrence of certain historical, social, and cultural issues that have formed the multi-ethnic Caribbean peoples will be analyzed in their varying manifestations across the linguistic and other boundaries to uncover the underlying shared experience.

[460 African Philosophy and the Origins of Major Western Religions
Fall or spring. 4 credits. Not offered 1990–91.
M 3:35–6.
The overall objective of this course is to develop in the student an understanding of the origins of the philosophical, theosophical, and magic-religious teachings that were responsible for producing what is today called Judaism, Christianity, and Islam. From this juncture the most basic works and teachings from the Nile Valley and the Great Africans Lakes, and African religions will be compared to the adoptions in Hebrew, Christian, and Moslem religions, as well as in what is today called Greek philosophy.]

471 Black Emancipation in Comparative Perspective (also History 471)
4 credits. Limited to 8 students. Letter grade only.
T 2:30–4:30. D. Ohadike.
This course will explore the black emancipation experiences in comparative perspective. Primary emphasis will be on Africa and the United States; secondary focus will be the Caribbean and Latin America. The African component will investigate social consequences of emancipation, the transformations that accompanied that process, and experiences of ex-slaves. Perspectives on the Americas will include the complexities of emancipation, its socio-economic results and the legacy of race relations.

475 Black Leaders and Movements in Afro-American History
Spring. 4 credits. Offered alternate years.
T R 2:55–4:10. R. Harris.
Analyzes the personalities, ideas, and activities central to the struggle for Afro-American liberation from the eighteenth-century to the present. Examines theories of leadership and the structure of protest movements with the goal of understanding current leadership needs and trends among Afro-Americans.

[481 Peoples, Culture and Sociology of Caribbean
4 credits. Not offered 1990–91.
R 1:25–3:20. G. Fraser (on leave, 1990–91).
May be used for social science requirement. This course considers the socio-cultural continuities and differences in what M. G. Smith has called the "plural societies" of the Caribbean. Emphasis will be placed on the anthropological approach to understanding historical and contemporary lifeways. Using ethnographies as well as literary works, we will examine, for example, rural and urban family structure, male-female relations, religious movements, healthcare, migration patterns, markets, and individual and ethnic identity to develop a full portrait of both mainland and island societies in the region.]

483 Themes in African History
Fall. 4 credits.
M W 1:25–3:20, plus one hour to be arranged. Staff.
Designed to expose the student to what has been referred to as the particular aspects of African history. The survey approach will be adopted in the treatment of selected themes, and use will be made, when necessary, of the work done in auxiliary disciplines. The study will be along the following lines: (a) selected African heroines; (b) women in traditional African societies; and (c) African women in the twentieth-century industrial societies.

484 Politics, Conflict, and Social Change in Southern Africa
Fall or spring. 4 credits.
T 10:10–12:05. L. Edmondson.
The focus is on escalating conflicts and ongoing transformations in South Africa and the increasingly salient issue of U.S. relations with the apartheid regime. Topical emphases include the heightening contradictions of apartheid; the rising tide of Black resistance; women under and against apartheid; South Africa's relations with its neighbors; geopolitical, economic, and racial dimensions of the American connection; the disinvestment-divestment debate; and the Reagan administration's "constructive engagement" policy under challenge. Instructor's lectures will be supplemented by films, class discussion, and guest lectures.

485 Racism, Social Structure, and Social Analysis Seminar
Spring. 4 credits.
W 2–4:25. J. Turner.
An examination of the social structure of American society and the relationship of racial and class categories to social stratification. An analysis of power structures and the social salience of socioeconomic connections of government decision makers and the corporate structure is developed.

490 Advanced Reading and Research Seminar in Black History
Spring. 4 credits.
M W 1:25–2:15. Staff.
The seminar is designed to help students acquaint themselves with the available sources of information and materials in Black history, as well as make the maximum use of their own inclinations and interests in unearthing the material and creating a body of comprehensive conclusions and generalizations out of them.

495 Political Economy of Black America
Spring. 4 credits.
M W 10:30–12:05.
An examination of the role that Black labor has played in the historical development of U.S. monopoly, capitalism, and imperialism. Emphasis is on the theory and method of political economy and a concrete analysis of the exploitation of Black people as slave labor, agricultural labor, and proletarian labor.

498–499 Independent Study
498, fall; 499, spring.
Hours to be arranged. Africana Center faculty.
For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

500 Political Theory, Planning, and Development in Africa
Spring. 4 credits. Offered alternate years.
T R 11:15–12:45.
The course explores the processes of underdevelopment of Africa from the epoch of slavery through colonial and neocolonial phases of domination, drawing on the assumptions of "underdevelopment" theory à la G. Frank, Walter Rodney, and others. It then takes up the differential content and emphasis on socialistic and capitalistic strategies by highlighting the interaction of political and economic forces. Case studies are drawn from Ghana, Kenya, and Tanzania.

505 Workshop in Teaching about Africa
4 credits. Prerequisites: AS&RC 203 and 204 or AS&RC 360 and 361 or permission of instructor. Offered alternate years.

510 Historiography and Sources: The Development of Afro-American History
Fall. 4 credits. Prerequisite: upperclass or graduate standing or permission of instructor.
T 9:30–12:05. R. Harris.
Studies the way Black historians in particular have explained the Afro-American past. Examines the development of writing on Afro-American history from the earliest writers to the present. Seeks to determine the principles for interpreting Afro-American history. Acquaints participants with the methodologies and sources central to understanding the Afro-American experience.

515 Comparative Political History of the African Diaspora
Fall. 4 credits. Prerequisite: upperclass or graduate standing or two of the following courses: AS&RC 203, 204, 283, 360, 361, 475, 484, 490. Offered alternate years.
Staff.

520 Historical Method, Sources, and Interpretation
Fall. 4 credits. Prerequisite: upperclass or graduate standing or two of the following courses: AS&RC 203, 204, 361, 475, 484, 490. Offered alternate years.
Staff.

550 Transnational Corporations in Africa and Other Developing Countries
Spring. 4 credits. Prerequisite: upperclass or graduate standing or permission of instructor. Offered alternate years.
Examines the role of transnational enterprises as an economic and political factor in the Third World, their relations with the host government, and their interaction with both the private and public sectors of the economy of the host country. Special emphasis on Africa and Latin America.

571 Graduate Seminar in Black Psychology
Fall. 4 credits. Prerequisite: permission of instructor.
R 9:05–12:05. W. Cross.
This is an upper-level undergraduate and graduate seminar devoted to psychological issues in the Afro-American experience. This seminar will examine the theoretical and empirical literature of Black family–kinship systems and Black self-concept.

598–599 Independent Study
598, fall; 599, spring. Variable credit. For all graduate students.

698–699 Thesis
698, fall; 699, spring. Limited to Africana Studies and Research Center graduate students. Africana Center faculty.

Agriculture, Food, and Society Concentration

F. H. Buttel, A. G. Power, coordinators; G. Altschuler, M. M. Devine, M. J. Esman, J. Fessenden-Raden, C. C. Geisler, A. Gillespie, B. Ginsberg, C. J. Greenhouse, D. J. Greenwood, S. L. Kaplan, D. R. Lee, T. J. Lowi, T. F. Lynch, T. A. Lyson, P. L. Marcus, P. McMichael, V. Nee, D. I. Owen, D. Pimentel, N. T. Uphoff, D. Usher, M. W. Wachsberg. Office: 275 Clark Hall, 255-6042.

Agriculture, food, and society is an interdisciplinary concentration that is designed to introduce students to the study of agricultural and food issues from diverse perspectives within the liberal arts. The concentration seeks to make available to students a coherent program of study in which the role of agriculture in modern or prehistorical-historical and developed or developing societies can be understood in biological, social, scientific, and humanistic perspective. The concentration draws on courses in several colleges—in particular the Colleges of Arts and Sciences, Agriculture and Life Sciences, and Human Ecology.

Members of the concentration committee, which consists of faculty from each of the major colleges from which courses in the concentration are drawn, serve as advisers in the program. The committee is administered through the Biology and Society Major (office: 275 Clark Hall, 255-6042).

Basic Requirements

The requirements for the agriculture, food, and society concentration are designed to ensure a broad background in the biological, socioeconomic, and humanistic dimensions of agricultural and food issues. These requirements include foundation courses in biology plus a minimum of six courses and 18 credits of electives.

Students enrolling in the concentration should take the following foundation courses in biology to prepare themselves for course work in agricultural science: a two-semester introductory biology sequence selected from Biological Sciences 109–110, 105–106, or 101–102 plus 102–104. (Advanced placement in biology with a score of 4 or 5, or Biological Sciences 100, offered during the six-week Cornell summer session for 7 credits, also satisfies the biological sciences requirement). These courses may be used to meet group 1 (physical or biological sciences) distribution sequence requirements in the College of Arts and Sciences.

It is recommended (but not required) that students in the agriculture, food, and society concentration elect one or more freshman writing seminars with agriculturally related content to meet basic college requirements for graduation. A list of agriculturally related freshman writing seminars to be offered in 1990–91 is available from the Biology and Society office.

For further information and a complete list of courses that can be used to fulfill the concentration requirements, students should contact the Biology and Society office, 275 Clark Hall, 255-6042.

American Indian Program

R. LaFrance, acting director (300 Caldwell Hall, 255-6587)

The American Indian Program (AIP) is a multidisciplinary, intercollege program consisting of academic, student support, research, extension, and publications–public relations components.

Academic component. The AIP offers courses that increase all students' awareness of the unique heritage of American Indians. Students are challenged by such topics as the sovereign rights of Indian nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses focusing on American Indian life with an emphasis on the Iroquois and other Indians of the Northeast. Core courses are supplemented by a variety of offerings from several departments.

The student support staff help Indian students complete an enriched Cornell education by coordinating academic tutoring, financial aid, personal counseling, and other student services.

Research. Research priorities include education, social and economic development, agriculture, wildlife management, and cultural preservation.

Extension. The AIP's cooperative extension unit seeks to develop solutions to problems identified by Indian people. In this way the AIP can stimulate the application of institutional expertise and resources to community needs.

Publications and public relations. AIP publishes its own multidisciplinary journal, Northeast Indian Quarterly and sponsors conferences, guest lectures, and forums on important national and local Indian issues, past and present. AIP also contributes articles and information to the national Indian press.

For full descriptions of the following courses, consult the listings under individual departments.

The Indian Traditions

Rural Sociology 100 American Indian Studies: An Introduction

Rural Sociology 318 An Ethnohistory of the Haudenosaunee: The Six Nations Iroquois Confederacy

Anthropology 230 Cultures of Native North America

Anthropology 242 American Indian Philosophies I: Power and World Views (also Rural Sociology 242)

Anthropology 354 The Peopling of America

Music 223 Music of the American Indian

Indians in Transition

Anthropology 318 Ethnohistory of the Iroquois

History 209 Political History of Indians in the United States

History 219 Freshman Writing Seminar: History of North American Indians

History 323–324 Native American History

History 381–382 Content and Form of Iroquois Diplomacy

Rural Sociology 442 North American Indian Philosophies

History 429 American Indians in Eastern North America

History 624 Graduate Seminar in American Indian History

Contemporary Issues

Anthropology 243 American Indian Philosophies II: Native Voices (also Rural Sociology 243)

Anthropology 442 American Indian Philosophies: Selected Topics

Rural Sociology 175 North American Indians From 1890 to the Present

Rural Sociology 440 Social Impact of Rapid Resource Development

Independent Study

Independent study courses in departments; students must have approval of an American Indian studies faculty member.

Center for Applied Mathematics

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 305 Sage Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

A listing of selected graduate courses in applied mathematics can be found in the description of the center on page 16.

Asian American Studies Program

The Asian American Studies Program is a university-wide program within the College of Arts and Sciences. Its aim is to promote teaching, research, and cultural activities related to Americans of Asian heritage. The program functions as a teaching and resource center to serve the educational needs of the general Cornell community as well as those of the Asian American community. It is intercollegiate in nature with links to all the schools and colleges of the university. The teaching program offers a number of broad basic courses dealing with the Asian American experience that are offered in any of the participating colleges, depending on content and faculty affiliation. It encourages the incorporation of more specific Asian American content into the mainstream curriculum of the university by providing financial resources and substantive support to faculty members interested in developing new courses and adding pertinent materials to existing courses. The Course Development Grants Program has been established for this purpose. The staff in the program will work toward establishing one or more academic concentrations in the future.

Research

The research program encourages and stimulates research on Asian American topics by functioning as a resource and activity center for its affiliated members as well as the general Cornell community. It sponsors activities designed to facilitate dialogue and interchange among faculty from a variety of disciplines and strives to promote collaborative research among its members. To this end, the Research Grants Program has been instituted to provide seed money to faculty and students for research on Asian American topics.

Art and Culture

The third dimension of the program is to foster and promote Asian American culture and art. The program functions as a resource center and a place for social interaction among Asian American students and members of the Cornell community. In this capacity the program sponsors events aimed not simply at enhancing Asian American students' sense of identity but also at developing an appreciation for the creative aspects of the heritage of Asian Americans among all members of the Cornell community.

Affiliated Faculty

Lee C. Lee, director (Human Development and Family Studies); R. Barker (Agricultural Economics), M. L. Barnett (Rural Sociology and Asian Studies), T. Chaloemtiarana (Southeast Asia Program), P. Chi (Consumer Economics and Housing), M. C. Chou (Asian Studies), B. de Bary (Asian Studies), D. Gold (Asian Studies), J. C. T. Huang (Modern Languages and Linguistics), K. A. R. Kennedy (Ecology and Systematics), J. V. Koschmann (History), L. C. Lee (Human Development and Family Studies), D. R. McCann (Asian Studies), K. March (Anthropology and Women's Studies), T. L. Mei (Asian Studies), V. Nee (Sociology), R. E. Ripple (Education), N. Sakai (Asian Studies), P. S. Sangren (Anthropology), C. L. Shih (Modern Languages and Linguistics), R. J. Smith (Anthropology), M. W. Young (History of Art)

Courses

110 Introduction to Asian American Studies
Fall. 3 credits.
T R 2:55–4:10. Staff.
This introductory course examines the historical roots of Asians in America—the causes and sources of Asian immigration to the United States, the experiences of these pioneers, and their major role in the development of the western states. It also examines the U.S. response to these Asian immigrants, and analyzes contemporary issues such as self-worth, identity, and the influences of mass media.

262 Asian American Literature
Spring. 3 credits.
Staff.
This course explores the diverse worlds of past and present Asian America through critical reading of selected works by Asian American writers. Emphasis is on helping students locate and develop their own points of view with regard to America as a pluralistic society with a diverse and evolving literary heritage. Topics covered include the oral tradition; the creative process for Asian American writers; incarceration and resistance; generation, gender, and community; and diversity and evolution. Students will keep a reading journal with entries focusing on connections among what is read, class discussion, and perceptions of life.

435 Asian American Images and Stereotypes in Film
Fall. 3 credits. Prerequisite: AAS 110 or permission of instructor.
Staff.
This course examines images of Asian Americans in domestically produced film and television and analyzes these images with a historical and socio-cultural framework. Within this context, film and media theory are used to assess the impact of these images on viewers. Students' projects will include the creation of a video or a paper using images that more realistically reflect Asian American life and issues.

610 Asian Americans, Civil Rights, and the Law
Fall. 3 credits. Prerequisite: Seniors may enroll with permission of instructor.
M 1–3:30. R. J. Chin, J. Moy.
This course examines major immigration and civil rights laws and Supreme Court cases which have impacted Asians in America. Topics include America's immigration policy; alien land laws and Asian American community development; Japanese American internment; the failure of the Constitution and the redress and reparation movement; Asian women and the law; Asian labor; voting rights and Asian empowerment; anti-Asian violence and the criminal justice system; equal education opportunity and contemporary legal issues in Asian American communities (from the "English only" initiative to new immigration bills). American laws and Supreme Court cases will be analyzed, and the treatment of Asian Americans and other minority groups within the American system will be contrasted.

Biology and Society

F. H. Buttel, chair, biology and society (275 Clark Hall, 255-6042); A. G. Power, director of undergraduate studies, colleges of Arts and Sciences and Agriculture and Life Sciences; V. Utermohlen, advising coordinator, College of Human Ecology; R. Battistella, B. Bedford, A. Boehm, R. Boyd, U. Bronfenbrenner, emeritus, S. M. Brown Jr., emeritus, S. Ceci, B. Chabot, C. C. Chu, J. Ford, J. Fortune, C. Geisler, M. Gilliland, S. Gilman, D. Gurak, J. Haas, M. A. Harwell, R. Howarth, H. C. Howland, S. Jasanoff, K. Kennedy, B. Knuth, A. Lemley, M. Lenzenweger, S. A. Levin, B. A. Lewis, J. Fessenden MacDonald, K. S. March, L. Palmer, A. Parrot, D. Pimentel, D. L. Poston, Jr., W. Provine, H. Ricciuti, emeritus, S. Robertson, R. Root, M. Small, H. Stinson, N. Sturgeon, J. M. Stycos, P. Taylor, M. W. Wachsberg

The biology and society major is offered to students enrolled in the College of Arts and Sciences and the College of Human Ecology. Undergraduates in the College of Agriculture and Life Sciences can develop an approved sequence of courses from the biology and society curriculum under general studies. The major is coordinated for students in all colleges through the biology and society office. Students can get information, specific course requirements, and application procedures for the major from the office in 275 Clark Hall.

Because the major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises. These include introductory courses in the fields of ethics, history or philosophy, biochemistry, ecology, genetics, evolutionary biology, and statistics. In addition, majors are required to take a core course and must develop a theme: a coherent and meaningful grouping of six courses representative of their special interest in biology and society. Students should develop the theme and select the courses in consultation with a member of the biology and society faculty. Courses must be above the 100 level, at least 3 credits, and taken for a letter grade if used to fulfill a major requirement.

There are student advisers and faculty available (according to posted office hours or by appointment) in the biology and society office, 275 Clark Hall or 278 Clark Hall (advising office), to answer questions and to provide assistance.

Admission to the Major

Arts and Sciences and Agriculture and Life Sciences

Students should have completed a year of college-level biology and submit an application during their sophomore year. Juniors are considered on a case-by-case basis. Upper-division applicants should realize the difficulties of completing the major requirements in fewer than two years. The application includes (1) a one- to two-page statement explaining the student's intellectual interests in the biology and society major and why the major is consistent with the student's academic goals and interests; (2) a selected theme in the major; (3) a tentative plan of courses fulfilling biology and society requirements, including courses taken and those the student plans to take; and (4) a transcript of work taken at Cornell University and elsewhere if applicable, current as of the date of application.

Acceptance into the major requires completion of the course sequence in introductory biology. Sophomores in the process of completing this prerequisite may be admitted to the major on a *provisional* basis. It is the student's responsibility to assure that final acceptance is granted on satisfactory completion of the introductory biology sequence. Although only introductory biological science is a prerequisite for acceptance, students will find it useful to have completed some of the other requirements (listed below) by the end of their sophomore year, preferably in the first semester.

Human Ecology

Human Ecology students should consult the current Human Ecology Guide and meet with the college advising coordinator, Virginia Utermohlen, N206a Martha Van Rensselaer Hall, 255-2136.

Major Requirements

1) Basic courses
   - A. Biological sciences 101–104 or 105–106 or 107–108
   - B. College calculus (one course): Math 106, 111, 112 or any higher-level calculus course
   - C. General chemistry (one-year sequence): Chem 103–104, 207–208, or 215–216.
2) Foundation courses (should be completed by the end of the junior year): one course in *each* subject area
   - A. Ethics: B&Soc 205 (also Bio Sci 205 and Phil 245) or B&Soc 206 (also Bio Sci 206 and Phil 246)
   - B. History *or* philosophy: Phil 381 or 389, or B&Soc 288 (also Hist 288 and Bio Sci 202), or Bio Sci 207 (also Hist 287), or Hist 282
   - C. Biochemistry: Bio Sci 231 or 330 or 331
   - D. Ecology: Bio Sci 261
   - E. Genetics: Bio Sci 281 or 282 or Pl Br 225
   - F. Evolutionary Biology: Bio Sci 378
   - G. Statistics: Stat 200, ILR 210, Ag Ec 310, Ed 353, Soc 301, Psych 350, Math 372, Econ 319, OR&IE 370, Stat 215, or Stat 601
3) Core courses (one course)
   - A. 301 Biology and Society: The Social Construction of Life (also Biological Sciences 301)
   - B. Phil 286: Science and Human Nature
4) Themes (six courses above the 100 level)
   - A. Natural Sciences issues (one course)
   - B. Social sciences issues (one course) and elective (one course)
   - C. Humanities issues or elective, or additional social sciences elective (one course)

Note: If 301 is taken as the core course, a humanities course must be taken to fulfill this requirement.

   - D. Biology elective (one course)
   - E. Senior seminar (one course *in the senior year*). Courses change yearly.

Themes in the Major

Students are encouraged to develop their own themes in a concentration area. Examples include biology, behavior, and society; biology and human population; biology and public policy; environment and society; food, agriculture, and society; and health and society. Sample theme areas are available in the biology and society office.

Independent Study

Projects under the direction of a biology and society faculty member are encouraged as part of the program of study in the student's theme area. Applications for research projects are accepted by individual faculty members. Biology and Society majors may enroll for 1–4 credits in Biology and Society 375 (Independent Study) with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Biology and Society majors from the colleges of Arts and Sciences and Agriculture and Life Sciences may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the biology and society office, 275 Clark Hall. Independent study credits may not be used in completion of the major requirements.

Honors Program

The honors program is available to biology and society majors from the colleges of Arts and Sciences and Agriculture and Life Sciences and is designed to challenge the academically-talented undergraduate student. Students who enroll in the honors program are given the opportunity to do independent study and to develop the ability to evaluate research dealing with issues in biology and society. Students participating in the program should find the experience intellectually stimulating and rewarding.

Selection of Students: During the first three weeks of the fall semester, senior biology and society majors are considered for entry into the honors program by the Honors Program Committee. Applications for the honors program are available at the biology and society office, 275 Clark Hall. To qualify for the honors program, students must explain how the honors work will fit into their overall program, must have an overall Cornell cumulative grade-point average of at least 3.00 and at least a 3.30 cumulative grade-point average in all courses used to meet the major requirements. Students in the College of Agriculture and Life Sciences must also meet the requirements of that college and be selected by one of the existing college honors committees.

If, after admission to the honors program, a student fails to maintain a high scholastic average, or if for any other reason(s) he or she is considered unsuited for honors work, the student reverts to candidacy for the regular bachelor's degree. The student who does not continue in the honors program receives credit for any work passed in the program but is not eligible for a degree with honors.

Project Requirements: The satisfactory completion of a special project and the writing and oral defense of an honors thesis are required. The project must include substantial research, and the completed work should be of wider scope and higher quality than the work normally required for an advanced course.

Initiative for formulation of ideas, developing the proposal, carrying out the study, and preparation of a suitable thesis lies with the student. Honors projects will be under the direction of two advisers. Candidates must first find a biology and society faculty member willing to serve as the adviser and, together with the adviser, find a second adviser among the faculty at large. The purpose of the second adviser is to guarantee expertise in the subject matter covered by the thesis. Students in the College of Agriculture and Life Sciences must select this adviser from the area in which their thesis will be reviewed.

Students must enroll in Biology and Society 499 for one or both terms of their senior year after consultation with the biology and society thesis adviser. They take from 3 to 5 credits per term with up to a maximum of 8 credits in Biology and Society 499. Students are encouraged to enroll for both terms to give them time to develop a project properly for the thesis. If registering for a two-semester honors project, students must register for the total credits desired for the whole project each term (e.g., 8 credits for the fall term and 8 credits for the spring term). Students should note, however, that Biology and Society 499, because it is a special honors course, is to be taken in addition to those courses that meet the regular major requirements. Honors projects cannot be used to fulfill the senior seminar requirement.

Honors Thesis: Students and their advisers should meet regularly during the period of research and writing for the honors thesis. The responsibility for scheduling these meetings, and for carrying out the research agreed on, rests with the student. Advisers are expected to make themselves available for discussion at the scheduled times and to offer advice on the plan of research, as well as provide critical and constructive comments on the written work as it is completed. They are not expected, however, to have to pursue students either to arrange meetings or to ensure that the research and writing are being done on schedule.

There is no prescribed length for a thesis, since different topics may require longer or shorter treatment, but it should normally be no longer than seventy double-spaced, typed pages. When a thesis has been completed in a form satisfactory for purposes of evaluation, the candidate must meet with the thesis advisers and one member of the Honors Program Committee and formally defend the thesis. This should be no later than the last day of classes. Any student would be well advised, however, to provide reviewers with a polished draft at least four weeks prior to the last day of classes and defend his or her thesis well in advance of the end of classes to allow time for revisions. A public presentation of the honors work to faculty and students will be scheduled at the end of the student's last semester.

Evaluation and Recommendation: Two copies of the completed and defended thesis (suitably bound in a plastic or hard-backed cover), together with the advisers' recommendations, must be submitted to the Honors Program Committee by the first day of study period of the student's final term.

Following the formal defense of the thesis, the thesis advisers will each submit to the Honors Program Committee a recommendation that includes (1) an evaluation of the honors work and the thesis, (2) an evaluation of the student's academic record in the biology and society major, and (3) a recommendation for or against awarding honors. (For College of Arts and Sciences students, a justification for the level of honors proposed must be included.)

Copies of the thesis and recommendations will be circulated to the Honors Program Committee. As the committee may have little knowledge of the subject area of the thesis, letters of recommendation should be carefully prepared to help the committee ensure consistency in the honors program. Unless there is serious disagreement, the recommendation of the advisers should stand. If there is disagreement, the Honors Program Committee will make the decision after consultation with the interested parties.

Freshman Writing Seminars

103 In the Company of Animals
Spring. 3 credits.
A. Boehm.

[104 Ecosystems and Ego Systems
Spring. 3 credits.
M. Gilliland.]

108 Living on the Land
Fall. 3 credits.
A. Boehm.

109 Women and Nature (also English 105.5)
Fall. 3 credits.
M. Perks.

[113 Writing as a Naturalist (also English 113)
Spring. 3 credits.
M. Gilliland.]

[115 The American Way: Addiction and Consumption
Spring. 3 credits.
M. Gilliland.]

For up-to-date information consult the John S. Knight Writing Program brochure.

Foundation Courses

A. Ethics (select one)

205 Ethics and Health Care (also Philosophy 245 and Biological Sciences 205)
Fall. 4 credits. Limited to 70 students. Registered students not attending the first week will be dropped from the course. Open to sophomores, juniors, and seniors; permission of instructor required for graduate students.
Lecs, T R 10:10–11:25, disc, 1 hour each week to be arranged. M. Wachsberg.
Critical *philosophical* analysis of the conceptual frameworks in which ethical problems associated with health care can be formulated and solutions evaluated. General topics (with sample issues in parentheses) include knowledge in ethics (ethical skepticism, ethical relativism); proper social allocation of resources for, and within, medicine (entitlement to health care, access to scarce medical resources, cost-benefit analysis); the proper account of basic concepts such as illness, death, autonomy, and personhood (abortion, euthanasia, procreative technologies); and the professional-patient relationship (informed consent, confidentiality, medical paternalism). *Note:* A more detailed description of this course is available in the biology and society office, 275 Clark Hall.

206 Ethics and the Environment (also Philosophy 246 and Biological Sciences 206)
Spring. 4 credits. Open to all undergraduates; permission of instructor required for graduate students.
Lecs, T R 10:10–11:25, disc, 1 hour each week to be arranged. M. Wachsberg.
Critical *philosophical* analysis of the conceptual frameworks in which policies affecting the environment are formulated and judged. An introductory section of the course discusses the nature of ethics and the possibility of knowledge in ethics. The first major substantive component of the course deals with the nature and extent of individual and social obligations to spatially distant people, future generations, nonhuman animals, and nonsentient things (e.g., the ecosystem). The second major component of the course deals with the appropriate analysis of the origin of environmental problems and the range of options for their solution. Topics include individual vs. collective goods, cost benefit analysis, and coordination problems. *Note:* A more detailed description of this course is available in the biology and society office, 275 Clark Hall.

B. History or Philosophy (select one)

[288 History of Biology (also History 288 and Biological Sciences 202)
Spring. 3 credits. Prerequisite: one year of introductory biology. S-U grade optional. Not offered 1990–91.
Lecs, T R 10:10–11:25. W. B. Provine.
An examination of the history of biology, emphasizing the interaction of biology and culture. Original writings of biologists constitute the bulk of reading assignments. This course covers the period from classical antiquity to the present, but primary emphasis is on twentieth-century biology.]

History 282 Science in Western Civilization
Spring. 3 credits.
P. Dear.

History 287 Evolution (also Biological Sciences 207)
Fall. 3 credits. (May not be taken for credit after Biological Sciences 378, Evolutionary Biology.)
W. B. Provine.

Philosophy 381 Philosophy of Science: Knowledge and Objectivity
Fall. 4 credits.
R. Boyd.

[Philosophy 389 Philosophy of Science: Evidence and Explanation
Spring. 4 credits.
R. Miller.]

C. Biochemistry (select one)

Biological Sciences 231 General Biochemistry
Fall. 3 credits.
J. M. Griffiths.

Biological Sciences 330 Principles of Biochemistry, Individual Instruction
Fall and spring. 4 credits.
M. Ferger.

Biological Sciences 331 Principles of Biochemistry, Lectures
Fall. 4 credits. (2 credits if taken after Biological Sciences 231)
J. K. Moffat.

D. Ecology

Biological Sciences 261 Ecology and the Environment
Fall. 4 credits.
R. Root and T. Dawson.

E. Genetics (select one)

Biological Sciences 281 Genetics
Fall, spring, and summer. 5 credits.
R. S. MacIntyre and M. L. Goldberg.

Biological Sciences 282 Human Genetics
Spring. 3 credits. (2 credits if taken after Biological Sciences 281)
R. Calvo.

[Plant Breeding 225 Plant Genetics
Spring. 4 credits.
M. A. Mutschler.]

F. Evolutionary Biology

Biological Sciences 378 Evolutionary Biology
Spring. 4 credits. (2 credits if taken after History 287/Biological Sciences 207.)
R. G. Harrison.

G. Statistics (select one)

Agricultural Economics 310 Introductory Statistics
Fall and spring. 4 credits.
C. VanEs.

Economics 319 Introduction to Statistics and Probability
Fall. 4 credits.
J. Park.

Education 353 Introduction to Educational Statistics
Spring. 3 credits.
J. Millman.

Industrial and Labor Relations 210 Statistics: Statistical Reasoning
Fall and spring. 4 credits.
Staff.

Mathematics 372 Elementary Statistics
Fall. 4 credits.
Staff.

Operations Research and Industrial Engineering 370
Fall. 4 credits.
Staff.

Psychology 350 Statistics and Research Design
Fall. 4 credits.
T. Gilovich.

Sociology 301 Evaluating Statistical Evidence
Fall. 4 credits.
R. Breiger.

Statistics 200 Statistics and the World We Live In
Spring. 3 credits.
Staff.

Statistics 215 Introduction to Statistical Methods
Fall. 3 credits.
Staff.

Statistics 601 Statistical Methods I
Fall. 4 credits.
Staff.

Core Courses

301 Biology and Society: The Social Construction of Life (also Biological Sciences 301)
Fall. 4 credits. Prerequisite: one year of introductory biology. Students taking 301 as a core course must take a humanities course as part of their theme requirement.
Sem and disc, M W 2:30–4:25. P. Taylor.
Controversial issues, past and present, in the life sciences and tools for analysis of the social, historical, and conceptual underpinnings of these issues. Topics include evolution and natural selection, heredity and genetic determinism, biotechnology and reproductive interventions, ecology and environmental change. Analytic themes include bias, metaphor, historical semantics, styles of explanation, determinism, causality, interest, social construction, and mapping. Through discussions and writing assignments, students will develop analytic skills and their own responses to current issues.

Philosophy 286 Science and Human Nature
Spring. 4 credits.
Lecs, M W F 11:15, disc, to be announced. R. Boyd.
An examination of attempts in the biological and social sciences to offer scientific theories of human nature and human potential and to apply such theories to explain important social and psychological phenomena. Topics vary, and may include issues in psychology, such as behaviorism, Freudianism, and artificial intelligence, or issues in the foundations of historical theory, such as methodological individualism and economic determinism, as well as relevant issues in the biological sciences.

Themes

A. Issues - Natural Sciences

201 Biotechnology: The "New" Biology (also Biological Sciences 201)
Spring. 3 credits. Prerequisite: one year of introductory biology. Not intended for students planning to enroll in BioSci 281, 330, or 331.
Sem and disc hours to be announced.
J. Fessenden MacDonald et. al.
A general introduction to the application of modern molecular biology and cell culture techniques to the manipulation of genetic engineering of animals, plants, and microorganisms. Information on recombinant DNA technology, monoclonal antibodies, plant and/or animal cell culture, and embryo manipulation methods will be presented. Commercial applications to health, forensics, environment, agriculture, and food as well as the economic, social policy, regulatory, ethical, and legal issues that surround biotechnology will be discussed. The course will be taught in four modules and the topics will vary from year to year. The topics of spring 1991 will be Gene Probes as Diagnostics and Molecular Fingerprints, Immunology and Monoclonal Antibodies, Reproductive Biotechnology, and Genetically Engineered Plants in Agriculture.

[232 Recombinant DNA Technology and Its Applications (also Biological Sciences 232)
Spring. 3 credits. Disc limited to 20 students. Prerequisite: one year of introductory biology. There is a possible fee for course reading material.
Lecs and discs, M W F 11:15. J. Calvo, J. Fessenden MacDonald, F. H. Buttel.
An introduction to molecular approaches to biology. Basic concepts underlying recombinant DNA technology together with strategies for cloning genes are discussed. Much of the course deals with applications of recombinant DNA technology to basic research and to biotechnology. Applications to be discussed include screening for genetic diseases, plant improvement, and production of insulin, interferon, blood-clotting factors, growth hormones, vaccines, and feedstock chemicals. Scientific, historical, regulatory, social, and ethical issues form the basis of the discussions. Recommended especially for sophomores desiring a firm background in recombinant DNA technology in preparation for taking genetics and biochemistry. Also appropriate for an intelligent layperson who wants to understand some new research discoveries and applications stemming from them.]

347 Human Growth and Development: Biological and Social Psychological Considerations (also Human Development and Family Studies 347 and Nutritional Sciences 347)
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and Human Development and Family Studies 115 or Psychology 101. Offered alternate years.
Lecs M W F 1:25–2:15. J. Haas and S. Robertson.
A review of major patterns of physical growth from the fetal period through adolescence, with consideration of biological and socio-environmental determinants of growth as well as physical and psychological consequences of variations in growth patterns. An examination of normal patterns of growth is followed by an analysis of major sources of variations in growth (normal and atypical).

469 Food, Agriculture, and Society (also Biological Sciences 469)
Spring. 3 credits. Prerequisite: an introductory ecology course or permission of instructor. There is a possible fee for course reading material.
Lecs, T R 1:25–2:40 plus disc to be arranged. A. G. Power.
A multidisciplinary course that deals with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, farm labor, land reform, biotechnology, and international food policy.

Biological Sciences 246 Plants and Civilization
Spring. 3 credits.
D. Bates.

Biological Sciences 275 Human Biology and Evolution (also Anthropology 275)
Fall. 4 credits.
J. Haas and K. Kennedy.

Natural Resources 201 Environmental Conservation
Spring. 3 credits.
T. Fahey.

Nutritional Sciences 361 Biochemistry and Human Behavior (also Psychology 361)
Fall. 3 credits.
B. Strupp.

Nutritional Sciences 650 Public Health Nutrition
Spring. 3 credits.
D. Roe.

B. Issues - Social Sciences

300 Investigative Research on the Social Impact of Science
Spring. 4 credits. Prerequisite: one year of science.
Sem and disc, M W 2:30–4:25. P. Taylor.
Students choose a current issue in the social impact of biological or physical sciences and work through the steps of investigation from issue definition to spoken presentations and proposals for action. In a workshop setting, students comment on and learn from each other's projects and discuss case studies and articles, with occasional guest speakers and films.

[407 Law, Science, and Public Values (also Government 407)
Spring. 4 credits.
Lec, M 2:30–4:30; disc, W 1:25 or 3:35.
S. Jasanoff.
This course explores the varied interactions between science and the legal process that have developed in recent years as a result of attempts to bring greater public accountability to the use of science and technology. It examines the activities of both legislatures and courts in controlling science and analyzes the values underlying these initiatives. Three major types of science-law interactions form the focus of the course: regulation of new technologies, judicial review of risk-management decisions, and legal control of professional standards in science and technology. Specific topics include the regulation of toxic chemicals and nuclear power, controversies about biotechnology, reproductive technologies and biomedical research, and science fraud.]

Biological Sciences 673 Human Evolution: Concepts, History, and Theory (also Anthropology 673)
Fall. 3 credits.
K. Kennedy.

City and Regional Planning 480 Environmental Politics
Spring. 3 credits.
R. Booth.

City and Regional Planning 551 Environmental Law
Fall. 3 credits.
R. Booth.

[City and Regional Planning 656 Land Resources Protection Law
Fall. 3 credits.
R. Booth.]

[Consumer Economics and Housing 450 Economics of Health, Health-care Expenditures, and Health Policy
Fall. 3 credits.]

History 233 Agriculture, Science, and Society: From Squanto to Biotechnology
Fall. 4 credits.
M. Rossiter.

[Human Development and Family Studies 258 The Historical Development of Women as Professionals, 1800 to the Present (also Women's Studies 238)
Spring. 3 credits.
J. Brumberg.]

[Human Development and Family Studies 372 Typical and Atypical Intellectual Development
Spring. 4 credits.
S. Ceci.]

Human Development and Family Studies 488 Development in Context (also Psychology 488)
Spring. 4 credits.
U. Bronfenbrenner.

Human Service Studies 315 Human Sexuality
Spring. 3 credits.
A. Parrot.

[Human Service Studies 325 Health Care Services and the Consumer
Fall. 3 credits.
A. Parrot.]

[Human Service Studies 330 Ecology and Epidemiology of Health
Fall. 3 credits.
A. Parrot.]

Human Service Studies 634 Health Care Organization—Providers and Reimbursement
Fall. 3 credits.
R. Buchanan.

Human Service Studies 688 Alternative Health and Social Services Delivery Systems: Long-Term Care and the Aged
Spring. 3 credits.
R. Battistella.

Natural Resources 400 International Environmental Issues
Fall. 4 credits.
R. McNeil.

[Nutritional Sciences 325 Sociocultural Aspects of Food and Nutrition
Fall. 3 credits.
D. Sanjur.]

Nutritional Sciences 445 Community Nutrition and Health
Spring. 3 credits.
A. Gillespie.

Nutritional Sciences 457 National and International Food Economics
Spring. 3 credits.
E. Thorbecke.

Psychology 326 Evolution of Human Behavior
Fall. 4 credits.
R. Johnson.

Rural Sociology 201 Population Dynamics (also Sociology 205)
Spring. 3 credits.
J. M. Styces.

Rural Sociology 205 Rural Sociology and International Development
Spring. 3 credits.
P. McMichael.

Rural Sociology 324 Environment and Society
Fall. 3 credits.
F. Buttel.

Rural Sociology 490 Society and Survival
Fall. 3 credits.
D. Gurak.

C. Issues - Humanities

[322 Medicine and Civilization
Spring. 4 credits. Offered alternate years. Not offered 1990–91.
Lecs T R 1:25–2:40. S. Gilman.
What is sickness? What is health? Who is the physician? Is a physical illness different from mental illness? Where is medicine practiced? Is being a patient or a doctor different from culture to culture and from age to age? This course will introduce the undergraduate student to the historical and cultural context of medicine. Our sources will range from the texts of ancient Greek medicine to contemporary films and novels dealing with medicine. We will examine the historical and social context of mental illness as well as physical illness from the standpoint of patient, physician, and "society." The class will consist of lecture and discussion. All of the primary readings are available in English.]

Natural Resources 407 Religion, Ethics, and the Environment
Spring. 3 credits.
R. Baer.

Philosophy 241 Ethics
Spring. 4 credits.
T. H. Irwin.

D. Senior Seminars

[401 The History of Biology (also History 447)
Fall. 4 credits. Limited to 20 students. A Common Learning course. Not offered 1990–91.
Sec, T 2:30–4:30. W. Provine.]

[402 The History of Biology (also History 448)
Spring. 4 credits. Not offered 1990–91.
Sec, T 2:30–4:30. W. Provine.]

[404 Human Fertility in Developing Nations (also Rural Sociology 408)
Fall. 3 credits. Prerequisite: a population course or permission of instructor. Offered alternate years.
Lecs, R 3–5:30. J. M. Stycos.
A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.]

[406 Biotechnology and Law
Fall. 4 credits. Limited to 20 students. Recommended: a course in genetics or rDNA, a course in American government or law, or permission of instructor. Fee for course reading materials.
Lec, R 2:30–4:25. S. Jasanoff.
Biotechnology, with its myriad applications in areas such as medicine and agriculture, is developing more rapidly than the social institutions that are capable of controlling it. This course explores the use and potential abuse of biotechnology in areas such as genetic screening and counseling, reproductive technologies, intentional release of genetically engineered organisms, patents, and ownership of human tissue. Particular attention will be given to evolving legal and management strategies for regulating the applications of biotechnology. Readings are from science, medicine, law, and public policy. A research paper is required.]

414 Population Policies (also Rural Sociology 418)
Fall. 3 credits. Prerequisite: a population course or permission of instructor. Offered alternate years.
Lecs, T R 2:30–3:45. J. M. Stycos.
The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to influence fertility.

415 The Politics of Technical Decisions (also City and Regional Planning 541, Government 628)
Spring. 4 credits.
Lecs, hours to be announced.
P. Edwards.
Political aspects of decision-making in technical areas. Drawing from recent risk disputes, we will examine the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system.

426 Medicine and the Law
Fall. 4 credits. Letter grades only.
Lecs, T 2:30–4:25. Limited to 16 students.
L. Palmer.
The role of law in modern medicine (and the related biomedical sciences) will be examined from the perspective of the social functions of law and medicine. A number of policy and ethical issues will be considered, including the role of hospitals and other health organizations in doctor-patient interactions, the social aspects of physician-patient interactions, reproductive technologies, the effect of medical malpractice on health-care delivery, legal issues in the care of the newborn and health-care decisions for incompetents and terminally ill patients.

428 Medical Service Issues in Health Administration (also Human Service Studies 628)
Spring. 3 credits.
Sec, M W 2:15–3:30. V. Utermohlen.
A survey of the issues that affect interactions between the health-care consumer and the health-care team, including disease processes (how disease occurs and progresses), the health-care team and illness, third-party payment and illness, and resource allocation.

434 Biotechnology: Science, Policy and Values (also Biological Sciences 434)
Spring. 3 credits. Fee for photocopied materials.
Sem, W 1:25–4:25.
J. Fessenden MacDonald.
Topic for 1991: environment, agriculture, and food biotechnology. Issues raised by the introduction of new biotechnology products and procedures to medicine, food and agriculture, environment, and the legal system will be analyzed. There will be an examination of the scientific, political, legal, economic, social, and ethical implications. Cases studied will vary each term. Background is provided on the molecular biology and applied science aspects of the biotechnology under consideration. Readings from various disciplines, including scientific papers, government reports, and industrial and legal reports, will provide background for class discussions. A research paper and oral presentations are required. Topics for 1992: rDNA drugs and diagnostics, DNA fingerprinting, and gene therapy.

442 Social and Political Studies of Science (also City and Regional Planning 442)
Fall. 3 or 4 credits.
Lecs, hours to be announced. T. Pinch.
A view of science less as an autonomous activity than as a social and political institution. We will discuss such issues as secrecy in science, ethical and value disputes, and the limits to scientific inquiry in the context of the changing relationships between science and the public.

451 AIDS and Society
Fall. 3 credits. Limited to 20 students who have been approved by Professor A. van Tienhoven, 102 Rice Hall. A Common Learning course.
W 2:30–4:30. Optional 1 hr. discussion, M 2:30. A. van Tienhoven and others.
Discussions of the impact of acquired immune deficiency syndrome (AIDS) on society will consist of faculty seminars on the biology of the virus, the epidemiology of the disease, the legal aspects of controlling the spread of the disease, and the impact of the disease on the performing arts, especially theater. Students will have the opportunity to initiate and carry out (a) class project(s).

460 Social Analysis of Ecological Change (also Rural Sociology 660)
Fall. 3 credits. Limited to 20 students. Seniors must have permission of instructor. Offered alternate years.
Sem, M 7:30–10:30 p.m. P. Taylor.
Scientific studies of ecological and social processes, together with the analysis of those studies and their interpretation by historians, sociologists, and anthropologists. Topics include cybernetics, systems ecology, the tragedy of the commons, the *Limits to Growth*, ecological degradation, political ecology, global models, conservation biology, and sustainable development.

461 Environmental Policy (also Biological Sciences 661 and Agriculture and Life Sciences 661)
Fall and spring. 6 credits. Prerequisite: permission of instructor. This is a two-semester course.
Sec, R 2:30–4:30. D. Pimentel.
This course uses an interdisciplinary approach to focus on complex environmental and energy problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*.

Human Service Studies 625 Consumer and Ethical Perspectives
Fall. 3 credits. If using this course as a senior seminar, Biology and Society majors must inform instructor and write a major paper for a fourth credit. Enrollment is limited to 30 (10 undergraduates). Permission of instructor is required.
M W 2–4:15 (until 10/31). A. Parrot.

Other Courses

375 Independent Study
Fall or spring. 1–4 credits. Prerequisite: must be a Biology and Society major and have written permission of faculty supervisor.
Staff.
Projects under the direction of a Biology and Society faculty member are encouraged as part of the program of study within the student's concentration area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1–4 credits in Biology and Society 375 (Independent Study) with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Students may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology and Society office, 275 Clark Hall. Independent study credits may not be used in completion of the major requirements.

400 Undergraduate Seminar
Fall or spring. Variable credit. May be repeated for credit.
Staff.
From time to time different seminars on topics of interest to undergraduates are offered. Topics and instructors are listed in the biology and society supplement issued at the beginning of each semester.

499 Honors Project
Fall or spring; two-semester projects are acceptable. 3–5 credits each term with a maximum of 8 credits for the entire project. Open only to Biology and Society students in their senior year.
Staff.
Students enrolled in Biology and Society 499 will receive a letter grade at the end of their final term, whether or not they complete a thesis and whether or not they are recommended for honors. Students enrolled for the whole year in 499 may receive either a letter grade for both terms or a grade of "R" for the first term with a letter grade for both terms submitted at the end of the second term. When a student is enrolled for two terms, the student and the thesis adviser must reach a clear agreement at the outset as to which grade will be assigned for the first term and on the basis of what sort of work. Minimally an honors thesis outline and bibliography should be completed during the first term. Applications and information are available in the Biology and Society office, 275 Clark Hall.

Cognitive Studies Program

F. Keil (psychology), S. McConnell-Ginet (linguistics), codirectors. G. Bilardi, K. Birman, R. Constable, B. Donald, D. Huttenlocher, D. McAllester, P. Panangaden, G. Salton, A. Segrè, D. Subramanian, (computer science); J. Condry, B. Koslowski, B. Lust, M. Potts, G. Suci (human development and family studies); L. Babby, J. Bowers, G. Chierchia, G. N. Clements, J. Gair, W. Harbert, J. Huang, J. Kingston, A. Landman, S. McConnell-Ginet, C. Rosen, C. Shih, M. Suñer, L. Waugh, J. Whitman (linguistics); A. Nerode, R. Platek, R. Shore (mathematics); A. Appiah, R. Boyd, C. Ginet, H. Hodes, S. Shoemaker (philosophy); J. Cutting, B. Finlay, E. Gibson, B. Halpern, F. Keil, C. Krumhansl, H. Kurtzman, H. Levin, E. Spelke (psychology)

Cognitive studies is comprised of a number of disciplines that are linked by a major concern with such fundamental capacities of the mind as perception, memory, reasoning, language, and motor control. In the College of Arts and Sciences these disciplines are represented in the departments of Computer Science, Linguistics, Mathematics, Philosophy, and Psychology. Elsewhere in the university they are represented in the Department of Human Development and Family Studies (College of Human Ecology), the Section of Neurobiology and Behavior (Division of Biological Sciences), and the Department of Education (College of Agriculture and Life Sciences).

The issues addressed in cognitive studies arise at several levels. At the broadest level are problems of characterizing such basic notions as "mind," "knowledge," "information," and "meaning." At a more specific level are questions regarding the abstract operating principles of individual components of the mind, such as the components underlying visual perception, language ability, and understanding of concepts. These principles concern the organization and behavior of the components and also how the components develop and change. And at the most specific level are questions about the properties of the elementary computational structures and processes that constitute these components.

Important insights into issues of these kinds have been achieved in recent years as a result of the various cognitive studies disciplines converging in their theoretical and methodological approaches. It is this convergence, in fact, that warrants grouping the disciplines together under the single term "cognitive studies." Even greater progress can be expected in the future as a consequence of increasing cooperation among the disciplines.

Undergraduate Concentration

Professor H. Kurtzman (psychology), director of undergraduate studies (224 Uris Hall, 255-3835).

The undergraduate concentration in cognitive studies provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. It is considered crucial that students gain a strong background in an individual department, independent of their work in the concentration. This background provides both a foundation and a focus for the concentration work.

In light of the importance of a strong background in an individual department, it is required that a student seeking admission to the concentration have completed or plan to complete three courses in one department from among the list of courses below. (Such a student will typically be a major in the department, but being a major is not necessary. The Section of Neurobiology and Behavior counts as a department here.) These three courses are, however, the only requirement for admission. To enter the concentration formally, the student should consult with the concentration director, who will assign the student a concentration adviser (from among the faculty listed above) who has expertise in the student's main areas of interest.

The concentration requires that the student take five courses from departments other than the one from which the student takes the three courses needed for admission to the concentration. These five courses may not all be taken from a single department. The student must gain approval for the selection of five courses from the concentration adviser. The five courses will generally be chosen from among the list below, but other courses (including independent study) are permissible in individual cases.

In addition to assisting in and approving the student's selection of courses, the concentration adviser serves as a general source of information about the field of cognitive studies, relevant resources around the university, and job and graduate school opportunities.

Graduate Minor

For information, consult the program office (225 Uris Hall, 255-6431).

Courses

Computer Science

172 An Introduction to Artificial Intelligence
Spring. 4 credits.

211 Computers and Programming
Fall or spring. 3 credits.

212 Modes of Algorithmic Expression
Fall. 4 credits.

280 Discrete Structures
Fall or spring. 4 credits.

381 (or 481) Introduction to Theory of Computing
Fall. 4 credits.

410 Data Structures
Fall or spring. 4 credits.

411 Programming Languages and Logics
Spring. 4 credits.

472 Introduction to Artificial Intelligence
Fall. 3 credits.

473 Practicum in Artificial Intelligence
Spring. 2 credits.

482 (382) Introduction to Analysis of Algorithms
Spring. 4 credits.

486 Applied Logic (also Mathematics 486)
Spring. 4 credits.

664 Machine Vision
Spring. 4 credits.

Education (College of Agriculture and Life Sciences)

210 Introduction to Applied Psychology: Learning and Memory
Fall. 3 credits.
J. A. Dunn.

Human Development and Family Studies (College of Human Ecology)

333 Cognitive Processes in Development
Fall. 3 credits.
Staff.

431 Learning in Children
Fall. 3 credits.
M. Potts.

432 Cognitive Development and Education
Spring. 3 credits.
M. Potts.

434 The Growth of the Mind: A View from Piaget's Theory
Spring. 4 credits.
B. Lust.

436 Language Development (also Psychology 436 and Linguistics 436)
Spring. 4 credits.
B. Lust.

438 Thinking and Reasoning
Fall. 3 credits.
B. Koslowski.

Linguistics

101–102 Theory and Practice of Linguistics
Fall and spring. 4 credits each term.
Staff.

264 Language, Mind, and Brain
Fall. 4 credits.
J. Bowers.

301–302 Phonology I, II
Fall and spring. 4 credits each term.
G. N. Clements.

303–304 Syntax I, II
Fall and spring. 4 credits each term.
Staff.

309–310 Morphology I, II
Fall and spring. 4 credits each term.
Staff.

316 Introduction to Mathematical Linguistics
Spring. 4 credits.
F. Landman.

319–320 Phonetics I, II
Fall and spring. 3 credits each term.
J. Kingston.

325 Pragmatics
Fall. 4 credits.
S. McConnell-Ginet.

370 Language and Cognition (also Psychology 370)
Spring. 4 credits.
J. Bowers, H. Kurtzman.

400 Semiotics and Language
Spring. 4 credits.
L. Waugh.

401 Language Typology
Fall. 4 credits.
J. Whitman.

412 Process and Knowledge in Speech Perception and Word Recognition
Spring. 4 credits.
J. Kingston.

418 Nonlinear Phonology
Spring. 4 credits.
J. Kingston.

420 Fundamentals of Speech Acoustics
Spring. 4 credits.
J. Kingston.

421–422 Semantics I, II
Fall and spring. 4 credits each term.
F. Landman.

436 Language Development (also Psychology 436 and HDFS 436)
Spring. 4 credits.
B. Lust.

Mathematics

481 Mathematical Logic
Spring. 4 credits.

483 Intensional Logics and Alternatives to Classical Logics (also Philosophy 436)
Spring. 4 credits.

486 Applied Logic (also Computer Science 486)
Fall. 4 credits.

487 Applied Logic II
Spring. 4 credits.

Neurobiology and Behavior (Division of Biological Sciences)

221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3 or 4 credits.
S. Emlen and staff.

222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits.
O. Hamill.

326 The Visual System
Spring. 4 credits.
H. Howland.

396 Introduction to Sensory Systems (also Psychology 396)
Spring. 3 or 4 credits.
B. Halpern.

424 Neuroethology
Fall. 3 credits.
Staff.

492 Sensory Function (also Psychology 492)
Spring. 4 credits.
H. Howland, B. Halpern.

Philosophy

231 Introduction to Formal Logic
Fall or spring. 4 credits.
C. Ginet.

261 Knowledge and Reality
Fall. 4 credits.

262 Philosophy of Mind
Spring. 4 credits.
S. Shoemaker.

318 Twentieth-Century Philosophy
Spring. 4 credits.
C. Ginet.

331 Formal Logic
Fall. 4 credits.
H. Hodes.

332 Philosophy of Language
Spring. 4 credits.
M. Crimmins.

361 Metaphysics and Epistemology
Fall. 4 credits.

381 Philosophy of Science: Knowledge and Objectivity
Fall. 4 credits.
R. Boyd.

382 Philosophy and Psychology
4 credits.

383 Philosophy of Choice and Decision
Spring. 4 credits.
M. Crimmins.

389 Philosophy of Science: Evidence and Explanation
4 credits.

431 Deductive Logic
4 credits.

433 Philosophy of Logic
4 credits.

436 Intensional Logic
Spring. 4 credits.

437 Problems in the Philosophy of Language
4 credits.

461 Metaphysics
Spring. 4 credits.
S. Shoemaker.

Psychology

205 Perception
Spring. 3 credits.
J. Cutting.

209 Development
Spring. 4 credits.
Staff.

214 Knowledge and Reasoning
Spring. 3 credits.
C. Krumhansl.

215 Psycholinguistics
Fall. 3 or 4 credits.
H. Kurtzman.

305 Visual Perception
Fall. 4 credits.
J. Cutting.

308 Perceptual Learning
Fall. 3 credits.
Staff.

309 Development of Perception and Representation
Fall. 3 credits.
E. Spelke.

313 Perceptual and Cognitive Processes
Fall. 4 credits.
Staff.

314 The Social Psychology of Language
Spring. 4 credits.
H. Levin.

316 Auditory Perception
Spring. 3 or 4 credits.
Staff.

332 Biopsychology of Learning and Memory
Spring. 3 credits.
T. DeVoogd.

370 Language and Cognition (also Linguistics 370)
Spring. 4 credits.
J. Bowers, H. Kurtzman.

396 Introduction to Sensory Systems (also Biological Sciences 396)
Spring. 3 or 4 credits.
B. Halpern.

412 Human Experimental Psychology Laboratory
Spring. 4 credits.
Staff.

415 Concepts, Categories, and Word Meanings
Fall. 4 credits.
F. Keil.

416 Psychology of Language
Spring. 4 credits.
H. Kurtzman.

417 The Origins of Thought and Knowledge
Spring. 4 credits.
F. Keil.

418 Psychology of Music
Fall. 3 or 4 credits.
C. Krumhansl.

425 Brain and Behavior
Fall. 3 or 4 credits.
B. Finlay.

436 Language Development (also Linguistics 436 and HDFS 436)
Spring. 4 credits.
B. Lust.

465 Mathematical Psychology
Spring. 4 credits.

490 History and Systems of Psychology
Fall. 4 credits.
H. Levin.

492 Sensory Function (also Biological Sciences 492)
Spring. 4 credits.
H. Howland, B. Halpern.

Graduate Courses and Seminars

The following courses and seminars are generally for graduate students only. However, some may be appropriate for advanced undergraduates. The director of the concentration must approve an undergraduate's use of any of these for satisfying the concentration requirements.

Cog St 773 (also Philosophy 773 and Psychology 773) Proseminar in Cognitive Studies I
Fall. 2 credits.

Cog St 774 (also Computer Science 774 and Linguistics 774) Proseminar in Cognitive Studies II
Spring. 2 credits.

Cog St 600/700 Graduate Seminars

CS 600/700 Graduate Seminars

HDFS 600/700 Graduate Seminars

Ling 600/700 Graduate Seminars

Math 581 Logic

Math 655 Mathematical Foundations of Computer Modeling and Simulation

Math 684 Recursion Theory

Math 688 Automated Theorem Proving

Phil 700 Graduate Seminars

Psych 500–700 Graduate Seminars

College Scholar Program

Dean Lynne Abel, director, 55 Goldwin Smith Hall, 255-3386.

The College Scholar program is described in the introductory section, p. 130.

397 Independent Study
Fall or spring. 1–4 credits. Prerequisite: permission of program office.

499 Honors Research
Fall or spring. 1–8 credits; a maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.

East Asia Program

140 Uris Hall

K. W. Brazell, director; S. Akiba, C. D. A. Bailey, R. Barker, M. C. Chou, S. G. Cochran, J. Cody, B. de Bary, E. M. Gunn, C. T. J. Huang, Q. Jia, J. V. Koschmann, J. M. (Swanberg) Law, L. C. Lee, T. P. Lyons, D. R. McCann, J. R. McRae, T. L. Mei, V. Nee, T. J. Pempel, C. A. Peterson, J. R. Piggott, D. L. Poston, M. Rebick, N. Sakai, P. S. Sangren, C. L. Shih, T. Shiraishi, V. B. Shue, R. J. Smith, R. J. Sukle, J. K. Wheatley, J. Whitman, A. Yee, M. W. Young

East Asian studies at Cornell is led by thirty-five faculty members from seven colleges, who participate in a program of research and teaching on the civilizations and cultures of East Asia. Courses are offered in most of the humanities and social science disciplines, as well as in the fields of business, city and regional planning, and rural sociology. Comprehensive language courses in Mandarin, Cantonese, and Japanese are taught, in addition to the Full-year Asian Language Concentration (FALCON) in Japanese and Mandarin. Elementary and intermediate-level Korean language instruction are also offered. Undergraduates major in the Department of Asian Studies and concentrate on the language and culture of one East Asian country, while graduate students may work toward an M.A. in East Asian studies, a dual M.B.A./M.A. degree, or an M.A./Ph.D. degree in a discipline such as agricultural economics, anthropology, city and regional planning, government, history, history of art, linguistics, literature, rural sociology, or sociology. A variety of fellowships, travel grants, awards, and assistantships are available for graduate students in East Asian studies.

The formal program of study is enriched by a variety of extracurricular activities, including a Chinese language house, various film series, career workshops, art exhibits, and numerous lectures and performances related to East Asia. The Wason Collection in Olin Library is a comprehensive collection of books on East Asia in Western languages, Japanese, and Chinese. The Mary Rockwell Galleries of the Herbert F. Johnson Museum of Art have an excellent collection of East Asian art.

Freshman Writing Seminars

For information about the requirements for freshman writing seminars and descriptions of seminar offerings, see John S. Knight Writing Program, p. 311, and consult the John S. Knight Writing Program brochure, available from college registrars in August for the fall term and in November for the spring term.

Program in History and Philosophy of Science and Technology

The Program in History and Philosophy of Science and Technology (HPST) is an interdisciplinary program that provides a broadly based perspective on science and its place in modern society. The faculty is drawn from numerous science and humanities departments and includes specialists in philosophy, history, and communications. A considerable number of courses is offered each year at the undergraduate level, ranging from historical surveys of physical and biological sciences to the philosophy of science. The cultural and intellectual history of science and technology in particular periods and in both American and European settings, courses in science writing, and the philosophy of quantum physics all contribute to the establishment of a richly structured field of opportunity for those undergraduates who wish to supplement their majors with an integrated yet wide-ranging series of studies that will further their understanding of a powerful social and cultural force.

The Concentration

The undergraduate concentration in HPST is an interdisciplinary offering providing a broadly based perspective on science and its place in modern society. It grants recognition to students, regardless of college or major, who have successfully completed before graduation a sequence of courses selected from among a substantial number of offerings. Credit for the concentration is awarded for the completion of at least one course in each of *four* categories. The courses currently on offer for 1990–91 under each category are listed below; certain unlisted courses from previous years may also qualify.

Interested students should contact Pat Dean, Program in the History and Philosophy of Science and Technology, 425 Caldwell Hall (tel. 5-6234), from whom information on available program advisers can also be obtained.

History of Science

- ** Hist. 281 *or* 282. Science in Western Civilization. Fall and spring. 281, Fall; 282, Spring. History 281 is not a prerequisite for 282.
- ** Hist. 287 (also Biological Sciences 207). Evolution. Fall.
- ** Hist. 288 (also Biological Sciences 202 and Biology and Society 288). History of Biology. Spring.
- ** Hist. 482. Origins of Modern Science. Spring.

History of Technology and Applied Sciences

- ** Engr 250. Technology in Western Society. Fall.
- ** Engr 256. Science and Technology in America. Spring.
- ** EE 292. The Electrical and Electronic Revolutions. Spring.

Philosophy of Science

- ** Phil. 286. Science and Human Nature. Spring.
- ** Phil. 381. Philosophy of Science: Knowledge and Objectivity. Fall.
- ** Phil. 384. Philosophy of Physics. Spring.
- ** Phil. 481. Problems in the Philosophy of Science. Spring.

Social Dimensions of Science

- ** Comm. 352. Science Writing for the Mass Media. Fall.
- ** Hist. 443. Science and Culture in Austria 1872–1930. Fall.
- ** Hist. 487 Science, Technology, and Strategy in the Post-Napoleonic World. Spring.

Interested students should contact Pat Dean, Program in HPST, 425 Caldwell Hall (tel. 5-6234), for a full listing of courses and for information on available program advisers.

Human Biology Program

J. Haas (nutritional sciences), director, 211 Savage Hall, 255-8001; R. Dyson-Hudson (anthropology), B. Finlay (psychology), J. Fortune (physiology/women's studies), R. Johnston (psychology), K.A.R. Kennedy (ecology and systematics/anthropology), D. Levitsky (nutrional sciences), D. McClearn (ecology and systematics), D. L. Pelletier (nutritional sciences), W. Provine (ecology and systematics/history), R. Robertshaw (physiology), S. Robertson (human development and family studies), R. Savin-Williams (human development and family studies), M. Small (anthropology)

Human biology integrates the methods and theories of many disciplines, such as biological anthropology, nutrition, neurobiology, physiology, psychology, demography, ecology, genetics, and paleontology, into a comprehensive study of biological diversity in *Homo sapiens.* A central focus of this interdisciplinary approach to the study of the human organism is an understanding of evolutionary processes that explain our biological variation through space and time. The program of study seeks to educate future biological scientists to address the concerns of a society that is becoming more demanding of the scientific community to place its specialized biological knowledge in a broad context. The human biology curriculum is of particular relevance to undergraduate students in premedical and predentistry programs, biological anthropology, nutrition, human development, ecology and systematics, psychology, physiology, genetics, and the health-related sciences. It serves to bring together students with a common interest in humankind as defined from these diverse fields and to provide a forum for student-faculty interaction on various topics relating to human evolution and biological diversity. Human biology is not a major but a curriculum of study that provides majors in various departments with a program for selecting elective courses that deal with the biology of the human species. Students in their junior year may develop a program of study in human biology while majoring in a number of different departmental fields.

Basic Requirements

The requirements for a program of study in human biology are designed to ensure sufficient background in physical sciences and mathematics to enable the student to pursue a wide range of interests in the fields of modern biological sciences, anthropology, and fields related to the evolution and physical diversity of the human species. Adjustments may be made in these requirements, depending upon the student's academic background and affiliation with colleges and schools within the university.

The basic requirements are one year of introductory biology (Biological Sciences 101–103 plus 102–104 or 105–106 or Biological Sciences 100 offered during the six-week Cornell Summer Session); one year of general chemistry (Chemistry 103–104 or 207–208 or 215–216); one year of college mathematics (Mathematics 111–112 or 105–106 or 111–105); one course in genetics (Biological Sciences 281 or 282); one course in biochemistry (Biological Sciences 231, 330 or 331). It is recommended that students planning graduate careers in biological anthropology, psychology, and related fields in the medical and nutritional

sciences take a course in statistics. Students should consult their faculty adviser in human biology for help in selecting appropriate courses.

Elective courses should be taken that will enable the student to acquire breadth in the subject matter of human biology outside of their departmental major. Therefore only 6 of the 15 human biology elective credits may also fulfill requirements for the major. Courses should be selected that also provide sufficient exposure to the integration of basic anatomical and physiological sciences with the behavior of individuals and groups within the context of evolutionary theory and ecology. The courses listed below are representative of the offerings in human biology and are included to assist the student in organizing a curriculum of study. They are organized into three groups that reflect the three levels of integration noted above: (1) human anatomy and physiology, (2) human behavior, and (3) human evolution and ecology. Students should choose at least one course from each of these areas of integration. It is anticipated that the student will include in a program of study at least one of the laboratory courses offered. It is expected that a student will take a minimum of 15 credits from among these courses.

There is no foreign language requirement for human biology beyond what is dictated by specific departments and colleges. The requirements for the human biology curriculum are set alongside requirements of the undergraduate majors as these are defined by different departments. Students with independent majors may design their own programs of study under the guidelines provided by their college. Although a student may indicate an interest in human biology in the freshman year and be able to obtain early guidance from a faculty adviser representing the curriculum of study, it is more usual for students to establish their course programs in the first semester of the junior year. The student may request one of the faculty advisers in his or her department who is listed as faculty in human biology to be their principal adviser, or he or she may have an adviser in the department of the major and seek the advice of a human biology faculty adviser in matters pertaining to satisfaction of the requirements. In certain cases a faculty adviser may represent both the major and the curriculum of study in human biology.

Courses

Human Anatomy and Physiology

Bio S 214 The Biological Basis of Sex Differences (also Women's Studies 214)
Spring. 3 credits.

Bio S 274 Functional and Comparative Morphology of Vertebrates
Spring. 4 credits.

Bio S 311 Introductory Animal Physiology, Lectures (also Veterinary Medicine 346)
Fall. 3 credits.

Bio S 319 Animal Physiology Experimentation (also Veterinary Medicine 378)
Fall. 3 credits.

Bio S 410 Seminar in Anatomy and Physiology
Fall or spring. 1 credit.

Bio S 458 Mammalian Physiology
Spring. 3 credits.

Bio S 474 Laboratory and Field Methods in Human Biology (also Anthropology 474)
Spring. 5 credits.

NS 115 Ecology of Human Nutrition and Food
Fall or spring. 3 credits.

NS 222 Maternal and Child Nutrition
Spring. 3 credits.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 3 credits.

NS 361 Biochemistry and Human Behavior (also Psychology 361)
Fall. 3 credits.

NS 441 Nutrition and Disease
Fall. 4 credits.

Psych 322 Hormones and Behavior (also Biological Sciences 322)
Spring. 3 or 4 credits.

Psych 425 Brain and Behavior
Fall. 3 or 4 credits.

Vet M 331 Medical Parasitology
Fall. 2 credits.

Human Behavior

Anthr 490 Primates and Evolution
Spring. 4 credits.

Bio S 301 Biology and Society I: The Social Construction of Life (also Anthropology 301 and Biology and Society 301)
Fall. 3 credits.

Bio S 427 Animal Social Behavior
Fall. 3 credits.

HDFS 344 Infant Behavior and Development
Fall. 3 credits.

HDFS 464 Developmental Theory and Research on Homosexuality
Fall. 4 credits.

HDFS 645 Seminar in Infancy: Newborn Behavioral Organization
Spring. 3 credits.

HSS 315 Human Sexuality: A Biosocial Perspective
Fall, spring, or summer. 3 credits.

NS 245 Social Science Perspectives of Human Nutrition
Fall. 3 credits.

NS 347 Human Growth and Development: Biological and Social Psychological Considerations (also Human Development and Family Studies 347)
Spring. 3 credits.

NS 445 Community Nutrition and Health
Spring. 3 credits.

Psych 326 Evolution of Human Behavior
Fall. 4 credits.

Psych 425 Brain and Behavior
Fall. 3 or 4 credits.

R Soc 408 Human Fertility in Developing Nations (also B Soc 404)
Fall. 4 credits.

R Soc 438 Social Demography
Fall. 3 credits.

R Soc 481 Techniques of Demographic Analysis
Spring. 3 credits.

R Soc 490 Mortality and Morbidity
Spring. 3 credits.

Human Evolution and Ecology

Anthr 101 Biological Perspectives on the Evolution of Human Kind
Fall. 3 credits.

Anthr 203 Early People: The Archaeological and Fossil Record (also Archaeology 203)
Fall. 3 credits.

Anthr 214 Humankind: The Biological Background
Fall. 3 credits.

Anthr 490 Primates and Evolution
Spring. 4 credits.

Bio S 207 Evolution
Fall. 3 credits.

Bio S 261 Principles of Ecology
Fall. 4 credits.

Bio S 272 Functional Ecology
Spring. 4 credits.

Bio S 275 Human Biology and Evolution (also Anthropology 275)
Fall. 3 or 4 credits.

Bio S 371 Human Paleontology (also Anthropology 371)
Fall. 4 credits.

Bio S 378 Evolutionary Biology
Spring. 4 credits.

Bio S 461 Population and Evolutionary Ecology
Spring. 4 credits.

Bio S 470 Ecological Genetics
Spring. 4 credits.

Bio S 471 Mammology
Fall. 4 credits.

Bio S 481 Population Genetics
Spring. 4 credits.

Bio S 482 Human Genetics and Society
Fall. 2 credits.

Bio S 673 Human Evolution: Concepts, History and Theory (also Anthropology 673)
Fall. 3 credits.

B&Soc 447 History of Biology–Evolution (also History 447)
Fall. 4 credits.

HSS 330 Ecology and Epidemiology of Health
Fall. 3 credits.

Psych 326 Evolution of Human Behavior
Fall. 4 credits.

R Soc 483 Techniques of Demographic Analysis
Spring. 4 credits.

Vet M 331 Medical Parasitology
Fall. 2 credits.

Vet M 664 Introduction to Epidemiology
Spring. 3 credits.

Independent Major Program

Dean Lynne Abel, director, 55 Goldwin Smith Hall, 255-3386.

The Independent Major Program is described in the introductory section, p. 129.

351 Independent Study
Fall or spring. 1–4 credits. Prerequisite: permission of the program office.

499 Honors Research
Fall or spring. 4–8 credits; a maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.

Intensive English Program

E. J. Beukenkamp, director
This full-time, noncredit, nondegree program is designed to meet the requirements of foreign students who need to acquire proficiency in English to pursue university-level studies in the United States, as well as for visitors, businessmen, and others seeking competence in the language.

The intensive nature of the program leads to a command of the language in all its aspects—listening, speaking, reading, and writing—in the shortest possible time.

Integrated courses are offered both fall and spring semesters at three levels: beginning (Test of English as a Foreign Language [TOEFL] score below 370), intermediate (TOEFL score below 450), and advanced.

Students who have gained full admission to, or who already are registered in, degree-granting programs at Cornell should consult the section, Modern Languages and Linguistics, for information regarding courses in English as a second language.

The Intensive English Program is administered by the Department of Modern Languages and Linguistics, Cornell University, Morrill Hall, Ithaca, New York 14853-4701, U.S.A. Application materials and information are available directly from the program or by calling 607/ 255-4863.

International Relations Concentration

Peter Katzenstein, faculty coordinator

Undergraduates interested in an international relations concentration should see the TA in charge, whose name is posted on Professor Katzenstein's office door (McGraw B-7).

One of the university's strongest, most diverse fields is international relations. Cornell offers dozens of courses, in many departments and several colleges, that provide a strong education in the field, including courses in government, economics, history, anthropology, rural sociology, nutrition, modern languages and literatures, international comparative labor relations, and many others too numerous to list and keep current.

The purpose of a concentration is to provide a structure for students who have a general interest in the field or who plan to specialize in careers in international law, economics, agriculture, foreign trade, international banking, government service, international organizations, or another cultural or scholarly activity. Some students will major in one of the traditional departments: history, government, economics, foreign literature, and so on. Others will design an independent major. Still others will major in a different discipline, perhaps altogether unrelated, but would like to have a basic understanding of international problems.

For students in any of these categories, the requirements for a concentration in international relations are the following six courses or options:

1) Government 181, Introduction to International Relations
2) One appropriate 300-level government course, either in international relations or in the foreign policy of a particular nation
*3) Two courses in Economics, chosen from among the following offerings:
   a) Economics 361, International Trade Theory
   b) Economics 362, International Monetary Theory
   c) *Either* Economics 367, Comparative Economic Systems: Soviet Union and Europe, *OR* Economics 368, Comparative Economic Systems: United States, Europe, and the Soviet Union.
   d) Economics 371, Economic Development
   e) Economics 372, Applied Economic Development
   f) Economics 373, International Specialization and Economic Development
   g) Economics 374, National and International Food Economics
4) History 314, History of American Foreign Policy II
5) Any history course dealing with a modern nation other than the United States

Under certain conditions, it may be possible to substitute other courses for those listed above.

Students are also urged as strongly as possible to acquire full proficiency in, not merely a passing acquaintance with, a modern foreign language. At least a semester of study abroad is advised.

Center for International Studies

See Interdisciplinary Centers, Programs, and Studies, p. 18.

Program of Jewish Studies

D. I. Owen, acting director (Near Eastern and ancient Jewish history), S. Bacharach (industrial and labor relations, sociology, Jewish thought and social theory), R. Brann (Hebrew and Judeo-Arabic literatures), W. J. Dannhauser (Jews and Germans, contemporary Jewish thought, Gershom Scholem), S. L. Gilman (Yiddish Literature, German Jewish history and literature), S. T. Katz (Jewish history and religion), G. Korman (Holocaust studies, Jewish labor history), D. S. Powers (history of Jews in Islamic lands), G. Rendsburg (biblical studies), E. Rosenberg (Jews in modern European and Anglo-American literature), N. Scharf (Hebrew language), S. Schwartz, N. Sher (jurisprudence), M. Winter (Dayan Visiting Professor)

The Program of Jewish Studies is a university-wide program housed in the College of Arts and Sciences. It was founded as an extension of the Department of Semitic Languages and Literatures (now the Department of Near Eastern Studies) in 1973 and attained status as an independent and intercollegiate program in 1976.

The program has grown out of the conviction that Judaic civilization merits its own comprehensive and thorough treatment and that proper understanding of any culture is inconceivable without adequate knowledge of the language, literature, and history of the people that created it. Accordingly, the offerings in the areas of Hebrew language and literature have been considerably expanded, and courses in ancient, medieval, and modern Jewish history have been added to the program.

It is a broadly based, interdisciplinary program, bringing together faculty from the various Cornell colleges and schools.

The Program of Jewish Studies supports teaching and research in the overall area of Judaic Studies. It is a secular, academic program, the interests of which are diverse and cross-cultural. The program recognizes its special relationship to teaching and research in classical Judaica and Herbraica which is pursued by the members of the Department of Near Eastern Studies.

Although further expansion of the program is anticipated, it presently enables students to obtain basic instruction and specialization in the fields of Semitic languages; the Hebrew Bible; the apocryphal and Tannaitic literatures; medieval and modern Hebrew literature; ancient, medieval, and modern Jewish history; and modern Jewish thought. In some of these fields students may take courses both on graduate and undergraduate levels. Faculty throughout the university provide breadth to the program by offering courses in related areas of study.

Courses Offered

Elementary Modern Hebrew I and II (Near Eastern Studies 101–102)
Fall and spring.

Elementary Modern Hebrew (Near Eastern Studies 103)
Summer.

Intermediate Modern Hebrew I and II (Near Eastern Studies 201–202)
Fall and spring.

Introduction to the Bible (Near Eastern Studies 223)
Fall.

Jurisprudence and the Holocaust (Near Eastern Studies 244)
Fall. 2 credits.
M 9:05–11. N. Sher.
This seminar will trace the history of judicial efforts to bring to justice the perpetrators of the Holocaust. Emphasis will be on the principles established at the Nuremberg Trials, as well as analysis of measures taken and legal precedent established in Europe, Israel, and the United States to uncover and prosecute alleged Nazi criminals.

Seminar: The Eichmann Case (Near Eastern Studies 244)
Spring. 2 credits. Prerequisites: 241 and/or 244 or permission of instructor. Enrollment limited to 20 students.
M 9:05–11. N. Sher.
The Israeli trial of Eichmann raised profound legal, moral, and philosophical questions, which are still the subject of much debate. The seminar will undertake an in-depth look at ex post facto considerations; due process questions, etc. We will also discuss the trial process itself, focusing on the strategies of both defense and prosecution. In addition, the course will address a myriad of provocative questions raised by the trial, such as the role of Jewish collaborators, the alleged "banality" of Eichmann, and the world's response to the Holocaust. Materials to be used include Hannah Arendt's *Eichmann in Jerusalem*; Jacob Robinson's *And the Crooked Shall Be Made Straight*; Avner Less's *Eichmann Interrogated*; portions of the court judgment and trial record.

Introduction to Classical Jewish History (Near Eastern Studies 248)
Fall.

Introduction to Modern Jewish History (Near Eastern Studies 249)
Spring.

Jewish Sectarian Literature and History in Late Antiquity (also NES 279)
Spring.

Modern History of the Middle East: Changing Politics, Society, and Ideas (Near Eastern Studies 294 and Government 358)
Fall.

Advanced Modern Hebrew I and II (Near Eastern Studies 301 and 302)
Fall and spring.

History into Fiction: Nazis and the Literary Imagination (Near Eastern Studies 404, also Comparative Literature 404, English 404, and Jewish Studies Program)
Fall. 4 credits.
T R 11:40–12:55. E. Rosenberg.
The twelve years of Hitler's rule remain the most critical, "longest" years of the century. We shall read some seven or eight texts by Anglophone and Continental novelists (and one or two playwrights) that explore salient features of the regime: Hitler's rise to power (e.g., Mann's *Mario and the Magician*, Hughes's *Fox in the Attic*); civilian life in Nazi Germany (e.g., Isherwood's *Berlin Stories*, Brecht's *Private Life of the Master Race*, Grass's *Dog Years*); World War II (Boell's fiction); the Occupation (Sartre's *Flies* or Camus's *Plague*, Nabokov's *Aleppo*); the American brand (Lewis's *It Can't Happen Here*, Faulkner's *Percy Grimm*); the persecution of European Jews (Sartre's *Childhood of a Leader*, selections from Julian Barnes' novel *History of the World*, Jakov Lind's *Soul of Wood*). Historical commentary; brief ancillary selections by Adorno, Arendt, Sartre. Two short papers, no exam.

Medieval Hebrew Biblical Exegesis (Near Eastern Studies 428 and Medieval Studies 428)
Spring.

Independent Study, Undergraduate Level (Near Eastern Studies 491–492)

Independent Study Honors Seminar (Near Eastern Studies 499)

Independent Study, Graduate Level (Near Eastern Studies 691–692)

Courses Not Offered 1990–91.

Readings in Classical Hebrew Literature: The Art of Biblical Narrative (Near Eastern Studies 221)

Readings in Classical Hebrew Literature: The Art of Biblical Poetry (Near Eastern Studies 222)

Exodus and Conquest (Near Eastern Studies 226)

Introduction to the Prophets (Near Eastern Studies 227)

Genesis (Near Eastern Studies 228 and 628)

Classics of Hebrew Literature, a Survey: The Hebrew Literary Tradition (Near Eastern Studies 231 and Comparative Literature 231)

The Lyrics of Love and Death: Medieval Hebrew Poetry in Translation (Near Eastern Studies 233 and Comparative Literature 333)

Muslims, Christians, and Jews in Islamic Spain: Literature and Society

Israel: Literature and Society (Near Eastern Studies 236)

Aramaic (Near Eastern Studies 238)

The Holocaust: European Jewry, 1933–1945 (Near Eastern Studies 241)

Israel: History and Geography (Near Eastern Studies 242)
Summer.

The History and Archaeology of Ancient Israel (Near Eastern Studies 243)

The Emergence of the Modern Jew: 1648–1948 (Near Eastern Studies 245)

Seminar in Jewish Mysticism: From the Zohar to Hasidism (Near Eastern Studies 246)

History of Jewish Textual Interpretation (Near Eastern Studies 247)

Ancient Seafaring (Near Eastern Studies 261 and Archaeology 275)

Introduction to Biblical Archaeology (Near Eastern Studies 263)

Agriculture and Society in the Ancient Near East (Near Eastern Studies 264)

Women in the Hebrew Bible (Near Eastern Studies 292 and Women's Studies 292)

Judaism and Islam in Comparative Perspective (Near Eastern Studies)

Seminar in Medieval Hebrew Literature: The Short Story (Near Eastern Studies 303)

Seminar in Medieval Hebrew Literature: The Novel (Near Eastern Studies 304)

The History and Archaeology of the Ancient Near East (Near Eastern Studies 366 and Archaeology 310)

Undergraduate Seminar in Biblical Literature: Prophecy in Ancient Israel (Near Eastern Studies 322)

Ancient Near Eastern Literature (Near Eastern Studies 332)

Jews of Arab Lands (Near Eastern Studies 346)

Anti-Semitism in Germany and the Jewish Response (Near Eastern Studies 349 and German Studies 349)

Interconnections in the Eastern Mediterranean World in Antiquity (Near Eastern Studies 361)

The History and Archaeology of Ebla (Near Eastern Studies 362)

The History and Culture of Ancient Mesopotamia (Near Eastern Studies 363)

The Divided Monarchy (Near Eastern Studies 365)

The History and Archaeology of the Ancient Near East (Near Eastern Studies 366 and Archaeology 310)

The Shtetl in Modern Yiddish Fiction in English Translation (German Studies 375)

The Yiddish Novel in English Translation (German Studies 350)

Jewish Workers in Europe and America 1789–1948 (Industrial and Labor Relations 381)

Seminar in Hebrew Literature and Poetics (Near Eastern Studies 402)

The Double Identity Crisis: German Jewish Women from Rahal Varnhagen to Hannah Arendt (Near Eastern Studies 409, German Studies 409, Society for the Humanities 409, and Women's Studies 409)

Readings in Judeo-Arabic: Medieval Judeo-Arabic and Hebrew Poetics (Near Eastern Studies 432)

The Holocaust Survivor as Author (German Studies 444/644 and Near Eastern Studies 444)

Seminar in Jewish Mysticism (Near Eastern Studies 693)

John S. Knight Writing Program

The director of the John S. Knight Writing Program is Harry Shaw, professor in the Department of English. Katherine Gottschalk, senior lecturer in the Department of English, is director of Freshman Writing Seminars. The program's offices are in 159 Goldwin Smith Hall (telephone: 255-4061).

S. Davis (English), M. Gilliland (Writing Workshop), K. Hjortshoj (Writing Workshop), N. Kaplan (English), B. LeGendre (Writing Workshop), J. Martin (Writing Workshop), S. Orlov (Society for the Humanities), J. Pierpont (Writing Workshop), D. Williams (Writing Workshop)

The John S. Knight Writing Program helps to coordinate the teaching of writing for undergraduates in six of the university's schools and colleges (the School of Industrial and Labor Relations and the colleges of Agriculture and Life Sciences; Architecture, Art, and Planning; Arts and Sciences; Engineering; and Human Ecology). The program administers writing seminars for freshmen and upperclass students, tutorial writing classes, and seminars in the teaching of writing. More than twenty-five academic departments participate in the program.

Advanced Writing Seminars

For upperclass students the program offers three upper-division writing courses, Writing in the Humanities, Writing for Readers/Reading for Writers, and Writing in the Social Sciences. These courses help students write with more confidence and skill in all disciplines while provoking inquiry about the methods and aims of study common to many of them. They may be taken as electives or to fulfill distribution or certain writing requirements.

Freshman Writing Seminars

For freshmen the program offers the freshman writing seminars—more than 125 different courses in the humanities, social sciences, expressive arts, or sciences. Freshman writing seminars help students write good English prose—prose that, at its best, is characterized by clarity, coherence, intellectual force, and stylistic control. These seminars teach writing within a field while offering freshmen the opportunity to participate in a small seminar. Although they differ widely in content, all seminars adhere to the following guidelines:

1) at least thirty pages of assigned writing
2) at least eight—and, at most, about fourteen—written assignments
3) opportunities for serious revision, not mere editing, of essays (at least some of these revising assignments may satisfy 1 and 2 above)
4) ample classroom time spent on work directly related to writing
5) reading assignments small enough—about one hundred pages a week at most—to permit regular, concentrated work on writing
6) individual conferences

Offerings change from semester to semester. Each term's freshman writing seminars are described in a brochure available from college registrars.

To ensure that students will enjoy the benefits of small writing classes, no freshman writing seminar may comprise more than seventeen students. Instead of pre-enrolling in their writing courses, students request placement in one of five writing seminars by filling out ballots available from their college registrars. Most students receive one of their highest choices. Students may change their writing seminars at the university course exchange or during the add/drop sessions held at the beginning of each semester.

The colleges and the school served by the program accept freshman writing seminars in fulfillment of their individual graduation requirements in categories referred to variously as "freshman writing," "oral and written expression," and the like. The program does not decide whether students may graduate: it makes courses available. Individual colleges and schools administer their own graduation requirements.

Currently most undergraduate students are required to take two freshman writing seminars. Architecture students, however, need only one. Hotel students fulfill their requirement through Hotel Administration 165, which should be taken with Hotel Administration 265 during the first two semesters at Cornell. Agriculture and life sciences students can take freshman writing seminars or choose from among a variety of other courses to fulfill their requirement.

All students who score "4" or "5" on the Princeton Advanced Placement Examination in English receive three credits. Such credits are awarded automatically; no application to the John S. Knight Writing Program or the Department of English is necessary. How these credits may be applied to freshman writing or other distribution requirements depends on the student's college and score. All students who score "5," except architecture and fine arts students, may apply their three credits towards the writing requirements of their college. Of students who score "4," only agriculture and life science students and industrial and labor relations students may apply their three credits toward the writing requirements of their college. Students should always consult their college registrars to be certain that they understand their writing requirements.

Students who score "4" or "5" on the Princeton AP exam, or "700" or better on the English Composition or CEEB tests, may enroll, space permitting, in the following upper-level freshman writing seminars: English 270, 271, 272, and 276.

Although there are no exemptions from college writing requirements, some students may fulfill all or part of their college's writing requirement through transfer credits or writing-course substitutions.

For work done at other institutions to be accepted as equivalent to freshman writing seminars, students should demonstrate that they have done a reasonably equivalent amount of writing in a formal course. (It is not sufficient to write, for example, one thirty-page term paper.) Students in the College of Engineering and the College of Arts and Sciences must file an "application for transfer evaluation" to request writing credit for such courses; students in other colleges should consult their college registrars.

In unusual situations the program recommends that courses taken at Cornell other than freshman writing seminars fulfill the various freshman writing requirements. Upper-division students may also take a writing course other than a freshman writing seminar and petition to have it satisfy part of the requirement. The program advises students about these courses on request. Students must file the "proposal for course substitution" in advance to request writing credit for such courses.

Although Cornell "summer writing program" seminars may fulfill college writing requirements, they do not automatically count toward those requirements. Students who have taken these courses must ask their college registrars to assign the credits in the appropriate categories.

Teaching Writing

Each summer and fall, the program offers instruction in the teaching of writing to new staff members in the freshman writing seminars and other interested instructors. Teaching Writing I, offered in conjunction with an apprenticeship in the summer school, is primarily a course for graduate students; the same course is offered alone in the fall as Teaching Writing II. The program also sponsors a summer seminar for faculty members interested in the teaching of writing.

Writing Workshop

The John S. Knight Writing Program offers Workshops in English Composition for freshmen (or transfer students needing writing credit) through the Writing Workshop. These tutorials in English composition are designed for students who have had little training in composition or who have serious difficulty with writing assignments.

Writing 137 and 138 are graded S-U only, and students receiving a grade of S are normally granted credit toward their college writing requirements. Students who think this course might be appropriate, including non-native speakers of English scoring less than 600 on the Test of English as a Foreign Language (TOEFL), should attend the assessment sessions offered by the Writing Workshop during orientation week each fall. The workshop also offers a walk-in service (see below) to help students with problems in essay writing. The director is Nancy Kaplan, senior lecturer in the Department of English. The workshop offices are in 174 Rockefeller Hall (telephone: 255-6349).

The Walk-In Service

The Walk-In Service, a unit of the Writing Workshop, offers tutoring assistance in writing to any student who needs help with a writing project. The Walk-In Service has tutors available during the academic year in 174 Rockefeller, 340 Goldwin Smith, and north- and west-campus residential areas. The director is Joseph Martin. For information contact the Writing Workshop, 174 Rockefeller Hall, 255–6349.

The Macintosh Center

The Macintosh Center, housing twenty microcomputers, is a facility supported by the John S. Knight Writing Program for students enrolled in writing courses. The center offers introductory classes on the Macintosh and works closely with many writing instructors to help students learn how to use word processing as an effective writing tool. The coordinator is William Fleischmann; the center is in 340 Goldwin Smith Hall (telephone: 255–8453).

Freshman Writing Seminar

137–138 Workshops in English Composition

137, fall; 138, spring. 3 credits each term. Each section limited to 12 students. S-U grades only. Hours to be arranged. N. Kaplan and staff.

An intensive writing experience, this course is designed for those whose composition skills need extra attention. In class discussion, students respond to each other's work and analyze brief additional readings. The average weekly syllabus includes small classes, a tutorial with the instructor, and a paper plus

revision. Each section of this course is individually shaped to respond to the needs of students in that particular class.

Advanced Writing Seminars

201 Writing in the Humanities (also English 286)
Fall or spring. 3 credits. Limited to 17 students. Registrants must have completed freshman writing requirements. S-U grades with permission of instructor. Carries distribution credit as English 286.
Fall: T R 11:40–12:55. Spring: to be announced. S. Davis.
Writing 201 helps students strengthen reading and writing skills valuable in all disciplines and particularly appropriate to the humanities. It also encourages them to reflect on what they do when they interpret and write about works of literature, philosophy, and visual art. Just what happens when we "read" such works—and what do we mean when we claim to understand them? What audience do our interpretations address, and how can we convey them in writing that is engaging and forceful? How are conflicts of interpretation resolved? How do historical knowledge and theory affect our interpretations? What kinds of knowledge and self-awareness does study in the humanities yield? Works studied in the course challenge our understanding by their strangeness or their uncanny familiarity. They show Western reason in conflict with its real or supposed opposites—alien humanity, artistic inspiration, illusion, madness, the divine, and the will to power. Readings and viewings may include paintings by da Vinci and Velasquez; novels by Nabokov, Conrad, and Achebe; parables by Maxine Hong Kingston, Kafka, and Jesus; Plato's *Gorgias* or *Phaedrus*; Nietzsche's *Birth of Tragedy*; and Euripides' *The Bacchae*.

Students in the course write (and often rewrite) 40 pages of papers and confer frequently with the instructor.

202 Writing in the Social Sciences (also Sociology 202)
Fall or spring. 3 credits. Limited to 17 students. Prerequisite: at least one social-science course. Carries distribution credit as Sociology 202.
Fall: T R 11:40–12:55. Spring: M W F 11:15–12:05. K. Hjortshoj.
This course offers students the opportunity to strengthen their writing, become more aware of the diverse writing styles and strategies used in the social sciences, and experiment with new approaches to composition and revision. Students will benefit from detailed written comments on their work and from extensive discussion of student writing in class. Initial writing and reading assignments will explore styles of description, the ways in which writers adapt their work to different audiences, the differences between academic and popular writing in a particular field, and methods of revision. Subsequent assignments will include the interpretation of primary data, the review of a documentary film, and writing based on research literature in a field of the student's choice. The instructor will hold frequent individual conferences with students to discuss finished essays and work in progress. During the semester students will write, and often revise, 8 to 10 papers—about 40 pages of finished work.

203 Writing for Readers/Reading for Writers (also English 283)
Spring. 3 credits. Limited to 17 students. Prerequisite: permission of the instructor.
T R 10:10–11:25. J. Martin.
This is a writing course for students interested in studying theories and strategies of composition as a way of developing writing skills. By studying a broad range of approaches to the act of writing (from traditional handbooks' definitions to contemporary rhetorical theories), students will learn to identify and use the critical vocabulary that skilled readers rely on to discuss how writing and language develop, focusing on issues such as the role of audience, the patterns of organization, the varieties of language, and the control of style. In addition to weekly writing assignments, the course will include readings in the theories of language and rhetoric. Students will write and revise at least eight essays during the semester. Students interested in the practice of reading and responding to the writing of others are encouraged to take this course and consider becoming tutors in the Writing Workshop's Walk-In Service.

Latin American Studies

B. J. Isbell, director; L. Beneria, R. Blake, D. Block, D. Castillo, T. Davis, G. Fields, W. Goldsmith, C. Greenhouse, J. Haas, J. Henderson, T. Holloway, S. Jackson, T. Jordan, E. Kenworthy, S. Kyle, T. Lynch, O. Mitchell, C. Morris, J. Piedra, T. Poleman, A. Power, D. Sanjur, D. Sola, J. M. Stycos, M. Suñer, H. D. Thurston, J. Tittler, A. VanWambeke, L. Williams, F. Young

The Latin American Studies Program encourages and coordinates faculty and student interests in Latin America. A variety of special lectures, films, and seminars supplement the regular course offerings. Undergraduate students may arrange an independent major in Latin American studies, and graduate students may pursue a minor in Latin American studies while majoring in the graduate field of their choice. The College of Arts and Sciences offers Latin American studies courses in anthropology, economics, government, history, and sociology. In addition, there is a varied language, literature, and linguistics curriculum in Spanish, Portuguese, and Quechua. The student may also pursue Latin American studies in the College of Agriculture and Life Sciences; the College of Architecture, Art, and Planning; the College of Human Ecology; and the School of Industrial and Labor Relations.

For further information and a current course listing, students should contact the program office, 190 Uris Hall.

Law and Society

D. Dunning, director, 240 Uris Hall, 255-6391, C. Bohmer (sociology), C. Carmichael (comparative literature), D. A. Dunning (psychology), C. Greenhouse (anthropology), G. Hay (economics), C. Holmes (history), S. Jasanoff (science, technology, and society), M. Katzenstein (government), D. B. Lyons (philosophy), R. Miller (philosophy), M. B. Norton (history), R. Polenberg (history), D. Powers (Near Eastern studies), J. Rabkin (government), L. Scheinman (government)

The Law and Society Program offers an interdisciplinary concentration for undergraduates who are interested in the law from the perspectives of the social sciences and the humanities: anthropology, comparative literature, economics, government, history, philosophy, psychology, science, technology and society, and sociology. In addition, undergraduates in the College of Arts and Sciences can major in law and society through the Independent Major Program. Students who wish to graduate with a concentration in law and society should consult the director of the program or one of the advisers listed above to plan a coherent program of study. Such a program should ordinarily include at least four courses from the following list. Other courses may be substituted with the approval of the adviser.

Anthropology 328 Law and Culture

Anthropology 329 Power and Culture

Anthropology 627 Legal Anthropology

Comparative Literature 326 Christianity and Judaism

Comparative Literature 427 Seminar on Biblical Law

Economics 304 Economics and the Law

Economics 354 Economics of Regulation

Government 313 The Nature, Functions, and Limits of Law

Government 323 The "Fourth" Branch

Government 327 Civil Liberties in the United States

Government 328 Constitutional Politics: The United States Supreme Court

Government 364 Liberty, Equality, and the Social Order

Government 389 International Law

Government 407 Law, Science, and Public Values

Government 414 The Administrative State

Government 428–429 Government and Public Policy: An Introduction to Analysis and Criticism

Government 457 Comparative Public Law: Legal Controls on Government in Europe and America

Government 489 International Law and Regime Development

History 275 Crime and Punishment: From the Puritans to Mickey Spillane

History 318 American Constitutional Development

History 367 Church and State during the Middle Ages

History 421 Constitutionalism as a Cultural Problem in America

History 430 Law and Authority in American Life

Near Eastern Studies 357 Islamic Law and Society

Philosophy 319 Philosophy of Marx

Philosophy 342 Law, Society, and Morality (also Law 666)

Philosophy 446 Topics in Social and Political Philosophy

Psychology 265 Psychology and Law

Sociology 207 Ideology and Social Concerns

Sociology 310 Sociology of War and Peace

Sociology 348 Sociology of Law

Sociology 372 Sex Discrimination: Law and Social Policy (also Government 306)

Sociology 409 Interpretation, Authority, and the Law (also Government 409)

Biology and Society 406 Biotechnology, Society, and Law

Biology and Society 426 The Social Functions of Law and Medicine

City and Regional Planning 480 Environmental Politics

City and Regional Planning 656 Land Resources Protection Law

Civil and Environmental Engineering 524 Contemporary Issues in Environmental Law and Policy

Civil and Environmental Engineering 525 Environmental Law I

Consumer Economics and Housing 465 Consumers and the Law

Industrial and Labor Relations 607 Arbitration and Public Policy

Industrial and Labor Relations 680 Problems in Union Democracy

Medieval Studies

Marilyn Migiel, director; B. B. Adams, F. M. Ahl, R. Brann, E. W. Browne, R. G. Calkins, A. M. Colby-Hall, R. T. Farrell, A. B. Groos, W. Harbert, T. D. Hill, P. R. Hyams, J. H. Jasanoff, J. J. John, W. J. Kennedy, N. Kretzmann, S. Mehrez, C. Moron-Arroyo, J. M. Najemy, J. S. Noblitt, D. S. Powers, D. M. Randel, S. Senderovich, D. R. Shanzer, B. Tierney, W. Wetherbee

Undergraduates interested in Medieval Studies have an opportunity to take courses in the following areas of instruction: medieval Hebrew, Arabic, and Latin; Old English, Middle English, and medieval Irish and Welsh; Old Provençal and medieval French; medieval Spanish and Italian; Old Saxon, Old High German, Middle High German, Gothic, Old Norse (Old Icelandic); Old Russian; comparative literature; medieval art and architecture; medieval history; Latin paleography; medieval philosophy; musicology; comparative Slavic linguistics, comparative Romance linguistics, and comparative Germanic linguistics.

Undergraduates who want to undertake an independent major or a concentration in Medieval Studies should consult the director of the program, 259 Goldwin Smith Hall.

Information for prospective graduate students is contained in the catalog of the Graduate School and in a brochure on Medieval Studies, which can be obtained from the director.

Freshman Writing Seminars

101 Aspects of Medieval Culture
Fall or spring. 3 credits.
Staff.
Under this very general heading a variety of courses are offered each year. A course may center on a particular kind of writing (e.g., biography, narratives of crusades or pilgrimages) or on a particular theme (e.g., the status of the individual, women in medieval society, encounters with other cultures and with the supernatural). In most cases, in addition to exploring the distinctive features of the medieval world view, the course will compare medieval treatments of these forms or themes with the work of modern writers.

102 The Literature of Chivalry
Fall, spring, or summer. 3 credits.
Staff.
Romances of chivalry, especially those devoted to King Arthur and the knights of the Round Table, were not only the most popular literature of medieval Europe, but also a vehicle for examination of social ideals. This course explores the development of chivalric culture in such works as the *Lais* of Marie de France, the romances of Chrêtien de Troyes, French and German stories of Tristan and Perceval, *Sir Gawain and the Green Knight*, Malory's *Morte d'Arthur*, and modern works on related themes. Discussion will investigate fundamental problems raised by these works: the individual in society, the development of the hero, the nature of love, and the conflict of religious and secular ideals.

103 Legend, Fantasy, and Vision
Fall or spring. 3 credits.
Staff.
Re-creation of the legendary past, imaginary voyages to other worlds, and the invention of ideal societies are among the ways in which medieval writers attained a perspective on social, scientific, and religious questions. This course will survey examples of such writing from various medieval cultures (e.g., Icelandic sagas, the Irish *Voyage of St. Brendan*, the Anglo-Saxon epic *Beowulf*, French and German romances of King Arthur and his knights, Dante's *Divine Comedy*), and we will consider the continuity of these writings with selected works of modern fiction.

Graduate Seminars

Courses in various aspects of medieval studies are offered each year in numerous cooperating departments, including Classics, Comparative Literature, English, History, History of Art, Modern Languages and Linguistics, German Literature, Romance Studies, Russian Literature, Music, Near Eastern Studies, and Philosophy, and by the Society for the Humanities. An up-to-date listing of the courses offered in each term will be made available at the Medieval Studies office as soon as the Course and Time Roster is published.

Modern European Studies Concentration

Susan Tarrow, coordinator

Students from any college may choose an undergraduate concentration in modern European studies to complement any major in any college. The purpose of the concentration is to provide a coherent structure for students with an interest in interdisciplinary study in the field of European studies.

The concentration has two tracks:

European culture comprises courses in English and European literatures, comparative literature, semiotics, fine arts, music, architecture, film and theater arts, and women's studies.

European society comprises courses in European and comparative politics, social and political history, anthropology, sociology, philosophy, women's studies, and related courses in the School of Hotel Administration, the College of Agriculture and Life Sciences, and the School of Industrial and Labor Relations.

The requirements for completion of the concentration are

1) Completion of the European studies interdisciplinary core course (History 283/ Government 343/German 285)
2) Three additional courses in European studies with at least one from each of the two tracks. (No more than one of these courses may be used to satisfy requirements for the student's major.)
3) Competence in at least one modern Western European language (i.e., completion of a 300-level course or equivalent with a grade of at least B- or demonstration of an advanced level of competence in an oral proficiency interview test where available).

Students who want to take honors in the concentration must choose a senior seminar in the field and complete an honors essay. All concentrators are encouraged to spend a semester or more in a program of study in Europe and to participate in the Language House Program.

Undergraduates in the College of Arts and Sciences can major in European studies through the Independent Major or College Scholar programs.

For a list of relevant courses and seminars, departmental advisers, and any further information, contact Susan Tarrow, coordinator of the Modern European studies concentration, at the Western Societies Program, 130 Uris Hall (telephone: 255-7592).

Religious Studies

B. Adams, chairman; R. Ahmed, C. M. Arroyo, R. Baer, J. P. Bishop, R. Brann, R. Calkins, C. M. Carmichael, K. Clinton, J. Fajans, D. Gold, J. Henderson, D. Holmberg, P. Hyams, J. John, S. Katz, T. Kirsch, N. Kretzmann, J. (Swanberg) Law, K. March, R. L. Moore, D. Owen, D. Powers, D. Randel, G. Rendsburg, J. Rusten, D. Shanzer, J. Siegel, B. Tierney, M. Washington, A. Wood.

Religious Studies is an interdisciplinary program reflecting a wide variety of academic interests and disciplines. The intention of the program is to provide a formal structure for the study of religions at the undergraduate level. A student may fulfill the requirement for a concentration in religious studies by completing a minimum of four courses that have been approved by an adviser in the area of concentration.

The program is administered by a committee. The chairman is Professor Adams, 309 Rockefeller Hall.

Courses in religious studies currently offered include the following:

Religious Studies 101 Introduction to the Study of Religion
Spring. 3 credits.
D. Gold and others.
A team-taught course designed to introduce students to the contemporary study of religion. Through an examination of selected religious traditions of the world, the course will explore topics having to do with personal piety (including mysticism, myth, and philosophy) as well as those having to do with the leadership of religious communities, the development of religious institutions, and the formation of scriptural canon. Analysis of the ways in which these phenomena have interacted in specific cases will lead to a consideration of more general questions about the dynamics of religious traditions and the roles they continue to play in contemporary life. Highly recommended for students considering a concentration in Religious Studies.

Anthropology 424 Myth, Ritual, and Sign
Fall. 4 credits.
J. Siegel.

Asian Studies 250 Introduction to Asian Religions
Fall. 3 credits.
J. McRae.

Asian Studies 351 The Religious Traditions of India
Spring. 4 credits.
D. Gold.

Asian Studies 358 Buddhism in China
Fall. 4 credits.
J. McRae.

Asian Studies 359 Japanese Buddhism
Spring. 4 credits.
J. (Swanberg) Law.

Asian Studies 421 Religious Reflections on the Human Body
Fall. 4 credits.
J. (Swanberg) Law.

Asian Studies 435 Chinese Buddhist Texts
Spring. 4 credits.
J. McRae.

Asian Studies 467–468 Readings in Sanskrit Literature: The Vedas
Fall and spring. 3 credits each.
C. Minkowski.

Classics 202 The New Testament
Spring. 3 credits.
J. Rusten.

Classics 239 Greek and Roman Mystery Cults and Early Christianity
Spring. 3 credits.
K. Clinton.

Classics 468 Augustine's *Confessions*
Fall. 4 credits.
D. Shanzer.

Comparative Literature 324 Selected Problems of Law and Religion
Fall. 4 credits.
C. Carmichael.

Comparative Literature 326 Christianity and Judaism
Spring. 4 credits.
C. Carmichael.

Comparative Literature 328 Literature of the Old Testament
Fall. 4 credits.
C. Carmichael.

Comparative Literature 426 New Testament Seminar
Spring. 4 credits.
C. Carmichael.

History 417 Islam in South Asia
Fall. 4 credits.
R. Ahmed.

History 437 Church and State in the Middle Ages
Fall. 4 credits.
B. Tierney.

Natural Resources 407 Religion, Ethics, and the Environment
Spring. 3 credits.
R. Baer.

Near Eastern Studies 223 Introduction to the Bible
Fall. 3 credits.
G. Rendsburg.

Near Eastern Studies 243 History and Archaeology of Ancient Israel
Spring. 4 credits.
D. Owen.

Near Eastern Studies 250 Shi'ism and the Iranian Revolution
Fall. 3 credits.
J. Katz.

Near Eastern Studies 279 Jewish Sectarian Literature in Late Antiquity

Russian and Soviet Studies Major

M. G. Clark (emeritus), G. J. Staller, J. Vanek (economics); M. Rush (government); W. M. Pintner (history); W. W. Austin (emeritus); U. Bronfenbrenner (emeritus, psychology); P. Carden, G. Gibian, N. Pollak, M. Scammell, S. Senderovich, G. Shapiro (Russian literature); L. H. Babby, W. Browne, R. L. Leed (Slavic linguistics)

The major in Russian and Soviet studies has the following requirements:

1) Qualification in Russian.
2) At least one course relating to Russia, at the 200 level or above, in each of the following departments: Government, Economics, History, and Russian Literature. (A course in another department may be substituted for one of the above with the consent of the major adviser.)
3) At least three additional courses, at the 250 level or above, in one of the following departments: Government, History, Economics, or Russian Literature. These courses are selected in consultation with the student's adviser and are to be approved as appropriate for a major in Russian and Soviet studies.

Professor Pintner will serve as adviser for all majors, but each student should also designate an additional adviser in the department in which his or her work is concentrated.

Students must apply for the major at the Soviet and East European Studies Program, 236 Goldwin Smith Hall.

Courses

[Economics 329 Eastern Europe Today: Economics, Government, Culture (also Government 326 and Russian Literature 329)
Fall. 4 credits. Not offered 1990–91.
G. Staller, M. Rush, G. Gibian.]

[Economics 367/567 Comparative Economic Systems
Fall. 4 credits. Not offered 1990–91.
G. Staller.]

[Economics 381 Economics of Participation and Worker Management
Fall. 4 credits. Not offered 1990–91.
J. Vanek.]

Economics 382 The Practice and Implementation of Self-Management
Spring. 4 credits.
J. Vanek.

[Economics 681 Self-Management
Fall. 4 credits. Not offered 1990–91.
J. Vanek.]

[Economics 682 Seminar on Economics of Participation and Labor-Managed Systems
Spring. 4 credits. Not offered 1990–91.
J. Vanek.]

[German Studies 376 Contemporary Soviet Latvian Literature
Fall. 4 credits. Taught in Latvian. Not offered 1990–91.
I. Ezergailis.]

Government 333 Government and Politics of the Soviet Union
Fall. 4 credits.
M. Rush.

[Government 446 Comparative Communism
Fall. 4 credits. Not offered 1990–91.
M. Rush.]

[Government 481 Foreign Policy of the U.S.S.R.
Spring. 4 credits. Not offered 1990–91.
M. Rush.]

History 252 Russian History to 1800
Fall.
W. Pintner.

History 253 Russian History since 1800
Spring. 4 credits.
W. M. Pintner.

History 471 Russian Social History
Spring. 4 credits.
W. M. Pintner.

[History 486 The Formation of the Russian Intelligentsia, 1700–1850
Fall. 4 credits. Not offered 1990–91.
W. M. Pintner.]

History 677 Seminar in Russian History
Fall or spring. 4 credits.
W. M. Pintner.

Human Development and Family Studies 488 (also Psychology 488) Development in Context
Spring. 4 credits.
U. Bronfenbrenner.

[Polish 131–132 Elementary Course
131, fall; 132, spring. 3 credits each term. Not offered 1990–91.
W. Browne.]

[Polish 133–134 Intermediate Course
133, fall; 134, spring. 3 credits each term. Not offered 1990–91.
W. Browne.]

Russian 101–102 Elementary Course
101, fall; 102, spring. 6 credits each term.
R. L. Leed and staff.

[Ukrainian 131–132 Elementary Course
131, fall; 132, spring. 3 credits each term. Not offered 1990–91.
W. Browne.]

Concentration in Science, Technology and Society

The undergraduate concentration in Science, Technology and Society (STS) is designed for students who wish to engage in a systematic, interdisciplinary exploration of the role of science and technology in modern societies. The concentration is intended for students with varied academic interests and career goals. It offers majors in the natural sciences and engineering an opportunity to explore the social, political, and ethical implications of their selected fields of specialization. At the same time it offers students majoring in the humanities and social sciences a chance to study the processes, products, and impacts of science and technology from varied disciplinary perspectives. Drawing on course offerings in several departments, programs, and colleges, the STS concentration permits students to develop an individualized program of study closely related to their major field. STS courses are organized under four major headings: social relations of science and technology; science, technology, and public policy; ethics and values in science and technology; and biology, medicine, and society.

To satisfy the requirements for the STS concentration, students must complete a minimum of four courses selected from the following list. At least one course should be chosen from the list of core courses. The remaining three courses should be chosen in consultation with an STS faculty adviser and must be drawn from at least two of the areas described below.

Interested students may obtain further information about advisers and courses by contacting the STS main office, 632 Clark Hall, 255-3810.

STS Core Courses

B&Soc 407 Law, Science, and Public Values (also Govt 407)

B&Soc 415 The Politics of Technical Decisions (also CRP 541, Mgmt NBA 686, Soc 515, Govt 628)

Social Relations Major

A. T. Kirsch, director of undergraduate studies, 200 McGraw Hall, 255-3505; C. Greenhouse, D. Hayes, B. J. Isbell, W. W. Lambert, V. Nee, L. Smith-Lovin, R. Williams

The major in social relations is offered jointly by the Department of Anthropology and the Department of Sociology. It provides the student with basic competence in cultural anthropology, social psychology, and sociology and gives particular emphasis to the common methods of research in these disciplines. The student is expected to obtain a grasp of the common interests and unique insights of the three disciplines, and in the senior Social Relations Seminar is expected to integrate aspects of their theory and data.

Students seeking admission to the program should have completed the following prerequisites: (a) Sociology 101 or Anthropology 212; (b) Psychology 101 or 280 or Sociology 280; and (c) Sociology 301 or Psychology 350 or an equivalent course in statistics.

The major calls for a minimum of 36 credits of course work as follows:

1) two related courses to be selected in consultation with the major adviser, in each of the three following disciplines: anthropology, social psychology, and sociology. Ordinarily these courses should be at the 300 level or above, but in special circumstances the adviser may approve one or two courses at the 200 level.
2) at least one course in methods, to be selected from the following: anthropological methods, techniques of experimentation (psychology), methods in sociology, philosophy of science or of social science, or advanced statistics
3) at least one course in theory related to social relations
4) the senior seminar in social relations (Sociology 497 or Anthropology 495)

A list of the courses that may be used to satisfy the requirements for a major in social relations is available from any of the major advisers.

Society for the Humanities

Jonathan Culler, director

Fellows for 1990–91

David Bathrick (Cornell University)

Rachel Bowlby (University of Sussex)

Noel Carroll (Cornell University)

Alexander Doty (Lehigh University)

Jane Feuer (University of Pittsburgh)

Simon Frith (Strathclyde University)

James William Gibson (Southern Methodist University)

Karal Ann Marling (University of Minnesota)

Marilyn Migiel (Cornell University)

Trinh T. Minh-Ha (San Francisco State University)

Laura Mulvey (Film Maker)

Tim Murray (Cornell University)

Jonathan Ngate (Cornell University)

Constance Penley (University of Rochester)

Thomas Ross (Union College)

Mark Seltzer (Cornell University)

The Society annually awards fellowships for research in the humanities. The Fellows offer, in line with their research, informal seminars intended to be exploratory or interdisciplinary.

These seminars are open to graduate students, suitably qualified undergraduates, and interested auditors. Students who want credit for a seminar should formally register in their own college. Persons other than those officially enrolled may attend as visitors with permission of the Fellow.

The Society's theme during 1990–91 will be **The Humanities and the Challenge of Mass Culture.**

402 Video Verité: Televised Reality, Docudrama, and the Response of Multicultural Video (also English 402)

Fall. 4 credits.
T 2:30–4:25. T. Murray.

The course will study different forms of documenting everyday life on television and video. How do we draw the line between fiction and reality in the broadcast news, the television docudrama, and the video documentary? In analyzing the narrative and psychoanalytical conventions of video dramatized news, we will give special consideration to the relation of video form and style to representations of subjectivity, gender, and ethnicity. We will pay close attention to experimentations with video by multicultural artists who probe the relation of video documentation to the representation of cultural difference (race, nationality, sexuality, and class). How do multicultural artists profit from mixing media that have served as the technological tools of colonializing systems of representation? And how does multicultural experimentation with film and video contribute to the theoretical understanding of the media? In addition to viewing video tapes selected for the course, we will study material from the Johnson Museum of Art's weekly *Expanding Cinema* series.

409 Images of Fetishism, Narratives of Curiosity (also English 409)

Fall. 3 credits.
R 10:10–12. L. Mulvey.

The seminar will take the question of fetishism as its point of departure, considering the concept as a symptom both of the language of the unconscious and of the circulation of commodities. Using images and narratives from popular culture, the seminar will also place the processes of displacement and denial associated with fetishism in juxtaposition with narrative mechanisms activated by enigma and curiousity.

410 Disneyland and Its Origins: Consumption, Mobility, and Leisure in 1950s America

Spring. 3 credits.
M 2:30–4:25. K. A. Marling.

This interdisciplinary seminar aims to explore both the historical precedents from the theme park Walt Disney opened in Anaheim, California, in the summer of 1954—conventional parks and cemeteries, World's Fairs, touring midways, historic houses and villages, the celluloid world of the movies—and its relationship to Ike's America, the fast-spending, family-centered, TV-mad, suburban culture of the 1950s. Attention will also be paid to the technological and iconographic evolution of the park in its first decade, and most especially to Disney's collaboration with Robert Moses on attractions (later moved to California) for the 1964 New York World's Fair.

411 Contemporary Film Theory (also Theatre 414, English 410, and Women's Studies 431)

Fall. 3 credits.
T 11:10–1:05. C. Penley.

This course will survey the major figures and ideas that have shaped contemporary film theory: Christian Metz's semiotics of the cinema, Raymond Bellour and Thierry Kuntzel's textual analyses of film, Jean-Louis Baudry's "Apparatus" theories, Stephen Heath's work on narrative and ideology, and Laura Mulvey's feminist and psychoanalytic approach to describing spectatorship. In addition the course will cover the most important revisions and refutations of those theories by feminists, Marxists, neo-formalists, deconstructionists, cognitive theorists, cultural studies and popular culture scholars, and so on. Attention will also be given to the social and institutional forces that have shaped this relatively new and volatile discipline.

412 The Good and the Bad in Popular Culture (also Music 412)

Spring. 3 credits.
R 2:30–4:25. S. Frith.

Academic accounts of popular culture tend to treat the question of value in very general terms. Either mass-produced art is taken to be worthless by definition (e.g., Adorno, Bloom) or else the popular and the valuable are simply equated (e.g., Kiske). The purpose of this course is to examine the quality of popular culture more rigorously, and there will be less interest in the familiar critical commentaries than in investigating the ways in which value judgments work in the actual production and consumption of popular music, television, film, fiction, etc.

413 American Music (also Music 413)

Fall. 3 credits.
R 2:30–4:25. T. Ross.

A study of several traditions in America's musical fabric, such as jazz, shape-note singing, zydeco, salsa, symphonic and experimental music, rock 'n' roll, and one-man bands. How are these defined, and what mutual influences can be observed both near at hand and globally? Diverse musical ethnicities are examined through lecture, field-tapes (video and audio), reading, and some in-class performance.

414 Modernity, Femininity, Consumerism (also Women's Studies 434 and English 414)

Spring. 3 credits.
M 12:20–2:15. R. Bowlby.

The tradition of literary modernity is generally seen as opposed to consumerism, whether considered as an exclusive focus on material and monetary values, or (rather differently) as a feminine capitulation of the lures of a homogeneous mass culture. This course will question the implications and the validity of that dichotomy by looking in detail at representations of the woman, the artist, the consumer, and consumer culture in literary, theoretical, and popular texts by authors such as Baudelaire, Barthes, Benjamin, Freud, Friedan, Nabokov, Wilde, and Woolf.

415 Mass Culture (also Theatre Arts 415)
Fall. 3 credits.
W 2:30–5:30. J. Feuer.
This seminar will approach the subject of 'Popular' culture from the perspective of contemporary critical theory. We will focus upon the products of the U.S. mass-culture industry (e.g., films, TV, music, fashion), with an emphasis on the analysis of television. We will consider both the varying theoretical approaches to mass culture and specific studies of forms of mass culture using these approaches. Case studies might include: romance novels, James Bond, teen films, TV and postmodernism, TV soap operas, MTV, made for TV movies and others. The course readings will be chosen primarily from recent studies which, although theoretical in nature, focus upon *specific* cultural phenomena and often synthesize several theoretical models.

416 Cinema and the Humanism of Commodity (also Theatre Arts 416 and Women's Studies 436)
Spring. 3 credits
T 12:20–2:15. Trinh T. Minh-Ha.
Media production plays a primary role in maintaining a system of depoliticized multicultural diversity, which keeps each marginal group in a definable place as the latter is urged to provide the expected "difference." The seminar will emphasize issues of race and gender in representation, focusing on works that challenge conventional notions of subjectivity, of audience, and of interpretation in relation to film making, film viewing, and the cinematic apparatus. It will discuss the effect of social multiplication of images through which the whole world, in the name of humanism, is gathered within the fold of the known and the visible, and becomes appropriable.

417 Fascism and Mass Culture (also Comparative Literature 417, German Studies 417, and Theatre Arts 417)
Fall. 4 credits. Taught in English for advanced undergraduate and graduate students.
W 3:30–5:30. D. Bathrick.
This course will study the role and evolution of mass culture in the Third Reich between 1933 and 1945. In so doing, we will seek to demonstrate *why* and *how* the Nazis were able to use forms of aesthetic representation and mass media communication to establish and maintain political control during this period. Three things will be emphasized: 1) A comparative approach that explores the similarities and differences in the developments of mass-mediated culture during the 1930s within liberal/capitalist, communist/Stalinist, and fascist societies; 2) A focus upon the "aestheticizing of politics" (Walter Benjamin) by the Nazis as the key to understanding their appropriation of mass culture as a mode of domination. 3) Finally, as a main part of the course, a study of individual cultural documents of mass culture. This will include careful interpretive analysis of films (*Jüd Süss, Triumph of the Will, Baron Münchhausen*), literature (popular novels, utopian novels, poetry, etc.), theatre (the Nazi use of the classics such as Shakespeare, Goethe, Schiller, Nazi plays), art (a study of Nazi painters—(Arno Brekker, etc).

418 Gay Perspectives and Mass Culture
Spring. 3 credits.
R 12:20–2:15. A. Doty.
How do gays read such products of mass culture as film, television, music and advertising? Is there a definable "gay sensibility" that informs these encounters with mass culture texts? How might we theorize gay spectatorship/gay readings of mass culture? These questions address the most general concerns of this seminar, which will work through the issues suggested by these questions with reference to a number of topics: misogyny, camp, drag, cult, consumerism, and homoeroticism.

419 Bodies, Technologies, Mass Culture (also English 419)
Fall. 4 credits.
M 12:20–2:15. M. Seltzer.
The seminar proposes an interdisciplinary investigation of the relays between forms of cultural and technological production in America between 1870 and 1930. Turn-of-the-century American culture has alternatively been described as *naturalist*, as *the culture of consumption*, and as *machine culture*. What binds together these apparently alternative descriptions is the "discovery" that *bodies and persons are things that can be made*. This course will investigate the consequences—social, representational, and theoretical—of such a discovery. The focus will be on the representations of bodies and technologies in the discourse (written and visual) of the period. Some of the questions we will consider are these: How are the sieve-like categories of the body and the machine and of the natural and the cultural reconceived in this period? What are the literary, social, and formal consequences of such a reconception? How are the life process and the machine process rewritten in this period and how do literary and visual practices register such a rewriting? What do the bodies and machines of machine culture look like and what appeals and anxieties do these representations generate?

420 Mass Culture, Ideology and Philosophy (also Philosophy 443)
Spring. 4 credits.
W 2:30–4:25. N. Carroll.
This course approaches questions concerning mass culture from a philosophical perspective, asking about the nature of mass culture and reviewing the epistemological problems and prospects of mass culture analysis as well as exploring the resistance of traditional philosophical aesthetics to mass art. The central purpose of this course is to develop a philosophically informed model for analyzing the ideological dimensions of mass culture; the ramifications of this model for issues such as censorship, pornography, and public access with respect to mass media will also be discussed.

421 Riffraff of the Renaissance
Fall. 4 credits. Reading knowledge of Italian required.
T 2:30–4:25. M. Migiel.
The predominantly urban centers of northern Italy permitted the rise of a "mass culture" which sought to reinterpret (and to resist) the discursive models and practices offered by the greats of classical and Italian literature, preferring instead subjects, themes, and styles shunned by high culture. In studying the writers who do not conform to the ideological and aesthetic norms of the Renaissance, we will rethink our conception of the relation between "high" and "low" culture, between canonical and non-canonical works, between "literary" and "non-literary" languages.

422 Regeneration Through Violence: Post-Vietnam Imaginary Wars and Male Rebirth in American Popular Culture 1974–1990
Spring. 3 credits.
T R 2:30–4:25. J. W. Gibson.
Defeat in Vietnam created a serious cultural crisis; it ended the long tradition of victory in warfare that had been a central component of both American national identity and male identity. The course will explore the fantasies of winning new wars that have developed over the past 15 years using theories from mythology and psychoanalysis.

425 Marcham Seminar: Images of Humanity in Medieval China (also History 393)
Fall. 4 credits.
M 2:30–3:30 and W 2:30–4:25.
J. R. McRae and C. A. Peterson.
The middle period of China's history, essentially the T'ang and Sung dynasties, feature some of the highest achievements of Chinese civilization. These centuries (the seventh through the thirteenth) are distinguished by the exceptionally high levels of literature, art, religious and secular thought, and proto-scientific development, as well as by fundamental changes in state, society, and the economy. This seminar will explore the China of this age by examining the lives of several representative figures—a politician, a poet, a Buddhist monk, a Taoist priest, an emperor, an empress, a "detective," and others. The aim will be to reconstruct the inner and outer worlds of men and women perhaps not so far removed from ourselves in their basic motivations and daily concerns.

426 Marcham Seminar: Black Emancipation in Comparative Perspective (also History 471)
Fall. 4 credits. One course in American, Afro-Amercian or African History required, permission of instructor.
T 2:30–4:30. M. Washington and D. Ohadike.
This course will explore the black emancipation experiences in comparative perspective. Primary emphasis will be on Africa and the United States; secondary focus will be the Caribbean and Latin America. The African component will investigate social consequences of emancipation, the transformations accompanying that process, and the experiences of former slaves. Perspectives on the Americas will include the complexities of emancipation, its socio-economic results and the legacy of race relations.

439 Oral and Written Traditions in Africa (also French Literature 439 and Comparative Literature 439)
Fall. 4 credits. Reading knowledge of French recommended.
M 2:30–4:25. J. Ngate.
Organized around but not limited to two major African epics, *Soundjata* and *Chaka*, this course will enable us to investigate the nature, the validity, and the implications of many francophone African writers' claims to being modern versions of the *griots* of the oral tradition.

440 African Cityscapes: Urbanization and Its Literary Representations (also Comparative Literature 440, French Literature 440 and Africana 440)

Spring. 4 credits. Reading knowledge of French recommended.

T 2:30–4:25. J. Ngate.

The course will seek to make sense of the evolving fate of the city in African literature in French: from being presented almost exclusively as a deathtrap for the colonized, the city has now become that ambiguous space in which it is increasingly difficult to say what it means to be African.

150 Introduction to Cultural Studies (also Comparative Literature 150)

Fall. 4 credits. Does not satisfy the Freshman Writing Seminar requirement, but will satsify the distribution requirement.

T R 10:10–11:25. W. Cohen.

An introduction not to culture but to the study of it. This course outlines an emergent field of inquiry concerned with the ultimately political character of meanings, values, subjectivity, and symbolization. Topics include cultural theory, mass culture/popular culture, cultures of resistance, and cultural imperialism. Examples are drawn primarily from the 1960s and its legacy. Emphasis is on responses to the Vietnam War: news coverage, documentaries, scholarship, memoirs and letters, architecture, fiction, poetry, theatre, comics, tv series, and especially popular music (Beatles, Arlo Guthrie, Country Joe, etc.) and Hollywood films (e.g., *Apocalypse Now, Coming Home, Deer Hunter, Full Metal Jacket, Platoon, Born on the Fourth of July*—if available— and perhaps one Rambo movie.

491 Mass Culture Revisited: From Popular Literature to the Culture Industry (also Comparative Literature 491 and German Studies 491)

Fall. 4 credits. For advanced undergraduates and graduate students; taught in English. Reading knowledge of German required.

T 1:25–3:20. P. U. Hohendahl.

This seminar is designed to engage in a critical dialogue with theoretical writings on mass culture (Adorno, Bausinger, C. Bürger, Howe, Huyssen, Jameson, L. Levine, MacDonald, Schenda); and to investigate the emergence of modern mass culture in Germany. Tracing the transition from traditional forms of popular literature to its recasting after the industrial revolution, the course will examine the relationship between established high culture and popular culture. Readings from the works of popular novelists, such as Marlitt, Courths-Mahler, Karl May, and Ganghofer.

South Asia Program

N. Uphoff, director; R. Ahmed, R. Barker, R. Colle, E. W. Coward, E. Erickson, S. Feldman, J. W. Gair, A. Gold, D. Gold, D. Holmberg, J. Jasanoff, S. Jasanoff, M. Katzenstein, V. Kayastha, K. A. R. Kennedy, B. Lust, B. G. MacDougall, K. March, F. McCarthy, B. Miller, C. Minkowski, S. Mohanty, A. Nussbaum, S. O'Connor, B. Oja, S. Oja, P. Olpadwala, T. Poleman, D. Sisler, D. Sudan, M. Walter, S. White

The South Asia Program coordinates research, teaching, and special campus events relating to Bangladesh, India, Pakistan, Nepal, and Sri Lanka. The program faculty includes members from a variety of disciplines, including agricultural economics, agricultural engineering, anthropology, architecture, city and regional planning, communication, comparative religion, ecology and systematics, English, government, history, history of art, human ecology, international agriculture, linguistics, literature, rural sociology, and science, technology, and society. Undergraduates with a special interest in the region may major in Asian studies with a South Asian concentration, or do a South Asian concentration with any other major. The languages regularly offered are Bengali, Hindi, Nepali, Punjabi, Sinhala, Tamil, Urdu, Sanskrit, and Pali. Cornell is a class A member of the American Institute of Indian Studies (AIIS), and undergraduates as well as graduate students are eligible for AIIS intensive language program fellowships in India. For courses available in South Asian studies and details on the major, see the Department of Asian Studies listing in this volume.

Students who want further information on courses and research opportunities should direct questions to the program office, 170 Uris Hall.

Southeast Asia Program

R. Barker, director; B. R. Anderson, T. Chaloemtiarana, E. W. Coward, Jr., G. Diffloth, G. S. Fields, M. F. Hatch, H. K. Khanh, A. T. Kirsch, S. J. O'Connor, T. Shiraishi, J. T. Siegel, K. W. Taylor, J. U. Wolff, D. K. Wyatt

Southeast Asia studies at Cornell is included within the framework of the Department of Asian Studies. Fourteen full-time faculty members in the colleges of Arts and Sciences and Agriculture and Life Sciences participate in an interdisciplinary program of teaching and research on the history, culture, and societies of the region stretching from Burma through the Philippines. Courses are offered in such fields as agricultural economics, anthropology, Asian studies, government, history, history of art, linguistics, music, and rural sociology. Instruction is also offered in a wide variety of Southeast Asian languages: Burmese, Cambodian, Cebuano (Bisayan), Indonesian, Javanese, Tagalog, Thai, and Vietnamese, for which Foreign Language Area Studies Fellowships are available. Intensive instruction is offered in the Full-Year Asian Language Concentration (FALCON) in Indonesian at the beginning and intermediate levels. Intensive advanced Indonesian language programs are held from June through August in Indonesia each summer. The formal program of study at Cornell is enriched by a diverse range of extracurricular activities, including an informal weekly luncheon seminar, the concerts of the Gamelan Ensemble, a weekly Southeast Asia film series, and public lectures. The John M. Echols Collection on Southeast Asia, in Olin Library, is the most comprehensive collection on this subject in America.

Undergraduates may major in Asian studies with a focus on Southeast Asia and its languages, or they may elect to take a concentration in Southeast Asia studies by completing 15 credits of course work. Students interested in exploring these opportunities should consult the director, Southeast Asia Program, 120 Uris Hall.

The Southeast Asia Summer Studies Institute (SEASSI), a ten-week intensive language and area program, will be offered from 3 June through 10 August 1991 at Cornell University. A limited number of fellowships are available for this program. For further information write: Professor John U. Wolff, SEASSI Director, GO2E Uris Hall, Cornell University, Ithaca, New York 14853.

Statistics Center

The Cornell Statistics Center coordinates a university-wide program in statistics and probability. Students interested in graduate study in probability and statistics should apply to the Field of Statistics or to one of the other graduate fields of study that offer related course work. A list of courses in probability and statistics recommended for graduate students in the Field of Statistics can be found in the description of the Cornell Center for Statistics in the section "Interdisciplinary Centers and Programs." Further information can be obtained from the director of the Statistics Center in Caldwell Hall.

Women's Studies Program

N. Furman, director; L. Abel, J. Allen, D. Bathrick, S. Bem, L. Beneria, J. Bernstock, J. Blackall, J. Brumberg, D. Castillo, A. Cook, I. DeVault, I. Ezergailis, J. Farley, S. Feldman, F. Firebaugh, J. Fortune, G. Fraser, J. Gerner, J. Ginsburg, M. Hite, D. Holmberg, I. Hull, B. J. Isbell, M. Jacobus, J. Locey, S. McConnell-Ginet, K. March, C. A. Martin, S. Mehrez, J. Mueller, H. Mullen, M. B. Norton, S. Samuels, D. Scott, M. Small, L. Waugh, E. Wethington

Women's Studies, a university program in the College of Arts and Sciences, has three goals: to encourage the development of teaching about women and sex roles for women and men; to examine assumptions about women in various disciplines and to develop, systematize, and integrate back into the disciplines new knowledge about women; and to cooperate in public service activities with the extension divisions of the university.

The program is guided by a board composed of faculty, staff, and students at Cornell and members of the Ithaca community who have an intellectual interest in women's studies. Program facilities in Uris Hall, including a reading room–lounge and a seminar room, are open to all interested students and faculty.

Program Offerings

Undergraduate students in the College of Arts and Sciences who want to major in women's studies can design their own major through the College Scholar or Independent Major programs. Any graduate student in the university may elect a women's studies minor. Students interested in either the major or the minor should obtain further information from the Women's Studies Office, 332 Uris Hall.

The program typically sponsors a noncredit seminar/study group for graduate students and faculty to facilitate sharing of knowledge across disciplinary lines. During the academic year the program also sponsors frequent public lectures dealing with social, political, and intellectual issues in women's studies.

The Concentration

Undergraduate students who wish to graduate with a concentration in women's studies should consult with the director of undergraduate studies in women's studies to select an adviser. In collaboration with that adviser, students will design a coherent program in women's studies to complement their major.

Before graduation, students will submit to their adviser a final summary on their completed work in the program. The concentration is open to students in all colleges of the university.

The concentration in women's studies consists of four courses. Typically, two courses are selected from the list of general courses and two from the list of specialized courses (see below). Freshman writing seminars, related courses, or independent study in women's studies may be substituted for specialized courses in the concentration with the prior approval of the adviser.

For further information or to meet with the director of undergraduate studies to select an adviser, students should contact the Women's Studies Office, 332 Uris Hall, 255-6480.

Distribution Requirement

Distribution requirements are satisfied by any two women's studies courses in any of the following categories:

Social sciences: (a) any two of 208, 218, 238, 244, 277, 305, 321, 353, 363, 366, 406, 408, 425, 428, 450, 454, 480 or (b) any one of 210, 365, plus one from list a.

History: any two of 227, 238, 273, 307, 336, 357, 426, 438.

Humanities: (a) any two of 248, 251, 264, 281, 297, 348, 349, 363, 365, 366, 390, 402, 404, 445, 456, 460, 474, 475, 476, 481or (b) any one of 210, 365, 493, plus one from list a.

Courses

Keeping in mind that women's studies is interdisciplinary, it is useful to distinguish six core areas, or foci, within the program: ideology and culture, institutions and society, history, literature and the arts, psychology and human development, and natural sciences.

The program offers undergraduate and graduate courses in all of the core areas, both independently and in cooperation with other departments. Women's studies courses are grouped into four categories to assist students in selecting the level or degree of specialization suited to their program:

I) Freshman writing seminars

II) General courses (which provide a general introduction to a broad subject area or core focus within women's studies)

III) Specialized courses and seminars (which have smaller enrollments and focus upon more specialized topics within each of the core areas)

IV) Related courses and seminars (which need not focus exclusively upon women's studies issues but include significant consideration of sex differences, feminist criticism, or gender)

I. Freshman Writing Seminars

105 Feminine and Masculine Ideals in Japanese Culture (also Asian Studies 105)

Spring. 3 credits.
M W F. 10:10. Staff.

In its long history, Japanese culture has developed a large number of role models—the aristocrat, poet-priest, warrior, entertainer, "salary man," and "education mama"—and idealized them in its literature and art. Using these ideals as its subject matter, the seminar will give students practice in reading texts closely, analyzing ideas, and writing various types of papers. Through studying Japanese concepts of femininity and masculinity, the students will not only explore a new culture but will also gain new perspectives on their own cultures.

106 Women and Writing (also English 105)

Fall and spring. 3 credits.
Hours to be arranged. Staff.

What is a woman? How does she confront her personal experience? Does she play a special role in history, in our definition of society, or in our understanding of language and literature? This course will explore the relation between women and writing. We will discuss writings by and about women, debate our attitudes toward feminism, and analyze the relevance of these questions to our own written work. Individual sections will emphasize different aspects of the relation between women and writing. Which section to choose should depend on your own interest in exploring how women appear in private or autobiographical writings, historical contexts, and/or literary works. Further information on specific sections is available in the freshman writing seminar office. Textual overlap among the sections is kept to a minimum so that students can take more than one Women and Writing seminar during their time at Cornell.

[107 The Family in American History (also History 107)

3 credits. Not offered 1990–91.
M. B. Norton.]

II. General Courses

116 Women and the Biblical World

Fall. 3 credits.
M W F 12:20–1:10. M. Amihai.

A feminist approach to the study of women, their history, and their portrayal in biblical antiquity. Sources include inscriptions, marriage and divorce documents, and literature (goddess mythology, Hebrew Bible, New Testament, Gnostic Gospels). All texts in English translation.

121 Language and Gender (also Linguistics 121)

Fall. 3 credits. Disc/sem, limited to 17 students.
T R 1:25–2:40. Sally McConnell-Ginet.

What does it mean to speak "like a woman" or "like a man," or "like a girl," or "like a boy?" Even ten-year-olds in our culture approach similar communicative tasks in gender-differentiated ways: girls often get others to do things by saying things like "let's get some coat-hangers" whereas their male peers are more likely to say something like "get me a coat hanger." How do race, social class, age, setting, and aims interact with gender in affecting communicative style? How do our ways of writing and talking reflect and perpetuate gender stereotypes or biases? What is the role of sex and gender in language change? Readings, discussion, and writing assignments will explore connections between our uses of language and the cultural construction of femaleness, maleness, and sexuality.

168.01 Black Women Writers: The Uses of Madness and Silence (also English 168)

Fall. 3 credits. Disc/sem.
Harryette Mullen.

How are silence and madness used in texts by black women writers to explore their relationship to language, writing, and power? Why is madness a compelling metaphor for the complexities of race, class, gender, and cultural conflict? How does one interpret the silences in a text? How is silence itself foregrounded in a literary text? This seminar will focus on these and other questions raised by the novels, short stories, poetry, and drama of black women writers from Africa, the United States, and the Caribbean, including Bessie Head, Toni Morrison, Adrienne Kennedy, Opal Palmer Adisa, Tsitsi Dangarembga, and Jamaica Kincaid.

210 Introduction to Women's Studies

Fall. 4 credits. Limited to 20 students. Permission of instructor required .
Lec, M 12:20–2:15; disc, W 12:20 or 1:25.
C. A. Martin.

This course introduces students to critical approaches in feminist scholarship to the cultural, socioeconomic, and political situation(s) of women. Particular attention will be paid to the conceptual challenges and dangers posed by attempts to study women without taking account of relations between race, class, and gender in ideological and social formations. Readings will draw on work in various disciplines and will include literary texts and visual images.

214 Biological Basis of Sex Differences (also Biological Sciences 214)

Fall. 3 credits. Prerequisite: one year of introductory biology.
T R 8:30–9:55; plus occasional disc to be arranged.

The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction. Where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, physical and mental capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

218 The Economics of Gender (also City and Regional Planning 218)

Spring. 3 credits.
T R 3:30–5. L. Beneria.

An introduction to economic analysis of gender relations and women's work, with emphasis given to understanding different analytical approaches to these issues. Although the course focuses mostly on the United States, some basic questions regarding international development and women will be dealt with.

227 Modern American Sex Roles in Historical Perspective (also History 227)
Spring. 4 credits. Limited to 20 students. Permission required. Intended primarily for sophomores.
M 1:25–3:15. M. B. Norton.
A reading and discussion course. The class will begin by examining sex roles in the United States in the 1990s, looking at a variety of sources like popular magazines and contemporary commentaries. We will then move backwards in time in an attempt to uncover the roots of current attitudes. The students will help to determine which topics the class will investigate in detail.

[244 Language and the Sexes (also Linguistics 244)
4 credits. Not offered 1990–91.
S. McConnell-Ginet.
This course explores connections between language (use) and gender/sex systems, addressing such questions as the following. How do sex and gender affect the ways we speak, the ways we interpret and evaluate speech? How do sociocultural differences in women's and men's roles affect their language use, their relation to language change? What is meant by sexist language? How does conversation structure the social worlds of women and men? Readings draw from work in linguistics, anthropology, philosophy, psychology, literature, and general women's studies and feminist theory.]

[273 Women in American Society, Past and Present (also History 273)
4 credits. Not offered 1990–91.
M. B. Norton.
A survey of women's experiences in America from the seventeenth century to the present. Among the topics to be discussed are women's familial roles, the changing nature of household work, the women's rights movement, employment of women outside the home, and contemporary feminism.]

277 Psychology of Sex Roles (also Psychology 277 and Sociology 277)
Spring. 3 credits. Limited to 300 students.
T R 11:40–12:55. S. Bem.
Addresses the question of why and how adult women and men come to differ in their overall life-styles, work and family roles, personality patterns, cognitive abilities, etc. This broad question is examined from five perspectives: (a) the psychoanalytic perspective; (b) the biological perspective; (c) the historical and cultural evolutionary perspective; (d) the child development perspective; and (e) the social-psychological and contemporaneous perspective. Each of these perspectives is also brought to bear on more specialized phenomena relating to the psychology of sex roles, including psychological androgyny, women's conflict over achievement, the male sex role, egalitarian marriage relationships, gender-liberated childrearing, female sexuality, homosexuality, and transsexualism.

321 Sex and Gender in Cross-Cultural Perspective (also Anthropology 321)
Fall. 4 credits.
Lec M F 12:20, Disc W 8:00, 9:05, 10:10, 11:15, 12:20, 1:25, 2:30, 3:35. K. S. March.
An introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. The course examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex role definition around the world.

353 Feminism: State and Public Policy (also Government 353)
Spring. 4 credits.
T R 2:55–4:10. M. Katzenstein.
The course examines aims and strategies of the feminist movement in the United States and the response of both society and the state to feminist claims. It is thus a course about political protest and the capacity of American political institutions to promote and shape, as well as to counter social change. In examining the law and public policy on such issues as job discrimination, wife battery, rape, abortion, etc., the course explores the contradictions between, and the congruence of, the dual ideals of individual choice and group equality.

[365 Directions in Feminist Theory (also Government 362)
4 credits. Limited to 25 students. Not offered 1990–91.
C. A. Martin.
This course is designed to explore developments in contemporary feminist theory with particular attention to feminist critiques, reinterpretations, and uses of Marxist, psychoanalytic, and (post)structuralist thought. We will be concerned with the ways in which radical feminist questions converge with developments in these fields and the ways in which feminist analyses challenge some of the most basic assumptions embedded in these and other social theories. We will consider the approaches of a variety of feminist thinkers to the relations between a gender, race, class, and sexual divisions.]

372 Sex Discrimination: Law and Social Policy (also Sociology 372 and Government 306)
Spring. 4 credits.
M W F 10:10. C. Bohmer.
This course will cover the legal and social trends in the area of sex discrimination. It will examine the relationship between feminist consciousness and developments in gender-related constitutional law. We will discuss the meaning of sex discrimination in the context of various areas of importance and examine the role of the law in redressing or perpetuating social and legal inequities.

III. Specialized Courses and Seminars

[208 Gender, Race, and Medical "Science" (also Africana Studies 208 and Anthropology 208)
3 credits. Not offered 1990–91.
G. Fraser.
The course will examine the social construction of race and gender in the medical sciences from the turn of the century to the present. Beginning with readings that propose a new view of scientific medicine as a system of signs and symbols and as culturally embedded, we will proceed to an examination of some of the following topics: racism and experimentation: the treatment of venereal disease and tuberculosis; the demise of social childbirth; the body as a medical product; menstruation as pathology; the monitored mind: women and psychiatry; the political economy of health care; medical authority; the training of medical students; political anatomy of the body; sites of resistance; and alternative systems: cross-cultural case studies.]

[238 The Historical Development of Women as Professionals, 1800–Present (also Human Development and Family Studies 258)
3 credits. Not offered 1990–91.
J. Brumberg.
The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, the clergy, and the academy. Lectures, reading, films, and discussion are geared to identifying the cultural patterns that fostered the conception of gender-specific work and the particular historical circumstances that created these different work opportunities. The evolution of professionalism and the consequences of professionalism for women, family structure, and American society are also discussed.]

[248 Major Nineteenth-Century Women Novelists (also English 247)
4 credits. Not offered 1990–91.
J. Blackall.
This course gives particular attention to the biographical and social circumstances surrounding the novels, their critical reception within their own time, and the themes and subject matter that women novelists elected to write about. The reading includes masterworks and certain other works that exerted a major imaginative impact on contemporary readers. Readings are Austen, Persuasion; C. Bronte, *Jane Eyre*; E. Bronte, *Wuthering Heights*; Gaskell, *Mary Barton*; Stowe, *Uncle Tom's Cabin*; Eliot, *The Mill on the Floss*; Gilman, *The Yellow Wallpaper*; Chopin, *The Awakening*. In addition, two twentieth-century works, Jean Rhys's *Wide Sargasso Sea* and Edith Wharton's *Ethan Frome*, will be approached as imaginative sequels to *Jane Eyre* and *Wuthering Heights* respectively.]

[251 Twentieth-Century Women Novelists (also English 251)
4 credits. Not offered 1990–91.
S. Samuels.
This course will be particularly concerned with self-consciously experimental novels and with some of the questions about women's experience, perspective, and language raised by recent feminist criticism. We will read works by Virginia Woolf, Jean Rhys, Djuna Barnes, Doris Lessing, Toni Morrison, Margaret Atwood, Alice Walker, and others.]

[264 Ethnic Literature: Bridges and Boundaries (also English 264)
3 credits. Not offered 1990–91.
Harryette Mullen.
The American language that came, as William Carlos Williams noted, "from the mouths of Polish mothers," has also been shaped by the oral and written traditions of Native Americans, African Americans, Chicanos, and Asian Americans whose literary production will be examined in this course. Works by writers in these traditions will be studied as sites marking the emergence of a contemporary American language and literature capable of representing the diverse and particular realities of a multicultural nation. This course will focus

especially on how each ethnic tradition uses the contested territories of geography, language, and gender in texts that both refer to and imaginatively construct communities and traditions based on collective experience. Discussion will focus on how each text makes connections and distinctions between individuals as well as within and among communities bound together by shared linguistic, geographical, spiritual, and cultural traditions, and the territorialization of bodies, especially women's bodies, as boundaries or bridges between races/ethnicities, in discursive constructions of ethnicity.]

[281 Gender and Society in the Muslim Middle East (also Near Eastern Studies 281)
3 credits. Not offered 1990–91.
L. Peirce.
This course examines conceptions of gender in traditional Muslim society and the ways in which they have affected the experiences of Muslim women. Topics to be covered include the position of women in the religious law of Islam, female seclusion and the harem, social hierarchies and family structure, sexuality, and the problem of Western perceptions of Muslim women. Although attention will be given to gender issues in the contemporary Middle East, the course focuses on the historical roots of the present-day situation of Muslim women. Readings include primary sources in translation; visual materials (slides, movies) form an integral part of the course.]

[297 Beyond the Stereotype: Images of Women in the Middle East (also Near Eastern Studies 297)
Not offered 1990–91.
S. Mehrez.
We will be reading nonfictional works on women, as well as works of fiction on and by women, in an attempt to re-evaluate certain stereotypic functions and roles ascribed to Middle Eastern women throughout history. Our starting point will be the Koran, the text that continues to regulate the formation of the image of women. We will investigate the degree of acceptance or rejection of such an imposed image as it manifests itself in contemporary texts.]

307 African-American Women in Slavery and Freedom (also History 303)
Spring. 4 credits.
T R 11:40–12:55. M. Washington.
This course thematically explores the history of African-American women from a sociopolitical perspective. Topics include the images and depictions of Black women, how Black women have engaged in political struggle, race progress vs. feminism, the relationship between racism and sexism, and Black women in family life.

336 Special Topics in International and Comparative Labor Relations: Comparative History of Women and Work (also ILR 337/537)
Fall. 3 credits. Disc/sem.
W 1:25–4:25. Ileen DeVault.
This seminar will explore the similarities and differences among different cultures' assumptions about the work of women as well as women's experiences in varying work circumstances throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course will consist across time and geography. Comparative examples will be taken from the United States, Europe, and the Third World.

346 German Women Writers in Translation (also German Studies 346)
Spring. 4 credits.
T R 1:25–2:40. C. A. Martin.
The course will involve careful readings of the work of specific authors, (authors to change each semester); feminist discussion of the concept of "Women's Writing"; and attention to the sociocultural and historical contexts in which the texts under discussion were written. In spring 1991 we will include twentieth-century German and German-Jewish writers and post-war West German writers.

348 The Female Literary Tradition: Wollstonecraft to Woolf (also English 348)
Spring. 4 credits.
T R 11:40–12:55. M. Jacobus.
A course designed to survey and investigate the nature of a British "female literary tradition" from the late eighteenth to the early twentieth centuries, read in the light of the rich and varied feminist criticism it has attracted (questions: what might constitute a female literary tradition? How is it transmitted? Forgotten? Recovered? Defined as "Female" in the first place?) Starting with late eighteenth-century women novelists such as Inchbald, Burney, and Radcliffe, we will move by way of Wollstonecraft's writing to Austen, Edgeworth, and Mary Shelley. Mid-nineteenth-century authors will include writing by the Brontes, Gaskell, Barrett Browning, and George Eliot, as well as sensation novelists such as Braddon and Wood. We will look at some of the "new women" authors of the 1890s (Egerton, Schreiner) before turning to early twentieth-century novelists including Woolf, Radcliffe Hall, and H. D. The dual emphasis will be on an atypical or noncanonical selection of authors and texts, where possible, and on feminist literary criticism; a valuable (although not essential) prerequisite might be a 200- or 300-level course in major women novelists of the period covered, such as Austen, the Brontes, or Eliot, or in feminist literary theory.

[349 Women in Medieval Literature (also German Studies 348 and Comparative Literature 349)
4 credits. Not offered 1990–91.
B. Buettner.
A study of women and their roles in the social order as portrayed in the literature of the Middle Ages. Readings will illustrate the range of attitudes toward women from asceticism and antifeminism to their idealization in courtly love lyric and romance. We will examine woman's putative influence in literature, both positive and negative, on man and society and the debates over woman's "proper" attitude and role. Works in English translation will include a play by Hroswitha of Gandersheim, the Nibelungenlied, selected Mariological and mystical poems, courtly love lyric, Parzival, Tristan and Isolde, and The Book of the City of Ladies.]

[363 Representations of Women in Ancient Greece and Rome (also Classics 363)
4 credits. Not offered 1990–91.
L. S. Abel, J. Ginsburg.
Classical authors created and left behind powerful images of women and of what women ought and ought not to be. These writers also provide fleeting insights into the real lives of women in antiquity. In this course, we will examine the ancient evidence to trace the origin of some Western attitudes about women and to analyze the assumptions that underlie the representations of women in ancient Greece and Rome. How are these images constructed and how do they work? How can we use the ancient evidence to assess the real lives and social roles of women in antiquity?]

366 Lesbian Writing and Theory (also Government 366)
Spring. 4 credits. Prerequisite: permission of instructor.
Hours to be arranged. C. A. Martin.
This course will begin by investigating the histories and implications of the categories in the course title. Though the focus will change from year to year, there will be a strong emphasis on "lesbian writing" and theory since the late 1960s. We will consider the relations between lesbian and gay male writing and theory as well as theory and writing that addresses itself explicitly to the intersections of race, gender, sexuality, and class. Writers, critics, and theorists will include, but not be limited to Audre Lorde, Esther Newton, Mab Segrest, Barbara Smith, Cherrie Moraga, Gloria Anzaldúa, V. K. Aruna, Adrienne Rich, Teresa de Lauretis, Judith Butler, Diana Fuss, Martha Vicinus, Michael Foucault, Martin Duberman.

[390 The Fiction of Modern Hispanic Women (also Spanish 390)
Taught in Spanish. Not offered 1990–91.
D. Castillo.
This course will survey a representative sampler of novels and short stories by twentieth-century Hispanic women. We will be giving particular attention to typical themes and subject matter relating to women's experience and perspectives in the context of questions raised by recent feminist criticism. Readings will include works by Silvina Ocampo, Rosario Ferre, Susana Torres Molina, Carmen Martin Gaite, Carmen Gomez Ojea, Luisa Valenzuela, Cristina Peri Rossi, Mercedes Salisachs, and Albalucia Angel.]

[404 Women Artists (also History of Art 404)
4 credits. Prerequisite: permission of instructor. Auditing not permitted. Not offered 1990–91.
J. Bernstock.
This seminar will be devoted to a study of the work of women artists from antiquity to the present. The works of the most important women artists from each period will be studied in relation to the changing roles of women in society and to the art produced contemporaneously by men.]

406 The Culture of Lives (also Anthropology 406)
Spring. 4 credits.
K. March.
This seminar explores the insights provided by biographical-autographical accounts into both the particularities of individual lives and into the wider social and cultural forms of those lives. We will look at the place of life histories within development of anthropology as a discipline from the earliest explorers' accounts, through the florescence of their importance in early American ethnographic description, and into the contemporary resurgence of interest in personal narratives as windows onto both the social or cultural construction of the person and the personal construction of the social or cultural. Course materials draw heavily upon women's lives and their representations, both to contrast women's and men's accounts and to underscore the special significance of women's narratives in anthropology.

408 Gender Symbolism (also Anthropology 408)
Spring. 4 credits.
K. March.
This seminar looks at how cultural meaning is constructed about biological sex differences. We begin from the presumption that sex difference and gender are culturally defined as a system of categories and meanings interacting with people's cognitive, intellectual, and affective experience of their worlds. The seminar has two primary conceptual objectives: (1) to analyze the relations among gender symbols and (2) to explore the relations between these symbols and the social worlds of the people who believe in them.

425 Gender Relations and Social Transformation (also Rural Sociology 425)
Fall. 3 credits. Students in the endowed colleges must register for Women's Studies 425.
W 7:30–10:30 p.m. S. Feldman.
A comparative analysis of women's contribution to domestic-household and agricultural labor as production practices change. The course emphasizes the configuration of various economic and social sectors and their realignments in and between countries. Changes occur in response to technology transfer, the transformation of the labor market, the international division of labor, and changing family relations.

[426 Undergraduate Seminar in Early American History (also History 426)
4 credits. Not offered 1990–91.
M. B. Norton.]

[428 Spirit Possession, Shamanism, Curing, and Witchcraft (also Anthropology 428)
4 credits. Limited to 20 students. Prerequisite: background in anthropology or women's studies. Not offered 1990–91.
D. Holmberg.
An anthropological consideration of witchcraft, shamanisms, and cults of spirit possession, with special attention to the play of gender. Classic anthropological accounts of non-Western societies will be considered along with ethnographic and historical accounts of Western societies. The course also addresses general problems in the study of women and gender and the anthropology of myth, ritual, and symbolism.]

431 Contemporary Film Theory (also Theatre 414, English 410, and Society for the Humanities 411)
Fall. 3 credits.
T 11:10–1:05. C. Penley.
This course will survey the major figures and ideas that have shaped contemporary film theory: Christian Metz's semiotics of the cinema, Raymond Bellour and Thierry Kuntzel's textual analyses of film. Jean-Louis Baudry's "Apparatus" theories, Stephen Heath's work on narrative and ideology, and Laura Mulvey's feminist and psychoanalytic approach to describing spectatorship. In addition the course will cover the most important revisions and refutations of those theories by feminists, Marxists, neo-formalists, deconstructionists, cognitive theorists, cultural studies and popular culture scholars, and so on. Attention will also be given to the social and institutional forces that have shaped this relatively new and volatile discipline.

[433 The Female Dramatic Tradition (also Theatre Arts 433)
4 credits. Not offered 1990–91.
J. E. Gainor.]

434 Modernity, Femininity, Consumerism (also Society for the Humanities 414 and English 414)
Spring. 3 credits.
M 12:20–2:15. R. Bowlby.
The tradition of literary modernity is generally seen as opposed to consumerism, whether considered as an exclusive focus on materials and monetary values, or (rather differently) as a feminine capitulation of the lures of a homogeneous mass culture. This course will question the implications and the validity of that dichotomy by looking in detail at representations of the woman, the artist, the consumer culture in literary, theoretical, and popular texts by authors such as Baudelaire, Barthes, Benjamin, Freud, Friedan, Nabokov, Wilde, and Woolf.

436 Cinema and the Humanism of Commodity (also Society for the Humanities 416 and Theatre Arts 416)
Spring. 3 credits.
T 12:20–2:15. T. Minh-Ha.
Media production plays a primary role in maintaining a system of depoliticized multicultural diversity, which keeps each marginal group in a definable place as the latter is urged to provide the expected "difference." The seminar will emphasize issues of race and gender in representation, focusing on works that challenge conventional notions of subjectivity, of audience, and of interpretation in relation to film making, film viewing, and the cinematic apparatus. It will discuss the effect of social multiplication of images through which the whole world, in the name of humanism, is gathered within the fold of the known and the visible and becomes appropriable.

[438 Female Adolescence in Historical Perspective, 1815–1960 (also HDFS 415)
3 credits. Limited to 5 students. Permission of instructor required. Not offered 1990–91.
J. Brumberg.
The changing nature of female adolescence in the United States is explored using nineteenth-century primary sources available in the Department of Manuscripts and University Archives. Olin Library multidisciplinary readings and discussions are designed to uncover the nature of women's childhood, patterns of authority within the family, cultural attitudes toward sexuality, female friendships, courtship patterns, and rites of passage into adulthood.]

[445 Jane Austen, Elizabeth Gaskell, and George Eliot (also English 445)
4 credits. Not offered 1990–91.
J. Blackall.
A close focus on five masterworks of the nineteenth century—Austen's *Pride and Prejudice* and *Emma*; Gaskell's *Life of Charlotte Bronte* and *Wives and Daughters*; and Eliot's *Middlemarch*—with particular regard for the circumstances, biographical and social, from which these works emerged. We will examine these writers' perception of the institution of marriage; their delineation of the problem of attaining self-fulfillment and self-expression within a domestic and rural community, especially for women; and their concepts of a "heroine" and a "hero." Emphasis will be on reading and discussion. Participants will keep journals reflecting their personal responses to the books and their pursuit of chosen topics, these notes leading to one final essay of moderate length.]

[446 Gothic and Gender (also English 445)
4 credit hours. Seminar limited to 20. Prerequisite: a course at 300 level or above in literature or literary theory. Not offered 1990–91.
M. Jacobus.
A course focusing on the intersections of gothic fiction (by men and women) and gender issues between the late-eighteenth-century and the mid-nineteenth-century sensation novel. The emphasis will be on the gothic construction of gender as well as the definition and evolution of gothic modes and genre and on exploring and (where appropriate) contesting a variety of the psychoanalytic accounts (including gender-political accounts—whether specifically feminist or not). We will be reading some or all of the following novels by Walpole (*Castle of Otranto*), Diderot (*The Nun*), de Sade (*Justine*), and M. G. Lewis (*The Monk*), as well as the feminized (anti-)gothic tradition including Radcliffe (*Mysteries of Udolpho*), Austen (*Northanger Abbey*), Mary Shelley (*Frankenstein*), and Freud's Schreber (*Memoirs of my Nervous Illness*), ending with Wilkie Collins (*The Women in White*). Alongside fiction, we will consider classics of gothic criticism such as Freud's "Uncanny" as well as more recent critical accounts, whether their emphasis is on post-structuralism (Sedgwick's *The Coherence of Gothic Conventions*), feminine fantasy (Modleski's *Loving with Vengence*), or domestic ideology (Kate Ellis's *The Contested Castle*).]

450/650 Bio-historical Construction of Gender and Sexuality (also Psychology 450 and 650)
Fall. 4 credits. Prerequisite: Psychology 277 or permission of instructor. Limited to 12 seniors and graduate students. No preregistration; interested students should attend first class session. Graduate students, see Psychology/Women's Studies 650.
W 2:30–4:30. S. Bem.
This seminar is designed to bridge the divide between biological/essentialist perspectives on gender and sexuality, and historical/social constructionist perspectives. It is interdisciplinary, covering material from biology, history, anthropology, law, sociology, psychology, psychiatry, philosophy, and feminist theory.

Part 1 considers how biology and history have interacted in Western culture to produce both social institutions and discourses that have embedded within them the following three organizing principles or "cultural lenses": (a) biological determinism, (b) androcentrism, and (c) gender polarization (including the stigmatizing of homosexuality). Part 2 considers how the individuals living within such a cultural context are transformed from male or female newborns into "masculine" and "feminine" adults. Part 3 considers possibilities for both social and personal change.

[454 Women, Revolution, and Socialism (also Asian Studies 454)
4 credits. Not offered 1990–91.
Staff.
The course will examine the theory and practice of revolution and socialist development from the viewpoint of women revolutionaries and socialist thinkers as well as male socialist writers on the "Woman Question." The theoretical focus will be on the articulation of revolution in gender relations with other revolutionary struggles against colonial, class, and ethnic domination. Case study material includes the Soviet Union, China, Vietnam, Mozambique, Central America (Nicaragua and Guatemala), and Malaysia. Issues include marriage law reform, land reform and cooperativization, military struggle, political mobilization and leadership, and nonrevolutionary forms of everyday resistance.]

456 Edith Wharton, Willa Cather, and Eudora Welty (also English 456/656)
Fall. 4 credits.
T R 1:25–2:40. J. F. Blackall.
A representative selection of the best fiction of three distinguished American women writers with particular regard for their representation of women in relation to environment, for their characteristic themes and materials, and for their practice of the craft of fiction. Readings: Wharton, *The House of Mirth, Summer, The Age of Innocence*, and selected short stories; Cather, *O, Pioneers!, A Lost Lady, The Professor's House*, and selected short stories; and Welty, *The Robber Bridegroom, The Golden Apples, The Optimist's Daughter*, and selected short stories. Discussion format with three essays.

[460 Gender in Nineteenth-Century America (also English 461/661)
4 credits. Not offered 1990–91.
S. Samuels.
A study of the relation between historical experience and literary texts. We will examine from the perspectives of both historical and literary analysis the rise of women writers, the novel's preoccupation with conflicts between men and women, the cultural uses of feminism and antifeminism, and the impact of the new woman. Bringing traditional literary texts—novels and poetry—into dialogue with "nonliterary" writings like journalism, political treatise, social reform manifestos, and etiquette books, we will draw on the methods and theories of cultural history and literary criticism to ask how gender relations and the history of women bear on the plots, discourses, and images of literary texts. A tentative reading list would include Susannah Rowson's Charlotte Temple, Lydia Maria Child's *The Mother's Book*, Catherine Beecher's *A Treatise on Domesticity*, Nathaniel Hawthorne's *The Blithedale Romance*, works by Angelina and Sarah Grimke, Harriet Beecher Stowe's *Uncle Tom's Cabin*, poems by Emily Dickinson and Walt Whitman, Louisa May Alcott's *Little Women*, Edith Wharton's *House of Mirth*, William Dean Howells's *A Hazard of New Fortunes*, and Charlotte Perkins's *Gilman's Herland*.]

[474 Black Women Writers (also English 464)
4 credits. Not offered 1990–91.]

475 Feminist Literary Criticism (also English 475)
Spring. 3 credits.
Mary Jacobus.
An introduction to the varieties of feminist literary criticism and theory currently practiced in America, drawing on recent anthologies such as *The New Feminist Criticism* and *Speaking of Gender*, ed. Showalter; *The (M)other Tongue*, ed. Brennan; *Conjuring*, ed. Pryse and Spillers; *French Feminist Thought*, ed. Moi; *Making a Difference*, ed. Greene and Kahn; *The Feminist Reader*, ed. Belsey; *Socialist Feminist Criticism*, ed. Newton. We will explore and question the practice and theoretical assumptions of feminist criticism in the past decade—psychoanalytic, Marxist, linguistic, reader-response, Black and Lesbian, Anglo-American, and Franglo-American. We will be particularly concerned with questions such as: What are the assumptions that underpin the concept of a specifically feminine literary practice or writing (écriture féminine)? How do questions of gender enter into interpretation? How is sexual difference constructed (socially, psychically, textually)? How do questions of racial difference and/or sexual preference enter into feminist criticism? Is there a politics of women's writing? What does it mean to invoke a (M)other tongue, and what are the politics of the pervasive maternal and matrilinear metaphors in feminist accounts of literature, literary tradition, and language? Though the main tests will be essays in feminist literary criticism and theory, we will also read a selection of (mainly nineteenth-century and twentieth-century) short works by women authors.

[476 Women's Poetry (also English 476)
4 credits. Limited to 25 students. Prerequisite: permission of instructor. Not offered 1990–91.
D. Mermin.
A historical survey of the female poetic tradition in Britain and America, including such writers as Bradstreet, Dickinson, Bronte, Barrett Browning, Bishop, Brooks, and Plath.]

[480 Toward an Anthropology of the Female Body (also Anthropology 480)
4 credits. Not offered 1990–91.
G. Fraser.
The main purpose of this course is to create a context for the discussion of central issues in the cross-cultural literature on the relationship between the female self, her body-mind, and the wider social order(s). All too easily Western feminists acknowledge but neglect to incorporate into their theoretical framework the perspectives of women from non-Western societies, from different historical periods, and from divergent classes. Do the differences challenge or support our vision of gender as a unifying category? By focusing on women's embodied selves, the hope is that we will begin to develop a critical theory that will reshape the boundaries of our old assumptions.]

481 Latin American Women Writers (also Spanish 492 and Comparative Literature 482)
Spring. 3 credits. Taught in English.
T R 10:10–11:25. D. Castillo.
This course will provide a sampler of novels and short stories by and about Latin American women. We will look at the question of self-construction and issues such as the social and political concerns involved in a specifically Latin American feminine identity. All works will be read in translation (Romance Studies students should read originals of the two works from the Spanish). Authors may include writers like Luisa Valenzuela (Argentina) and Rigoberta Menchú (Guatemala), Helena Parente Cunha and Clarice Lispector (Brazil), Helena María Viramontes and the Anzaldúa/Moraga anthology *This Bridge Called My Back* (U.S.A.), and Simone Schwarz-Bart (Guadalupe).

493 French Feminisms (also French 493)
Fall. 4 credits.
T R 1:25–2:40. N. Furman.
This course will examine the political, theoretical, and literary concerns of contemporary French writers who have addressed "la question de la femme/la question du féminin." Readings will include representative texts by Simone de Beauvoir, Monique Wittig, Julia Kristeva, Jacques Lacan, Luce Irigaray, Jacques Derrida, and Hélène Cixous. Taught in English.

499 Directed Study
Fall or spring. Variable credit. Prerequisites: one course in women's studies and permission of a faculty member of the Women's Studies Program Board.
Hours to be arranged. Staff.

[613 The Political Economy of Women and Work I (also City and Regional Planning 613)
3 credits. Not offered 1990–91.
L. Beneria.
This course deals with the question of how to understand and analyze the economic condition of women, starting with some general issues about the "question of origins," reproduction and production, and the underestimation of women's economic activities. It focuses on different approaches to the analysis of women's work in the household and in the labor market (from an economic and feminist perspective). The empirical material concentrates mostly on the United States with some glances at other industrial countries and the international economy.]

614 The Political Economy of Women and Work II (also City and Regional Planning 614)
Spring. 3 credits.
W 7–10 p.m. L. Beneria.
A continuation of Women's Studies 613. The focus here is on development issues and on how the development process has affected women in the Third World. The analysis is placed in the context of the global economy, including the connections between the Third World and the more industrialized countries.

[626 Graduate Seminar in the History, of American Women (also History 626)
Fall. 4 credits. Limited to graduate students. Not offered 1990–91.
T 2:30–4:30. M. B. Norton.
A reading and research seminar intended for graduate students. Major works in American women's history will be carefully scrutinized, and each student will prepare a lengthy research paper.]

[638 Contemporary German Women Writers (also German Literature 638)
4 credits. Not offered 1990-91.
I. Ezergailis.]

[685 Seminar in Sex Differences and Sex Roles (also Psychology 685 and Sociology 685)
4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
S. Bem.]

[690 German Feminist Criticism and Theory (also German Studies 690)
4 credits. Open to qualified undergraduates with permission of instructor. Reading knowledge of German recommended but not required. Not offered 1990-91.
C. A. Martin.
This course is designed to explore developments in feminist literary theory with particular attention to the field of German literature. We will consider competing critical strategies and their political implications by working through different readings of specific literary texts and by raising questions about the implications for feminism of competing critical strategies in the general field of literary theory; the relations between feminism and established critical schools; the tension in feminist Germanistik between critical attention to the "male canon" and the construction of a female literary tradition; the impact on West and East German feminism(s) of their translations of French and American work; the impact and treatment of the Nazi period; the effects of the East-West divide on development in both Germanys; the impact on feminist literature and criticism of Third World women in Germany; and approaches in West and East Germany to imperialism and racism.]

[692 Hispanic Feminisms (also Romance Studies 690)
4 credits. Taught in Spanish. Not offered 1990–91.
D. Castillo.
This seminar is designed to explore the interrelationship of feminist literary theory and the narrative production of the Hispanic world. In this inquiry, we will be developing feminist critical methodologies (based on readings of essays by thinkers such as Barthes, Castellanos, Derrida, Freud, and Glantz) and defining strategies or possibilities for feminist criticism(s). Finally, we will study the ways in which feminist analyses of literature alter our readings of texts by men (Isaacs, Cortazar, Onetti, Garcia Lorca) as well as by women (Pardo Bazan, Tusquets, Valenzuela, Garro), and how they change our conception of criticism and the task of the critic.]

699 Topics in Women's Studies
Fall or spring. Variable credits.
Staff.
Independent reading course for graduate students on topics not covered in regularly scheduled courses. Students develop a course of readings in consultation with a faculty member in the field of Women's Studies who has agreed to supervise the course work.

[772 Advanced Topics on International Development and Women (also City and Regional Planning 772)
4 credits. Not offered 1990–91.
L. Beneria.
A seminar to explore theoretical and empirical issues of interest to master's and Ph.D. degree students working on topics related to gender and international development. The focus will be on a few narrow topics–such as the effect of the foreign debt crisis on women, the formal sector in women's work, and gender aspects in demographic change–to be explored in depth in preparation for research and thesis writing. Students will be encouraged to explore and exchange ideas as well as to provide mutual support and criticism.]

IV. Related Courses and Seminars

[305 Emotion, Cognition, and Culture (also Anthropology 305)
4 credits. Not offered 1990-91.
B. J. Isbell.
This course introduces students to the current anthropological perspective on the following topics: (1) cultural shaping of emotion, (2) acquisition and production of gender and sexuality, and (3) cognition and classification in cross-cultural context. It is appropriate for students majoring in anthropology, psychology, cognitive studies, and human development and family studies.]

[329 Race, Gender, and Politics (also Government 329)
4 credits. Open to sophomores and juniors. Limited to 5 students. Not offered 1990–91.
M. Katzenstein.]

[357 American Families in Historical Perspective (also Sociology 359 and Human Development and Family Studies 359)
3 credits. Prerequisite: Human Development and Family Studies 150 or one 200-level social science or history course. Students in endowed units must register for Women's Studies 357 or Sociology 359. Not offered 1990-91.
J. Brumberg.
An introduction to, and overview of, problems and issues in the historical literature on American families and the family life cycle. Reading and lectures will demonstrate the pattern of American family experience in past time, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family in past time will deal with changing cultural conceptions of sexuality, sex roles, generational relationships, stages of life, and life events. Students will be required to do a major research paper on the history of their family, covering at least two generations and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.]

[759 Virginia Woolf (also English 759)
5 credits. Prerequisite: permission of instructor. Not offered 1990–91.
S. Siegel.]

Begley, Tadhg P., Ph.D., California Inst. of Technology. Asst. Prof., Chemistry
Bem, Daryl J., Ph.D., U. of Michigan. Prof., Psychology
Bem, Sandra L., Ph.D., U. of Michigan. Prof., Psychology/Women's Studies
Beneria, Lourdes, Ph.D., Columbia U. Prof., City and Regional Planning/Women's Studies
Bereaud, Jacques, Doctorat d'Univ., U. of Lille (France). Prof., Romance Studies
Berger, Anne, Ph.D., Paris Vll (France). Asst. Prof., Romance Studies
Berkelman, Karl, Ph.D., Cornell U. Prof., Physics/LNS¶
Bernal, Martin G., Ph.D., Cambridge U. (England). Prof., Government/Near Eastern Studies
Bernstock, Judith, Ph.D., Columbia U. Asst. Prof., History of Art
Berstein, Israel, Candidate in Physico-Mathematical Sciences, Roumanian Academy. Prof., Mathematics
Bethe, Hans, Ph.D., U. of Munich (Germany). John Wendell Anderson Professor of Physics Emeritus, Physics
Bilardi, Gianfranco, Ph.D., U. of Illinois. Asst. Prof., Computer Science
Billera Louis J., Ph.D., City U. of New York. Prof., Mathematics/Operations Research and Industrial Engineering
Bilson, Malcolm, D.M.A., U. of Illinois. Prof., Music
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof., Geological Sciences
Birman, Kenneth P., Ph.D., U. of California at Berkeley. Assoc. Prof., Computer Science
Bishop, Jonathan P., Ph.D., Harvard U. Prof., English
Bittman, Dina, Ph.D., U. of Wisconsin at Madison. Asst. Prof., Computer Science
Blackall, Jean F., Ph.D., Harvard U. Prof., English
Blass, Elliott M., Ph.D., U. of Virginia. Prof., Psychology
Bloom, Arthur L., Ph.D., Yale U. Prof., Geological Sciences/INSTOC#
Bloom, Bard, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Blume, Lawrence E., Ph.D., U. of California at Berkeley. Prof., Economics
Blumin, Stuart M., Ph.D., U. of Pennsylvania. Prof., History
Bogel, Fredric V., Ph.D., Yale U. Prof., English
Bowers, John S., Ph.D., Massachusetts Inst. of Technology. Prof., Modern Languages and Linguistics
Boyd, Richard N., Ph.D., Massachusetts Inst. of Technology. Prof., Philosophy
Bramble, James H., Ph.D., U. of Maryland. Prof., Mathematics
Brann, Ross, Ph.D., New York U. Assoc. Prof., Hebrew and Arabic Literatures (Near Eastern Studies)
Brazell, Karen W., Ph.D., Columbia U. Prof., Japanese Literature (Asian Studies)
Breiger, Ronald L., Ph.D., Harvard U. Prof., Sociology
Bronfenbrenner, Urie, Ph.D., U. of Michigan, Jacob Gould Schurman Professor Emeritus, Human Ecology/Psychology
Brown, Kenneth S., Ph.D., Massachusetts Inst. of Technology. Prof., Mathematics
Brown, Larry D., Ph.D., Cornell U. Assoc. Prof., Geological Sciences/INSTOC#
Brown, Laura, Ph.D., U. of California at Berkeley. Prof., English
Brown, Lawrence D., Ph.D., Cornell U. Prof., Mathematics
Brown, Stuart M., Jr., Ph.D., Cornell U. Prof. Emeritus, Philosophy/Science, Technology, and Society
Brown, Theodore M., Ph.D., U. of Utrecht (Netherlands). Prof. Emeritus, History of Art
Browne, E. Wayles III, Ph.D., U. of Zagreb (Yugoslavia). Assoc. Prof., Modern Languages and Linguistics
Brumberg, Joan Jacobs, Ph.D., U. of Virginia. Assoc. Prof., Human Development and Family Studies/Women's Studies
Buck-Morss, Susan F., Ph.D., Georgetown U. Assoc. Prof., Government
Burdett, Kenneth, Ph.D., Northwestern U. Prof., Economics
Burlitch, James M., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Chemistry
Burns, Joseph A., Ph.D., Cornell U. Prof., Astronomy/Theoretical and Applied Mechanics/CRSR
Caldwell, Steven B., Ph.D., Cornell U. Assoc. Prof., Sociology
Calkins, Robert G., Ph.D., Harvard U. Prof., History of Art
Campbell, Donald B., Ph.D., Cornell U. Prof., Astronomy/NAIC‡
Caputi, Anthony F., Ph.D., Cornell U. Prof., English/Comparative Literature
Carden, Patricia J., Ph.D., Columbia U. Prof., Russian Literature
Carmichael, Calum M., B. Litt, Oxford U. (England). Prof., Comparative Literature/ Biblical Studies
Carpenter, Barry K., Ph.D., U. College, London (England). Prof., Chemistry
Carroll, Noel, Ph.D. U. of Illinois. Assoc. Prof., Theatre Arts/Philosophy
Cassel, David G., Ph.D., Princeton U. Prof., Physics/LNS¶
Castillo, Debra, Ph.D., U. of Wisconsin at Milwaukee. Assoc. Prof., Romance Studies/ Comparative Literature
Cathles, Lawrence M. III, Ph.D., Princeton U. Prof., Geological Sciences
Chase, Cynthia, Ph.D., Yale U. Assoc. Prof., English
Chase, Stephen U., Ph.D., U. of Chicago. Prof., Mathematics
Chernoff, David F., Ph.D., U. of California at Berkeley. Asst. Prof., Astronomy/CRSR
Chester Geoffrey V., Ph.D. King's Coll. London (England). Prof., Physics/LASSP*
Chierchia, Gennaro, Ph.D., U. of Massachusetts at Amherst. Assoc. Prof., Modern Languages and Linguistics
Cisne, John L., Ph.D., U. of Chicago. Prof., Geological Sciences/INSTOC#
Clardy, Jon C., Ph.D., Harvard U. Prof., Chemistry
Clark, M. Gardner, Ph.D., Harvard U. Prof., Industrial and Labor Relations/Economics
Clements, George N., Ph.D., U. of London (England). Prof., Modern Languages and Linguistics
Clinton Kevin M., Ph.D., Johns Hopkins U. Prof., Classics
Cochran, Sherman G., Ph.D., Yale U. Prof., History
Cohen, Marshall M., Ph.D., U. of Michigan. Prof., Mathematics
Cohen, Walter I., Ph.D., U. of California at Berkeley. Assoc. Prof. Comparative Literature
Colby-Hall, Alice M., Ph.D., Columbia U. Prof., Romance Studies
Cole, Stephen R., B.A., U. of Indiana. Assoc. Prof., Theatre Arts
Coleman, John E., Ph.D., U. of Cincinnati. Prof., Classics
Coleman, Thomas F., Ph.D., U. of Waterloo. Assoc. Prof., Computer Science
Collum, David B., Ph.D., Columbia U. Assoc. Prof., Chemistry
Connelly, Robert, Ph.D., U. of Michigan. Prof., Mathematics
Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
Cooper, Barbara H., Ph.D., California Inst. of Technology. Assoc. Prof., Physics/LASSP*
Cordes, James M., Ph.D., U. of California at San Diego. Assoc Prof., Astronomy/NAIC‡
Correll, Barbara, Ph.D., U. of Wisconsin. Asst. Prof., English
Corson, Dale R., Ph.D., U. of California at Berkeley. Prof. Emeritus, Physics
Cotts, Robert M., Ph.D., U. of California at Berkeley. Prof., Physics/LASSP*
Crimmins, Mark. D., Ph.D., Stanford U. Asst. Prof., Philosophy
Cross, William E., Ph.D., Princeton U. Assoc. Prof., Africana Studies and Research Center
Culler, Jonathan D., D. of Phil., Oxford U. (England). Class of 1916 Professor, English/ Comparative Literature
Cutting, James E., Ph.D., Yale U. Prof., Psychology
Dannhauser, Werner J., Ph.D., U. of Chicago. Prof., Government
Darlington, Richard B., Ph.D., U. of Minnesota. Prof., Psychology
Davenny Wyner, Susan, A.B., Cornell U. Assoc. Prof., Music
Davis, N. Gregson G., Ph.D., U. of California at Berkeley. Prof., Comparative Literature/ Classics
Davis, Tom E., Ph.D., Johns Hopkins U. Prof., Economics
Dear, Peter, Ph.D., Princeton U. Asst. Prof., History of Science/History
de Bary, Brett, Ph.D., Harvard U. Assoc. Prof., Japanese Literature (Asian Studies)
De Filippo, Joseph G., Ph.D., Princeton U. Asst. Prof., Classics
Deinert, Herbert, Ph.D., Yale U. Prof., German Literature
Dennis, R. Keith, Ph.D., Rice U. Prof., Mathematics
DeVoogd, Timothy J., Ph.D., U. of Illinois. Assoc. Prof., Psychology
DeWire John W., Jr., Ph.D., Ohio State U. Prof., Emeritus, Physics/LNS¶
Diffloth, Gerard, Ph.D., U. of California at Los Angeles. Prof., Modern Languages and Linguistics
DiSalvo, Francis J. Jr., Ph.D., Stanford U. Prof., Chemistry
Donald, Bruce, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Dotson, Arch T., Ph.D., Harvard U. Prof., Government
Dotson, Esther G., Ph.D., New York U. Prof. Emeritus, History of Art
Drell, Persis, Ph.D., U. of California at Berkeley. Asst. Prof., Physics/LNS¶

Dunning, David, Ph.D., Stanford U. Asst. Prof., Psychology
Durrett, Richard T., Ph.D, Stanford U. Prof., Mathematics
Dynkin, Eugene B., Dr. of Sci., Moscow U. (USSR). Abram R. Bullis Professor of Mathematics, Mathematics
Earle, Clifford J., Ph.D., Harvard U. Prof., Mathematics
Easley, David, Ph.D., Northwestern U. Prof., Economics
Eddy, Donald D., Ph.D., U. of Chicago. Prof., English
Edmondson, Locksley G., Ph.D., Queens U. Prof., Africana Studies and Research Center
Ehrenberg, Ronald, Ph.D., Northwestern U. Prof. Industrial and Labor Relations/ Economics
Einaudi, Mario, Ph.D., U. of Turin (Italy). Goldwin Smith Professor of Government Emeritus, Government
Elias, Robert, Ph.D., U of Pennsylvania. Goldwin Smith Professor of English Literature and American Studies, Emeritus, English
Elledge, Scott B., Ph.D., Cornell U. Goldwin Smith Professor of English Literature Emeritus, English
Elser, Veit, Ph.D., U. of California at Berkeley. Asst. Prof., Physics/LASSP*
Esman, Milton J., Ph.D., Princeton U. John S. Knight Professor of International Studies, Emeritus, Government
Ezergailis, Inta M., Ph.D., Cornell U. Prof., German Literature
Ezra, Gregory S., Ph.D., Oxford U. Assoc. Prof., Chemistry
Fajans, Jane, Ph.D., Stanford U. Asst. Prof., Anthropology
Farrell, Robert T., Ph.D., Fordham U. Prof., English/Medieval Studies/ Archaeology
Farrell, Roger H., Ph.D., U. of Illinois. Prof., Mathematics
Fay, Robert C., Ph.D., U. of Illinois. Prof., Chemistry
Feldshuh, David, Ph.D., U. of Minnesota. Prof., Theatre Arts
Fessenden-MacDonald, June, Ph.D., Tufts U. Assoc. Prof., Biology and Society
Field, David J., Ph.D., U. of Pennsylvania. Asst. Prof., Psychology
Fine, Gail J., Ph.D., Harvard U. Prof., Philosophy
Finlay, Barbara L., Ph.D., Massachusetts Inst. of Technology. Prof., Psychology
Fisher, Eric, Ph.D., U. of California at Berkeley. Asst. Prof., Economics
Fitchen, Douglas B., Ph.D., U. of Illinois. Prof., Physics/LASSP*
Fogel, Ephim G., Ph.D., Ohio State U. Prof. Emeritus, English
Fortune, Joanne E., Ph.D., Cornell U. Assoc. Prof., Physiology/Women's Studies
Franck, Carl P., Ph.D., Princeton U. Assoc. Prof., Physics/LASSP*
Frank, Robert H., Ph.D., U. of California at Berkeley. Prof., Economics
Fraser, Gertrude, M.A., Johns Hopkins U. Asst. Prof., Women's Studies/Africana Studies and Research Center
Frechet, Jean M. J., Ph.D., SUNY Syracuse and Syracuse U. Prof., Chemistry
Fredericksen, Donald L., Ph.D., U. of Iowa. Assoc. Prof., Theatre Arts
Freed, Jack H., Ph.D., Columbia U. Prof., Chemistry
Freeman, John, Ph.D., U. of North Carolina at Chapel Hill. Prof., Organizational Behavior/ Sociology
Fried, Debra, Ph.D., Yale U. Assoc. Prof., English
Fuchs, Wolfgang H., Ph.D., Cambridge U. (England). Prof. Emeritus, Mathematics
Furman, Nelly, Ph.D., Columbia U. Assoc. Prof., Romance Studies
Gainor, Ellen, Ph.D., Princeton U. Asst. Prof., Theatre Arts
Gair, James W., Ph.D., Cornell U. Prof., Modern Languages and Linguistics
Galenson, Walter, Ph.D, Columbia U. Jacob Gould Schurman Professor of Economics, Industrial and Labor Relations
Galik, Richard S., Ph.D., Cornell U. Assoc. Prof., Physics/LNS¶
Ganem, Bruce, Ph.D., Columbia U. Prof., Chemistry
Gates, Henry L., Ph.D., Clare Coll., Cambridge U. (England). Prof., English/Africana Studies/Comparative Literature
Gaylord, Mary G., Ph.D., Harvard U. Assoc. Prof., Romance Studies
Gibian, George, Ph.D., Harvard U. Goldwin Smith Professsor of Russian and Comparative Literature, Russian Literature
Gibson, Eleanor J., Ph.D, Yale U. Susan Linn Sage Professor of Psychology Emeritus, Psychology
Gierasch, Peter J., Ph.D., Harvard U. Prof., Astronomy/CRSR†
Gilbert, Roger S., Ph.D., Yale U. Asst. Prof., English
Gilman, Sander L., Ph.D., Tulane U. Goldwin Smith Professor, German Literature and Humane Studies/Near Eastern Studies/ Psychiatry (History), Cornell Medical College
Gilovich, Thomas, Ph.D., Stanford U. Assoc. Prof., Psychology
Ginet, Carl A., Ph.D., Cornell U. Prof., Philosophy
Ginsberg, Benjamin, Ph.D., U. of Chicago. Prof., Government
Ginsburg, Judith R., Ph.D., U. of California at Berkeley. Assoc. Prof., Classics
Gittelman, Bernard, Ph.D., Massachusetts Inst. of Technology. Prof., Physics/LNS¶
Golay, Frank H., Ph.D, U. of Chicago. Prof. Emeritus, Economics
Gold, Daniel, Ph.D., U. of Chicago Divinity School. Asst. Prof., Asian Studies
Gold, Thomas, Ph.D., Cambridge U. (England). John L. Wetherill Professor of Astronomy Emeritus, Astronomy/CRSR†
Goldfield, Michael, Ph.D., U. of Chicago. Assoc. Prof., Government
Goldgeier, James M., Ph.D., U. of California at Berkeley. Asst. Prof., Government
Gottfried, Kurt, Ph.D., Massachusetts Inst. of Technology. Prof., Physics/LNS¶
Grant, Keith, M.F.A, Yale U. Asst. Prof., Theatre Arts
Greene, Brian R., Ph.D., Oxford U. Asst. Prof., Physics/LNS¶
Greenhouse, Carol J., Ph.D., Harvard U. Assoc. Prof., Anthropology
Greenwood, Davydd J., Ph.D., U. of Pittsburgh. John S. Knight Professor of International Studies, Anthropology
Greisen, Kenneth I., Ph.D., Cornell U. Prof. Emeritus, Physics
Gries, David J., Ph.D., Technische Hoch., München (Germany). Prof., Computer Science
Grimes, Joseph E., Ph.D., Cornell U. Prof., Modern Languages and Linguistics
Groos, Arthur, Ph.D., Cornell U. Prof., German Literature/Medieval Studies
Gross, Leonard, Ph.D., U. of Chicago. Prof., Mathematics
Grossvogel, Anita V., Ph.D., Cornell U. Assoc. Prof., Romance Studies
Grossvogel, David I., Ph.D., Columbia U. Goldwin Smith Professor of Comparative Literature and Romance Studies, Romance Studies
Guckenheimer, John, Ph.D., U. of California at Berkeley. Prof., Mathematics
Gunn, Edward M., Jr., Ph.D., Columbia U. Prof., Chinese Literature (Asian Studies)
Hagfors, Tor, Ph.D., U. of Oslo (Norway). Prof., Astronomy/Engineering/NAIC‡
Halpern, Bruce P., Ph.D., Brown U. Prof., Psychology/ Biological Sciences
Hand, Louis N., Ph.D., Stanford U. Prof., Physics/LNS¶
Hannan, Michael T., Ph.D., U. of North Carolina. Henry Scarborough Professor of Social Sciences, Sociology
Harbert, Wayne E., Ph.D., U. of Illinois. Assoc. Prof., Modern Languages and Linguistics
Harris, Robert L., Ph.D., Northwestern U. Assoc. Prof., Africana Studies and Research Center
Hartill, Donald L., Ph.D., California Inst. of Technology. Prof., Physics/LNS¶
Hartman, Paul L., Ph.D., Cornell U. Prof. Emeritus, Physics/Applied and Engineering Physics/LASSP*
Hartmanis, Juris, Ph.D., California Inst. of Technology. Walter R. Read Professor of Engineering, Computer Science
Harwit, Martin O., Ph.D, Massachusetts Inst. of Technology. Prof. Emeritus, Astronomy/ CRSR†
Hatch, Martin, Ph.D., Cornell U. Assoc. Prof., Music
Hatcher, Allen, Ph.D., Stanford U. Prof., Mathematics
Hay, George A., Ph.D., Northwestern U. Prof., Economics/Law
Hayes, Donald P., Ph.D., U. of Washington. Prof., Sociology
Haynes, Martha P., Ph.D., Indiana U. Assoc. Prof., Astronomy/NAIC‡
Hays, Michael D., Ph.D., U. of Minnesota. Prof., Theatre Arts
Henderson, David W., Ph.D., U. of Wisconsin. Prof., Mathematics
Henderson, John S., Ph.D., Yale U. Assoc. Prof., Anthropology
Henley, Christopher L., Ph.D., Harvard U. Asst. Prof., Physics/LASSP*
Herrin, W. Lamar, Ph.D., U. of Cincinnati. Prof., English
Herter, Terry L., Ph.D., U. of Rochester. Asst. Prof., Astronomy/CRSR†
Hildebrand, George H., Ph.D., Cornell U. Maxwell M. Upson Professor of Economics and Industrial Relations Emeritus, Economics/Industrial and Labor Relations
Hill, Thomas D., Ph.D., Cornell U. Prof., English/Medieval Studies
Hite, Molly, Ph.D., U. of Washington. Assoc. Prof., English
Ho, Wilson, Ph.D., U. of Pennsylvania. Assoc. Prof., Physics/LASSP*
Hodes, Harold, Ph.D., Harvard U. Assoc. Prof., Philosophy
Hoffmann, Roald, Ph.D., Harvard U. John A. Newman Professor of Physical Science, Chemistry
Hohendahl, Peter U., Ph.D., Hamburg U. (Germany). Jacob Gould Schurman Professor, German Literature/Comparative Literature
Holcomb, Donald F., Ph.D., U. of Illinois. Prof., Physics/LASSP*

Holdheim, W. Wolfgang, Ph.D., Yale U. Frederic J. Whiton Professor of Liberal Studies, Emeritus, Comparative Literature/ Romance Studies
Holloway, Thomas H., Ph.D., U. of Wisconsin. Assoc. Prof., History
Holmberg, David H., Ph.D., Cornell U. Assoc. Prof., Anthropology/Women's Studies
Holmes, Clive A., Ph.D., Cambridge U. (England). Prof., History
Holmes, Philip J., Ph.D., Southampton U. (England). Prof., Theoretical and Applied Mechanics/Mathematics
Hopcroft, John E., Ph.D., Stanford U. Joseph C. Ford Professor of Computer Science, Computer Science
Houck, James R., Ph.D., Cornell U. Prof., Astronomy/CRSR†
Houston, Paul L., Ph.D., Massachusetts Inst. of Technology. Prof., Chemistry
Howe, Douglas J., Ph.D., Cornell U. Asst. Prof., Computer Science
Hsu, John T. H., D. Music, New England Conservatory of Music. Old Dominion Foundation Professor of Humanities and Music, Music
Huang, C. T. James, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Modern Languages and Linguistics
Hubbard, John H., Doctorat d'Etat, U. de Paris (France). Prof., Mathematics
Hull, Isabel V., Ph.D., Yale U. Assoc. Prof., History
Husa, Karel, Diploma, Paris Conservatory (France). Kappa Alpha Professor of Music, Music
Huttenlocher, Daniel P., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Hwang, Jiunn, Ph.D., Purdue U. Prof., Mathematics
Hyams, Paul R., D. Phil., Oxford University. Assoc. Prof., History
Irwin, Terence H., Ph.D., Princeton U. Prof., Philosophy
Isacks, Bryan L., Ph.D., Columbia U. William and Katherine Snee Professor of Geological Sciences, Geological Sciences
Isard, Walter, Ph.D., Harvard U. Prof. Emeritus, Economics
Isbell, Billie J., Ph.D., U. of Illinois. Assoc. Prof., Anthropology
Isen, Alice M., Ph.D., Stanford U. Prof., Johnson Graduate School of Management/ Psychology
Jacobus, Mary L., D. Phil, Oxford U. (England). John Wendell Anderson Professor of English, English/Women's Studies
Janowitz, Phyllis, M.F.A., U. of Massachusetts. Assoc. Prof., English
Jarrett, Jon P., Ph.D., U. of Chicago. Asst. Prof., Philosophy
Jasanoff, Jay H., Ph.D., Harvard U. Prof., Modern Languages and Linguistics
Jasanoff, Sheila, Ph.D., J.D., Harvard U. Assoc. Prof., Science, Technology, and Society/ Government
Jeyifo, Biodun, Ph.D, New York U. Prof., English
John, James J., Ph.D., U. of Notre Dame. Professor of Paleography and Medieval History, History
Johnston, Robert E., Ph.D., Rockefeller U. Prof., Psychology
Jordan, Teresa E., Ph.D., Stanford U. Asst. Prof., Geological Sciences/INSTOC#
Kahin, George McT., Ph.D., Johns Hopkins U. Aaron L. Binenkorb Professor of International Studies Emeritus, Government
Kahl, Joseph A., Ph.D., Harvard U. Prof. Emeritus, Sociology
Kahn, Alfred E., Ph.D., Yale U. Robert Julius Thorne Professor of Political Economy Emeritus, Economics
Kahn, H. Peter, M. A., New York U. Prof. Emeritus, History of Art
Kahn, Peter J., Ph.D., Princeton U. Prof., Mathematics
Kalos, Malvin H., Ph.D., U. of Illinois. Prof., Physics/LASSP*, Director, Theory Center
Kammen, Michael G., Ph.D., Harvard U. Newton C. Farr Professor of American History and Culture, History
Kaplan, Steven L., Ph.D., Yale U. Prof., History
Karig, Daniel E., Ph.D., U. of California at San Diego. Prof., Geological Sciences
Karplus, Kevin, Ph.D., Stanford U. Asst. Prof., Computer Science/Electrical Engineering
Kaske, Carol V., Ph.D., Johns Hopkins U. Assoc. Prof., English
Katz, Steven T., Ph.D., Cambridge U. (England). Prof., History and Religion (Near Eastern Studies)
Katzenstein, Mary F., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Government
Katzenstein, Peter J., Ph.D., Harvard U. Walter S. Carpenter, Jr., Professor of International Studies, Government
Kaufman, Sidney, Ph.D., Cornell U. Acting Prof., Geological Sciences/INSTOC#
Kay, Robert W., Ph.D., Columbia U. Prof., Geological Sciences/INSTOC#
Keil, Frank C., Ph.D., U. of Pennsylvania. Prof., Psychology
Kelley, E. Wood, Ph.D., Indiana U. Assoc. Prof., Government
Kelly, Morgan, Ph.D., Yale U. Asst. Prof., Economics
Kennedy, William J., Ph.D., Yale U. Prof., Comparative Literature
Kenworthy, Eldon G., Ph.D., Yale U. Assoc. Prof., Government
Kesten, Harry, Ph.D., Cornell U. Prof., Mathematics
Kiefer, Nicholas M., Ph.D., Princeton U. Prof., Economics
Kingston, John C., Ph.D., U. of California at Berkeley. Asst. Prof., Modern Languages and Linguistics
Kinoshita, Toichiro, Ph.D., Tokyo U. (Japan). Prof., Physics/LNS¶
Kirkwood, Gordon M., Ph.D., Johns Hopkins U. Frederick J. Whiton Professor of Classics Emeritus, Classics
Kirsch, A. Thomas, Ph.D., Harvard U. Prof., Anthropology
Klein, Richard J., Ph.D., Yale U. Prof., Romance Studies
Koschmann, J. Victor, Ph.D., U. of Chicago. Assoc. Prof., History
Kozen, Dexter, Ph.D., Cornell U. Assoc. Prof., Computer Science
Kramnick, Isaac, Ph.D., Harvard U. Richard J. Schwarz Professor of Government, Government
Kretzmann, Norman, Ph.D., Johns Hopkins U. Susan Linn Sage Professor of Philosophy, Philosophy
Kronik, John W., Ph.D., U. of Wisconsin. Prof., Romance Studies
Krumhansl, Carol L., Ph.D., Stanford U. Assoc. Prof., Psychology
Krumhansl, James A., Ph.D., Cornell U. Horace White Professor of Physics Emeritus, Physics/LASSP*
Kufner, Herbert L., Ph.D., Cornell U. Prof., Modern Languages and Linguistics
Kuki, Atsuo, Ph.D., Stanford U. Asst. Prof., Chemistry
Kuniholm, Peter I., Ph.D., U. of Pennsylvania. Assoc. Prof., History of Art
Kurtzman, Howard S., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Psychology
LaCapra, Dominick C., Ph.D., Harvard U. Goldwin Smith Professor of European Intellectual History, History
LaFeber, Walter F., Ph.D., U. of Wisconsin. Marie Underhill Noll Professor of American History, History
Lambert, Bernd, Ph.D., U. of California at Berkeley. Prof., Anthropology
Lambert, William W., Ph.D., Harvard U. Prof. Emeritus, Psychology/Sociology/Anthropology
Landman, Alfred, Ph.D., U. of Amsterdam (Netherlands). Asst. Prof., Modern Languages and Linguistics
Lawler, Margaret, M. A., San Jose State Coll. Assoc. Prof., Theatre Arts
Lazzaro, Claudia, Ph.D., Princeton U. Assoc. Prof., History of Art
Leavitt, Thomas W., Ph.D., Harvard U. Prof., History of Art
Lebow, Richard N., Ph.D., City U. of New York. Prof., Government
Le Clair, André R., Ph.D., Harvard U. Asst. Prof., Physics/LNS¶
Lee, David M., Ph.D., Yale U. Prof., Physics/ LASSP*
Leed, Richard L., Ph.D., Cornell U. Prof., Modern Languages and Linguistics
Legros, Patrick A., Ph.D., California Inst. of Technology. Asst. Prof., Economics
LePage, G. Peter, Ph.D., Stanford U. Assoc. Prof., Physics/LNS¶
Levin, Harry, Ph.D., U. of Michigan. William R. Kenan, Jr. Professor of Psychology, Emeritus, Psychology
Levitsky, David A., Ph.D., Rutgers U. Prof., Nutritional Sciences/Psychology
Levitt, Bruce, Ph.D., U. of Michigan. Prof., Theatre Arts
Levy, Charles S., Ph.D., Cornell U. Prof., English
Lewis, Philip E., Ph.D, Yale U. Prof., Romance Studies
Lichtenbaum, Stephen, Ph.D., Harvard U. Prof., Mathematics
Littauer, Raphael M., Ph.D., Cambridge U. (England). Prof., Physics/LNS¶
Liu, Richard C., Ph.D., U. of California at Berkeley. Asst. Prof., Mathematics
Livesay, George R., Ph.D., U. of Illinois. Prof., Mathematics
Long, Franklin A., Ph.D., U. of California at Berkeley. Henry R. Luce Professor of Science and Society Emeritus, Chemistry/ Science, Technology, and Society
Loring, Roger F., Ph.D., Stanford U. Asst. Prof., Chemistry
Lowi, Theodore J., Ph.D., Yale U. John L. Senior Professor of American Institutions, Government
Lurie, Alison, A. B., Radcliffe Coll. Frederic J. Whiton Professor of American Literature, English
Lynch, Thomas F., Ph.D., U. of Chicago. Prof., Anthropology
Lyons, David B., Ph.D., Harvard U. Prof., Philosophy/Law
Lyons, Thomas, Ph.D., Cornell U. Asst. Prof., Economics
Maas, James B., Ph.D., Cornell U. Prof., Psychology
McAllester, David, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
McCall, Dan E., Ph.D., Columbia U. Prof., English

McClane, Kenneth A., M.F.A., Cornell U. Prof., English
McClelland, Peter D., Ph.D., Harvard U. Prof., Economics
McConkey, James R., Ph.D., State U. of Iowa. Prof., English
McConnell-Ginet, Sally, Ph.D., U. of Rochester. Prof., Modern Languages and Linguistics
McCoy, Maureen, M.F.A., U. of Iowa. Asst. Prof., English
McDaniel, Boyce D., Ph.D., Cornell U. Floyd R. Newman Professor of Nuclear Studies Emeritus, Physics/LNS¶
McGinnis, Robert, Ph.D., Northwestern U. Prof., Sociology
Mack, Ronald D., Ph.D., Columbia U. Assoc. Prof., Psychology
McLafferty, Fred W., Ph.D., Cornell U. Prof., Chemistry
McMillin, H. Scott, Ph.D., Stanford U. Prof., English

DIVISION OF BIOLOGICAL SCIENCES

The Division of Biological Sciences provides a unified curriculum for undergraduate majors enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

ORGANIZATION

The Division of Biological Sciences is composed of seven major sections: Biochemistry, Molecular and Cell Biology; Ecology and Systematics; Genetics and Development; Microbiology; Neurobiology and Behavior; Physiology; Plant Biology; and, in addition, the L. H. Bailey Hortorium and the Shoals Marine Laboratory.

The offices, research laboratories, and classrooms of biology faculty members are located in many different buildings on the campus, primarily in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Veterinary Medicine.

Student services are provided by the division's Office for Academic Affairs and the Behrman Biology Center, both located in Stimson Hall, where academic advice, information on biological sciences course offerings, other important information, and counseling are available for undergraduates. The Office for Academic Affairs also follows the progress of biology majors and works closely with faculty advisers. Additional services and resources of the Biology Center include academic program planning, tutoring, lecture tapes, examination files, and information on undergraduate research opportunities. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides advising and career counseling for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner *Westward* or brigantine *Corwith Cramer*.

FACULTY

P. J. Bruns, director; H. T. Stinson, associate director; K. K. Adler, C. F. Aquadro, W. J. Arion, R. Barker, A. H. Bass, D. M. Bates, A. Bensadoun, K. W. Beyenbach, A. W. Blackler, S. E. Bloom, R. Booker, A. C. Borror, A. P. Bretscher, W. J. Brown, W. L. Brown, W. R. Butler, J. M. Calvo, R. R. Capranica, B. F. Chabot, J. L. Cisne, R. A. Corradino, W. L. Crepet, W. B. Currie, P. J. Davies, J. I. Davis, T. E. Dawson, A. Dobson, J. J. Doyle, T. Eisner, S. T. Emlen, P. P. Feeny, G. W. Feigenson, R. H. Foote, J. E. Fortune, T. D. Fox, M. A. Geber, J. Gibson, Q. H. Gibson, R. F. Gilmour, M. L. Goldberg, N. G. Hairston, B. P. Halpern, O. P. Hamill, W. Hansel, M. R. Hanson, R. G. Harrison, R. M. Harris-Warrick, C. D. Harvell, L. A. Heppel, G. P. Hess, P. C. Hinkle, C. D. Hopkins, K. A. Houpt, T. R. Houpt, R. W. Howarth, S. H. Howell, H. C. Howland, R. R. Hoy, T. C. Huffaker, A. T. Jagendorf, P. A. Karplus, M. N. Kazarinoff, E. B. Keller, K. J. Kemphues, K. A. R. Kennedy, L. V. Kochian, R. P. Korf, T. A. LaRue, A. C. Leopold, S. A. Levin, G. E. Likens, J. T. Lis, E. R. Loew, M. A. Luckow, R. E. McCarty, D. K. McClearn, A. R. McCune, J. M. Fessenden MacDonald, R. J. MacIntyre, W. H. Mark, P. L. Marks, J. K. Moffat, J. B. Nasrallah, K. J. Niklas, K. C. Nixon, T. G. Owens, D. J. Paolillo, M. V. Parthasarathy, D. Pimentel, T. R. Podleski, F. H. Pough, A. G. Power, W. B. Provine, A. Quaroni, E. Racker, E. Adkins Regan, M. E. Richmond, J. W. Roberts, D. Robertshaw, R. B. Root, M. M. Salpeter, A. M. Schneiderman, T. D. Seeley, D. I. Shalloway, P. W. Sherman, R. F. Silver, R. M. Spanswick, D. N. Tapper, J. F. Thompson, R. Turgeon, B.-K. Tye, S. Via, V. M. Vogt, C. Walcott, R. H. Wasserman, R. O. Wayne, W. W. Webb, N. F. Weeden, Q. D. Wheeler, D. B. Wilson, D. W. Winkler, M. F. Wolfner, J. F. Wootton, R. Wu, S. A. Zahler, D. B. Zilversmit

Other Teaching Personnel

G. Albrecht, R. R. Alexander, R. A. Calvo, C. Eberhard, P. R. Ecklund, M. F. Ferger, J. C. Glase, J. M. Griffiths, J. B. Heiser, A. C. Huntley, C. H. McFadden, H. C. Reiss

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109–110,105–106, or 101 and 103 plus 102 and 104, or 107–108. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) satisfies the requirement for introductory biology. The additional credits may be satisfied by any biological sciences courses except Biological Sciences 152, 200, 202, 205, 206, 208, 209, 301, or 367.

In the College of Arts and Sciences, the biological sciences distribution requirement is for a two-semester introductory biology sequence selected from Biological Sciences 109–110,105–106, or 101 and 103 plus 102 and 104, or 107–108. An Advanced Placement score of 4 or 5 fulfills one-half the distribution requirement. Students must take an upper-level biology course to complete the distribution requirement in biological sciences. The remainder of the distribution requirement may be satisfied by an upper-level course (200+) offered by the Division of Biological Sciences *other than Biological Sciences 200, 202, 205, 206, 208, 209, 301, or 367*; Anthropology 101; or Chemistry 222.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from Biological Sciences 109–110, 101 and 103 plus 102 and 104, 105–106 or 107–108 or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) also satisfies the distribution requirement in the natural sciences.

Note: Biological Sciences 101–102–103–104 should be taken as a unit by students of any college except those with advanced placement credit.

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.

THE MAJOR

The Division of Biological Sciences offers a major in biological sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges through the division's Office for Academic Affairs, where students submit their applications to the major and obtain biology faculty advisers.

During the second semester of the sophomore year, all students who intend to major in biological sciences must apply for acceptance into the major with the associate director for academic affairs, in 200 Stimson Hall. Students in the College of Agriculture and Life Sciences who were admitted directly to the major complete the application process to declare a concentration area and to assure satisfactory progress toward completion of the major. Acceptance into the major requires completion of the course sequences in introductory biology, chemistry, and mathematics (see requirements 1–3 below), plus one semester of organic chemistry lectures. In addition, a 2.75 Cornell cumulative grade-point average is required for final acceptance into the major except for those students admitted directly to the major as freshmen (College of Agriculture and Life Sciences students only) or as transfers. Students in the process of completing these prerequisites for admission to the major may be accepted on a *provisional* basis. Final acceptance into the major is required for graduation with a biological sciences major. It is the student's responsibility to assure that final acceptance has been granted.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Students are not encouraged to continue with the major in biological sciences unless performance in these four subjects gives evidence of capacity to perform satisfactorily at a more advanced level.

The following requirements for the major are for students who matriculated fall 1988 and later. Students who matriculated *before* fall 1988 see section "Requirements for the Major for Students Matriculating before Fall 1988." These courses should be taken for a letter grade unless the course is offered for S-U grades only.

1) **Introductory biology for majors** (one year): Biological Sciences 101 and 103 plus 102 and 104, or 105–106. Biological Sciences 107–108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101–102, 101 and 103, 102 and 104, or 103–104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (216-222 Stimson Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, Biological Sciences 101 and 103 is advised. These students receive a total of 8 introductory biology credits (4 AP credits plus 4 course credits).

2) **General chemistry** (one year): Chemistry 207–208,* or 215–216,* or 103–104.

3) **College mathematics** (one year, including at least one semester of calculus): Mathematics 111–112,* 105–106, or 111–105. Education 115 may not be used to fulfill any part of this requirement.

4) **Organic chemistry**: Chemistry 253 and 251, or 253 and 301, or 357–358 and 251, or 357–358 and 301, or 359–360 and 251, or 359–360 and 301.

5) **Physics:** Physics 207–208,* 112–213,* or 101–102. Those who take Physics 112–213 are advised to complete Physics 214 as well.

6) **Genetics:** Biological Sciences 281.

7) **Biochemistry:** Biological Sciences 330 or 331.

8) **Evolutionary Biology:** Biological Sciences 378.

9) **A program of study** selected from the outline below.

10) **Foreign language:** students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Programs of Study Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible programs of study are listed below.

1) *Animal Physiology and Anatomy:* Bio S 311 and 319, Introductory Animal Physiology, Lectures and Laboratory; Bio S 313, Histology: The Biology of Tissues; Bio S 315, Topics in Functional Anatomy; and Bio S 316, Cellular Physiology. The Program of Study in Animal Physiology and Anatomy emphasizes whole animal, tissue, and cell physiology, and provides considerable opportunity for studies using live animals. It is intended especially for students contemplating careers in biomedical practice or research.

2) *Biochemistry:* Chemistry 300 or 215–216, Quantitative Chemistry, must be taken. One of the following organic chemistry laboratory sequences must also be taken: Chemistry 301–302 or 251–252–302 or 301 or 251–252. In addition, students must take a physical chemistry sequence (Chemistry 389–390 or 287–288.1 or 287–288.2) and a biochemistry laboratory course (Bio S 638 or 430 or 630). Note that Physical Chemistry 288.2 is designed for biologists, but either sequence is appropriate. It is recommended that students take the more rigorous organic chemistry and physics sequences (Chemistry 357–358 or 359–360 and Physics 207–208) and a third semester of calculus. Students interested in biochemistry should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.

3) *Botany:* A minimum of 13 credits is required from courses chosen with the aid of an adviser to meet the goal of exposing each student to plant structure, function, classification, ecology, and evolution. Three courses, one from each of the three following categories, fulfill the minimum requirements. Students are encouraged to begin the sequence of courses with Bio S 241 (see category b): (a) Bio S 242 and 244 or Bio S 341 and 349, Plant Physiology, Lectures and Laboratory; (b) Bio S 241, Introductory Botany; Bio S 248, Taxonomy of Vascular Plants; Bio S 448, Plant Evolution and the Fossil Record; or Pl Pa 309, Introductory Mycology; and (c) Bio S 345, Plant Anatomy; or Pl Pa 301, Introductory Plant Pathology. Students interested in a broad background in botany are encouraged to take Bio S 346, Algal Physiology; Bio S 444, Plant Cell Biology; Bio S 463 and 465, Plant Ecology, Lectures and Laboratory; and additional courses in (b) and (c).

4) *Cell Biology:* Chemistry 300 or 215–216, Quantitative Chemistry; Bio S 432, Survey of Cell Biology; Bio S 630, Laboratory in Cell Biology (strongly recommended), or Bio S 638, Intermediate Biochemical Methods or Bio S 430, Basic Biochemical Methods; and at least 5 additional credits chosen from the following courses: Bio S 222, Neurobiology and Behavior II: Introduction to Neurobiology; Bio S 305, Basic Immunology; Bio S 313, Histology: The Biology of the Tissues; Bio S 345, Plant Anatomy; Bio S 435–436, Undergraduate Biochemistry Seminar; Bio S 438, Cell Proliferation and Oncogenic Viruses; Bio S 483, Molecular Aspects of Development; Bio S 444, Plant Cell Biology; Bio S 636, Current Topics in Cell Biology; Bio S 639, The Nucleus; An S 419, Animal Cytogenetics.

   Students interested in cell biology should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year. If graduate work in cell biology is anticipated, students should consider taking a physical chemistry sequence (Chemistry 389–390 or 287–288.1 or 287–288.2).

5) *Ecology and Systematics:* Bio S 261, Ecology and the Environment, and 10 credits from the following course lists, including at least one course from each group:

   (a) Bio S 241, Introductory Botany; Bio S 274, Functional and Comparative Morphology of Vertebrates; Bio S 373, The Invertebrates: Form, Function, and Evolution; Bio S 471, Mammalogy; Bio S 472, Herpetology; Bio S 475, Ornithology; Bio S 476, Biology of Fishes; Entom 212, Insect Biology.

   (b) Bio S 263, Field Ecology; Bio S 272, Functional Ecology: How Animals Work; Bio S 448, Plant Evolution and the Fossil Record; Bio S 455, Insect Ecology; Bio S 457 and 459, Limnology, Lectures and Laboratory, Bio S 461, Population and Evolutionary Ecology; Bio S 462, Marine Ecology; Bio S 463 and 465, Plant Ecology, Lectures and Laboratory; Bio S 464, Microevolution and Macroevolution; Bio Sci 470, Ecological Genetics; Bio S 478, Ecosystem Biology; Bio S 479, Paleobiology; Bio S 481, Population Genetics.

One 400-level, 4-credit course offered at Shoals Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

6) *General Biology:* The program of study in general biology requires a minimum of 13 credit hours from courses offered by the Division of Biological Sciences and may include Microbiology 290–291. These credits must include one course from the courses listed for at least three of the eight other programs of study, and must include a course with a laboratory and a minimum of two upper-level (300 and above) courses.

7) *Genetics and Development:* A minimum of 13 credits, usually chosen from the following courses: Bio S 385, Developmental Biology; Bio S 389, Embryology; Bio S 480, Seminar in Developmental Biology; Bio S 481, Population Genetics; Bio S 483, Molecular Aspects of Development; Bio S 484, Molecular Evolution; Bio S 485 and 487, Microbial Genetics; Bio S 633 Biosynthesis of Macromolecules; Bio S 639, The Nucleus; Bio S 641, Laboratory in Plant Molecular Biology; Bio S 644, Plant Growth and Development; Bio S 653, Plant Molecular Genetics; Bio S 687, Developmental Genetics; Bio S 688, Yeast Genetics; Bio S 689, Advanced Topics in Population Genetics; An S 419, Animal Cytogenetics; An S 486, Immunogenetics, Micro 695, Bacterial Genetics.

   Up to 3 credits for this program of study may be chosen from other biological sciences courses with approval of the faculty adviser.

8) *Microbiology:* A program of study offered by the Division of Biological Sciences beginning fall 1990. For course listings in Microbiology, see the College of Agriculture and Life Sciences section in the *Courses of Study*. Information on the requirements for the program of study in Microbiology is available in 200 Stimson Hall.

9) *Neurobiology and Behavior:* The two-semester introductory course sequence, Neurobiology and Behavior I and II (Bio S 221 and 222) with discussion section (4 credits per term), and 7 additional credits, among which must be a course from the neurobiology and behavior offerings. Bio S 420, 498, 499, and 720 may not be used as this neurobiology and behavior course. However, these readings and independent research courses may form part of the additional credits (beyond those provided by the advanced neurobiology and behavior course) required to complete the program of study in neurobiology and behavior.

Note: Students who declare the program of study in neurobiology and behavior after taking Bio S 221 or 222 for only 3 credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W119 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

10) *Independent Option:* Special program for students interested in nutrition is available under this option. In addition, students who want to undertake a course of study not covered by the nine existing programs of study or one of the special programs may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee petition forms are available in the Office for Academic Affairs, 200 Stimson Hall.

Requirements for the Major for Students Matriculating before Fall 1988

Students who matriculated before fall 1988 must complete the major by satisfying the requirements listed below. These courses should be taken for a letter grade unless the course is offered for S-U grades only.

1) **Introductory biology for majors** (one year): Biological Sciences 101 and 103 plus 102 and 104, or 105–106. Biological Sciences 107–108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101–102, 101 and 103, 102 and 104, or 103–104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (216-222 Stimson Hall) to determine which semester to take to complete the introductory biology requirement. Students in doubt are advised to take Biological Sciences 101 and 103. These students receive a total of 8 introductory biology credits (4 AP credits plus 4 course credits).

2) **General chemistry** (one year): Chemistry 207–208,* or 215–216,* or 103–104.

3) **College mathematics** (one year, including at least one semester of calculus): Mathematics 111–112,* 105–106, or 111–105. Education 115 may not be used to fulfill any part of this requirement.

4) **Organic chemistry:** Chemistry 253 and 251, or 253 and 301, or 357–358 and 251, or 357–358 and 301, or 359–360 and 251, or 359–360 and 301.

5) **Physics:** Physics 207–208,* 112–213,* or 101–102. Those who take Physics 112–213 are advised to complete Physics 214 as well.

6) **Genetics:** Biological Sciences 281.

7) **Biochemistry:** Biological Sciences 330 or 331.

8) **A concentration area** selected from the outline below.

9) **Breadth in biology**, as described below.

10) **Foreign language:** students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

As an alternative to requirements 8 and 9 above, students may choose to complete the Program in General Biology, outlined below.

Concentration Areas and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a concentration area or the Program in General Biology. The concentration requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible concentration areas are listed below.

1) *Animal Physiology and Anatomy:* Bio S 274, The Vertebrates*; Bio S 316, Cellular Physiology; Bio S 311 and 319, Introductory Animal Physiology, Lectures and Laboratory; and at least one additional course selected from the following: Bio S 313, Histology: The Biology of the Tissues; Bio S 385, Developmental Biology; Bio S 389, Embryology; Bio S 458, Mammalian Physiology; Bio S 492, Sensory Function; An Sc 427, Fundamentals of Endocrinology.

Note: Bio S 313, Histology: The Biology of the Tissues, is recommended for those students who have not yet taken Bio S 274, The Vertebrates, as part of their concentration requirements in animal physiology and anatomy. Students should contact their adviser for other possible alternatives.

2) *Biochemistry:* Chemistry 300 or 215–216, Quantitative Chemistry, must be taken. One of the following organic chemistry laboratory sequences must also be taken: Chemistry 301–302 or 251–252 and 302 or 301 or 251–252. In addition, students must take a physical chemistry sequence (Chemistry 389–390 or 287–288.1 or 287–288.2) and a biochemistry laboratory course (Bio S 638 or 430 or 630). Note that Physical Chemistry 288.2 is designed for biologists, but either sequence is appropriate. It is recommended that students take the more rigorous organic chemistry and physics sequences (Chemistry 357–358 or 359–360 and Physics 207–208) and a third semester of calculus.

Students interested in biochemistry should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.

3) *Botany:* courses chosen with the aid of an adviser to meet the goal of exposing each student to plant structure, function, classification, ecology, and evolution. Three courses, one from each of the three following categories, fulfill the minimum requirements. Students are encouraged to begin the sequence of courses with Bio S 241 (see category b): (a) Bio S 242 and 244 or Bio S 341 and 349, Plant Physiology, Lectures and Laboratory; (b) Bio S 241, Introductory Botany; Bio S 248, Taxonomy of Vascular Plants; Bio S 448, Plant Evolution and the Fossil Record; or Pl Pa 309, Introductory Mycology; and (c) Bio S 345, Plant Anatomy; or Pl Pa 301, Introductory Plant Pathology. Students interested in a broad background in botany are encouraged to take Bio S 346, Algal Physiology; Bio S 463 and 465, Plant Ecology, Lectures and Laboratory; and additional courses in (b) and (c).

4) *Cell Biology:* Chemistry 300 or 215–216, Quantitative Chemistry; Bio S 630, Laboratory in Cell Biology (strongly recommended), Bio S 638, Intermediate Biochemical Methods, or Bio S 430, Basic Biochemical Methods; and one of the following two options:

Option 1: Bio S 432, Survey of Cell Biology, and 8 additional credits distributed between groups A and B and approved by the adviser.

Option 2: The two courses from Group A and 6 additional credits from Group B approved by the adviser.

Group A: Bio S 438, Cell Proliferation and Oncogenic Viruses; Bio S 483, Molecular Aspects of Development.

Group B: Bio S 222, Neurobiology and Behavior II: Introduction to Neurobiology; Bio S 305, Basic Immunology, Lectures; Bio S 307, Basic Immunology, Laboratory; Bio S 313, Histology: The Biology of the Tissues; Bio S 345, Plant Anatomy; Bio S 485, Microbial Genetics, Lectures; An Sc 419, Animal Cytogenetics; An Sc 486, Immunogenetics; Micro 290, General Microbiology Lectures; Micro 291, General Microbiology Laboratory; Micro 451 (484), Structure and Function of Bacterial Cells; Micro 453 (485), Bacterial Cytology Laboratory.

Students interested in cell biology should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.

Students anticipating graduate work in cell biology should consider taking a physical chemistry sequence (Chemistry 389–390 or 287–288.1 or 287–288.2). Note that Physical Chemistry 288.2 is designed for biologists, but either sequence is appropriate.

5) *Ecology, Systematics, and Evolution:* Bio S 261, Ecology and the Environment; Bio S 378, Evolutionary Biology; and at least two of the following courses or one of the following courses and a 400–level, 4–credit course offered at Shoals Marine Laboratory: Bio S 248, Taxonomy of Vascular Plants; Bio S 373, The Invertebrates: Form, Function, and Evolution; Bio S 455, Insect Ecology; Bio S 457/459, Limnology; Bio S 461, Population and Evolutionary Ecology; Bio S 462, Marine Ecology; Bio S 463/465, Plant Ecology; Bio S 464, Microevolution and Macroevolution; Bio S 471, Mammalogy; Bio S 472, Herpetology; Bio S 475, Ornithology; Bio S 476, Biology of Fishes; Bio S 478, Ecosystem Biology; Bio S 479 Paleobiology; Bio S 481 Population Genetics; Bio S 484, Molecular Evolution. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

6) *Genetics and Development:* 9 credits, usually selected from the following courses: Bio S 378, Evolutionary Biology; Bio S 385, Developmental Biology; Bio S 389, Embryology; Bio S 481, Population Genetics; Bio S 482, Human Genetics and Society; Bio S 483, Molecular Aspects of Development; Bio S 484, Molecular Evolution; Bio S 485 and 487, Microbial Genetics; Bio S 633, Biosynthesis of Macromolecules; Bio S 639, The Nucleus; Bio S 641, Laboratory in Plant Molecular Biology; Bio S 644, Plant Growth and Development; Bio S 653, Plant Molecular Biology I; Bio S 688, Yeast Genetics; An Sc 419, Animal Cytogenetics; An S 486, Immunogenetics, Micro 695, Bacterial Genetics.

7) *Neurobiology and Behavior:* The two-semester introductory course sequence, Neurobiology and Behavior I and II (Bio S 221 and 222) with discussion section (4 credits per term), and 9 additional credits, among which must be a course from the neurobiology and behavior offerings. Bio S 420, 498, 499, and 720 may not be used as this neurobiology and behavior course. The remainder of the 9 credits may be in any course (such as physiology, developmental biology, cellular biology, ecology, vertebrate or invertebrate biology, or neurobiology and behavior) approved by the adviser. Courses used to fulfill the concentration requirements may not be counted toward fulfillment of the breadth requirement.

Note: Students who declare the concentration in neurobiology and behavior after taking Bio S 221 or 222 for only 3 credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W119 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

8) *Independent Option:* Special programs for students interested in biophysics, microbiology (College of Arts and Sciences students only), or nutrition are available under this option. In addition, students who want to undertake a course of study not covered by the seven existing concentration areas, special programs, or the Program in General Biology may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee petition forms are available in the Office for Academic Affairs, 200 Stimson Hall.

Requirement for Breadth in Biology

To fulfill the requirement for breadth in biology, students must pass a total of two courses outside of their concentration area selected from two of the categories listed below.

Students should consult their faculty advisers, keeping in mind the following rules, when choosing the courses to meet this requirement. A course may not count for breadth if it could be used (even if it is not) to fulfill a concentration requirement (see note below). No course may be used to fulfill the breadth requirement if it is also used to fulfill a concentration requirement. Students may not count two courses for breadth credit if one course is a prerequisite to the other course. Students concentrating in animal physiology and anatomy; botany; cell biology; ecology, systematics, and evolution; or genetics and development should see the notes following the list of approved breadth courses.

1) *Animal Physiology and Anatomy:* Biological Sciences 214, 311, 313; Nutritional Sciences 331.

2) *Botany:* Biological Sciences 241, 242 and 244, 248, 341 and 349, 343, 345, 441, 448; Plant Pathology 309.

3) *Cellular Biology:* Biological Sciences 305, 316, 432; Microbiology 290.

4) *Developmental Biology:* Biological Sciences 385, 389, 483; Animal Science 220.

5) *Ecology, Systematics, and Evolution:* Biological Sciences 261, 378.

6) *Neurobiology and Behavior:* Biological Sciences 221, 222.

Note: Students concentrating in animal physiology and anatomy may not use Biological Sciences 316, 385, 389, or 432 to fulfill the breadth requirement.

Students concentrating in cell biology may not use Biological Sciences 222, 313, 345, or 483 to fulfill the breadth requirement.

Students concentrating in ecology, systematics, and evolution may not use Biological Sciences 248 to fulfill the breadth requirement.

Students concentrating in genetics and development may not use Biological Sciences 378 or any course in group 4 to fulfill the breadth requirement.

Program in General Biology

As an alternative to the requirements for a concentration area and for breadth in biology, students may choose to complete the Program in General Biology. These students must fulfill all other requirements for the biological sciences major. In addition, students must complete the following:

1) Ecology (Bio S 261 or Bio S 262 [no longer offered]).

2) Neurobiology and Behavior I or II (Bio S 221 or 222).

3) A physiology course from the following: Bio S 242 and 244, or 341 and 349, Plant Physiology; Bio S 311, Introductory Animal Physiology, Lectures.

4) One course from the following: Bio S 241, Introductory Botany; Bio S 248, Taxonomy of Vascular Plants; Bio S 274, Functional and Comparative Morphology of Vertebrates; Entom 212, Insect Biology; Micro 290 and 291, General Microbiology.

5) At least one course offered by the Division of Biological Sciences concentrating on plants. This may be satisfied by a course that also fulfills requirement 3 or 4.

6) At least one course offered by the Division of Biological Sciences with a laboratory. This may be satisfied by a course that also fulfills requirement 3, 4, or 5.

7) A biological sciences course offered for 2 or more credits having as a prerequisite one of the following: Bio S 221, Neurobiology and Behavior I; Bio S 222, Neurobiology and Behavior II; Bio S 241, Introductory Botany; Bio S 242 or 341, Plant Physiology; Bio S 261, Ecology and the Environment; Bio S 274, Functional and Comparative Morphology of Vertebrates; Bio S 281, Genetics; Bio S 311, Introductory Animal Physiology, Lectures; Bio S 330 or 331, Principles of Biochemistry.

Independent Research and Honors Program

Individual research projects under the direction of a faculty member are encouraged as an aspect of study within a concentration (programs of study). Applicants for research projects are accepted by the individual faculty members, who take into account students' previous academic accomplishments, interests, and goals and the availability of space and equipment suitable for the proposed project. Students accepted for independent research enroll for credit in Biological Sciences 499 (Undergraduate Research in Biology) with the written permission of the faculty supervisor. Students register for this course in 200 Stimson Hall. Any faculty member in the Division of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to take full responsibility for the quality of the work. Information on faculty research activities and undergraduate research opportunities is available in the Behrman Biology Center, 216-222 Stimson Hall.

Research credits may not be used in completion of the following concentration (program of study) areas: animal physiology and anatomy; biochemistry; botany; cell biology; ecology, systematics, and evolution; and genetics and development. No more than 4 credits of research may be used in completion of the concentration area (program of study) in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the faculty. Applications for the honors program are available in the Office for Academic Affairs, 200 Stimson Hall, and must be submitted to the Honors Program Committee by the deadline announced early in the senior year. Application forms for the honors program are separate from the enrollment forms for Biological Sciences 499 (Undergraduate Research in Biology). To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.00. In addition, students must have at least a 3.00 Cornell cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill major requirements are included in this computation.) In addition, candidates must have a faculty member to supervise their research. Any faculty member in the Division of Biological Sciences may act as a supervisor. Students may also work with faculty supervisors outside the division. Students who select supervisors outside the division must arrange for a faculty member of the division to serve as cosigner of the research. The division cosigner must agree to meet with the student on a regular basis, to report to the Honors Program Committee on the progress of the work approximately two months before the thesis is due, and to serve as a reviewer of the thesis. An honors candidate usually enrolls for credit in Biological Sciences 499 (Undergraduate Research in Biology) under the direction of the faculty member acting as honors supervisor, although it is not necessary to do so. Students choosing to earn credit for honors research must enroll in Biological Sciences 499 (Undergraduate Research in Biology) separate from the honors program. Requirements of the honors program include participation in honors research seminars during two semesters, submission of an acceptable honors thesis, completion of all major requirements, and maintenance of the 3.00 Cornell cumulative grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors is the responsibility of the Honors Program Committee.

Students interested in the honors program should consult their faculty advisers early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of their senior year. Students who are considering a year abroad should consult with a member of the Honors Committee before beginning their year abroad. Details pertaining to thesis due dates, seminars, and other requirements may be obtained from the chair of the Honors Program Committee or from the Office for Academic Affairs, 200 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, 216-222 Stimson Hall.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum, to division-wide requirements, to concentration and breadth requirements, and to the programs of study are made by the Curriculum Committee of the division. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested persons.

ADVISING

Students in need of academic advice are encouraged to consult their advisers, come to the Behrman Biology Center (216-222 Stimson Hall), or contact the associate director for academic affairs (200 Stimson Hall).

Students interested in marine biology should visit the Cornell Marine Programs Office, G14 Stimson Hall.

Students interested in the multidisciplinary program Biology and Society should see "Special Programs and Interdisciplinary Studies," in the College of Arts and Sciences section of this catalog.

INDEX OF COURSES

The middle digits of biological sciences course numbers are used to denote courses in specific areas: 0, general; 1, animal physiology and anatomy; 2 and 9, neurobiology and behavior; 3, biochemistry and cell biology; 4, botany; 6 and 7, ecology, systematics, and evolution; 8, genetics and development. The middle digit 5 is used when all other course numbers in a particular area have already been assigned.

Note: Biological sciences courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

Current and Former Course Numbers

Course	*Page*	*Course*	*Page*

GENERAL COURSES

101–102 Biological Sciences, Lectures
101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in Biological Sciences 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless written permission is obtained from instructor. S-U grades optional, with permission of instructor. May not be taken for credit after Biological Sciences 105–106 or 109–110.

Lecs, M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 27 and Nov. 8; spring, Feb. 21 and Apr. 2. C. D. Hopkins.

Designed both for students who intend to specialize in biological sciences and for those specializing in other subjects, such as the social sciences or humanities, who want to obtain a thorough knowledge of biology as part of their general education. Plant and animal materials are considered together rather than in separate units. The fall semester covers the chemical and cellular basis of life, energy transformations, anatomy, physiology, and behavior. The spring semester covers genetics, development, evolution, ecology, and the origin of life. Each topic is considered in the light of modern evolutionary theory.

103–104 Biological Sciences, Laboratory
103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in Biological Sciences 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless written permission is obtained from instructor. S-U grades optional, with permission of instructor. No admittance after second week of classes.

Lab, M T W or R 1:25–4:25, M or W 7:30–10:30 p.m, or T R or S 8–11. One 3-hour lab each week and a weekly lec for discs, special lecs, etc. J. C. Glase, P. R. Ecklund and staff.

Biological Sciences 103–104 is designed to give students laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, development, organismal diversity, population genetics and growth, and ecology. During the first semester, dissection of a doubly-pithed frog is included. Pithing is done by the instructor.

105–106 Introductory Biology
105, fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. S-U grades optional, with written permission of instructor. May not be taken for credit after Biological Sciences 101–104 or 109–110. No admittance after first week of classes. Fee, $5.

Lec, T 9:05 (1st lec of fall term, R 8/30 9:05); additional study and lab hours to be arranged. C. H. McFadden and staff.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects of study in the spring semester are genetics, development, ecology, evolution, behavior, and the diversity of organisms. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Four formal laboratory sessions are offered each semester. Written reports on experimental work are required in the fall; extensive dissections (both invertebrate and vertebrate) with practical exams constitute spring laboratories. The core units include additional laboratory work. Performance on the core units, the laboratories, and the final examination determine the final grade. Students who object to dissecting live invertebrates may want to take another biology course.

107–108 General Biology
8-week summer session (107, weeks 1–4; 108, weeks 5–8). 4 credits each. Prerequisite: Biological Sciences 101–103, 105, or 107 is a prerequisite for 108. Fee, $35.

Lecs, M-R 9–12; labs, M T & R 1:30–4:30, F 9–12. A. W. Blackler and staff.

Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. Biological Sciences 107 covers biological metabolism, first at the molecular level and then progressively to the organ system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. Biological Sciences 108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in Biological Sciences 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. Biological Sciences 107–108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school.

109–110 Biological Principles
109, fall; 110, spring. 3 credits each term. Limited to 600 students. Prerequisite: A passing grade in 109 or 101–103 or 105 is prerequisite to 110 unless written permission is obtained from the instructor and student has at least 3 credits of college biology. Letter grades only. May not be taken for credit after Biological Sciences 101–104 or 105–106. This course may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology but may *not* be used as an introductory course for the major in biological sciences. *Note that this course may not always satisfy the prerequisite for second- and third-level courses in biology.*

Lecs, M W F 9:05 or 10:10; lab, M T W R or F 2–4:25 or T 10:10–12:35. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks. Evening prelims: fall, Sept. 27 and Nov. 8; spring, Feb. 21 and Apr. 2. R. Turgeon, C. Eberhard.

Students who do not plan to major in biology may take this broad introductory course in modern biology. It is not a course in social biology but addresses itself to biological principles with academic rigor. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Laboratory sections enable small groups of students to meet with the course staff and are used for problem-solving experiments, demonstrations, and discussions. No live dissections are involved; there are dissections of preserved material.

152 Special Topics in Biology
Spring. 1 credit. Limited to 30 students. Prerequisites: superior performance in Biological Sciences 109 or equivalent and concurrent enrollment in Biological Sciences 102, 106, or 110, or written permission of instructor. S-U grades only. *This course may not be used in fulfillment of college distribution requirements.*

Lec, M 3:35: occasional field trips to be arranged. R. Turgeon, C. Eberhard, and guest lecturers.

A lecture course designed to complement introductory biology by providing an opportunity for deeper exploration of selected topics of interest. Class involvement and discussion are encouraged.

200 Special Studies in Biology
Fall or spring. 1–3 credits. Prerequisites: transfer- or special-student status and written permission of instructor and of the associate director of the Division of Biological Sciences. Students must register using a special form available in Stimson 200. S-U grades optional, with permission of instructor.

Hours to be arranged. Staff.

A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. May not be substituted for 100–level courses and may not be used in fulfillment of college distribution requirements.

201 Biotechnology: The "New" Biology (also Biology and Society 201)
Spring. 3 credits. Prerequisite: One year of introductory biology for nonmajors. S-U grades optional.

Lecs, 2 hours each week to be arranged; disc, 1 hour each week to be arranged. J. Fessenden MacDonald, J. M. Calvo, and staff.

A general introduction to the application of modern molecular biology and cell culture techniques to the manipulation and genetic engineering of animals, plants, and microorganisms. Information on recombinant DNA technology, monoclonal antibodies, plant and/or animal cell culture, and embryo manipulation methods is presented. Topics include commercial applications to health, forensics, environment, agriculture and food; and economic, social policy, regulatory, ethical and legal issues that surround biotechnology. The course is taught in four modules and the topics vary from year to year. Topics are listed in the division's catalog supplement issued at the beginning of the semester.

[202 History of Biology (also Biology and Society 288 and History 288)
Spring. 3 credits. Prerequisite: one year of introductory biology. S-U grades optional. Not offered 1990–91.

Lecs, T R 10:10–11:25. W. B. Provine.

An examination of the history of biology, emphasizing the interaction of biology and culture. Original writings of biologists constitute the bulk of reading assignments. Covers the period from classical antiquity to the present, but primary emphasis is on twentieth-century biology.]

205 Ethics and Health Care (also Biology and Society 205 and Philosophy 245)
Fall and summer. 4 credits. Limited to 80 students (25 under Biological Sciences 205, 25 under Biology and Society 205, and 30 under Philosophy 245). Registered students not attending during the first week will be dropped from the course. Open to sophomores, juniors, and seniors; permission of instructor required for graduate students.

Lecs, T R 10:10–11:25; disc, 1 hour each week to be arranged. M. Wachsberg.

Critical *philosophical* analysis of the conceptual frameworks in which ethical problems associated with health care can be formulated and solutions evaluated. General topics (with sample issues in parentheses) include knowledge in ethics (ethical skepticism, ethical relativism); proper social allocation of resources for, and within, medicine (entitlement to health care, access to scarce medical resources, cost-benefit analysis); the proper account of basic concepts such as illness, death, autonomy, and personhood (abortion, euthanasia, procreative technologies); and the professional-patient relationship (informed consent, confidentiality, medical paternalism).

206 Ethics and the Environment (also Philosophy 246 and Biology and Society 206)
Spring. 4 credits. Open to all undergraduates. Permission of instructor required for graduate students.

Lecs, T R 10:10–11:25; disc, 1 hour each week to be arranged. M. Wachsberg.

Critical *philosophical* analysis of the conceptual frameworks in which policies affecting the environment are formulated and judged. An introductory section of the course discusses the nature of ethics and the possibility of knowledge in ethics. The first major substantive component of the course deals with the nature and extent of individual and social obligations to spatially distant people, future generations, nonhuman animals and nonsentient things (e.g., the ecosystem). The second major component of the course deals with the appropriate analysis of the origin of environmental problems and the range of options for their solution. Topics include individual vs. collective goods, cost-benefit analysis, and coordination problems.

207 Evolution (also History 287)
Fall. 3 credits. Intended for students with no background in college biology. May not be taken for credit after Biological Sciences 378. S-U grades optional.

Lecs, T R 10:10; disc, to be arranged. W. B. Provine.

Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. Aims of the course include understanding the major issues in the history and current status of evolutionary biology and exploring the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

208 Drawing the Human Figure
Summer (6-week session). 3 credits.

Lab, M W F 3–5:15. K. Kucharski.

Human anatomy. Emphasis on learning correct anatomical information relating to the skeletal and muscular systems as approached through observation and drawing practices.

209 Introduction to Natural Science Illustration
Summer. 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional.

Lec and lab, T R 6:30–9:30 p.m. B. S. King.

An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

301 Biology and Society: The Social Construction of Life (also Biology and Society 301)
Fall. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional.

Lecs, M W 2:30–4:25. P. J. Taylor.

Topics include evolution and natural selection, heredity and genetic determinism, biotechnology and reproductive interventions, and ecology and enviornmental change. Through laboratories, discussions, and writing exercises, students develop analytic skills and explore their own intellectual and practical responses to current issues.

305 Basic Immunology, Lectures (also Veterinary Medicine 315)
Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics.

Lecs, T R 8:30–9:55. Evening prelims: Oct. 11 and Nov. 8. A. J. Winter.

A survey of modern immunology, with emphasis on the biological functions of the immune response.

307 Basic Immunology, Laboratory (also Veterinary Medicine 316)
Fall. 2 credits. Prerequisite: a course in basic microbiology or permission of instructor. Recommended: concurrent enrollment in Biological Sciences 305.

Labs, T R 10:10–1:10. N. L. Norcross.

A series of laboratory exercises selected to illustrate immunological concepts presented in Biological Sciences 305. Exercises are designed to give students experience with the stimulation and measurement of an immune response in the rabbit. Techniques to familiarize students with both humoral and cellular immune phenomena are included, with the goal of offering hands-on experience in immunology. Among the methods and techniques offered are agglutination and precipitation methods, virus neutralization and phagocytosis, measurement of the biological activity of complement components, antibody-dependent cell-mediated cytotoxicity, T and B cell identification, monoclonal antibodies and the ELISA, antibody production by single cells, lymphocyte blastogenesis, and delayed hypersensitivity.

[308 Pathogenic Virology (also Veterinary Medicine 317)
Spring. 4 credits. Limited to 40 students. Prerequisites: Microbiology 290, 291. Recommended: Biological Sciences 305. Alternate year course. Not offered 1990–91.
Lecs, T R 1:25; labs, T R 2:25–4:25. Evening prelims to be arranged.
J. W. Casey and L. E. Winter.
Properties of the virion, viral-host interactions, strategies for gene regulation, and mechanisms of pathogenicity are studied. Selected viral infections that result in immune disfunction and neoplasia are highlighted in the context of current approaches to prevent or reduce the severity of disease. Laboratories emphasize the isolation and culture of viral pathogens as well as demonstrations on tissue culture and animal models for studying the pathogenesis of, and the immune response to, infectious agents. Discussions are included in the laboratory and guest speakers present current approaches of identifying and characterizing viral agents.]

400 Undergraduate Seminar in Biology
Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional.
Sem to be arranged. Staff.
From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty or faculty from the Sections of Ecology and Systematics, Genetics and Development, or Plant Biology. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester. For students interested in Biochemistry, Physiology, or Neurobiology, please see descriptions under appropriate section.

401 Introduction to Scanning Electron Microscopy
Fall or spring, weeks 1–8. 1 credit. Limited to 8 students (fall), 12 students (spring). Prerequisite: permission of instructor. S-U grades optional.
Lec, M 10:10; labs, T 9:05–12:15, 1:25–4:25; W 1:25–4:25, R 9:05–12:15, 1:05–4:25; or F 9:05–12:15.
M. V. Parthasarathy.
A general introduction to the principles and the proper use of the scanning electron microscope. Emphasis is on biological material.

403 Transmission Electron Microscopy for Biologists
Fall. 1 or 2 credits. 2 credits if student takes both sections. Limited to 12 students. Prerequisites: Biological Sciences 313, 345, 443, or written permission of instructor. S-U grades optional.
Lec, T 11:15; labs, M W or T R 1:25–4:25. Two sections: Sec 01, weeks 1–4; sec 02, weeks 5–8. Students may register for one or both sections. M. V. Parthasarathy.
Section 01, weeks 1–4, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using plant, animal, and microbe materials this section studies chemical fixations, ultrathin sectioning, negative staining, and metal shadowing techniques. Section 02, weeks 5–8, covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Ultrathin sections as well as negatively stained material from samples prepared in Section 01 are used. Students have 2 additional weeks to complete laboratory assignments at the end of each section.

405 Electron Microscopy in Molecular Biology
Fall, weeks 9–12. 1 credit. Limited to 12 students. Prerequisites: Biological Sciences 403 or proficiency in transmission electron microscopy and written permission of instructor. S-U grades optional.
Lec, T 11:15; labs, M W or T R 1:25–4:25.
M. V. Parthasarathy, M. Kyle.
An introductory course to electron microscopy (EM) for use as a tool in analyzing molecular structure, interactions, and processes. Methods considered to be most generally applicable to current studies in molecular biology are covered, including visualization of nucleic acids, heteroduplexes, protein molecules and filaments, and EM immunolabelling.

407 Advanced Laboratory Techniques
Summer. 3 credits.
Lecs, M–F 9–5. M. Kusch and R. Calvo.
Intensive laboratory course stressing techniques and approaches helpful to students intending to work in a research laboratory during the summer. The course is taught in three one-week modules that include molecular biology, cell biology and physiology, and neurobiology.

Cornell has received a five-year grant from the Howard Hughes Medical Institute to encourage Cornell biology majors to consider careers in biological or medical research. Also included in this course are five Cornell students in the NSF-funded Plant Science Center Program. The program begins May 30, 1990, with an intensive three-and-one-half-week laboratory course designed to teach students some state of the art techniques used in molecular biology, cell physiology, and neurobiology. After the laboratory course, students receive stipends to spend the next seven weeks doing independent research in a Cornell biology laboratory. Students are expected to continue their research projects during their senior year. The first summer (1990) the lab course is limited to the thirty students selected to be in either the Cornell/Hughes Program or the NSF-sponsored Plant Science Center Program. It is anticipated that in the future the course will be offered to additional interested students.

408 Molecular Biology for Teachers
Summer. 3 credits.
Lecs, M–F 9–5. R. Calvo, M. L. Cordts, and M. Kusch.
Lecture and laboratory course in molecular biology designed specifically for high school biology teachers. The lecture material covers the structure and biosynthesis of macromolecules, recombinant DNA technology, the unexpected complexity of eukaryotic genes, and the application of recombinant DNA technology to medicine and agriculture. The laboratories provide experience with techniques used in modern molecular biology. Registration limited to teachers selected to participate in the Cornell Institute for Biology Teachers.

Cornell has received a five-year grant from the Howard Hughes Medical Institute to upgrade the information and skills of high school biology teachers. Twenty teachers from a hundred-mile radius of Ithaca are chosen to participate each summer in a three-week intensive program at Cornell. A major part of the program is a lecture and laboratory course in molecular biology. Also included are field trips to various Cornell research facilities, guest lectures by Cornell faculty on their research interests, as well as discussions with university faculty involved in teaching introductory biology. Teachers also perform laboratory exercises designed for high school biology classes. To enable teachers to implement new laboratory exercises, the grant provides each teacher with up to $4,000 worth of equipment and supplies to take home to their biology classes. Participating teachers get 3 credits, board, and a stipend. Applicants should not apply directly to the Summer Session Office. More information on the program and the application process is available from Rita Calvo or Meredith Kusch, Cornell/Hughes Program, 169 Biotechnology Building, 254-4831.

469 Food, Agriculture, and Society (also Biology and Society 469)
Spring. 3 credits. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Possible fee for course reading materials.
Lecs, T R 1:25–2:40. A. G. Power.
A multidisciplinary course dealing with the social and environmental impact of food production in the United States and in developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, farm labor, land reform, biotechnology, and international food policy.

498 Teaching Experience
Fall or spring. 1–4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent, and written permission of instructor. S-U grades optional, with permission of instructor. *Students in the College of Arts and Sciences may not count credits from this course toward the 120 credits required for graduation.*
Hours to be arranged. Staff.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include Biological Sciences 105–106, 231, 311, 319, 330, 430, and 475.

499 Undergraduate Research in Biology
Fall or spring. Variable credit. *Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor.* Prerequisite: written permission of staff member who supervises the work and assigns the grade. Students must register in the Office for Academic Affairs in 200 Stimson. Each student must submit an independent study statement describing the proposed research project during course registration. (Special forms for this purpose are available in the college offices.) S-U grades optional. Any faculty member in the Division of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to serve as cosigner, taking full responsibility for the quality of the work.
Hours to be arranged. Staff.
Practice in planning, conducting, and reporting independent laboratory and library research programs. Research credits may *not* be used in

completion of the following concentration areas (programs of study): animal physiology and anatomy; biochemistry; botany; cell biology; ecology, systematics, and evolution; and genetics and development. No more than 4 credits of research may be used in completion of the concentration area (program of study) in neurobiology and behavior.

606 Freeze-Fracture Technique
Spring, weeks 9–14. 1 credit. Primarily for graduate students. Limited to 8 students. Prerequisites: Biological Sciences 403 or equivalent, and permission of instructor. S-U grades only.
Lec, M 10:10; disc to be arranged; labs, M W 1:25–4:25. M. V. Parthasarathy.
Principles of freeze-fracturing and freeze-substitution technique, freezing artifacts, and interpretation of images.

608 Advanced Electron Microscopy for Biologists
Spring, weeks 10–14. 1 credit. Primarily for graduate students. Limited to 6 students. Prerequisite: Biological Sciences 403 or equivalent. S-U grades only.
Hours to be arranged.
M. V. Parthasarathy.
Project in biological ultrastructure.

[702 X-Ray Elemental Analysis in Biology
Spring, weeks 7–14. 1 credit. Limited to 6 students. Prerequisites: Biological Sciences 403 or equivalent, and permission of instructor. S-U grades only. Offered alternate years. Not offered 1990–91.
Lec and lab to be arranged.
M. V. Parthasarathy, C. Daugherty.
Principles of X-ray elemental analysis are discussed, with special reference to the energy-dispersive system. Emphasis is on qualitative elemental analysis of biological specimens and preparation of material for such analysis, including freeze-substitution technique. A brief introduction to quantitative elemental analysis is also given.]

[705 Advanced Immunology Lectures (also Veterinary Microbiology 705)
Spring. 3 credits. Prerequisite: Biological Sciences 305 or permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, M W F 9:05. A. J. Winter, course coordinator.
Coverage at an advanced level of molecular and cellular immunology, immunoregulation, and the immunology of infectious diseases and tumors.]

Related Courses in Other Departments

Medicine and Civilization (Biology and Society 322)

ANIMAL PHYSIOLOGY AND ANATOMY

214 Biological Basis of Sex Differences (also Women's Studies 214)
Fall. 3 credits. Prerequisite: one year of introductory biology. Limited to non-biology majors and freshman and sophomore biology majors. S-U grades optional. Offered alternate years.
Lecs, T R 8:30–9:55; occasional disc to be arranged. J. E. Fortune.
The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

311 Introductory Animal Physiology, Lectures (also Veterinary Medicine 346)
Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional, with permission of instructor.
Lecs, M W F 11:15. Evening prelims: Sept. 25 and Nov. 1. E. R. Loew and staff.
A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

313 Histology: The Biology of the Tissues
Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: background in vertebrate anatomy and organic chemistry or biochemistry.
Lecs, T R 1:25; labs, T R 2:30–5. R. B. Silver.
Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analytic morphology at the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with invertebrate or vertebrate animals.

315 Topics in Functional Anatomy
Fall. 1 credit. Prerequisite: one year of college biology. Required of students studying animal physiology and anatomy.
Disc, one hour per week to be arranged. E. R. Loew, D. Robertshaw.
Comparative functional anatomy of both invertebrates and vertebrates is presented at the whole animal level using prepared and fresh materials. Correlations between structure, function, and ecological significance are stressed.

316 Cellular Physiology
Spring. 4 credits. Limited to 100 students, with preference given to students studying in animal physiology and anatomy. Each lab limited to 24 students. Prerequisite: concurrent or previous enrollment in Biological Sciences 330 or 331.
Lecs, M W F 9:05; lab, M T W or R 1:25–5. A. Quaroni and staff.
Lectures introduce students to the most current information on the ways cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories provide an introduction to cell and organ culture and to immunological techniques used to study cell structure and function *in vivo* and *in vitro*. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

319 Animal Physiology Experimentation (also Veterinary Medicine 348)
Fall. 3 credits. Enrollment limited to 80 students. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Each of 4 afternoon laboratory sections limited to 20 students. Prerequisite: concurrent or previous enrollment in Biological Sciences 311 or permission of instructor based on previous meritorious performance in another introductory animal physiology course.
Lab, M T W or R 1:25–5; disc, R 1:25 or F 12:20. Students do not choose disc sections during course enrollment; disc assignments are made during first day of classes. R. A. Corradino, P. W. Concannon.
A series of student-conducted *in vitro* and *in vivo* experimental exercises designed to illustrate basic physiological processes in animals and to introduce students to animal physiology research techniques, instrumentation, experimental design, and interpretation of results. Protocols include anesthesia, dissection, vivisection, physiographic recording, and computer simulations. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves; cardiovascular, respiratory and gastrointestinal function and control; and endocrine regulation of mineral metabolism and reproductive tissue activity. Experimental resources include live animals of several vertebrate species, including frogs, birds, rats, and rabbits, which are sacrificed in conjunction with the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports and on laboratory performance.

410 Seminar in Anatomy and Physiology
Fall or spring. 1 credit. May be repeated for credit only once. Limited to upperclass students. S-U grades only.
Sem to be arranged. Organizational meeting first W of each semester at 7:30 p.m. in Vet Research Tower 828. Staff (coordinator, D. Robertshaw).
Discussions and seminars on specialized topics in animal physiology and anatomy.

458 Mammalian Physiology
Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: Biological Sciences 311 or equivalent with permission of instructor.
Lecs, M W F 10:10. K. W. Beyenbach and staff.
An in-depth treatment of selected topics in mammalian physiology and human physiology. Emphasis is on a conceptual and working knowledge of physiology rather than a factual, memorizing knowledge. Topics selected, in order of presentation, include recurrent themes in physiology; basic functional elements of biological systems; design of multicellular animals; mammalian fluid compartments; homeostasis; cardio-vascular, respiratory, gastro-intestinal, and renal physiology; and energy metabolism. The course concludes with a discussion of integrative physiology by considering the multiple, parallel short-term responses of the human body to exercise. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science.

615 Nutrition and Physiology of Mineral Elements (also Veterinary Medicine 759 and Nutritional Sciences 659)
Fall. 3 credits. Prerequisites: courses in basic physiology, intermediate biochemistry, and general nutrition. Offered alternate years.
Lecs, M W F 9:05. R. Schwartz, R. H. Wasserman, D. R. Van Campen, C. S. Fullmer, C. C. McCormick.
Lectures on nutritional aspects and physiological, biochemical, and hormonal relationships of the prominent macroelements and microelements, with emphasis on recent developments. Information on methodologies of mineral research and essentiality, transport, function, homeostasis, interrelationships, and toxicity of various mineral elements.

[618 Biological Membranes and Nutrient Transfer (also Veterinary Medicine 752)
Spring. 2 credits. Prerequisites: courses in animal or plant physiology, quantitative and organic chemistry, and physics. Recommended: a course in cellular physiology. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, T R 11:15. R. H. Wasserman.
An introduction to elementary biophysical properties of biological membranes; theoretical aspects of permeability and transport; mechanism of transfer of inorganic and organic substances primarily across epithelial membranes; and characteristics and properties of transporting macromolecules and ion channels.]

619 Lipids (also Nutritional Sciences 602)
Fall. 2 credits.
Lecs, T R 11:15. A. Bensadoun.
Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, molecular structure, and catabolism; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

[658 Molecular Mechanisms of Hormone Action (also Veterinary Medicine 758)
Spring. 2 credits. Prerequisite: permission of instructor. Minimum enrollment of 6 required. Offered alternate years. Not offered 1990–91.
Lecs, T R 10:10. R. A. Corradino.
An advanced course developed from the current literature on endocrine mechanisms.]

710–718 Special Topics in Physiology
Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.
Fall 1990: two topics are offered.

713 Cardiac Electrophysiology
1 credit.
Lec, 1 hour each week to be arranged. R. F. Gilmour.

717 Structure and Function of Joints with Emphasis on Arthritis
1 credit.
Lec, 1 hour each week to be arranged. G. Lust.
Spring 1991: three topics are offered.

[712 Plasma Lipoproteins
1 credit. Not offered 1990–91.
Sem, one hour each week, to be arranged. A. Bensadoun.]

714 Physiology of Pregnancy
2 credits. Offered alternate years.
Lab to be arranged. P. W. Nathanielsz.

715 Acid-Base Relations (also Veterinary Medicine 627)
2 credits.
Autotutorial. A. Dobson.

716 Regulation of Mitosis and the Cell Cycle
1 credit.
Lec, M 8 p.m. R. B. Silver.

719 Graduate Research in Animal Physiology (also Veterinary Medicine 628)
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Students must register in Vet Research Tower 725. S-U grades optional.
Hours to be arranged. Staff.
Similar to Biological Sciences 499 but intended for graduate students who are working with faculty members on an individual basis.

[753 Animal Biotechnology
Fall. 3 credits. Prerequisites: two courses in physiology, two courses in biochemistry, and one course in endocrinology or nutrition. Not offered 1990–91.
Lec and disc, M 11:15; lab, M 1:25–4:20; additional hours to be arranged.
W. Hansel and staff.
A course in animal biotechnology designed to prepare students for research in animal genetic engineering. Standard techniques for cloning DNA in bacteria are discussed. Development of expression systems in bacteria, yeast, and mammalian cells; DNA sequencing and analysis; and insertion of DNA into mammalian cells are carried out in the laboratory.]

811 Advanced Physiological Methods I
Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only.
Lab to be arranged. Staff.
This is a course primarily for graduate students in physiology and related discipline. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

812 Advanced Physiological Methods II
Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only.
Lab to be arranged. Staff.
This is a course primarily for graduate students in physiology and related discipline. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

Sensory Function (Biological Sciences 492)

Teaching Experience (Biological Sciences 498)

Undergraduate Research in Biology (Biological Sciences 499)

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY

132 Orientation Lectures in Biochemistry
Spring, weeks 1–3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance).
Lec, S 10:10–11:00, for first 3 S of semester. Section chair and staff.
Discussions by six professors about their research and promising areas for research in the future.

231 General Biochemistry
Fall. 3 credits. Intended for students who have not studied biochemistry previously and who do not expect to pursue it further. Not recommended for students who have taken organic chemistry. Prerequisite: Chemistry 104 or 208 or equivalent. S-U grades optional.
Lecs, M W F 12:20. J. M. Griffiths.
A brief introductory section relating organic chemistry to biochemistry is given, followed by the biochemical material in the usual one-semester introductory courses. Topics of general interest are also included.

[232 Recombinant DNA Technology and Its Applications (also Biology and Society 232)
Spring. 3 credits. Prerequisite: one year of introductory biology. S-U grades optional. Not offered 1990–91.
Lecs, M W F 11:15. F. H. Buttel, J. M. Calvo, J. M. Fessenden MacDonald, and staff.
An introduction to molecular approaches to biology. Basic concepts underlying recombinant DNA technology together with strategies for cloning genes are discussed. Much of the course deals with applications of recombinant DNA technology to basic research and to biotechnology. Applications to be discussed include screening for genetic diseases, animal

and plant improvement, and production of proteins useful in medicine, agriculture, and industry. Historical, regulatory, social, and ethical issues are presented and discussed. Recommended especially for freshman with AP biology credit and sophomores desiring a firm background in recombinant DNA technology in preparation for taking genetics and biochemistry. Also appropriate for nonmajors.]

233 Introduction to Research in Molecular Biology and Biological Engineering (also Agricultural and Biological Engineering 233)
Fall. 2 credits. Limited to 50 students. S-U grades optional.
Lec, 1 hour each week to be arranged; disc, 1 hour each week to be arranged. L. P. Walker and D. B. Wilson.
The process of research in biology and biological engineering as well as current problems and discoveries are presented through lectures and readings of biographies, autobiographies, and review articles about specific fields and discoveries.

330–331 Principles of Biochemistry
Introductory biochemistry is offered in two formats: individualized instruction (330) and lectures (331). *Individualized instruction is offered to a maximum of approximately 150 students each semester. Lectures given fall semester only.*

330 Principles of Biochemistry, Individualized Instruction
Fall or spring. 4 credits (2 credits if taken after Biological Sciences 231). Prerequisite: Chemistry 253 or 358 or equivalent. May not be taken for credit after Biological Sciences 331. S-U grades optional for graduate students only.
Evening prelims: fall, Oct. 25; spring, Mar. 12. M. F. Ferger, R. Wu, P. C. Hinkle, and staff.
The core material of the course includes protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. There are no formal lectures; the course has an autotutorial format. The core material is divided into fourteen units of work that are outlined in a study guide written to accompany the textbook. Students prepare the work on their own, with help from the staff of the Study Center if desired, and must pass a written and an oral quiz on each unit. A final exam is required.

Elective discussion groups on research papers and on review articles are scheduled throughout the semester.

331 Principles of Biochemistry, Lectures
Fall or 6-week summer session. 4 credits (or 2 credits if taken after Biological Sciences 231). Enrollment may be limited to 400 students in fall. Prerequisite: Chemistry 253 or 358 or equivalent. May not be taken for credit after Biological Sciences 330. S-U grades optional for graduate students only.
Lecs, M W F S 10:10. J. K. Moffat, R. Barker, B.-K. Tye.
Chemistry of biological substances presented in lecture format. Course content is similar to that of Biological Sciences 330.

430 Basic Biochemical Methods
Fall or spring. 4 credits. Enrollment limited. Prerequisites: Biological Sciences 330 or 331, organic chemistry lectures and laboratory, and permission of instructor obtained by preregistering in Wing 312. Concurrent registration in Biological Sciences 330 or 331 may be arranged in the fall term for graduate students.
Lec and disc, F 1:25; labs, M W or T R 12:20–4:25. R. R. Alexander, J. M. Griffiths, and staff.
A laboratory course designed to introduce students to the biochemical techniques commonly used in the study of biological materials. Students work in small groups, and each student may select two of three or four modules offered. Various assay methods, chromatography, electrophoresis, and use of the scintillation counter are taught. Protein isolation, purification, and enzyme characterization methods are included. Techniques used in the clinical laboratory are applied to analyses of blood and urine samples, and some nutritional analyses are done for protein and vitamin contents of foods. In the nucleic acids module, students are introduced to recombinant DNA methodology, isolating DNA, and studying the function of transfer RNA. A student may isolate and purify the lipids from a material of his/her choice and perform thin-layer chromatography and carry out cholesterol and phosphate analyses. Separation techniques are used to isolate cell components and experiments are conducted to illustrate basic biochemical methods.

432 Survey of Cell Biology
Spring. 3 credits. Prerequisite: Biological Sciences 330 or 331 or equivalent. S-U grades optional for graduate students only.
Lecs, M W F 11:15. W. J. Brown and staff.
A survey of a wide array of topics focusing on the general properties of eucaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in Biological Sciences 438, 483, 632, 636, and 639.

433 Molecular Biology
Fall. 2 credits. Prerequisite: Biological Sciences 281 and 330 or 331.
Lecs, T R 11:15. T. C. Huffaker.
A comprehensive examination of the molecular biology of prokaryotic and eukaryotic cells. Topics include DNA and chromatin structure; genomic organization; replication, recombination, mutability, and repair of DNA; synthesis and processing of RNA and protein; and regulation of gene expression. The principles of recombinant DNA technology are discussed with emphasis on bacterial and yeast systems.

434 Biotechnology: Science, Policy, and Values (also Biology and Society 434)
Spring. 3 credits. Limited to 20 seniors and graduate students. Prerequisites: a course dealing with the science behind biotechnology or Biological Sciences 281 and 330 or 331 or permission of instructor. Fee for course materials.
Disc W 1:25–4:25. J. M. Fessenden MacDonald.
Issues raised by the introduction of new biotechnology products and procedures to medicine, food and agriculture, environment, and the legal system are analyzed. The course examines the scientific, political, legal, economic, social, and ethical implications of these issues. Cases studied vary each term. Background is provided on the molecular biology and applied science aspects of the biotechnology under consideration. Readings from various disciplines including scientific papers, government reports, and industrial and legal reports provide background for class discussions. A research paper and oral presentations are required. Topic for spring 1991 is environment, agriculture, and food biotechnology.

435–436 Undergraduate Biochemistry Seminar
435, fall; 436, spring. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisite: Biological Sciences 330 or 331 or written permission of instructor. S-U grades only.
Sem to be arranged. Organizational meeting first W of each semester at 4 p.m. Fall: J. M. Calvo; spring: G. W. Feigenson.
Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

438 Cell Proliferation and Oncogenic Viruses (also Toxicology 438)
Spring. 3 credits. Prerequisite: Biological Sciences 330 or 331. Recommended: Biological Sciences 281.
Lecs, T R 12:20–1:35. V. M. Vogt.
A description of the growth properties of animal cells in culture, followed by discussions of the changes in cells that are induced by tumor viruses and carcinogens. Topics include immortalization of cells, the cell cycle, macromolecular growth factors, cell-surface properties, cell cytoskeleton, transcription and translation of retrovirus genes, and structure and function of viral and cellular *onc* genes.

630 Laboratory in Cell Biology
Spring. 4 credits. Enrollment limited. Prerequisites: a course in biochemistry or cell biology, and permission of instructor obtained by registering in 258 Biotechnology Building with J. Gibson.
Labs, M W 1:25–4:25 or R 9:05–4:25; disc to be arranged. J. Gibson and staff.
The course emphasizes techniques for handling and experimenting with cells of different kinds and provides experience in experimental design. Limited numbers of vertebrate animals are used for two experiments where no alternative approach exists.

631 Protein Structure and Function
Fall. 3 credits. Prerequisites: introductory biochemistry, physical chemistry, and organic chemistry. S-U grades optional for lecture.
Lecs, M W F 9:05. P. A. Karplus.
Lectures on the principles of protein structure and the nature of enzymatic catalysis.

[632 Membranes and Bioenergetics
Spring. 2 credits. Prerequisite: Biological Sciences 330 or 331 or equivalent. Offered alternate years. Not offered 1990–91.
Lecs, T R 11:15. P. C. Hinkle, R. E. McCarty.
Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria.]

633 Biosynthesis of Macromolecules
Fall. 2 credits. Prerequisite: Biological Sciences 330 or 331. Recommended: Biological Sciences 281.
Lecs, T R 9:05. J. W. Roberts, D. B. Wilson.
Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

[634 Biochemistry of the Vitamins and Coenzymes (also Nutritional Sciences 634)
Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331 or equivalent and either Chemistry 358 or 360. Offered alternate years. Not offered 1990–91.
Lecs, T R 10:10. M. N. Kazarinoff.
Lectures on the chemistry, biochemistry, and physiology of vitamins and coenzymes. Emphasis is placed on the relationship of structure and function, and mechanisms are examined in detail. Readings from the current primary literature are assigned weekly.]

[635 Mechanisms of Metabolic Regulation (also Nutritional Sciences 635)
Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331 and either Chemistry 358 or 360, or permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, T R 9:05. Staff.
Lectures on the identification and characterization of regulatory steps in metabolism, considered from both theoretical and practical aspects. The intracellular mechanisms of regulation are emphasized, with specific examples in mammalian metabolism examined in detail.]

636 Current Topics in Cell Biology
Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331, and 432, or their equivalents.
Lecs, T R 10:10. A. P. Bretscher.
Lectures covering current topics in cell biology, including a detailed discussion of secretion, endocytosis, membrane-bound organelles, membrane recycling, the cytoskeleton, cell motility, junctions, the cell cycle, and related topics. Together with Biological Sciences 632 and 639, this course provides broad coverage of the cell biology subject area.

637 Integration and Coordination of Energy Metabolism (also Nutritional Sciences 636)
Fall. 3 credits. Prerequisite: Biological Sciences 330 or 331 or equivalent.
Lecs, M W F 9:05. Evening prelims to be arranged. W. J. Arion.
The elements and dynamics of energy metabolism in higher animals are developed systematically through biochemical characterizations of the metabolic components and structure of major tissues and organs. Emphasis is placed on correlations with physiologic functions. Mechanisms that control energy metabolism within individual tissues and coordinate these processes in intact animals are analyzed in the contexts of selected physiologic and pathologic stresses.

638 Intermediate Biochemical Methods
Fall or spring. 4 credits. Primarily for graduate students minoring in biochemistry and undergraduates studying in biochemistry. Enrollment limited to 24 students in the fall and 48 students in the spring. Admission to the course is dependent upon the results of a personal interview with the teaching support specialist (x5-8072 or x5-5706), which must be held before the first day of classes. *There is no admission to the course without the interview.* Undergraduates are urged to interview during preregistration. May not be taken for credit after Biological Sciences 430.
Lab, T 9:05–4:25 (fall); lab, T or R 9:05–4:25 (spring). D. B. Wilson and staff.
Selected experiments on proteins, enzymes, DNA, and bioenergetics to illustrate basic biochemical properties. The course emphasizes quantitative aspects and techniques currently used in biochemical research.

639 The Nucleus
Spring. 2 credits. Prerequisite: Biological Sciences 330 or 331 or equivalent. Recommended: Biological Sciences 281.
Lec, M 8–9:55 p.m. J. T. Lis.
Lectures on topics of eucaryotic gene organization, regulation of gene expression, RNA processing, chromatin structure, the structure and movement of chromosomes, and the architecture of the nucleus. This course and Biological Sciences 632 and 636 provide broad coverage of the cell biology subject area.

648 Plant Biochemistry
Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Offered alternate years.
Lecs, M W F 9:05. A. T. Jagendorf, R. E. McCarty, J. F. Thompson.
Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

[650 Nitrogen Metabolism (also Nutritional Sciences 607)
Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331 and Chemistry 358 or 360. Offered alternate years. Not offered 1990–91.
Lecs, T R 9:05. Staff.
A coverage of most aspects of nitrogen metabolism. The first section of the course deals with nitrogen fixation and assimilation, and the metabolism and biological importance of purines, pyrimidines, porphyrins, alkaloids, and amines. This is followed by discussion of the pathways of amino acid biosynthesis and degradation. The final section includes discussion of protein turnover and degradation, nitrogen excretion, and interorgan relationships in higher organisms. Emphasis throughout the course is on hormonal, developmental, and molecular biological aspects of metabolic regulation and evolutionary differences.]

731–736 Current Topics in Biochemistry
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: Biological Sciences 330 or 331 or equivalent. S-U grades only.
Lectures and seminars on specialized topics. *Fall 1990:* two topics are offered.

731 Lipoprotein Receptors
1/2 credit.
T R 12:20 (6 lecs) Sept. 11–27. A. Bensadoun.

732 Calculation of Polypeptide and Protein Conformations
1/2 credit.
T 7:30–9:30 p.m. (3 lecs) Feb. 5, 12, 19. H. A. Scheraga.

733 Current Topics in Biochemistry
1/2 credit.
T R 12:20 (6 lecs) Apr. 23-May 9. M. L. Goldberg.

734 Oncogenes
1/2 credit.
T R (6 lecs) Mar. 5–28. D. I. Shalloway.

735 Mitochondrial Genetics of Yeast
1/2 credit.
W 7:30–9:30 p.m. (3 lecs) Oct. 30-Nov. 15. T. D. Fox.

Spring 1991: four topics are offered.

736 Current Topics in Biochemistry
1/2 credit.
T R 12:20 (6 lecs) Apr. 2–18. T. C. Huffaker.

751 Professional Responsibilities of Scientists (also Toxicology 751)
Fall. 1 credit. Prerequisites: advanced graduate standing and permission of instructor. S-U grades only. Offered alternate years.
Sem, W to be arranged. J. M. Fessenden MacDonald.
Case studies of professional responsibilities and dilemmas faced by scientists in academia, industry, and government, with discussions of possible approaches, alternatives, and outcomes. Readings of scientific, ethical, and general papers provide background for discussions. Topics for consideration include legal liabilities, frauds and misconduct, conflicts of interest/commitment, peer review, and professional codes of ethics.

[752 Isotope Kinetics (also Nutritional Sciences 682)
Spring. 2 credits. Prerequisite: calculus. S-U grades only. Offered alternate years. Not offered 1990–91.
Lec, T 7:30–9:30 p.m. D. B. Zilversmit.
Quantitative analysis of the transport and distribution of nutrients, metabolites, and drugs in multicompartmental systems. The material is presented as lectures, discussion groups, and problem sets.]

755 Biotechnology Transfer: Professional Issues and Social Concerns (also Biology and Society 755)
Fall. 1 credit. Limited to advanced graduate students. S-U grades only.
Disc, R 3:35. J. M. Fessenden MacDonald.
Topics to be covered include how scientific discoveries become commercial products; what's going on at Cornell; biotechnology as Big Science; research in an industrial setting; impact of corporate support; patents,

copyrights, and licensing; and regulation of biotechnology. Readings from diverse disciplines and sources provide background for discussions and presentations by special guests from academe, industry, and government.

830 Biochemistry Seminar
Fall or spring. No credit.
Sem, F 4:30. Staff.
Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

831 Advanced Biochemical Methods I
Fall. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades optional.
Labs and discs, 12 hours each week to be arranged. Organizational meeting first R of semester at 10:10. D. B. Wilson and staff.
To learn the basic techniques of biochemical research, each student performs experiments on proteins, enzymes, DNA, and bioenergetics. First half of the fall term is an intensive lab course with defined experiments assigned to the students. Letter grades are assigned for this laboratory portion of the course. Second half of the fall term is devoted to a rotation project in different labs selected by the students. S-U grades only are assigned for the rotation portion of the course.

832 Advanced Biochemical Methods II
Spring. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades only.
Lab to be arranged. Staff (coordinator: graduate field representative).
Research in the laboratories of two or three different professors chosen by the student. Arrangements are made jointly between the graduate field representative and the research adviser.

833 Research Seminar in Biochemistry
Fall and spring. 1 credit each term. (Students must register for 2 credits each term, since an "R" grade is given at the end of the fall term.) May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in biochemistry. S-U grades only.
Sem, T 5–6:30 p.m. T. C. Huffaker, W. J. Brown, J. T. Lis.
Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BOTANY

241 Introductory Botany
Fall. 4 credits. Prerequisite: one year of introductory biology or permission of instructor.
Lecs, M W F 9:05; lab, M T W R or F 1:25–4:25, or M or W 7:30–10:30 p.m. K. J. Niklas.
Introductory botany for those who plan to specialize in or use some aspect of the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. *Those who register for an evening laboratory are still required to attend the afternoon field trips.*

242 Plant Physiology, Lectures
Spring. 3 credits. Primarily for undergraduates in agricultural sciences. Prerequisites: one year of introductory biology and introductory chemistry. Concurrent enrollment in Biological Sciences 244 required of undergraduates. May not be taken for credit after Biological Sciences 341 except by written permission of instructor.
Lecs, M W F 10:10. P. J. Davies.
Plant physiology as applied to plants growing in communities. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, flowering, fruiting, dormancy, and abscission; stress.

243 Taxonomy of Cultivated Plants (formerly Biological Sciences 342)
Fall. 4 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after Biological Sciences 248.
Lecs, M W 10:10; labs, M W 2–4:25. M. Luckow.
A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

244 Plant Physiology, Laboratory
Spring. 2 credits. Prerequisite: concurrent enrollment in Biological Sciences 242. May not be taken for credit after Biological Sciences 349.
Disc and lab, M T W or R 12:20–4:25. C. Reiss.
Experiments exemplify concepts covered in Biological Sciences 242 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

245 Plant Biology
Summer (6-week session). 3 credits. Limited to 24 students.
Lecs, M–F 11:30–12:45; labs, M W 1:30–4:30. S. Williams.
Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of angiosperms. Seventy-five percent of the laboratory work is conducted outdoors in an area that surpasses most biological stations. Those who lack college-level biology are expected to work more closely with the instructor on supplemental instructional materials.

246 Plants and Civilization
Spring. 3 credits.
Lecs, T R 11:15; disc, T or W 1:25 or W or R 12:20. D. M. Bates.
A consideration of the role that plants have played and continue to play in the evolution of human cultures. Emphasis is on the interactions between humans and the plant environment, the nature of plants and manner in which humans use and integrate them into their cultures, and the problems and concerns related to contemporary and future use of plant resources.

248 Taxonomy of Vascular Plants
Spring. 4 credits. Prerequisite: one year of introductory biology. May not be taken for credit after Biological Sciences 243.
Lecs, M W F 9:05; labs, W or R 1:25–4:25. J. I. Davis.
An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and an overview of vascular plant diversity, with particular attention to the flowering plants.

341 Plant Physiology, Lectures
Fall. 3 credits. Prerequisites: one year of introductory biology, organic chemistry, and either concurrent enrollment in Biological Sciences 349 or written permission of instructor. May not be taken for credit after Biological Sciences 242 unless written permission is obtained from instructor.
Lecs, T R 10:10–11:25. Staff.
The behavior, growth, transport processes, and environmental response of plants. Topics include membrane properties, solute and water transport, and function of osmotic forces; mineral and organic nutrition; stress resistance; growth and development controls; metabolism, including photosynthesis and respiration; and responses to environmental influences.

345 Plant Anatomy
Fall. 4 credits. Limited to 25 students. Prerequisite: one year of introductory biology or a semester of botany.
Lecs, M W 9:05; labs, M W 2–4:25. D. J. Paolillo.
A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

[346 Algal Physiology
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and Biological Sciences 242 or 341, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
Lecs, T R 8:30–9:55. T. G. Owens.
A brief description of the algal classes, as well as classical and emerging criteria for taxonomic classification. Discussions include the interactions of algae with their physical and chemical environments, uptake of inorganic compounds, algal photosynthesis, and metabolic strategies of unicellular and macrophytic algae. Emphasis is placed upon physiological comparisons between algae and higher plants.]

349 Plant Physiology, Laboratory
Fall. 2 credits. Prerequisite: concurrent enrollment in Biological Sciences 341. May not be taken for credit after Biological Sciences 244.
Lab, W or R 1:25–4:25; disc, W or R 12:20. Lab and disc must be on same day. C. Reiss.
Experiments exemplify concepts covered in Biological Sciences 341 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

[359 Biology of Grasses
Fall. 3 credits. Limited to 24 students. Prerequisite: one year of introductory biology or an introductory plant taxonomy course, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
Lecs, T R 10:10; lab,T 1:25–4:25. J. I. Davis.
Systematics and ecology of the graminoid plant families (grasses, sedges, and rushes), with principal emphasis on grasses. Major topics include taxonomy, phylogenetics, physiology, reproductive biology, ecotypic variation, speciation, biogeography, and population biology. The role of graminoids as ecosystem dominants, weeds, and the origins of cultivated species are discussed. Laboratory concentrates on the diversity of grasses.]

440 Plant Geography
Spring. 2 credits. Prerequisite: Biological Sciences 248 or equivalent. Recommended: Biological Sciences 378 or 463 or both. S-U grades optional, with permission of instructor. Offered alternate years.
Lecs, T R 10:10. Bailey Hortorium staff.
Patterns of distribution and variation of plant species and higher taxa, endemism and disjunction and their causes, influences of past continental movements and climatic change on plant distributions, geographical aspects of plant speciation, major biomes and floristic regions of the world, and methods of phytogeographic analysis.

441 Crop Plant Evolution
Fall. 2 credits. Prerequisite: an advanced-level course in the plant sciences with taxonomic content or permission of instructor. Offered alternate years.
Lecs, T R 11:15. D. M. Bates.
An integrated study of the systematics and evolution of agronomic and horticultural species. Processes of domestication, the evolutionary history of selected cultigens, the nature of weeds and land races, classification and nomenclature as applied to cultivated plants, and underexploited plant resources are among the topics considered.

[442 Biology of Plant Species
Spring. 2 credits. Prerequisite: Biological Sciences 248 or equivalent. Recommended: Biological Sciences 378 and 463. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, T R 10:10. Bailey Hortorium staff.
A comprehensive introduction to the nature and origin of plant species, with coverage of plant evolutionary genetics, race formation and modes of speciation, evolution of reproductive isolating mechanisms, types of species complexes found in plants, cytogenetic aspects of plant speciation, natural hybridization and its consequences, and the origin and nature of higher taxa.]

443 Research Methods in Systematic Botany
Fall. 2 credits. Limited to 10 students. Prerequisite: Biological Sciences 248 or equivalent. Offered alternate years.
Lab, F 1:25–4:25; additional hours to be arranged. Bailey Hortorium staff.
An introduction to the methodology of plant systematic research: field studies; sampling and collecting methods; preparation of taxonomic revisions and monographs; numerical methods of data analysis; and laboratory methods in cytogenetics, comparative anatomy, and comparative chemistry, as applied to problems in plant systematics.

444 Plant Cell Biology
Fall. 4 credits. Limited to 24 students. Prerequisites: Biological Sciences 242 or 341, and 345, or permission of instructor.
Lecs, M W F 9:05; lab, M or W 1:25–4:25. R. O. Wayne.
Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

445 Photosynthesis (also Applied and Engineering Physics 601)
Fall. 3 credits. Prerequisites: Chemistry 104 or 208, Mathematics 105 or 111, and either Physics 102 or 208 or permission of instructor. Offered alternate years.
Lecs, M W F 10:10. T. G. Owens.
A detailed study of the processes by which plants utilize light energy to grow. Structure of the photosynthetic apparatus, light absorption, photochemistry, and electron transport are emphasized. The course incorporates biophysical, biochemical, physiological, and molecular aspects of photosynthesis. Photosynthetic carbon metabolism is not covered in detail. Discussions include relevant material in bacterial, algal, and higher-plant photosynthesis.

[446 Plant Cytogenetics
Fall. 3 credits. Limited to 18 students. Prerequisite: Biological Sciences 281 or equivalent. S-U grades optional. Offered alternate years. Not offered 1990–91.
Lecs, M W 9:05; lab, R 2–4:25. J. I. Davis.
An analysis of the cellular mechanisms of heredity, particularly the behavior of chromosomes, and the role of chromosome structure and behavior in plant evolutionary processes. The application of chromosomal studies to analyses of plant species biology and phylogenetics is also covered.]

[447 Molecular Plant Systematics
Fall. 3 credits. Prerequisites: Biological Sciences 248, 281, and 330 or 331, or written permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, T R 10 :10–11: 30. J. J. Doyle.
The study of variation at the molecular level and its application to the taxonomy and evolution of plants, particularly angiosperms. Emphasis is on the use of molecular evidence, particularly DNA data, for reconstructing phylogenies. Theory and methods of phylogenetic reconstruction are discussed. The organization and evolution of nuclear, mitochondrial, and chloroplast genomes, genes, and gene products are described from the standpoint of their utility for addressing a diversity of evolutionary questions. These questions span the entire taxonomic spectrum, and include such issues as the origin of angiosperms, evolution of species related to important crop plants, and population studies of hybridization.]

448 Plant Evolution and the Fossil Record
Spring. 3 credits. Prerequisite: Biological Sciences 241 or equivalent, or permission of instructor. Offered alternate years.
Lecs, T R 9:05; lab, R 12:20–2:15. K. J. Niklas.
An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

450 Optical Methods of Plant Biologists
Spring. 3 credits. Limited to 12 students. Prerequisite: Biological Sciences 444 or permission of instructor.
Lecs, T R 1:25; lab R 2:15–4:30. R. O. Wayne.
Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, differential-interference-contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living plant cells.

640 Applied Plant Anatomy
Spring. 3 credits. Prerequisites: Biological Sciences 345 or equivalent, and permission of instructor.
Lecs and discs, T R 9:05; lab, W 10:10–1:10 or by arrangement with instructor. Bailey Hortorium Staff.
The use of anatomy in vascular plants for diagnosis of structure, taxonomic relationships, evolutionary sequences, and ecological adaptions, with emphasis on recent research. The laboratory provides experience in techniques and interpretation.

641 Laboratory in Plant Molecular Biology
Spring. 4 credits. Prerequisites: Biological Sciences 281 or equivalent, 330 or 331 or equivalent, and permission of instructor. S-U grades optional.
Lab, T 9:05–4:30. J. B. Nasrallah, M. R. Hanson, S. D. Tanksley, P. Palukaitis.
Selected experiments on genome organization, gene expression, and gene transfer in plants. The course emphasizes the application of molecular biology methodology to plant systems. Students may have additional lab time to complete assignments.

642 Plant Mineral Nutrition (also Soil, Crop, and Atmospheric Sciences 642)
Spring. 3 credits. Prerequisite: Biological Sciences 341 or equivalent. Offered alternate years.
Lecs, M W F 10:10. L. V. Kochian, R. M. Welch.
A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., salinity). Specific mineral elements are emphasized to illustrate these topics.

643 Plant Physiology, Advanced Laboratory Techniques
Fall. 4 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. S-U grades only.
Lab, T or W 8–5; disc, M 4:30–5:30. A. T. Jagendorf.
An introduction to some modern methods in experimental plant biology. A partial list of techniques used includes radioactivity measurements, infrared CO_2 analysis, gel electrophoresis and Western Blots, cellular electrode measurements, microtiter plate technology for enzyme assays, sensitive growth measurements, HPLC and GC-MS, and computer interfacing with laboratory equipment.

[644 Plant Growth and Development
Spring. 3 credits. Prerequisites: Biological Sciences 345 and either 242 or 341 or their equivalents, or written permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, M W F 9:05. P. J. Davies, D. J. Paolillo.
Explores the changes that occur during plant growth and development and their control: morphological and anatomical changes in apices, tissue differentiation, organ formation, embryo development, gene regulation, hormone action and interaction, the influence of light in development, flowering, fruiting, dormancy, abscission, and senescence.]

645 Families of Tropical Flowering Plants
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years.
Lec and disc, F 11:15. Bailey Hortorium staff.
The families of flowering plants encountered solely or chiefly in tropical regions are considered in lectures, discussions, and demonstrations, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families for the student venturing into the tropics.

646 Families of Tropical Flowering Plants: Field Laboratory
Intersession. 3 credits. Limited to 20 students, with preference given to graduate students from member institutions of the Organization for Tropical Studies. Prerequisite: Biological Sciences 243 or 248 or equivalent. Recommended: Biological Sciences 645. S-U grades only. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library. Offered alternate years.
Bailey Hortorium staff.
An intensive orientation to families of tropical flowering plants represented in forests of the American tropics. Emphasis on field identification combined with laboratory analysis of available materials in a "whole-biology" context.

647 Seminar in Systematic Botany
Fall and spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional.
Sem to be arranged. Bailey Hortorium staff.
Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

648 Plant Biochemistry
Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Offered alternate years.
Lecs, M W F 9:05. A. T. Jagendorf, R. E. McCarty, J. F. Thompson.
Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

[649 Transport of Solutes and Water in Plants
Fall. 3 credits. Prerequisite: Biological Sciences 341 or equivalent. Offered alternate years. Not offered 1990–91.
Lecs, M W F 10:10. R. M. Spanswick.
Transport of ions, water, and organic materials in plants; mechanisms of ion transport; relationships between ion transport and metabolism; ion uptake and transport in higher plants; phloem transport; and water relations of single cells and whole plants.]

651 Quantitative Whole-Plant Physiology
Fall. 3 credits. Prerequisites: introductory physics, calculus, and plant physiology. S-U grades only. Offered alternate years.
Lecs, T R 10:10–11:30. R. M. Spanswick.
An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.

652 Plant Molecular Biology II
Spring. 1–4 credits (1 credit per section). Prerequisites: Biological Sciences 281, 330 or 331, and 653 (Section 01), or their equivalents. S-U grades optional.
A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

Section 01 Molecular Plant-Pathogen Interactions (also Plant Pathology 652)
1 credit.
Lecs, M W F 10:10 (12 lecs) Jan. 21–Feb. 15. P. F. Palukaitis, O. C. Yoder.
An examination of the molecular properties that control the development of host-parasite interactions in both microorganisms (viruses, bacteria, and fungi) and higher plants. Contemporary theories describing the genetic mechanisms of pathogenesis and resistance are discussed.

Section 02 Molecular Biology of Plant Organelles
1 credit.
Lecs to be arranged (12 lecs) for four weeks. M. R. Hanson, D. B. Stern.
An in-depth examination of the molecular biology of plant mitochondria and plastids. Topics include the organization and expression of organelle genomes, cytoplasmic male sterility, gene regulation during plastid development, and organelle transformation.

Section 03 Molecular Aspects of Plant Development II
1 credit.
Lecs, M W F 10:10 (12 lecs) Feb. 18–Mar. 15. S. H. Howell.
A systems approach to the study of plant development from a molecular perspective. Topics include *Arabidopsis* as a model plant system; molecular genetics of flowering, seed development, and germination; shoot and root development; senescence; and fruit ripening.

Section 04 Molecular Plant-Microbe Interactions (also Microbiology 652)
1 credit.
Lecs, M W F 10:10 (12 lecs) Mar. 25–Apr. 19. S. C. Winans, T. A. LaRue.
Course focuses on the interactions of *Agrobacteria* and *Rhizobia* with plants. Topics on *Agrobacterium*-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis and use of *Agrobacterium* to produce transgenic plants. Topics on *Rhizobium*-plant interactions include regulation of nitrogenase activity and expression, organization and function of the *sym* plasmid, nodule development, plant genetics involved in plant-microbe interaction.

653 Plant Molecular Biology I
Fall. 1–4 credits (1 credit per section). Prerequisites: Biological Sciences 281 and 330 or 331, or their equivalents. S-U grades optional.
A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

Section 01 Concepts and Techniques in Plant Molecular Biology
1 credit.
Lecs, M W F 10:10 (12 lecs) Sept. 3–Sept. 28. R. L. Last, R. Wu.
A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, protein structure and translation. Methods applicable to plant molecular biology are described including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, mutant production, DNA-protein interactions, and use of antibodies.

Section 02 Plant Biotechnology (also Plant Breeding 653 and Plant Pathology 653)
1 credit.
Lecs, M W F 10:10 (12 lecs) Sept. 3–Sept. 28. M. Zaitlin, E. D. Earle.
Applications of molecular biology and tissue culture to plant biotechnology are studied. Topics covered include gene introduction and tissue culture technologies, use of somaclonal variation, use of cultured plant materials and transgenic plants to obtain resistance to insects, plant diseases, and herbicides and to improve nutritional and food processing qualities. Regulatory and social issues relating to plant biotechnology are discussed.

Section 03 Plant Genome Organization and Function (also Plant Breeding 653)
1 credit.
Lecs, M W F 10:10 (12 lecs) Oct. 1–Oct 31. S. D. Tanksley.
Molecular structure and evolution of plant nuclear genomes are explored. Topics covered include mechanisms for packaging DNA into chromosomes, molecular structure of telomeres and centromeres, DNA replication and methylation, and molecular biology of plant transposons. Methods for genetic and physical mapping of plant genomes are discussed as well as applications of mapping tools for gene isolation and plant breeding.

Section 04 Molecular Aspects of Plant Development I
1 credit.
Lecs, M W F 10:10 (12 lecs) Nov. 5–Dec. 7. J. B. Nasrallah.
The regulation of plant nuclear gene expression during development and in response to environmental stimuli is explored. Topics include the use of classical and molecular genetics, transposable elements, and transgenic plants to identify and characterize *cis*- and trans-acting elements responsible for the regulation of selected genes.

654 Plant Nomenclature
Spring. 1 credit. Prerequisite: written permission of instructor. S-U grades optional. Offered alternate years.
Lec and disc to be arranged. R. P. Korf.
An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

656 Topics in Paleobotany
Spring. 1 credit. Prerequisite: Biological Sciences 448 or equivalent background in evolution or written permission of instructor.
Lab and disc to be arranged. K. J. Niklas.
A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

657 Literature of Taxonomic Botany
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades optional. Offered alternate years.
Lec and disc, R 10:10. Bailey Hortorium staff.
A survey of the basic reference works in taxonomy from the pre-Linnaean literature drawn on by Linnaeus to contemporary publications, with comments on the peculiarities of the books (when appropriate), publication dates, typographic devices, and intricacies of bibliographic citation.

740 Plant Biology Seminar
Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology.
Sem, F 11:15. Staff.
Lectures on current research in plant biology, presented by visitors and staff.

742 Current Topics in Plant Molecular Biology
Fall and spring. 1 credit. Limited to 20 students. Primarily for graduate students, with preference given to majors or minors in plant molecular biology; written permission of instructor required for undergraduates. S-U grades only.
Sem, 1 hour each week to be arranged. Staff.
A seminar with critical presentation and discussion by students of original research papers concerning the molecular biology of plants. Staff direction varies each year and is announced a semester in advance.

749 Graduate Research in Botany
Fall or spring. Variable credit. May be repeated for credit. S-U grades optional.
Hours to be arranged. Staff.
Similar to Biological Sciences 499 but intended for graduate students who are working with faculty members on an individual basis.

840 Current Topics in Plant Physiology
Fall or spring. 2 credits. May be repeated for credit. S-U grades only.
Sem to be arranged. Staff.
Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

ECOLOGY, SYSTEMATICS, AND EVOLUTION

261 Ecology and the Environment (formerly Principles of Ecology)
Fall and summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional.
Lecs, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. T. E. Dawson, R. B. Root.
An introduction to principles of ecology concerning the interactions between organisms and their environment. The course deals with both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual population, community, and ecosystem levels of organization are discussed. These principles are extensively applied to current environmental problems and issues.

263 Field Ecology
Fall. 2 credits. Prerequisite: concurrent or previous enrollment in Biological Sciences 261. Limited to 16 students.
Lec, R 1:25; lab, F 12:20–5. One weekend field trip to the Hudson Valley. R. B. Root.
Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, sampling plankton, and use of scientific collections.

[272 Functional Ecology: How Animals Work
Spring. 4 credits. Prerequisite: one year of introductory biology for majors. Offered alternate years. Not offered 1990–91.
Lecs, M W F 9:05; lab, T or R 1:25–4:25. Evening prelims. F. H. Pough.
An introductory course for students interested in organismal biology. The features of the physical environment that are important to insects and vertebrates are used to illustrate the interaction of physiological, behavioral, and morphological characteristics in organismal activity and homeostasis. Laboratories include a survey of the diversity of endothermal and ectothermal animals, ecophysiological measurements, and measurements of important environmental parameters in local habitats. This course uses live and preserved vertebrate animals for field observations and laboratory exercises.]

274 Functional and Comparative Morphology of Vertebrates
Spring. 4 credits. Prerequisite: one year of introductory biology. Offered alternate years.
Lecs, T R 12:20; labs, T R 1:25–4:25. D. K. McClearn.
An exploration of the relations between form and function in biological systems with an emphasis on trends in vertebrate evolution. Lectures integrate data from topics such as locomotion, feeding, size and scaling with issues of historical importance and current interest (e.g., correlation of body parts, adaptationist explanations, developmental constraints, criteria for determining biomechanical and energetic "efficiency"). Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations (motion analysis, surface electrode, and force-plate recordings).

275 Human Biology and Evolution (also Anthropology 275)
Fall. 3 or 4 credits (4 credits with discussion). S-U grades optional, with permission of either instructor.
Lecs, M W F 10:10; optional disc to be arranged. K. A. R. Kennedy, J. D. Haas.
An introduction to the biology of *Homo sapiens* through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology. These topics and others are the focus of the optional one-hour weekly discussions.

[371 Human Paleontology (also Anthropology 371)
Fall. 4 credits. Prerequisite: one year of introductory biology or Anthropology 101 or permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, M W F 2:30; lab, 1 hour each week to be arranged; occasional field trips. K. A. R. Kennedy.
A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.]

373 The Invertebrates: Form, Function, and Evolution
Fall. 4 credits. Limited to 30 students. Prerequisite: one year of introductory biology for majors. Offered alternate years.
Lecs, M W F 10:10; lab, W 1:25–4:25; one optional weekend field trip to Shoals Marine Laboratory. Small fee for the field trip. C. D. Harvell.
An introduction to the evolution of form and function among the major invertebrate phyla. Strong emphasis is placed on the integration of evolutionary pasts and ecological presents to produce extant forms. Lectures draw heavily on original literature from the field of invertebrate functional morphology. Laboratory dissections and demonstrations often involve live marine and freshwater invertebrates.

378 Evolutionary Biology
Spring. 4 credits. Prerequisite: one year of introductory biology or permission of instructor. S-U grades optional.
Lecs, M W F 10:10; disc, 1 hour each week to be arranged. Evening prelims Feb. 26 and Apr. 9. R. G. Harrison, M. A. Geber.
The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction.

[455 Insect Ecology (also Entomology 455)
Fall. 3 credits. Prerequisites: Biological Sciences 261 and Entomology 212 or their equivalents. Offered alternate years. Not offered 1990–91.
Lecs, W F 11:15; disc, 1 hour each week to be arranged. R. B. Root.
Ecological and evolutionary principles are integrated by thorough examination of outstanding investigations. Topics include the factors responsible for the great diversity of insects, adaptive syndromes associated with climate, natural history of arthropod guilds, impact of insects on terrestrial vegetation, population regulation, and the contrast between natural and managed ecosystems.]

457 Limnology, Lectures
Fall. 3 credits. Prerequisite: Biological Sciences 261 or written permission of instructor. Recommended: introductory chemistry.
Lecs M W F 11:15. N. G. Hairston, Jr.
The study of continental waters, with emphasis on lakes and ponds. Factors regulating nutrients, population and community dynamics of freshwater organisms, and physical and chemical properties of fresh water are considered.

459 Limnology, Laboratory
Fall. 2 credits. Prerequisite: concurrent or previous enrollment in Biological Sciences 457.
Lab, T W or R 1:25–4:25; 1 weekend field trip. N. G. Hairston, Jr. and staff.
Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Vertebrate dissection (fish) during one laboratory exercise and during a portion of weekend field trip.

[461 Population and Evolutionary Ecology
Fall. 4 credits. Prerequisite: Biological Sciences 261 or 378. S-U grades optional. Offered alternate years. Not offered 1990–91; next offered fall 1991.
Lecs, M W F 9:05; lab, M 1:25–4:25. D. W. Winkler and S. A. Levin.
Problems of ecology are viewed from an evolutionary perspective, exploring issues of adaptation and fitness definition by developing advanced understanding of demography and interspecific interactions. Blending theory and empirical findings, the course explores population dynamics; life-history theory; dispersal; competition; predation; parasite-host coevolution; mutualisms; and sexual, kin, and group selection. Methods of estimation and analysis are learned in laboratory.]

[462 Marine Ecology
Spring. 3 credits. Prerequisite: Biological Sciences 261. Offered alternate years. Not offered 1990–91.
Lecs and disc, M W F 10:10. C. D. Harvell and R. W. Howarth.
Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology.]

463 Plant Ecology, Lectures
Fall. 3 credits. Prerequisites: two advanced-level courses in biology, including Biological Sciences 261, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in Biological Sciences 465.
Lecs, M W F 11:15. P. L. Marks.
Principles of plant-environment and plant-plant interactions in relation to the evolution, distribution, structure, and functioning of plants and plant communities.

[464 Microevolution and Macroevolution (also Entomology 464)
Spring. 4 credits. Limited to 25 students. Prerequisite: Biological Sciences 378 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, T R 10:10–11:30; disc, one hour each week to be arranged. A. R. McCune and S. Via.
An advanced course in evolutionary biology integrating macroevolutionary and microevolutionary approaches. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction in populations and higher taxa, the origins and fate of variation, and causes of major evolutionary transitions. Discussion of these problems involve data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.]

465 Plant Ecology, Laboratory
Fall. 1 credit. Prerequisite: concurrent enrollment in Biological Sciences 463.
Lab, F 12:05–5. P. L. Marks.
Laboratory and field exercises designed to give firsthand experience with the ecology of plants. Emphasis is on making observations and measurements of plants in the field.

470 Ecological Genetics (also Entomology 470)
Spring. 4 credits. Prerequisite: Biological Sciences 378 or permission of instructor. S-U grades optional. Offered alternate years.
Lecs, T R 10:10–11:30; disc, one hour each week to be arranged. S. Via.
A study of the relationships between genetic and ecological processes in populations. Topics include consequences of genetic variation in age-structured populations; demographic concepts of fitness; evaluation of methods for measuring genetic variation and natural selection on ecologically important traits; genetics of competitive ability and predator avoidance; genetic and ecological aspects of phenotypic plasticity; character displacement; maintenance of genetic variability; limits to selection. How theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations is considered and experiments designed to test such hypotheses are evaluated.

[471 Mammalogy
Fall. 4 credits. Recommended: Biological Sciences 274. S-U grades optional, with permission of instructor. Offered alternate years. Fee, $15. Not offered 1990–91.
Lecs, M W F 9:05; lab, M or T 1:25–4:25; 1 weekend field trip required. D. K. McClearn.
Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.]

472 Herpetology
Spring. 4 credits. Recommended: Biological Sciences 274. S-U grades optional, with permission of instructor. Offered alternate years. Fee, $10.
Lecs and labs, T R 12:20–4:25; occasional field trips and special projects. F. H. Pough.
Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory includes systematics, functional morphology, and behavior. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.

473 Ecology of Agricultural Systems (also Soil, Crop, and Atmospheric 473)
Fall. 3 credits. Limited to 45 students. Prerequisite: Biological Sciences 261 or permission of instructor. S-U grades optional. Offered alternate years.
Lec and disc, T R 2:30–3:45. During the first 6 weeks of class the Thursday meetings may run to 5:00 because of field trips. A. G. Power, T. W. Scott.
Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

474 Laboratory and Field Methods in Human Biology (also Anthropology 474)
Spring. 5 credits. Prerequisite: one year of introductory biology or Anthropology 101 or permission of instructor. Offered alternate years.
Lecs and labs, T R 10:10–12:05; additional hours to be arranged. Independent research project required. K. A. R. Kennedy.
Practical exercises and demonstrations of modern approaches to the methodology of physical anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal and living subjects, paleopathology, skeletal maturation, and relevant field techniques for the archaeologist and forensic anthropologist. This course includes dissection of a profused nonhuman primate.

475 Ornithology
Fall. 4 credits. Recommended: Biological Sciences 274. S-U grades optional, with permission of instructor. Limited to 30 students. Offered alternate years. Fee, $15.
Lecs and labs, T R 12:20–4:25; occasional field trips and special projects. D. W. Winkler.
Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

476 Biology of Fishes
Fall. 4 credits. Recommended: Biological Sciences 272 or 274 or equivalent experience in vertebrate zoology. S-U grades optional, with permission of instructor. Offered alternate years.
Lecs, M W F 9: 05; lab, M 1:25–4:25. A. R. McCune.
An introduction to the study of fishes: their structure, evolution, distribution ecology, physiology, behavior, classification, and identification, with emphasis on local species. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

478 Ecosystem Biology
Spring. 4 credits. Prerequisite: Biological Sciences 261 or equivalent. S-U grades optional. Offered alternate years.
Lecs and disc, T R 10:10–12:05. R. W. Howarth.
Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Discussion of the interactions between ecosystem processes and community structure.

[479 Paleobiology (also Geological Sciences 479)
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either Biological Sciences 272 or 274, Geological Sciences 375, Biological Sciences 373, or permission of instructor. Offered alternate years. Not offered 1990–91; next offered 1991–92.
Lecs, M W F 12:20. J. L. Cisne and staff.
A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.]

660 Field Studies in Ecology and Systematics
Spring. Variable credit. Prerequisites: Biological Sciences 261, a taxon-oriented course, and permission of instructor. Estimated cost of room and board (exclusive of transportation) to be announced.
Lecs and labs to be arranged. Staff.
This course provides students an opportunity to learn techniques and a new biota by participating in an intensive series of field exercises. An extended field trip is scheduled during either intersession or spring break. The region visited, trip objectives, and other details are announced by the instructor in charge in the division's catalog supplement issued at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

661 Environmental Policy (also ALS 661 and Biology and Society 461)
Fall and spring. 3 credits each term. (Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor.
Sem, R 2:30–4:30. D. Pimentel.
This course uses an interdisciplinary approach to focus on complex environmental and energy problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*.

662 Mathematical Ecology (also Statistics and Biometry 662)
Spring. 3 credits. Prerequisites: one year of calculus and a course in statistics. Recommended: a general ecology course. S-U grades optional, with permission of instructor. Offered alternate years.
Lecs, M W F 12:20. S. A. Levin, C. Castillo-Chavez.
Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis. Deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, simulation, and analytical techniques.

[664 Seminar in Insect-Plant Interactions (also Entomology 664)
Spring. 2 credits. Intended for seniors and graduate students. Limited to 15 students. Prerequisites: courses in entomology, ecology, evolution, and organic chemistry and written permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91. Sem, 1 evening each week to be arranged. P. P. Feeny.
Presentations and discussions by students on the evolution of patterns of interaction between plants and insects, emphasizing critical evaluation of concepts and evidence.]

665 Limnology Seminar
Spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Offered alternate years.
Sem to be arranged. N. G. Hairston, Jr.
A seminar course on advanced topics in freshwater ecology.

[668 Comparative Biogeochemistry
Fall. 4 credits. Prerequisites: solid background in ecology, environmental chemistry, or related environmental science. Permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1990–91. Next offered fall 1992, spring 1994, and alternate spring semesters thereafter.
Lecs and disc, T R 10:10–12:05.
R. W. Howarth.
Lectures cover the biotic controls on the chemistry of the environment. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems, with slight emphasis on aquatic ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes.]

669 Plant Ecology Seminar
Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional.
Sem to be arranged. Staff.
Includes review of current literature, student research, and selected topics of interest to participants.

670 Graduate Seminar in Vertebrate Biology
Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only.
Sem to be arranged. Staff.
Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

673 Human Evolution: Concepts, History, and Theory (also Anthropology 673)
Fall. 3 credits. Prerequisite: one year of introductory biology, Anthropology 101, or permission of instructor. Offered alternate years.
Sem, W 7:30–9:30 p.m.; additional hours to be arranged. K. A. R. Kennedy.
The historical background of present-day concepts of man's evolutionary variations and adaptations in space and time is surveyed. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.

[674 Principles of Systematics (also Entomology 674)
Spring. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. Recommended: an introductory biological systematics course. Offered alternate years. Not offered 1990–91.
Lecs, discs, and labs, M W 1:25–4:25.
Q. D. Wheeler and staff.
An introduction to modern theory and methods of systematic biology. Lectures are on theoretical systematics and include species concepts, classification, phylogenetics, and biogeography. Laboratories include modern methods of analysis of data, including cladistic hand and computer methods and numerical methods. Laboratory grade is based in part on a final paper.]

760 Special Topics in Evolution and Ecology
Fall or spring. 1–3 credits. May be repeated for credit. Enrollment limited. S-U grades optional, with permission of instructor.
Hours to be arranged. Staff.
Independent or group intensive study of special topics of current interest. Content varies and is arranged between student and staff member.

[765 Autecology/Population Ecology
Fall. 4 credits. Prerequisite: Biological Sciences 261 or equivalent. S-U grades optional. Not offered 1990–91.
Lecs and discs, T R 10:10–12:05. Staff.
Comparison of the responses and adaptations of organisms to environments in selected ecosystems. Emphasis on similarities and differences in molecular and organismal mechanisms by which plants and animals cope with their environments. Critical examination of the properties and dynamics of populations. Emphasis on theories of adaptation, population structures, dynamics, and regulation.]

[766 Communities and Ecosystems
Spring. 4 credits. Prerequisite: Biological Sciences 261 or equivalent. S-U grades optional. Not offered 1990–91.
Lecs, T R 10:10–12:05. Staff.
Structure, dynamics, and evolution of natural communities; species diversity; niches and gradient relations; and succession, climax, and disturbance. Comparative aspects of terrestrial, marine, and freshwater communities. Analysis of ecosystems in terms of energy flow, biogeochemistry, and model systems. Emphasis on functional and structural properties of communities and ecosystems.]

767 Current Topics in Ecology and Evolutionary Biology
Fall. 4 credits. Prerequisites: Biological Sciences 261 and 378 or their equivalents. S-U grades optional.
Lecs and discs, T R 10:10–12:05. Staff.
Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

Veterinary Parasitology (Veterinary Medicine 510)

GENETICS AND DEVELOPMENT

281 Genetics
Fall, spring, or summer. 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. Students who have taken Biological Sciences 282 may register only with written permission of instructor. No admittance after first week of classes.

Lecs, T R 10:10–12:05; lab, M T W or R 2:30–4:25; additional hours to be arranged. Labs may also be scheduled T or R 8–9:55, W or F 10:10–12:05, F 2:30–4:25, or S 10:10–12:05 if enrollment requires it. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. T. D. Fox, M. L. Goldberg, R. J. MacIntyre.

A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genetic aspects of differentiation, genes in populations, breeding systems, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in *Drosophila.*

282 Human Genetics
Spring. 2 or 3 credits (2 credits if taken after Biological Sciences 281). Each discussion limited to 25 students. Prerequisite: one year of introductory biology or equivalent; written permission of instructor required for students who have taken Biological Sciences 281. S-U grades optional.

Lecs, M W 10:10 (lecs, also F 10:10 1st 3 weeks only); disc, R 10:10 or F 10:10 or 11:15. R. A. Calvo.

A course designed primarily for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

385 Developmental Biology
Fall. 3 credits. Prerequisite: Biological Sciences 281.

Lecs, M W F 11:15. K. J. Kemphues.

An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

[389 Embryology
Spring. 4 credits. Prerequisites: one year of introductory biology and a knowledge of mammalian adult anatomy. Limited to seniors. Not offered 1990–91.

Lecs, T R 10:10; labs, T R 2–4:25. A. W. Blackler.

A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue level. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy. Preserved materials are used in the laboratory.]

480 Seminar in Developmental Biology
Spring. 1 credit. May be repeated for credit. Limited to upperclass students. S-U grades only.

Sem to be arranged. Staff.

481 Population Genetics
Fall. 4 credits. Prerequisite: Biological Sciences 281 or equivalent.

Lecs, M W F 10:10; disc, M 2:30 or T 1:25. C. F. Aquadro.

A study of factors that influence the genetic structure of Mendelian populations and that are involved in race formation and speciation. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. The interplay between theory and the data from experiments and natural populations are emphasized.

482 Human Genetics and Society
Fall. 3 credits. Prerequisites: Biological Sciences 281 and 330 or 331. Enrollment limited to senior biological sciences majors, with preference given to students studying genetics and development. S-U grades optional.

Disc, T 2:30–4:25; additional 1 hour each week to be arranged. R. A. Calvo, H. T. Stinson.

Presentation of the technology and discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics that may be considered are new reproductive strategies, wrongful life and wrongful birth, eugenics, genetic counseling, genetic screening (prenatal, neonatal, presymptomatic, carrier, and workplace), genetic effects of abused substances, sociobiology, and gene therapy. Students lead most discussions. There is a major writing component in the course.

483 Molecular Aspects of Development
Spring. 3 credits. Prerequisites: Biological Sciences 281, 330 or 331, and 385. Offered alternate years.

Lecs, T R 10:10–11:45. W. H. Mark.

An examination of the molecular biology of developing systems, with emphasis on the genomic, transcriptional, post-transcriptional, translational, and post-translational mechanisms involved in regulating development. Both prokaryotic and eukaryotic systems are considered, but emphasis is on the latter. Topics to be discussed include changes in chromatin structure, DNA rearrangements, control of RNA synthesis and processing, translational controls, nucleo-cytoplasmic interactions, and genetic responses to hormone treatment. The regulation of selected developmental systems is considered in detail.

[484 Molecular Evolution
Spring. 3 credits. Prerequisites: Biological Sciences 281 and organic chemistry. Offered alternate years. Not offered 1990–91.

Lecs, T R 11:15. R. J. MacIntyre.

An analysis of evolutionary changes in proteins and nucleic acids, and gene-enzyme variability in natural populations. Theories on the evolution of the genetic code and the construction of phylogenetic trees from biochemical data are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes.]

485 Microbial Genetics, Lectures
Fall. 2 credits. Limited to upperclass and graduate students. Prerequisites: Biological Sciences 281 and Microbiology 290, or written permission of instructor. S-U grades optional.

Lec, W 7:30–9:25 p.m. S. A. Zahler.

Genetics of bacteria and their viruses, with emphasis on the mechanisms of genetic phenomena. The first half of the course deals with the biosynthesis of proteins, RNA, and DNA by bacteria; how bacteria control those syntheses; the mechanisms of DNA repair and recombination; and types of mutations that occur. The second half of the course deals with more specific questions: transformation in various bacteria; plasmids and their roles in mating, genetic engineering, antibiotic resistance, and pathogenicity; and the molecular biology of selected bacteriophages (mainly T4, T7, M13, ΦX174, MS2, lambda, and Mu).

487 Microbial Genetics, Laboratory
Fall. 3 credits. Primarily for upperclass students. Limited to 16 students. Prerequisites: concurrent or previous enrollment in Biological Sciences 485, Microbiology 291 or equivalent, and written permission of instructor.

Lab, T 1:25–4:25; additional hours to be arranged. S. A. Zahler.

Problem solving in bacterial genetics.

[683 Molecular Developmental Genetics
Spring. 2 credits. Prerequisites: Biological Sciences 281, 330 or 331, and 385. Not offered 1990–91.

Lecs, T R 10:10–11. K. J. Kemphues and M. F. Wolfner.

An in-depth study of recent literature on the genetic and molecular bases of developmental events. Topics include specification of segmentation in *Drosophila* and in vertebrates, the molecular and genetic events encompassing gametogenesis, fertilization and early development, and sex determination.]

684 Advanced Topics in Population Genetics (formerly Biological Sciences 689)
Spring. 2 credits. Limited to 20 students. Prerequisites: Biological Sciences 481 or equivalent and written permission of instructor. S-U grades optional. Offered alternate years.

Lec, T 2:30–4:25. C. F. Aquadro.

An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

[686 Mammalian Development
Spring. 2 credits. Limited to 25 students. Prerequisites: Biological Sciences 281, 330 or 331, and 385 or their equivalents. S-U grades optional. Offered alternate years. Not offered 1990–91.

Lecs, W F 11:15. W. H. Mark.

An in-depth study of mammalian development using the mouse as the animal model. The course covers classical embryology beginning with gametogenesis followed by morphogenetic and biochemical anayses of pre- and post-implantation development. Current topics in experimental embryology, including genetic analysis of mutants, study of cell lineage with chimeras, *in vitro* culturing of embryonic stem cells, and molecular approaches to understanding development are examined.]

[687 Developmental Genetics
Fall. 2 credits. Limited to 20 students. Prerequisites: Biological Sciences 281 or equivalent, Biological Sciences 385 or equivalent. S-U grades optional. Offered alternate years. Not offered 1990–91.

Lec, M 7:30–9:30 p.m. K. J. Kemphues.
Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in *Drosophila*, *Caenorhabditis*, and Mouse. Other possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are given the opportunity to discuss each topic in class.]

[688 Yeast Genetics
Spring. 2 credits. Prerequisites: Biological Sciences 281, 330 or 331, and 485, or written permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.

Lecs, W 7:30–9:25 p.m. T. D. Fox.
An advanced overview of genetic studies in yeast, primarily *Saccharomyces cerevisiae*. Both formal genetic and molecular approaches to selected problems of biological interest are discussed.]

780 Current Topics in Genetics
Fall and spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics; written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor.

Sem to be arranged. Staff.
A seminar course with critical presentation and discussion by students of original research papers in a particular area of current interest. Content of the course and staff direction vary each year and are announced a semester in advance.

781 Problems in Genetics and Development
Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics.

Disc to be arranged. Staff.
An introduction to the research literature in selected areas through weekly problem sets and discussions.

782–787 Current Genetics/Development Topics
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only.

Lectures and seminars on specialized topics to be announced.

NEUROBIOLOGY AND BEHAVIOR

221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3 or 4 credits (4 credits with discussion and written projects). 4–credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisite: one year of introductory biology for majors. May be taken independently of Biological Sciences 222. S-U grades optional.

Lecs, M W F 12:20; disc to be arranged. Evening prelims Oct. 2 and Oct. 30. S. T. Emlen and staff.
A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, neuroethology, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.

222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits (4 credits with discussion and written projects). 4–credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: one year of introductory biology for majors and one year of chemistry. May be taken independently of Biological Sciences 221. S-U grades optional.

Lecs, M W F 12:20; disc to be arranged. O. P. Hamill and staff.
A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory.

[322 Hormones and Behavior (also Psychology 322)
Spring. 3 credits. Limited to juniors and seniors; open to sophomores only by permission. Prerequisites: one year of introductory biology plus a course in psychology or Biological Sciences 221 or 222. S-U grades optional. Not offered 1990–91.

Lecs, T R 10:10–11:30; disc to be arranged. E. Adkins Regan, R. E. Johnston.
The relationship between endocrine and neuroendocrine systems and the behavior of animals, including humans. Major emphasis is on sexual, parental, and aggressive behavior.]

324 Biopsychology Laboratory (also Psychology 324)
Fall. 4 credits. Limited to 24 upperclass students. Prerequisites: laboratory experience in biology or psychology, Biological Sciences 221 and 222 or Psychology 123 and 222; and permission of instructor. S-U grades optional.

Labs, T R 1:25–4:25. T. DeVoogd.
Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

[326 The Visual System
Spring. 4 credits. Prerequisites: Biological Sciences 222 or 311, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.

Lecs, M W F 10:10; disc, 1 hour each week to be arranged. H. C. Howland.
The visual systems of vertebrates and invertebrates are discussed in breadth and depth. Topics covered include the optics of eyes, retinal neurophysiology, and structure and function of higher visual centers.]

[396 Introduction to Sensory Systems (also Psychology 396)
Spring. 3 or 4 credits (4 credits with discussion and term paper). No auditors. Prerequisites: an introductory course in biology or biopsychology, and a second course in neurobiology or behavior or perception or cognition or biopsychology; students are expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. Permission of instructor required for 4–credit option. Offered alternate years. Not offered 1990–91.

Lecs, M W F 9:05. B. P. Halpern.
This course employs the Socratic method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties that represent adaptations of animals to particular habitats or environments. The principles and limitations of major methods used to examine sensory systems are considered. General principles of sensory systems and auditory, visual, and somesthetic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, and thermoreception) is selected for special attention. At the level of *An Introduction to the Physiology of Hearing*, by J. O. Pickles; *Photoreceptors: Their Role in Vision*, by A. Fein and E. Z. Szuts; *Comparative Studies of Hearing in Vertebrates*, edited by A. N. Popper and R. R. Ray; and "Information Processing in Cutaneous Mechanoreceptors," Federation Proceedings 42:1983.]

420 Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional.

To be arranged. Staff.
Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. Topics, instructors, and time of organizational meetings are listed in the division's catalog supplement issued at the beginning of the semester.

[422 Computer Interfacing for Neurobiologists (formerly Biological Sciences 628)
Spring. 3 credits. Limited to 20 students. Prerequisites: Biological Sciences 222 and 426, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
Lecs, T R 9:05; lab, 4 hours each week to be arranged. D. W. McBride.
Lectures and laboratories deal with interfacing a computer with an experiment and doing data acquisition and computer control of the experiment. Topics include introduction to digital electronics, data acquisition and monitoring of an experiment (A/D conversions and digital input), some data analysis and decision making, computer control of an experiment (D/A conversions and digital output), communication (RS-232 and IEEE), assembler language programming, sampling theory and Fourier analysis, feedback control using computers, optimizing data through-put, and storage to disk. A Mac II computer is used in this course.]

[424 Neuroethology
Fall. 3 credits. Prerequisites: Biological Sciences 221 and 222. S-U grades optional for graduate students only. Offered alternate years. Not offered 1990–91.
Lecs, M W 11:15; disc, F 11:15.
C. D. Hopkins.
The integrated study of neurobiology and animal behavior. Representative topics include acoustic communication in insects and amphibians, vocal mechanisms and plasticity of bird song, mammalian hearing, bat echolocation, prey detection by owls, electroproduction and electroreception in fish, neurophysiology and behavior of pheromone communication, neurobehavior of vision in anurans, mammalian visual processing, command neurons and decision networks, locomotion and motor-pattern generation, escape behavior in invertebrates, and neural correlates of learning. Assigned readings include original articles in the scientific literature. A term paper on the neural basis of animal behavior is required.]

426 Electronics for Neurobiology
Spring. 3 credits. Limited to 20 students. Prerequisites: Biological Sciences 222 and one year of introductory physics. Offered alternate years.
Lecs, T R 9:05; lab, 4 hours each week to be arranged. D. W. McBride.
Electronics as applied to electrophysiological instrumentation, data acquisition, and analysis. Topics include a review of basic electrical concepts, the cell as a circuit, design of amplifiers and pulse generators for biological use, and computer interfacing to an experiment.

427 Animal Social Behavior
Fall. 3 credits. Limited to 30 students. Prerequisites: Biological Sciences 221 and 261 and permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years.
Lecs and discs, M W 2:30–4:25.
P. W. Sherman.
An intensive course for upper-division students interested in the adaptive bases of social behavior. Lectures, discussions, and student presentations examine topics including spacing systems, mating systems, sexual selection, mate choice, conflict and cooperation in animal societies, and the evolution of deceit, honesty, and altruism.

[428 Mechanisms of Insect Behavior: Field and Laboratory Studies
Spring. 3 credits. Limited to 15 students. Prerequisite: Biological Sciences 221. S-U grades optional, with permission of instructor. Not offered 1990–91.
Lecs and discs, T R 2:30–4:20.
T. D. Seeley.
A course intended for upper-division students. An in-depth review of studies performed with whole animals and designed to elucidate the mechanisms underlying their behaviors. Topics to be covered include sensory physiology, biological clocks, hormonal controls, learning and memory orientation to skymarks and landmarks, communication, foraging, kin recognition, and thermoregulation. Assigned readings include original articles in the scientific literature. The laboratories provide first-hand experience with the social behavior of honeybees.]

[429 Olfaction and Taste: Structure and Function (also Psychology 429)
Fall. 3 or 4 credits (4 credits with term paper on research project, which can, but need not, study nonhuman vertebrates). Prerequisite: a 300–level course in biopsychology or equivalent. Preference given to junior and senior psychology and biology majors and graduate students. S-U grades optional for graduate students only. Offered alternate years. Not offered 1990–91.
Lecs, T R 9:05. B. P. Halpern.
The structural and functional characteristics of olfaction and taste are explored by reading and discussing current literature in these areas. Structure is examined at the light- and electron-microscope levels, as well as at the molecular level. The neurophysiological and biochemical aspects of function are considered. The emphasis of the course is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms.]

491 Principles of Neurophysiology
Fall. 4 credits. Limited to 20 students. Prerequisite: Biological Sciences 222 or written permission of instructor. S-U grades optional.
Lecs, M W 10:10; lab, M or W 12:20–4:25; additional hours to be arranged.
B. R. Johnson.
A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology. Lecture time is used to present laboratory exercise results, to supplement laboratory topics, and to encourage discussion of primary research papers. Laboratory topics include electrical modeling of neurons; intracellular and extracellular recording, and analysis of neuronal properties such as nerve conduction velocities, resting potentials, electrical synaptic transmission; voltage-clamp analysis of ionic currents; and neuronal architecture. A variety of preparations, both invertebrate and vertebrate, are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.

492 Sensory Function (also Psychology 492)
Spring. 4 credits. Prerequisite: Biological Sciences 222 or 311 or an upper-level course in biopsychology, or permission of instructor. S-U grades optional. Offered alternate years.
Lecs, M W F 10:10; disc, 1 hour each week to be arranged. H. C. Howland, B. P. Halpern.
Classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics, including sensory coding, location of stimulus sources in space, and the development of sensory systems. Both human and nonhuman systems are discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information are treated and the processing of this information is followed into the central nervous system. At the level of *The Senses*, edited by Barlow and Mollon, and *An Introduction to the Physiology of Hearing*, by Pickles.

493 Developmental Neurobiology
Fall. 3 credits. Prerequisite: Biological Sciences 222 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years.
Lecs, M W F 9:05. R. Booker.
Lectures covering the development of the nervous system taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, How do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development are discussed. Readings are taken from original journal articles.

[494 Comparative Vertebrate Neuroanatomy
Spring. 3 credits. Intended for juniors, seniors, and graduate students. Prerequisite: Biological Sciences 222 or equivalent. S-U grades optional. Offered alternate years. Not offered 1990–91.
Lecs, T R 10:10–11:30. A. H. Bass.
Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into two major sections: principles of brain organization and vertebrate brain evolution.]

495 Membrane Ion Channels
Fall. 3 credits. Limited to 15 students. Prerequisites: Biological Sciences 222, college introductory physics, and calculus, or permission of instructor. S-U grades optional. Offered alternate years.
Lecs, M W F 10:10. O. P. Hamill.
The functional and mechanistic aspects of membrane ion channels, beginning with basic concepts and model systems. Theories of ion permeation and channel gating are discussed. Development of membrane ion channels during neuron differentiation and the role of membrane channels in disease states are also considered.

497 Neurochemistry and Molecular Neurobiology
Fall. 3 credits. Limited to 30 students. Prerequisites: Biological Sciences 222 and either 330 or 331, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
Lecs, T R 9:05; disc, T 10:10.
R. M. Harris-Warrick.
This course focuses primarily on synaptic neurochemistry. The presynaptic regulation of release and postsynaptic mechanism of action of the major classes of neurotransmitters are discussed, as well as selected neuromodulators and hormones. Second-messenger mechanisms are stressed. Readings are primarily from journal articles.]

[623 Chemical Communication (also Chemistry 622)
Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: one year of introductory biology for majors or equivalent, course work in biochemistry, and Chemistry 358 or equivalent. Offered alternate years. Not offered 1990–91.
Lecs, M W F 1:25. T. Eisner, J. Meinwald, W. L. Roelofs, and guest speakers.
The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles.]

626 Sex Differences in Brain and Behavior (also Psychology 524)
Spring. 2 credits. Limited to 12 students. Prerequisite: Biological Sciences 322 or permission of instructor.
Disc and sem, M W 3:35–5:30.
T. DeVoogd.
A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

720 Seminar in Advanced Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional.
Sem to be arranged. Staff and students.
Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior.

721 Graduate Survey of Behavior
Fall. 1 credit. Limited to graduate students. Concurrent registration in Biological Sciences 221 is not required. S-U grades optional.
Sem to be arranged. S. T. Emlen and staff.
A survey course involving readings of the original literature in behavior. A weekly seminar, primarily in the form of student-led discussions, is held to discuss readings linked to the material presented in Biological Sciences 221.

722 Graduate Survey of Neurobiology
Spring. 1 credit. Limited to graduate students. Concurrent registration in Biological Sciences 222 is not required. S-U grades optional.
Sem to be arranged. O. P. Hamill and staff.
A survey course involving readings of the original literature in neurobiology. A weekly seminar, primarily in the form of student-led discussions, is held to discuss readings linked to the material presented in Biological Sciences 222.

723 Advanced Topics in Animal Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional.
Sem to be arranged. Staff.
A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

724 Field Methods in Animal Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional.
Sem and fieldwork to be arranged. Staff.
A seminar-field experience course designed for first-year graduate students in animal behavior. Weekly seminars discussing field methodology, data collection, and hypothesis testing are followed by an intensive period (ten days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

790 Advanced Topics in Cellular and Molecular Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Limited to graduate students and advanced undergraduates studying neurobiology and behavior. Prerequisite: Biological Sciences 222. S-U grades optional.
Lecs and sem to be arranged. Staff.
A lecture-seminar course on selected topics in cellular and molecular neurobiology. Students read original papers in the scientific literature and lead discussions of these articles. Suggestions for topics may be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

792 Advanced Laboratory in Cellular and Molecular Neurobiology
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students. Prerequisites: Biological Sciences 330 or 331 or equivalent, 491 or equivalent, and written permission of instructor. S-U grades optional.
Lab to be arranged. Staff.
A two-week intensive laboratory course designed to provide experience with a specific technique currently used in cellular and molecular neurobiology. The technique under study and instructor in charge vary from semester to semester and are listed in the division's catalog supplement issued at the beginning of the semester.

793 Advanced Topics in Integrative Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional.
Lecs and discs to be arranged. Staff.
A course designed to provide in-depth knowledge of current research in anatomical and physiological bases of vertebrate and invertebrate behavior. Readings are primarily from specialty books and selected journal articles. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

794 Advanced Laboratory Techniques in Integrative Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Prerequisite: permission of instructor based upon a personal interview.
Lab to be arranged. Staff.
A laboratory in the integrative, or neuroethological, approach to studies of animal behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

SHOALS MARINE LABORATORY

John B. Heiser, director
G14 Stimson Hall, 255-3717

Seventy-two percent of the earth's surface is covered by the sea; knowledge of the sea is of paramount importance in understanding global environmental phenomena and change. The objective of the Shoals Marine laboratory (SML) is to provide undergraduates, beginning graduate students, and other interested adults a unique opportunity opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML oustanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the laboratory's 47-foot research vessel, *John M. Kingsbury*. Field experience is an integral component of all courses, using Appledore's extensive intertidal zone, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only based on their academic excellence, but also based on their teaching ability in the field. In addition, numerous guest lecturers include engineers, coastal planners, lobstermen, fishermen, and specialists from private industry, government, and the academic community.

Although there is no concentration (program in study) in marine sciences offered to Cornell undergraduates, there is extensive opportunity at the undergraduate level to prepare for more advanced study.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association.

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

204 Biological Illustration
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, supplies, and ferry transportation), $675.

Daily sessions for 1 week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

306 Marine Microbial Ecology
Summer. 4 credits. Prerequisites: one year of introductory college biology and chemistry. Recommended: an introductory course in microbiology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,175.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

Designed to provide a strong practical and theoretical understanding of the ecology, physiology, and systematics of marine microbes from diverse marine ecosystems. Intertidal zone, salt marsh, coastal water, open ocean, and hydrothermal vent communities are covered. Particular cellular arrangements, metabolic pathways, and biogeochemical cycles are covered in detail, as are general principles concerning microbial ecology and evolution.

309 Coastal Ecology and Bioclimates
Summer. 4 credits. Prerequisite: one year of college level biology; background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,175.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. In-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

329 Ecology of Animal Behavior
Summer. 4 credits. Prerequisite: one year of introductory college biology. Recommended: course work in ecology, evolution, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N. H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,175.

Daily lecs and fieldwork for 2 weeks. SML faculty.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

363 Marine Biology for Teachers
Summer. 3 credits. Primarily for teachers, grades 6 through 12, but open to others. Prerequisite: one year of introductory college biology. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $895.

Daily lecs, labs, and fieldwork for 10 days. SML faculty.

Designed to give an overview of living marine organisms (algae, invertebrates, fishes, marine mammals, and shorebirds) and of the environment they inhabit. Fieldwork is emphasized. Occasional lectures and films deal with additional topics such as coastal-zone problems, marine fisheries, economics of marine organisms, and educational resources of the marine environment. The core faculty of marine biologists is augmented by specialists in science and environmental education.

364 Field Marine Science
Summer. 6 credits. Prerequisite: one year of college biology or other supporting subject. S-U grades optional. A special 4-week course offered twice each summer at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,995.

Daily lecs, labs, and fieldwork for 4 weeks. 3 core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies, and commercial fishermen. SML faculty.

Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included.

365 Underwater Research
Summer. 4 credits. Prerequisites: one year of college-level biology or other supporting subject, recognized scuba certification, and a medical examination. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,275.

Daily lecs and fieldwork for 2 weeks. Team-taught by a diving-safety officer, two faculty members, and guest lecturers.

For competent divers only. Covers special problems of underwater research, including random sampling, use of dive tables, underwater instrumentation, special diving equipment, photographic techniques, integration with boat and shore facilities, and emergency procedures. Students are required to conduct a transect study on both soft and hard substrates.

366–370 SEA Semester
In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory office offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. *This sequence is repeated approximately once every two months throughout the year.* Students spend the first half of SEA Semester (the six-week shore component) in Woods Hole, Massachusetts, receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (the six-week sea component) is spent at sea aboard R/V *Westward* or the R/V *Corwith Cramer.* Enrollment is open to men and women judged capable of benefiting from SEA Semester; no specific prior training or study is required. Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, consult the Shoals Marine Laboratory office, G14 Stimson Hall, or call SEA directly at 1-800-552-3633. Program costs are to be paid in place of regular Cornell tuition and fees: tuition for entire 17-credit SEA Semester, about $6,700; room and board for sea component (six weeks) only, about $1,875.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

Shore Component (six weeks)

366 SEA Introduction to Oceanography
3 credits. Prerequisites: a laboratory course in physical or biological science and concurrent enrollment in Biological Sciences 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

367 SEA Introduction to Maritime Studies
3 credits. Prerequisite: concurrent enrollment in Biological Sciences 366 and 368.
An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

368 SEA Introduction to Nautical Science
3 credits. Prerequisites: college algebra or equivalent, and concurrent enrollment in Biological Sciences 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial, and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

Sea Component (six weeks)
Courses 369 and 370 take place aboard the R/V *Westward,* a 125-foot steel auxiliary-powered staysail schooner built in 1961, or the R/V *Corwith Cramer,* a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of thirty-four. The professional staff of nine includes the captain, the chief scientist, two science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to twenty-five students round out the complement.

369 SEA Practical Oceanography I
4 credits. Prerequisite: Biological Sciences 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

370 SEA Practical Oceanography II
4 credits. Prerequisite: Biological Sciences 368. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

372 An Introduction to the Ecology and Chemistry of Rock-Pool Environments
Summer. 2 credits. Prerequisite: an introductory biology, chemistry, or marine science course at the college level or permission of instructor. S-U grades optional. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $650.

Daily lecs, labs, and fieldwork for 1 week. SML faculty.

A fundamental field-oriented introduction to the interrelationships of the chemistry and biology of both rock- and tide-pool ecosystems, using the numerous pools on Appledore Island as natural laboratories.

409 Ciliophorology
2 credits. Prerequisite: permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $550.

Daily lecs and labs for 1 week. SML faculty.

A special course that examines ciliophoran biology in depth through lectures and laboratory exercises. Topics include a detailed look at the ciliate faunules found in such diverse habitats as saltmarshes, sandy sediment interstitial spaces, the Gulf Stream and the Sargasso Sea, marine caves, and benthic hydrothermal vents. Laboratory focuses on examining silver stained specimens, and covers staining techniques, as well as back scattered and secondary SEM and TEM methodologies.

413 Adaptations of Marine Organisms
Summer. 6 credits. Prerequisite: Biological Sciences 364 or a course in physiological ecology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,595.

Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; acclimation and tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and *in vivo* functional analyses of metabolic phenomena.

449 Marine Botany: Ecology of Marine Plants
Summer. 4 credits. Prerequisite: Biological Sciences 364 or general familiarity with marine algae. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,175.
Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.
An overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

466 Ecology and Chemistry of Rock-Pool Environments
Summer. 6 credits. Prerequisites: one year of introductory college chemistry and an introductory ecology course at the college level. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,595.
Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.
A field-oriented course emphasizing the interrelationships of the chemistry and biology of both rock- and tide-pool ecosystems, using the numerous pools on the island as natural laboratories. Laboratory work includes organism identification; chemical analyses of pools for nutrients, pH, alkalinity, dissolved carbon dioxide and oxygen, salinity, plant pigments, and primary production; and determinations of lethal temperature, salinity, and oxygen level for different species and populations. Lectures and class research projects cover the effects of pool morphology and algal growth on pool temperature, chemistry, and stratification; salinity changes caused by evaporation, rainfall, and seawater splash; dissolved oxygen and pH changes associated with primary production; nutrient dynamics relative to rainfall, flow through, primary production, microbial activities, and proximity to nesting birds; primary production differences among pool types; and predation experiments with fish implantation. Food web and energy models for different rock-pool ecosystems are presented. The use of microcomputers for interpretation of data is emphasized.

467 Chemical Oceanography of Coastal Waters
Summer. 6 credits. Prerequisites: one year of introductory college chemistry and an introductory marine science course at the college level. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,595.
Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.
A field-oriented course in the chemical oceanography of coastal waters. Lectures, frequent field trips, and laboratory sampling and analysis; includes tests of salinity, temperature, pH, chlorophyll, alkalinity, total CO_2, nutrients, organic material, and suspended materials in coastal waters, with some work on the analysis of coastal sediments.

468 Marine Plankton Ecology
Summer. 4 credits. Limited to 20 students. Prerequisites: one year of introductory college biology and Biological Sciences 364 or equivalent, or a course in invertebrate zoology or introductory oceanography. S-U grades optional. A special course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,175.
Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.
An introduction to the biology of plankton and their ecological role in representative marine environments, including estuaries, coastal areas, open ocean gyres, and polar seas. Includes an overview of morphology, life histories, and nutrition of planktonic bacteria, protozoans, algae, and metazoans (coelenterates, crustaceans, ctenophores, chaetognaths, and tunicates). The role of these groups in different ecosystems is related to the hydrography of the area, as well as the life cycles and trophic interactions of the dominant species. During several one-day cruises in the Gulf of Maine and Great Bay Estuary students use simple field techniques to address current research problems.

477 Marine Vertebrates
Summer. 6 credits. Prerequisite: Biological Sciences 364 or 274 or a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,595.
Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.
Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine, elasmobranch physiology, interpretation of life history and parameters from otolith microstructure, teleost skeletomuscular structure and function, population biology and the contemporary Gulf of Maine fishery, Mesozoic marine reptiles, the biology of sea turtles in cold water, coloniality in sea birds, avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

488 Reproduction and Development of Marine Invertebrates
Summer. 6 credits. Prerequisite: Biological Sciences 364 or a course in invertebrate zoology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,595.
Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.
A laboratory-oriented course emphasizing processes of fertilization and early development through the metamorphosis of larvae in species selected from an extensive variety of local marine invertebrates. Practical experience includes collecting specimens intertidally and from the plankton, culturing embryos through metamorphosis, camera lucida and photomicrographic recording of embryonic development, and design and execution of basic experiments on eggs and embryos. Lectures complement laboratory work through phylogenetic examination of classical invertebrate embryology and modern experimental developmental biology.

Archaeology of Maritime Communities (Archaeology 300: Individual Study in Archaeology)
Summer. 2 credits. Prerequisite: Archaeology 319 or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $650.
Daily lecs, labs, and fieldwork for 1 week. SML faculty.
Fieldwork on various land sites and their adjacent offshore marine environments. Artifact analysis, preliminary conservation, and the proper recording of finds are emphasized. Methods of archaeological research, including the use of archives and historical materials, and publication methodologies as well as the larger questions in the discipline are discussed.

Coastal and Oceanic Law and Policy (Natural Resources 306)
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $650.
Daily lecs and discs for 1 week. SML faculty.
Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

Marine Pollution (Agricultural Engineering 420)
Summer. 4 credits. Prerequisite: Biological Sciences 364 or permission of instructor. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,175.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

Dispersion modeling and the effects of pollutants (including oil, outfalls, solid wastes, sludge and dredge spoils, and radioactive wastes) are discussed from the perspectives of elementary physical oceanography and biological processes. Laboratories include basic methods for targeting and tracing wastewater; organic carbon determinations; and practical field projects.

Marine and Coastal Geology (Geological Sciences 213)
Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $650.

Daily lecs, labs, and fieldwork for 1-week. SML faculty.

With "the New England coast" defined as beginning at the -200 meter isobath and proceeding westward, this course examines specific geological events and processes important in shaping the area's bedrock and surficial sediments. Petrology, geophysics, and the Pleistocene geology of the region are investigated. Consideration of the geologic history of New England within the plate tectonic model is emphasized. Examination of insular geology is used to integrate micro-, meso-, and macroscale geological evolution of continental margins in general. Marine geology is approached through basic geophysical exploration and bottom-sediment collection followed by data analysis and interpretation. Experience aboard a coastal research vessel is an integral part of the course.

Marine Resources: Economic Modeling of Use and Regulation (Agricultural Economics 252)
Summer. 2 credits. Prerequisite: an introductory course in economics or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $650.

Daily lecs and discs for 1 week. SML faculty.

Resource economics in general is concerned with the optimal allocations through time of renewable and nonrenewable resources. This course examines fisheries management, offshore oil and gas recovery, and ocean-minerals mining. Models of optimal resource use are developed and used to assess both the behavior of those harvesting marine resources and the adequacy of current governmental policy. An integral part of the course is the special opportunity to observe and interview those professionally involved in harvesting marine resources in the Gulf of Maine.

Archaeology Underwater (Archaeology 319)
Summer. 2 credits. Prerequisites: recognized scuba certification and a medical examination required for students engaging in underwater research. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $750.

Daily lecs, labs, and fieldwork for 1 week. SML faculty.

An introduction to the subject and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for actual on-site experience in search, site recognition, survey, and recording. The course also covers the history and development of the subject, the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but are not divers or sufficiently experienced in scuba.

Wetland Resources (Natural Resources 417)
Summer. 2 credits. Prerequisite: one year of college biology. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $650.

Daily lecs, labs, and fieldwork for 1 week. SML faculty.

An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

COURSES IN BIOPHYSICS

Biophysics is an interdisciplinary undergraduate and graduate program. A special program for undergraduate students interested in biophysics is offered as an independent concentration (program of study) in the biological sciences major (see option 8 under "Concentration Areas and Requirements" and option 10 under "Programs of Study"). Information on this independent option is available in the Office for Academic Affairs, 200 Stimson Hall. Graduate study and research in biophysics are available through general Graduate Fields. Students interested in graduate work in biophysics should inquire at the Program in Biophysics Office, 210 Clark Hall.

The following courses are available for students interested in biophysics:

Biomechanical Systems—Analysis and Design (Mechanical and Aerospace Engineering 565)

Chemistry of Nucleic Acids (Chemistry 677)

Computer Interfacing for Neurobiologists (Biological Sciences 422)

Electron Microscopy for Biologists (Biological Sciences 401, 403, 405, 606, 608)

Electronics for Neurobiologists (Biological Sciences 426)

Enzyme Catalysis and Regulation (Chemistry 672)

Membrane Biophysics (Applied and Engineering Physics 615)

Membranes and Bioenergetics (Biological Sciences 632)

Membrane Ion Channels (Biological Sciences 495)

Neurochemistry (Biological Sciences 497)

Neuroethology (Biological Sciences 424)

Photosynthesis (Biological Sciences 445)

Physical Chemistry of Proteins (Chemistry 686)

Principles of Neurophysiology (Biological Sciences 491)

Protein Structure and Function (Biological Sciences 631)

Special Topics in Biophysical and Bioorganic Chemistry (Chemistry 782)

Transport of Solutes and Water in Plants (Biological Sciences 649)

FACULTY ROSTER

New York State College of Agriculture and Life Sciences

Adler, Kraig K., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior

Bates, David M., Ph.D., U. of California at Los Angeles. Prof., Bailey Hortorium

Beyenbach, Klaus W., Ph.D., Washington State U. Prof., Physiology/Veterinary Physiology†

Bruns, Peter J., Ph.D., U. of Illinois. Prof., Genetics and Development

Calvo, Joseph M., Ph.D., Washington State U. William T. Keeton Professor in Biological Sciences; Biochemistry, Molecular and Cell Biology

Crepet, William L., Ph.D., Yale U. Prof., Bailey Hortorium

Davies, Peter J., Ph.D., U. of Reading (England). Prof., Plant Biology

Davis, Jerrold I., Ph.D., U. of Washington. Asst. Prof., Bailey Hortorium

Doyle, Jeffrey J., Ph.D., Indiana U. Asst. Prof., Bailey Hortorium

Eisner, Thomas, Ph.D., Harvard U. Jacob Gould Schurman Professor, Neurobiology and Behavior

Emlen, Stephen T., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior

Feeny, Paul P., Ph.D., Oxford U. (England). Prof., Ecology and Systematics/Entomology*

Fox, Thomas D., Ph.D., Harvard U. Assoc. Prof., Genetics and Development

Gibson, Jane, Ph.D., U. of London (England). Prof., Biochemistry, Molecular and Cell Biology

Goldberg, Michael L., Ph.D., Stanford U. Assoc. Prof., Genetics and Development

Hanson, Maureen R., Ph.D., Harvard U. Assoc. Prof., Genetics and Development

Harrison, Richard G., Ph.D., Cornell U. Assoc. Prof., Ecology and Systematics
Harris-Warrick, Ronald M., Ph.D., Stanford U. Assoc. Prof., Neurobiology and Behavior
Harvell, C. Drew, Ph.D., U. of Washington. Asst. Prof., Ecology and Systematics
Hopkins, Carl D., Ph.D., Rockefeller U. Prof., Neurobiology and Behavior
Jagendorf, Andre T., Ph.D., Yale U. Liberty Hyde Bailey Professor of Plant Physiology, Plant Biology*
Keller, Elizabeth B., Ph.D., Cornell U. Prof., Biochemistry, Molecular and Cell Biology
Kemphues, Kenneth J., Ph.D., Indiana U. Asst. Prof., Genetics and Development
Lis, John T., Ph.D., Brandeis U. Assoc. Prof., Biochemistry, Molecular and Cell Biology
Loew, Ellis R., Ph.D., U. of California at Los Angeles. Assoc. Prof., Physiology/Veterinary Physiology†
Luckow, Melissa A., Ph.D., U. of Texas at Austin. Asst. Prof., Bailey Hortorium
McCarty, Richard E., Ph.D., Johns Hopkins U. Prof., Biochemistry, Molecular and Cell Biology
McCune, Amy R., Ph.D., Yale U. Assoc. Prof., Ecology and Systematics
MacIntyre, Ross J., Ph.D., Johns Hopkins U. Prof., Genetics and Development*
Marks, Peter L., Ph.D., Yale U. Prof., Ecology and Systematics
Moffat, J. Keith, Ph.D., Cambridge U. (England). Prof., Biochemistry, Molecular and Cell Biology
Nasrallah, June B., Ph.D., Cornell U. Asst. Prof., Plant Biology
Niklas, Karl J., Ph.D., U. of Illinois. Prof., Plant Biology/Bailey Hortorium
Nixon, Kevin C., Ph.D., U. of Texas at Austin. Asst. Prof., Bailey Hortorium
Owens,Thomas G.,Ph.D., Cornell U. Asst. Prof., Plant Biology
Paolillo, Dominick J., Jr., Ph.D., U. of California at Davis. Prof., Plant Biology
Parthasarathy, Mandayam V., Ph.D., Cornell U. Prof., Plant Biology
Pough, F. Harvey, Ph.D., U. of California at Los Angeles. Prof., Ecology and Systematics/Physiology
Quaroni, Andrea, Ph.D., U. of Pavia (Italy). Asst. Prof., Physiology
Roberts, Jeffrey W., Ph.D., Harvard U. Prof., Biochemistry, Molecular and Cell Biology*
Root, Richard B., Ph.D., U. of California at Berkeley. Prof., Ecology and Systematics/Entomology
Shalloway, David I., Ph.D., Massachusetts Inst. of Technology. Prof., Biochemistry, Molecular and Cell Biology
Spanswick, Roger M., Ph.D., U. of Edinburgh (Scotland). Prof., Plant Biology
Tye, Bik-Kwoon, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biochemistry, Molecular and Cell Biology
Vogt, Volker M., Ph.D., Harvard U. Assoc. Prof., Biochemistry, Molecular and Cell Biology
Walcott, Charles, Ph.D., Cornell U. Prof., Neurobiology and Behavior/Laboratory of Ornithology
Wayne, Randy O., Ph.D., U. of Massachusetts. Asst. Prof., Plant Biology
Winkler, David W., Ph.D., U. of California at Berkeley. Asst. Prof., Ecology and Systematics

FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Computing equipment, for example, is available through centers administered by the university and by the College of Engineering, as well as in laboratories run by schools, departments, or programs. The university facilities include personal computers for student use, terminals connected to the mainframe, computer-graphics equipment, and a supercomputer. The College of Engineering operates, in addition to several computing centers for student use, the Computer-Aided Design Instructional Facility, which provides advanced computer-graphics equipment used in course work throughout the college.

Cornell programs and centers of special interest in engineering include the following:

Center for Applied Mathematics. A cross-disciplinary center that administers a graduate program.

Center for Environmental Research. A sponsor of interdisciplinary programs that are currently in the areas of environmental law and policy, ecosystem research, remote sensing, water resources, the global environment, biological resources, waste management, and solid-waste combustion.

Center for Radiophysics and Space Research. An interdisciplinary unit that facilitates research in astronomy and the space sciences.

Center for Theory and Simulation in Science and Engineering. A national supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Cornell High Energy Synchrotron Source. A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring.

Cornell Manufacturing Engineering and Productivity Program. A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.

Cornell Program in Power Systems Engineering. A research and instructional program centered in a laboratory that has a complete real-time model of an electric power system.

Cornell Waste Management Institute. A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.

Institute for the Study of the Continents. An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.

Laboratory of Plasma Studies. A center for interdisciplinary research in plasma physics and lasers.

Materials Science Center. An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated equipment.

Mathematical Sciences Institute. An interdisciplinary program in applications of mathematics funded by the U.S. Army.

National Astronomy and Ionosphere Center. The world's largest radio-radar telescope facility, operated by Cornell in Puerto Rico.

National Earthquake Engineering Research Center. A facility recently established by the National Science Foundation at a group of universities in New York State.

National Nanofabrication Facility. A center that provides equipment and services for research in the science, engineering, and technology of structures (including electronic components) with dimensions as small as the nanometer range.

Program of Computer Graphics. An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.

Program on Science, Technology, and Society. A cross-disciplinary unit that sponsors courses and promotes research.

SRC Center for the Program on Microscience and Technology. A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.

Statistics Center. Coordinates a university-wide program in statistics and probability.

Ward Laboratory of Nuclear Engineering. Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.

Programs sponsored by College of Engineering units include several for industrial affiliates. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer structures.

DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and the special announcement *Graduate Study in Engineering and Applied Science.* The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY

Bachelor of Science (B.S.) degrees are offered in the following areas:*

Agricultural engineering†

Chemical engineering

Civil engineering

College program

Computer science

Electrical engineering

Engineering physics

Geological sciences

Materials science and engineering

Mechanical engineering

Operations research and engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the Common Curriculum Governing Board (CCGB) through the

associate dean for undergraduate programs and the Office of Advising. Subsequently most students enter *field* programs, which are described separately for each academic area. Alternatively students may enter the *College Program* (described below), which permits them to pursue a course of study adapted to individual interests.

Students interested in bioengineering may arrange a suitable curriculum within one of the field programs or through the College Program. Information about these options is available in the Office of Advising, 167 Olin Hall.

*Agricultural engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

†To major in agricultural engineering students generally enroll in the College of Agriculture and Life Sciences for the first, second, and fourth years, and jointly in that college and the College of Engineering for the third year.

Requirements for Graduation

To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. The Common Curriculum is composed of courses in eight categories.

Course Category	*Credits*
1) Mathematics	16
2) Physics	12
3) Chemistry	4
4) Freshman writing seminar	6
5) Computer programming	4
6) Engineering distribution (4 courses)	12
7) Humanities and social sciences (6 courses)	18
8) Electives:	
Approved electives	9
Free electives	6
Technical electives	6

One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirement.

Credits for courses in the field program vary between 36 and 48, depending on which program is chosen. Because of this variation the credits needed for graduation range between 129 and 141. Two terms of physical education must be taken in the freshman year to satisfy a university requirement.

Mathematics

The normal program in mathematics includes Mathematics 191,192, 293, and 294. Students who have little or no acquaintance with calculus take Mathematics 191.

Physics

The normal program in physics includes Physics 112 or 116, 213 or 217, and 214 or 218. Students in the Field Programs in Civil Engineering or Operations Research and Industrial Engineering may substitute Chemistry 208 for Physics 214 upon approval of a petition to the field.

Chemistry

Chemistry 207 or 211 is required for all students. Chemistry 207 is normally taken in the first freshman semester; 211 may be taken either in the fall or spring of the freshman year.

Chemistry 211 is a course designed for students who do not intend any further study in chemistry. Therefore students who intend to take more chemistry should register for Chemistry 207 in the fall of their freshman year.

In general, students in the following departments and schools should take Chemistry 211: electrical engineering, operations research and industrial engineering, computer science, mechanical and aerospace engineering, applied and engineering physics (applied and engineering physics students should discuss this option with the field consultant), and civil engineering (not students in environmental engineering). Students in environmental engineering, materials science and engineering, geology and chemical engineering must take Chemistry 207 in the fall of their freshman year.

All students considering a health-related career, for example in medicine, should take Chemistry 207 in their first term.

Freshman Writing Seminars

Each semester of their freshman year, students choose a freshman writing seminar from among more than seventy courses offered by over twenty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

Computing

In either the first or second term of their freshman year, students take Engr 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 475, CS 212, Engr 211, Engr 222, Engr 241, Engr 264, EE 423, M&AE 389, M&AE 489, M&AE 575, and M&AE 670. The recommended choice for students intending to enter the Field Program in Engineering Physics is Engr 264; in Chemical Engineering, Engr 222 or 241; in Computer Science, Engr 211 or CS 212; in Electrical Engineering, Engr 211; in Civil Engineering, Engr 241; in Mechanical Engineering, M&AE 389, M&AE 489, M&AE 575, or M&AE 670; and in Operations Research and Engineering, Engr 211.

Engineering Distribution

Four engineering distribution courses (12 credits) are required. These courses must be selected from four of the eight areas listed below. A student may use only one of the possible substitutions described.

1) *Scientific computing*
   Engr 211, Computers and Programming
   Engr 222, Introduction to Scientific Computing
   Engr 241, Engineering Computation

Students in the Field Program in Computer Science may substitute CS 212 for Engr 211 (also CS 211).

2) *Materials science*
   Engr 261, Introduction to Mechanical Properties of Materials
   Engr 262, Introduction to Electrical Properties of Materials

3) *Mechanics*
   Engr 202, Mechanics of Solids
   Engr 203, Dynamics

Students in the Field Program in Engineering Physics may substitute A&EP 333 for Engr 203.

4) *Probability and statistics*
   Engr 260, Introduction to Engineering Probability
   Engr 270, Basic Engineering Probability and Statistics

Students in the Field Program in Electrical Engineering may substitute EE 310 for Engr 260. Students in the Field Program in Engineering Physics may substitute EE 310 or Mathematics 471 for Engr 260. Students in the Field Programs in Civil Engineering and Agricultural Engineering may substitute CEE 304 for Engr 270.

5) *Electrical sciences*
   Engr 210, Introduction to Electrical Systems
   Engr 264, Computerized-Instrumentation Design

6) *Thermodynamics and energy balances*
   Engr 219, Mass and Energy Balances
   Engr 221, Thermodynamics

Students in the Field Program in Electrical Engineering may substitute EE 480 for Engr 221.

7) *Earth and life sciences*
   Engr 201, Introduction to the Physics and Chemistry of the Earth

8) *Introduction to engineering*

Several courses are offered to introduce freshmen to the various fields of engineering. Some of these courses, which begin with Engr 110, may not be included in this announcement. A full listing will be available in the Course and Room Roster at the time of registration.

Humanities and Social Sciences

The six required courses in the humanities and social sciences (totaling at least 18 credits) must be chosen from approved courses in three categories: (a) humanities or history, (b) social sciences, and (c) expressive or language arts.

Restrictions:* At least three courses and a minimum of 9 credits must be chosen from category (a), and no more than 4 credits may be chosen from category (c). One-credit courses are acceptable only in category (c). Furthermore, in satisfying the humanities and social sciences requirement, the courses selected must provide both breadth and depth, and not be limited to a selection of unrelated introductory courses. This means inclusion of: at least two courses from the same field, one of which is the explicit prerequisite for the other; **or** two related courses in the same field, at least one of which is numbered 300 or above (e.g., one of the history department prerequisites—History 151, 152, 190 or 191—together with a 300-level history course.)

*These restrictions apply to those students matriculating in fall of 1989 or later. Others should refer to earlier editions of this catalog.

a) Humanities or History

This category includes all courses (except English 285) designated by the College of Arts and Sciences as humanities and history (see Distribution Requirement section, group 2b and group 3a; disregard the phrase "Any two") as well as the following:

College of Agriculture and Life Sciences: Education 472, 473

College of Architecture, Art, and Planning: any course in architectural history except freshman seminars

College of Arts and Sciences: Economics 315, 326; History of Art, all courses numbered 200 and above; Music, all courses listed as introductory (except 120), music theory, and music history; Theatre Arts, only history, literature, and theory courses (performance courses are not acceptable)

College of Engineering: Engineering 250, 292

School of Industrial and Labor Relations: 100, 101, 140, 304, 305, 381, 382, 384, 406, 430, 502

b) Social Sciences

This category includes all courses designated by the College of Arts and Sciences as social sciences (see Distribution Requirement section, group 2a; disregard the phrase "Any two") as well as the following:

College of Agriculture and Life Sciences: Agricultural Economics 150, 252, 332; Communication 116, 120, 314, 416; Education 271, 317, 378; Natural Resources 201, 407; Rural Sociology, all courses

College of Architecture, Art, and Planning: Architecture 342; City and Regional Planning 400, 404, 413, 414

College of Arts and Sciences: Economics, all courses except 105, 315, 317, 318, 319, 320, 326

College of Engineering: Engineering 321, 322, 360, 400

College of Human Ecology: Consumer Economics and Housing 110, 111, 148, 247, 310, 355, 356, 430; Design and Environmental Analysis 250; Human Development and Family Study, all courses except 242, 243; Human Service Studies, all courses

School of Industrial and Labor Relations: All courses except: courses listed under category a); all courses in Economic and Social Statistics; Personnel and Human Resource Management 266; Interdepartmental Course 452

c) Expressive or Language Arts

This category includes all courses defined by the College of Arts and Sciences as expressive arts (see Distribution Requirement, group 3b) as well as the following:

College of Agriculture and Life Sciences: Communication, all courses; Floriculture, any course in freehand drawing and scientific illustration

College of Architecture, Art, and Planning: Art, all courses

College of Arts and Sciences: all nonliterature language courses and all music and theater arts courses that emphasize performance, acting, producing, or directing

College of Human Ecology: Design and Environmental Analysis 101, 111, 115

College of Engineering: Engineering 301, 350

School of Industrial and Labor Relations: Interdepartmental Course 452

Electives

There are three kinds of electives: approved, free, and technical. Approved electives must be an appropriate part of an overall educational plan or objective.* This constraint allows flexibility for individual goals while maintaining a coordinated, nontrivial program. A free elective may be any course in the university,† although all course selections must be approved by the student's faculty adviser. Technical electives are generally taken in the junior and senior years. They are usually upper-level courses in engineering, mathematics, or the physical sciences, but they also may be courses in other areas as designated by the student's field program.

Approved electives can help develop the skills of a broadly educated engineer, so students should give serious thought to their educational objectives and not propose approved-elective courses haphazardly. Advisers generally accept as approved electives: one introduction to engineering course, engineering distribution courses, courses stressing oral or written communication, upper-level engineering courses, advanced courses in mathematics, and rigorous courses in the biological and physical sciences. Courses in business, economics, and language are often approved by advisers when they serve a student's educational and academic objectives. In other cases, the student's interests are better served by approved electives that expand the field program or other parts of the curriculum, including the humanities and social sciences requirement.

*No ROTC courses may be used as approved electives unless they are colisted by an academic department.

†Except supplementary courses and ROTC courses at the 100 and 200 level not colisted by an academic department. Up to 6 credits of ROTC courses at the 300 level or above may be used as free electives.

Additional ROTC courses not colisted by an academic department may not be used to meet graduation requirements.

Social Issues of Technology

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, approved electives, and free electives, students are urged to consider courses listed within the "Science, Technology, and Society" undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

Office of Advising

From the time that students enter the college as freshmen until they become affiliated with a major field or the College Program, they are under the administration of the Office of Advising, which implements the academic policies of the Common Curriculum Governing Board. The office also offers general advising and counseling services, publishes a college newsletter, and provides support for all students in the college. The Office of Minority Programs provides additional specialized services.

To remain in good standing, students in the College of Engineering must affiliate with a field by the end of their sophomore year, but some fields permit (and encourage) affiliation at the *beginning* of the sophomore year. Transfer students from outside Cornell automatically affiliate with a field of study on matriculation.

Engineering courses taken at the freshman and sophomore levels are listed under "Engineering Common Courses." Additional engineering courses of general interest are also listed in this section.

Following is a typical curriculum for freshmen who have not received advanced placement in mathematics. Many variations are possible, depending on the individual student's background, advanced placement credit, and career goals. Those receiving advanced placement for first term calculus may take Physics 112 in term one. Students with an interest in bioengineering may take biology in terms one and two as approved electives. Students preparing to study medicine should take one year of biology and Chemistry 208 in the first year.

Term 1	*Credits*
Math 191, Calculus for Engineers	4
Chem 207 or Chem 211,* General Chemistry	4
Engr 100, Introduction to Computer Programming	4
Introduction to Engineering, a humanities or social science course, or an approved elective	3
Freshman writing seminar	3

*Chem 211 may be postponed until term 2

Term 2	*Credits*
Math 192, Calculus for Engineers	4
Phys 112, Mechanics and Heat	4
Two electives	6 to 8
Freshman writing seminar	3

Field Program

The specific program for each field is described in the following pages. Students with a grade-point average of at least 2.0 who are making normal progress toward their degree must affiliate with a field program by the end of their sophomore year. Students who intend to enter the Field Program in Chemical Engineering should take Chemistry 208 and Chemistry 287–289 as approved electives in terms two and three, and Chemistry 288–290 as a field course in term four. Students intending to major in mechanical engineering must take Engr 203, and students in agricultural engineering must take Engr 221 as a field course in term three or four. Students intending to major in computer science must take CS280 as a field course in term three or four. Mechanical engineering students should also complete Engr 221 in their sophomore year. Students who intend to enter the Field Program in Electrical Engineering must earn grades of at least C in Math 293 and 294, at least C in Physics 213 and 214, and at least C+ in Engr 210.

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

Chemical Engineering: Engr 219

Civil Engineering: Engr 202

Computer Science: Engr 211 (or CS 212)

Electrical Engineering: Engr 210

Materials Science and Engineering: Engr 261

Mechanical Engineering: Engr 202

Operations Research and Engineering: Engr 260

College Program

Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives cannot be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work.

Students apply to enter the College Program early in the second term of the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere. Generally, students applying to the College Program should have a 3.0 cumulative grade point average.

Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and an educationally related minor. The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected nonengineering area. The combinations must clearly form an engineering education in scope and in substance and should include engineering design and synthesis as well as engineering sciences. In addition to 42 credits in the major and minor subjects, including at least 21 credits in engineering courses, each program includes the normally required courses in humanities and social sciences and free electives.

Further information about the College Program may be obtained from the associate dean for undergraduate programs, 223 Carpenter Hall, or from a counselor in the Office of Advising, 167 Olin Hall.

Dual Degree Option

A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and a Bachelor of Arts degrees can be earned in about five years. Students registered in the College of Engineering or the College of Arts and Sciences may apply and, after acceptance of their application, begin the dual program in their second or third year. Those interested should contact the associate dean for undergraduate programs in 223 Carpenter Hall or see a counselor in the Office of Advising, 167 Olin Hall.

Double Major in Engineering

Another program that is attractive to many students is the double major. This option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years. Students affiliate with one field in the normal way and then petition to enter a second field before the end of their junior year. All the requirements of both fields must be satisfied. Further information is available from the Office of Advising, 167 Olin Hall, and the individual field consultant offices.

Engineering Communications Program

The Engineering Communications Program offers instruction in written, oral, and visual presentation. Engineering Communications 350, a three-credit seminar course, is for students who desire intensive work in these areas. Examples from real-life engineering contexts are analyzed and specific assignments are often framed as professional case studies. Students learn to address audiences having different levels of technical expertise and to investigate the social and ethical implications of written and oral communication. A second course, Engineering 301, is offered only in conjunction with particular writing-intensive engineering courses. This one-credit class prepares students for the writing assignments in those courses.

In addition to classroom teaching, the Communications Program consults with faculty in engineering who wish to stress writing in their courses; maintains a writing-resource library; advises the staff of the *Cornell Engineer*; and arranges discussions of communications with students and alumni.

Engineering Cooperative Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

Sophomores in the upper half of their class are eligible to apply for the co-op program. (Students in computer science and agricultural engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of cooperating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Cooperative Program office, 105 Hollister Hall.

MASTER OF ENGINEERING DEGREE PROGRAMS

One-year Master of Engineering (M.Eng.) programs are offered in thirteen fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. The M.Eng. degrees and the academic fields under which they are described are listed below.

M.Eng.(Aerospace): Mechanical and aerospace engineering

M.Eng.(Agricultural): Agricultural engineering

M.Eng.(Chemical): Chemical engineering

M.Eng.(Civil): Civil and environmental engineering

M.Eng.(Computer Science): Computer sciences

M.Eng.(Electrical): Electrical engineering

M.Eng.(Engineering Physics): Applied and engineering physics

M.Eng.(Geology): Geological sciences

M.Eng.(Materials): Materials science and engineering

M.Eng.(Mechanical): Mechanical and aerospace engineering

M.Eng.(Mechanics): Theoretical and Applied Mechanics

M.Eng.(Nuclear): Nuclear science and engineering

M.Eng.(OR&IE): Operations research and industrial engineering

Candidates for a professional master's degree who wish to specialize in areas related to manufacturing may avail themselves of two special programs. The manufacturing systems engineering option may be centered in any one of the fields listed above. The microelectronics manufacturing option is offered in the fields of electrical engineering, engineering physics, materials science and engineering, and chemical engineering. Both specializations are attested to by a Dean's Certificate in addition to a diploma at the time of graduation. An industrial internship program provides opportunities to combine on-campus education with off-campus industrial experience.

An M.Eng. option of potential interest to engineers from all fields is the program in engineering management, offered by the School of Civil and Environmental Engineering. This option is described in the section related to the M.Eng.(Civil) degree. A new management option in the M.Eng.(Chemical) degree program is also available.

Cornell engineering graduates in the upper half of their class will generally be admitted to M.Eng. programs; however, requirements for admission vary by field. Superior Cornell applicants who will be, at the time of matriculation, eight or fewer credits short of a baccalaureate degree may petition for early admission. Other applicants must have a baccalaureate degree or its equivalent from a college or university of recognized standing, in

an area of engineering or science that is judged appropriate for the proposed field of study. They must also present evidence of undergraduate preparation equivalent to that provided by a Cornell undergraduate engineering education, a transcript, two letters of recommendation, and a statement of academic purpose. A candidate who is admitted with an undergraduate background that is judged inadequate must make up any deficiencies in addition to fulfilling the regular course requirements for the degree. Applicants from foreign universities must submit the results of the Graduate Record Examination aptitude tests and must have an adequate command of the English language. Financial aid providing partial support is available for very highly qualified candidates, primarily those who are residents of the U.S. Industry-sponsored internships, which extend the program to two years, are also available to residents of the United States. Beginning in the fall of 1990, selected courses that satisfy M.Eng. degree requirements in operations research and industrial engineering, computer science, and electrical engineering will be available in the Continuing Education Program. Application forms and further information are available from the Master of Engineering Office, 113 Hollister Hall, or from the M.Eng. chair, 248 Carpenter Hall.

Cooperative Programs with the Johnson Graduate School of Management

Two programs culminate in both Master of Engineering and Master of Business Administration degrees. One, which students enter during their undergraduate career, makes it possible to earn the B.S., M.Eng., and M.B.A. in six years—one year less than such a program would normally require. The other program, which is available to students who already hold baccalaureate degrees from Cornell or other institutions, requires five semesters and leads to both the M.Eng. and M.B.A.

Undergraduate students interested in the six-year program should seek advice and information from the department with whose field they intend to affiliate during their upperclass years. Information about admission to either program and about special scholarship aid may be obtained from the Master of Engineering Office, 113 Hollister Hall.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students may qualify for AP credit in one of two ways:

1) by receiving sufficiently high scores on advanced placement examinations given and scored by the College Entrance Examination Board (CEEB); or

2) by receiving sufficiently high scores on Cornell's departmental placement examinations, which are given during orientation week before fall-term classes begin. Advanced placement is granted only to first-term freshmen, and the placement examinations are scored before the students begin classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways.

1) They may enroll in a more advanced course in the same subject right away.

2) They may substitute an elective course from a different area.

3) They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

A detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet *Advanced Placement and Transfer Credit for First-Year Engineering Students*, which may be obtained at the Office of Advising, 167 Olin Hall.

Transfer Credit

Entering freshmen and entering transfer students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell.

College courses completed under the auspices of cooperative college and high school programs may be considered for advanced standing as follows. Credit for such courses is not granted unless students demonstrate academic proficiency by taking the appropriate CEEB or Cornell departmental placement examination, as described above.

After matriculation no more than 9 credits of transfer or Cornell extramural credit may be used to satisfy bachelor's degree requirements. Summer session courses at Cornell are the only exception to this rule.

A more detailed description of the college's regulations governing transfer credit may be found in the *Engineering Student Handbook*, available from the Office of Advising, 167 Olin Hall.

Academic Standing

The requirements for good standing in the college vary slightly among the different divisions. First-term freshmen must have a grade point average of 1.7 or higher with no failing, unsatisfactory, or *incomplete* grades and must be making adequate progress toward the four-year degree. Second-term freshman and sophomore requirements are the same, except that the grade-point average must be at least 2.0. Upperclass requirements for good standing and for satisfactory performance in courses that are prerequisite for field courses vary slightly for different fields of study, as specified in the following sections or the *Engineering Student Handbook*.

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor, which are determined by the dean of the college, are a term average of 3.25 or higher with no failing, unsatisfactory, or *incomplete* grades (even in physical education) and 12 credits or more of **letter grades**. Students may earn Dean's List status retroactively if they meet these criteria after making up incompletes according to college rules.

Standard of Performance for Mathematics

Every student must attain a grade of at least C– in Mathematics 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

S-U Grades

The option of receiving a grade of "satisfactory" or "unsatisfactory" (S-U) in a particular course, rather than a grade on a graduated scale, may be selected only in the following circumstances. Students who want to take a course on an S-U basis must have completed at least one full semester of study at Cornell, and they may take only one course per semester on an S-U basis. Only courses in the humanities and social sciences, approved electives, and free electives may be taken as S-U courses. Students may preregister for the S-U option. To change a grading option, a properly completed and approved add/drop form must be filed with the registrar of the College of Engineering by the end of the first three weeks of the semester. After this deadline, the grading option *may not be changed under any circumstances* and no courses may be added with the S-U option selected.

The S-U policy does not apply to courses in physical education and other courses that are not taken to fulfill degree requirements. When a particular course is offered **only** on an S-U basis, a student may petition to take a second S-U course in the same term.

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are voluntarily not enrolled at Cornell as full-time students may take individual courses through the Extramural Division. Students who have been asked to take time off are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 9 credits earned through study in the Extramural Division or acquired as transfer credit (or a combination thereof) may be used to satisfy the requirements for the bachelor's degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Such students must register for study in absentia and pay a fee. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be planned in consultation with Professor Richard Lance, 219 Kimball Hall,

or with the staff of the Office of Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

Students who have completed at least one semester at Cornell and wish to transfer into the College of Engineering can make application to the Office of Engineering Admissions—application forms are available in 167 Olin Hall. Students who would enter the college as second-semester sophomores or upperclassmen must be accepted by a field program as part of the admission process. Others may be accepted into the college without the requirement of field affiliation.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, and physics that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in the Office of Engineering Advising, 167 Olin Hall.

Leave of Absence and Withdrawal

Students may interrupt their studies for a period of time by taking a leave of absence. A formal petition must be filed, an exit interview conducted, and written approval granted. Leaves of absence for more than two years are not generally granted. Credit earned while on leave of absence is subject to the limitation placed on extramural and transfer credit.

Students who voluntarily *withdraw* from the engineering degree program sever all connection with the college, and if they subsequently want to return, they must make a formal application for readmission. Students who fail to register in the first three weeks of the semester, without having received a leave of absence or permission for study in absentia, may be classified, by action of the faculty, as having withdrawn.

ENGINEERING CAREER SERVICES

Individual advising and group seminars are available for students who desire assistance in career and job-search matters. Also, interviews are arranged between students and national company representatives who visit the campus to recruit employees. This service, which is available to both undergraduates and graduates, can be used to find permanent or summer employment. A résumé referral service is available to engineering alumni. Further information on all services is available from the Office of Engineering Placement, 201 Carpenter Hall.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

G. E. Rehkugler, chair; L. D. Albright, D. J. Aneshansley, J. A. Bartsch, J. R. Cooke, A. K. Datta, R. C. Derksen, R. B. Furry, K. G. Gebremedhin, W. W. Gunkel, D. A. Haith, J. B. Hunter, L. H. Irwin, W. J. Jewell, D. C. Ludington, J.-Y. Parlange, R. E. Pitt, N. R. Scott, T. S. Steenhuis, M. B. Timmons, L. P. Walker, M. F. Walter

Bachelor of Science Curriculum

The Field Program in Agricultural Engineering prepares students for engineering practice in biological and physical systems represented in agriculture and its supporting industries and agencies, environmental or resource protection agencies, the biotechnological industries, and the food industries. Engineering is applied to production, storage processing, distribution, and use of plant and animal products and biomass. Issues of environmental quality and safety and preservation of soil and water resources are studied. Emerging areas of study include engineering aspects of biotechnology. Biological, social, and agricultural sciences are integrated into the field program along with the engineering design and studies in the physical sciences. Areas of concentration include agricultural engineering, biological engineering, environmental systems, and food engineering.

This program is jointly administered by the College of Engineering and the College of Agriculture and Life Sciences. Students are enrolled in the College of Agriculture and Life Sciences in the first four semesters and jointly in the College of Engineering in the remaining semesters. Engineering college tuition is paid in the fifth and sixth semesters of study.

Graduates find employment not only in agricultural and food related industries but also in environmentally related firms and agencies. Professional education is also the choice of many of the graduates. Agricultural and biological engineers are employed throughout the entire spectrum of private industry, consulting firms, government agencies, utility companies, and educational institutions. The unique blend of engineering and the biological sciences in the education of the agricultural and biological engineer is often attractive to employers.

For further details see the department's undergraduate programs brochure, available at 106 Riley-Robb Hall.

The field program requirements are outlined below.

Basic Subjects	*Credits*
Math 191, 192, 293, 294, Calculus for Engineers and Engineering Mathematics	16
Chem 211, General Chemistry, or equivalent	4
Phys 112, 213, 214, Physics I, II, and III	12
Introductory biological sciences	6 to 8
ABEN 151, computer programming and introduction to field	4 to 6
Engineering distribution (four courses, including Mechanics of Solids and Thermodynamics)	12
Humanities and social sciences (eight courses, including two in written expression, one in oral expression, and a minimum of 9 credits in humanities and/or history)	24
Advanced and Applied Subjects	
Engineering sciences in any field (must include fluid mechanics and dynamics), plus ABEN 250, 350, 351	
and a minimum of three agricultural and biological engineering courses (at least 9 credits) chosen from courses numbered 450 to 496 to total 33 credits	33
Biological or agricultural sciences (3 credits of upper level biological sciences required)	12
Free electives	6

Master of Engineering (Agricultural) Degree Program

The program for the M.Eng.(Agricultural) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an extension of the Cornell undergraduate program in agricultural and biological engineering but can accommodate graduates of other engineering disciplines. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. Six of the required 30 credits are earned for an engineering design project that culminates in a written and oral report.

A candidate for the M.Eng.(Agricultural) degree may choose to concentrate in one of the subareas of agricultural engineering or take a broad program without specialization. The subareas are (a) agricultural engineering, (b) biological engineering, (c) environmental systems, and (d) food engineering. Engineering electives are chosen from among subject areas relevant to agricultural engineering, such as thermodynamics, process engineering, mechanical design and analysis, theoretical and applied mechanics, structural engineering, hydraulics, environmental engineering, soil engineering, waste management, and electronics.

APPLIED AND ENGINEERING PHYSICS

R. A. Buhrman, director; M. S. Isaacson, associate director; B. W. Batterman, J. D. Brock, K. B. Cady, D. D. Clark, T. A. Cool, H. G. Craighead, H. H. Fleischmann, V. O. Kostroun, J. A. Krumhansl, B. R. Kusse, R. L. Liboff, R. V. E. Lovelace, M. S. Nelkin, T. N. Rhodin, M. M. Salpeter, J. Silcox, R. N. Sudan, W. W. Webb, F. W. Wise, G. J. Wolga

Bachelor of Science Curriculum

The undergraduate engineering physics curriculum is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas

of concentration, the students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, and solid-state-device development. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics astrophysics, atmospheric sciences, biophysics, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mechanical engineering, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The engineering physics program fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are A&EP 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman course); A&EP 264, Computerized-Instrumentation Design (a sophomore course); A&EP 363, Electronic Circuits (a junior course); Physics 410, Advanced Experimental Physics, and A&EP 436, Physical and Integrated Optics (senior courses).

Undergraduates who plan to enter the Field Program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. Students are also encouraged to take Physics 112 or Physics 116 during their first semester (if their advanced placement credits permit) and to satisfy the computing applications requirement with an engineering distribution course such as A&EP 264. Engineering physics students need to take only three engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a fourth member of this category.

The upperclass course requirements of the field program are as follows:

Course	*Credits*
A&EP 333, Mechanics of Particles and Solid Bodies	4
A&EP 355, Intermediate Electromagnetism	4
A&EP 356, Intermediate Electrodynamics	4
A&EP 361, Introductory Quantum Mechanics	4
A&EP 363, Electronic Circuits	4
A&EP 423, Statistical Thermodynamics	4
A&EP 434, Continuum Physics	4
Physics 410, Advanced Experimental Physics	4
A&EP 321, Mathematical Physics I; Mathematics 421; or T&AM 610 (applied mathematics)	4
A&EP 322, Mathematical Physics II; Mathematics 422; or T&AM 611 (applied mathematics)	4
Applications of quantum mechanics*	3 or 4
A third technical elective (in addition to the two required by the Common Curriculum)†	3

*Some courses that will satisfy this requirement are Physics 444, Nuclear and High-Energy Particle Physics; Physics 454, Introductory Solid-State Physics; A&EP 609, Low-Energy Nuclear Physics; EE 430, Lasers and Optical Electronics; and EE 531, Quantum Electronics I.

†If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

Areas of concentration. With at least five electives in the junior and senior years, students are encouraged to develop areas of concentration in accordance with their individual career goals and interests. For those who look toward an industrial position after graduation, these electives should be chosen to widen the necessary background in a specific area of practical engineering. A different set of electives could be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in such programs are advised to consult with a professor active in their area or with the associate director of the school, Professor Michael S. Isaacson.

Electives need not be all formal course work: Qualified students may undertake informal study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active. While free electives may be selected (with the permission of the faculty adviser) from among almost all the courses offered at the university, the student is encouraged to select those that will provide further preparation in the area of technical interest. The minimum requirement is two courses or six credits.

The variety of course offerings provides a sizable flexibility in scheduling. In addition, if scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses: Physics 325–326 is similar to A&EP 355–356; Physics 318 (offered in the spring) and T&AM 570 are similar to A&EP 333; Physics 443 (offered in the fall), is similar to A&EP 361; and advanced courses in fluid mechanics or elasticity are similar to A&EP 434.

The engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each term an overall grade point average of at least 2.3.

Master of Engineering (Engineering Physics) Degree Program

The M.Eng.(Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, microstructure science and technology, device physics, or materials characterization. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to microstructure science and technology. Core courses in this specialty include the microcharacterization of materials (A&EP 661) and the fabrication of microstructures and devices (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics, microstructure technology, or optoelectronics.

Each individual program is planned by the student in consultation with the program chair. The object is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1) a design project in applied science or engineering (not less than 6 nor more than 12 credits)

2) an integrated program of graduate-level courses, as discussed below (14 to 20 credits)

3) a required special-topics seminar course (4 credits)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It is planned to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in electrical engineering, materials science, computer science, mechanical engineering, physical geology, or bioengineering).

Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng.(Engineering Physics) degree program should contact Professor R. V. E. Lovelace.

APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, Sage Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

CHEMICAL ENGINEERING

K. E. Gubbins, director; G. F. Scheele, associate director; A. B. Anton, P. Clancy, P. Clark, C. Cohen, T. M. Duncan, J. R. Engstrom, D. A. Hammer, P. Harriott, D. L. Koch, R. P. Merrill, W. L. Olbricht, A. Panagiotopoulos, F. Rodriguez, M. L. Shuler, P. H. Steen, W. B. Streett, J. A. Zollweg

Bachelor of Science Curriculum

The undergraduate Field Program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program take Chemistry 208 as an approved elective during the freshman year. The program for the last three years, for students who have taken two engineering distribution courses during the first year, is as follows:

Term 3	*Credits*
Math 293, Engineering Mathematics	4
Phys 213, Electricity and Magnetism	4
Chem 287–289, Physical Chemistry (approved elective)	5
Chem E 219 (engineering distribution course)	3
Humanities or social sciences course	3
Term 4	
Math 294, Engineering Mathematics	4
Phys 214, Optics, Waves, and Particles	4
Chem 288–290, Physical Chemistry	5
Engineering distribution course	3
Humanities or social sciences course	3
Term 5	
Chem 357, Organic Chemistry†	3
Chem 251, Organic Chemistry Laboratory	2
Chem E 313, Chemical Engineering Thermodynamics	4
Chem E 323, Fluid Mechanics	3
Humanities or social sciences course	3
Term 6	
Chem 358, Organic Chemistry†	3
Chem E 101, Nonresident Lectures	0
Chem E 324, Heat and Mass Transfer	3
Chem E 332, Analysis of Separation Processes	4
Chem E 390, Reaction Kinetics and Reactor Design	3
Humanities or social sciences course	3
Term 7	
Chem E 432, Chemical Engineering Laboratory	4
Electives*	9
Humanities or social sciences course	3
Term 8	
Chem E 462, Chemical Process Design	4
Chem E 472, Process Control	3
Electives*	6
Humanities or social sciences course	3

*The electives in terms seven and eight comprise 6 credits of technical electives, 6 credits of free electives, and 3 credits of Chem E process or systems elective. Chem E process or systems electives include Chem E 566, Computer-aided Process Design; Chem E 640, Polymeric Materials; Chem E 643, Introduction to Bioprocess Engineering.

†Chemistry 253 plus an applied science elective may be substituted for Chem 357–358. Applied science electives include Biological Sciences 330 and 331, Principles of Biochemistry; Chem E 640, Polymeric Materials; Chem E 673, Adsorption and Catalysis; MS&E 331, Structural Characterization of Materials; MS&E 332, Electrical and Magnetic Properties of Materials; MS&E 441, Microprocessing of Materials; MS&E 442, Macroprocessing of Materials; Microbiology 290, General Microbiology Lectures; any A&EP course numbered 333 or above; any Chemistry course numbered 301 or above; any Physics course numbered 300 or above.

Master of Engineering (Chemical) Degree Program

The professional master's degree, M.Eng.(Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

Specific requirements include

1) two courses in advanced chemical engineering fundamentals chosen from Chem E 711, 713, 731, 732, and 751
2) two courses in applied chemical engineering science chosen from Chem E 564, 566, 640, and 643
3) a minimum of 3 credits of a design project, Chem E 565

CIVIL AND ENVIRONMENTAL ENGINEERING

A. H. Meyburg, director; J. R. Stedinger, associate director; J. F. Abel, J. J. Bisogni, Jr., W. H. Brutsaert, G. G. Deierlein, R. I. Dick, P. Gergely, J. M. Gossett, M. D. Grigoriu, D. A. Haith, K. C. Hover, A. R. Ingraffea, G. H. Jirka, F. H. Kulhawy, J. A. Liggett, L. W. Lion, P. L-F. Liu, D. P. Loucks, W. R. Lynn, A. H. Nilson, T. D. O'Rourke, T. Pekŏz, W. R. Philipson, W. D. Philpot, M. J. Sansalone, R. E. Schuler, C. A. Shoemaker, H. E. Stewart, M. A. Turnquist, R. N. White

Bachelor of Science Curriculum

The School of Civil and Environmental Engineering offers an accredited undergraduate program in civil engineering. The civil engineering curriculum is designed to ensure adequate depth and breadth in each of the subdisciplines of civil engineering. For students who want to specialize in a particular subdiscipline, illustrative sets of courses are available in the school office (220 Hollister Hall). Students may emphasize structural engineering; civil engineering materials; geotechnical engineering; water quality and hazardous-waste engineering; environmental engineering; environmental management and planning; hydraulics, hydrology and fluid mechanics; and remote sensing.

Students planning to enter the Field Program in Civil Engineering are required to take Mechanics of Solids (Engr 202) during the sophomore year.* Prospective majors are strongly encouraged to obtain a "typical course schedule" from the school office.

For the Field Program in Civil Engineering the following courses are required in addition to those required for the Common Curriculum:†

Courses	*Credits*
Engr 202, Mechanics of Solids*	3
Engr 203, Dynamics	3
Engr 261, Introduction to Mechanical Properties of Materials*	3
Engr 241, Engineering Computation††	3
CEE 304, Uncertainty Analysis in Engineering**	4
CEE 323, Engineering Economics and Management	3
CEE 331, Fluid Mechanics	4
CEE 341, Introduction to Geotechnical Engineering	4
CEE 351, Environmental Quality Engineering	3
CEE 361, Introduction to Transportation Engineering	3
CEE 371, Structural Behavior	4
Civil engineering distribution courses	12

Four civil engineering distribution courses must be selected from an approved list, and they must represent at least three of the different areas of civil engineering into which the list is

categorized. The list is available at the school office, 220 Hollister Hall.

Civil engineering majors must also take at least two courses selected from a list of approved design courses (also available in 220 Hollister Hall), and must choose as one of their technical electives a 3-or-more-credit upper-level engineering course with design content. These requirements should not make it necessary to add any courses to the field program, although they do constrain the choice of civil engineering distribution courses or electives.

*These courses can also be used to satisfy the Common Curriculum requirements for engineering distribution courses.

†Chem 208 can be substituted for Phys 214.

††Engr 241 can be used to satisfy both the computer application requirement and an engineering distribution requirement of the Common Curriculum.

**Students in Civil Engineering may use CEE 304 as a substitute for Engr 270, applying it toward the engineering distribution requirement. If this is done, the technical elective requirement is increased by 3 credits. Alternatively, Engr 270 may be accepted (on petition) as a substitute for CEE 304 in the field program, but only if Engr 270 is taken before entry into the field.

Master of Engineering (Civil) Degree Program

The M.Eng. (Civil) degree program is a 30-credit (usually ten-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, and it includes an intensive, full-time, three-week session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, one in professional engineering practice (CEE 503) and a two-course design project (CEE 501 and 502)

2) Specialization in a major—three to five courses in either environmental engineering, environmental and public systems engineering, geotechnical engineering, hydraulic engineering, remote sensing, structural engineering, or transportation engineering

3) Two courses in a single related or minor area

4) Technical electives (up to two courses)

Courses in the minor and electives may consist of graduate or advanced courses in fields related to the major, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

1) Four courses: Management Practice (CEE 590), Engineering Management Methods (CEE 593), and the Management Project (CEE 591 and 592)

2) Two courses from a list of engineering management electives

3) Two elective courses in general management from outside the school, including accounting, finance, law and regulation, marketing, and organizational behavior

4) Two engineering and/or technical elective courses

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering.

Applications for the six-year B.S./M.Eng./M.B.A. program must be submitted at the beginning of the sixth term of study.

COMPUTER SCIENCE

G. Bilardi, K. Birman, B. Bloom, T. Coleman, R. L. Constable, B. Donald, D. Gries, J. Hartmanis, J. E. Hopcroft, D. Huttenlocher, D. Kozen, K. Marzullo, P. Panangaden, K. Pingali, G. Salton, F. B. Schneider, A. Segre, D. Subramanian, R. Teitelbaum, S. Toueg, C. Van Loan, S. Vavasis, V. Vazirani

Bachelor of Science Curriculum

The Field Program in Computer Science is intended for students who are interested in the computing process and in the fundamental structure of algorithms, data, and languages that underlie that process.

A student entering the Field Program in Computer Science must take CS 211 or 212 and CS 280 before beginning the upperclass sequence. Students who do not earn a grade of B– or better in both CS 211 or 212 and CS 280 are strongly advised against attempting the computer science field program. Students who have not maintained an average of at least 3.0 in the mathematics courses required by the Common Curriculum are also discouraged from entering the program. Apart from these requisites and those of the college, the courses required for the Field Program in Computer Science are:

Course Work	*Credits*
Systems sequence CS 314, Systems and Organization CS 410, Data Structures	8
Theory sequence CS 381 or 481, Theory of Computing CS 482, Analysis of Algorithms	8
Numerical Analysis CS 222, Scientific Computation, or CS 421, Numerical Solutions of Algebraic Equations	3–4
Electrical Engineering EE 230, Digital Systems*	4
Computer science electives Two nonrequired computer science courses numbered 400 or above.† One must be a course or course-laboratory combination that includes a substantial programming project—for example, CS 412, 414–415, 417–418, 432–433, or 472.	7–9
Related electives One mathematically oriented course plus three courses forming a coherent sequence in mathematics, operations research, electrical engineering, or another technical area.	14–16

*EE 230 also counts as an approved elective.

†Except CS 415, 418, 433, 600, 601, and seminar courses.

For more information, refer to the *Computer Science Undergraduate Handbook*, available from 303 Upson Hall.

The performance of students in the Field of Computer Science is reviewed each term. To remain in good standing with the department, they must have an overall term average of at least 2.3 with no courses failed and a term average for field program courses of at least 2.7 with no course grade less than C–, and they must be making satisfactory progress in the field.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng.(Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details, application forms, and assistance in planning a curriculum, students should contact the computer science undergraduate coordinator in Upson Hall.

Master of Engineering (Computer Science) Degree Program

The one-year program leading to the degree of M.Eng.(Computer Science) admits fifteen to twenty students a year. A strong undergraduate background in computer science or a related field is required. Early admission is available for Cornell seniors who apply in the fall semester.

In the curriculum the emphasis can be on programming languages and systems, on theory of algorithms and theory of computation, on numerical analysis, on artificial intelligence, or on information processing, which includes databases and information organization and retrieval. (Students who are interested in logical design or computer architecture will find it more appropriate to apply for admission to a graduate program in electrical engineering.) The required design project could be, for example, the design of a compiler for a large subset of a general-purpose programming language.

ELECTRICAL ENGINEERING

N. C. MacDonald, director; V. Anantharam, J. M. Ballantyne, T. Berger, A. W. Bojanczyk, G. M. Brown, R. R. Capranica, H.-D. Chiang, R. C. Compton, H. G. Craighead, D. F. Delchamps, L. F. Eastman, D. T. Farley, T. L. Fine, L. K. Grover, T. Hagfors, M. W. Hauser, C. Heegard, C. R. Johnson, Jr., M. C. Kelley, P. M. Kintner, R. Kline, J. P. Krusius, C. A. Lee, S.-Y. Lee, M. E. Leeser, R. L. Liboff, F. T.-C. Luk, P. R. McIsaac, J. A. Nation, N. F. Otani, T. W. Parks, C. R. Pollock, C. Pottle, A. P. Reeves, C. E. Seyler, Jr., J. R. Shealy, A. O. Steinhardt, R. N. Sudan, C. L. Tang, R. J. Thomas, J. S. Thorp, H. C. Torng, C. B. Wharton, E. D. Wolf, G. J. Wolga

Bachelor of Science Curriculum

Reflecting the large scope of this engineering discipline, the undergraduate Field Program in Electrical Engineering provides a broad foundation in a number of important and fundamental areas.

Areas of concentration include computer engineering; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric physics; and semiconductor devices and applications.

Students planning to enter the Field Program in Electrical Engineering must take EE 210, Introduction to Electrical Systems, as an engineering distribution course. In addition, the field program requires twelve courses, as shown below. Many of these courses are taught only once a year, either spring or fall, as indicated in the course descriptions.

Course	*Credits*
EE 230, Introduction to Digital Systems	4
EE 301, Electrical Signals and Systems I	4
EE 303, Electromagnetic Waves and Fields I	4
EE 315, Electrical Laboratory	4
A choice of three courses from among: EE 302, Electrical Signals and Systems II EE 304, Electromagnetic Waves and Fields II EE 306, Fundamentals of Quantum and Solid State Electronics EE 308, Fundamentals of Computer Engineering EE 310, Probability and Random Signals	12
EE electives with laboratory (3 courses)	12
EE electives (2 courses)	6
Total	46*

*Credits in excess of 46 may be used to fill approved-, technical-, or free-elective requirements of the Common Curriculum.

EE electives may be selected from all courses taught in electrical engineering. At least one of the required EE electives with laboratory must be selected from a list including EE 316, 318, 425, 431, 435, 437, and 475. The other two may be selected from the above list or from among EE 423, 426, 432, 433, 436, 451, 452, 471, 476, 526, 534, 536, 539, and 572. (If EE 539 is taken for 6 credits, it counts as two courses. One course will count as an EE elective with laboratory, and the other may be used as an EE elective or to meet any other degree requirement that can be satisfied by a 500-level technical course.)

Specialization is achieved through the five electrical engineering elective courses, as well as other courses in electrical engineering or related subjects taken as technical, approved, or free electives. The School of Electrical Engineering offers more than thirty courses that are commonly taken as electives by undergraduates. Students with advanced standing frequently take one or more graduate-level courses prior to graduation.

Students majoring in electrical engineering are expected to meet the following academic standards:

1) Students must achieve a grade-point average of at least 2.3 every semester.

2) No course with a grade of less than C– may be used to satisfy degree requirements in the field program or technical elective categories, or serve as a prerequisite for an electrical engineering course. (It may count as a free elective, however, unless it must be repeated.)

3) Students must complete EE 301, 303, and 315 by the end of the first semester of the junior year, and accumulate at least 10 credits each semester toward the remaining degree requirements in the field program and technical elective categories.

Master of Engineering (Electrical) Degree Program

The M.Eng.(Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the Master of Science degree mainly in its emphasis on engineering design and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work, including a minimum of two two-term course sequences in electrical engineering. (A list of approved course sequences is available from the Master of Electrical Engineering Program Office.) All but 8 credits of course work applied toward degree requirements must be at the graduate level (courses numbered 500 or above). An electrical engineering design project is also required and may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the 8-credit maximum. Students with special career goals, such as engineering management, may apply to use up to 8 credits of courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Although admission to the M.Eng.(Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical Engineering Program Office in 222 Phillips Hall.

GEOLOGICAL SCIENCES

D. L. Turcotte, chair; R. W. Allmendinger, M. Barazangi, W. A. Bassett, J. M. Bird, A. L. Bloom, L. D. Brown, L. M. Cathles, J. L. Cisne, B. L. Isacks, T. E. Jordan, D. E. Karig, S. Kaufman, R. W. Kay, J. E. Oliver, F. H. T. Rhodes, W. B. Travers, W. M. White

Bachelor of Science Curriculum

Study in geological sciences is offered for students who are preparing for careers in solid earth science, for those who want a broad background in the geological sciences as preparation for careers in other fields, and for those who want to combine geological training with other sciences such as agronomy, astronomy and space science, biological sciences, chemistry, economics, mathematics, physics, or various fields of engineering. The Department of Geological Sciences is organized as an intercollege department in the College of Arts and Sciences and the College of Engineering. College of Arts and Sciences students should consult that college's section on geological sciences as well as the course listing here.

Students in the College of Engineering who plan to enter the Field Program in Geological Sciences are required to take Geol 201 (Engr 201) during their freshman or sophomore year. Those interested in geobiology should also take Biological Sciences 101–103 and 102–104.

Geological Sciences requires the following courses for the major: Geol 210, 214, 326, 355, 356, 375, 388, and one other 300-, 400-, or 600-level course. A summer field geology course is also required.

Core courses may be taken in any reasonable sequence, except that Geol 355, which is offered in the fall, should be taken before Geol 356, which is offered in the spring. Geol 326 and 375 should be taken relatively early in the major program as preparation for the summer field camp, which usually follows the junior year. Students with adequate preparation may attend field camp at an earlier time.

It is recommended that students intending to specialize in *geophysics* select most of their approved and technical electives from the following courses or their equivalents:

A&EP 333, Mechanics of Particles and Solid Bodies

A&EP 355, Intermediate Electromagnetism

A&EP 356, Intermediate Electrodynamics

A&EP 434, Continuum Physics

Phys 410, Advanced Experimental Physics

T&AM 310–311, Advanced Engineering Analysis I and II

It is recommended that students intending to specialize in *geochemistry* (including petrology and mineralogy) select most of their approved and technical electives from the following courses or their equivalents:

Chem 208, General Chemistry

Chem 287–288, Introductory Physical Chemistry

Chem 300, Quantitative Chemistry

Chem 301, Experimental Chemistry I

Chem 302, Experimental Chemistry II

Chem 303, Experimental Chemistry III

Chem 357–358, Introductory Organic Chemistry

Chem 389–390, Physical Chemistry I and II

MS&E 331, Structural Characterization and Properties of Materials

MS&E 335, Thermodynamics of Condensed Systems

It is recommended that students intending to specialize in *geobiology* select most of their approved and technical electives from the following courses or their equivalents:

Bio S 241, Introductory Botany

Bio S 274, The Vertebrates

Bio S 371, Human Paleontology

Bio S 373, The Invertebrates

Bio S 261, General Ecology

Bio S 448, Plant Evolution and the Fossil Record

Bio S 378, Organic Evolution

Chem 253, Elementary Organic Chemistry

It is recommended that students who want to pursue further training or immediate employment in *applied geology* (environmental and engineering geology, geohydrology, petroleum geology, or geological engineering) select most of their approved and technical electives from the following courses or their equivalents, with two of the four from the same field:

ABEN 371, Introduction to Hydrology and Ground-Water Pollution

ABEN 475, Environmental Systems Analysis

ABEN 671, Analysis of the Flow of Water and Chemicals in Soils

Agron 361, Genesis, Classification, and Geography of Soils

Agron 667, Soil Physics

Agron 366, Soil Chemistry

CEE 341, Introductory Soil Mechanics

CEE 611, Remote Sensing Applications

CEE 612, Physical Environment Evaluation

CEE 615, Digital Image Processing

CEE 640, Foundation Engineering

MS&E 331, Structural Characterization and Properties of Materials

MS&E 445, Mechanical Properties of Materials

CEE 331, Fluid Mechanics

CEE 332, Hydraulic Engineering

CEE 351, Environmental Quality Engineering

CEE 633, Flow in Porous Media and Groundwater

OR&IE 260, Introductory Engineering Probability

OR&IE 370, Introduction to Statistical Theory with Engineering Applications

Students intending to specialize in *economic geology* or pursue careers in the mining industries or mineral exploration should consider including economics courses among their humanities and social sciences electives and should select most of their approved and technical electives from the groups of courses listed above for geochemistry and applied geology plus the following additional courses:

CEE 654, Aquatic Chemistry

CEE 741, Rock Engineering

Students who want a more general background or who want to remain uncommitted with regard to specialty must choose at least two of their three approved electives from the same field, at a level comparable to the courses listed above. The technical electives may be chosen from offerings in geological sciences or in other science or engineering fields and should be at the 300 level or above. Outstanding students may request substitution of Geol 491 and 492, Undergraduate Research, for a fourth-year technical elective.

Students intending to pursue graduate study in geology are reminded that some graduate schools require proficiency in reading the scientific literature in one or two of the three languages, French, German, and Russian. Undergraduate preparation in at least one of these languages is therefore advantageous.

Master of Engineering (Geological Sciences Degree Program)

The Master of Engineering (Geological Sciences) degree is intended to provide future professional geologists with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Students may choose a program from one of several options, or tailor a program to meet their special interests with the help of a faculty adviser.

The program requires 30 credits of postgraduate instruction, at least 10 of which must involve engineering design. Students must also complete a design project, worth between 3 and 12 credits, that has a significant geological component and results in substantial conclusions or recommendations.

General information on admission and degree requirements for the M.Eng. degree programs can be found in the college's introductory section.

MATERIALS SCIENCE AND ENGINEERING

J. M. Blakely, director; D. G. Ast, C. B. Carter, R. Dieckmann, E. Gianellis, D. T. Grubb, E. W. Hart, D. L. Kohlstedt, E. J. Kramer, C. Y. Li, J. W. Mayer, C. Ober, R. Raj, A. L. Ruoff, S. L. Sass, M. O. Thompson, Y. K. Vohra

Bachelor of Science Curriculum

Students who major in materials science and engineering are required to take MS&E 261, Introduction to Mechanical Properties of Materials, before the end of their junior year. They are strongly urged to take it as an engineering distribution course during their freshman or sophomore year. Students may enter the field after taking MS&E 262, Introduction to Electrical Properties of Materials, but they must still take MS&E 261 in order to graduate. Students who choose to major in materials science and engineering can concentrate in any one of the following areas of specialization: materials science, solid state, metallic materials, ceramic materials, polymeric materials, or electrical materials. Specialization is achieved through the selection of technical electives in the junior and senior years. The materials science and engineering field program leading to the Bachelor of Science degree consists of

Courses	*Credits*
MS&E 331, Structural Characterization of Materials	4
MS&E 332, Electrical and Magnetic Properties of Materials	3
MS&E 333, Research Involvement I, or a field-approved elective*	3
MS&E 334, Research Involvement II, or a field-approved elective*	3
MS&E 335 Thermodynamics of Condensed Systems	4
MS&E 336, Kinetics, Diffusion, and Phase Transformations	3
MS&E 441, Microprocessing of Materials	3
MS&E 442, Macroprocessing of Materials	3
MS&E 443/435, Senior Materials Laboratory I or Senior Thesis I	3/4
MS&E 444/436, Senior Materials Laboratory II or Senior Thesis II	3/4
MS&E 445, Mechanical Properties of Materials	3
MS&E 447, Materials Design Concepts I	2
MS&E 448, Materials Design Concepts II	2
	37/39

*These courses serve as two of the four required specialization courses. The other specialization courses are technical electives. The optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their resesearch groups on current projects.

To continue in good standing in the Field of Materials Science and Engineering, students must

1) Maintain an overall 2.0 term average

2) Maintain an average of 2.3, with no grade below C, in the department's basic curriculum.

3) Complete MS&E 261 or 262 prior to entering the field.

The department's basic curriculum consists of all the required MS&E courses including MS&E 261 and the four courses comprising the student's area of specialization.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. The combination of materials science and engineering with electrical engineering is particularly well suited to students who will eventually be employed in the electronic materials industry. Mechanical engineers knowledgeable in materials science also will be well equipped for technical careers. Curricula leading to the double-major degree must be approved by both of the departments involved. Students are urged to plan such curricula as early as possible.

Master of Engineering (Materials) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences will be considered for admission to the M.Eng.(Materials) program, which includes a project and course work. The project, which must require individual effort and initiative, is worth 12 credits. It is carried out under the supervision of a member of the faculty, and is usually experimental, although it can also be analytical.

Courses, worth an additional 18 credits, may be selected from graduate-level courses in materials science and engineering or other courses approved by the faculty. These courses should be half MS&E courses and half technical electives. One 3-credit technical elective must be in advanced mathematics (modeling, computer applications, or computer modeling), beyond the MS&E undergraduate requirements. Other electives may be in MS&E or allied fields.

MECHANICAL AND AEROSPACE ENGINEERING

F. C. Moon, director; P. L. Auer, C. T. Avedisian, D. L. Bartel, J. F. Booker, A. H. Burstein, D. A. Caughey, B. J. Conta, P. R. Dawson, P. C. T. deBoer, A. R. George, F. C. Gouldin, J. C. Koechling, S. E. Landsberger, S. Leibovich, M. Y. Louge, J. L. Lumley, F. K. Moore, S. B. Pope, M. L. Psiaki, E. L. Resler, Jr., S. F. Shen, D. G. Shepherd, D. L. Taylor, K. E. Torrance, H. B. Voelcker, K. K. Wang, Z. Warhaft, G. G. Weber, R. L. Wehe, C. H. K. Williamson

Members of the faculty of the graduate Fields of Aerospace Engineering and Mechanical Engineering are listed in the *Announcement of the Graduate School.*

Bachelor of Science Curriculum in Mechanical Engineering

The upperclass Field Program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. Two main areas of concentration, corresponding to the two major streams of mechanical engineering technology, are offered in the field program.

Mechanical systems, design, and manufacturing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration include mechanical design and analysis, computer-aided design, vehicle engineering, composite materials, vibrations and control systems, biomechanics, and manufacturing engineering.

Engineering of fluids, energy, and heat-transfer systems has as its main concerns the experimental and theoretical aspects of fluid flow and heat transfer; the development of fossil, solar, and other energy sources for uses such as electric-power generation; industrial heating; terrestrial and aerospace transportation; and the use of heating, air conditioning, refrigeration, and noise- and pollution-control techniques to modify the human environment.

The undergraduate field program is a coordinated sequence of courses beginning in the sophomore year. During that year students who plan to enter the field of mechanical engineering take Engr 202 (also T&AM 202) as an engineering distribution course. They also take Engr 203 (also T&AM 203) which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an approved (or free) elective. Both of these courses are prerequisites for courses to be taken during the junior year. During either the sophomore or junior year students take Engr 221 (also M&AE 221) and Engr 261 (also MS&E 261).

The requirements for the degree of Bachelor of Science in mechanical engineering are as follows:

1) Completion of the Common Curriculum. During the upperclass years this will typically mean earning credit for two technical electives, one approved elective, two free electives, and three humanities or social sciences courses.

2) Completion of the field requirements, which consist of ten required courses (beyond Engr 202 and 203, already mentioned), and three elective courses (9 credits). The ten additional required courses are

Engr 210, Introduction to Electrical Systems

Engr 221, Introduction to Thermodynamics

Engr 261, Introduction to Mechanical Properties of Materials

M&AE 312, Fundamentals of Manufacturing Processes

M&AE 323, Introduction to Fluid Mechanics

M&AE 324, Heat Transfer

M&AE 325, Mechanical Design and Analysis

M&AE 326, System Dynamics

M&AE 427, Mechanical Engineering Laboratory

M&AE 428, Engineering Design (required starting with the class of 1989)

If Engr 210 or 221 or 261 is taken as an engineering distribution course, the corresponding field requirement is replaced by an alternate technical elective. The three elective courses consist of one mathematics elective (3 credits), a field elective (3 credits), and a field design elective (3 credits). These electives are chosen from lists approved by the faculty of the Sibley School of Mechanical and Aerospace Engineering.

An additional graduation requirement of the field program is proof of elementary competence in technical drawing. This proof may be given in a number of ways, including satisfactory completion of

a) a technical drawing course in high school or in a community college

b) Engineering 102, Drawing and Engineering Design

c) another technical drawing course at Cornell, or

d) a departmental examination.

The proof is expected before completion of M&AE 325, Mechanical Design and Analysis.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 389, 489, 575, and 670.

The requirements listed are those currently in effect. Requirements for classes earlier than 1989 differ somewhat from the ones listed.

Introduction to Electrical Systems (EE 210) may be replaced or supplemented by Introductory Electronics (Physics 360).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

More-detailed materials describing the field program and possible concentrations may be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.

Preparation in Aerospace Engineering

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking a number of aerospace engineering electives such as M&AE 405, 506, 507, 530, 531, and 536. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

Master of Engineering (Aerospace) Degree Program

The M.Eng.(Aerospace) degree program provides a one-year course of study for those who want to develop a high level of competence in current technology and engineering design. This degree requires 30 credits of course work and is subject to the rules adopted by the Graduate Professional Program Committee. Because aerospace engineering is continually engaged in new areas, an essential guideline for the program is to reach beyond present-day practices and techniques. This is achieved by supplying the student with the fundamental background and the analytical techniques that will remain useful in all modern engineering developments. Aerospace students register for 1 credit a term on an S-U basis in M&AE Colloquium (M&AE 799). All other courses must have letter grades. To fulfill the design project requirement, students register for M&AE 592, Seminar and Design Project in Aerospace Engineering, for 2 credits a term. Other requirements are four aerospace core courses (minimum of 12 credits), two math courses (6 credits), and two technical electives (6 credits).

Aerospace Core Courses

3 credits:

M&AE 506, Aerospace Propulsion Systems

M&AE 507, Dynamics of Flight Vehicles

M&AE 530, Fluid Dynamics

M&AE 531, Boundary Layers

M&AE 536, Turbomachinery and Applications

M&AE 543, Combustion Processes

M&AE 559, Introduction to Controlled Fusion

M&AE 569, Mechanical and Aerospace Structures I

4 credits:

M&AE 601, Foundations of Fluid Dynamics and Aerodynamics

M&AE 602, Incompressible Aerodynamics

M&AE 603, Compressible Aerodynamics

M&AE 608, Physics of Fluids

M&AE 630, Atmospheric Turbulence and Micrometeorology

M&AE 639, Aerodynamic Noise Theory

M&AE 648, Seminar on Combustion

M&AE 651, Advanced Heat Transfer

M&AE 652, Thermodynamics and Phase Change Heat Transfer

M&AE 653, Experimental Methods in Fluid Mechanics, Heat Transfer, and Combustion

M&AE 670, Mechanical and Aerospace Structures II

M&AE 704, Theory of Viscous Flows

M&AE 732, Analysis of Turbulent Flows

M&AE 733, Stability of Fluid Flow

M&AE 734, Turbulence and Turbulent Flow

M&AE 736, Computational Aerodynamics

M&AE 737, Computational Heat Transfer and Fluid Mechanics

Nominations of Special Committee chair (adviser) must be filed with the Graduate School within three weeks of the start of classes. A formal selection of course work for the term must be filed within three weeks of the start of classes. A program of courses must be submitted for committee approval by the end of the first week of classes.

The school has particular strengths in the areas of fluid dynamics, aerodynamics, high-temperature gasdynamics, turbulence, chemical kinetics, aerodynamic noise, sonic boom, nonlinear waves, atmospheric flows, combustion processes in low-pollution engines, and solution of flow problems by numerical methods. Professional design projects may be arranged in any of these areas.

Master of Engineering (Mechanical) Degree Program

The M.Eng.(Mechanical) degree program provides a one-year course of study for those who want to develop a high level of competence in current technology and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These areas include biomechanical engineering, combustion, energy and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, and CAD/CAM (computer-aided design/computer-aided manufacturing). An individual student's curriculum includes a 4-credit design course, a major consisting of a minimum of 12 credits, and sufficient technical electives to meet the degree requirement of 30 credits. Students register for 1 credit per term on an S–U basis in M&AE Colloquium (M&AE 799). The design course (M&AE 590) is a formal consideration of the complete design process, including planning, cost analysis, and analytical methods. Students conduct one or more specific projects during the course. These projects may arise from individual faculty interests or from collaboration with industry. A student may replace the design course with an independent design project. Such a project must have a mechanical engineering design focus and have the close supervision of a faculty member.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This proposed program, together with a statement of overall objectives and a statement of purpose for the major, is submitted for approval to the Master of Engineering Committee by the end of the first week of class. Any subsequent changes must also be approved by this committee.

The courses that constitute the major must be graduate-level courses in mechanical and aerospace engineering or a closely related field such as theoretical and applied mechanics. At least 24 credits of the total for the degree must be in mechanical engineering or related areas, and in general all courses must be beyond the level of those required in the undergraduate program in mechanical engineering. Credit may be granted for an undergraduate, upper-level first course in some subject area if the student has done little or no previous work in that area, but such courses must have the special approval of the Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students enrolled in the M.Eng.(Mechanical) program may take courses that also satisfy the requirements of the Cornell Manufacturing Engineering and Productivity Program (COMEPP), leading to a special dean's certificate in manufacturing engineering.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the Master of Engineering (Nuclear) curriculum include D. D. Clark (faculty representative), K. B. Cady, H. H. Fleischmann, D. A. Hammer, V. O. Kostroun, and S. C. McGuire.

Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

Master of Engineering (Nuclear) Degree Program

The two-term curriculum leading to the M.Eng.(Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Laboratory of Nuclear Engineering are described in the *Announcement of the Graduate School.*

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses are included in the 30-credit program:

Fall term

A&EP 609, Low-Energy Nuclear Physics

A&EP 612, Nuclear Reactor Theory

A&EP 633, Nuclear Engineering

Technical elective

Spring term

A&EP 651, Nuclear Measurements Laboratory

Technical elective

Engineering design project

Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

M&AE 651, Advanced Heat Transfer

EE 581, Introduction to Plasma Physics

EE 582, Advanced Plasma Physics

EE 589 Magnetohydrodynamics

EE 471, Feedback Control Systems

EE 572, Digital Control Systems

A&EP 636, Seminar on Thermonuclear Fusion Reactors

A&EP 638, Intense Pulsed Electron and Ion Beams: Physics and Technology

NS&E 484, Introduction to Controlled Fusion: Principles and Technology

MS&E 459, Physics of Modern Materials Analysis

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

J. A. Muckstadt, director; R. G. Bland, L. I. Weiss, associate directors; E. Arkin, R. R. Barton, R. E. Bechhofer, L. J. Billera, D. C. Heath, P. L. Jackson, W. L. Maxwell, J. S. B. Mitchell, N. U. Prabhu, J. Renegar, S. Resnick, R. Roundy, D. Ruppert, G. Samorodnitsky, T. J. Santner, L. W. Schruben, D. B. Shmoys, E. Tardos, M. J. Todd, L. E. Trotter, Jr., B. W. Turnbull

Bachelor of Science Curriculum in Operations Research and Engineering

The program is designed to provide a broad and basic education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. An accelerated honors program is available for exceptional students interested in pursuing graduate studies.

A student who plans to enter the Field Program in Operations Research and Engineering should take Introductory Engineering Probability (Engr 260). For a student who has not taken Engr 260, entry into the field program in OR&E is possible only by permission of the associate director for undergraduate studies. In addition, it is recommended that Computers and Programming (CS 211 or Engr 211) be taken before entry into the OR&E field program. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&E field program and the typical terms in which they are taken are as follows:

Term 5	*Credits*
OR&IE 320, Optimization I	4
OR&IE 350, Cost Accounting, Analysis, and Control	4
OR&IE 370, Introduction to Statistical Theory with Engineering Applications	4
CS 211, Computers and Programming*	3
Course in humanities and social sciences	3

*If CS 211 has already been taken, an appropriate 3- or 4-credit technical elective must be substituted.

Term 6	
OR&IE 321, Optimization II	4
OR&IE 361, Introductory Engineering Stochastic Processes	4
OR&IE 410, Industrial Systems Analysis	4
Behavioral science†	3
Course in humanities and social sciences	3

†The behavioral science requirement can be satisfied by any one of several courses of an advanced nature, including Graduate School of Management (GSM) NCC 504 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, and Industrial and Labor Relations 120, 121, 151, and 320. The adviser must approve the selection in all cases.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

Minimum credits	
OR&IE 580, Digital Systems Simulation	4
Three upperclass OR&IE electives as described below	9
Two technical electives	6
Two courses in humanities and social sciences	6
Two free electives	6

Available OR&E electives are as follows:

Industrial systems: OR&IE 416, 417, 421, 451, 525, and 562 and GSM NBA 601 and 641*

Optimization methods: OR&IE 431, 432, and 435

Applied probability and statistics: OR&IE 462, 472, 475, 476, 561, 563, 575, and 577

*No more than one course in the Graduate School of Management may be taken as an OR&E elective.

Scholastic requirements for the field are a passing grade in every course, an overall average of at least 2.0 for each term the student is enrolled in the school, an average of 2.0 or better for OR&IE field courses, and satisfactory progress toward the completion of the degree requirements. The student's performance is reviewed at the conclusion of each term.

Master of Engineering (OR&IE) Degree Program

This one-year professional degree program stresses applications of operations research and industrial engineering and requires completion of a project. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design of new or improved man-machine systems, information systems, and control systems.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng.(OR&IE) program is integrated with the undergraduate Field Program in Operations Research and Engineering. Also welcome are requests for admission from Cornell undergraduates in engineering programs other than OR&E or from qualified non-Cornellians. To ensure completion of the program in one calendar year, the entering student should have completed courses in probability theory and basic probabilistic models and in computer programming and should have acquired some fundamental knowledge of economic concepts required for decision making. Students interested in the manufacturing systems engineering option and the manufacturing internship program should obtain further information regarding program requirements from the office of the Cornell Manufacturing Engineering and Productivity Program, 319 Upson Hall.

I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Engineering:

Fall term	*Credits*
OR&IE 516, Case Studies	4
OR&IE 893, Applied OR&IE Colloquium	1
OR&IE 599, Project	1
Three technical electives	9
Spring term	
OR&IE 894, Applied OR&IE Colloquium	1
OR&IE 599, Project	minimum of 4
Three technical electives	9

The electives specified above will normally be chosen from graduate courses offered by the School of Operations Research and Industrial Engineering. A minimum of 30 credits must be taken to complete the program.

II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&IE 370, 520, and 523 will take technical electives in their place):

Fall term	*Credits*
OR&IE 370, Introduction to Statistical Theory with Engineering Applications	4
OR&IE 520, Operations Research I	4
OR&IE 516, Case Studies	4
OR&IE 580, Digital Systems Simulation	4
OR&IE 893, Applied OR&IE Colloquium	1
OR&IE 599, Project	1
Spring term	
OR&IE 523, Introduction to Stochastic Modeling	4
OR&IE 894, Applied OR&IE Colloquium	1
OR&IE 599, Project	minimum of 4
Two technical electives	6

Students fulfill the project requirement by working as part of a group of no more than four students on an operational systems problem that actually exists in some organization. Appropriate problems are suggested by manufacturing firms, retailing organizations, service organizations, government agencies, and educational institutions.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in operations research and engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning such a combined B.S./M.Eng./M.B.A. program can be completed in six years.

An advantage for OR&E majors is that they study, as part of their undergraduate curriculum, several subjects that are required for the M.B.A. degree. (This is because modern management is concerned with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing these systems.) An early start on meeting the business-degree requirements permits students

accepted into the cooperative program to earn both the M.Eng.(OR&IE) and M.B.A. degrees in two years rather than the three years such a program would normally take.

The details of planning courses for this program should be discussed with the admissions office of the Johnson Graduate School of Management.

In accordance with this program the candidate would qualify for the B.S. degree at the end of four years, the M.Eng.(OR&IE) degree at the end of five years, and the M.B.A. degree at the end of six years.

Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, Upson Hall, and at the admissions office of the Johnson Graduate School of Management.

STATISTICS CENTER

The Cornell Statistics Center coordinates a university-wide program in statistics and probability. Students interested in graduate study in probability and statistics should apply to the Field of Statistics or to one of the other graduate fields that offer related coursework.

A list of courses in probability and statistics recommended for graduate students in the Field of Statistics can be found in the description of the Cornell Center for Statistics in the section "Interdisciplinary Centers and Programs." Further information can be obtained from the director of the Statistics Center, Lawrence Brown, or the field representative for statistics, George Casella, both at 272 Caldwell Hall.

THEORETICAL AND APPLIED MECHANICS

J. A. Burns, chair; H. D. Conway, J. M. Guckenheimer, E. W. Hart, T. J. Healey, P. J. Holmes, C. Y. Hui, J. T. Jenkins, R. H. Lance, S. Mukherjee, Y. H. Pao, R. H. Rand, P. Rosakis, A. L. Ruina, W. H. Sachse, A. Zehnder

Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

Master of Engineering (Mechanics) Degree Program

This program focuses on the mechanical behavior of advanced composite materials and structures. It is designed for students who have completed a four-year undergraduate program in a field such as mechanical, aerospace, structural, materials, or biomedical engineering, who wish to develop a high level of competence in the mechanics of composites. It leads to the professional Master of Engineering degree, whose requirements can be met in one year.

The curriculum is composed of courses that explore the nature of modern composite materials and provide students with a broad background in the fundamentals as well as an introduction to techniques that will be useful in subsequent work. The degree program requires satisfactory completion of 30 credits of course work, including 12 credits of courses that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in T&AM 501, 502, 555, or 655. Up to 10 credits will be awarded for an individual project involving composites. The balance of the required credits may be earned in elective courses chosen from those listed below or others approved by the student's adviser.

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other research activities. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources. All of these facilities are at the disposal of students carrying out professional design projects.

Core courses in the M.Eng.(Mechanics) program are:

Course	*Credits*
T&AM 555, Introduction to Composite Materials	3
T&AM 655, Advanced Composite Materials and Structures	3
T&AM 663, Solid Mechanics I	4
T&AM 501, Topics in Composites I	1–3
Selected from the following:	
Analysis of Composite Structures	
Mechanical Testing of Composite Constituents	
Fracture Testing of Composites	
Reliability Models for Composites	
Design Principles for Composite Structures	
Biological Composites	
T&AM 502, Topics in Composites II	1–3
Selected from the following:	
Effective Properties of Composites	
Interface Failure and Fracture Processes in Composites	
Boundary-Element Methods for Composites	
Nondestructive Testing of Composites	
Software for Composite Design	
Novel Composite Structures	
MS&E 450, Physical Metallurgy	3
MS&E 452, Properties of Solid Polymers	3
MS&E 605, Plastic Flow and Fracture of Materials	3
M&AE 465, Biomechanical Systems: Analysis and Design	3
M&AE 569, Mechanical and Aerospace Structures	3
M&AE 670, Mechanical and Aerospace Structures II (Finite-Element Methods)	4
CEE 770, Engineering Fracture Methods	3
CEE 772, Finite-Element Analysis	3
T&AM 591, Master of Engineering Design Project I	3–5
T&AM 592, Master of Engineering Design Project II	5–10

ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.

Engineering Common Courses	Engr
Agricultural Engineering	ABEN
Applied and Engineering Physics	A&EP
Chemical Engineering	Chem E
Civil and Environmental Engineering	CEE
Computer Science	CS
Electrical Engineering	EE
Geological Sciences	Geol
Materials Science and Engineering	MS&E
Mechanical and Aerospace Engineering	M&AE
Nuclear Science and Engineering	NS&E
Operations Research and Industrial Engineering	OR&IE
Theoretical and Applied Mechanics	T&AM

ENGINEERING COMMON COURSES

Courses of General Interest

100 Introduction to Computer Programming (also CS 100)
Fall, spring, summer. 4 credits. The course content is the same as that of CS 100.

2 lecs, 1 rec (optional), 3 evening exams. An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. The subject of the course is programming, not a particular programming language. The principal programming language is Pascal. The course does not presume previous programming experience. An introduction to numerical computing is included, although no college-level mathematics is presumed. Programming assignments are tested and run on interactive, stand-alone microcomputers.

101 The Computer Age (also CS 101)
Fall, summer. 3 credits. Credit is granted for both CS 100 and 101 only if 101 is taken first.
2 lecs, 1 rec, 1 evening exam.
An introduction to computer science and programming for students in nontechnical areas. The aims of the course are to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics, natural-language processing, and machine intelligence. Students become acquainted with the notion of an algorithm by writing several programs in Pascal or LISP and testing them on microcomputers. The amount of programming is about half that taught in Engr 100. Each student writes a term paper on some aspect of computing.

102 Drawing and Engineering Design (also M&AE 102)
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.
2 lecs, 1 lab.
Introduction to drawing and graphic techniques useful in design, analysis, and presentation of ideas. Use of computer-aided drafting software is introduced in the final design project.

250 Technology in Western Society (also EE 250)
Fall. 3 credits. Meets humanities distribution requirement.
R. Kline.
The interaction between technology and Western society from the earliest times to the present, focusing on Western Europe up to the British industrial revolution in the late eighteenth century, and on the United States thereafter. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's promotion and regulation of technology through such measures as the patent system, the funding of research and development, and regulatory legislation; the origins of modern systems of mass production; and the spread of the automobile and microelectronics cultures in the United States.

281 Structures and Machines in Urban Society (also T&AM 281)
Fall. 3 credits.
R. Lance.
Major technological advances during the hundred years since the Industrial Revolution and how they have shaped urban society. Development and use of the steam engine and the suspension bridge; their modern counterparts. Transportation, electricity, and communication systems. Social, symbolic, and scientific perspectives. Simple formulas for designing and analyzing machines and structures. Illustrated lectures. Readings include the writings of engineers as well as social and scientific critics.

292 The Electrical and Electronic Revolutions (also EE 292)
Spring. 3 credits. Approved for humanities distribution, not for EE or as a technical elective.
R. Kline.
A survey of the history of electricity in society from the telegraph to the personal computer. The course considers both the technical and social history of telecommunication, the electric power industry, microelectronics, and computers. Emphasis is placed on the changing relationship between science and technology, the institutional context of research and development, and the electrical engineer and society.

301 Writing in Engineering
Fall and spring. Can be used to satisfy requirements in expressive arts or as a free or approved elective.
Offered only in conjunction with "writing-intensive" engineering courses. Faculty from the college's Writing Program prepare students for writing assignments and guide them through composing, drafting, editing, and revising. Strengthens understanding of the course materials and communication skills. Work is discussed in class and in individual conferences. May be taken more than once, with different engineering courses, but may not be taken independently.

321 Microeconomic Analysis (also CEE 321 and Economics 313, lecture 5)
Fall. 4 credits. Prerequisite: one semester of calculus. A social science elective for engineering students.
R. E. Schuler.
Intermediate microeconomic analysis similar to Economics 313 but emphasizing mathematical techniques and engineering-design implications. Theory of consumer choice and efficient production; analysis of monopoly and competitive markets; theories of distribution, market equilibrium, and welfare economics.

322 Economic Analysis of Government (also CEE 322 and Economics 308)
Spring. 4 credits. Prerequisites: one semester of calculus, plus CEE 321 or Economics 313. A social science elective for engineering students.
R. E. Schuler.
Analysis of government intervention in a market economy and implications for engineering planning and design. Market imperfections, public goods and public decision making, public finance, cost-benefit analysis of government projects, environmental regulation, risk management, and macroeconomic topics.

323 Engineering Economics and Management (also CEE 323)
Spring. 3 credits. Primarily for juniors and seniors.
D. P. Loucks.
Introduction to engineering and business economics and to methods of operations research. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. Project management, inflation, taxation, depreciation, financial planning, and basic operations-research techniques of simulation and optimization are introduced and applied to economic investment problems.

350 Engineering Communications
Fall and spring. 3 credits. Limited to 17 students.
Instruction and practice in written, oral, and visual presentation. Communications in real-life engineering contexts are analyzed; assignments include case studies or problems which resemble actual engineering work. The class also considers the social and ethical implications of communications. By composing letters, memoranda, summaries, instructions, explanations, proposals, and reports, students learn to address audiences having different levels of technical expertise. Some assignments include oral or graphic presentation. The goal throughout is clear, well-organized, responsible, and graceful professional communication.

355 Understanding Cultural Differences in the Engineering Work Environment
Fall and spring. 1 credit. Open to sophomores, juniors, seniors, and graduate students from all Cornell academic units.
E. P. Gordon.
This seminar prepares students for the variety of cultural experiences they will encounter in industry and improves their opportunities to succeed in a multicultural work environment. Students explore the customs, values, and beliefs of different cultures. Much attention is given to ways of communicating across cultures, techniques for teamwork and building relationships with supervisors and peers, and skills for taking advantage of the positive opportunities inherent in a diverse work force. Both corporate professionals and Cornell faculty members from throughout the university offer lectures.

360 Ethical Issues in Engineering
Spring. 3 credits. A social-science elective for engineering students. Open to juniors and seniors.
3 lecs.
A discussion of ethical issues encountered in engineering practice, such as the rights of engineers in corporations, responsibility for harmful actions, whistleblowing, conflicts of interest, and decision making based on cost-benefit analysis. Use of codes of ethics of professional engineering societies and ethical theory to help sort conflicting obligations the engineer may feel toward public safety, professional standards, employers, colleagues, and family. Students will present a case study to the class, along the lines of the Space-Shuttle Challenger disaster, the Kansas City Hyatt-Regency Hotel walkway failure, or the Cornell computer "worm".

[400 Science, Risk, and Public Policy (also T&AM 400 and Economics 358)
Fall. 3 credits. Not offered 1990–91.
The scientific and humanistic bases of risk assessment and management, examined from a variety of perspectives. Emphasis on the measurement of natural and social phenomena; the psychological and political components in assessing the human and economic costs of risk; and the policies that individuals, institutions, and governments establish to manage risks.]

Introduction to Engineering Courses

110 The Laser and Its Applications in Science, Technology, and Medicine (also A&EP 110)
Fall, spring. 3 credits.
2 lecs, 1 lab.
The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser-induced chemistry, Raman spectroscopy, frequency doubling, and interferometry. Guest lectures by prominent medical and industrial scientists introduce students to current fields of laser application and research.

111 Elements of Materials Science and Engineering (also MS&E 201)
Fall. 3 credits.
Relations between atomic structure and macroscopic properties of such diverse materials as metals, ceramics, and polymers. Properties discussed include magnetism, superconductivity, insulation, semiconductivity, mechanical strength, and plasticity. Design problems involving microelectronics, superconducting power transmission lines, synthetic bones and joints, ceramic engines, etc.

112 Introduction to Chemical Engineering (also Chem E 112)
Fall, spring. 3 credits. Limited to freshmen.
2 lecs, 1 rec. F. Rodriguez, M. L. Shuler.
This course is designed to acquaint students with the scope of chemical engineering. Topics such as polymers, fluid flow, and plant design will be introduced at an elementary level. Quantitative discussions buttressed by lecture demonstrations will show how the engineering approach differs from a purely scientific one. The rapid solving of numerical problems is emphasized in homework and on tests.

113 Computer-aided Design in Environmental Systems (also CEE 113)
Fall. 3 credits.
2 lecs, 1 sec. C. A. Shoemaker.
Planning, design, and management of environmental systems. Emphasis on use of computer-aided techniques, including interactive computer graphics. Sample problems will address public-systems issues and water-quality management. The objective of the course is to provide students with an opportunity to experiment with alternative design and management strategies in several areas of environmental engineering.

115 Engineering Application of Operations Research (also OR&IE 115)
Fall, spring. 3 credits.
2 lecs, 1 lab.
Techniques for optimal decision making and engineering design. Computer graphics and mathematical modeling. Allocation of scarce resources, simulation of complex systems, design and analysis of networks, strategies in competitive games. Engineering applications and problem solving will be stressed.

116 Modern Structures (also CEE 116)
Fall, spring. 3 credits.
2 lecs, 1 sec. M. Sansalone.
An introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structures carry loads. Concepts are illustrated by a series of case studies of major structures such as spacecraft, skyscrapers, bridges, shell structures, and dams. The philosophy of engineering design and lessons learned from structural failures are discussed. The Computer-Aided Design Instructional Facility (CADIF) and the Craig Miller Laboratory for Structural Modeling in Hollister Hall are used to demonstrate how engineering materials and structures behave under load. A semester project involves the design and construction of a small balsa-wood bridge.

117 Introduction to Mechanical Engineering (also M&AE 117)
Fall. 3 credits. Consists of two half-term minicourses chosen from a list of three. Two of these minicourses alternate; the third (Drawing and Engineering Design) is offered every half term but has limited enrollment.
2 lecs, 1 lab.
Drawing and Engineering Design (see Engr 102) will enable students without prior mechanical drawing experience to understand and create basic engineering graphics. The other two minicourses provide an introduction to topics of current interest typifying two broad areas within mechanical engineering: fluid and thermal sciences, and mechanical systems and manufacturing. Emphasis is on the practical applications of this knowledge.

119 Introduction to Manufacturing Engineering (also M&AE 119 and OR&IE 119)
Spring. 3 credits.
2 lecs, 1 lab.
Engineering considerations in the design, manufacture, distribution, and service of products. Transformation from functional requirements to material, processing, assembly, and inspection requirements; design and management of manufacturing facilities and distribution channels.

121 Fission, Fusion, and Radiation (also NS&E 121)
Spring. 3 credits.
2 lecs, 1 lab demonstration.
A lecture, demonstration, and laboratory course on (1) the physical nature and biological effects of nuclear radiation; (2) the benefits and hazards of nuclear energy; (3) light-water reactors, breeder reactors, and fusion reactors; and (4) the uses of nuclear radiation in physical and biological research. The laboratory work and demonstrations involve criticality and the control of Cornell's two research reactors; detection of, and protection against, nuclear radiation; neutron activation analysis using gamma-ray spectroscopy; and plasma sources and devices.

123 Sensors and Actuators
Fall. 3 credits.
2 lecs, 1 lab.
A sensor or an actuator is the element by which information is converted from one form of energy to another. It is the key component in all measurement and control systems. This course will focus on the operational features of a wide variety of sensors and actuators that are used in scientific and engineering metrology, in industrial process control applications, and in consumer products. The devices may be based on electrical, mechanical, acoustical, optical, and thermal phenomena. Students will measure the parameters of various thermo-mechanical sensors and actuators and they will be expected to design, fabricate, and verify the operation of a sensor meeting specific design objectives.

172 Introduction to Artificial Intelligence
Spring. 4 credits. Recommended: CS 100 or 101, or equivalent computer experience. Enrollment my be limited.
3 lecs, 2 evening exams.
A hands-on introduction to concepts in artificial intelligence. Topics may include heuristic search, game playing, automated theorem proving, natural-language processing, expert systems, neural networks and/or machine learning. Students will use workstation environments to gain software laboratory experience. Interested students need not be proficient programmers to take this class.

185 Art, Isotopes, and Analysis (also MS&E 285, Physics 200, Archaeology 285, English 285, and Art 372)
Spring. 3 credits.
3 lecs. J. W. Mayer, S. Taft, D. Eddy.
The analysis of paintings and rare books and the physical concepts underlying modern analytical techniques. Each week a work of art will be discussed, focusing on the historical and technical aspects of its creation and modern analysis of it. Visual, infra-red, and x-ray examinations provide insight into the physical properties. Pigments are identified by the radiation emitted in electronic transitions. The ratio of isotopes can be used to identify the geographical origin of a particular pigment and also as a dating method. The same analytical techniques are also discussed from the viewpoint of archaeological investigations.

Engineering Distribution Courses

201 Introduction to the Physics and Chemistry of the Earth (also Geol 201)
Spring. 3 credits. Prerequisites: Mathematics 191, Physics 112, and Chemistry 207.
2 lecs; 1 rec, lab, or field trip.
L. M. Cathles.
Formation of the solar system, accretion and evolution of the earth, radioactive isotopes and the geological time scale, rocks and minerals, the continents and the oceans, erosion and sedimentation, weathering processes, the earth as a heat engine, volcanism, seismology, gravity, magnetism, plate tectonics, deformation of the earth's crust, comparative planetology.

202 Mechanics of Solids
Fall, spring. 3 credits. Prerequisite: coregistration in Mathematics 293.
2 lecs, 1 rec, 4 labs each semester, evening exams.
Principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, plane stress; Mohr's circle; bending and torsion of bars; buckling and plastic behavior.

203 Dynamics
Fall, spring. 3 credits. Prerequisite: coregistration in Mathematics 294.
2 lecs, 1 rec, 4 labs each semester, evening exams.
Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

210 Introduction to Electrical Systems (also EE 210)
Fall, spring. 3 credits. Prerequisites or corequisites: Mathematics 293 and Physics 213.
3 lecs and optional tutorial secs.
Circuit elements and laws, analysis techniques, operational amplifiers. Response of linear systems, with an introduction to complex frequency and phasors, forced response, average power, transfer function, pole-zero concepts, and the frequency spectrum. Terminal characteristics of diodes and transistors, linear models, bias circuits, and frequency response of small-signal amplifiers.

211 Computers and Programming (also CS 211)
Fall, spring, summer. 3 credits. Prerequisite: CS 100 or equivalent programming experience.
2 lecs, 1 rec, 2 evening exams.
Intermediate programming in a high-level language and introduction to computer science. Topics include program development, proofs of program correctness, program structure, recursion, abstract data types, data structures, and analysis of algorithms. Pascal is the principal programming language.

219, 220 Mass and Energy Balances (also Chem E 219, 220)
219, fall; 220, spring, summer. 3 credits. Corequisite: physical or organic chemistry; 220 is intended for transfer students who cannot take 219 and requires permission of instructor.
A. Panagiotopoulos, G. F. Scheele.
Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Humidification processes. Chem E 220 differs from 219 in that it uses *only self-paced audiovisual instruction at the convenience of the student.* A minimum of seventy clock hours of audiovisual instruction is required to master the subject matter. Student performance in 220 is evaluated by nine tests.

221 Thermodynamics
Fall, spring. 3 credits. Prerequisites: Mathematics 192 and Physics 112.
3 lecs.
The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, multiphase pure substances, gaseous reactions. Heat-engine and heat-pump cycles, with an introduction to energy-conversion systems.

222 Introduction to Scientific Computation (also CS 222)
Spring. 3 credits. Prerequisites: CS 100 and Mathematics 112, 122, or 192.
2 lecs, 3 evening exams.
Students write FORTRAN programs to solve representative problems from elementary calculus. Emphasis is on the design of numerical software that is efficient, reliable, stable, and portable. Special topics include supercomputing and parallel computation.

241 Engineering Computation (also CEE 241)
Fall, spring. 3 credits. Prerequisites: CS 100 and Mathematics 293. Corequisite: Mathematics 294.
J. R. Stedinger, J. F. Abel.
This course develops FORTRAN programming proficiency and provides exposure to engineering computation. The art of top-down, modular program design is illustrated with engineering applications. Included are numerical methods for solving engineering problems such as Taylor-series approximations, truncation and round-off errors, roots of functions, solution of simultaneous linear equations, interpolation, numerical differentiation and integration, the solution of ordinary differential equations, and the context and solution of partial differential equations. Applications are drawn from different areas of engineering.

260 Introductory Engineering Probability (also OR&IE 260)
Fall, spring. 3 credits. Prerequisite: first-year calculus.
3 lecs.
The basic tools of probability and their use in engineering. This may be the last course in probability for some students, or it may be followed by OR&IE 361, Introductory Engineering, Stochastic Processes I, or by OR&IE 370, Introduction to Statistical Theory with Engineering Applications. Definition of probability; random variables; probability distributions, density functions, expected values; jointly distributed random variables; distributions such as the binomial, Poisson, and exponential that are important in engineering and how they arise in practice; limit theorems.

261 Introduction to Mechanical Properties of Materials
Fall, spring. 3 credits.
2 lecs, 1 rec or lab.
The relation of elastic deformation, plastic deformation, and fracture properties to structure and defects on a microscopic scale in metals, ceramics, polymers, and composite materials. Design and processing of materials to achieve high modulus, damping capacity, hardness, fracture strength, creep resistance, or fatigue resistance. Flaw-tolerant design methods using fracture mechanics.

262 Introduction to Electrical Properties of Materials
Spring. 3 credits.
2 lecs, 1 rec or lab.
Electrical and structural properties of semiconductors, the operation of p-n junctions and transistors, and the processing methods used to form modern integrated circuits. Electrical conduction in metal films, semiconductors, bipolar and field-effect transistors and light-emitting diodes. Diffusion, ion implantation, oxidation, metallization, and other process steps in fabricating semiconductor devices. Interplay between structural and electrical properties and their application to the design of semiconductor devices and integrated circuits.

264 Computerized-Instrumentation Design (also A&EP 264)
Fall, spring. 3 credits. Prerequisites: Engr 100 or CS 100.
1 lec, 1 lab.
Design techniques for incorporating small computers into experimental apparatus. Experiments in elementary physics are performed with appropriate sensors wired to computer interfaces, under program control that employs routines written in BASIC and ASSEMBLY languages. Analog-to-digital converters, digital-to-analog converters, optical encoders, and stepping motors are used. Graphic display of data and theoretical fit are emphasized.

270 Basic Engineering Probability and Statistics
Fall, spring. 3 credits. Students who intend to enter the upperclass Field Program in Operations Research and Industrial Engineering should take Engr 260 instead of this course. Prerequisite: first-year calculus.
3 lecs, evening prelims.
At the end of this course a student should command a working knowledge of basic probability and statistics as they apply to engineering work. For students who want to have greater depth in probability and statistics, a course in probability (OR&IE 260) followed by a course in statistics (OR&IE 370) is recommended.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

Courses in agricultural and biological engineering will be found in the section listing the offerings of the College of Agriculture and Life Sciences.

APPLIED AND ENGINEERING PHYSICS

110 The Laser and Its Applications in Science, Technology, and Medicine (also Engr 110)
Fall, spring. 3 credits. This is a course in the Introduction to Engineering series.
2 lecs, 1 lab.
For description see Engineering Common Courses.

264 Computerized-Instrumentation Design (also Engr 264)
Fall, spring. 3 credits. Prerequisites: Engr 100 or CS 100.
1 lec, 1 lab.
For description see Engineering Common Courses.

303 Introduction to Nuclear Science and Engineering I (also NS&E 303)
Fall. 3 credits. Prerequisite: Physics 214 or Mathematics 294.
3 lecs.
For description see NS&E 303.

321 Mathematical Physics I
Fall. 4 credits. Prerequisite: Math 294. Intended for upper-level undergraduates in the physical sciences.
4 lecs.
Review of vector analysis; complex variable theory, Cauchy-Rieman conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations, Green's functions, Bessel functions. Texts: *Mathematical Methods for Physicists*, by Arfken; *Mathematical Physics*, by Butkov.

322 Mathematical Physics II
Spring. 4 credits. Prerequisite: A&EP 321. Second of the two-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.
4 lecs.
Partial differential equations, separation of variables, wave and diffusion equations, Laplace, Helmholtz and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernals; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant and covariant representations; group theory, matrix representations, class and character. Texts: *Mathematical Methods for Physicists*, by Arfken; *Mathematical Physics*, by Butkov.

333 Mechanics of Particles and Solid Bodies
Fall, summer. 4 credits. Prerequisites: Physics 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor.
3 lecs, 1 rec.
Newton's mechanics; linear oscillations; Lagrangian and Hamiltonian formalism for generalized coordinates and constrained motion; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; basic introduction to relativistic mechanics. Emphasis on physical concepts and applications. (On the level of *Classical Dynamics*, by Marion).

355 Intermediate Electromagnetism
Fall, summer. 4 credits. Prerequisites: Physics 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor.
3 lecs, 1 rec.
Topics: vector calculus, electrostatics, magnetostatics, and induction phenomena; solutions to Laplace's equation in various geometries, electric and magnetic materials, electric and magnetic forces, energy storage, skin effect, quasistatics. Emphasis on physical concepts and applications to design of high-voltage generators, electron guns, and particle accelerators.

356 Intermediate Electrodynamics
Spring. 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor.
3 lecs, 1 rec.
Topics: electromagnetic wave phenomena, transmission lines, waveguides, dispersive media, scattering, radiation, reciprocity, physical optics, special relativity. Emphasis on physical concepts and their application to the design of microwave circuits, antenna arrays, and optically coupled systems.

361 Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: A&EP 333 or Physics 318; coregistration in A&EP 322 or equivalent and in A&EP 356 or Physics 326.
3 lecs, 1 rec.
A first course in the systematic theory of quantum phenomena. Topics include the harmonic oscillator, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory. Analytical solutions of the Schroedinger equation are supplemented with numerical solutions on a microcomputer.

363 Electronic Circuits (also Physics 360)
Fall, spring, summer. 4 credits. Prerequisite: Physics 208 or 213 or permission of instructor; no previous experience with electronics is assumed. Fall term is generally less crowded.
1 lec, 2 labs.
This laboratory course focuses on designing, building, and testing analog, digital, and microprocessor-based circuits that are useful in electronic instrumentation. Analog topics include basic circuit concepts, applications of operational amplifiers in linear circuits, oscillators and comparators, transistor circuits and diodes in power supplies, waveform-shaping circuits, and protective circuits. Students also design and build digital circuits that incorporate Schmidt triggers, comparators, and combinatorial and sequential logic using meduim-scale integrated circuits. The above circuits are also interfaced to a microprocessor whose architecture, machine instruction set, and programming principles are studied. At the level of *Introductory Electronics for Scientists and Engineers*, 2d ed., by R. E. Simpson.

423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: Introductory three-semester physics sequence plus one year of junior-level mathematics.
3 lecs, 1 rec.
Quantum statistical basis for equilibrium thermodynamics, canonical and grand canonical ensembles, and partition functions. Quantum and classical ideal gases and paramagnetic systems. Fermi-Dirac, Bose-Einstein, and Maxwell-Boltzmann statistics. Introduction to systems of interacting particles. At the level of *Thermal Physics*, by Kittel, and *Statistical Physics*, by Mandl.

434 Continuum Physics
Spring. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent.
3 lecs, 1 rec.
Local conservation laws; stress, strain, and rate-of-strain tensors; equations of motion for elastic and viscous response; waves in solids and fluids; dislocations; ideal fluids, potential flow, Bernouli's equation, vorticity and circulation, lift; viscous incompressible flow and the Navier-Stokes equations, Reynolds number, Poiseuille flow in a pipe, Stokes drag on a sphere; boundary layers, Blasius equations; flow instabilities, Rayleigh-Benard convection and the onset of chaotic flow. Introduction to turbulent flow.

436 Physical and Integrated Optics
Spring. 4 credits. Prerequisite: A&EP 355.
3 lecs, 1 lab.
The fundamentals of optics: diffraction, polarization, interference, birefringence, scattering, Fourier optics. Applications to optical waveguides, nonlinear optics, integrated optics, optical storage, coherent detection, optical communications. Emphasis on hands-on experimental laboratory demonstrations and computer synthesis of optical phenomena.

490 Informal Study in Engineering Physics
Credit to be arranged.
Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the staff. The study can take a number for forms; for example, design of laboratory apparatus, performance of laboratory measurements, or theoretical design or analysis. Details to be arranged with respective faculty member.

606 Introduction to Plasma Physics (also EE 581)
Fall. 4 credits. Prerequisites: A&EP 355 or 356 or equivalent. Open to fourth-year students with permission of instructor.
3 lecs.
Motion of charged particles in fields, collisions, plasma waves, Boltzmann equation, microinstabilities, Landau damping, introduction to kinetic theory, introduction to M.H.D., single-fluid equations, Tokamak equilibrium, and stability.

607 Advanced Plasma Physics (also EE 582)
Spring. 4 credits. Prerequisite: A&EP 606.
3 lecs.
Boltzmann and Vlasov equations; waves in hot plasmas; Landau damping, microinstabilities; drift waves, low-frequency stability, collisional effects; method of dressed test particles; high-frequency conductivity and fluctuations; neoclassical toroidal diffusion, high-powered beams.

608 Plasma Astrophysics (also Astronomy 660)
Spring. 2 credits.
Selected topics discussed in detail: (a) the solar corona and the solar wind, (b) hydrodynamic and magnetohydrodynamic flows around compact objects in galactic nuclei, (c) global electrodynamics of double radio sources.

609 Low-Energy Nuclear Physics
Fall. 4 credits. Prerequisite: an introductory course in modern physics, including quantum mechanics.
3 lecs.
The nuclear interaction. Properties of ground and excited states of nuclei; models of nuclear structure; alpha, beta, gamma radioactivity; low-energy nuclear reactions—resonant and nonresonant scattering, absorption, and fission. At the level of *Introduction to Nuclear Physics*, by Enge.

612 Nuclear Reactor Theory
Fall. 4 credits. Prerequisites: a year of advanced calculus and some nuclear physics.
3 lecs.
Physical theory of fission reactors. Fission and neutron interactions with matter; theory of neutron diffusion; slowing down and thermalization; calculations of criticality and neutron flux distribution in nuclear reactors. Reactor kinetics. At the level of *Nuclear Reactor* Theory, by Lamarsh.

615 Membrane Biophysics
Fall. 3 credits.
Molecular structure and supramolecular organization of cell membranes. Model membranes and membrane models. Molecular mechanisms of membrane transport, electrophysiology and cell-cell interaction, molecular channels. Receptors and transmembrane ion channels, molecular basis for Hodgkin-Huxley theory, single-channel recording, sensory transduction mechanisms. Physical probes of membrane processes. Dynamics of membrane processes, lateral mobility, diffusion, and flow. Some current problems in cell-surface function and organization of specialized membrane macrostructures.

633 Nuclear Engineering
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering.
The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, and radiation protection.

634 Nuclear Engineering Design Seminar
Spring. 4 credits. Prerequisite: A&EP 633.
A group design study of a selected nuclear system. Emphasis is on safety, siting, and radiation protection in the design of nuclear systems.

636 Seminar on Thermonuclear Fusion Reactors
Fall. 3 credits. Prerequisite: basic course in plasma physics or nuclear reactor engineering, or permission of instructor. Offered alternate years.
Analysis of various technological and engineering problems in design and construction of fusion reactors. Topics include basic reactor schemes, materials, mechanical and heat-transfer problems, radiation and safety, superconducting magnets, energy conversion, plasma impurities, and economics.

638 Intense Pulsed Electron and Ion Beams: Physics and Technology
Spring. 2 credits. Prerequisites: A&EP 606 (EE 581) and 607 (EE 582) or equivalent, or permission of instructor. Offered alternate years.
Topics include (1) theoretical aspects of intense electron and ion beams, such as equilibria and stability; (2) technology of intense beam production, such as pulsed-power generator principles, and electron and ion diode operation; and (3) applications of intense beams, such as to controlled fusion, microwave generation, and laser pumping. Extensive discussion of experimental results.

651 Nuclear Measurements Laboratory
Spring. 4 credits. Prerequisite: A&EP 609 or equivalent. Primarily for graduate students in nuclear fields. A less-intensive related course, NS&E 551, which has the same lecture but has only one lab period, is intended for students in non-nuclear fields in which nuclear methods are used
One 2-hour lecture and two 1/2 hour labs. D. D. Clark.
Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments and methods. About fifteen experiments are available in radiation detection, attenuation, and measurement; electronic instrumentation, including computerized systems; activation analysis; neutron radiography; neutron moderation and reactor physics; neutron diffraction; and low-energy nuclear physics with neutron beams. The TRIGA reactor and the Zero Power Reactor critical facility are used. Students select seven or eight experiments to meet their interests and needs. At the level of *Radiation Detection and Measurement*, by Knoll.

661 Microcharacterization
Fall. 3 credits. Prerequisites: Physics 112, 213, and 214, or an introductory course in modern physics.
The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterizatation is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.

662 Microprocessing and Microfabrication of Materials
Spring. 3–4 credits (3 credits plus 1 credit for optional laboratory).
Several field trips.
An introduction to the fundamentals of fabricating and patterning thin-film materials and surfaces, with emphasis on electronic materials. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes.

681–689 Special Topics in Applied Physics
Topics, instructors, and credits to be announced each term. Typical topics include quantum superconducting devices, physics of submicron conductors, nonlinear fluctuators, biophysical processes, molecular fluorescence.

711 Principles of Diffraction (also MS&E 610)
Fall. 3 credits. Offered alternate years.
Introduction to diffraction phenomena as applied to solid-state problems. Scattering and absorption of neutrons, electrons, and X-ray beams, with particular emphasis on synchrotron radiation X-ray sources. Diffraction from two- and three-dimensional periodic lattices. Fourier representation of scattering centers and the effect of thermal vibrations. Diffraction from almost periodic structures, surface layers, gases, and amorphous materials. Survey of dynamical diffraction from perfect and imperfect lattices. Several laboratory experiments will be conducted.

751, 752 Project
751, fall; 752, spring. Credit to be arranged. Required for candidates for the M.Eng. (Engineering Physics) degree.
Informal study under the direction of a member of the university faculty. Students are offered research experience through work on a special problem related to their field of interest.

753 Special Topics Seminar in Applied Physics
Fall. 4 credits. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics.
Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, optical, plasma, and solid-state physics, as suggested by the students and coordinated by the instructor.

761 Kinetic Theory (also EE 681)
Fall. 3 credits. Prerequisite: EE 407, Physics 561, or permission of instructor. Offered alternate years.
2 lecs.
For description see EE 681.

762 Physics of Solid Surfaces and Interfaces
Spring. 3 or 4 credits. Lecture course primarily for graduate and qualified senior students. Primarily for beginning graduate students and seniors. Similar to MS&E 703. Offered alternate years.
An experimental approach connecting the basic physics and chemistry of electron and atomic structure with processes at surfaces and interfaces. A critical perspective on principles, with an emphasis on applications and devices from an applied-physics viewpoint. Principles involved in characterization will be discussed more than techniques and equipment. Specific concepts and phenomena will be emphasized, and only those theories and models required for their analysis will be covered. Topics include ultrahigh vacuum, surface crystallography, measurement concepts, gas-solid surfaces, solid-solid interfaces, atomic structure, surface reconstruction, electronic processes, chemical bonding, physical and chemical adsorption, nucleation and growth, particle-solid phenomena, and radiation–solid interface phenomena. At the level of *Physics at Surfaces* by Zangwill.

CHEMICAL ENGINEERING

101 Nonresident Lectures
Spring. No credit.
1 lec. G. F. Scheele and guest lecturers.
Given by lecturers invited from industry and from selected departments of the university to assist students in their transition from college to industrial life.

112 Introduction to Chemical Engineering (also Engr 112)
Fall, spring. 3 credits. Limited to freshmen.
2 lecs, 1 rec. F. Rodriguez, M. L. Shuler.
For description see Engineering Common Courses.

219 Mass and Energy Balances (also Engr 219)
Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor.
3 lecs. 1 computing session.
A. Panagiotopoulos.
For description see Engineering Common Courses.

220 Mass and Energy Balances (also Engr 220)
Spring, summer. 3 credits. Corequisite: physical or organic chemistry and permission of instructor. Intended for transfer students who cannot take Chem E 219.
G. F. Scheele.
Self-paced audiovisual instruction in the material of Chem E 219. For description see Engineering Common Courses.

313 Chemical Engineering Thermodynamics
Fall. 4 credits. Corequisite: physical chemistry.
4 lecs, 1 computing session.
K. E. Gubbins.
A study of the first and second laws, with application to batch and flow processes. Thermodynamic properties of fluids; applications of thermodynamics to compressors, power cycles, refrigeration; thermodynamic analysis of processes. Thermodynamics of mixtures, phase equilibria and phase diagrams. Estimation methods. Heat effects, chemical equilibria.

323 Fluid Mechanics
Fall. 3 credits. Prerequisites: Chem E 219 and engineering mathematics sequence.
3 lecs, 1 computing session. D. L. Koch.
Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

324 Heat and Mass Transfer
Spring. 3 credits. Prerequisite: Chem E 323.
3 lecs, 1 computing session.
D. A. Hammer.
Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

332 Analysis of Separation Processes
Spring. 4 credits. Prerequisites: Chem E 313 and 323.
3 lecs, 1 computing session.
G. F. Scheele.
Analysis of separation processes involving phase equilibria and mass transfer; some use of the digital computer. Phase equilibria; binary, multicomponent, and extractive distillation; liquid-liquid extraction; gas absorption.

390 Reaction Kinetics and Reactor Design
Spring. 3 credits. Prerequisites: Chem E 313 and 323.
3 lecs. A. B. Anton.
A study of chemical reaction kinetics and principles of reactor design for chemical processes.

432 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: Chem E 323, 324, 332, and 390.
2 lecs, 1 lab. G. F. Scheele.
Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

462 Chemical Process Design
Spring. 4 credits. Prerequisite: Chem E 432.
P. Harriott and R. P. Merrill.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

472 Process Control
Spring. 3 credits. Prerequisites: Chem E 324, 332, and 390.
3 lecs, 1 lab. P. Clark.
Analysis of the dynamics of chemical processes and design of feedback control systems with emphasis on control of chemical reactors and separation systems.

490 Undergraduate Projects in Chemical Engineering
Variable credit.
Research or studies on special problems in chemical engineering.

564 Design of Chemical Reactors
Spring. 3 credits. Prerequisite: Chem E 390 or equivalent.
3 lecs. P. Harriott.
Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of data for gas-solid, gas-liquid, and three-phase reaction systems.

565 Design Project
Spring. 3 or 6 credits. Required for students in the M.Eng.(Chemical) program.
Staff.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

566 Computer-aided Process Design
Spring. 3 credits. Prerequisite: Chem E 332 or equivalent.
3 lecs. P. Clark.
An introduction to the synthesis and use of computer systems for steady-state simulation and optimization of chemical processes. Synthesis of heat exchanger networks and separation systems.

590 Special Projects in Chemical Engineering
Variable credit. Limited to graduate students.
Non-thesis research or studies on special problems in chemical engineering.

640 Polymeric Materials
Fall. 3 credits.
3 lecs. F. Rodriguez.
Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

642 Polymeric Materials Laboratory
Spring. 2 or 3 credits. Prerequisite: Chem E 640.
F. Rodriguez.
Experiments in the formation, characterization, fabrication, and testing of polymers.

643 Introduction to Bioprocess Engineering
Fall. 3 credits. Prerequisite: Chem E 390 or permission of instructor. No prior background in the biological sciences required.
3 lecs. M. L. Shuler.
A discussion of principles involved in using microorganisms and enzymes for processing. Application to food and fermentation industries and to biological waste treatment.

645 Advanced Concepts in Biological Engineering
Spring. 3 credits. Prerequisite: Chem E 643 or equivalent or permission of instructor.
3 lecs. D. A. Hammer.
Fundamentals of biochemical engineering science with emphasis on enzyme processing, mathematical models of cell growth, bioreactors, product recovery, bioseparations, the use of tissue culture, and genetically modified organisms.

[646 Controlled Cultivation of Microbial Cells
Spring (January intersession). 3 credits.
Prerequisite: Microbiology 291 or equivalent.
Not offered 1990–91.
Staff.
A projects course. Use of batch- and continuous-stirred jars to explore the physiology of microorganisms under conditions simulating industrial practice.]

648 Polymers in Electronics and Related Areas
Spring. 3 credits. Prerequisite: 640 or permission of instructor.
3 lecs. F. Rodriguez.
Applications of polymers as resists for microlithography, as insulators, and as conductors. Radiation effects, polymer synthesis, and surface characterization. Additional special topics may be covered.

661 Air Pollution Control
Fall. 3 credits.
3 lecs. P. Harriott.
Origin of air pollutants. Design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

673 Adsorption and Catalysis
Fall. 2 credits.
R. P. Merrill.
The physics and chemistry of adsorption on reactive surfaces and catalysis. Emphasis on the use of modern spectroscopic techniques to determine the geometric structure, electronic structure, and reaction sequences on well-defined surfaces. Discussion of several catalytic systems.

675 Synthetic Polymer Chemistry (also MS&E 671 and Chemistry 671)
Fall. 3 credits. Prerequisites: Chem 359–360 or equivalent or permission of instructor. MS&E 620 is recommended.
3 lecs. J. M. J.Frechet.
For description see Chemistry 671.

681 Dynamics of Colloidal Systems
Fall. 3 credits. Prerequisite: basic understanding of thermodynamics and fluid dynamics.
3 lecs. A. Z. Panagiotopoulos and W. L. Olbricht.
Fundamental descriptions of colloidal systems under equilibrium and non-equilibrium conditions. Phase equilibria of surfactant systems, thermodynamics of micelle formation, forces between colloidal particles, electrokinetic phenomena, flocculation and aggregation, transport of surfactant in interfacial systems, stability of emulsions, and dynamics of thin films. Open to advanced undergraduates and graduate students from all fields.

711 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: Chem E 313 or equivalent.
3 lecs. P. Clancy.
Postulatory approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problems in chemical engineering. Introduction to statistical mechanical ensembles, phase transitions, Monte Carlo methods, and theory of liquids.

713 Chemical Kinetics and Dynamics
Fall. 3 credits. Prerequisite: Chem E 390 or equivalent.
3 lecs. J. R. Engstrom.
Microscopic and macroscopic viewpoints. Connections between phenomenological chemical kinetics and molecular reaction dynamics. Reaction cross sections, potential energy surfaces, and dynamics of biomolecular collisions. Molecular beam scattering. Transition state theory. Unimolecular reaction dynamics. Complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation. Reactions in heterogeneous media. Free-radical mechanisms in combustion and pyrolysis.

721 Thermodynamics and Phase Change Heat Transfer (also M&AE 652)
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.
C. T. Avedisian.
For description see M&AE 652.

731 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisite: Chem E 323 and 324 or equivalent.
3 lecs. D. L. Koch.
Derivation of the equations of motion for Newtonian fluids. Low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer.

732 Diffusion and Mass Transfer
Spring. 2 credits. Prerequisite: Chem E 731 or equivalent.
C. Cohen.
Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition.

[734 Fluid Mechanics of Suspensions
Spring. 3 credits. Prerequisite: Chem E 731, M&AE 601, or equivalent. Offered alternate years. Not offered 1990–91.
D. L. Koch.
Relationship between macroscopically observed transport and rheological behavior of suspensions and composites, and underlying transport processes occurring on the particle-length scale. Methods of treating interparticle hydrodynamic interactions. Derivation of macroscopic properties using ensemble averages, renormalization, and dynamic simulations. Applications will include free suspensions of solid spheres, fibers, and bubbles; composite solids; and porous media.]

741 Selected Topics in Biochemical Engineering
Fall, spring. 1 credit (may be repeated for credit). Prerequisite: Chem E 643 or permission of instructor.
D. A. Hammer, M. L. Shuler.
Discussion of current topics and research in biochemical engineering for graduate students.

745 Physical Polymer Science I
Fall. 3 credits. Prerequisite: Chem E 711 or equivalent. Offered alternate years.
C. Cohen.
Thermodynamic properties of dilute, semidilute, and concentrated solutions from both classical and scaling approaches. Characterization techniques of dilute solutions: osmometry, light scattering, viscometry, and sedimentation. Rubber elasticity; mechanical and thermodynamic properties of gels. Polymer melts: equations of state and glass transition phenomena.

751 Mathematical Methods of Chemical Engineering Analysis
Spring. 4 credits.
3 lecs. P. H. Steen.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbation, multiple scales, asymptotic analysis. Linear and nonlinear ordinary differential equations, partial differential equations.

[753 Analysis of Nonlinear Engineering Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: Chem E 751 or equivalent. Offered alternate years. Not offered 1990–91.
3 lecs. P. H. Steen.
Elements of bifurcation theory. Branch-following techniques. Stability of discrete and continuous systems. Application to population-dynamics, reaction-diffusion, and hydrodynamic systems using software for continuation problems.]

772 Theory of Molecular Liquids
Spring. 3 credits. Prerequisite: Chem E 711 or equivalent. Offered alternate years.
K. E. Gubbins.
Theory of intermolecular forces, and equilibrium statistical mechanics for nonspherical molecules. Distribution functions. Applications to thermodynamics of such fluids using integral equation and perturbation theory techniques. Mixture properties, phase diagrams for mixtures with polar or quadrupolar components. Surface properties.

774 Atomistic Simulation of Materials
Spring. 3 credits. Prerequisite: Competence in FORTRAN, PASCAL, or C. Prior knowledge of statistical mechanics helpful.
2 lecs, 1 computer lab. P. Clancy.
The statistical mechanical theory behind Monte-Carlo and molecular-dynamics computer-simulation techniques. Strong emphasis is placed on students writing their own MC and MD code. Calculation of distribution functions, thermodynamic, kinetic and structural properties. Introduction to the application of computer graphics to simulation. Interparticle forces and application of atomistic simulation of systems containing metals, semiconductors, and biological materials. Issues of code efficiency and vectorization.

790 Seminar
Fall, spring. 1 credit each term.
General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering.

792 Advanced Seminar in Thermodynamics
Fall, spring. 1 credit.
K. E. Gubbins, A. Panagiotopoulos.
A forum for talks by graduate students and faculty members on topics of current interest in thermodynamics and statistical mechanics.

890 Thesis Research
Variable credit.
Thesis research for the M.S. degree in chemical engineering.

990 Thesis Research Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING

General

113 Computer-aided Design in Environmental Systems (also Engr 113)
Fall. 3 credits.
2 lecs, 1 sec. C. A. Shoemaker.
For description see Engineering Common Courses.

116 Modern Structures (also Engr 116)
Fall, spring. 3 credits.
2 lecs, 1 sec. M. Sansalone.
For description see Engineering Common Courses.

241 Engineering Computation (also Engr 241)
Fall, spring. 3 credits. Prerequisites: CS 100 and Mathematics 293. Corequisite: Mathematics 294.
J. F. Abel, J. R. Stedinger.
For description see Engineering Common Courses.

304 Uncertainty Analysis in Engineering
Fall. 4 credits. Prerequisite: first-year calculus.
J. R. Stedinger.
An introduction to probability theory, statistical techniques, and uncertainty analysis, with examples drawn from civil, environmental, agricultural, and related engineering disciplines. The course covers data presentation, probability theory, commonly used probability distributions, parameter estimation, goodness-of-fit tests, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, models of vehicle arrivals, analysis of return-period calculations, and distributions describing wind speeds, floods, pollutant concentrations, and soil and material properties.

309 Special Topics in Civil and Environmental Engineering
Fall, spring. 1–6 credits.
Staff.
Supervised study by individuals or groups of upper-division students on one or more specialized topics not covered in regular courses.

501 Civil and Environmental Engineering Design Project I
Fall. 3 credits. Required for students in the M.Eng.(Civil) program.
School faculty and visiting engineers.
Design of major civil engineering project. Planning and preliminary design in fall term; final design in January intersession (CEE 502).

502 Civil and Environmental Engineering Design Project II
Spring (work done during January intersession). 3 credits. Required for students in the M.Eng.(Civil) program. Prerequisite: CEE 501.
School faculty and visiting engineers.
A continuation of CEE 501.

503 Professional Practice in Engineering
Spring. 3 credits. Required for and limited to students in the M.Eng.(Civil) program.
W. R. Lynn.
Financial, legal, regulatory, ethical, and business aspects of engineering practice are examined in detail. Students are expected to develop their understanding of the interrelations among the physical, social, economic, and ethical constraints on engineering design.

601 Water Resources and Environmental Engineering Seminar
Fall, spring. 1 credit.
Staff.
Presentation of topics of current interest.

Remote Sensing

411 Remote Sensing: Environmental Applications (also SCAS 461)
Spring. 3 credits. Prerequisite: permission of instructor.
2 lecs, 1 lab. W. R. Philipson.
A survey of how remote sensing is applied in various environmental disciplines. Laboratory emphasis is on using aircraft and satellite imagery for inventorying and monitoring surface features in engineering, planning, agriculture, and natural resource assessments.

610 Remote Sensing Fundamentals (also Agronomy 660)
Fall. 3 credits. Prerequisite: permission of instructor.
2 lecs, 1 lab. W. R. Philipson.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors; sensor and ground-data aquisition; data analysis and interpretation; and project design.

[612 Physical Environment Evaluation
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
2 lecs, 1 lab. Staff.
Physical environmental factors affecting engineering planning decisions: climate, soil and rock conditions, water sources. Evaluation methods: interpretation of meteorological, topographic, geologic, and soil maps, aerial photographs, and subsurface exploration records.]

[613 Image Analysis I: Landforms
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
2 lecs, 1 lab. Staff.
Analysis and interpretation of aerial photographs for a broad spectrum of soil, rock, and drainage conditions. Specific fields of application are emphasized.]

[614 Image Analysis II: Physical Environments
Fall. 3 credits. Prerequisite: CEE 612 or 613. Not offered 1990–91.
2 lecs, 1 lab. Staff.
Study of physical environments using aerial photographs and other remote sensing methods. Conventional photography; spectral, space, and sequential photography; thermal and radar imageries. Arctic, tropic, arid, and humid climate regions. Project applications.]

615 Digital Image Processing
Fall. 3 credits. Prerequisites: facility with algebra (Mathematics 109) and statistics (CEE 304 or Agricultural Economics 310), or permission of instructor.
W. D. Philpot.
An introduction to digital image-processing concepts and techniques, with emphasis on techniques used in remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification. Assignments will require the use of image-processing software and graphics.

616 Digital Image Analysis
Spring. 3 credits. Prerequisites: calculus (Mathematics 192), statistics (CEE 304 or Agricultural Economics 310), and computer programming (FORTRAN or C), or permission of instructor.
W. D. Philpot.
Pattern recognition, feature extraction, and classification of digital images as used in remote-sensing applications. Both spectral and spatial patterns will be considered. Assignments will require the development of computer programs and will make use of existing image-processing software and graphics.

617 Project—Remote Sensing
On demand. 1–6 credits.
Staff.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

618 Special Topics—Remote Sensing
On demand. 1–6 credits.
Staff.
Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

619 Seminar in Remote Sensing (also SCAS 662)
Spring. 1 credit. S-U grades only.
W. R. Philipson.
Lectures on current developments in assessing earth resources or the environment. Each week a different topic on remote sensing or geographic information systems is presented by specialists from government, industry, Cornell, or other research or academic institutions.

710 Research—Remote Sensing
On demand. 1–6 credits.
Staff.
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

810 Thesis—Remote Sensing
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Environmental and Public Systems

321 Microeconomic Analysis (also Engr 321 and Economics 313, section 5)
Fall. 4 credits. Prerequisite: one semester of calculus. A social science elective for engineering students.
R. E. Schuler.
For description see Engineering Common Courses.

322 Economic Analysis of Government (also Engr 322 and Economics 308)
Spring. 4 credits. Prerequisites: one semester of calculus, plus CEE 321 or Economics 313. A social science elective for engineering students.
R. E. Schuler.
For description see Engineering Common Courses.

323 Engineering Economics and Management (also Engr 323)
Spring. 3 credits. Primarily for juniors and seniors.
D. P. Loucks.
For description see Engineering Common Courses.

325 System Perspectives on Solid Waste Management
Fall. 3 credits. Open to juniors and seniors from all colleges who have had freshman chemistry or physics, and a calculus course.
D. W. Ditz, R. E. Schuler.
An introduction to alternative technological solutions to society's solid waste problems with the interdisciplinary perspective of how those proposals interact with a broad range of public, environmental, and economic concerns. Using engineering, economic, legal, and political professionals, an integrated systems approach to problem solving will be emphasized and will culminate in a semester project in solid waste management planning that requires written and oral presentations by small groups. Field trips to operating facilities.

528 Interactive Modeling with Microcomputer Graphics
Spring. 3 credits. Prerequisite: Engr 241 or Engr 222, and permission of instructor.
D. P. Loucks.
Principles of interactive modeling and its application to the design and management of civil, environmental, and water-resources engineering systems. Topics will include tablet and video digitizing, image processing (including editing and overlaying pictures and maps), contouring, opaque and transparent coloring, generating 2-D and 3-D colored graphs, and developing pre- and postprocessors to permit the interactive use of various models for synthesizing designs and operating policies and for predicting system performance. Microcomputers with high-quality color-graphics capabilities will be available together with numerous interactive graphics subroutines for use in C or FORTRAN programs.

529 Water and Environmental Resources Problems and Policies
Fall. 3 credits. Intended primarily for graduate engineering and non-engineering students but open to qualified upperclass students. Prerequisite: permission of instructor.
Lec-disc. D. Allee, L. B. Dworsky.
Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.

620 Water-Resources Systems I
Fall. 3 credits. Prerequisite: CEE 323 or equivalent.
D. P. Loucks.
Development and application of techniques for deterministic and stochastic optimization and simulation in water-resources planning. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality models.

621 Water-Resources Systems II
Spring. 3 credits. Prerequisites: CEE 304 and 620 or permission of instructor.
J. R. Stedinger, D. P. Loucks.
Advanced topics in the development and use of optimization and simulation models for water-resources planning. Stochastic hydrologic modeling and stochastic river-basin and reservoir models. Incorporates material in CEE 622.

622 Stochastic Hydrologic Modeling
On demand. 2–3 credits. Prerequisite: OR&IE 370 or CEE 304.
J. R. Stedinger.
Develops statistical techniques used to analyze and model stochastic processes. Examination of Box-Jenkins, fractional-Brownian noise, and other single- and multiple-site stream-flow models; review of flood-frequency estimation issues; analysis of simulation output; parameter estimation and Bayesian inference.

623 Water Quality Systems Analysis
Spring. 3 credits. Prerequisites: Math 294 and optimization (CEE 323, Ag En 475, or OR&IE 320/520).
C. A. Shoemaker.
Applications of optimization and simulation methods to the design and operation of facilities for managing the quality of surface- and groundwater. Applications include location of wastewater and hazardous-waste facilities, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated aquifers. Optimization techniques include separable convex (linear) programming, integer programming, and nonlinear programming.

[626 Modeling Managed Ecosystems
Fall, on demand. 3 credits. Prerequisites: Mathematics 294, statistics, and population ecology. Not offered 1990–91.
C. A. Shoemaker.
The use of optimization and statistical estimation procedures to develop strategies for managing populations and ecosystems. Primary focus will be on pest management, poikilotherm populations, and mitigation of potential pollution from pesticides.]

721 Environmental and Water Resources Systems Analysis Design Project
On demand. Variable credit. Prerequisite: permission of instructor. May extend over two semesters.
Staff.
Design or feasibility study of environmental or water resources sytems, supervised and assisted by one or more faculty advisers; individual or group participation. Final report required.

722 Environmental and Water Resources Systems Analysis Research
On demand. Variable credit. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken.
Staff.
Investigations of particular environmental or water resources systems problems.

728 Environmental and Water Resources Systems Analysis Colloquium
Fall, spring. 1 credit.
Staff.
Lectures in various topics related to environmental or water resources systems planning and analysis.

729 Special Topics in Environmental or Water Resources Systems Analysis
On demand. Variable credit.
Staff.
Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

Fluid Mechanics and Hydrology

331 Fluid Mechanics
Fall. 4 credits. Prerequisite: Engr 203 (may be taken concurrently).
3 lecs, 1 rec, evening exams. P. L.-F. Liu.
Hydrostatics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, open-channel flow. Elements of design in water supply systems, canals, and other hydraulic schemes.

332 Hydraulic Engineering
Spring. 4 credits. Prerequisite: CEE 331.
2 lecs, 1 lab, field trip. G. H. Jirka.
Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, groundwater flow, and pollutant dispersal. Lectures supplemented by laboratory work and a design project.

430 Descriptive Hydrology
On demand. 2 credits. Intended for non-engineering majors. Prerequisite: permission of instructor.
W. H. Brutsaert.
Introduction to hydrology as a description of the hydrologic cycle and the role of water in the natural environment. Topics include precipitation, infiltration, evaporation, groundwater, surface runoff, floods, and droughts.

431 Geohydrology (also ABEN 471 and Geol 445)
Fall. 3 credits. Prerequisite: permission of instructor.
G. H. Jirka with J.-Y. Parlange and
T. S. Steenhuis (in ABEN) and
A. L. Bloom and L. Cathles (in Geol).
An intermediate course in aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

630 Advanced Fluid Mechanics
Fall. 3 credits. Prerequisite: CEE 331. Offered alternate years.
3 lecs. J. A. Liggett.
Introduction to tensor analysis; conservation of mass, momentum, and energy. Rigorous treatment includes study of exact solutions of the Navier-Stokes equations. Asymptotic approximations at low and high Reynolds numbers. Similitude and modeling. Laminar diffusion of momentum, mass, and heat.

631 Flow and Contaminant Transport Modeling in Groundwater
Spring. 3 credits. Prerequisites: Mathematics 294 or equivalent, Engr 241 or experience in numerical methods and programming, and elementary fluid mechanics.
J. A. Liggett.
Potential flows and their calculation. Numerical methods include finite difference, finite elements, and boundary elements. Fundamental equations of saturated and unsaturated flow in porous media. Flow in fractured media. Numerical modeling of transport in porous media. Diffusion and advective diffusion in one, two, and three dimensions. Anisotropy. Additional terms for reactive substances. The course will include the use of computer programs.

[632 Analytical Hydrology
Spring. 3 credits. Prerequisite: CEE 331. Not offered 1990–91.
W. H. Brutsaert.
Physical and statistical prediction methods for design related to hydrologic processes. Hydrometeorology and evaporation. Infiltration and base flow. Surface runoff and channel routing. Linear and nonlinear hydrologic systems. Storage routing and unit hydrograph methods.]

[633 Flow in Porous Media and Groundwater
Spring. 3 credits. Prerequisite: CEE 331. Not offered 1990–91.
W. H. Brutsaert.
Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells; drought flows; infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement; transient seepage in unsaturated materials.]

[634 Engineering Micrometeorology
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. Not offered 1990–91.
3 lecs. W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.]

635 Coastal Engineering I
Spring. 3 credits. Prerequisite: CEE 331.
3 lecs. P. L.-F. Liu.
Linear wave theory, wave generation by wind, analysis of fluid forces on floating and fixed coastal structures and modification of waves and currents by these structures, coastal processes, and coastal sediment motion.

636 Environmental Fluid Mechanics
Spring. 3 credits. Prerequisite: CEE 655. Offered alternate years.
G. H. Jirka.
Mass- and heat-transport processes in the environment and their interaction with pollutant discharges. Mechanics of discretely and continuously stratified fluids, internal waves, density currents, selective withdrawal, and baroclinic motions. Flow stability, mixing, and turbulence. Turbulent diffusion and shear flow dispersion, including effects of buoyancy. Convective instabilities and mixed-layer dynamics. Concentrated sources of momentum and buoyancy: jets and plumes and their behavior in the environment. Applications to mixing processes in rivers, lakes, the ocean, and the atmosphere.

637 Project—Hydraulics
On demand. Variable credit.
Hours to be arranged. Staff.
The student may elect a design problem or undertake the design and construction of special equipment in the fields of fluid mechanics, hydraulic engineering, or hydrology.

638 Hydraulics Seminar
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering.
Staff.
Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

639 Special Topics in Hydraulics
On demand. Variable credit.
Staff.
Special topics in fluid mechanics, hydraulic engineering, or hydrology.

[730 Coastal Engineering II
Spring. 3 credits. Prerequisite: CEE 635. Not offered 1990–91.
3 lecs. P. L.-F. Liu.
Review of linear and nonlinear theories for ocean waves, applicability of different wave theories to engineering problems, wave-energy transmission, tsunamis, behavior of submerged and floating bodies, harbor agitations, ship waves.]

[732 Unsteady Hydraulics
Spring. 3 credits. Prerequisite: CEE 332 or permission of instructor. Offered alternate years. Not offered 1990–91.
J. A. Liggett.
The physical and mathematical basis for unsteady processes in hydraulic engineering, especially unsteady open-channel flow. Water hammer, unsteady sediment transport, long waves on large bodies of water, circulation. Numerical methods of solution.]

734 Experimental Methods in Hydraulics
On demand. 2 credits. Prerequisite: CEE 331.
G. H. Jirka.
Methods used in planning and conducting laboratory and field experiments in hydraulics and fluid mechanics. Dynamic similarity, modeling laws, and applications. General operating principles and performance characteristics of measurement instruments. Specific devices for measurement of fluid properties, pressure, and flow. Data acquisition, processing, and signal analysis. Laboratory demonstrations.

735 Research in Hydraulics
On demand. Variable credit.
Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

Geotechnical Engineering

341 Introduction to Geotechnical Engineering
Spring. 4 credits.
3 lecs, 1 lab-tutorial. Staff.
Soil as an engineering material. Chemical and physical nature of soil. Engineering properties of soil. Stresses and stress analysis of soil. Basic theory and design for water flow in soil, one-dimensional consolidation of clay and silts, and shear-strength problems. Introduction to slope stability, earth pressure, geosynthetics, and landfill and waste-containment issues. Introduction to laboratory testing. Synthesis of soil analysis and laboratory-test results for the design of engineering structures.

640 Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341.
3 lecs, optional tutorial. Staff.
Soil exploration, sampling, and in-situ testing techniques. Bearing capacity, stress distribution, and settlement. Design of shallow and deep foundations. Compaction and site preparation. Seepage and dewatering of foundation excavations.

641 Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341.
3 lecs, optional tutorial. Staff.
Earth pressure theories. Design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures. Stability of excavation, cut, and natural slopes. Design problems stressing application of course material under field conditions of engineering practice.

642 Highway Engineering (also ABEN 491)
Spring. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently).
2 lecs, 1 lab. L. H. Irwin.
For description see ABEN 491.

643 Pavement Engineering (also ABEN 692)
Fall. 4 credits. Limited to engineering seniors and graduate students. Prerequisites: CEE 341 and 642. Offered alternate years.
3 lecs, 1 lab. L. H. Irwin.
For description see ABEN 692.

647 Design Project in Geotechnical Engineering
On demand. 1–6 credits.
Students may elect to undertake a design project in geotechnical engineering. The work is supervised by a professor in the subject area.

648 Seminar in Geotechnical Engineering
Fall, spring.
Staff.
Presentation and discussion of topics in current research and practice in geotechnical engineering.

649 Special Topics in Geotechnical Engineering
On demand. 1–6 credits.
Staff.
Supervised study of special topics not covered in the formal courses.

740 Engineering Behavior of Soils
Fall. 4 credits. Prerequisite: CEE 341.
3 lecs, 1 lab. Staff.
Detailed study of the physiochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils. Field-testing methods for determining properties based on laboratory testing. Weekly laboratory sessions include in-situ field testing, simple index tests, and complete laboratory characterization of important soil properties.

741 Rock Engineering
Fall. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology.
2 lecs, 1 lab. Staff.
Geological and engineering classifications of intact rock, discontinuities, and rock masses. Laboratory and field evaluation of properties. Stress states and stress analysis. Design of foundations on, and openings in, rock masses. Analysis of the stability of rock slopes.

[744 Advanced Foundation Engineering
Spring. 2 credits. Prerequisite: CEE 640. Not offered 1990–91.
2 lecs. Staff.
A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, pile-driving dynamics, foundations for special structures.]

745 Soil Dynamics
Spring. 4 credits. Prerequisite: permission of instructor.
3 lecs, 1 lab. Staff.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Design of embankments and retaining structures under dynamic loading conditions. Laboratory experiments and demonstrations using resonant column and a range of cyclic testing equipment.

746 Embankment Dam Engineering
Spring. 2 credits. Prerequisites: CEE 641 and 741, or permission of instructor.
2 lecs. Staff.
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.

[747 Case Studies in Geotechnical Engineering
Spring. 3 credits. Prerequisites: CEE 641 and 741. Not offered 1990–91.
Staff.
Study of case histories in geotechnical engineering. Critical evaluation of successful and unsuccessful projects. Oral presentations and engineering report evaluation of each case.]

[748 Tunnel Engineering
Spring. 2 credits. Prerequisites: CEE 641 and 741. Not offered 1990–91.
2 lecs. Staff.
Principles of analysis and design for earth and rock tunnels. Materials, construction methods, stability and support systems, deformations, and performance monitoring.]

749 Research in Geotechnical Engineering
On demand. 1–6 credits.
Staff.
For the student who wants to pursue a particular geotechnical topic in considerable depth.

Environmental Engineering

351 Environmental Quality Engineering
Spring. 3 credits.
3 lecs. L. W. Lion.
Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Emphasis on water-quality control concepts, theory, and methods. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

352 Water Supply Engineering
Fall. 3 credits. Prerequisite: CEE 351 or permission of instructor.
3 lecs. R. I. Dick.
Analysis of contemporary threats to human health by public water supply systems. Criteria and standards for potable-water quality. Water-quality control theory. Design of facilities for obtaining, treating, storing, and distributing water.

651 Microbiology of Water and Wastewater
Fall. 2 credits. Prerequisite: one semester of college chemistry.
2 lecs. J. M. Gossett.
A self-paced autotutorial introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Course work consists of assigned readings, study questions, and brief exams.

653 Chemistry of Water and Wastewater
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor.
3 lec-recs. L. W. Lion.
Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

654 Aquatic Chemistry
Spring. 3 credits. Prerequisite: CEE 653 or Chemistry 287–288.
3 lecs. J. J. Bisogni.
Concepts of chemical equilibria applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination chemistry, redox reactions, adsorption phenomena and chemical-equilibria computer programs. In depth coverage of topics covered in CEE 653.

655 Pollutant Transport and Transformation in the Environment
Fall. 3 credits. Prerequisite: CEE 331.
J. J. Bisogni, G. H. Jirka.
An introduction to the physical transport and chemical and biochemical transformation processes that govern the fate and distribution of pollutants in the environment. Advective and diffusive mass transport, turbulent diffusion and shear-flow dispersion in water or atmosphere, dispersion in groundwater flow, homogeneous and heterogeneous chemical reactions and their effects on transport phenomena, air-water-soil interface transfer processes. Emphasis on physical mechanisms, with some applications to surface water, groundwater, and atmospheric transport and quality models.

658 Sludge Treatment, Utilization, and Disposal
Spring. 3 credits. Prerequisite: CEE 351 or permission of instructor. May not be offered 1990–91.
3 lecs. R. I. Dick.
Analysis of the quantity and quality of residues produced from municipal and industrial water-supply and pollution-control facilities as a function of process design and operational variables; alternatives for reclaiming or disposing of hazardous and nonhazardous residues with assessment of potential environmental impacts; fundamental factors influencing performance of treatment processes for altering sludge properties prior to reuse or ultimate disposal; and considerations in selection and integration of sludge-management processes to approach optimal design.

659 Environmental Quality Engineering Seminar
Spring. 1 credit. Intended for all graduate students in environmental engineering; open to others with permission of instructor.
R. I. Dick.
Presentation and discussion of current research and design projects in environmental engineering.

755 Environmental Engineering Processes I
Fall. 3 credits. Prerequisite: Previous or concurrent enrollment in CEE 653 or permission of instructor.
3 lecs. J. J. Bisogni.
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Analysis and design of treatment processes and systems.

756 Environmental Engineering Processes II
Spring. 3 credits. Prerequisites: CEE 651 and 755, or permission of instructor.
3 lecs. J. M. Gossett.
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Biokinetic analysis and design of biological treatment process.

757 Environmental Engineering Processes Laboratory I
Fall. 1 credit. Prerequisite: concurrent enrollment in CEE 653 and CEE 755.
1 lab. J. J. Bisogni.
Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes; coagulation.

758 Environmental Engineering Processes Laboratory II
Spring. 1 credit. Prerequisite: CEE 651 and concurrent enrollment in CEE 756.
1 lab. J. M. Gossett.
Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy; biochemical and chemical oxygen demand; enzymatic assays for microbial inhibition; disinfection; aerobic and anaerobic biological treatability studies; enumeration of bacteria.

759 Special Topics in Environmental Engineering
On demand. Variable credit.
Hours to be arranged. Staff.
Supervised study in special topics not covered in formal courses.

851 Thesis—Environmental Engineering
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Transportation

361 Introduction to Transportation Engineering
Spring. 3 credits.
A. H. Meyburg.
Introduction to technological, economic, and social aspects of transportation. Emphasis on design and functioning of transportation systems and their components. Vehicle and system technology; traffic flow and control; supply-demand interactions; system planning, design, and management. Institutional and energy issues; environmental impact.

660 Transportation Planning and Policy
Fall. 3 credits. Prerequisite: permission of instructor.
A. H. Meyburg.
Public-sector planning and decision making for transportation. Problems of urban transportation and their implications. A systems-analysis approach to formulation of transportation policy at the local, regional, state, and federal levels. Consideration of urban-transportation planning models.

664 Transportation Systems Design
Spring. 3 credits. Prerequisite: CEE 361.
Staff.
Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

761 Transportation Design Project
On demand. Variable credit.
Staff.
Design or feasibility study of transportation systems, supervised by one or more faculty advisers. Individual or group participation.

762 Transportation Research
On demand. Variable credit.
Staff.
In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

764 Special Topics in Transportation
On demand. Variable credit.
Staff.
Advanced subject matter not covered in depth in other regular courses.

Structural Engineering

371 Structural Behavior
Fall. 4 credits. Prerequisite: Engr 202.
3 lecs, one 2-hour lab, evening exams.
P. Gergely.
Fundamental concepts of structural engineering. Behavior, analysis, and design. Loads, structural form, statically determinate analysis, approximate analysis of indeterminate systems. Use of interactive graphical analysis programs. Fundamentals of behavior and design of steel and concrete members.

372 Structural Analysis
Spring. 4 credits. Prerequisite: CEE 371.
3 lecs, one 2-hour lab, evening exams.
Staff.
Fundamentals of statically indeterminate structures. Moment-area and virtual-work methods of displacement computation. Matrix flexibility and stiffness methods. Moment distribution analysis. Influence lines. Computer applications to practical structures. Role and limitations of analysis in design. The art of structural modeling for analysis and design.

373 Design of Concrete Structures
Fall. 4 credits. Prerequisites: CEE 372 or permission of instructor. Prerequisites or corequisites: CEE 376 and Engr 261.
2 lecs, one 2-hour lab, design project.
A. H. Nilson.
Behavior and design of reinforced concrete, prestressed concrete, and composite structures.

374 Design of Steel Structures
Spring. 4 credits. Prerequisite: CEE 372 or permission of instructor. Prerequisites or corequisites: CEE 376 and Engr 261.
3 lecs, one 2-hour sec, evening exams, design project. G. G. Deierlein, T. Peköz.
Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

376 Civil Engineering Materials
Fall. 3 credits.
2 lecs, 1 lab. K. C. Hover.
Engineering properties of concrete, steel, wood, and other structural materials. Design characteristics and significance of test results of materials used in engineering works. Developing QA/QC programs and writing specifications. Extensive laboratory testing and report writing.

671 Random Vibration
Fall. 3 credits. Prerequisites: M&AE 326, CEE 779, and OR&IE 260; or equivalent and permission of instructor. Offered alternate years.
M. D. Grigoriu.
Review of random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolmogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

672 Fundamentals of Structural Mechanics
Fall. 3 credits. Prerequisite or corequisite: CEE 373.
M. D. Grigoriu.
Theory of elasticity, energy principles, plate flexure, failure theories for structural design, beams on elastic foundation, finite-difference method, plate theory, energy principles, introduction to finite-element method.

673 Advanced Structural Analysis
Fall. 3 credits. Prerequisites: CEE 372 and computer programming.
Evening exams, programming project.
Staff.
Matrix analysis of structures, computer programming of displacement (stiffness) method, use of interactive graphical analysis programs, solution methods, errors and accuracy, special analysis procedures, virtual work in matrix analysis, and introduction to nonlinear analysis.

674 Structural Model Analysis and Experimental Methods
Spring. 3 credits.
2 lecs, 1 lab. R. N. White.
Experimental behavior of structures. Dimensional analysis and similitude. Model materials, fabrication, loading, instrumentation techniques, and use of models in design. Experimental stress analysis. Laboratory exercises and project.

675 Concrete Materials and Construction
Spring. 3 credits. Prerequisite: CEE 376 or equivalent.
2 lecs, 1 lab. K. C. Hover.
Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior. Lab assignments.

678 Low-Cost Housing Primarily for Developing Countries (also Architecture 614)
Fall. 3 credits. May not be offered 1990–91.
2 lecs, conferences. H. Richardson.
A broad, multidisciplinary approach covering technology, architecture, planning, sociology, economy, and cultural aspects. Students work in teams on a term project, applying their own discipline while being introduced to the problems and approaches of other disciplines. For example, engineering students investigate the technological aspects of the subject but also learn about other matters that influence technological decisions, such as cultural and economic factors.

680 Structural Engineering Seminar
Fall, spring. 1 credit. Limited to qualified seniors and graduate students.
Staff.
Presentation of topics of current interest in the field of structures.

[770 Engineering Fracture Mechanics
Fall. 3 credits. Prerequisite: CEE 772 or permission of instructor. Offered alternate years. Not offered 1990–91.
2 lecs, 1 lab. A. R. Ingraffea.
Fundamentals of fracture-mechanics theory. Energy and stress-intensity approaches to fracture. Mixed-mode fracture. Fatigue-crack propagation. Finite- and boundary-element methods in fracture mechanics. Introduction to elastic-plastic fracture mechanics. Interactive computer graphics for fracture simulation. Laboratory techniques for fracture-toughness testing of metals, concrete, and rock.]

772 Finite-Element Analysis
Spring. 3 credits. Prerequisites: CEE 672 and 673, or permission of instructor.
Staff.
Conceptual, theoretical, and practical bases for finite-element analysis in structural mechanics and other disciplines. Development and evaluation of formulations for one-, two-, and three-dimensional elements. Introduction to boundary-element analysis. Interactive computer graphics for finite- and boundary-element analysis.

773 Structural Reliability
Spring. 3 credits.
M. D. Grigoriu.
Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, elementary concepts of probabilistic fracture mechanics.

774 Prestressed Concrete Structures
Spring. 3 credits. Prerequisites: CEE 373 and 376 or equivalent. Recommended: CEE 775.
3 lecs. R. N. White.
Behavior, analysis, design of pretensioned and posttensioned prestressed concrete structures. Flexure, shear, bond, anchorage zone design, cracking, losses. Partial prestressing. Strength, serviceability, structural efficiency of beams, slabs, tension members, frameworks, parking garages, and bridges.

775 Advanced Reinforced Concrete
Fall. 3 credits. Prerequisites: CEE 373 and 376 or equivalent.
3 lecs. A. H. Nilson.
General flexural analysis, deflection analysis, columns with uniaxial and biaxial bending, beam-supported slabs, flat-plate slabs, composite steel-deck slabs, ground-supported slabs, yield-line theory, limit-state analysis, footings, retaining walls, deep beams, tall buildings, and seismic design.

[776 Advanced Design of Metal Structures
Fall. 3 credits. Prerequisite: CEE 374 or equivalent. Not offered 1990–91.
T. Peköz.
Preliminary design of structural systems. Design of members and connections. Behavior and computer-aided design of building frames. Design of composite members.]

777 Advanced Behavior of Metal Structures
Spring. 3 credits. Prerequisite: CEE 374 or equivalent.
T. Peköz.
Analysis of elastic and inelastic stability. Behavior and design of hot-rolled and cold-rolled steel and aluminum members, elements, and frames. Critical review of design specifications.

778 Shell Theory and Design
Fall. 2–3 credits. Offered alternate years.
P. Gergely.
Fundamentals of practical shell theory. Differential geometry of surfaces; membrane and bending theory of shells; analysis and design of cylindrical shells, polygonal domes, and paraboloids.

779 Structural Dynamics and Earthquake Engineering
Spring. 3 credits.
P. Gergely.
Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

780 Advanced Concrete Material Science
Fall. 3 credits. Prerequisites: CEE 376 or equivalent and CEE 675.
K. C. Hover.
Advanced study of the chemistry, physics, and microstructure of cement and concrete. Investigation of cement manufacture and chemistry, hydration reactions and effect of admixtures. Study of microstructure with scanning electron microscopy, and porosimetry. Engineering properties and behavior include failure mechanisms and elastic and viscoelastic behavior. Durability. Student presentations.

782 Advanced Topics in Finite-Element Analysis
Fall. 3 credits. Prerequisite: CEE 772. Offered alternate years.
J. F. Abel, A. R. Ingraffea.
Lectures and colloquia on selected advanced topics and research in progress, including dynamics, nonlinear analysis, shells, fracture mechanics, fluid dynamics, and computer graphics.

783 Civil and Environmental Engineering Materials Project
On demand. 1–3 credits.
Staff.
Individual projects or reading and study assignments involving engineering materials.

784 Design Project in Structural Engineering
Fall, spring. Variable credit.
Students may elect to undertake a design project in structural engineering. The work is supervised by a professor in this subject area.

785 Research in Structural Engineering
On demand. Variable credit.
Hours to be arranged. Staff.
Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

786 Special Topics in Structural Engineering
On demand. Variable credit.
Hours to be arranged. Staff.
Individually supervised study or independent design or research in specialized topics not covered in regular courses.

880 Thesis—Structural Engineering
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Geotechnical engineering: section 01; structural engineering: section 02. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Engineering Management

590 Engineering Management Practice
Fall. 3 credits. Prerequisite: permission of instructor.
K. C. Hover.
An introduction to the work and skills of management. Planning, organizing, communicating, controlling, and correcting will be covered in combination of lectures, readings, outside assignments, in-class role-playing exercises, and talks by visiting speakers.

591 Engineering Management Project
Fall. 3 credits. Prerequisite: permission of instructor.
K. C. Hover, M. A. Turnquist.
An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

592 Engineering Management Project
Spring. 3 credits. Prerequisite: permission of instructor.
K. C. Hover, M. A. Turnquist.
A continuation of CEE 591.

593 Engineering Management Methods I
Fall. 3 credits. Prerequisite: permission of instructor.
M. A. Turnquist.
Engineering management methods with an emphasis on modern interactive-software tools. Case studies are used extensively to illustrate the application of these methods to engineering management problems. Methods covered include spreadsheets, database management, statistical analysis, project scheduling, optimization, and quality control.

594 Engineering Management Methods II
Spring. 3 credits. Prerequisite: permission of instructor.
M. A. Turnquist.
An extension of CEE 593. Modeling of stochastic systems using spreadsheets, distributed databases, simulation of complex systems, and the use of expert systems in engineering management. Extensive use is made of projects and case studies to illustrate the application of these methods.

595 Construction Planning and Operations
Fall. 3 credits. Prerequisite: permission of instructor.
3 lecs. K. C. Hover.
A course on the fundamentals of construction planning: organization of the worksite, construction planning, scheduling, and cost estimating, bidding design of falsework and shoring systems, construction loadings, materials handling for construction, optimization of construction processes, applications of computer methods.

596 Building Systems Integration
Spring. 3 credits. Prerequisite: permission of instructor.
3 lecs. Staff.
Emphasizes the engineering design and construction process as a total systems problem: overall structural planning and the sequence of assembly, impact of assembly details on construction procedures, review of designs for constructability, integration of engineering services, introduction to value engineering, construction documents, and contract administration.

597 Risk Analysis and Management
Spring. 3 credits. Prerequisite: CEE 304 or OR&IE 270 or equivalent.
2 lecs, 1 sec. M. A. Turnquist, J. R. Stedinger.
The analysis and management of risks in technological systems, including energy production, waste disposal, engineering construction, and transportation. Probability models of failure, exposure, and consequences. Public-sector decision making and regulation of risks.

598 Decision Making in Engineering Systems
Spring. 3 credits. Prerequisite: permission of instructor.
3 lecs. Staff.
An examination of the decision-making behavior of managers and users of engineering systems. Such behavior will be addressed from various perspectives, including economic theories of choice, psychological theories of perception and choice, and consumer theories from marketing research.

COMPUTER SCIENCE

The Department of Computer Science is in both the College of Arts and Sciences and the College of Engineering.

100 Introduction to Computer Programming (also Engr 100)
Fall, spring, summer. 4 credits. Students who plan to take CS 101 or 102 and also 100 must take 101 or 102 first.
2 lecs, 1 rec (optional), 3 evening exams.
An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. The subject of the course is programming, not a particular programming language. The principal programming language is Pascal. The course does not presume previous programming experience. An introduction to numerical computing is included, although no college-level mathematics is presumed. Programming assignments are tested and run on interactive, stand-alone microcomputers.

101 The Computer Age (also Engr 101)
Fall, summer. 3 credits. Credit is granted for both CS 100 and 101 only if 101 is taken first.
An introduction to computer science and programming for students in nontechnical areas. The aims of the course are to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics, natural-language processing, and machine intelligence. Students

become acquainted with the notion of an algorithm by writing several programs in Pascal or LISP and testing them on microcomputers. The amount of programming is about half that taught in CS 100. Each student writes a term paper on some aspect of computing.

102 Introduction to Microcomputer Applications (also Ag Engr 102)
Fall. 3 credits. Each lab section limited to 16 students. Not open to engineering students or students who have taken any prior computer courses at Cornell. Students in statutory colleges must enroll in Ag Engr 102.
2 lecs, 1 lab, 2 evening exams.
An introduction to the use of application packages on microcomputers. An attempt will be made to assess and demonstrate the capability and limitations of the current generation of personal computers through software for word processing, spreadsheets, databases, and other applications. The course will involve very little programming with high-level languages.

107 An Introduction to SCHEME
Spring. 1 credit. Prerequisite: Introductory course in PASCAL, or equivalent programming experience.
1 lec.
An accelerated introduction to SCHEME, a dialect of LISP. Recommended for students who intend to pursue the computer science major. Taught in the first four weeks of the semester.

172 An Introduction to Artificial Intelligence (also Engr 172)
Spring. 4 credits. Prerequisites: CS 100 or CS 101; and precalculus-level mathematics.
3 lecs, 2 evening exams.
For description see Engineering Common Courses.

211 Computers and Programming (also Engr 211)
Fall, spring, summer. 3 credits. Credit will not be granted for both CS 211 and 212. Prerequisite: CS 100 or equivalent programming experience.
2 lecs, 1 rec, 2 evening exams.
Intermediate programming in a high-level language and introduction to computer science. Topics include program development, proofs of program correctness, program structure, recursion, abstract data types, data structures, and analysis of algorithms. Pascal is the principal programming language.

212 Modes of Algorithmic Expression
Fall. 4 credits. Credit will not be granted for both CS 211 and 212. Prerequisite: CS 100 or equivalent programming experience.
2 lecs, 2 recs, 2 evening exams.
A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs. Programs are written in Scheme, a dialect of LISP.

CS 212 emphasizes a varied collection of advanced programming concepts and techniques available in a modern functional programming language. In contrast, CS 211 focuses on perfecting programming skills in a conventional imperative programming language. Corrective transfers between CS 211 and 212 (in either direction) are encouraged during the first few weeks of instruction.

222 Introduction to Scientific Computation (also Engr 222)
Spring. 3 credits. Prerequisites: CS 100 and Mathematics 112, 122, or 192.
2 lecs, 1 rec, 2 evening exams.
An introduction to elementary numerical analysis and scientific computation. Students write FORTRAN programs and use high-quality numerical software packages to solve representative problems. Emphasis is on efficient, reliable, and stable methods for the basic problems of computational mathematics. Special topics include supercomputing and parallel computation.

280 Discrete Structures
Fall, spring. 4 credits. Prerequisite: CS 211, 212 or permission of instructor.
3 lecs.
Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets; graphs.

314 Introduction to Computer Systems and Organization
Fall, spring, summer. 4 credits. Prerequisite: CS 211 or equivalent.
2 lecs, 1 sec, 2 evening exams.
Introduction to the logical structure of digital computers. Topics include representation of information, machine-assembly language, the input-output channel, hierarchical storage systems, and microprogramming.

381 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: CS 280 or permission of instructor.
3 lecs.
An introduction to modern theory of computing: automata theory, formal languages, and effective computability.

400 The Science of Programming
Spring. 4 credits. Prerequisite: CS 280 or equivalent. Not offered every year.
3 lecs. D. Gries.
The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types and contains an introduction to problems with concurrency. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.

405 Science and the Computer
Fall. 4 credits. Prerequisites: Juniors and seniors only, some scientific computing experience recommended. Not offered every year.
2 lecs, 2 evening exams.
How computers affect the conduct of science. Simulation and the scientific method, visualization and the discovery process, notation and the expression of scientific ideas, quantification in the social and biological sciences, the gap between science and the public. Strong writing component.

410 Data Structures
Fall, spring, summer. 4 credits. Prerequisite: CS 280 or permission of instructor.
2 lecs, 2 evening exams.
Lists, trees, graphs, arrays, and other forms of data structure and their implementation. Relationship between language and data structure, emphasizing abstract data types. Dynamic storage allocation and memory management. Detailed study of searching and sorting methods. Analysis to determine the more efficient algorithm in a given situation.

411 Programming Languages and Logics
Spring. 4 credits. Prerequisite: CS 410 or permission of instructor. Not offered every year.
2 lecs.
A study of major programming paradigms. Basic l-calculus. Functional programming. Programming in ML. Typed l-calculi. Polymorphism, type systems. Object-oriented programming and inheritance. Logic programming. Introduction to formal semantics.

412 Introduction to Compilers and Translators
Spring. 4 credits. Prerequisites: CS 314, 381, 410. Not offered every year.
3 lecs.
Overview of the internal structure of modern compilers, with emphasis on implementation techniques. Topics covered include lexical scanning, simple parsing techniques, symbol-table manipulation, type-checking routines, code generation, and simple optimizations. The course entails a compiler implementation project.

414 Systems Programming and Operating Systems
Fall. 3 credits. Prerequisite: CS 314 or permission of instructor.
2 lecs, 2 evening exams.
An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

415 Practicum in Operating Systems
Fall. 2 credits. Prerequisite: CS 410. Corequisite: CS 414.
1 lec.
The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

417 Computer Graphics (also Architecture 374)
Fall. 3 credits. Prerequisite: CS 211 or 212. Not offered every year.
2 lecs, 1 lab.
An introduction to the principles of interactive computer graphics, including input techniques, display devices, display files, interactive graphic techniques, two- and three-dimensional computer graphics, perspective transformations, hidden-line and hidden-surface algorithms, parametric surfaces, light reflection models, and realistic image synthesis.

418 Practicum in Computer Graphics (also Architecture 375)
Fall. 2 credits. Prerequisite: CS 211 or 212. Recommended: CS 314. Corequisite: CS 417. Not offered every year.
1 lab.
Two or three programming assignments dealing with sophisticated interactive vector graphics programs on calligraphic displays and solid image generation or raster graphics displays.

421 Numerical Solution of Algebraic Equations
Fall. 4 credits. Prerequisites: Mathematics 222 or 294, one additional mathematics course numbered 300 or above, and knowledge of FORTRAN at the CS 222 level.
3 lecs.
Modern algorithms for systems of linear equations, systems of nonlinear equations, and multidimensional optimization. Some discussion of methods that are suitable for parallel computation.

432 Introduction to Database Systems
Spring. 3 credits. Prerequisites: Either CS 211or 212, and 410, or permission of instructor. Recommended: CS 314.
2 lecs, 1 rec.
Introduction to modern database management systems. Concepts in data modeling and query processing. Database models and query languages. Storage structures and access methods. Concurrency control.

433 Practicum in Database Systems
Spring. 2 credits. Corequisite: CS 432.
1 lab.
Issues related to the design and implementation of database-management systems will be addressed. Students will implement a simplified relational database system, including a file-access method and query-processing algorithms.

472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: CS 107 or CS 212, CS 280 and CS 410. Open to juniors, seniors, and graduate students.
2 lecs, 1 sec.
An introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, search, problem-solving, natural-language processing, logic and deduction, planning, and machine learning.

473 Practicum in Artificial Intelligence
Spring. 2 credits. Prerequisite: CS 107 or CS 212, CS 280 and CS 410. Corequisite: CS 472.
1 lab.
Project portion of CS 472. Topics include Common LISP programming, representation systems, deductive retrieval, databases and frame languages, and truth-maintenance-system implementations.

481 Introduction to Theory of Computing
Spring. 4 credits. Prerequisite: CS 280 or permission of instructor. Credit will not be granted for both CS 381 and CS 481. Corrective transfers between CS 481 and CS 381 (in either direction) are encouraged during the first few weeks of instruction.
3 lecs.
A faster-moving and deeper version of CS 381.

482 (382) Introduction to Analysis of Algorithms
Spring. 4 credits. Prerequisites: CS 410 and either 381 or 481, or permission of instructor.
3 lecs.
Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

486 Applied Logic (also Mathematics 486)
Fall or summer. 4 credits. Prerequisites: Mathematics 222 or 294, CS 100, and some additional course in mathematics or theoretical computer science.
2 lecs, 1 lab to be arranged.
Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method and the congruence-closure algorithm and l-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

490 Independent Reading and Research
Fall, spring. 1–4 credits.
Independent reading and research for undergraduates.

600 Computer Science and Programming
Fall. 1 credit. Prerequisite: graduate standing in computer science or permission of instructor.
1 lec.
An introduction to practical, modern ideas in programming methodology. Covers style and organization of programs, basic techniques for presenting proofs of correctness of programs, and the use of a "calculus" for the derivation of programs.

601 Introduction to Programming Logics
Spring. 1 credit. Prerequisite: graduate standing in computer science or permission of instructor.
1 lec.
Exploration of logics for reasoning about programs, with special emphasis on data types and type theory. Comparison with domain theory and logics of computable functions. The Cornell proof development system Nuprl may be used.

611 Advanced Programming Languages
Fall. 4 credits. Prerequisites: CS 410 and 381 or 481, or permission of instructor.
3 lecs.
A survey of programming paradigms; functional, imperative, and logic programming. The untyped lambda-calculus. The typed lambda-calculus, type systems, polymorphism, type inference. Formal semantics of programming languages. Elements of domain theory.

612 Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: CS 314, 410, and 412, or permission of instructor.
3 lecs.
Compiler design techniques for sequential and parallel machines. Principles of optimizing compilers: dataflow analysis, optimizing transformations, code generation. Code generation for pipelined computers: code reorganization to minimize interlock. Principles of vectorization: dependency analysis, solving Diophantine equations, transformations to enhance vector content in programs. Code generation for VLIW machines: trace scheduling. Compiling functional and logic programming languages for dataflow architectures.

613 Concurrent Programming
Spring. 4 credits. Prerequisites: CS 414 and 600, or permission of instructor.
3 lecs.
Advanced techniques in, and models of, concurrent systems. Synchronization of concurrent processes; parallel programming languages; deadlock; verification.

614 Advanced Systems
Spring. 4 credits. Prerequisite: CS 414 or permission of instructor.
2 lecs.
An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication mechanisms, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

[615 Machine Organization
Spring. 4 credits. Prerequisite: CS 314 or permission of instructor. Not offered every year.
3 lecs.]

616 RISC Microprocessor Design
Spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
2 lecs.
This project course involves design and testing of a pipelined reduced-instruction set processor. Typically, about ten students participate in the project and are assigned the design of different components of the processor, such as the ALU or register file.

621 Matrix Computations
Fall. 4 credits. Prerequisites: Mathematics 411 and 431, or permission of instructor.
3 lecs.
Numerical matrix algorithms. Stable and efficient methods for solving systems of linear equations: Gaussian elimination, Cholesky decomposition, bounded and structured systems, the QR factorization, and least-squares methods. The symmetric and unsymmetric eigenvalue problems and related computational problems. The singular value decomposition.

622 Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: CS 621.
3 lecs.
Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

632 Database Systems
Fall. 4 credits. Prerequisites: CS 410 and 432, or permission of instructor.
2 lecs.
Discussion of data models and the implementation of database systems, with an emphasis on current areas of research. Topics include the relational model, data-dependency theory, semantic modeling, query optimization, transaction management, and advanced issues in distributed databases.

635 Automatic Text Processing and Information Retrieval
Spring. 4 credits. Prerequisite: CS 410 or permission of instructor.
2 lecs.
Modern methods for natural language text processing. Topics include text analysis, storage and retrieval, automatic spelling aids, text compression and encryption, language understanding systems, automatic abstracting, and text generation and translation.

643 Design and Analysis of Computer Networks
Fall. 4 credits. Prerequisite: CS 414 or permission of instructor. Not offered every year.
2 lecs.
A course in computer networks and layered protocols. The following topics are presented: network topology design; data transmission within the physical layer; data-link sliding-window protocols; network layer in point-to-point long-haul networks, satellite and packet radio networks and local networks; transport and session layer protocols; internetworking. Selected topics from distributed computing will also be discussed.

655 Mathematical Foundations of Computer Modeling and Simulation (also Mathematics 655)
Fall. 4 credits. Prerequisites: Mathematics 431 and 432, or the equivalent in both content and level of mathematical sophistication, or permission of instructor. Not offered every year.
3 lecs.
This course has two parts, one purely mathematical and the other emphasizing applications. The first part is intended to introduce students to theoretical tools that are relevant to the study of robotics, solid modeling, and simulation. These tools will be drawn from the areas of real and complex algebraic geometry, topology, differential geometry, and differential equations. The second part of the course will provide applications that illustrate uses of the mathematics and point the way to needed further developments.

661 Robotics
Fall. 4 credits. Prerequisites: CS 482 and permission of instructor. Not offered every year.
3 lecs.
State-of-the-art in theoretical and experimental robotics, with an emphasis on robot-motion planning. Topics include: Task-level robot planning, collision-free path planning, grasp synthesis, modeling and propagating uncertainty, planning compliant motions for precision assembly, geometrical planning theories, motion planning with dynamics (and dynamic constraints), computational complexity of robot-motion planning, computational theories of friction, impact, and the physics of manipulation, and error detection and recovery in robotics.

662 Robotics Laboratory
Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. Not offered every year.
1 lab.
Introduction to the use of equipment and techniques in a modern robotics laboratory. Includes VAL programming, force sensing, compliant motion, and mechanical assembly.

664 Machine Vision
Spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms, knowledge of differential equations, and differential and transformational geometry.
3 lecs.
An introduction to computer vision, with an emphasis on object recognition and geometric matching. The following topics will be covered: edge detection, image segmentation, stereopsis, motion and optical flow, shape reconstruction, shape representations and extracting shapes from images, model-based recognition. Students will be required to implement several of the algorithms covered in the course and evaluate them on both synthetic and real images.

671 Introduction to Automated Reasoning
Fall. 4 credits. Prerequisites: CS 611 and 681 and Mathematics 581. Not offered every year.
3 lecs.
Methods to automate reasoning in mathematics, including decision procedures, theorem provers, and formal proof tactics. Various implemented systems such as Edinburgh LCF, Cornell's Nuprl, and the Boyer and Moore theorem prover may be studied.

672 Artificial Intelligence Programming
Spring. 4 credits. Prerequisite: CS 472 or permission of instructor.
3 lecs.
Review of Common LISP programming and an overview of AI programming techniques. Discussion focuses on practical issues faced by implementors of large LISP systems. Topics may include discrimination nets, agendas, deductive retrievers, slot and filler databases, backtracking problem solvers, and truth-maintenance systems. Students will be expected to implement several of the systems discussed in class.

681 Analysis of Algorithms
Fall. 4 credits. Prerequisite: CS 381 or 481, or permission of instructor.
3 lecs.
Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, randomized reducibilities. Additional topics such as parallel algorithms and efficient data structures.

682 Theory of Computing
Spring. 4 credits. Prerequisite: CS 381 or 481, or permission of instructor.
3 lecs.
Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

709 Computer Science Graduate Seminar
Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.
A weekly meeting for the discussion and study of important topics in the field.

711 Topics in Programming Languages and Systems
Spring. 4 credits. Prerequisites: CS 381 or 481, and 611, or permission of instructor. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

712 Topics in Programming Languages and Systems
Spring. 4 credits. Prerequisite: CS 612 or permission of instructor. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

713 Seminar in Systems and Methodology
Fall, spring. 4 credits. Prerequisites: CS 414 and an advanced Systems course such as CS 613, 614, 632, or 643, or permission of instructor. Not offered every year.
Discussion of contemporary issues in systems and methodology.

714 Distributed Computing
Spring. 4 credits. Prerequisites: CS 414 and an advanced systems course such as CS 613, 614, 632, or 643, or permission of instructor. Not offered every year.
2 lecs.
Principles of distributed computing and their application to fundamental problems. Considerable time will be devoted to modeling distributed computations, the theory of concurrency control, security and protection, and issues in fault tolerance (including consensus problems). Other topics may be optimal resource placement, cache management, the specification of distributed programs, and randomized protocols.

715 Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.
Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

717 Topics in Parallel Architectures
Fall. 4 credits. Prerequisite: CS 612 or permission of instructor. Not offered every year.
2 lecs.
Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

719 Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisite: CS 611 or permission of instructor. S-U grades only.

721 Topics in Numerical Analysis
Fall. 4 credits. Prerequisite: CS 621 or 622, or permission of instructor. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

722 Topics in Numerical Analysis
Spring. 4 credits. Prerequisite: CS 621 or 622. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

729 Seminar in Numerical Analysis
Fall, spring. 1–4 credits (to be arranged). Prerequisite: permission of instructor. S-U grades only.

[733 Topics in Information Processing
Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.]

[734 Seminar in File Processing
Fall. Credit to be arranged. Prerequisite: CS 733 or permission of instructor. Not offered every year.]

739 Seminar in Text Processing and Information Retrieval
Fall, spring. Credit to be arranged. Prerequisite: CS 635 or permission of instructor. S-U grades only.

[743 Topics in Fault-Tolerant Distributed Computing
Prerequisites: CS 614, 643, or 714. Not offered every year.
1 lec.
A study of the latest results and an exploration of open questions in the area of fault-tolerant distributed computing. Topics may include failure models, reliable broadcasts, synchronization, knowledge, and network partitioning. This course is particularly suited to students interested in pursuing research in this area.]

747 Seminar in Program Logic and Semantics
4 credits. Prerequisite: permission of instructor. S-U grades only. Not offered every year.

749 Seminar in Systems Modeling and Analysis
Fall, spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Discussion of advanced topics in modeling and analysis of computer systems and networks, with emphasis on performance.

771 Topics in Artificial Intelligence
4 credits. Prerequisite: permission of instructor. Not offered every year.

772 Seminar in Advanced Robotics
4 credits. Prerequisite: permission of instructor. Not offered every year.

773–774—Proseminar in Cognitive Studies I and II (also Cognitive Studies, Philosophy, Linguistics, and Psychology 773–774)
Fall-spring. 2 credits.
R 1:25–2:40. Staff (taught jointly by faculty from Cornell's Cognitive Studies Program, representing fields of computer science, linguistics, philosophy, and psychology).
This is a year-long lecture-and-discussion course which is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its presentation, acquisition, and use. Topics may include the psychology of perception and cognition; the philosophy of mind, language, and knowledge; the phonology, syntax, and semantics of natural language; computational approaches to natural language processing, vision, and reasoning; parallel distributed processing; and neuropsychology.

779 Seminar in Machine Learning
Fall, spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades only.

781 Topics in Analysis of Algorithms and Theory of Computing
Fall. 4 credits. Prerequisites: CS 681 and 682, or permission of instructor. S-U grades only. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

782 Topics in Analysis of Algorithms and Theory of Computing
Spring. 4 credits. Prerequisites: CS 681 and 682, or permission of instructor. S-U grades only. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

783 Fundamentals of Distributed Algorithms
Spring. 4 credits. Prerequisite: A graduate course in algorithms and one in systems, or permission of instructor.
2 lecs.
A research-oriented course in distributed algorithms. Two main models of computation will be considered: the message passing (point-to-point, broadcast) and the shared-memory models. Material from the following topics will be covered: fault-tolerance, agreement, atomic broadcasts, clock synchronization, real-time issues, mutual-exclusion, concurrency control, self-stabilization, knowledge-theoretic algorithms, probabilistic algorithms, secrecy, and authentication.

789 Seminar in Theory of Algorithms and Computing
Fall, spring. 2–4 credits. Prerequisite: permission of instructor. S-U grades only.

790 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only. Independent research or Master of Engineering project.

890 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Master of Science degree research.

990 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

ELECTRICAL ENGINEERING

Core Courses

210 Introduction to Electrical Systems (also Engr 210)
Fall, spring. 3 credits. Prerequisites or corequisites: Mathematics 293 and Physics 213.
3 lecs and optional tutorial sections.
For description see Engineering Common Courses.

230 Introduction to Digital Systems
Fall, spring. 4 credits.
2 lecs, 5 lab experiments.
Introduction to basic analysis, design techniques, and methodology of digital systems. Boolean algebra, integrated circuit components used in digital-system implementation, codes and number systems, logic design of combinational circuits, and sequential circuits, register transfer systems, and machine organization. Laboratory experiments are performed on a Macintosh computer using a logic simulator.

301 Electrical Signals and Systems I
Fall. 4 credits. Prerequisites: a grade of at least C+ in Engr 210 and C in Mathematics 293 and 294.
3 lecs, 1 rec-computing session.
Continuous- and discrete-time signals and systems; Fourier series and transforms; bilateral Laplace and z transforms; convolution; FFTs and DFTs; applications to modulation, filtering, and sampling.

302 Electrical Signals and Systems II
Spring. 4 credits. Prerequisite: EE 301.
3 lecs, 1 rec-computing session.
Linear time-invariant systems as models for electrical networks; network topology; nodal analysis, loop analysis, modified nodal analysis, and state variable analysis; unilateral Laplace transforms for solving vector differential equations; passivity and related energy storage concepts; elementary nonlinearities.

303 Electromagnetic Waves
Fall, summer co-op session. 4 credits. Prerequisites: Grades of C or better in Physics 213, 214, and Mathematics 294.
3 lecs, 1 rec.
Maxwell's equations in differential form, wave equation and the Poynting theorem. Fundamentals of electromagnetic waves with emphasis on plane waves and the effects of the medium and boundary conditions on wave propagation. Guided waves including transmission lines and rectangular waveguides. Basics of resonant cavities and simple short and dipole antennas.

304 Electromagnetic Fields and Applications
Spring. 4 credits. Prerequisites: Grades of C or better in EE 303 and EE 301.
3 lecs, 1 rec.
A deeper and broader foundation in electromagnetics than EE 303, recommended for students interested in electrophysics. Electrostatics and magnetostatics: energy and forces in static fields. Boundary value problems. Wave propagation: conducting and dielectric guiding structures. Anisotropic media such as plasma and ferrites. Dispersion of signals. Superconductors and semiconductors. Antennas and radiation: elemental radiators and linear antenna arrays. Transmitting-receiving relations. Radar and scattering cross section.

306 Fundamentals of Quantum and Solid-State Electronics
Spring. 4 credits. Prerequisites: Physics 214, Mathematics 294, and EE 303.
3 lecs, 1 rec-computing session.
Introductory quantum mechanics and solid-state physics necessary for understanding lasers and modern solid-state electronic devices. Quantum mechanics is presented in terms of wave functions, operators, and solutions of Schroedinger's equation. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications studied include a simple metal, thermionic emission, and the p-n junction.

308 Fundamentals of Computer Engineering
Spring. 4 credits. Prerequisites: CS 100 and EE 230.
3 lecs, 1 rec-computing session.
An introduction to theoretical topics basic to computer engineering: discrete mathematics; structured computer organization; data structures and algorithms; and computer arithmetic. Practical applications of these concepts.

310 Introduction to Probability and Random Signals
Spring. 4 credits. Prerequisite: Mathematics 294.
3 lecs, 1 rec-computing session.
Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems incorporating these models, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications of these models will be given in such areas as communications, control, and device modeling. Specific topics include the basic concept of probability and its presentations through densities, cumulative distribution functions, and characteristic functions; conditional probability; independence; scalar and vector random variables and nonlinear transformations of data; expectation, conditional expectation, moments, correlation; laws of large numbers and central limit theorem; linear least mean square estimation; Bayes decision making.

315 Electrical Laboratory I
Fall. 4 credits. Prerequisite: a grade of at least C+ in Engr 210.
2 lecs, 2 labs.
Basic electrical and electronic instrumentation and measurements involving circuits and fields of both active and passive elements; an experimental introduction to solid-state theory and devices. Introduction of the personal computer as a laboratory aid.

Computer Engineering

230 Introduction to Digital Systems
Fall, spring. 4 credits.
For description see Core Courses.

423 Computer Methods for Circuit Simulation
Fall. 4 credits. Prerequisite: EE 302. Satisfies undergraduate computer-applications requirement.
3 lecs, open lab.
Numerical techniques presented in the context of circuit simulation. Solution of linear and nonlinear algebraic equations; integration; solution of ordinary differential equations; alternative forms of circuit-equation formulation. Starting from a program to simulate simple, linear passive, steady-state circuits, the instructor will add, and the students improve on, procedures that will finally result in a nonlinear transient integrated-circuit simulator that involves most of the techniques discussed in class.

445 Computer Networks and Telecommunications I
Fall. 3 credits. Prerequisites: EE 308, a course in probability, and programming at the level of CS 211.
3 lecs.
Methods and approaches in the design, analysis, and implementation of local area networks and public data networks; circuit switching, packet switching; carrier-sense multiple access with collision detection, token passing; ethernets, busses, and rings; roles and functions of protocols; layering and ISO models.

475 Computer Structures
Fall. 4 credits. Prerequisite: EE 308 or EE 230 and CS 314.
3 lecs, 1 lab.
Methods of designing digital computers and the hardware-software interface to the systems they function with. Topics will include types of control sequencers, memory and I/O organization and interfacing, interrupt hardware design, floating-point hardware and basic architectural alternatives. Laboratory groups will design and build a small digital computer. User-programmable logic devices will be employed for circuit implementation.

476 Microprocessor Systems
Spring. 4 credits. Prerequisite: EE 475.
3 lecs, 1 lab.
System design using microprocessors. Hardware and software techniques employed in interfacing. Assembly language and Pascal programs for interfacing and control of interfaced devices. Study of different microprocessor architectures, memory management, multiprogramming, and multiprocessing. Development systems and user-programmable logic devices will be employed in the laboratory for interfacing the microcomputer to hardware.

524 Differential Equation Numerical Methods for the Electrical Engineer
Spring. 4 credits. Prerequisites: EE 301 and EE 303. EE 423 is helpful. A working knowledge of a scientific programming language is required. Open to both undergraduates and graduates. Satisfies undergraduate computer applications requirement.
3 lecs, open lab.
Numerical methods for ordinary and partial differential equations are presented using examples from different areas of electrical engineering. Examples include semiconductor-device simulation, plasma simulation, propagation of solitons in optical fibers, and the modeling of electrostatic fields in micromechanical devices. Numerical methods include particle-in-cell simulation techniques; spectral methods; elementary parabolic, elliptic, and hyperbolic methods; and the boundary-element method. The fundamental notions of accuracy and error, consistency, stability, and convergence are discussed.

539 VLSI Digital-System Design
Fall and spring. 6 credits (must be taken both semesters). Prerequisite: EE 475 or equivalent.
Fall: 3 lecs, 1 computing sec; spring: 1 lec, 1 lab.
Custom VLSI design as seen by a system designer. Switches as logic devices, MOS transistor, MOS logic design, two-phase clocking, stick diagrams, cell layout, regular control structures, simulation, performance analysis, RC timing model, system design for performance, design for testing, semicustom design, systolic arrays, CAD design tools. A chip design project and design report are required for fall semester. CAD tools are used extensively. Chips are tested for functionality and performance, and the design report is revised during the spring semester.

541 Advanced Computer Architectures
Fall. 3 credits. Prerequisite: EE 308 or permission of instructor.
Design and evaluation of processor architectures are examined in the light of actual implementations of both large-scale and small-scale systems. Topics include microprogramming, parallel and pipelined architectures, interleaved memories, cache and virtual memories, I/O processors, vector and array processors, protection mechanisms, and RISC architectures.

542 Parallel Processing
Spring. 3 credits. Prerequisite: EE 541 or permission of instructor.
3 lecs.
Computer architecture for parallel processors that are designed to provide a high computation rate for large scientific problems; primary emphasis on image processing and highly parallel VLSI-based systems. Other applications considered include signal processing and the solution of PDEs. Performance, processor interconnections, algorithms, programming techniques, and fault tolerance will be discussed. Architecture types to be considered include binary-array processors, pipeline processors, inner-product computers, systolic arrays, and MIMD systems.

543 VLSI Architectures and Algorithms
Fall. 3 credits. Prerequisite: EE 476 or permission of instructor.
3 lecs.
Since the advent of VLSI, the cost of processing logic is no longer a fundamental constraint on the design of computer architectures. Problems that once were computationally intractable can now be solved on arrays of thousands or even tens of thousands of processors. This course addresses the important question: What are the optimal VLSI structures and algorithms for specific classes of problems? The architectures we will examine include systolic arrays, mesh-connected processors, and data-flow computers; special attention will be given to problems that arise in real-time signal processing.

546 Computer Networks and Telecommunications II
Spring. 3 credits. Prerequisite: EE 545 or permission of instructor.
3 lecs.
Introduction to Integrated Service Digital Network (ISDN); circuit switching fundamentals; time division architectures; packet switching architectures; integration of circuit and packet switching; evolution from ISDN to Broadband ISDN.

[547 Computer Vision
Fall. 3 credits. Prerequisites: EE 302 and 475 or 425, or permission of instructor.
3 lecs. Not offered 1990–91.
Computer acquisition and analysis of image data with emphasis on techniques for robot vision. Computer vision is the construction of explicit meaningful descriptions of physical objects from images. This course will concentrate on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms will be required.]

548 Image Processing
Spring. 4 credits. Prerequisite: EE 301 or permission of instructor.
3 lecs.
Image formation and perception, digitization, image coding, image enhancement, image restoration, computerized tomography, optical processing, image analysis. The programming of several image-processing algorithms will be required.]

563 Communication Networks
Fall. 4 credits.
For description see Communication and Information Systems.

593 RISC Microprocessor Design (also CS 616)
4 credits over two semesters. Prerequisite: EE 539 or consent of instructors.
L. K. Grover and K. K. Pingali.
RISC (Reduced Instruction Set Computers) is the newest trend in microprocessor architecture—every leading microprocessor manufacturer including Motorola and Intel has announced RISC microprocessors. In this course, we will design and fabricate CAYUGA, a pipelined RISC microprocessor on a VLSI chip. Students will be given the instruction-set specification of the CAYUGA processor. During the course, they will perform the VLSI layout and simulation of the design. The processor will then be fabricated by MOSIS, after which it will be tested to verify that it meets design goals.

644 Fault-Tolerant Computing
Spring. 3 credits. Prerequisites: EE 541 and 543.
The discipline of fault-tolerant computing deals with digital systems that operate in applications where the cost of failure is high. Effective and efficient techniques are required for tolerating failures in complex digital systems. The real-time needs of many signal processing problems have led to the development of special-purpose systolic arrays. This course covers general fault-tolerance techniques such as masking redundancy and error detecting and correcting codes, with particular emphasis on those suitable for systolic computing.

Circuits, Systems, and Signal Processing

210 Introduction to Electrical Systems
Fall, spring. 3 credits.
For description see Engineering Common Courses.

230 Introduction to Digital Systems
Fall, spring. 4 credits.
For description see Core Courses.

301 Electrical Signals and Systems I
Fall. 4 credits.
For description see Core Courses.

302 Electrical Signals and Systems II
Spring. 4 credits.
For description see Core Courses.

318 Electric and Electromechanical Circuits and Systems
Spring. 4 credits. Prerequisite: EE 315.
Integrated lectures and lab.
Concepts and methods for design, construction, testing, and analysis of a variety of electronic circuits and for modeling and analysis of electromechanical devices such as speakers, solenoids, and a variety of motors. Applications of single-input/single-output classical feedback-control principles illustrated through the design and testing of a DC motor (PWM driven) positional system.

423 Computer Methods for Circuit Simulation
Fall. 4 credits.
For description see Computer Engineering.

425 Digital Signal Processing
Fall. 4 credits. Prerequisite: EE 301.
3 lecs, 1 lab.
Fundamentals of signal analysis, review of Fourier, Laplace, and Z transforms. Sampling theory. Discrete Fourier transform properties and computation (FFT). Digital filter design; the approximation problem for FIR and IIR filters, the realization problem–finite word-length limitations and filter structures.

426 Applications of Signal Processing
Spring. 3 or 4 credits. Prerequisite: EE 425.
1 lec, 2 labs.
Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented and emphasizes individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design (principally digital filtering) and spectral analysis as well as speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

521 Theory of Linear Systems
Fall. 4 credits. Prerequisite: EE 302 or permission of instructor. Recommended: a good background in linear algebra and differential equations.
3 lecs.
State-space and input-output linear systems. Transition matrices, matrix exponential functions, the Cayley-Hamilton theorem, and the Jordan form. Controllability, observability, stability, realizability. At the level of *Linear Systems*, by T. Kailath.

522 Theory of Nonlinear Systems
Spring. 4 credits. Prerequisites: EE 521 or a solid background in linear algebra strongly recommended but not required.
A fairly rigorous introduction to nonlinear systems, including nonlinear differential equations (existence and uniqueness theorems); flows; stability of equilibria and periodic orbits; Lyapunov functions; the Circle Criterion and Popov's Criterion; the Poincaré-Bendixson Theorem.

[526 Advanced Signal Processing
Spring. 4 credits. Prerequisites: EE 411 and EE 425. Not offered 1990–91.
3 lecs, 1 lab.
Sampling and signal reconstruction. Approximation theory with 1 [sub p] and Chebyshev norms. Linear inversion theory. Exponential signal modeling. Spectral estimation. Radon transform.]

528 Multisensor Digital Signal Processing
Spring. 4 credits. Prerequisite: EE 301, 411, 425 recommended.
Addresses signal processing techniques for the coordinated use of data derived from an array of sensors. Application areas for sensor arrays include radar, geophysics, speech enhancement, and satellite comunications. We will discuss propagation and sensor models, beamforming, sidelobe cancellers, source location and direction finding, adaptive detection and estimation, computational approaches (RLS, LMS, and square root) and architectures (systolic arrays and other concurrent schemes). Assignments will involve computer simulations.

548 Image Processing
Spring. 4 credits.
For description see Computer Engineering.

674 Adaptive Parameter Estimation Theory
3 credits.
For description see Power and Control Systems.

679 Advanced Topics in Systems and Control
1–3 credits.
For description see Power and Control Systems.

Communication and Information Systems

310 Probability and Random Signals Spring. 4 credits.
For description see Core Courses.

411 Random Signals in Communications and Signal Processing
Fall. 3 credits. Prerequisite: EE 302 and 310 or equivalent.
3 lecs.
Introduction to probability models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, wide-sense stationary processes and power spectral densities, Gaussian random process, including the narrowband case. Electrical engineering phenomena described by such models (e.g., communications channel noise, queues that form in multiple-access telecommunications systems). Response of linear and nonlinear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems (e.g., problems of extraction of signals from noise via Wiener filtering, power spectral density estimation).

445 Computer Networks and Telecommunications I
Fall. 3 credits.
For description see Computer Engineering.

468 Communications and Signal Processing
Spring. 4 credits. Prerequisite: EE 301 or 521, and 411 or equivalent.
3 lecs, 1 rec.
Analog signal representation and filtering using Fourier and Hilbert transform techniques. Varieties of amplitude modulation (AM, DSBSC, SSB, VSB, QAM) and their demodulators. Frequency modulation and demodulation. Demodulation of AM and FM in the presence of noise. Sampling theorems and aliasing. Pulse amplitude modulation. Quantization for A/D conversion. Pulse code modulation. Elements of optimal signal parameter estimation. Application to commercial broadcasting and data transmission.

546 Computer Networks and Telecommunications II
Spring. 3 credits.
For description see Computer Engineering.

561 Error-Control Codes
Fall. 3 credits. Prerequisite: EE 301 or EE 521 or equivalent. A strong familiarity with linear algebra is assumed.
3 lecs.
An introduction to the theory of error-control codes: linear block codes, convolutional and other trellis codes. Hamming codes, minimum distance, standard array, minimum-distance decoding, cyclic codes. The dual of a code. Methods of shortening and combining codes. Hamming and Singleton bounds for error-correcting codes. Algebra: groups, rings, and fields with special emphasis on Galois or finite field theory. The construction and decoding of Bose-(Ray) Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Algebraic description of binary convolutional codes. Decoding algorithms and construction of Euclidean distance trellis codes.

562 Fundamental Information Theory
Spring. 3 credits. Prerequisite: EE 310 or equivalent.
3 lecs.
Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

563 Communication Networks
Fall. 4 credits. Prerequisite: EE 310 or permission of instructor.
3 lecs.
Classical line-switched communication networks: point process models for offered traffic; blocking and queuing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local and wide area communication networks: TDMA, FDMA, ALOHA, slotted ALOHA, Ethernet, reservation, tree, and interval-searched contention resolution protocols. Flow control and capacity assignment algorithms for wideband, robust networks. Examples drawn from packet radio, T1 networks, and satellite communications.

564 Decision Making and Estimation
Spring. 4 credits. Prerequisite: EE 411.
An introduction to those methods of making rational decisions and inferences and of forming estimates that are central to problems of communications, detection, and statistical signal processing. Topics covered are drawn from utility theory and rational preferences; Bayes, minimax, and Neyman-Pearson decision theories; Bayes and maximum likelihood point estimation; Cramer-Rao bound, efficient, and consistent estimation; spectral estimation; and robust models for signal extraction.

566 Queuing Networks
Spring. 4 credits. Prerequisite: EE 411 or equivalent.
Single-class and multiclass queuing network models of communication networks and computer networks. Little's formula. Jackson networks. Quasi-reversibility. Product-form networks. Output theorem. Analysis of sojourn times. Insensitivity. Server allocation and optimal routing problems. Bandit problem. Fluid approximation. Light traffic approximation. Heavy traffic approximation. Static and dynamic control of queuing networks. Regenerative simulation of performance measures. Fast simulation techniques. Perturbation analysis.

567 Communication Systems II
Fall. 4 credits. Prerequisites: EE 411, 468.
This course presents the fundamental principles of the theory of digital communication. Analytical and computational tools required to understand the principles of modern data conversion, transmission, and storage systems are presented. While examples of systems from the "real" world are described, the emphasis of the course is on the fundamental theory involved in the design of digital communication systems.

577 Artificial Neural Networks
Fall. 3 credits. Prerequisites: EE 310; EE 411 recommended.
Artificial neural networks are brainlike in being formed out of many highly interconnected nonlinear memoryless elements. Probability theory will provide the primary analytical approach to design and analysis of neural networks. The course will cover aspects of feed-forward nets (multilayer perceptrons) that can serve as pattern classifiers, decision-making devices, and controllers, as well as aspects of recurrent/feedback/Hopfield nets that can serve as associative memories and combinatorial optimizers. Students will have an opportunity to explore the behavior of neural networks through computer simulation and to present an article from the current literature.

664 Foundations of Inference and Decision Making
Spring. 3 credits. Prerequisite: a course in probability and some statistics, or permission of instructor. Not offered every year.
3 lecs.
An examination of methods for characterizing uncertainty and chance phenomena and for transforming information into decisions and optimal systems. Discussion of the foundations of inference includes topics drawn from comparative probability, interval-valued probability, quantitative probability, relative frequency interpretations, computational complexity, randomness, classical probability and invariance, induction, and subjective probability.

668–669 Random Processes in Electrical Systems
668, fall; 669, spring. 3 credits each term.
Advanced topics in the general area of randomness and uncertainty and their relevance to the analysis and design of electrical systems.

Power and Control Systems

318 Electric and Electromechanical Circuits and Systems
Spring. 4 credits.
For description see Circuits, Systems, and Signal Processing.

451–452 Computer-Aided Analysis of Electric Power Systems I and II
451, fall; 452, spring. 4 credits each term.
Prerequisite: EE 302.
3 lec-recs, 1 lab-computing session.
The so-called second-generation and third-generation simulation tools and their computer implementation for large-scale circuits and systems. Modeling of electric power systems for load-flow, stability, economic-dispatch, control, and optimal-power-flow studies. Special properties of electric power systems that enhance the efficiency of simulation tools used for their analysis. The Kettering Power System Laboratory's digital computer is used as a dynamic "laboratory."

471 Feedback Control Systems
Fall. 4 credits. Prerequisite: EE 302 or M&AE 326, or permission of instructor.
3 lecs, open lab.
Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include PID, root-locus, frequency response, and algebraic pole placement. Computer-aided design laboratory examines modeling and control of a computer-simulated dynamic industrial process.

[555 Advanced Power Systems Analysis I
Fall. 3 credits. Prerequisites: EE 302 and concurrent registration in 451, or permission of instructor. Not offered 1990–91.
Analysis of power-system components. These components include rotating machines and systems for excitation control, automatic voltage regulation, boiler-turbine control, and speed regulation, as well as ancillary three-phase networks. Emphasis on derivation of mathematical models from first principles; development of algorithms for the formation of applicable network matrices.]

[556 Advanced Power Systems Analysis II
Spring. 3 credits. Prerequisite: EE 555 or permission of instructor. Not offered 1990–91.
Computer methods in power systems applied to short-circuit studies, load-flow studies, transient-stability studies, economic dispatch, and security load flows. Use of sparse-matrix techniques. Comparison of algorithms for digital relaying. State-estimation algorithms. Emphasis on the use of the digital computer in the planning and operation of large-scale power systems. At the level of *Computer Methods in Power System Analysis*, by Stagg and El-Abiad.]

564 Decision Making and Estimation
Spring. 4 credits.
For description see Communication and Information Systems.

572 Digital Control Systems
Spring. 4 credits. Prerequisite: EE 471 or permission of instructor.
3 lecs, open lab.
Analysis and design of feedback control systems using digital devices to implement compensation. Z-transforms and linear algebra are the major mathematical tools. Topics include: state realizations, digitizations of analog systems, least-squares system identification, state feedback control, observers, combined observer-controller, algebraic-control design, and simultaneous identification and control. Assignments will consist of reports on computer-aided controller design and digitally-simulated evaluation.

573 Optimal Control and Estimation for Continuous Systems
Fall. 4 credits. Prerequisite: EE 521 or permission of instructor. Not offered every year.
3 lecs.
Control system design through parameter optimization, with and without constraints. The minimum principle; linear regulations, minimum-time and minimal-fuel problems. Computational techniques; properties of Lyapunov and Riccati equations.

574 Estimation and Control in Discrete Linear Systems
Spring. 4 credits. Prerequisites: EE 521 and 411, or permission of instructor.
3 lecs.
Optimal control, filtering, and prediction for discrete-time linear systems. Approximation on discrete point sets. The principle of optimality. Kalman filtering. Stochastic optimal control.

664 Foundations of Inference and Decision Making
Spring. 3 credits.
For description see Communication and Information Systems.

674 Adaptive Parameter Estimation Theory
3 credits. Prerequisites: EE 521 and either 526 or 572, or permission of instructor. Recommended: EE 522. Not offered every year.
3 lecs.
Fundamental concepts of adaptive parameter estimation theory as applicable to adaptive filtering, adaptive control, and system identification. Analytical tools are drawn primarily from nonlinear, time-varying feedback-system stability theory. Applications considered include telephony echo cancellation, noise cancelling, differential pulse code modulation, channel equalization, model-following control, and pole placement. Assignments will consist of reports on analysis and simulation studies of adaptive parameter-estimator behavior.

679 Advanced Topics in Systems and Control
1–3 credits. Prerequisite: permission of instructor. Not offered every year.
Topics include robotics, nonlinear feedback system stability, multivariable control, and qualitative theory on nonlinear systems.

Solid-State Electronics

306 Fundamentals of Quantum and Solid-State Electronics
Spring. 4 credits.
For description see Required Courses.

412 Applied Solid-State Physics
Spring. 4 credits. Prerequisite: EE 306.
3 lecs, 1 rec.
Review of basic solid-state concepts (lattice, primitive cell, reciprocal lattice, Brillouin zone). Lattice vibrations. The diatomic chain. Polarity of waves. Binding of crystals. Thermal properties of insulators and metals. Effective mass tensor. Magnetic flux quantization and the Fermi surface in metals. Plasmons, polaritons, and polarons. Charge-carrier scattering. Optical properties. Kramers-Kronig relations. Elements of superconductivity. Dia- and ferroelectric materials. Dia-, para-, ferro-, and antiferromagnetism.

431–432 Analysis and Design of Integrated Circuits
431, fall; 432, spring. 4 credits each term. Prerequisites: EE 301 and 315. Concurrent registration in EE 435 is encouraged.
3 lecs, 1 lab.
Analysis and design of analog and digital circuits using semiconductor devices, with emphasis on integrated circuits in bipolar and MOS technologies. Device models for circuit analysis; common circuit configurations; DC analysis, frequency response and speed limitations; feedback and noise sources. Case studies such as design of high-frequency or operational amplifiers and semiconductor memory, reinforced by laboratory and design projects. At the level of *Analysis and Design of Analog Integrated Circuits*, by Gray and Meyer, and *Analysis and Design of Digital Integrated Circuits*, by Hodges and Jackson.

433 Microwave Integrated Circuits
Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: EE 303 and EE 306.
3 lecs, 1 lab.
An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz). Topics include: computer-aided design, automated microwave measurement techniques, optoelectronic applications, and GaAs monolithic microwave integrated circuits. Six two-week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

435–436 Semiconductor Electronics
435, fall; 436, spring. 4 credits each term; may be taken for 3 credits without laboratory only with permission of instructor. Prerequisites: EE 306 and 316, or equivalent.
3 lecs, 1 lab.
Semiconductor electronics from point-contact transistor to VLSI and beyond. Fall term: electronic characteristics of semiconductors, carrier transport, band diagrams, semiconductor interfaces; pn-junction diode, Si bipolar transistor (BJT), Si MOS transistor (MOSFET), integrated Si structures such as inverters (NMOS, CMOS). Spring terms: GaAs J-FET, Schottky diode, GaAs metal-semiconductor FET (MESFET), AlGaAs/GaAs modulation-doped FET (MODFET), heterojunction bipolar transistor (HBT); semiconductor lasers and optical detectors, integrated GaAs structures; computer simulation of devices; limits and future of semiconductor electronic devices.

524 Differential Equation Numerical Methods for the Electrical Engineer
Spring. 4 credits.
For description see Computer Engineering.

534 Microwave Semiconductor Devices
Spring. 4 credits, may be taken for 3 credits without lab. Prerequisites: EE 433 and EE 435.
3 lecs, 1 lab.
Basic theory of operation of solid-state microwave and millimeter-wave devices: field-effect transistor (FET), high electron mobility transistor (HEMT), Schottky, IMPATT, Gunn, PIN, and tunnel devices. Emphasis on how to integrate these devices into practical circuits. Oscillators, amplifiers, and mixers will be fabricated and measured in the laboratory.

535 Semiconductor Physics
Fall. 4 credits. Prerequisites: EE 304 and 407, or permission of instructor.
3 lecs.
Foundations of semiconductor physics for the description of carrier transport and optical characteristics of semiconductor materials and structures. Crystal structure and symmetry, energy-band structures, statistics, effective mass theorem, classical transport, scattering, high-field transport, quantum transport, optical absorption and reflection, photoconductivity, light generation, deep levels, and surface and interface phenomena. On or above the level of *Fundamentals of Semiconductor Theory and Device Physics*, by S. Wang.

536 VLSI Technology
Spring. 4 credits. Prerequisite: EE 435 or permission of instructor.
3 lecs, 1 lab.
Processing technology for high-density silicon integrated circuits for CMOS, BiCMOS, and ECL. Lithography, oxidation, diffusion, ion implantation, thin-film deposition, dry etching, multilevel interconnect, process integration, manufacturing yield, integrated-circuit reliability, future of high-density VLSI. Laboratory includes actual device fabrication in a clean room, measurements, and process simulations. On the level of *VLSI Technology*, edited by S. M. Sze.

537 Physical Design of High-Speed Computers
Fall. 4 credits. Prerequisites: EE 230 and 431 or 435; or permission of instructor. Recommended companion course: MS&E 463.
Integration of computer structures from integrated circuits to modules, boards, and full computer systems, from workstations to supercomputers. Computer packaging architectures; high-speed electrical and optical signal distribution; power distribution and thermal management; functional architecture; manufacturing, measurement, and simulation methods; case studies on workstations, mainframes, and supercomputers; fundamental limits. On the level of *Principles of Electronic Packaging*, edited by Seraphim, Lasky, and Li. Lectures by outside speakers from the computer industry.

538 Introduction to III–V Compound Semiconductor Materials
Spring. 3 credits. Prerequisites: EE 407 and 436.
J. R. Shealy.
An introduction to III–V compound semiconductor materials and their crystal growth technologies. Topics include the modern epitaxial growth technologies, Molecular Beam Epitaxy and Organometallic Vapor Phase Epitaxy; common methods used for the evaluation of compound semiconductor materials, including Raman spectroscopy. Emphasis is placed on the materials' properties and the related growth and characterization techniques that currently support a variety of research topics in new semiconductor devices.

539 VLSI Digital-System Design
Fall and spring. 6 credits.
For description see Computer Engineering.

636 Advanced Solid-State Devices
Spring. 3 credits. Prerequisite: EE 535 or equivalent.
3 lecs.
A fundamental analysis of device operation, with emphasis on operational limits. Effects of band structure, low- and high-field transport characteristics, secondary ionization, transferred electron effects, and the details of junction and contact technology relevant to devices at the limits of microfabrication technology. Applications to microwave amplification, generation, and broadband optical detection, including stability, nonlinearity, and noise.

638 Advanced Semiconductor Devices and Processes
Fall. 4 credits. Prerequisite: EE 535, EE 636, or permission of instructor. Not offered every year.
3 lecs, special project or term paper.
Advanced topics in solid-state electronic-device physics, fabrication methods, and materials for high-density silicon VLSI and high-speed compound semiconductor technologies. Concepts developed in EE 535 and 636 are applied to current state-of-the-art topics. On the level of IEEE Transactions on Electron Devices, *Journal of Applied Physics*, and current conference proceedings.

Quantum and Opto-Electronics

306 Fundamentals of Quantum and Solid-State Electronics
Spring. 4 credits.
For description see Core Courses.

407 Quantum Mechanics and Applications
Fall. 4 credits. Prerequisite: EE 306.
3 lecs, 1 rec.
Fundamentals of quantum mechanics: theory of angular momentum, time-independent and time-dependent perturbation theory, and interaction of radiation with matter. Elementary considerations of the structure of atoms, molecules, and solids. Applications to semiconductors, spectroscopy of atoms and molecules, and lasers.

430 Lasers and Optical Electronics
Fall. 3 credits. Prerequisite: EE 306 or equivalent.
3 lecs, 1 rec-lab.
An introduction to the operation of stimulated-emission devices such as lasers and devices based on linear and nonlinear optics. Material covered includes diffraction-limited optics, propagation of Gaussian laser beams, optical resonators, interaction of radiation with matter, physics of laser operation, laser design. Applications of coherent radiation to nonlinear optics, communication, and research will be discussed as time permits.

437 Fiber and Integrated Optics
Spring. 3 credits lecture only, 4 credits with lab. Prerequisite: EE 306. EE 304 and 430 or equivalents are strongly recommended.
3 lecs, 1 lab–computing session; lab optional.
A detailed treatment of the physical principles of fiber optics, integrated optics, and optical applications to communication and sensing. Topics include mode structure in waveguides, mode coupling, dispersion and bandwidth limitations, optical sources based on semiconductors, detectors and noise, modulation techniques, nonlinear effects in fibers, and optical sensors. Laboratory includes experiments relevant to lasers and fiber optics.

524 Differential Equation Numerical Methods for the Electrical Engineer
Spring. 4 credits.
For description see Computer Engineering.

531 Quantum Electronics I
Fall. 4 credits. Prerequisites: EE 306 and 407, or Physics 443.
3 lecs, 1 computing session.
A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interaction of radiation and matter, including emission, absorption, scattering, and basic spectroscopic properties of key laser media; theory of the laser, including methods of achieving population inversions, dispersive effects, and laser oscillation spectrum.

532 Quantum Electronics II
Spring. 4 credits. Prerequisite: EE 531 or permission of instructor.
3 lecs, 1 lec–computing session.
A continuation of EE 531. Topics include density matrix; nonlinear optical processes; properties of nonlinear optical materials; optical parametric oscillators; spontaneous and stimulated Raman and Brillouin processes; theory of coherence; pico- and femto-second optics; ultrafast processes in semiconductors and molecules; optical properties of semiconductor-doped glasses, quantum-well structures, and superlattices.

535 Semiconductor Physics
Fall. 4 credits.
For description see Solid-State Electronics.

Plasmas and Large-Scale Fluids

481 Experimental Plasma Physics and Gas Discharges
Fall. 4 credits. Prerequisite: EE 304 or A&EP 356 or equivalent. Fulfills electrical engineering laboratory requirement and constitutes an M.Eng.(Electrical) course pair with EE 480 or 484.
3 lecs, 1 lab.
Theory and practice of generation, control, and diagnostics of plasmas and intense particle beams. Coordinated lectures and nine experiments and a field trip. Plasma breakdown, collisions, diffusion, sheaths. Discussion of macroscopic and microscopic measurements. Reflex discharge, vacuum technology, plasma probing. Electromagnetic and space-charge-wave propagation and scattering. Microwave and optical radiation. Intense particle beams. Methods for data collection and analysis.

484 Introduction to Controlled Fusion: Principles and Technology (also M&AE 559 and NS&E 484)
Spring. 3 credits. Prerequisites: EE 301 and 303, or permission of instructor. Intended for seniors and graduate students.
3 lecs.
For description see NS&E 484.

524 Differential Equation Numerical Methods for the Electrical Engineer
Spring. 4 credits.
For description see Computer Engineering.

580 Applied Electrodynamics
3 credits. Prerequisites: EE 303 and EE 304, or a grade of B or better in EE 303.
Selected topics in contemporary electrodynamics with emphasis on applications. Theory, design, and uses of high-power microwave devices such as gyrotrons, CARMs, free-electron lasers, and traveling-wave tubes. Electromagnetic waveguide and cavity modes, charged-particle orbit theory, particle dynamics in electromagnetic fields, field transforms, electron-beam generation and equilibria including self-field effects, waves on beams, low- and high-power microwave devices and their applications. At the level of *Microwave Engineering and Applications*, by O. P. Gandi.

581 Introduction to Plasma Physics (also A&EP 606)
Fall. 4 credits. First-year graduate-level course; open also to exceptional fourth-year students with permission of instructor. Prerequisites: EE 303 and 304, or equivalent.
3 lecs.
Plasma state; motion of charged particles in fields; collisions, coulomb scattering; transport coefficients, ambipolar diffusion, plasma oscillations and waves; hydromagnetic equations; hydromagnetic stability and microscopic instabilities; test particle in a plasma; elementary applications. At the level of *Plasma Physics for Nuclear Fusion*, by Miyamoto.

582 Advanced Plasma Physics (also A&EP 607)
Spring. 4 credits. Prerequisite: EE 581.
3 lecs.
For description see A&EP 607.

583 Electrodynamics
Fall. 4 credits.
For description see Fields, Waves, and Antennas.

[585 Atmospheric and Ionospheric Physics (also Astronomy 575)
Fall. 3 credits. Offered alternate years. Not offered 1990–91.
Energy-balance and thermal structure of neutral atmospheres. Elements of circulation theory. Waves and instabilities. Coupling of lower atmospheres to upper atmospheres. Observations of the terrestrial atmosphere and of the other planets. Physical processes in the earth's ionosphere and magnetosphere. Production, loss, and transport of charged particles. Electric fields. Coupling of neutral-atmosphere dynamics with electric fields and charged-particle transport. Diagnostic techniques, including radar and in situ observations. The equatorial electrojet. Observations of ionospheres on the other planets.]

[586 Solar Terrestrial Physics (also Astronomy 576)
Spring. 3 credits. Offered alternate years. Not offered 1990–91.
High-latitude ionosphere; electric fields in the polar cap and auroral zone; particle precipitation and the aurora; magnetic and ionospheric storms; plasma instabilities in the ionosphere and magnetosphere; structure and physical processes in the sun, solar corona, and solar wind; interactions between the solar wind and the earth's magnetosphere; trapping, acceleration, and drift of energetic particles in the magnetosphere.]

587 Introduction to Antennas and Radar
Fall. 3 credits. Prerequisites: EE 301 and 304 (or at least a B in 303). Open to qualified undergraduates.
For description see Fields, Waves, and Antennas.

588 Electromagnetic Wave Propagation II
Spring. 3 credits. Prerequisites: EE 587 and 581, or permission of instructor.
3 lecs.
For description see Fields, Waves, and Antennas.

589 Magnetohydrodynamics
3 credits. Prerequisite: EE 581. Offered upon sufficient demand.
The theory of ideal and nonideal magnetohydrodynamical equations with emphasis on application to controlled thermonuclear fusion. Topics: derivation and domain of applicability; invariants; waves, equilibrium and normal-mode stability analysis; continuous spectrum; energy principle and applications to confinement geometries; nonideal effects, resistivity, finite Larmor radius stabilization. Selected additional topics such as dynamo theory or MHD turbulence.

681 Kinetic Theory (also A&EP 761)
Fall. 3 credits. Prerequisite: EE 407, Physics 561, or permission of instructor.
3 lecs.
Classical, quantum, and relativistic kinetic theory, Liouville equation, Prigogine and Bogoliubov analysis of the BBKGY sequence. Master equation, density matrix, Wigner distribution. Derivation of fluid dynamics. Transport coefficients. Boltzmann, Krook, Fokker-Planck, Landau, and Balescu-Lenard equations. Properties and theory of the linear Boltzmann collision operator. The relativistic Maxwellian. At the level of *Introduction to the Theory of Kinetic Equations*, by Liboff.

682 Nonlinear Phenomena in Plasma Physics
Fall. 3 credits. Prerequisite: EE 582. Offered alternate years.
Single-particle motion, multiple-time-scale analysis and ponderomotive effects, weakly nonlinear waves and solitons, nonlinear Vlasov phenomena, quasilinear theory, resonance broadening and resonant mode-mode coupling, statistical theories of plasma turbulence, recent developments in stochasticity and chaos in plasma physics.

685 Solar Plasma Physics
Fall. 3 credits.
This course will be coordinated with the two courses on upper atmospheric physics, EE 585 and 586, to provide an integrated view of solar-terrestrial physics for the graduate student intending a research career in space plasma physics. A thorough understanding of electromagnetic theory and some knowledge of fluid mechanics and plasma physics at the level of EE 581 and 582 are assumed.

Fields, Waves, and Antennas

303–304 Electromagnetic Fields and Waves
303, fall; 304, spring. 4 credits each semester.
For description see Core Courses.

316 High-Frequency and Microwave Fundamentals
Spring. 4 credits. Prerequisites: EE 301, 303, and 315.
3 lecs, 1 lab.
Laboratory and design studies in high-frequency and fast-pulse circuits, microwaves and electro-optics. Technical report writing. Eight experiments and two design projects.

433 Microwave Integrated Circuits
Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: EE 303 and EE306.
For description see Solid-State Electronics.

534 Microwave Semiconductor Devices
Spring. 4 credits. Prerequisites: EE 433 and 435.
3 lecs, 1 lab. For description see Solid-State Electronics.

583 Electrodynamics
Fall. 4 credits. Prerequisite: EE 301 and EE 304 or equivalent.
3 lecs.
Maxwell's equations, electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Lienard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation. Electrodynamics of dispersive dielectric and magnetic media. At the level of *Classical Electrodynamics*, by Jackson.

584 Microwave Theory
Spring. 4 credits. Prerequisites: EE 301 and 304 or equivalent.
3 lecs, 1 rec.
Theory of passive microwave devices. Modal analysis of inhomogeneous waveguides and cavities. Waveguide excitation, perturbation theory. Nonreciprocal waveguide devices. Scattering matrix analysis of multiport junctions, resonant cavities, directional couplers, circulators. Periodic waveguides, coupled-mode theory.

587 Introduction to Antennas and Radar
Fall. 3 credits. Prerequisites: EE 301 and 304 (or at least a B in 303). Open to qualified undergraduates.
Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, aperture antennas and aperture synthesis. Fundamentals of radar, including detection, tracking, Doppler shifts, sampling, range and frequency aliasing. Pulse compression principles and the ambiguity function; synthetic aperture radars and remote sensing from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects; radar astronomy techniques, including range-Doppler mapping of planets and the problem of overspread targets.

[588 Advanced Electromagnetic Wave Propagation and Scattering
Spring. 3 credits. Prerequisite: EE 587 or permission of instructor. Offered alternate years. Not offered 1989–90.
3 lecs.
Full-wave solutions of the wave equations, interactions between particles and waves, scattering of radio waves from random fluctuations in refractive index, scatter propagation, incoherent scatter from the ionosphere and its use as a diagnostic tool, scattering from unstable plasma waves, pulse compression and other radar probing techniques.]

General

250 Technology in Western Society (also Engr 250)
Fall. 3 credits. Approved for humanities distribution.
For description see Engineering Common Courses.

292 The Electrical and Electronic Revolutions (also Engr 292)
Spring. 3 credits.
For description see Engineering Common Courses.

360 Ethical Issues in Engineering
Spring. 3 credits. A social science elective for engineering students. Open to juniors and seniors.
3 lecs.
For description see Engineering Common Courses.

480 Thermal, Fluid, and Statistical Physics for Engineers
Spring. 3 credits. Prerequisite: Physics 214.
Extensive review of thermodynamic principles. Elementary theory of transport coefficients. Elements of fluid dynamics. Shock waves. Central-limit theorem. Random walk. Electrical noise. Fluctuation-dissipation theorem. Quantum and classical statistics. Black-body radiation. Thermal properties of solids. Kramers-Kronig relation. Elementary descriptions of the p-n junction. Shockley equation, superfluidity, superconductivity, and the laser.

491–492 Senior Project
491, fall; 492, spring. 1–8 credits.
Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required.

495–496 Special Topics in Electrical Engineering
1–4 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

591–599 Graduate Topics in Electrical Engineering
1–4 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

691–692 Electrical Engineering Colloquium
691, fall; 692, spring. 1 credit each term. For students enrolled in the graduate Field of Electrical Engineering.
Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Report required.

693–694 Master of Engineering Design
693, fall; 694, spring. 1–10 credits each term. For students enrolled in the M.Eng.(Electrical) degree program. Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate numbers.

695–699 Graduate Topics in Electrical Engineering
1–6 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

791–792 Thesis Research
791, fall; 792, spring. 1–15 credits. For students enrolled in the master's or doctoral program.

GEOLOGICAL SCIENCES

Freshman and Sophomore Courses

101 Introductory Geological Sciences
Fall, spring. 3 credits.
2 lecs, 1 lab, field trips, evening exams in the fall term. Fall, W. B. Travers; spring, J. M. Bird.
This course teaches observation and understanding of the earth, including oceans, continents, coasts, rivers, valleys, glaciated regions, earthquakes, volcanoes, and mountains; theories of plate tectonics; and the origin, discovery, and development of mineral and water resources. The lab teaches use of topographic and geologic maps and recognition of minerals and rocks and includes field trips to Cascadilla Gorge, Fall Creek, and Enfield Glen.

102 Evolution of the Earth and Life
Spring. 3 credits. Prerequisite: Geol 101 recommended.
2 lecs, 1 lab, field trips, weekly quizzes, no midterm. J. L. Cisne.
The story of the earth and life in terms of evolutionary processes and the global economy and material. The planet as a by-product of stars' evolution. Plate tectonics, continental drift, and their implications for life, fossil fuels, and climate. The greenhouse effect and its few-billion-year history. Evolution of life, human ancestry, dinosaurs. Laboratory involves examining the rocks and fossils that tell the story. Field trips to fossil-collecting sites and to Taughannock Gorge.

103 Geology in the Field
Fall. 3 credits. Limited to 35 students.
1 lec, 1 field trip or lab, 1 rec.
A. L. Bloom.
The subject matter of Geol 101, taught as much as possible by field trips on campus and in the vicinity, on foot and by bus. Weekly field trips until November introduce most of the major topics of the course, supplemented by lectures, recitations, and labs later in the term.

104 Introduction to Oceanography
Spring. 3 credits.
2 lecs, 1 lab. W. M. White.
The oceans remain one of the last frontiers, yet they affect our everyday lives in many subtle ways. A survey of what is known of the physics, chemistry, geology, and biology of the oceans, intended for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics; geology and biology of mid-ocean ridges; biological and geological controls on the chemisry of seawater; ocean currents and circulation; the oceans and climate, including El Niño, the greenhouse effect, and the Ice Ages; ecology of open ocean, ocean bottom, and near-shore communities; coastal processes; marine pollution and waste disposal; mineral and biological resources of the sea; Law of the Sea. At the level of *Scientific American.*

107 Frontiers of Geology I
Fall. 1 credit. May be taken concurrently with or after Geol 101, 102, 103, 104, 111, 201, or 202.
1 lec. J. L. Cisne and staff.
What is it like to get beyond the textbooks and standard introductory courses and do geological research? What are some of today's big questions, and how are they being answered? This course is an opportunity for beginning geology students to hear answers to these questions from a different Cornell researcher every week. Lectures are geared to the fall introductory geology courses.

108 Frontiers of Geology II
Spring. 1 credit. May be taken concurrently with or after Geol 101, 102, 103, 104, 111, 201, or 202.
1 lec. J. L.Cisne and staff.
Like Geol 107, but geared to the spring introductory geology courses.

111 To Know the Earth
Fall. 3 credits.
2 lecs, 1 lab, and field trips. J. E. Oliver.
Acquaints the non-scientist with the earth. Geology as an intellectual challenge, a provider of resources, an environment, a danger, a base for culture, and a science among sciences. The story behind landscapes, mountains, earthquakes, volcanoes, oceans, gold, petroleum, and icecaps. The record of the past, the context of the present, the forecast for the future.

201 Introduction to the Physics and Chemistry of the Earth (also Engr 201)
Spring. 3 credits. Prerequisites: Mathematics 191, Physics 112, and Chemistry 207.
2 lecs; 1 rec, lab, or field trip.
L. M. Cathles.
For description see Engineering Common Courses.

202 Environmental Geology
Spring. 3 credits.
2 lecs; 1 rec, lab, or field trip. D. E. Karig.
In-depth introduction to geologic processes that affect or are affected by human society, including stream behavior and floods, earthquakes, land stability and mass-wasting, and volcanic hazards. This material provides an application of geology to engineering, natural resources, and land-use planning. Local examples are discussed and visited on short field trips. The course can be taken as an introduction to geology, but also serves as a continuation of Geol 101.

210 Introduction to Field Methods in Geological Sciences
Fall. 2 credits. Prerequisite: Geol 101 or coregistration. Weekly field sessions. A weekend field trip.
D. E. Karig.
An introduction to the methods by which rocks are used as a geological database. Students are introduced to the field methods used in the construction of geologic maps and cross sections and to systematic description of stratigraphic sections. Field and laboratory sessions are held on Saturday mornings until Thanksgiving; during most of these weeks there is also one additional lecture. One weekend is devoted to a field trip to eastern New York.

212 Special January Field Trip
Fall. 1 credit. Prerequisites: Geol 101 or 201 or equivalent, and permission of instructor. Travel and subsistence expenses to be announced.
1 lec, field trip. Staff.
A trip of one week to ten days during January intersession in an area of interesting geology in the lower latitudes. Interested students should contact the instructor during the early part of the fall semester.

213 Marine and Coastal Geology
Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor.
A special one-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (including tuition, room, board, and ferry transportation) is $600.

214 Western Adirondack Field Course
Spring, one week at the end of the semester. 1 credit. Prerequisite: Geol 101 or 102 or equivalent. Students should be prepared for overnight camping and share in the cost of camp meals.
W. A. Bassett.
Field mapping methods, mineral and rock identification, examination of Precambrian metamorphic rocks and lower Paleozoic sediments, talc and zinc mines.

Junior, Senior, and Graduate Courses

Of the following, the core courses Geol 326, 355, 356, 375, and 388 may be taken by those who have successfully completed Geol 201 or the equivalent or who can demonstrate to the instructor that they have adequate preparation in mathematics, physics, chemistry, biology, or engineering.

326 Structural Geology
Fall. 4 credits. Prerequisite: Geol 101 or 201, or permission of instructor.
3 lecs, 1 lab, field trips. Staff.
Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics.

355 Mineralogy
Fall. 4 credits. Prerequisite: Geol 101 or 201 and Chem 207 or permission of instructor.
1 lec, 1 lab; assigned problems and readings. W. A. Bassett.
Examination of minerals by hand-specimen properties and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals are studied. X-ray diffraction is introduced.

356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: Geol 355.
2 lecs, 2 labs, 1 field trip; assigned problems and readings. R. W. Kay.
Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

375 Sedimentology and Stratigraphy
Fall. 4 credits. Recommended: Geol 102 or 201.
3 lecs, 1 lab, field trips. J. L. Cisne.
Formation of sedimentary rocks. Depositional processes. Depositional environments and their recognition in the stratigraphic record. Correlation of strata in relation to time and environment. Seismic stratigraphy. Geological age determination. Reconstruction of paleogeography and interpretation of earth history from stratigraphic evidence.

388 Geophysics and Geotectonics
Spring. 4 credits. Prerequisites: Mathematics 192 and Physics 208, 213, or equivalent.
3 lecs, 1 lab. B. L. Isacks.
Global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the earth's gravitational and magnetic fields, and heat flow.

401 Field Geology
Summer. 4 credits. Prerequisites: Geol 210, 214, and 326, or permission of instructor. Four weeks at research sites in the western United States or Canada. Fee, approximately $1,200.
Staff.
Field mapping techniques in igneous, metamorphic, and sedimentary rock, using topographic maps and air photos. The structural geology, petrology, geomorphology, and sedimentology of selected areas in the Rocky Mountains will be included. An independent project and report is done during the last week.

412 Experiments and Techniques in Earth Sciences
Spring. 2 credits. Prerequisites: Physics 213 and Mathematics 192 or equivalents, or permission of instructor.
S. Kaufman.
Laboratory and field experiments chosen in accordance with students' interests. Familiarization with instruments and techniques used in earth sciences. Independent work is stressed.

[424 Petroleum Geology
Fall. 3 credits. Recommended: Geol 326. Offered alternate years. Not offered 1990–91.
2 lecs, 1 lab. W. B. Travers.
Introduction to hydrocarbon exploration and development. Exploration techniques, including geologic use of well logs, fluid pressures, seismic-reflection methods, gravity, and magnetic measurements to map subsurface structures and stratigraphy. Petroleum origin and migration. Dispersal systems and depositional patterns of petroleum reservoirs. Economics of exploration, leasing, drilling and production, and estimates of petroleum reserves, including tar sands and oil shales.]

[431 The Earth's Crust: Structure, Composition, and Evolution
Fall. 3 credits. Prerequisites: Geol 356 and 388. Offered alternate years. Not offered 1990–91.
3 lecs. L. D. Brown.
Structure and composition of the crust from geophysical observations, analysis of xenoliths, and extrapolation of petrological laboratory data. Radioisotopic considerations. The nature of the crust-mantle boundary. Thermal and rheological structure of the crust. Oceanic versus continental crust. Origin and evolution of oceanic and continental crust.]

[432 Digital Processing and Analysis of Geophysical Data
Spring. 3 credits. Prerequisite: Geol 487 or equivalent. Offered alternate years. Not offered 1990–91.
3 lecs. L. D. Brown.
Sampling theory. Fourier, Laplace, and Z-transform techniques. Spectral analysis. Temporal and spatial filtering. Seismic processing theory: signal enhancement and imaging.]

433 Exploration Seismology I: Data Acquisition and Processing
Fall. 3 credits. Prerequisite or corequisite: Geol 487 or equivalent. Offered alternate years.
3 lecs. L. D. Brown.
Planning seismic reflection and refraction surveys. Array design. Source characteristics and ground coupling. Land and marine operations. 2-D and 3-D surveys. Convolutional seismic model. Applied seismic processing: FK filtering, deconvolution, velocity analysis, stacking, migration, display. True amplitude processing.

434 Exploration Seismology II: Analysis and Interpretation
Spring. 3 credits. Prerequisite: Geol 487 or equivalent. Offered alternate years.
3 lecs. L. D. Brown.
Techniques for inferring geologic structure and lithology from multichannel seismic reflection data and crustal refraction data. Migration. Velocity and amplitude interpretation, correlation criteria, resolution wave-form analysis, seismic structure, and stratigraphy. Seismic modeling. 3-D and VSP. Attribute and tau-p analysis.

441 Geomorphology
Fall. 3 credits. Prerequisite: Geol 102 or 201, or permission of instructor.
2 lecs, 1 lab. A. L. Bloom.
Systematic analysis of landforms constructed by tectonic and volcanic processes and their subsequent progressive destruction by climate-controlled erosional processes.

[442 Glacial and Quaternary Geology
Spring. 3 credits. Prerequisite: Geol 441 or permission of instructor. Offered alternate years. Not offered 1990–91.
2 lecs, 1 lab; several field trips.
A. L. Bloom.
Glacial processes and deposits and the chronology of the Quaternary Period.]

445 Geohydrology (also Ag Eng 471 and C&EE 431)
Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202.
3 lecs. A. L. Bloom, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

[452 X-ray Diffraction Techniques
Spring. 3 credits. Prerequisites: Geol 355 or permission of instructor. Offered alternate years. Not offered 1990–91.
1 lec, 2 labs. W. A. Bassett and staff.
Automated X-ray diffractometer, Debye-Scherrer, real-time Laue, high-temperature diffraction, high-pressure diffraction, and pole-figure analysis. Applications in materials science and geological sciences. Labs will be held in the new Materials Science X-Ray Facility.]

453 Modern Petrology
Fall. 3 credits. Prerequisite: Geol 356. Offered alternate years.
2–1/2 lecs, 1/2 lab. R. W. Kay.
Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems. Reading from the literature and petrographic examination of pertinent examples.

454 Advanced Mineralogy
Spring. 3 credits. Prerequisite: Geol 355 or permission of instructor. Offered alternate years.
2 lecs, 1 lab. W. A. Bassett.
Crystallography and crystal chemistry of minerals and the methods of their study. X-ray diffraction, optical methods, computer simulation of crystal structures. Emphasis on effects of high pressures and temperatures with implications for understanding of Earth's interior.

456 Geochemistry
Spring. 3 credits. Prerequisites: Chemistry 207 or 211, Geol 101 or 201 or equivalent, and Mathematics 112 or 192. Recommended: Geol 355 and 356.
3 lecs. W. M. White.
Thermodynamics applied to geology. Principles of trace-element and isotope geochemistry and their application to the study of igneous and metaporphic rocks. Overview of nucleosynthesis, cosmochemistry, and formation and chemical evolution of the earth. Introduction to the chemistry of the oceans and marine sediments.

[474 Modern Depositional Systems
Spring. 3 credits. Prerequisite: Geol 375 or permission of instructor. Offered alternate years. Not offered 1990–91.
3 lecs. T. E. Jordan.
Compositions, textures, sedimentary structures, and facies variations of sediments in modern depositional environments. Clastic and carbonate environments; fluvial, alluvial-fan, delta, intertidal, submarine-fan, carbonate-bank, and sabkha systems. Required field trip during spring recess to region of modern examples and/or rock sequences demonstrating ancient examples.]

[476 Sedimentary Basins: Tectonics and Mechanics
Spring. 3 credits. Prerequisite: Geol 375 or permission of instructor. Offered alternate years. Not offered 1990–91.
3 lecs. T. E. Jordan.
Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Framework of active-margin, passive-margin, and cratonic basins; and stratigraphy. Topics include geophysical and stratigraphic modeling, and sequence stratigraphy. Modern and ancient examples.]

[478 Advanced Stratigraphy
Spring. 3 credits. Prerequisite: Geol 375 or permission of instructor. Offered alternate years. Not offered 1990–91.
2 lecs, 1 lab, possible spring break field trip. T. E. Jordan.
Survey of modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Physical controls on the stratigraphic record and numerical modeling.]

[479 Paleobiology (also Bio Sci 479)
Fall. 3 credits. Prerequisites: Biological Sciences 101–102 and 103–104 or equivalent, and either Geol 375, Biological Sciences 272–274, Biological Sciences 373, or permission of instructor. Offered alternate years. Not offered 1990–91.
3 lecs. J. L. Cisne and staff.
Survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.]

487 Geophysical Prospecting
Fall. 3 credits. Prerequisites: Physics 213 and Mathematics 192 or equivalents, or permission of instructor.
2 lecs. S. Kaufman.
Physical principles, instrumentation, operational procedures, and interpretation techniques in geophysical exploration for oil, gas, and minerals. Seismic reflection, seismic refraction, gravity, and magnetic and electrical methods of exploration.

[489 Earthquakes and Tectonics
Fall. 3 credits. Prerequisites: Geol 101 or 201, Mathematics 192, Physics 213, or permission of instructor. Offered alternate years. Not offered 1990–91.
3 lecs. B. L. Isacks.
The mechanisms of earthquakes revealed by seismic-wave radiation and by near-source studies of faulting and surface deformation; relationships to regional tectonics; earthquake hazard and prediction.]

490 Honors Thesis (B.A. degree candidates)
Fall, spring. 2 credits.
Staff.
Thesis proposal to be discussed with director of undergraduate studies during the junior year. Participation requires acceptance of a thesis proposal by the faculty committee.

491–492 Undergraduate Research
Fall, spring. 1 credit.
Staff (D. E. Karig and A. L. Bloom, coordinators).
An introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

500 Design Project in Geohydrology
Fall, spring 3–12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters.
L. M. Cathles.
The project may address one of many aspects of groundwater flow and contamination, and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented in GS 501, Geohydrology Design Project Seminar.

501 Geohydrology Design Project Seminar
Fall, spring. 1 credit. Required for the M.Eng. degree, geohydrology option.
1 rec., hours to be arranged.
L. M. Cathles.
In fall, the weekly seminar provides a forum for discussion of courses and development of design projects (see GS 500). In spring, it provides an opportunity to present and discuss design projects.

502 Case Histories in Groundwater Analysis
Spring. 4 credits.
L. M. Cathles, A. L. Bloom.
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. For the remainder of the semester, the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report, whose results are presented in a half-day seminar at end of term.

621 Marine Tectonics
Fall. 3 credits. Prerequisites: Geol 326 and a course in geophysics. Offered alternate years.
3 lecs. D. E. Karig.
Study of geophysical and geological characteristics of the earth's crust beneath the oceans. Emphasis on recent geologic data concerning plate margins in the oceans; island-arc systems, spreading systems, and transforms. Techniques for determining instantaneous and finite plate rotations. Lectures and reviews of recent papers. Term project and paper required.

[622 Advanced Structural Geology I
Spring. 3 credits. Prerequisites: Geol 326 and permission of instructor. Offered alternate years. Not offered 1990–91.
2 lecs, 1 lab, possible weekend field trips.
D. E. Karig, R. W. Allmendinger.
Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.]

[624 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: Geol 326 and permission of instructor. Offered alternate years. Not offered 1990–91.
2 lecs, 1 lab, spring-recess trip.
R. W. Allmendinger, D. E. Karig.
Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, rift provinces, or strike-slip provinces. Techniques of balanced cross sections.]

625 Tectonic History of Western North America from Craton to Terrances
Fall. 2 credits. Open to seniors and graduate students. Offered alternate years.
Lecture, term paper, quizzes, no final.
W. B. Travers.
Seminar on current research on the sequence, style, and mechanics of deformation, with emphasis on growth of the continent in the western United States and southern Canada.

628 Geology of Orogenic Belts
Spring. 4 credits. Prerequisite: permission of instructor.
T R 10:10–12:05. J. M. Bird.
A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement Geol 781.

635 Advanced Geophysics I: Quantitative Geodynamics
Fall. 3 credits. Prerequisite: Geol 388.
3 lecs. D. L. Turcotte.
Stress and strain, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, and flow in porous media.

637 Advanced Geophysics II: Fundamentals of Mantle Convection
Spring. 3 credits. Prerequisite: Geol 388.
3 lecs. D. L. Turcotte.
Fractals and chaos, structure of the mantle, material properties, heat sources, basic equations, linear stability analysis, approximate solutions, numerical solutions, plumes, laboratory experiments, geochemistry, early thermal history, terrestrial planets and satellites.

655 Isotope Geochemistry
Fall. 3 credits. Open to undergraduates. Prerequisite: Geol 356 or permission of instructor. Offered alternate years.
2 lecs. W. M. White.
Nucleosynthetic processes and the isotopic abundance of the elements. Dating by Pb, Ar, Sr, and Nd isotope variations. Theories of crustal and mantle evolution. Pleistocene chronology using U-series and 14C dating. Time constants for geochemical cycles. The use of O and H isotopes as tracers in the earth's hydrosphere, and hydrothermal circulation systems.

681 Geotectonics
Fall. 4 credits. Prerequisite: permission of instructor.
2 lecs. J. M. Bird.
Theories of orogeny; ocean and continent evolution. Kinematics of lithosphere plates. Rock-time assemblages of modern oceans and continental margins, and analogs in ancient orogenic belts. Time-space reconstructions of specific regions. Problems of dynamic mechanisms—corollaries and evidence from crustal features.

687 Seismology
Fall. 3 credits. Prerequisite: T&AM 611 or equivalent. Offered alternate years.
3 lec-recs. B. L. Isacks.
Generation and propagation of elastic waves in the earth. Derivation of the structure of the earth and the mechanism of earthquakes from seismological observations.

695 Computer Methods in Geological Sciences
L. D. Brown, B. L. Isacks.
This course is intended to familiarize students with the growing importance of computers in geological and geophysical research. Students will be required to develop, debug, implement, and document a program relevant to current research in the Department of Geological Sciences. Available facilities include the department's VAX workstations, MEGASEIS seismic computer, Landmark Interpretation Workstation, IIS image processor, and numerous graphics and I/O peripherals. The Cornell National Supercomputer Facility may also be used.

700–799 Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor.
Advanced work on original investigations in geological sciences. Topics change from term to term.

721 Tectonic and Stratigraphic Evolution of Sedimentary Basins
W. B. Travers.

722 Advanced Topics in Structural Geology
R. W. Allmendinger.

725 Rock and Sediment Deformation
D. E. Karig.

731 Plate Tectonics and Geology
J. M. Bird.

741 Advanced Geomorphology Topics
A. L. Bloom.

751 Petrology and Geochemistry
R. W. Kay.

753 Mineralogy and Crystallography, X-Ray Diffraction, Microscopy, High-Pressure–Temperature Experiments
W. A. Bassett.

755 Advanced Topics in Petrology and Tectonics
J. M. Bird, W. A. Bassett.

757 Current Research in Petrology
R. W. Kay.

762 Advanced Topics in Petroleum Exploration
W. B. Travers.

771 Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

773 Paleobiology
J. L. Cisne.

780 Seismic Record Reading
M. Barazangi, B. L. Isacks.

781 Geophysics, Exploration Seismology
L. D. Brown.

783 Advanced Topics in Seismology
B. L. Isacks.

785 Exploration Seismology, Gravity, Magnetics
S. Kaufman.

788 Geophysics, Seismology, and Geotectonics
J. E. Oliver.

789 Research on Seismic-Reflection Profiling of the Continental Crust
J. E. Oliver, L. D. Brown, S. Kaufman.

793 Andes Seminar
B. L. Isacks, T. E. Jordan, A. L. Bloom, R. W. Allmendinger.

796 Geochemistry of the Solid Earth
Fall.
W. M. White.

797 Fluid-Rock Interactions
L. M. Cathles.

799 Contemporary Issues in Groundwater Hydrology
Spring.
L. M. Cathles.

MATERIALS SCIENCE AND ENGINEERING

Undergraduate Courses

201 Elements of Materials Science and Engineering (also Engr 111)
Fall. 3 credits.
For description see Engineering Common Courses.

261 Introduction to Mechanical Properties of Materials (also Engr 261)
Fall, spring. 3 credits.
2 lecs, 1 rec or lab.
For description see Engineering Common Courses.

262 Introduction to Electrical Properties of Materials (also Engr 262)
Spring. 3 credits.
2 lecs, 1 rec or lab.
For description see Engineering Common Courses.

285 Art, Isotopes, and Analysis (also Engr 285, Physics 200, Archaeology 285, English 285, and Art 372)
Spring. 3 credits.
3 lecs. J. W. Mayer, S. Taft, D. Eddy.
For description see Engineering Common Courses.

331 Structural Characterization of Materials
Fall. 4 credits.
3 lecs, 1 lab.
Crystal structures and crystal defects, stereographic projection methods. Techniques for materials analysis: X-ray and electron diffraction, optical and electron microscopy. Design of experimental systems for the structural characterization of materials.

332 Electrical and Magnetic Properties of Materials
Spring. 3 credits. Prerequisite: MSE 331 or permission of instructor.
3 lecs.
Electrical and magnetic properties of metals and semiconductors as affected by microstructure. Design of semiconductor properties by doping. Carrier drift, diffusion, and recombination. Depletion layers in p-n junctions. Design of semiconductor devices. Principles and design of ferromagnetic materials for transformers, permanent magnets, and bubble memories. Fundamentals and design of superconducting materials for high-field magnets and Josephson junctions.

333 Research Involvement I
Fall. 3 credits. Prerequisite: approval of department.
Supervised independent research project in association with faculty member and faculty research group of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Typical projects have involved hot isostatic compaction, sputter etching, and mechanical testing of polymer films.

334 Research Involvement II
Spring. 3 credits. Prerequisite: approval of department.
May be a continuation of MS&E 333 or a one-term affiliation with a research group.

335 Thermodynamics of Condensed Systems
Fall. 4 credits.
3 lecs.
The three laws of thermodynamics are introduced as a basis for understanding phase equilibria, heterogeneous reactions, solutions, electrochemical processes, surfaces, and defects. One-third of the course involves examples of design and control of materials processing and microstructure.

336 Kinetics, Diffusion, and Phase Transformations
Spring. 3 credits. Prerequisite: MS&E 335 or permission of instructor.
3 lecs.
Introduction of absolute rate theory, atomic motion, and diffusion. Applications and design involving nucleation and growth of new phases in vapors, liquids, and solids; solidification, crystal growth, oxidation and corrosion, radiation damage, recrystallization, gas-metal reactions, and thermomechanical processing to produce desired microstructures and properties.

345 Materials and Manufacturing Processes (also M&AE 312)
Spring. 3 credits. Prerequisite: T&AM 202 or permission of instructor.
2 lecs, 1 lab.
For description see M&AE 312.

435–436 Senior Thesis I & II
435, fall; 436, spring. 4 credits.
Staff.
Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty member prior to beginning the senior year. Approved thesis topics will normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required.

441 Microprocessing of Materials
Fall. 3 credits.
3 lecs, occasional lab.
Materials and processing steps involved in the production of large-scale integrated circuits. Design of processes to give a specific device, e.g., a MOSFET is described, not circuit design. Emphasis is on silicon devices, with mention of Gallium Arsenide. All steps in fabrication of circuits are considered, starting with purification of silicon, single-crystal growth, zone refining, and wager slicing. Thin-film growth by epitaxy, by chemical or physical vapor deposition, or by thermal oxidation of silicon to SiO2. Doping of layers by diffusion and by ion implantation. Principles and practice of lithography; comparison of near and far UV, electrons and X-rays for resolution, output, and cost. Photoresists. Wet and dry etching. Characterization and testing, yield. Electromigration and other device failure modes.

442 Macroprocessing (also M&AE 512)
Spring. 3 credits.
3 lecs.
Deformation processing of materials, including superplastic forming, sheet-metal forming, massive forming, and powder processing. Time, temperature, and strain-rate effects in warm-forming and hot-forming. Characterization of powder-compaction mechanisms and their use in process design. Forming-limit diagrams. Development of microstructure-based criteria for fracture in large deformations. Optimization and design of forming processes. Development of constitutive equations for superplastic flow. Design of a superplastic forming process starting from basic mechanisms. The course includes a comprehensive experimental project in which the constitutive equations for superplastic flow are measured and computer-aided techniques are used to design a superplastic forming process. The forming experiment is carried out, and the results are compared with the predictions from the numerical analysis.

443–444 Senior Materials Laboratory
443, fall; 444, spring. 3 credits.
Projects are available in plasticity of metals and ceramics, mechanical and chemical processing, phase transformations, electrical and ionic conductivity, analysis of defects by electron microscopy, sintering, crystal growth, thin-film fabrication, electronic materials, etc. Emphasis is placed on design of experimental equipment for analysis and evaluation of a material's properties and performance in terms of its processing history and microstructure.

445 Mechanical Properties of Materials
Fall. 3 credits. Prerequisites: MS&E 331 and 336, or permission of instructor.
3 lecs.
Relation between stress, strain, and the concept of equivalent stresses and strains; failure criteria for metals, polymers, and ceramics. Applications of fracture mechanics to fail-safe design. Analysis of important mechanical properties such as plastic flow, creep, fatigue, fracture toughness, and rupture and their variation with temperature in terms of the interaction of the microstructure with lattice defects. Application of these principles to the design of improved materials.

447 Materials Design Concepts I
Fall. 2 credits.
Speakers from industry and other institutions will give case studies of design problems. Students will write a proposal for a design-study project, which will be approved by the instructor. At the level of *Engineering Design*, by Dieter.

448 Materials Design Concepts II
Spring. 2 credits. Prerequisite: MS&E 447.
Each student is expected to complete an extensive design-study project and give a thirty-minute video-taped talk on a materials-design problem that includes a discussion of economic factors as well as the design of processes and the selection of materials. At the level of *Engineering Design*, by Dieter.

449 Introduction to Ceramics
Fall. 3 credits. Prerequisite: MS&E 331 or permission of instructor.
3 lecs.
Ceramic processes and products, crystal structures, structure of glasses, point defects (point-defect chemistry and relation to nonstoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids: heterogeneous reactions, reactions between different solids, point-defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.

450 Physical Metallurgy
Spring. 3 credits.
The service and design requirements of engineering alloys and their testing and characterization. The properties of important alloy systems. The selection and design of alloys for various engineering requirements, such as ASME design codes.

452 Properties of Solid Polymers
Spring. 3 credits. Prerequisite: Engr 261 or permission of instructor.
3 lecs.
Synthetic and natural polymers for engineering applications. Production and characterization of long-chain molecules. Gelation and networks, rubber elasticity, elastomers and thermosetting resins. Amorphous and crystalline thermoplastics and their structure. Time- and temperature-dependent elastic properties of polymers. Molecular-weight measurement. Design of high-impact-strength polymers.

454 Processing of Glass, Ceramic, and Glass-Ceramic Materials
Spring. 3 credits. Offered alternate years.
Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photosensitive materials, and powder processing and sintering of ceramics will be discussed. This course is team taught with two scientists from the research and development laboratory of Corning Glass Works.

455 Analysis of Manufacturing Processes (also M&AE 512)
Spring. 3 credits. Prerequisite: M&AE 312.
3 recs.
For description see M&AE 512.

459 Physics of Modern Materials Analysis
Fall. 3 credits.
The interaction of ions, electrons, and photons with solids, and the characteristics of the emergent radiation in relation to the structure and composition of materials. Aspects of atomic physics that are necessary for understanding techniques of modern materials analysis, such as Auger electron spectroscopy, ion scattering, and secondary ion mass spectroscopy. Design of experiments for near-surface analysis.

463 Principles of Electronic Packaging
Fall. 3 credits.
Design and materials needs for packaging technology, from chip to board. Principles involved in key areas of materials science, and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

Graduate-Level Professional Courses

510 Optical Methods and Materials
Fall. 3 credits.
Principles of geometric and Gaussian optics, instrumentation required for optical experiments, and methods in optical spectroscopy. Fundamental aspects of the interaction between optical waves and crystalline solids. Materials aspects of optical devices such as optical films and coatings, light-modulation devices, displays, lasers and detectors, optical waveguides, electro-optic devices, optical recording, and applications of high-intensity light beams.

512 Chemical Thermodynamics of Materials
Fall. 3 credits.
Thermodynamic principles. Chemical potentials, fugacities, and activities. Closed and open systems. Stability of single- and multicomponent systems. Reactions. Binary and multi-component systems and phase diagrams. Compounds. Surfaces, surface tension, and adsorption. Special topics such as electrochemistry, corrosion, and chemical-vapor deposition.

514 Chemical Processing of Ceramics
Spring. 3 credits.
Ultrastructure processing of ceramics, glasses, and composites. Chemical approaches in designing and controlling the surfaces and interfaces of materials, devices, and structures at the molecular level. Topics: organometallic routes to ceramics; sol-gel processing, chemical vapor deposition, and pyrolysis techniques; design, synthesis, and chemical properties of inorganic/organometallic precursors; preparation, surface chemistry, and micromechanics of controlled powders; characterization of chemically processed ceramics; application of sol-gel derived materials; advanced structural ceramics.

516 Thin-Film Materials Science
Fall. 3 credits.
This course is a fundamental approach to thin-film science that will cover deposition of films, growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and interdiffusion and reaction in thin films. The course will begin with the structure and thermodynamics of surfaces and ultrathin films. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, metallic silicides, and aluminides will be presented.

518 Introduction to Electron Microscopy
Spring. 3 credits. Prerequisite: MS&E 331 or permission of instructor.
3 lecs.
Basic optics and operation of scanning and transmission electron microscopes. Image formation, modes of contrast, and resolution in SEM and TEM. Electron diffraction. Images of perfect crystal and defects in two-beam diffraction contrast. Analytical microscopy; comparison of EDS, WDS, and EELS. X-ray imaging. Overview of specimen preparation and in-situ microscopy.

520 Practical Electron Microscopy
Spring. 3 credits. Corequisite: MS&E 518–520. Limited to 12 students. A fee will be charged for instrument usage.
Lab.
Students will be instructed in the proper use of a scanning and a transmission electron microscope. All stages from initial alignment of the instrument to presentation of the results will be covered. Three or four projects will be completed, including obtaining atomic lattice fringe images and X-ray microanalysis.

553–554 Special Project
553, fall; 554, spring. 6 credits each term.
Research on a specific problem in the materials area.

Graduate Core Courses

601 Thermodynamics of Materials
Fall. 3 credits.
Basic statistical thermodynamics. Partition function and thermodynamic state functions. Distributions. Laws of thermodynamics. Free-energy functions and conditions of equilibrium. Chemical reactions. Statistics of electrons in crystals. Heat capacity. Heterogeneous systems and phase transitions. Lattice models of 1–, 2–, 3–dimensional interacting systems. Statistical thermodynamics of alloys. Free-energy and phase diagrams. Order-disorder phenomena. Point defects in crystals. Statistical thermodynamics of interfaces. Nucleation phenomena.

602 Elasticity and Physical Properties of Crystals
Fall. 3 credits.
Cartesian tensors, elastic stress and strain, constitutive relations between stress and strain, symmetry of crystals, generalized tensor representation of elasticity and other reversible and irreversible properties of crystals; mathematical theory of infinitesimal elasticity with applications, including wave propagation and stress fields of dislocations; mathematical theory of yield stress and plasticity; origin of elastic behavior. At the level of Physical Properties of Crystals, by Nye.

603 Structural Defects in Solids
Spring. 3 credits. Prerequisites: MS&E 601 and 602, or equivalent.
Binding energies in perfect crystals. Structure and energetics of point, line, and planar defects in crystalline materials, including metals, ionic solids, covalent solids, and polymers. Interactions between defects. Bonding and random packing in amorphous materials. Observation of defects in crystalline materials. Structural analysis of amorphous materials.

604 Kinetics of Solid-State Reactions
Spring. 3 credits.
Point defects (thermal disorder, component-activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, interfaces, transport in solids (definition and different kinds of diffusion coefficients, reference frames, electrical conduction, diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes), point-defect relaxation (migration controlled, phase-boundary-reaction controlled), interdiffusion, solid-state reactions involving compound formation, behavior of materials in potential gradients, selected solid-state processes (sintering, solid-state galvanic cells, etc.).

605 Plastic Flow and Fracture of Materials
Fall. 3 credits.
R. Raj.
Topics in the mechanical behavior of materials from a fundamental standpoint. Atomistic aspects of elastic properties, plastic flow in single crystals and polycrystals, rate-dependent deformation at elevated temperature, mapping of various mechanisms of plastic flow over a wide range of temperature, shear stress and grain size, and superplastic deformation. Fracture is discussed from a thermodynamic as well as an atomistic standpoint. Fracture criteria are developed in terms of crack-tip processes. Cleavage, ductile brittle transition, and intergranular cavitation failure at high temperatures. Emphasis on micromechanical modeling of mechanical behavior. A materials-science approach to modeling that combines concepts from continuum mechanics, thermodynamics, kinetics, and atomic structure.

Related Course in Another Department
Introductory Solid-State Physics (Physics 454)

Further Graduate Courses

610 Principles of Diffraction (also A&EP 711)
Fall. 3 credits. Offered alternate years.
For description see A&EP 711.

612 Phase Transformations
3 credits. Prerequisites: MS&E 601 and 604, or equivalent preparation.
Compositional and structural transitions in condensed systems, including spinoidal decomposition, cellular transformations, and diffusionless transformations; clustering and ordering in solid solutions; radiation-induced precipitation; condensation and evaporation phenomena; order-disorder transformations; transitions in magnetic, ferroelectric, and superconducting materials; phase equilibria and transitions in surface and grain-boundary layers. Phase transformations in metallic, ceramic, semiconducting, and polymeric systems. Thermodynamic, statistical thermodynamic, structural, and kinetic aspects of the transitions. Modern methods of observation. At the level of *The Theory of Transformations in Metals and Alloys*, by Christian; *Critical Phenomena in Alloys, Magnets and Superconductors*, edited by Mills, Ascher, and Jaffee; and current review articles.

616 Electrical and Magnetic Properties of Materials
3 credits. Prerequisite: Physics 454 or equivalent.
Electronic transport properties of metals and semiconductors, semiconductor devices, optical and dielectric properties of insulators and semiconductors, laser materials, dielectric breakdown, structural aspects of superconducting materials, ferromagnetism, and magnetic materials. At the level of *Physics of Semiconductor Devices*, by Sze; *Ferromagnetism*, by Bozworth; and current review articles.

618 Laser Processing of Materials
3 credits. Offered on demand.
Use of high-intensity lasers in the processing of materials to achieve unique microstructures and metastable phases. Topics: fundamentals of the interaction of E&M fields with metals, semiconductors and ceramics, transfer of energy between electronic and phonon systems, kinetics of rapid solidification, metastable phase transformations, microstructure of rapidly solidified materials, and current industrial applications.

620 Synthesis of Polymeric Materials
3 credits. Prerequisite: MS&E 452 or permission of instructor.
Preparation of synthetic polymers by step- and chain-growth polymerization: condensation; free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and kinetic aspects of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Topics will also include liquid crystalline polymers, polymers for photoresists, and adhesive-binder polymers. At the level of *Principles of Polymerization*, by Odian, and current literature.

622 X-Ray Diffraction in Materials Science
Fall. 3 credits. Offered on demand.
X-ray scattering and absorption by materials. Reciprocal lattice and brillouin zones. Space groups and various crystal structures. Diffraction from two- or three-dimensional periodic lattices and effect of thermal vibrations. Experimental techniques in X-ray diffraction with particular emphasis on the use of synchrotron sources. Determination of crystal structure by powder and single-crystal diffraction. Use of X-ray diffraction techniques in materials science in studying phase transformation and texture in materials. Diffraction from surface layers and amorphous materials.

671 Synthetic Polymer Chemistry (also Chem 671 and Chem E 675)
Fall. 3 credits. Offered on demand. Prerequisites: Chem 359–360 or equivalent, or permission of instructor. Recommended: M&SE 620.
For description see Chem E 675.

Specialty Courses

707 Solar Energy Materials
3 credits. Offered on demand.
3 lecs.
Photovoltaic energy conversion: (1) theory (on the level of Hovel); (2) the role of crystal defects and grain boundaries on the conversion efficiency, and schemes to passivate these defects; (3) current investigations in the DOE program to produce large quantities of solar-grade semiconducting Si; (4) theory and materials for amorphous silicon solar cells.

714 Advanced Transmission Electron Microscopy
Fall. 3 credits. Prerequisites: MS&E 518 and 520. Offered on demand.
3 lecs.
Kinematic and dynamic diffraction, dispersion surfaces, and Bloch waves. Anomalous absorption, Kikuchi band theory, and energy selected images. Contrast transfer function theory of phase constrast. Lattice imaging and image modeling. Calculation of multibeam defect images in theory and practice. Weak-beam images. Image processing. High-resolution SEM and STEM images. Convergent beam patterns.

716 Transition Metal Oxides (also Chem 716)
Fall. 3 credits. Offered on demand.
For description see Chem 716.

779 Special Studies in Materials Sciences
Fall, spring. Variable credit. Offered on demand.
Supervised studies of special topics in materials science.

798 Materials Science and Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students.
Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

799 Materials Science Research Seminars
Fall, spring. 2 credits each term. For graduate students involved in research projects.
Short presentations on research in progress by students and staff.

800 Research in Materials Science
Fall, spring. Credit to be arranged. Prerequisite: candidacy for Ph.D. in materials science.
Independent research in materials science under the guidance of a member of the staff.

801 Research in Materials Science
Fall, spring. Credit to be arranged. Prerequisite: candidacy for M.S. in materials science.
Independent research in materials science under the guidance of a member of the staff.

MECHANICAL AND AEROSPACE ENGINEERING

General and Required Courses

101 Naval Ship Systems (also Naval Science 102)
Spring. 3 credits. Limited to freshmen and sophomores. A free elective for engineering students.
M. Y. Louge.
An introduction to primary ship systems and their interrelation. Basic principles of ship construction. Stability, propulsion, control, internal communications, and other marine systems.

102 Drawing and Engineering Design (also Engr 102)
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.
2 lecs, 1 lab.
For description see Engineering Common Courses.

117 Introduction to Mechanical Engineering (also Engr 117)
Fall. 3 credits.
2 lecs, 1 lab.
For description see Engineering Common Courses.

[119 Introduction to Manufacturing (also Engr 119 or OR & IE 119)
Spring. 3 credits. May not be offered 1990–91.
2 lecs, 1 lab.
For description see Engineering Common Courses.]

221 Thermodynamics (also Engr 221)
Fall, spring. 3 credits. Prerequisites: Mathematics 192 and Physics 112.
For description see Engineering Common Courses.

312 Fundamentals of Manufacturing Processes (also MS&E 345)
Spring; may be offered in Engineering Cooperative Program. 3 credits. Prerequisites: Engr 202 and 261, or permission of instructor.
2 lecs, 1 lab; evening exams and prelims may be given.
Yield criteria and plastic flow. Manufacturing processes for engineering materials, including metals, polymers, ceramics, and composites. Casting, forming, material removal, and joining processes.

323 Introductory Fluid Mechanics
Fall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: Engr 202 and 203 and coregistration in 221, or permission of instructor.
4 lecs, evening prelims.
Statics, kinematics, potential flow, dynamics, momentum, and energy relations. Thermodynamics of compressible flow; dimensional analysis; real fluid phenomena, laminar and turbulent motion, boundary layer; lift and drag; supersonic flow and shock waves.

324 Heat Transfer
Spring; may be offered in Engineering Cooperative Program. 3 credits. Prerequisite: M&AE 323.
3 lecs, evening prelims.
Conduction of heat in steady and unsteady situations. Surfaces with fins and systems with heat sources. Forced and natural convection of heat arising from flow around bodies and through ducts. Heat exchangers. Emission and absorption of radiation; radiative transfer between surfaces. Introduction to boiling and phase change.

325 Mechanical Design and Analysis
Fall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: Engr 202 and 203.
3 lecs, 1 lab. Evening prelims may be given. Lab fee $25. S. E. Landsberger.
Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems. A hands-on laboratory, the use of machine tools, and a final design project provide direct experience of creative design synthesis.

326 System Dynamics
Spring; may be offered in Engineering Cooperative Program. 4 credits. Prerequisite: M&AE 325, Mathematics 294, and Engr 210.
3 lecs, 1 lab, evening prelims.
Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; linear control systems, PDF control, stability analysis. Computer simulation and experimental studies of vibration and control systems.

427 Mechanical Engineering Laboratory
Fall. 4 credits. Prerequisites: M&AE 324 and 326.
1 lec, 2 labs.
Laboratory exercises in methods, techniques, and instrumentation used in mechanical engineering. Measurements of temperature, heat transfer, viscosity, drag, fluid-flow rate, effects of turbulence, shock wave phenomena, and engine performance. Weekly written assignments.

428 Engineering Design
Fall. 1 credit. Prerequisite: completion of six semesters in mechanical engineering or equivalent.
1 lec.
General principles of design, relevant to both the fluids, energy, and heat transfer stem and the mechanical systems and manufacturing stem of mechanical engineering.

Mechanical Systems and Design and Manufacturing

386 Automotive Engineering
Spring. 3 credits. Prerequisite: M&AE 325 or permission of instructor.
3 lecs.
Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles, trucks, and related vehicles. Power plant, drive line, brakes, aerodynamics, suspension, and structure. Other types of vehicle may be considered.

389 Computer-Aided Design
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: A course in programming. May be taken either before or in conjunction with a numerical-methods course. Fulfills computer applications requirement.
2 lecs, 1 sec of computational assignments at CADIF. D. L. Taylor.
A first course in CAD, introducing the use of software and computer methods in mechanical engineering. Topics include simulation, optimization, solution of field equations (finite elements, finite differences), least-square function approximation, geometry (space curves, splines, patches), and computer graphics.

417 Introduction to Robotics
Fall. 4 credits. Enrollment limited. Prerequisite: M&AE 326 or permission of instructor.
2 lecs, 1 lab.
Coordinate transformations for manipulator kinematics. Newton-Euler and Lagrangian developments of manipulator dynamics. Robot control schemes. Trajectory generation. Motion planning. Robot programming.

464 Design for Manufacture
Spring. 3 credits. Prerequisites: M&AE 312 and 428 and senior standing. Enrollment limited. Fulfills field design requirement.
Principles and methodologies for conceptual design; elimination procedures for selecting design alternatives; emphasis on design for manufacturability, quality, and cost considerations; team design projects from concept, analysis, and computer-aided drafting to manufacturing methods.

[465 Biomechanical Systems—Analysis and Design
Spring. 3 credits. Prerequisites: Engr 202 and 203. Not offered 1990–91.
2 lecs, 1 lab. D. L. Bartel.
Selected topics from the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering and rehabilitation engineering.]

478 Feedback Control Systems (also EE 471)
Fall. 4 credits. Prerequisite: EE 302, M&AE 326, or permission of instructor.
3 lecs. Open computer lab.
Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include root locus, frequency response, and algebraic pole placement. Feedback architectures include PID, PDF, and lead/lag compensation. Applications include robotics, aerospace vehicles, and industrial processes. Computer-aided design laboratory examines modeling and control of a computer-simulated dynamic system.

486 Automotive Engineering Design
Spring. 3 credits. Prerequisite: M&AE 428 and senior standing. Fulfills field design requirement.
Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis is on automobiles, trucks, and related vehicles. Power plant, driveline, brakes, aerodynamics, suspension, and structure. Other vehicle types may be considered. Design project required.

489 Computer-Aided Design Project
Spring. 4 credits. Prerequisite: M&AE 428; limited to seniors in mechanical engineering. A project-oriented design course. Fulfills both field design and computer applications requirements.
2 lecs, 1 sec of computational assignments at CADIF.
Students will undertake a complete design of a complex system based on specification of performance and functionality. Evaluation will be on how well the design submitted satisfies objective. Topics vary annually, but typical topics include sailboat or aircraft design. Students will be expected to utilize CAD techniques and commercial software (drafting, solid modeling, finite-element analysis, simulation) as appropriate. Attendance in lectures and completion of interim projects will be mandatory.

512 Analysis of Materials Processing (also MS&E 442)
Spring. 3 credits. Prerequisite: M&AE 312.
3 lecs. P. Dawson, R. Raj.
Review of the basic principles governing the inelastic behavior of crystalline solids. Application of slab models, bound theorems, and slipline theory to problems of forging, extrusion, and rolling. Analysis of sheet-metal forming, including forming limits and springback. Discussion of defect initiation during forming processes.

514 Modeling, Metrology, and Machining
Fall. 3 credits, or 4 with laboratory. Prerequisites: Mathematics 294, Engr 100, and Engr 102.
3 lecs, 1 lab (optional). H. Voelcker.
Introduction to the main principles and current limitations of three technologies central to modern mechanical design and manufacturing: solid modeling, for defining "shapes" unambiguously; geometric tolerancing and dimensional metrology, for specifying and verifying variations in part geometry; and NC machining, for making parts under program control.

569 Mechanical and Aerospace Structures I: Applied Analysis of Stress and Deformation
Fall. 3 credits. Prerequisite: M&AE 325 or permission of instructor.
A study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to the analysis and design of mechanical and aerospace systems. Fundamentals are reviewed and applied to classical problems of solid and structural mechanics.

575 Microprocessor Applications
Fall. 3 credits. Enrollment limited; intended for graduate students with limited background in digital circuitry; open to undergraduates with permission of instructor. Prerequisite: background in basic laboratory electronics. Fulfills computer applications requirement.
2 lecs, 1 lab.
Introduction to digital circuitry, microprocessors, and microprocessor-based data acquisition and control systems. Basic concepts of data representation, microprocessor and microcomputer structure, parallel and serial input/output, analog-to-digital conversion, and hardware and software requirements for interfacing. Emphasis on applications of the 8088 microprocessor and assembly language programming. Independent laboratory work on several applications projects, including the process control procedures.

577 Mechanical Vibrations
Fall. 3 credits. Open to qualified undergraduates. Prerequisite: M&AE 326 or equivalent.
2 lecs, 1 lab (occasional).
Vibration phenomena in single– and multiple–degree-of-freedom linear and nonlinear systems, with emphasis on engineering problems involving analysis and design.

578 Feedback Control Systems Design and Implementation
Spring. 3 credits. Open to qualified undergraduates. Prerequisite: M&AE 478 or EE 471, or permission of instructor.
1 lec, 2 labs. M. L. Psiaki.
Further development of the theory, design, and implementation of feedback control systems with particular emphasis on applications, modeling and system identification, and hardware implementation. Digital control is covered briefly. Labs include real-time microprocessor-based control of a D.C.-motor positioning system, a two-link robot arm, and a two-tank level-control system.

[589 Computer-aided Research, Design, and Development
Fall. 3 credits. Prerequisite: M&AE 489 or equivalent. Not offered 1990–91.
2 lecs, computational assignments at CADIF. D. L. Taylor.
Introduction to a wide range of topics and programming techniques that are useful in the development of engineering models for computer analysis. Emphasis on data structure and integration of existing packages. Extensive use of computer graphics. Intended to prepare students to take an active role in the development of CAD software. Topics include computer graphics, data structures, 3-D modeling, role of new languages (LISP, PROLOG, etc.), and program development and debugging.]

590 Mechanical Engineering Design
Spring. 4 credits. Intended for students in M.Eng.(Mechanical) program.
Formal consideration of the complete design process (including creativity, planning, scheduling, cost analysis, management, and analytical methods) in the context of one or more specific projects carried out by the students. Projects may arise from department research interests or industrial collaboration.

610 Solid Modeling
Fall or spring. 4 credits. Prerequisites: graduate standing, at least two years of engineering mathematics, programming competence.
3 lecs. H. Voelcker.
Development of mathematical and computational methods of modeling one-, two-, and three-dimensional solids, using principles from geometry, topology, and computer science. M&AE 610 focuses on models and representations; a sequel, M&AE 611, focuses on algorithms, applications, and systems that use solid models. The pair provide foundations for CAD/CAM research and system development.

611 Applications of Solid Modeling
Spring. 2–4 credits to be arranged. Prerequisites: M&AE 610 or permission of instructor.
H. Voelcker.
Continuation of M&AE 610 with a focus on applications—specifically, a study of algorithms based mainly on set membership classification, together with their design and use in programs and systems for mechanical design and manufacturing (CAD/CAM).

612 Motional-Process Modeling: Manipulation and Machining
Spring, on demand. 4 credits. Prerequisites: M&AE 326, 478, and 610, or permission of instructor.
2 lecs, 1 lab by arrangement.
H. Voelcker.
Modeling of the spatial and dynamical behavior of machine tools and industrial robots, using principles from geometric modeling, classical dynamics, manufacturing-process dynamics, and control theory. Characterization of the performance of machine tools and robots in terms of physical architectures, control strategies, and software environments.

[665 Advanced Topics in Orthopaedic Biomechanics
Spring. 4 credits. Prerequisites: graduate standing, prior or concurrent registration in advanced courses in strength of materials or elasticity, and intermediate dynamics. Offered alternate years. Not offered 1990–91.
3 lecs. D. L. Bartel.
Advanced treatment of topics in the biomechanics of the musculoskeletal system. Force analysis of the musculoskeletal system under static and dynamic conditions, compact and trabecular bone as structural materials, structural analysis of bone-implant systems, remodeling of bone.]

670 Mechanical and Aerospace Structures II: Finite-Element Method for Linear Mechanics
Spring. 4 credits. Prerequisite: M&AE 569 or permission of instructor. Fulfills computer applications requirement.
Introduction to the finite-element method for static and dynamic analysis of mechanical and aerospace structures (and related nonstructural applications such as heat conduction). Primary emphasis on underlying mechanics and the numerical solution of boundary-value problems. Secondary consideration of inherent capabilities and limitations of large, general-purpose structural mechanics programs. Introduction to computational aspects through development of small, special-purpose program segments and the application of large, general-purpose programs. Term project.

678 Optimal Control and Estimation
Fall, on demand. 3 credits. Prerequisite: M&AE 478, EE 471, or permission of instructor; programming ability in FORTRAN, Pascal, or C. Corequisite: EE 521.
3 lecs. M. L. Psiaki.
Develops the theory of the design of modern multi-input–multi-output feedback control systems using optimal control techniques. Topics covered include trajectory optimization and the minimum principle, bang-bang optimal control solutions, Kalman filtering, LQR/LQE compensator design, suboptimal control and estimation, and applications to regulator and tracking problems. Both linear and nonlinear systems, and continuous-time and discrete-time control, and considered.

679 Modeling and Simulation of Dynamic Systems
On demand. 4 credits. Open to qualified undergraduates with permission of instructor.
J. F. Booker.
Modeling and representation of physical systems by systems of linear and nonlinear ordinary differential equations in state variable form. Selected applications from diverse fields. Simulation by numerical integration. Components and organization of general-purpose, digital-simulation languages (such as DSL and CSMP). Special techniques for large linear systems. Term project.

[682 Hydrodynamic Lubrication: Fluid-Film Bearings
Fall, on demand. 4 credits. Not offered 1990–91.
J. F. Booker.
Theory of hydrodynamic lubrication and its application to the analysis and design of fluid-film bearings and other devices. General topics include viscous flow in thin films, self-acting and externally pressurized bearings with liquid and gas lubricant films, bearing-system dynamics, and computational methods. Selected special topics such as elastohydrodynamic lubrication and artificial joints. Term project.]

[685 Optimum Design of Mechanical Systems
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Not offered 1990–91.
D. L. Bartel.
The formulation of design problems frequently encountered in mechanical systems as optimization problems. Theory and application of methods of mathematical programming for the solution of optimum design problems.]

[715 Theory and Practice in Inelastic Deformation
Fall. 4 credits. Prerequisites: graduate standing and introductory finite-element course, or permission fo instructor. Offered alternate years. Not offered 1990–91.
G. G. Weber.
Topics in finite-deformation inelasticity in the framework of modern continuum mechanics. Material and geometric non-linear formulations on theoretical as well as practical grounds. Emphasis is on developing the underlying principles for proper formulation of engineering boundary-value problems with inelastic constitutive equations. Introductory small-scale simulations to illustrate the principles are also developed. Applications include inelastic design, metal forming, polymer processing, ice mechanics, and powder consolidation. Familiarity with compact tensor notation is recommended but not required.]

[716 Advanced Deformation Process Simulation
Spring. 4 credits. Prerequisites: graduate standing and M&AE 715, or permission of instructor. Offered alternate years. Not offered 1990–91.
P. R. Dawson.
Application of advanced mechanics theories to the simulation of the deformations of solids, with special attention toward materials processing and other severe-loading environments. The selection of model equations based on dominant features of the material behavior and kinematics of a particular application is stressed. The use of state-variable constitutive models are discussed, including micromechanical models such as those of polycrystal plasticity. Assignments consist of simulation projects that assume a working knowledge of the finite-element method.]

Energy, Fluids, and Aerospace Engineering

405 Introduction to Aeronautics
Fall. 3 credits. Limited to upperclass engineers; others with permission of instructor. Introduction to atmospheric-flight vehicles. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Propulsion system characteristics. Static aircraft performance; range and endurance. Elements of stability and control.

[439 Acoustics and Noise
Spring. 3 credits. Prerequisite: some knowledge of fluid mechanics or permission of instructor. Not offered 1990–91.
Sound propagation, transmission, and absorption. Sound radiation by surfaces and flow. Loudspeakers. Room acoustics and noise-control techniques. Hearing, music, noise, and noise-control criteria.]

[441 Advanced Thermodynamics with Energy Applications
Spring. 3 credits. Prerequisites: M&AE 221 and 323, or permission of instructor.
3 lecs. Not offered 1990–91.
Brief review of classical thermodynamics. Applications to power cycles and refrigeration cycles of particular interest to energy systems. Other topics include the thermodynamic properties of pure systems, phase and chemical equilibria. Brief introduction to statistical thermodynamics.]

449 Combustion Engines
Spring. 3 credits. Prerequisites: Engr 221 and M&AE 323.
Introduction to combustion engines, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Air-standard analyses, chemical equilibrium, ideal-cycle analyses, deviations from ideal processes, combustion knock. Formation and control of undesirable exhaust emissions.

[506 Aerospace Propulsion Systems
Spring. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Offered alternate years. Not offered 1990–91.
3 lecs.
Application of thermodynamic and fluid-mechanic principles to the design and performance of aerospace systems. Jet propulsion principles, including rockets. Pollution characteristics. Future possibilities for improved performance.]

507 Dynamics of Flight Vehicles
Spring. 3 credits. Prerequisites: M&AE 405 and Engr 203, or permission of instructor. Offered alternate years.
Introduction to stability and control of atmospheric-flight vehicles. Review of aerodynamic forces and methods for analysis of linear systems. Static stability and control. Small disturbance equations of unsteady motion. Dynamic stability and transient control response. At the level of *Dynamics of Flight: Stability and Control*, by Etkin.

530 Fluid Dynamics
Fall. 3 credits. Prerequisites: M&AE 323 and senior or graduate standing, or permission of instructor.
Inviscid fluid dynamics and aerodynamics, including imcompressible and supersonic flows, flow over bodies, lift, and drag. Shock waves. Courses 530 and 531 are of interest primarily to seniors and M.Eng. students; however, incoming M.S. or Ph.D. students who will not major in fluid mechanics but need competence in problem solving and basic problem formulation should be interested also. The courses may be taken independently or as a sequence.

531 Boundary Layers
Spring. 3 credits. Prerequisites: M&AE 323 and senior or graduate standing, or permission of instructor. Recommended: M&AE 530 or equivalent.
Review of the Navier-Stokes equation, simple exact solutions, concept of scaling. Classical laminar boundary layer theory. Physical mechanisms of boundary layer formation; flat plate boundary layer. Method of matched asymptotic expansions for singular perturbation problems of boundary layer type. Similarity solutions. Blasius series for boundary layer flow past an arbitrary two-dimensional body. Behavior of boundary layer flows near a separation point. Interactive boundary layer theory. Concepts of stability and transition to turbulence. Deterministic chaos. Some results of stability theory for boundary layers. Fully developed turbulence, turbulent wall layer structure, turbulent boundary layers.

536 Turbomachinery and Applications
Spring. 3 credits. Prerequisite: M&AE 323 or equivalent.
3 lecs. F. K. Moore.
Aerothermodynamic design of turbomachines in general, energy transfer between fluid and rotor in specific types, axial and radial devices, compressible flow. Three-dimensional effects, surging.

543 Combustion Processes
Spring. 3 credits. Prerequisites: M&AE 323 and 324.
3 lecs. F. C. Gouldin.
An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Thermochemistry, kinetics, vessel explosions, laminar and turbulent premixed and diffusion flames, droplet combustion, combustion of solids.

554 Solar Engineering Design
Spring. 3 credits. Prerequisites: M&AE 428 and senior standing in M&AE. Fulfills field design requirement. Enrollment limited to 30.
A broad coverage of solar-energy utilization by humankind. Fundamentals of solar radiation. Direct radiation as a source of heat and work. Indirect radiation utilization or natural collection; water power, windpower, and biomass. The production of liquid and gaseous fuels. Solar architecture and environmental control by both active and passive means. Each student will execute a design project in solar engineering. Course grade will be based on the design project; presentation of a design proposal, an oral presentation on progress of project, and submission of a final design report.

556 Power Systems
Fall. 3 credits. Corequisites: M&AE 428 and senior standing. Fulfills field design requirement.
P. L. Auer.
A broad survey of methods of large-scale power generation, emphasizing energy sources, thermodynamic cycle considerations, and component description. Power-industry, economic, and environmental factors, trends, and projections.

559 Introduction to Controlled Fusion: Principles and Technology (also EE 484 and NS&E 484)
Spring. 3 credits. Prerequisites: Physics 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics with permission of instructor. Intended for seniors and graduate students.
3 lecs.
This course is intended to give engineering and physical science students an introduction to the physical basis and technological requirements for generating useful power by nuclear fusion. For complete description see NS&E 484.

601 Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.
Foundations of fluid mechanics from an advanced viewpoint. Aspects of kinetic theory as it applies to the formulation of continuum fluid dynamics. Surface phenomena and boundary conditions at interfaces. Fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids. Viscous flows, boundary layers, potential flows, vorticity dynamics.

602 Incompressible Aerodynamics
Fall or spring. 4 credits. Prerequisite: M&AE 601 or equivalent. Open to qualified undergraduates with permission of instructor.
Basic equations for inviscid fluid motion. Vorticity dynamics. General results for irrotational flows. Integral representations via Green's theorem. Solution methods based on singularities. Complex variable technique for two-dimensional flows. Airfoil, wing, and slender-body theories. Unsteady phenomena. Three-dimensional boundary layers and separation.

603 Compressible Aerodynamics
Fall. 4 credits. Prerequisite: M&AE 601 or equivalent, or permission of instructor.
Basic conservation laws and fundamental theorems of compressible fluid flow. The accoustic approximation. One-dimensional unsteady flows. Characteristics and shock waves. Exact solutions of steady flows. General methods for two-dimensional and axisymmetric steady flows and Bateman principles. Hodograph method. Characteristics method for steady supersonic flows. Approximate methods, series expansion, and perturbation theories; transonic and hypersonic flows.

608 Physics of Fluids
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.
F. C. Gouldin.
Kinetic theory of gases: collisions; transport properties; derivation of the macroscopic equations of mass, momentum, and energy. Statistical mechanics of gases: microcanonical ensemble; partition functions; calculation of thermodynamic properties. Introduction to wave mechanics: harmonic oscillator, rigid rotator, one-electron atom. Atomic and molecular structure: building-up principle, Born-Oppenheimer approximation.

630 Atmospheric Turbulence and Micrometeorology
Spring, on demand. 4 credits. Open to qualified undergraduates with permission of instructor.
Z. Warhaft.
Basic problems associated with our understanding of the structure of the velocity field and the transport of scalars such as temperature and moisture in the lower atmosphere from both theoretical and experimental viewpoints. Topics include the second-order turbulence equations and their closure; Monin-Obukhov theory; diffusion of scalars; spectral characteristics of atmospheric variables; experimental techniques, including remote sensing; and the analysis of random-time series.

639 Aerodynamic Noise Theory
Fall. 4 credits. Prerequisites: Graduate standing and knowledge of fluid mechanics, or permission of instructor.
3 lecs. A. R. George.
Topics in acoustics relevant to transportation noise sources and control. Lighthill and Ffowcs Williams formulations for sound generation. Deterministic and broadband sources. Propagation, nonlinear effects, absorption, diffraction, and transmission. Applications to aircraft, automobiles, propellers, fans, etc.

651 Advanced Heat Transfer
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
M. Y. Louge.
Advanced treatment of conductive and convective heat transfer. Basic equations reasoned in detail. Integral and differential formulations. Exact and approximate solutions. Forced convection. Natural convection. Laminar and turbulent flows. Effects of viscous dissipation and mass transfer.

652 Thermodynamics and Phase-Change Heat Transfer (also Chem E 721)
Spring, on demand. 4 credits. Prerequisite: graduate standing or permission of instructor.
C. T. Avedisian.
Thermodynamics of phase change. Superheated liquids and supersaturated vapors. Thermodynamic stability criteria for metastable liquids and homogeneous nucleation theory. Dynamics of bubble growth and collapse. Pool boiling and the critical heat flux. Hydrodynamics of one-dimensional two-phase flows.

653 Experimental Methods in Fluid Mechanics, Heat Transfer, and Combustion
Spring. 4 credits.
2 lecs, 1 lab. Z. Warhaft.
Study of experimental techniques for measuring pressure, temperature, velocity, and composition of gases, with emphasis on experimental capabilities and physical principles. Topics include laser velocimetry, hot-wire anemometry, spectroscopy, and laser scattering.

[704 Viscous Flows
Fall or spring. 4 credits. Prerequisites: M&AE 601 or T & AM 610, or permission of instructor. Offered alternate years. Not offered 1990–91.
S. F. Shen.
A systematic study of laminar-flow phenomena (including compressibility and heat transfer) and methods of analysis. Exact solutions of the Navier-Stokes equations. Linearized problems; flow at small Reynolds numbers, laminar instability. The boundary-layer approximation; general properties. Transformations for compressibility and axisymmetric effects. Approximate methods of calculation. Separation and unsteady problems. Stability of laminar flows.]

[732 Analysis of Turbulent Flows
Spring. 4 credits. Prerequisite: M&AE 601 or permission of instructor. Offered alternate years. Not offered 1990–91.
S. B. Pope.
Study of methods for calculating the properties of turbulent flows. Characteristics of turbulent flows. Direct numerical simulations, large-eddy simulations, and the closure problem. Reynolds-stress equation: effects of dissipation, anisotropy, deformation. Transported scalars. Probability density functions (pdf's): definitions and properties, transport equations, relationship to second-order closures, stochastic modeling, Langevin equation, and Monte Carlo solutions. The course emphasizes comparison of theory with experiment.]

733 Stability of Fluid Flow
Fall. 4 credits. S-U grades only. Prerequisite: graduate standing or permission of instructor. Offered alternate years. May be offered 1990–91.
S. Leibovich.
Introduction to stability and bifurcation of fluid flow. Energy stability theory. Convective instability, the Benard problem. Taylor instability of rotating couette flow. Stability of parallel flows. Critical-layer singularities and methods of resolution. Boundary layers, slight departures from parallel flow. Stratified flows and the Taylor-Goldstein equation; swirling flows. Destabilization by "stabilizing" body forces. Nonlinear effects: amplitude equations of the Stuart-Watson type. Modulated nonlinear effects and amplitude equations of the Newell-Whitehead type. Nonlinear critical-layer dynamics.

734 Turbulence and Turbulent Flow
Fall. 4 credits. Prerequisite: M&AE 601 or permission of instructor.
J. L. Lumley.
Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

736 Computational Aerodynamics
Spring. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience.
3 lecs. D. A. Caughey.
Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming digital computer.

737 Computational Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some FORTRAN programming experience.
K. E. Torrance.
Numerical methods for elliptic and parabolic partial differential equations arising in fluid flow and heat-transfer problems involving convection and diffusion. Finite-difference, finite-volume, and spectral methods. Accuracy, stability, convergence, and conservation. Review of current methods. Emphasis on steady and unsteady incompressible flows. Assigned problems are solved on a digital computer and at CADIF.

Special Offerings

001 Introduction to Mechanical Technology
Fall, spring. 1 credit. Enrollment limited. S-U grades only. Does not meet any graduation requirements. May be offered 1990–91.
1 sec.
Offered to students lacking a background in basic understanding of mechanical devices and technology. Hands-on experience with various typical devices such as engines, refrigeration units, heat pumps, etc.

490 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to undergraduate students. Prerequisite: permission of instructor.
Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

491 Design Projects in Mechanical and Aerospace Engineering
Fall, spring. 3–6 credits, to be arranged. Prerequisite or corequisite: M&AE 428. Fulfills field design requirement.
Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses.

520 Mechanical Tolerancing and Dimensional Metrology
Spring. 2 credits. Prerequisites: Math 294 and Engr 102; M & AE 312 is helpful. Seven-week course. May be offered 1990–91.
2 lecs. H. B. Voelcker.
Current industrial practices in mechanical tolerancing and dimensional metrology, based on the national tolerancing standard ANSI Y14.5. Discussion of weaknesses in current methods, and emerging formal theories. Lab experience with manual instruments, functional gauges, coordinate-measuring and surface-measuring machines.

592 Seminar and Design Project in Aerospace Engineering
Fall, spring. 2 credits each term. Intended for students in M.Eng.(Aerospace) program. Introduction to topics of current research interest in aerospace engineering by Aerospace faculty and invited speakers. Individual design projects supervised by separate faculty members after introductory sessions.

594 Manufacturing Seminar (also OR&IE 894)
Fall, spring. 1 credit. S-U grades optional.
1 sec.
A weekly, practice-oriented seminar with external speakers for Master of Engineering students in several disciplines who are interested in manufacturing. Conducted in cooperation with the School of Operations Research and Industrial Engineering, the Cornell Manufacturing Engineering and Productivity Program (COMEPP), and the Cornell Society of Engineers.

690 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to graduate students.

695 Special Topics in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Graduate standing and permission of instructor.
Special lectures by faculty members on topics of current research. Two offerings are projected. 1) Seminar in Robotics, by J. C. Koechling (fall or spring); an overview of the design, control, and use of manipulators, from their early development to the present, through the reading and discussion of papers. 2) Chaotic Vibrations, by F. C. Moon (spring); review of classical nonlinear vibration theory, maps and flows, routes to chaos, mathematical models of chaotic physical systems, experimental Poincaré maps, theoretical predictive phenomena, Lyapunov exponents, measures of fractal dimensions, and fractal basin boundaries.

791 Mechanical and Aerospace Research Conference
Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects.
Presentations on research in progress by faculty and students.

794 Graduate Seminar in Manufacturing Processes
Fall, spring. 1 credit. S-U only. Prerequisites: Graduate standing and permission of instructor.
1 sec. K. K. Wang.
A weekly seminar giving graduate students who are working on manufacturing research topics an opportunity to present their work and discuss it with other students and staff. Participation of full-time research associates is also anticipated.

799 Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend.
Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

890 Research in Mechanical and Aerospace Engineering
Credit to be arranged. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director.
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

990 Research in Mechanical and Aerospace Engineering
Credit to be arranged. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of the director.
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING

A number of courses in nuclear science and engineering are offered through the School of Applied and Engineering Physics (see A&EP 609, 612, 633, 634, 636, 638, and 651).

121 Fission, Fusion, and Radiation (also Engr 121)
Spring. 3 credits.
2 lecs, 1 lab demonstration.
This is a course in the Introduction to Engineering series. For description see Engineering Common Courses.

303 Introduction to Nuclear Science and Engineering I (also A&EP 303)
Fall. 3 credits. Prerequisite: Physics 214 or Mathematics 294. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field.
3 lecs. V. O. Kostroun.
Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of *Introduction to Nuclear Engineering*, by Lamarsh.

484 Introduction to Controlled Fusion: Principles and Technology (also EE 484 and M&AE 559)
Spring. 3 credits. Prerequisites: Physics 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students.
3 lecs. D. A. Hammer.
Introduction to the physical principles and technology underlying controlled-fusion power. Topics include fundamental aspects of the physics of ionized gases at high temperature (thermonuclear plasmas), requirements (in principle) for achievement of net power from fusion, technological problems of an actual fusion reactor, and progress of the fusion program toward overcoming these problems. Both magnetic and inertial confinement fusion are discussed, and comparisons are made between fusion and fission.

551 Nuclear Methods in Non-Nuclear Research Fields
Spring. 3 credits. Prerequisite: Physics 214 or 218, or permission of instructor; some upper-division physics desirable. Primarily for graduate students in geology, chemistry, biology, materials science, and other non-nuclear fields in which nuclear methods are used. Open to qualified undergraduates. A more intensive related course, A&EP 651, which has the same lecture but has an additional lab period, is intended for nuclear specialists.
One 2-hour lecture and one 2-1/2-hour lab. D. D. Clark.
Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments and methods including data reduction. About ten experiments are available on radiation detection, attenuation, and measurement; electronic instrumentation, including computerized systems; activation analysis; and emerging applications such as prompt gamma analysis and neutron radiography. The TRIGA reactor is used. Emphasis is on those nuclear methods, particularly instrumental ones using neutrons, that are used in, or are being adapted for, non-nuclear fields, but tracer and other chemical techniques are not included. Students each select seven or eight experiments to meet their interests and needs. At the level of *Nuclear Analytical Chemistry*, by Brune, Forkman, and Persson.

621 Radiation Effects in Microelectronics
Fall. 3 credits. Prerequisite: Permission of instructor. A seminar intended for seniors and graduate students in engineering or applied physics.
T Th 9:00–10:00, two 1-1/2 hour lectures. S. C. McGuire.
An introduction to the physical processes that underlie the malfunction of microelectronic circuitry resulting from exposure to ionizing radiation. Basic device-failure mechanisms, including total-dose effects, single-event upsets, and latchup, as well as the roles that circuit testing and modeling methods play in improving circuit design. Impact of surface radiation typical of low-energy electron and photon sources on device fabrication. Reference materials from the current literature.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

115 Engineering Application of Operations Research (also Engr 115)
Fall, spring. 3 credits. Enrollment not open to OR&IE upperclass majors.
2 lecs, 1 lab.
For description see Engineering Common Courses.

119 Introduction to Manufacturing (also Engr 119 and M & AE 119)
Spring. 3 credits. Enrollment not open to OR&IE upperclass majors.
2 lecs, 1 lab.
For description see Engineering Common Courses.

230 Discrete Mathematics
Spring. 3 credits. Prerequisite: one year of calculus or permission of instructor.
3 lecs.
A broad but thorough introduction to topics of discrete mathematics of use in a variety of fields of science and engineering. Topics include basic combinatorics and counting techniques, recurrence relations and generating functions, introduction to modular arithmetic with application to coding theory and experimental designs, and basic notions of graph theory with applications in optimization such as maximum flow in a network and project planning.

260 Introductory Engineering Probability (also Engr 260)
Fall, spring, summer. 3 credits. Prerequisite: first-year calculus. Corequisite: Math 293.
3 lecs.
For description see Engineering Common Courses.

270 Basic Engineering Probability and Statistics
Fall; also spring, summer if staffing permits. 3 credits. Prerequisite: first-year calculus. Enrollment not open to OR&IE upperclass majors.
3 lecs. Evening prelims.
For description see Engineering Common Courses.

320 Optimization I
Fall. 4 credits. Prerequisite: Mathematics 221 or 294.
3 lecs, 1 rec.
Formulation of linear programming problems and solution by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning.

321 Optimization II
Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent.
3 lecs, 1 rec.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

350 Cost Accounting, Analysis, and Control
Fall; also spring if staffing permits. Upper-class standing only; enrollment limited. 4 credits.
3 lecs, 1 computing-disc.
Principles of accounting, financial reports; job-order and process cost systems—historical and standard costs; cost characteristics and concepts for control, analysis, and decision making.

361 Introductory Engineering Stochastic Processes I
Spring. 4 credits. Prerequisite: OR&IE 260 or equivalent.
3 lecs, 1 rec.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queueing and reliability.

370 Introduction to Statistical Theory with Engineering Applications
Fall. 4 credits. Prerequisite: OR&IE 260 or equivalent.
3 lecs, 1 rec.
Provides a working knowledge of basic statistics as it is most often applied in engineering and a basis in statistical theory for continued study. Topics include a review of distributions of special interest in statistics; testing simple and composite hypotheses; point and interval estimation; correlation; linear regression.

410 Industrial Systems Analysis
Spring. 4 credits. Corequisite: OR&IE 270 or 370.
3 lecs, 1 computing session.
Design of production facilities, including engineering economy, taxation effects, materials handling, process design, and facility layout. Operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control.

416 Design of Manufacturing Systems
Spring (last 4 weeks). 3 credits. Seniors and graduate students only. Corequisites: at least one of the following courses: OR&IE 417, 451, 525, and 562.
2 lecs.
Project course in which students, working in teams, design a manufacturing and/or logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for most lectures.

417 Layout and Material Handling Systems
Spring. 3 credits. Prerequisite: OR&IE 361.
2 lecs, 1 rec.
Design of the layout of processes and storage areas and the material- handling system for movement of items. Typical equipment used. The functions of identification control, storage, movement, batching, merging, and dispersion. Introduction to new technologies.

421 Production Planning and Control
Fall. 4 credits. Prerequisites: OR&IE 320 and 361, or permission of instructor.
3 lecs, 1 rec.
Introduction to the design, planning, and control of production and distribution systems. Decision making in manufacturing systems is stressed. Topics include inventory planning, work-cell design, work-load smoothing, production planning, and scheduling.

431 Discrete Models
Spring. 4 credits. Prerequisites: OR&IE 320 and CS 211, or permission of instructor.
3 lecs, 1 rec.
Basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific models studied include flows in networks, network synthesis, sequencing, partitioning, and fair allocation.

[432 Applied Linear Algebra and Introductory Nonlinear Programming
Fall. 3 credits. Prerequisite: Math 294 or 221. Not offered 1990–91.
Emphasis is on the ideas and theory of linear algebra that are especially important in optimization applications. Linear techniques are developed in the context of basic nonlinear programming to illustrate how linear algebra is used to study nonlinear systems. Some assignments provide exposure to existing software; other assignments require careful mathematical thought and exposition.]

435 Introduction to Game Theory
Fall. 3 credits.
3 lecs.
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

451 Economic Analysis of Engineering Systems
Spring. 3 credits. Prerequisites: OR&IE 320 and OR&IE 350.
2 lecs, 1 computing session.
Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student group project.

462 Introductory Engineering Stochastic Processes II
Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent.
3 lecs, 1 rec.
A selection of topics from the following: martingales, Markov and semi-Markov processes, optimal stopping. Examples and applications are drawn from several areas.

472 Statistical Decision Theory
Fall. 3 credits. Prerequisite: OR&IE 370 or equivalent.
3 lecs.
Decision rules, admissible decision rules, Bayes decision rules, minimax decision rules. Using regret instead of loss. Criteria for choosing a decision rule and relation to theory of games. Use of linear programming to construct minimax decision rules. Building cost of collecting information into the loss function. Decision problems requiring a sequence of decisions over time and relation to dynamic programming. Use of the empirical cumulative distribution function and applications to inventory problems. Classical statistical theory as special cases of statistical decision theory.

475 Regression
Fall. Second half of term. 2 credits. Prerequisite: OR&IE 370.
3 lecs, 1 rec.
Linear models; estimation and testing; confidence sets; diagnostics and residual analysis; variable selection and modeling.

476 Experimental Design I
Fall. First half of term. 2 credits. Prerequisite: OR&IE 370.
3 lecs, 1 rec.
One- and two-way ANOVA; blocking with one or two factors; replication and sample-size determination; multiple comparison; selection of best population(s).

499 OR&IE Project
Fall, spring. Credit to be arranged. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution, usually a regional organization. Opportunities in the course may be discussed with the associate director.

516 Case Studies
Fall. 4 credits. Only for M.Eng. students in OR&IE.
3 rec-labs.
Students are presented with unstructured problems that resemble real-world situations. Students work in project groups on the formulation of mathematical models, computer analysis of the data and models, and presentation of oral and written reports.

520 Operations Research I: Optimization I
Fall. 4 credits. Prerequisite: Mathematics 221 or 294. Intended for graduate students minoring in operations research. The same course as OR&IE 320, but on the graduate level.
3 lecs, 1 rec.
For description see OR&IE 320.

521 Optimization II
Spring. 4 credits. Prerequisite: OR&IE 320 or 520 or equivalent. Intended for graduate students in other fields. Lectures concurrent with OR&IE 321.
3 lecs, 1 rec.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed, as well as numerous applications.

523 Operations Research II: Introduction to Stochastic Modeling
Spring. 4 credits. Prerequisite: OR&IE 260 or equivalent. Intended for graduate students in other fields. Lectures concurrent with OR&IE 361.
3 lecs, 1 rec.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

[525 Scheduling Theory
Spring. 3 credits. Prerequisite: OR&IE 320. Not offered 1990–91.
3 lecs.
Scheduling and sequencing problems. Single-resource scheduling, parallel processing, flow-shop scheduling. Methodology is drawn from dynamic and integer programming, simulation techniques, and heuristic methods.]

561 Queuing Theory and Its Applications
Fall. 3 credits. Prerequisite: OR&IE 361 or permission of instructor.
3 lecs.
Basic queuing models. Delay and loss systems. Finite source, finite capacity, balking, reneging. Systems in series and in parallel. Various queue disciplines. Busy-period problems. Design and control problems. Statistical inference from queuing processes. Priority systems. Queuing networks. Applications to equipment maintenance, telephone traffic, and computer operations.

562 Inventory Theory
Spring. 3 credits. Prerequisite: OR&IE 421 or permission of instructor.
3 lecs, 1 rec.
Discussion of the nature of inventory systems and their design and control. Periodic and continuous review policies for single-item and single-location problems. Multi-item and multi-echelon extensions. Dynamic and static models are discussed. Distribution problems are analyzed. Applications are stressed.

[563 Applied Time-Series Analysis
Fall. 3 credits. Prerequisites: OR&IE 361 and 370 and CS 211, or permission of instructor. Not offered 1990–91.
3 lecs.
Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. As time permits other topics, such as spectral analysis, filtering and long-range dependence are discussed. Analysis of real data is carried out. Assignments require computer work.]

564 Introductory Engineering Stochastic Processes II
Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462.
3 lecs, 1 rec.
For description see OR&IE 462.

570 Introduction to Statistical Theory with Engineering Applications
Fall. 4 credits. Prerequisite: OR&IE 260 or equivalent. Lectures concurrent with OR&IE 370.
3 lecs, 1 rec.
For description see OR&IE 370.

[575 Experimental Design II
Spring. Half of term. 2 credits. Prerequisite: OR&IE 475. Not offered 1990–91.
3 lecs, 1 rec.
2^N factorials; confounding; 2^{N-P} and 3^{N-P} fractional factorials.]

[577 Quality Control
Spring, if staffing permits. 3 credits. Prerequisites: OR&IE 270 or 370. Not offered 1990–91.
3 lecs, 1 rec.
Control concepts and methods for attributes and variables; process capability analysis; acceptance sampling plans; elementary procedures for variables; acceptance-rectification procedures.]

580 Design and Analysis of Simulated Systems
Fall. 4 credits. Prerequisites: CS 211 and OR&IE 370, or permission of instructor.
3 lecs, 1 rec.
Digital computer programs to simulate the operation of complex discrete systems in time. Modeling, program organization, pseudo–random-variable generation, simulation languages, statistical considerations; applications to a variety of problem areas.

599 Project
Fall, spring. 5 credits. For M.Eng. students. Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

626 Advanced Production and Inventory Planning
Fall. 3 credits.
3 lecs.
Introduction to a variety of production and distribution planning problems; the development of mathematical models corresponding to these problems; a study of approaches for finding solutions.

[627 Dynamic Programming
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
3 lecs.
Optimization of sequential decision processes. Deterministic and stochastic models, infinite-horizon Markov decision models, policy iterations. Contraction mapping methods. Applications drawn from inventory theory, production control.]

630–631 Mathematical Programming I and II
630, fall; 631, spring. 3 credits each term. Prerequisites: advanced calculus and elementary linear algebra.
3 lecs.
A rigorous treatment of the theory and computational techniques of linear programming and its extensions. Formulation, duality theory, simplex, and dual simplex methods. Sensitivity analysis. Network flow problems and algorithms. Theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma. Introduction to new algorithms (ellipsoid, Karmarkar). Exploiting special structure in the simplex method, computational implementation. Decomposition Principle. Introduction to integer and nonlinear programming and game theory.

[632 Nonlinear Programming
Fall. 3 credits. Prerequisite: OR&IE 630. Not offered 1990–91.
3 lecs.
Necessary and sufficient conditions for unconstrained and constrained optima. Duality theory. Computational methods for unconstrained (e.g., quasi-Newton) problems, linearly constrained (e.g., active set) problems, and nonlinearly constrained (e.g., successive quadratic programming) problems.]

633 Graph Theory and Network Flows
Fall. 3 credits. Prerequisite: permission of instructor.
3 lecs.
Directed and undirected graphs. Bipartite graphs. Hamilton cycles and Euler tours. Connectedness, matching, and coloring. Flows in capacity-constrained networks. Maximum flow and minimum cost flow problems.

[634 Combinatorial Optimization
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
3 lecs.
Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.]

635 Interior-Point Methods for Mathematical Programming
Spring. 3 credits. Prerequisites: Math 411 and OR&IE 630, or permission of instructor.
3 lecs.
Interior-point methods arising from Karmarkar's Algorithm. Application to linear and quadratic programming and the linear complementarity problem. Projective-scaling, affine-scaling, path-following, and potential-reduction methods.

636 Integer Programming
Fall. 3 credits. Prerequisite: OR&IE 630.
3 lecs.
Discrete optimization. Linear programming in which the values are restricted to integers. Theory, algorithms, and applications. Cutting-plane methods, enumerative methods, and group-theoretic methods; additional topics are drawn from recent research in this area.

[639 Convex Analysis
Spring. 3 credits. Prerequisite: Mathematics 411 and 431, or permission of instructor. Not offered 1990–91.
3 lecs.
The theory of finite dimensional convex sets is developed through the study of real-valued convex functions and Fenchel duality. Separation of convex sets, polarity correspondences, recession cones, theorems of Helly and Caratheodory.]

660 Applied Probability
Fall. 4 credits. Prerequisite: advanced calculus.
3 lecs, 1 rec.
Introduction to basic probability. The sample space; events; probability. Conditional probability. Independence. Product spaces. Random variables. Expectation. Important distributions. Characteristic functions. Convergence concepts. Limit theorems.

661 Applied Stochastic Processes
Spring. 4 credits. Prerequisite: OR&IE 660 or equivalent.
3 lecs, 1 rec.
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, point processes.

662 Advanced Stochastic Processes
Spring. 3 credits. Prerequisite: OR&IE 661 or equivalent.
3 lecs.
A selection of topics from the following: stationary processes, Levy processes, diffusion processes, point processes, martingales, regenerative phenomena, random walks, stochastic calculus, weak convergence.

663 Time-Series Analysis
Spring. 3 credits. Prerequisite: OR&IE 660 or equivalent.
3 lecs.
Representations of stationary time series. The ARIMA models. Spectral analysis. Long-range dependence. Problems of estimation. Multivariate time series.

[665 Advanced Queuing Theory
Fall. 3 credits. Prerequisite: OR&IE 660 or equivalent. Not offered 1990–91.
3 lecs.
A study of stochastic processes arising in a class of problems including congestion, storage, dams, and insurance. The treatment is self-contained. Transient behavior of the processes is emphasized. Heavy-traffic situations are investigated.]

670 Statistical Principles
Spring. 4 credits. Prerequisite: OR&IE 660 or equivalent.
3 lecs, 1 rec.
Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; introduction to linear models.

671 Intermediate Applied Statistics
Fall. 3 credits. Prerequisite: OR&IE 670 or equivalent.
3 lecs.
Statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.

[674 Design of Experiments
Spring. 3 credits. Prerequisite: OR&IE 671 or permission of instructor. Not offered 1990–91.
3 lecs.
Use and analysis of experimental designs such as randomized blocks, balanced incomplete blocks, and Latin squares; analysis of variance and covariance, factorial experiments; statistical problems associated with finding best operating conditions; response-surface analysis.]

676 Statistical Analysis of Life Data
Spring. 3 credits. Prerequisite: OR&IE 671 or equivalent.
Analysis of data from reliability, fatigue, and life-testing studies in engineering; biomedical applications. Survival distributions, hazard rate, censoring. Life tables. Estimation and hypothesis testing. Standards. Goodness of fit, hazard plotting. Covariance analysis, accelerated life testing. Multiple decrement models, competing risks. Sample-size determination. Adaptive sampling.

[678 Asymptotic Methods in Statistics
Spring. 3 credits. Prerequisite: OR&IE 670 or Mathematics 574. Not offered 1990–91.
Large-sample behavior of MLEs and other estimates; chi-square, likelihood ratio, and related tests; Pitman and Bahadur efficiency; LAN families and LAM estimates; statistical applications of Edgeworth expansions; adaptive estimation and semiparametric inference.]

[680 Simulation
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
3 lecs.
An advanced version of OR&IE 580, intended for Ph.D.-level students.]

728–729 Selected Topics in Applied Operations Research
Fall, spring. Credit to be arranged.
Current research topics dealing with applications of operations research.

738–739 Selected Topics in Mathematical Programming
Fall, spring. Credit to be arranged.
Current research topics in mathematical programming.

768–769 Selected Topics in Applied Probability
Fall, spring. Credit to be arranged.
Topics are chosen from current literature and research areas of the staff.

778–779 Selected Topics in Applied Statistics
Fall, spring. Credit to be arranged.
Topics chosen from current literature and research of the staff.

790 Special Investigations
Fall, spring. Credit to be arranged.
For individuals or small groups. Study of special topics or problems.

799 Thesis Research
Fall, spring. Credit to be arranged.
For individuals doing thesis research for master's or doctoral degrees.

891 Operations Research Graduate Colloquium
Fall, spring. 1 credit.
A weekly 1-1/2 hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

893–894 Applied OR&IE Colloquium (894 also M&AE 594)
893, fall; 894, spring. 1 credit each term.
A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.

THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics

123 Sensors and Actuators (also Engr 123)
Fall. 3 credits.
2 lecs, 1 lab.
For description see Engineering Common Courses.

202 Mechanics of Solids (also Engr 202)
Fall, spring. 3 credits. Prerequisite: coregistration in Mathematics 293.
2 lecs, 1 rec, 4 labs each semester, evening exams.
For description see Engineering Common Courses.

203 Dynamics (also Engr 203)
Fall, spring. 3 credits. Prerequisite: coregistration in Mathematics 294.
2 lecs, 1 rec, 4 labs each semester, evening exams.
For description see Engineering Common Courses.

281 Structures and Machines in Urban Society (also Engr 281)
Fall. 3 credits.
R. Lance.
For description see Engineering Common Courses.

293 Engineering Mathematics
Fall, spring. 4 credits. Prerequisite: Mathematics 192 or 194.
2 lecs, 1 rec, 4 labs during semester, evening exams.
Partial derivatives and multiple integrals; first- and second-order ordinary differential equations with applications in the physical and engineering sciences. Includes microcomputer experiments using computer algebra to solve problems.

294 Engineering Mathematics
Fall, spring. 4 credits. Prerequisite: Mathematics 293.
2 lecs, 1 rec, 4 labs during semester, evening exams.
Vector spaces and linear algebra, matrices, eigenvalue problems, and applications to systems of linear differential equations. Vector calculus. Boundary-value problems and introduction to Fourier series. Includes microcomputer experiments using computer algebra to solve problems.

Engineering Mathematics

310 Advanced Engineering Analysis I
Fall, spring. 3 credits. Prerequisite: Mathematics 294 or equivalent.
2 lecs, 1 rec.
Ordinary differential equations as applied in engineering context. Analytical and numerical methods. Special functions, initial value, boundary value, and eigenvalue problems in linear partial differential equations; introduction to nonlinear ordinary differential equations. Use of computer algebra and MACSYMA to solve problems.

311 Advanced Engineering Analysis II
Spring. 3 credits. Prerequisite: T&AM 310 or equivalent.
Functions of several variables, introduction to complex variables, analytic functions, conformal mapping, method of residues. Application to the solution of Laplace's equation, and transform inversion techniques. Examples drawn from fluid mechanics, heat transfer, electromagnetics, and elasticity.

610 Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310–311) but open to exceptional undergraduates with permission of instructor.
3 lecs.
Emphasis is on applications. Linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, complex variables.

611 Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent.
3 lecs.
Emphasis on applications. Partial differential equations, transform techniques, tensor analysis, calculus of variations.

612 Methods of Applied Mathematics III
Fall. 3 credits. Prerequisite: T&AM 610 or 611 or equivalent. First of a 6-credit sequence (T&AM 612 and 613) that develops advanced mathematical techniques for engineers and applied physicists.
Review of complex variable theory, conformal mapping, special functions, integral transform, Wiener-Hopf technique, and singular integral equations. Problems drawn from electromagnetics, elasticity, fluid mechanics, heat transfer, and acoustics.

613 Methods of Applied Mathematics IV
Spring. 3 credits. Prerequisite: T&AM 612 or equivalent.
Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductors, Stokes phenomenon. The course may also include computer algebra (MACSYMA) exercises at the option of the instructor.

Continuum Mechanics

501 Topics in Composites I
Fall. 1 to 3 credits (1 credit each topical minicourse)
Analysis of Composite Structures (T. J. Healey)

Consideration of the simplest problems, seen in terms of classical linear theories of structural mechanics, with an emphasis on anisotropic material properties appropriate to composite structures. Small-deflection bending of thin, elastic beams; analysis of composite beams; small-deflection theory of thin, elastic plates; membrane theory of thin shells; analysis of composite plates and shells.

Biological Composites (J. T. Jenkins)

Overview of the microstructural features and origin of the mechanical properties of bone and soft tissues such as tendon, ligament, muscle, and skin; their use as structural components. Design principles for composite materials mimicking those found in biological systems.

Design Principles for Composite Structures (R. H. Lance)

Review of thermomechanical behavior of anisotropic, orthotropic, and transversely isotropic materials. Development of pertinent equations for laminated materials and sandwich structures. Application to design and analysis of rods, beams, tubes, and plates. Examples drawn from space structures.

Mechanical Testing of Composite Constituents (Staff)

Theoretical and experimental characterization of strength and life of advanced composite constituents and materials; review of test methods, specimen preparation, testing, data reduction, and analysis; conduct of laboratory experiments for short-term strength distribution of fiber material, interface-strength evaluation, and life strength.

Reliability Models for Composites (S. L. Phoenix)

Models for fiber strength and fatigue lifetime including flaw statistics, diameter and length effects, and the special role of the Weibull distribution; models for the failure of fiber bundles including the role of load sharing and fiber-breakdown laws; models for the strength and stress-rupture of unidirectional composites including the effects of fiber strength distributions and the micromechanics of fiber/matrix stress transfer including matrix creep.

Fracture Testing for Composites (A. Zehnder)

Fracture-mechanics models for fiber-reinforced composites and their ability to predict the fracture resistance of these materials; performance of simple fracture tests using standardized test methods as well as advanced experimental-mechanics techniques.

502 Topics in Composites II
Fall. 1 to 3 credits (1 credit each topical minicourse)
Interface Failure and Fracture Processes in Composites (H. Hui)

Fundamentals of elastic fracture mechanics, interface models for a number of composite systems, stiffness reduction, interface crack growth, and fracture toughness of simple composite structures.

Boundary-Element Methods for Composites (S. Mukherjee)

Boundary-element methods for potential and elasticity problems; modeling of anisotropic elasticity with applications to composites.

Software for Composite Design (Staff)

Introduction to software for the design of composite structures. Included are MATLAB, for matrix computations of orthotropic materials; GENLAM and LAMRANK, for the analysis and design of laminates; C-FRANC (interactive computer graphics), for simulating the fracture of unidirectional, fiber-reinforced composites; and SLAD, for probabilistic analysis of strength and life of fiber bundles and composites. Emphasis is on practical applications in the design of tubes, pressure vessels, beams, and plates.

Effective Properties of Composites (P. Rosakis)

Review of material anisotropy, field equations, and interface conditions for composite bodies, solutions of fundamental composite problems, Eshelby's inhomogeneity problem, self-consistent methods for computing effective moduli, layered media, periodic arrays of particles, introduction to basic concepts of homogenization theory.

Novel Composite Structures (A. Ruina)

The design of sports equipment, human-powered vehicles, and other high-performance structures fabricated from composite materials.

Nondestructive Testing of Composites (W. Sachse)

Issues of process control in composite fabrication, problems related to the inspection of composite components, integrity monitoring and damage assessment, survey of conventional and advanced nondestructive evaluation (NDE) methods for composites, sensors for composite NDE, directions in current NDE research applicable to composites.

555 Introduction to Composite Materials
Fall. 3 credits.
2 lecs, 6 labs per semester. R. H. Lance and staff.
Introduction to composite materials: varieties of reinforcements, matrix materials and their properties. Mechanics and failure analysis of lamina, laminates, and wound structures; introduction to micromechanics theories of composites, manufacturing methods, fabrication and assembly techniques, composite applications, environmental effects.

[569 Sensors
Fall. 3 credits. Not offered 1989–90.
3 lecs a week, 4 labs a semester.
This course deals with the general properties of sensors and actuators used in measurement and process-control applications involving thermal and mechanical quantities. Considered are sensors and actuators based on a broad range of physical transduction phenomena. Attention is given to the development of sensor models and criteria for evaluating the general performance characteristics of a sensor, including its transduction characteristics and its measurement field. Also studied are algorithms for processing sensor signals to recover the characteristics of the sensor or to remove its effect in a specific measurement application. An integral part of the course is the Sensors Laboratory, which provides students with hands-on opportunities for measuring the characteristics and operational parameters of a broad range of thermo-mechanical sensors.]

[640 Experimental Mechanics
Fall. 3 credits. Not offered 1989–90.
1 lec, 1 rec, 1 lab.
This course introduces students to the principles of measurement and experimentation in mechanics, acquaints them with some of the techniques for measuring fundamental mechanical quantities, and permits them to explore experimental topics such as the elastic, viscoelastic, and plastic response of materials; the linear and nonlinear vibration of discrete and continuous systems; and acoustic and elastic wave propagation and scattering phenomena.]

655 Advanced Composite Materials and Structures
Spring. 3 credits.
Staff.
Advanced mechanics of composite materials. Strength theory of continuous and discontinuous-reinforced composites. Micromechanics, interface mechanics, modes of failure, creep-rupture. Mechanics of structural components. Design and analysis of composite structures: pressure vessels, aerospace structures, thick composites, and plates. Adhesive bonding and mechanical fastening. Dynamic effects and hygrothermal effects.

663 Solid Mechanics I
Fall. 4 credits. Corequisite: Mathematics 610.
3 lecs, 1 lab. J. T. Jenkins, W. Sachse.
Rigorous introduction to small-strain solid mechanics with emphasis on linear elasticity: stress, strain, tensors, balance laws, energy principles, general theory of linear elasticity, solutions of elementary boundary value problems.

664 Solid Mechanics II
Spring. 4 credits. Prerequisites: Mathematics 610 and T&AM 663, or equivalent.
3 lecs, 1 lab.
Preparation for advanced courses in solid mechanics. Singular solutions in linear elasticity, large deformations, nonlinear elasticity, linear visco-elasticity, mechanics of defects (cracks and dislocations), classical plasticity, and constitutive relations.

[666 Fundamentals of Acoustics
Spring. 3 credits. Not offered 1988–89.
3 lecs, biweekly labs.
Introduction to the principles and theories of acoustics. The vibrations of strings, bars, membranes, and plates; plane and spherical acoustic waves; transmission phenomena; resonators and filters; waves in solids and fluids. Application is made to sonic and ultrasonic transducers, music and noise, and architectural acoustics, and an introduction is given to the digital processing of acoustic signals. Laboratory work is required. At the level of *Fundamentals of Acoustics*, by Kinsler, Frey, Coppens, and Sanders.]

751 Continuum Mechanics and Thermodynamics
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years.
3 lecs. T. Healey.
Kinematics, conservation laws, the entropy inequality, constitutive equations, frame indifference, material symmetry. Rate-dependent materials and materials with internal variables.

[752 Nonlinear Elasticity
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1989–90.
3 lecs. T. Healey.
Review of kinematics and constitutive theory appropriate for large deformations of nonlinearly elastic bodies. The basic field equations of nonlinear elastostatics and elastodynamics. Exact solutions of special problems. Linearization and stability. Nonlinear theories of thin structural members and their relationship to the three-dimensional theory. Introduction to static bifurcation theory with applications to strings, rods, plates, and shells.]

[753 Fracture
Spring. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1989–90.
3 lecs.
Topics will be selected from (1) elastic fracture mechanics: K, small-scale yielding, solutions of elastic crack problems; (2) nonlinear rate-independent, small-deformation fracture mechanics: plastic fracture, J-integral, small-scale yielding; (3) rate-dependent fracture mechanics: dynamic fracture, creep fracture; (4) mechanics of failure in polymers, ceramics, composites, and metals: void growth, load transfer between fibers, crazing.]

757 Inelasticity
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years.
3 lecs.
Inelasticity; plasticity, visco-elasticity, and modern nonlinear theories. Plasticity: general principles, limit analysis, and boundary value problems. Visco-elasticity: general principles and solution of boundary value problems. Modern state variable theories: their relation to classical theories, their phenomenology, and use in solving boundary value problems.

[759 Computational Methods
Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1989–90.
3 lecs. S. Mukherjee.
The aim of this course is to survey a wide range of applications of the boundary element method (BEM) and finite element method (FEM) in solid mechanics. The boundary element method will be introduced and then be used in problems in linear elasticity, diffusion, wave propagation, and problems with material and/or geometric nonlinearities. Finite-element applications will emphasize nonlinear problems in solid mechanics.]

768 Elastic Waves
Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 574 or equivalents. Offered alternate years.
3 lecs.
An advanced course on dynamic stress analysis and wave propagation in elastic solids. Theory of elastodynamics. Waves in isotropic and anisotropic media. Reflection and refraction. Surface waves and waves in layered media. Transient waves and methods of Lamb-Cagniard-Pakeris. Thick-plate theories. Vibration of spheres. Scattering of waves and dynamic stress concentration.

770 Research Topics in Solid Mechanics
Spring. 1–3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents.
3 lecs. 1–3 faculty members.
Three topics of current research interest to faculty will be presented. The topics for each year will be posted in the late fall. Students may register for one, two, or three credits.

Dynamics and Space Mechanics

570 Intermediate Dynamics
Fall. 3 credits.
Two 1 1/4-hour lecs.
Vector and matrix methods for kinematics, Lagrangian and Newtonian mechanics for particles and rigid bodies, Euler's equations for rotating bodies, central-force motion. Small vibrations and stability. Application to robotics, gyroscopes, orbital and spacecraft dynamics.

574 Vibrations and Waves in Elastic Systems
Spring. 4 credits. Prerequisites: T&AM 570 and 610.
3 lecs, 1 lab.
Dynamics of elastic continua, including strings, membranes, and beams. Hamilton's principle, balance laws, characteristics, dispersion, phase, and group velocities.

[671 Advanced Dynamics
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years. Not offered 1989–90.
Review of Lagrangian mechanics; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory.]

[672 Celestial Mechanics (also Astronomy 579)
Spring. 3 credits. Offered alternate years. Not offered 1989–90.
Two 1 1/4-hour lecs.
Description of orbits; 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems; virial theorem. Osculating elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; secular perturbations, resonances, mechanics of planetary rings.]

[673 Mechanics of the Solar System (also Astronomy 571)
Spring. 3 credits. Prerequisite: an undergraduate course in dynamics. Offered alternate years. Not offered 1989–90.
Two 1 1/4-hour lecs.
Gravitational potentials, planetary gravity fields. Free and forced rotations. Chandler wobble, polar wander, damping of nutation. Equilibrium tidal theory, tidal heating. Orbital evolution of natural satellites, resonances, spin-orbit coupling, Cassini states. Long-term variations in planetary orbits. Dust dynamics. Dynamics of ring systems. Physics of interiors, seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.]

675 Nonlinear Vibrations
Fall. 3 credits. Prerequisite: T&AM 574 or equivalent. Offered alternate years.
Review of linear systems, free and forced vibrations. Nonlinear systems, phase plane methods, method of isoclines. Conservative systems. General autonomous systems, equilibrium and periodic solutions, linearization and Lyapunov stability criteria, Poincaré-Bendixson theorem. Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, Krylov-Bogoliubov method. Applications to problems in mechanics.

776 Qualitative Theory of Dynamical Systems
Spring. 3 credits. Suggested prerequisite: T&AM 675, Mathematics 517, or equivalent. Offered alternate years.
Review of planar (single–degree-of-freedom) systems. Local and global analysis. Structural stability and bifurcations in planar systems. Center manifolds and normal forms. The averaging theorem and perturbation methods. Melnikov's method. Discrete dynamical systems, maps and difference equations, homoclinic and heteroclinic motions, the Smale Horseshoe and other complex invariant sets. Global bifurcations, strange attractors and chaos in free and forced oscillator equations. Applications to problems in solid and fluid mechanics.

Special Courses, Projects, and Thesis Research

[400 Science, Risk, and Public Policy (also Engr 400 and Economics 358)
Fall. 3 credits. Not offered 1989–90.
For description see Engineering Common Courses.]

491–492 Project in Engineering Science
491, fall; 492, spring. 1–4 credits, as arranged.
Projects for undergraduates under the guidance of a faculty member.

796–800 Topics in Theoretical and Applied Mechanics
Fall, spring. 1–3 credits, as arranged.
Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

890 Master's Degree Research in Theoretical and Applied Mechanics
Fall, spring. 1–6 credits, as arranged. S-U grades optional.
Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

990 Doctoral Research in Theoretical and Applied Mechanics
Fall, spring. 1–9 credits, as arranged. S-U grades optional.
Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

FACULTY ROSTER

Abel, John F., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Albright, Louis D., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Allmendinger, Richard, Ph.D., Stanford U. Assoc. Prof., Geological Sciences
Anantharam, Venkatachalam, Ph.D., U. of California at Berkeley. Asst. Prof., Electrical Engineering
Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Anton, A. Brad, Ph.D., California Inst. of Technology. Asst. Prof., Chemical Engineering
Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
Auer, Peter L., Ph.D., California Inst. of Technology. Prof., Mechanical and Aerospace Engineering
Avedisian, C. Thomas, Ph.D., Princeton U. Assoc. Prof., Mechanical and Aerospace Engineering
Ballantyne, Joseph M., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical Engineering
Barazangi, Muawia, Ph.D., Columbia U. Senior Scientist, Geological Sciences
Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering

Bartsch, James A., Ph.D., Purdue U. Asst. Prof., Agricultural and Biological Engineering
Bassett, William A., Ph.D., Columbia U. Prof., Geological Sciences
Batterman, Boris W., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
Berger, Toby, Ph.D., Harvard U. J. Preston Levis Professor of Engineering, Electrical Engineering
Bilardi, Gianfranco, Ph.D., U. of Illinois. Asst. Prof., Computer Science
Billera, Louis J., Ph.D., City U. of New York. Prof., Operations Research and Industrial Engineering
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof., Geological Sciences
Birman, Kenneth P., Ph.D., U. of California at Berkeley. Asst. Prof., Computer Science
Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Blakely, John M., Ph.D., Glasgow U. (Scotland). Prof., Materials Science and Engineering
Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Bloom, Arthur L., Ph.D., Yale U. Prof., Geological Sciences
Bloom, Bard, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Bojanczyk, Adam W., Ph.D., U. of Warsaw (Poland). Asst. Prof., Electrical Engineering.
Booker, John F., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Brock, Joel D. Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Applied and Engineering Physics
Brown, Geoffrey M., Ph.D., U. of Texas. Asst. Prof., Electrical Engineering
Brown, Larry D., Ph.D., Cornell U. Prof., Geological Sciences
Brutsaert, Wilfried H., Ph.D., U. of California at Davis. Prof., Civil and Environmental Engineering
Buhrman, Robert A., Ph.D., Johns Hopkins U. Prof., Applied and Engineering Physics
Burns, Joseph A., Ph.D., Cornell U. Prof., Theoretical and Applied Mechanics
Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Nuclear Science and Engineering
Capranica, Robert R., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical Engineering.
Carter, C. Barry, Ph.D., Oxford U. (England). Prof., Materials Science and Engineering
Cathles, Lawrence M. III, Ph.D., Princeton U. Prof., Geological Sciences
Caughey, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Chiang, Hsiao-Dong, Ph.D., U. of California at Berkeley. Asst. Prof., Electrical Engineering
Cisne, John L., Ph.D., U. of Chicago. Prof., Geological Sciences
Clancy, Paulette, Ph.D., Oxford U. (England). Asst. Prof., Chemical Engineering
Clark, David D., Ph.D., U. of California at Berkeley. Prof., Nuclear Science and Engineering
Clark, Peter A., Ph.D., Carnegie-Mellon U. Asst. Prof., Chemical Engineering
Cohen, Claude, Ph.D., Princeton U. Prof., Chemical Engineering
Coleman, Thomas F., Ph.D., U. of Waterloo. Assoc. Prof., Computer Science
Compton, Richard C., Ph.D., California Inst. of Technology. Asst. Prof., Electrical Engineering
Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
Cooke, J. Robert, Ph.D., North Carolina State U. Prof., Agricultural and Biological Engineering
Cool, Terrill A., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics
Craighead, Harold G., Ph.D., Cornell U. Prof., Applied and Engineering Physics, and Electrical Engineering
Datta, Ashim K., Ph.D., U. of Florida. Asst. Prof., Agricultural and Biological Engineering
Dawson, Paul R., Ph.D., Colorado State U. Prof., Mechanical and Aerospace Engineering
deBoer, P. Tobias, Ph.D., U. of Maryland. Prof., Mechanical and Aerospace Engineering
Deierlein, Gregory G., Ph.D., U. of Texas at Austin. Asst. Prof., Civil and Environmental Engineering
Delchamps, David F., Ph.D., Harvard U. Assoc. Prof., Electrical Engineering
Derksen, Richard C., Ph.D., U. of Illinois. Asst. Prof., Agricultural and Biological Engineering
Dick, Richard I., Ph.D., U. of Illinois. Joseph P. Ripley Professor of Engineering, Civil and Environmental Engineering
Dieckmann, Rudiger, Ph.D., Technical U. of Clausthal. Prof., Materials Science and Engineering
Donald, Bruce, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Duncan, Michael, Ph.D., California Inst. of Technology. Asst. Prof., Chemical Engineering
Eastman, Lester F., Ph.D., Cornell U. Given Foundation Professor of Engineering, Electrical Engineering
Engstrom, James R., Ph.D., California Inst. of Technology. Asst. Prof., Chemical Engineering
Farley, Donald T., Ph.D., Cornell U. Prof., Electrical Engineering
Fine, Terrence L., Ph.D., Harvard U. Prof., Electrical Engineering
Fleischmann, Hans H., Ph.D., Technische Hoch., München (Germany). Prof., Applied and Engineering Physics
Furry, Ronald B., Ph.D., Iowa State U. Prof., Agricultural and Biological Engineering
Gebremedhin, Kifle G., Ph.D., U. of Wisconsin. Asst. Prof., Agricultural and Biological Engineering
George, Albert R., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Gergely, Peter, Ph.D., U. of Illinois. Prof., Civil and Environmental Engineering
Giannelis, Emmanuel, Ph.D., Michigan State U. Asst. Prof., Materials Science and Engineering
Gossett, James M., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
Gouldin, Frederick C., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Greenberg, Donald P., Ph.D., Cornell U. Professor at Large, Engineering
Gries, David J., Ph.D., Technische Hoch., München (Germany). Prof., Computer Science
Grigoriu, Mircea D., Ph.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
Grover, Lov K., Ph. D., Stanford U. Asst. Prof., Electrical Engineering
Grubb, David T., Ph.D., Oxford U. (England). Assoc. Prof., Materials Science and Engineering
Gubbins, Keith E., Ph.D., U. of London (England). Thomas R. Briggs Professor of Engineering, Chemical Engineering
Gunkel, Wesley W., Ph.D., Michigan State U. Prof., Agricultural and Biological Engineering
Hagfors, Tor, Ph.D., U. of Oslo (Norway). Prof., Electrical Engineering
Haith, Douglas A., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Hammer, Daniel A., Ph.D., U. of Pennsylvania. Asst. Prof., Chemical Engineering
Hammer, David A., Ph.D., Cornell U. Prof., Nuclear Science and Engineering
Harriott, Peter, Sc.D., Massachusetts Inst. of Technology. Fred H. Rhodes Professor of Chemical Engineering
Hartmanis, Juris, Ph.D., California Inst. of Technology. Walter R. Read Professor of Computer Science
Hauser, Max W., Ph.D., U. of California at Berkeley. Asst. Prof., Electrical Engineering
Healey, Timothy J., Ph.D., U. of Maryland. Asst. Prof., Theoretical and Applied Mechanics
Heath, David C., Ph.D., U. of Illinois. Prof., Operations Research and Industrial Engineering
Heegard, Chris, Ph.D., Stanford U. Assoc. Prof., Electrical Engineering
Hillman, Lloyd W., Ph.D., U. of Rochester. Asst. Prof., Electrical Engineering
Holmes, Philip J., Ph.D., Southampton U. (England). Prof., Theoretical and Applied Mechanics
Hopcroft, John E., Ph.D., Stanford U. Prof., Computer Science
Hover, Kenneth C., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Howe, Douglas J., Ph.D. Cornell U. Asst. Prof., Computer Science
Hui, Chung Y., Ph.D., Harvard U. Assoc. Prof., Theoretical and Applied Mechanics
Hunter, Jean B., Ph.D., Columbia U. Asst. Prof., Agricultural and Biological Engineering
Huttenlocher, Daniel, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science

Wang, Kuo-King, Ph.D., U. of Wisconsin. Prof., Mechanical and Aerospace Engineering
Warhaft, Zellman, Ph.D., U. of London (England). Prof., Mechanical and Aerospace Engineering
Webb, Watt W., Sc.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
Weber, G. Gustavo, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Mechanical and Aerospace Engineering
Weiss, Lionel I., Ph.D., Columbia U. Prof., Operations Research and Industrial Engineering
Wharton, Charles B., M.S., U. of California at Berkeley. Prof., Electrical Engineering
White, Richard N., Ph.D., U. of Wisconsin. James A. Friend Family Distinguished Professor of Engineering, Civil and Environmental Engineering
White, William M., Ph.D., U. of Rhode Island. Assoc. Prof., Geological Sciences
Williamson, Charles, Ph.D., Cambridge U. (England). Asst. Prof., Mechanical and Aerospace Engineering
Wise, Frank W., Ph.D. Cornell U. Asst. Prof., Applied and Engineering Physics
Wolf, Edward D., Ph.D., Iowa State U. Prof., Electrical Engineering
Wolga, George J., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical Engineering
Zehnder, Alan, Ph.D., California Inst. of Technology. Asst. Prof., Theoretical and Applied Mechanics
Zollweg, John A., Ph.D., Cornell U. Assoc. Prof., Chemical Engineering

GRADUATE SCHOOL

ADMINISTRATION

Alison P. Casarett, dean

Eleanor S. Reynolds, associate dean

Benjamin Ginsberg, secretary of the graduate faculty

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

Programs leading to the degrees of Doctor of Law (J.D.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Medical College (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.

GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee and usually has the primary responsibility for directing the student's thesis or dissertation research.

Students who want to use the university's facilities for intensive specialized training only and who do not want to become degree candidates may apply for admission as non-degree students.

REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test for those fields that require the GREs.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be

1) a Test of English as a Foreign Language (TOEFL) score of 550 or higher;
2) a degree from a college or university in a country where the native language is English; or
3) two or more years of study in an undergraduate or graduate program in a country where the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, New Jersey 08540, U.S.A.

Applications for admission to the Graduate School may be submitted at any time during the year. Many fields, however, require that applicants for fall admission submit their completed applications before January 10.

Applicants who are also applying for Cornell Graduate School fellowship consideration *must* submit their completed applications and supporting credentials before January 10.

Inquiries regarding admission and fellowships should be addressed to the Graduate School Admissions Office, Cornell University, Sage Graduate Center, Ithaca, New York 14853-6201.

Information concerning admission requirements and courses of study for degrees not administered by the Graduate School may be obtained from the several schools and colleges that administer them (see "Administration," above).

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for teaching and research assistantships should be addressed to the graduate faculty representative in the particular field.

More detailed information may be obtained from the following publications: the *Graduate School Catalog, 1990–92*, available from Cornell University Catalogs, 122 Maple Avenue, Ithaca, NY 14850-4902, and the application *Graduate Study at Cornell University*, available from the Graduate School, Cornell University, Sage Graduate Center, Ithaca, New York 14853-6201.

SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION

David A. Dittman, dean

Michael H. Redlin, associate dean for academic affairs

Normand L. Peckenpaugh, assistant dean for finance and administration

William N. Chernish, assistant dean for executive education

Hans P. Weishaupt, managing director of the Statler Hotel and J. Willard Marriott Executive Education Center

Cheryl S. Farrell, director of admissions and financial aid

Michael H. Redlin, acting registrar

Lynda Haywood-Smith, director of minority programs

Katherine S. Laurence, librarian

Jim Dunston, director of the Binenkorb Video and Computer Center

Fred H. Antil, director of placement and corporate relations

Harry R. Keller, director of alumni affairs

John E. H. Sherry, graduate faculty representative

Sandra K. Boothe, director of the M.P.S. program

Sara L. Hurlbut, director of development

Glenn Withiam, executive editor of the *Cornell Hotel and Restaurant Administration Quarterly*

DEGREE PROGRAMS

	Degree
Hotel and Restaurant Administration	
	B.S.
	M.P.S.
	M.S.
	Ph.D.

FACILITIES

Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The totally renovated building, which serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a video and computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. The improved Statler Hall and new Statler Hotel were designed expressly for the school's revamped academic and executive-education programs, and provide students with training and work experience in facilities similar to those in which they will work after graduation.

The School of Hotel Administration Library, the largest of its kind, provides a comprehensive collection of publications on hotel and restaurant operation, business, and related subjects. The library's resources allow students to search numerous computerized bibliographic databases, including the hospitality industry's most extensive database containing current bibliographic information on the periodical literature of the industry. Among the library's special features are the Herndon and Vehling collections, which contain numerous rare materials.

Statler Hotel and J. Willard Marriott Executive Education Center. The all-new hotel comprises 150 guest rooms, an executive-education center, restaurants, lounges, and the university's faculty and staff club. It is an industry showcase, one that demonstrates the very finest in hospitality and hospitality-education practices. The Statler Hotel is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the Cornell community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the Statler Hotel is a practice-management facility for certain classes, internships, and for independent-study projects. It offers part-time jobs to approximately 200 students each semester; preference is given to students in the hotel school.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management, including accounting, finance, marketing, operations, communication, properties management, information technology, law, and human-resources management. The school's graduates hold executive positions in a variety of industries, but are especially well represented in the management of hospitality-related enterprises, including the lodging, food-service, and travel industries.

Students are encouraged to pursue a broad range of courses, including those in the humanities, as preparation for assuming positions in the business community. Included in the basic curriculum are courses in financial management, food and beverage operations, administration, and physical-plant management.

To satisfy degree requirements, every undergraduate enrolled in the School of Hotel Administration must complete a minimum of two periods of ten weeks each (or the equivalent) of full-time, supervised, relevant employment and file acceptable reports for each work period. Most students complete this requirement during the summer.

The basic program leading to the undergraduate degree in hotel administration, as set forth below, is enriched by a broad selection of free and distributive elective courses offered by the school and elsewhere in the university. For more complete information about undergraduate program requirements, see the school's admissions catalog (available in room 174 Statler Hall).

Requirements for Graduation

The requirements for graduation outlined below are the result of an extensive revision of the school's curricula that was completed in 1988. Regularly enrolled students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence;*†
2) completion, with a minimum average of 2.0, of 120 required and elective credits, as set forth in the table below;
3) completion of two units of practice credit prior to the last term of residence, as defined below;
4) completion of the university requirement in physical education (two units, usually taken during the first two terms of residence);
5) attainment of a grade-point average of at least 2.0 in the final semester.

*Students who plan to attend summer school at Cornell or elsewhere should keep in mind the degree requirement of a minimum of two periods of ten weeks each (or the equivalent) of full-time, supervised, relevant employment.

†Students transferring from other colleges and universities may be allowed appropriate credit against the residence requirement at the time of admission. Transfer students must complete a minimum of five semesters in the program.

Suggested course programs also appear on the following pages. The core courses account for 67 of the 120 credits needed for graduation, the selected subject concentration accounts for 12 credits, and 18 credits are allotted for distributive electives. The remaining 23 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or elsewhere or who propose to attend any other university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 23-credit group of free electives.

All students are required by the university to take two courses in physical education, but no credit toward the academic degree is allowed for these courses.

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. To graduate, a cumulative average of 2.0 and a final-term average of 2.0 are required as minimums. Of the free-elective courses, a maximum of 4 credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis.

Students whose term averages are at least 3.3 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

Practice-Credit Requirement

As part of degree requirements, undergraduates enrolled in the School of Hotel Administration must complete a specific set of practice-credit requirements. These requirements are set forth in the *Practice Credit Work Handbook for Undergraduates in the School of Hotel Administration*. The school registrar distributes copies of this document upon request to enrolled students.

A limited number of upperclass students are encouraged to enroll in management-intern programs that entail six to eight months of on-the-job managerial instruction and experience. For the details on these programs, see the section "Directed Study" on the following pages.

Course Requirements for Graduation

Required courses	*Credits*
Operation Management: Hotel Administration 103, 303, 403	9
Human-Resources Management: Hotel Administration 211, 212	6
Financial Management: Hotel Administration 225, 226, 325	10
Food and Beverage Management: Hotel Administration 136, 236, 335	12
Marketing and Tourism: Hotel Administration 243	3
Properties Management: Hotel Administration 255, 355	6
Communication: Hotel Administration 165, 365	6
Information Technology: Hotel Administration 174	3
Law: Hotel Administration 387	3
Quantitative Methods: Hotel Administration 191	3
Economics: Economics 101,102	6
Specifically required credits	67
Concentration	12
Distributive electives	18
Free electives	23
Total credits required for graduation	120

UNDERGRADUATE PROGRAM OF STUDY

The undergraduate curriculum of the School of Hotel Administration is continually being revised and expanded. In some cases, the numbers of old and new courses overlap. Class meeting times for the hotel school are not listed in this edition of this catalog. All meeting times and more detailed information about the courses may be found in the hotel school's *Course Supplement*, which is issued each semester. It is available from the hotel school registrar, room 178 Statler Hall (telephone 255-3739).

Typical Course Sequences

The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

Freshman Year

Typically, a freshman schedule will consist of 14 to 16 credits each term, to include the following:

Required courses	*Credits*
H Adm 103, Principles of Management	3
H Adm 136, Food and Beverage Management	4
H Adm 165, Managerial Communication: Writing Principles and Process	3
H Adm 174, Microcomputing	3
H Adm 191, Quantitative Methods	3
Econ 101, Microeconomics	3
Econ 102, Macroeconomics	3
Distributive electives	6
Free electives	0–4
	28–32

Sophomore Year

Required courses	*Credits*
H Adm 211, Human-Resources Management	3
H Adm 212, Human Relations Skills	3
H Adm 225, Financial Accounting	3
H Adm 226, Financial Management	4
H Adm 236, Culinary Theory and Practice	4
H Adm 243, Principles of Marketing	3
H Adm 255, Hospitality Facilities Development and Planning	3
Distributive electives	3–6
Free electives	3–6
	29–35

Junior Year

Required courses	*Credits*
H Adm 303, Organizational Processes and Design	3
H Adm 325, Hospitality Financial Management	3
H Adm 335, Restaurant Management	4
H Adm 355, Hospitality Facilities Construction and Operation	3
H Adm 365, Managerial Communication: Principles and Practices	3
H Adm 387, Business and Hospitality Law	3
Concentration	6
Free electives	3–6
	28–31

Senior Year

Required courses	*Credits*
H Adm 403, Integrative Senior Requirement	3
Concentration	6
Free electives	15–26
	24–35

Programs in Special Areas

While completing the required courses leading to the bachelor's degree, undergraduates in the school must also select a concentration: 12 elective credits in a major area of instruction. These include operation management, human-resources management, financial management, food and beverage management, marketing, properties management, and communications and hospitality management (self-directed study).

When students select one of these major fields of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of elective courses that will best fit their program.

A list of elective courses offered in the school's special areas of instruction is provided below.

Elective Courses in Hotel Administration

The following is a list of courses currently offered within the School of Hotel Administration that may, as appropriate, be used in partial or full satisfaction of the free-elective allocation or the requirements for the specified area of concentration.

The first digit of the course number is in general indicative of the level of the course; the second digit indicates the curricular area, according to the following scheme:

First digit

1—freshman/introductory

2—sophomore

3—junior

4—senior

5—provisional course offering

6—undergraduate independent study

7—graduate

Second digit

0—operation management

1—human-resources management

2—financial management

3—food and beverage management

4—marketing and tourism

5—properties management

6—communication

7— information technology/computers

8—law

9—other

Operation Management	*Credits*
H Adm 102, Distinguished Management Lectures	1
H Adm 203, Club Management	2
H Adm 304, Rooms-Division Management	2
H Adm 305, Resort and Condominium Management	3
H Adm 306, Franchising in the Hospitality Industry	2
H Adm 401, Seminar in Management Principles	2
H Adm 402, Hospitality Management Seminar	1
H Adm 404, Management Organization of the Small Business	3
H Adm 405, Management Planning for the Hospitality Industry	3
H Adm 406, Integrated Studies in the Hospitality Industry	3
H Adm 407, Seminar in Hotel Operations	2
H Adm 408, Casino Management	2
H Adm 409, Airline Management	3
H Adm 501, Creative Management for Organizational Change	3
H Adm 600, Undergraduate Independent Study—Operation Management	V*
H Adm 601, Management Intern Program I—Operations	6
H Adm 602, Management Intern Program II—Academic	6
H Adm 603, Hotel Ezra Cornell	V*
H Adm 700, Graduate Independent Research—Operation Management	V*

Human Resources Management	*Credits*
H Adm 313, Training in the Hospitality Industry	3
H Adm 414, Organizational Behavior and Small-Group Processes	3
H Adm 416, Special Studies in the Management of Human Resources	3
H Adm 511, Current Problems in the Management-Labor Relationship	2
H Adm 512, Managing Organizational Change and Productivity	3
H Adm 513, Situational Leadership and Organizational Behavior	2
H Adm 610, Undergraduate Independent Study—Human Resources Management	V*
H Adm 710, Graduate Independent Research—Human Resources Management	V*
H Adm 711, Negotiations in the Service Industry	3

Financial Management	*Credits*
H Adm 120, Survey of Financial Management	2
H Adm 123, Financial Accounting Principles	3
H Adm 321, Hospitality Management Contracts	1
H Adm 322, Investment Management	2
H Adm 323, Hospitality Real-Estate Finance	3
H Adm 326, Corporate Finance	3
H Adm 328, Advanced Hospitality Managerial Accounting	3
H Adm 421, Internal Control in Hotels	2
H Adm 422, Taxation and Management Decisions	3
H Adm 620, Undergraduate Independent Study—Financial Management	V*
H Adm 720, Graduate Independent Research—Financial Management	V*
H Adm 724, Analysis and Interpretation of Financial Statements	3
H Adm 729, Hospitality Investments and Portfolio Management	3

Food and Beverage Management	*Credits*
H Adm 336, Principles of Nutrition	3
H Adm 337, The Composition and Properties of Food	4
H Adm 338, Nutrition and Fitness in the Resort Hotel and Spa Industry	3
H Adm 339, Airline Food-Service Management	3
H Adm 430, Introduction to Wine and Spirits	2
H Adm 431, Seminar in Independent Restaurant Operations Management	3
H Adm 433, Food-Service Management in Business, Industry, and Health-Care Facilities	3
H Adm 434, Desserts Merchandising	3
H Adm 435, Selection, Procurement, and Supply Management	3
H Adm 436, Beverage Management	2
H Adm 437, Seminar in Culture and Cuisines	3
H Adm 530, The Restaurant in Society	3
H Adm 532, Seminar in Chain-Restaurant Operations Management	3
H Adm 533, Current Issues in Food Safety and Sanitation	3
H Adm 538, Gastronomy—Understanding Food-and-Wine-Pairing Principles	2
H Adm 630, Undergraduate Independent Study—Food and Beverage Management	V*
H Adm 730, Graduate Independent Research—Food and Beverage Management	V*

Marketing and Tourism	*Credits*
H Adm 244, Tourism I	3
H Adm 245, Hotel Sales Management	2
H Adm 441, Advertising Strategies	3
H Adm 444, Tourism II	3
H Adm 449, International Marketing	3
H Adm 541, Marketing Communications Strategy	3
H Adm 542, Marketing Communications Media	3
H Adm 543, Marketing Research	3
H Adm 544, Services Marketing	3
H Adm 548, Marketing Practices in the Casino Industry	2
H Adm 640, Undergraduate Independent Study—Marketing and Tourism	V*
H Adm 740, Graduate Independent Research—Marketing and Tourism	V*
H Adm 742, Strategic Marketing Planning in the Hospitality Industry	3

Properties Management	*Credits*
H Adm 256, Insurance and Risk Management	3
H Adm 350, Principles of Real Estate	3
H Adm 351, Hospitality Facilities Design and Analysis	3
H Adm 352, Hotel Planning and Interior Design	3
H Adm 353, Introductory Food-Service Facilities Design	3
H Adm 356, Hospitality Risk Management	3
H Adm 358, Hospitality-Industry Real Estate	3
H Adm 451, Seminar in Properties Management	1
H Adm 453, Advanced Food-Service Facilities Planning and Design	3
H Adm 454, Restaurant Planning	3
H Adm 456, Hospitality Facilities Management	3
H Adm 457, Advanced Development and Construction	3
H Adm 554, Mixed-Use Development	2
H Adm 650, Undergraduate Independent Study—Properties Management	V*
H Adm 750, Graduate Independent Research—Properties Management	V*

Management Support—Communications	*Credits*
H Adm 266, Intermediate French: Le Francais de l'Hotellerie	3
H Adm 267, Intermediate Spanish: Espanol de Hoteleria	3
H Adm 364, Advanced Business Writing	2
H Adm 562, Special Topics in Communication	V*

H Adm 660, Undergraduate Independent Study—Communication	V*
H Adm 760, Graduate Independent Research—Communication	V*
H Adm 761, Organizational Communication for Managers	3
Management Support—Information Technology	*Credits*
H Adm 170, Macintosh Tools	3
H Adm 171, Keyboarding on the Macintosh	2
H Adm 274, Hotel Computing Applications	3
H Adm 374, End-User Business Computing Tools	3
H Adm 571, Analysis and Design of Information Systems	3
H Adm 572, Development of Decision Support Systems	3
H Adm 670, Undergraduate independent Study—Information Technology/Computers	V*
H Adm 770, Graduate Independent Research—Information Technology/Computers	V*
Management Support—Law	*Credits*
H Adm 283, Law of Securities Regulation	1
H Adm 385, Law of Business I	3
H Adm 486, Historical Introduction to Public Hospitality Law (summer only)	3
H Adm 487, Real-Estate Law I	2
H Adm 680, Undergraduate Independent Study—Law	V*
H Adm 780, Graduate Independent Research—Law	V*
Management Support—Other	*Credits*
H Adm 490, Housing and Feeding the Homeless	4
H Adm 599, Development and Management of Wellness in Business Organizations	3
H Adm 690, Undergraduate Independent Study—Management Support (General)	V*
H Adm 790, Graduate Independent Research—Management Support (General)	V*

*Variable.

Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hotel or restaurant industries. Foreign language study at Cornell is characterized by small classes and emphasis on the spoken language. Students supplement their course work with study in a well-equipped language laboratory.

Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section and also under the section Advanced Placement for Freshmen.

GRADUATE CURRICULUM

The school's programs for advanced degrees include those of Master of Professional Studies, Master of Science, and Doctor of Philosophy. For further information on graduate programs, consult the school's graduate catalog (available in room 172 Statler Hall); contact Professor John E. H. Sherry, the school's graduate faculty representative; or see the university's *Announcement* from the Graduate School.

Candidates for the Master of Science or Doctor of Philosophy degrees should refer to the admission and degree requirements set forth in the *Announcement.* The student's program is developed with the aid and direction of a special committee chosen by the student from members of the Graduate Faculty. This committee also approves the thesis project.

Candidates for the Master of Professional Studies (M.P.S.) degree pursue one of four tracks in their graduate studies. Students whose undergraduate degrees are in areas other than hotel administration follow track I, for which the required two-year program is set forth below.

The curricula for M.P.S. tracks II and III are specifically designed for each student, based on previous experience and career goals. Students who hold four-year degrees in hotel administration from an institution other than Cornell qualify for the track II curriculum. A minimum of three residence units and 48 credits are required to complete track II. Track II students must take 12 credits in a concentration, 6 credits of monograph, 16 elective credits, and any required courses not yet completed prior to their arrival.

Track III is for students who hold a Bachelor of Science degree in hotel administration from Cornell. Two residence units and 32 credits are required to complete track III. Track III students must take 12 credits in a concentration, 6 credits of monograph, and 14 elective credits.

Track IV is for students who hold a master's degree and have no prior degrees in hotel administration. Three residence units and a minimum of 48 credits are required (if no required courses are exempted, 50 credits may be necessary to complete the program). Track IV students must take 12 credits in a concentration, 6 credits of monograph, prerequisites, and any required courses not yet completed.

All students are required to designate an area of concentration before their next-to-last term.

Each student also writes an investigative report or monograph, under the guidance of an adviser, to meet requirements for the M.P.S degree.

Required Program for M.P.S. Track I Students

Required courses	*Credit*
H Adm 705, Business Policy	3
H Adm 718, Advanced Human-Resources Management	3
H Adm 725, Graduate Managerial Accounting in the Hospitality Industry	3

Specifically required credits	36
Concentration credits	12
Free elective credits	16
Total credits required for M.P.S. Track I students	64

DIRECTED STUDY

Independent Research

Students may conduct independent research (directed study) projects in any academic area of the school under the direction of a faculty member. Credit is arranged on an individual basis. Only the first 3 credits of directed study may be credited against concentration credits during the undergraduate years. Additional directed study is credited against free electives. To enroll in an independent research project, students must obtain written permission from the school before course registration.

Management-Intern Program

This program is open only to upperclass students. Students accepted into the program earn 12 credits, which can be applied as free electives. With faculty approval some credits might be applied toward a concentration. Students enrolled in this program have an opportunity to combine managerial readings and previous course work with challenging work experience. Application for admission should be made one semester in advance. Guidance is provided by school staff members under the direction of a faculty committee. Management-intern positions are available at many locations worldwide, including several on the Cornell campus. Students receive both academic credit and practice credit, and appropriate financial remuneration for the period of the program. The student is charged reduced tuition.

Study Abroad

Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student's total educational experience. Students in recent years have studied in Italy, Spain, France, and England. Information on the many study-abroad programs operating during the summer and academic year is available at the University Career Center (in Sage Hall).

Students should discuss their plans with the school's study-abroad representative, Professor William Kaven, so that all petition and credit-evaluation procedures are followed.

OPERATION MANAGEMENT COURSES

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school registrar in room 178 Statler Hall, telephone 255-3739.

100 Principles of Management
Fall. 3 credits. Limited to DUS students, non-hotel school students, and transfer students. Required for transfer students.
A systems approach to understanding the nature of management in the hotel and restaurant industries.

102 Distinguished Management Lectures
Fall. 1 credit. Limited to hotel school students except by written permission. Elective.
A series of lectures given by nonresident speakers prominent in the hotel and restaurant industries or allied fields. Topics include career ladders, company profiles, and business-policy formulation.

103 Principles of Management
Fall. 3 credits. Limited to hotel school freshmen. Required.
A systems approach to understanding the nature of management in the hotel and restaurant industries.

203 Club Management
Fall, 7 weeks only. 2 credits. Elective.
The private-membership club and how it differs from other forms of business in the hospitality industry. Topics include constitution and by-laws issues, administration and interface with board of directors and committees, recreation management, labor management, and marketing of major tournaments.

303 Organizational Processes and Design
Fall or spring. 3 credits. Limited to 65 students. Required.
This course focuses on the design, development, and appropriateness of organizational systems, processes, and structures from a managerial perspective. Students will become familiar with alternative organizations, including hospitality organizations, through readings, case studies, and field experiences.

304 Rooms-Division Management
Fall, second 7 weeks only. 2 credits. Elective.
An introductory course concentrating on the fundamentals of rooms-division management. Areas of concentration include front-desk operations and the reservations, housekeeping, and telephone departments. Particular emphasis on selling strategies, forecasting, rate efficiencies, labor management, and guest relations.

305 Resort and Condominium Management
Fall. 3 credits. Not open to freshmen. Elective.
A lecture course in the operation of resort hotels and condominiums. Resorts of various types, seasons, and economic levels are considered. Emphasis is on the promotion of business, the provision of facilities, services, and guest entertainment. Contract and noncontract relationships with the travel industry are reviewed. Terminology, rental-pool agreements, S.E.C. regulations, state statutory requirements, developer-management-owner contracts, and relationships in condominiums are reviewed. Tax implications of both condominium ownership and management are fully considered.

306 Franchising in the Hospitality Industry
Spring, weeks 1–7. 2 credits. Prerequisite: H Adm 226. Elective.
Relationships between franchisor and franchisee, advantages and disadvantages of franchising, structure and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry.

402 Hospitality Management Seminar
Fall. 1 credit. Limited to 20 seniors and graduate students. Elective.
A weekly meeting with the H Adm 102 speaker of the week. The subject matter varies from week to week, depending on the area of expertise of the speaker. The class is relatively unstructured, and students are expected to ask questions and enter into discussion.

403 Integrative Senior Requirement
Fall or spring. Required.
The integrative senior requirement ensures that hotel school students have an interdisciplinary overview of hospitality-industry operations prior to graduation. Courses 404, 405, 406, 407, 431, and 503 provide this overview, and any one of them will satisfy the course requirement. The credit earned by the student is the credit assigned to the course selected.

404 Management Organization of the Small Business
Fall or spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H Adm 325 or equivalent. Elective.
The course focuses on the entrepreneur and the decisions made in planning, financing, developing, and operating a new business venture. Case studies and guest speakers will be used. There will be one major term project, which will require the application of the course material to a field consulting project that will result in written and oral reports to the owner of the business and the Small Business Administration.

405 Management Planning for the Hospitality Industry
Spring. 3 credits. Limited to 25 hotel school students. Prerequisites: all required undergraduate courses at the 100, 200, and 300 levels. Elective.
The course adopts a managerial perspective to examine the concept of strategic management, including the determination, formulation, implementation, and evaluation of strategic management in the hospitality industry at both the corporate and business-unit level. Class discussion is encouraged.

406 Integrated Studies in the Hospitality Industry
Fall or spring. 3 credits. Limited to 18 seniors and graduate students. Elective.
Analysis of case studies involving issues of business strategy, human relations, administration, marketing, and finance. Students will apply course principles through participation in a management simulation exercise. Student groups will make presentations to guest critics.

407 Seminar in Hotel Operations
Spring. 2 credits. Limited to 30 seniors and graduate students. Estimated cost of field trip, $100. Elective.
Management theory and practice of hotel operations. How to inquire carefully into real hotel situations will be a major focus of this course. Students will be actively involved in writing and discussing cases on current operations issues.

408 Casino Management
Fall and spring, weeks 1–7. 2 credits. Limited to 50 students. Prerequisite: H Adm 325, 725, or permission of instructor. Estimated cost of field trip, $150. Elective.
Topics include the importance of casino operations with a casino hotel and the communication network between the casino and all other departments of the hotel. A field trip to an Atlantic City casino is required.

409 Airline Management
Spring. 3 credits. Limited to 25 students. Prerequisites: H Adm 211 and 212 or written permission of instructor. Fulfills integrative senior requirement. Elective.
This course focuses on the airline industry and explores both pre- and post-regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include business organization, comparative corporate strategies, marketing and distribution networks, operation and service management, union relations, finance, government regulation, and air transport. Case studies will be used and guest lecturers will provide additional insights into the dynamics of airline management. Using the computer-based management simulation called AIRLINE, student teams will manage a regional carrier.

501 Creative Management for Organizational Change
Spring. 3 credits. Limited to 24 students. Elective.
Through lectures, exercises, and group problem-solving sessions participants will analyze the characteristics of creative people and organizations, obtain an inventory of their own creative ability, examine blocks to creativity and ways to overcome them, discuss methods for leading creative problem-solving meetings, analyze strategies for producing organizational change, and apply creativity techniques to actual work problems.

503 International Management
Spring. 3 credits. Limited to seniors and graduate students. Prerequisites: H Adm 303, 165, 225, 325, or M.P.S. status. Fulfills the integrative senior requirement. Elective.
The course recognizes the globalization of the industry and the importance of international management for those pursuing careers with major companies. It includes a broad overview of key environmental and cultural factors in international management; cross-cultural communication; historical, social, and ethical differences in management; labor supply issues; and issues related to expatriate management. The course format is case studies, discussions, lectures, simulations, and guest speakers.

601 Management Intern Program I—Operations
Fall, spring, or summer. 6 credits. Must be taken in conjunction with H Adm 602. Independent research. Elective.

602 Management Intern Program II—Academic
Fall, spring, or summer. 6 credits. Must be taken in conjunction with H Adm 601. Independent research. Elective.

603 Hotel Ezra Cornell
Fall or spring. Variable credit (maximum, 3). Prerequisite: written permission. Independent research. Elective.
Elected board members of Hotel Ezra Cornell may receive credit for developing, organizing, and managing the April "hotel-for-a-day" event.

705 Business Policy
Spring. 3 credits. M.P.S. requirement.
The integration and application of management concepts, theories, and practices to actual business situations. The course focuses on strategic planning and on strategy and policy implementation in the hotel and restaurant industry.

HUMAN-RESOURCES MANAGEMENT COURSES

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school registrar in room 178 Statler Hall, telephone 255-3739.

210 The Management of Human Resources
Fall or spring. 3 credits. Limited to 100 non-hotel school students, no freshmen. Elective.
The course examines the role of human-resources management in organizations, starting with an introduction to the personnel function and an analysis of the social, legal, international, and competitive factors influencing HRM. The course examines the selection process, training, motivation, development, compensation, performance appraisal, and labor relations. It assumes a managerial perspective and emphasizes class discussion and case analysis.

211 Human-Resources Management
Fall and spring. 3 credits. Limited to 100 hotel school students, no freshmen or graduate students. Prerequisite: H Adm 103, H Adm 191 preferred. Required.
An introductory study of the human-resources management function, with an emphasis on issues and applications within the hospitality industry. How organizations plan, staff, train, develop, and motivate employees to use their human resources more effectively.

212 Human-Relations Skills
Fall or spring. 3 credits. Limited to 100 students, no freshmen. Prerequisite: H Adm 100 or 103, or by permission of instructor. Lab fee, $15. Required.
Discussion and practice of human-relations skills necessary for managing people. Topics include supervising, motivating, and counseling employees; leading effective meetings; conducting creative problem-solving sessions; and time and stress management. Analysis of individual leadership skills and interpersonal and intergroup process skills will be emphasized.

313 Training in the Hospitality Industry
Spring. 3 credits. Limited to 24 students. Prerequisite: H Adm 211. Elective.
Training is a fundamental responsibility of hospitality managers and a primary solution to human-resource management problems. The training function within the hospitality industry will be analyzed, and a training and employee development model will be presented. Related subjects such as learning theories, task analysis, the writing of objectives, training methods, and program evaluation will be covered at both the conceptual and experiential levels. Students will gain experience designing and implementing a training program for a hospitality organization.

414 Organizational Behavior and Small-Group Processes
Fall or spring. 3 credits. Limited to 30 hotel school juniors, seniors, and graduate students by written permission of the instructor. Elective.
Applications of organizational behavior principles will be explored through lectures, case studies, and management games and exercises. Students will participate in experiential laboratories aimed at enhancing their effectiveness as members or leaders of groups. Topics that will be studied include leadership, decision making, motivation, power, and organizational change.

416 Special Studies in the Management of Human Resources
Fall or spring. 3 credits. Limited to seniors and graduate students, and others with permission of instructor. Prerequisite: H Adm 211. Elective.
This course surveys broad, comprehensive human-resources management policy areas (employee relations, staffing, reward systems, and work-system design) from the strategic perspective of the general manager. Case studies and industry guest speakers are utilized. In addition to diagnosing and formulating strategic management-action plans, current trends, essential competencies, and related research developments are examined.

511 Current Problems in the Management-Labor Relationship
Fall. 2 credits. Limited to juniors, seniors, and graduate students. Elective.
A seminar course addressing issues affecting industry in general, but with particular emphasis on the service industry. Topics range from wage systems to sexual harassment. The course is for undergraduate students with management career goals who wish to understand the issues facing management in a constantly changing work force and environment.

512 Managing Organizational Change and Productivity
Fall or spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective.
The critical issue facing managers today is how to cope with the endless barrage of socio-technological changes that confront them daily. Effective leaders must be able to plan and implement strategies that will enable changes to be realized in organizational development processes. This course will emphasize managerial and consulting techniques to identify and bring about changes in organizations and will provide hands-on practice in the design of an improvement program as a mechanism for organizational development.

711 Negotiations in the Service Industry
Fall or spring. 3 credits. Limited to 40 juniors, seniors, and graduate students. Elective.
The course examines the roles of managers as negotiators, both within the organization and for the organization. There will be discussion of planning and preparations, tactics, strategies, trends, power, timing, persuasion, the win-win concept, and developing alternatives. Cases are used and there will be opportunity for participation in both individual and team negotiations.

718 Advanced Human-Resources Management
Fall. 3 credits. Limited to hotel school graduate students, and non-hotel school graduate students as space permits by permission of instructor. Prerequisite: H Adm 211, an I/O psychology course, or equivalent. Required.
Managers will learn to understand the complexity of their organization's circumstances, to diagnose the contemporary situation, and to accurately anticipate consequences of managerial action. It examines human-resource management policy areas (planning, labor/employee relations, managerial effectiveness, reward systems, and employee development) from the general manager's perspective within the hospitality/service industry. Besides formulating integrated strategic action plans, current trends, essential competencies, and related research developments will be discussed.

FINANCIAL MANAGEMENT COURSES

120 Survey of Financial Management
Fall or spring. 2 credits. Limited to non-hotel school students. Elective.
A survey of accounting principles; organization of corporations; financial statement analysis and an introduction to managerial decision-making techniques. Emphasis is on analysis and decision making.

123 Financial Accounting Principles
Fall or spring. 3 credits. Limited to non-hotel school students. Elective.
An introduction to the basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

125 Finance
Fall or spring. 3 credits. Limited to non-hotel school students. Prerequisite: H Adm 123. Elective.
The course examines fundamental concepts and techniques related to business finance, such as financial statement analysis, time value of money, financial markets, risk, valuation, cost of capital, and capital budgeting.

225 Financial Accounting
Fall. 3 credits. Limited to hotel school students. Required.
The basic principles of accounting, including transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

226 Financial Management
Spring. 4 credits. Limited to hotel school undergraduates. Limited to 50 students per lab. Prerequisite: H Adm 225 or equivalent. Required.
The course facilitates a broad understanding of both managerial accounting and finance. The overall objective is to develop skill in using accounting information for managerial planning, control, and evaluation and to learn to incorporate accounting knowledge into a framework for short-term and long-term financial decision making. Topics include budgeting, current asset management, short- and long-term financing, capital structure, capital budgeting, cost of capital, and specific applications of all topics to issues in the financial structure of the hospitality industry.

321 Hospitality Management Contracts
Spring, last 7 weeks. 1 credit. Elective.
The negotiation and administration of hospitality management contracts are discussed with emphasis on contract concerns of owners, operators, and lenders; financial assessment of owner and operator returns; development of negotiation strategies; and alternative forms of operating agreements.

322 Investment Management
Fall or spring. 2 credits. Limited to juniors, seniors, and graduate students. Elective.
The course covers institutional and analytical aspects of security analysis and investment management: securities markets, sources of investment information, bonds and stocks valuation, risk-return analysis, behavior of security prices, portfolio analysis, and portfolio management. The course also covers the capital asset pricing theory, the generic stock investment strategy, the screen-to-profile approach, ranked order analysis, and their practical implications for security analysis and investment management. Computer-assisted analysis is discussed and applied in a realistic manner, using large databases and interactive screening computer packages. No previous knowledge of computers is required. Students participate in an investment game in which they select and manage large portfolios under real-life conditions.

323 Hospitality Real-Estate Finance
Spring. 3 credits. Prerequisite: H Adm 325 or equivalent. Elective.
Methods of analyzing real-estate returns for both owners and lenders and various equity and debt structures, to include: joint ventures; limited partnerships; syndications; construction mortgages; "permanent" debt financing vehicles, to include participating, convertible, seller-financial, and government-assisted loans and mortgages; work-out strategies for distressed properties; and analysis of various forms of operating agreements, to include management contracts, leases, franchises, and referral agreements. Presentations by hospitality-industry real estate practitioners tie course material to current industry practices.

325 Hospitality Financial Management
Fall. 3 credits. Required.
The course integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretive and analytical skills of each to hospitality-industry situations. Specific topics include uniform system of accounts, revenue and expense tracking and internal control, accounting systems, ratio and comparative analysis, capital budgeting decision making, equity and debt-financing structures, and operating agreement forms. Students analyze hospitality operations and projects using the above techniques and present their findings in management report form.

326 Corporate Finance
Fall. 3 credits. Limited to juniors and seniors. Prerequisite: H Adm 222 or equivalent. Elective (concentration requirement).
In-depth analysis of corporate financial management, including working capital strategy, cash management, marketable security management, inventory management, short-term financing, cost of capital calculation, capital budgeting decisions, and risk analysis, as well as special topics in finance. All course material and outside readings will relate the above topics to specific problems, issues, and solutions applicable to the hospitality industry.

328 Advanced Hospitality Managerial Accounting
Spring. 3 credits. Prerequisite: H Adm 225 and 226 or equivalent. Elective.
Emphasis is on the use of accounting information for managerial planning, control, analysis, and evaluation. Included are the principles of managerial accounting, cost allocation, management control, models for decision making, and the special topics of joint products and by-products, transfer pricing, responsibility accounting, and performance measurement. The course explores the application of managerial accounting concepts to the hospitality industry. Case studies are used.

421 Internal Control in Hotels
Spring. 2 credits. Limited to 30 juniors, seniors, graduate students, and others who have permission of the instructor. Prerequisite: H Adm 325 or 725, or equivalent. Elective.
Discussion of problems encountered in distributing the accounting and clerical work in hotels and restaurants so as to provide a good system of internal control. Study of many actual cases of the failure of internal control and the analysis of the causes of the failure. Practical problems and actual techniques of functioning systems of internal control are examined.

422 Taxation and Management Decisions
Fall. 3 credits. Limited to 50 juniors, seniors, and graduate students. Elective.
An introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and Subchapter S corporations; financial-information reporting to tax authorities and shareholders and how they differ; use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investment and development.

522 Hospitality Revenue Management
Fall. 3 credits. Limited graduate students, and seniors by permission of professor. Prerequisite: background in economics, marketing, or finance. Elective.
The course covers new techniques in hotel and restaurant pricing policies, including pricing theory as applied to the service industry, the ideal pricing system, the concept of revenue management, implementing revenue management, the diagnostic system, the cost and demand sides, the simultaneous solution, multipricing systems, market segmentation, product differentiation, price discrimination, feedback mechanisms, and update and control. New computer programs for revenue and yield management will be critically evaluated.

523 Financial Management Policy
Fall and spring. 3 credits. Limited to seniors and graduate students. Prerequisites: H Adm 326, 726, or equivalent. Elective.
Topics of interest to the financial policy maker are discussed and analyzed, including issues facing financial decision makers that often have no simple answer. Topics include working capital policy, the capital structure decisions in a dynamic framework, debt capacity, lease vs. buy analysis, dividend and retention decisions, project feasibility assessment, the owner/operation decision and agency relationship, public/private decisions and market timing, restructuring in the hospitality industry, and creative financing techniques.

524 Short-Term Asset Management
Spring. 3 credits. Limited to juniors, seniors, and M.P.S. students. Prerequisite: H Adm 191, 325, or permission of instructor. Elective.
Concepts and techniques relevant to short-term decision making are emphasized. Topics include cost concentration and disbursement systems, cash forecasting and budgeting, liquidity, accounts receivable and inventory management, hedging interest rates and exchange risks, trade credit, and international working-capital management.

724 Analysis and Interpretation of Financial Statements
Fall. 3 credits. Limited to seniors and M.P.S. students. Elective.
The course covers the financial accounting issues that are encountered in reporting the results of operations for corporate enterprises. Accounting principles as well as future extensions are explored and discussed. Emphasis is on the components of financial statements, how and why they are reported, and their impact on the overall financial position of the firm and its acceptance in capital markets. The underlying objective of the financial statement expertise is to analyze a firm as a whole and interpret that analysis. Emphasis is on both outsiders' views of the company and decision making through interpretation of the statements.

725 Graduate Managerial Accounting in the Hospitality Industry
Fall. 3 credits. M.P.S. requirement.
Hotel and restaurant accounting systems that provide decision-making information to management are reviewed. Methods of operational analysis for hospitality properties are evaluated and utilized to include ratio, comparative, and cost-volume-profit analyses. Other topics include internal control, operational budgeting, and the use of feasibility studies in long-term capital-budgeting decisions. The student's ability to effectively communicate analytical results will be demonstrated.

726 Graduate Corporate Finance
Spring. 3 credits. Limited to graduate students. Prerequisite: H Adm 726. Recommended: knowledge of algebraic techniques and elementary statistics (students who have not recently had a statistics course are urged to study review books in mathematics and elementary statistics). M.P.S. requirement.
An introduction to the principles and practices of business finance, including the development of theory and its application in real-life projects. Topics include risk analysis, valuation concepts, capital budgeting, cost of capital, capital structure, dividend policy, long-term financing, financial planning, short- and intermediate-term financial management, and mergers and consolidations. Computer-assisted decision support models are applied in a realistic manner using interactive packages. The course assumes knowledge of quantitative techniques and basic statistics.

[729 Hospitality Investments and Portfolio Management
Fall. 3 credits. Limited to graduate students and a limited number of undergraduates with written permission of instructor. Prerequisite: a background in economics and marketing or finance. Not offered 1990–91. Elective.
New techniques in hotel and restaurant pricing policies, which include pricing theory as applied to the service industry, the ideal pricing system, and the concept of revenue management. Also included is the implementation of revenue management: the diagnostic system, the cost side, the demand side, the simultaneous solution, multi-pricing systems, market segmentation, product differentiation, price discrimination, the feedback mechanism, and update and control. New computer programs for revenue and yield management will be critically evaluated.]

FOOD AND BEVERAGE MANAGEMENT COURSES

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school registrar in room 178 Statler Hall, telephone 255-3739.

136 Food and Beverage Management
Fall or spring. 4 credits. Limited to hotel school students. Required.
An introduction to the principles of food and beverage management, beginning with an overview of the food-service industry at large. Attention is focused on major industry segments, business practices, and trends. Subsequently, detailed consideration is given to the components of the food-service system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout.

[234 Food and Beverage Control
Fall or spring. 2 credits. Limited to hotel school students. Not offered 1990–91. Elective.
This course is designed to acquaint students with the theory and techniques of controlling food, beverage, and related labor costs in hotels and restaurants. The emphasis is on the duties and responsibilities of the food and beverage controller, analyst, and/or manager. Case studies and typical industry situations supplement required projects.]

236 Culinary Theory and Practice
Fall or spring. 4 credits. Prerequisite: H Adm 136 or permission of instructor. Required.
This course is designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety and sanitation. Students will prepare recipes, menus, and production schedules. Students will develop the ability to recognize properly prepared foods through preparing, tasting, and evaluating foods. They will also develop an awareness of potential production problems and how to troubleshoot them.

335 Restaurant Management
Fall or spring. 4 credits. Limited to hotel school students. Prerequisites: H Adm 136 and 236. Approximate cost of utensils and manual, $60. Required.
A restaurant-management course in which each student participates as a manager of an upscale, full-service restaurant operation. Lectures cover topics related to the general management of restaurants, including issues in defining a service philosophy, improving profit margins, securing adequate labor supplies, identifying target markets, and planning for organization growth. Many aspects of production and service in an upscale setting will be experienced, discussed, and demonstrated. The laboratory is based on a hands-on managerial component, from which students become familiar with the various requirements for success of each of the line positions in a restaurant. A significant responsibility of each student is the preparation of a planning and summary report.

336 Principles of Nutrition
Fall. 3 credits. Prerequisites: H Adm 136 and 236, or permission of instructor. Field trip, $40. Elective.
Designed especially for students interested in planning menus to meet the nutritional needs of the dining public. Students learn how to market healthful foods and study computer nutrient data bases, nutrition labeling, truth in menus, special diets, fad diets, and the current and future nutritional needs of the population. Discussions include how to counteract the public's misconceptions and myths. Laboratory sessions emphasize creative production of high-quality, nutritious, safe food.

337 The Composition and Properties of Food
Fall. 4 credits. Prerequisite: H Adm 236. Elective.
A study of the chemical and microbial properties of raw and cooked foods used and served in the food-service industry. Lectures cover the chemistry of water, carbohydrates, fats, and proteins in relation to food groups. Labs provide the opportunity to produce menu items and to relate food-production techniques to material presented during lectures. Emphasis is placed on development of the student's sensitivity to flavor, texture, aroma, and appearance, and on awareness of food safety.

338 Health and Fitness in the Resort Hotel and Spa Industry
Spring. 3 credits. Limited to 45 juniors, seniors, and graduate students. Field trip, $40. A previous course in nutrition, health, or related field is helpful but not required. Elective.
Especially designed for students who are interested in the fitness and nutrition trend in restaurants, resorts, and hotels. Nutritious menu design and the design of fitness programs, equipment, and facilities will be emphasized. Personnel required and legal, medical, and managerial implications will be discussed. Guest speakers from various spas, wellness centers, and fitness centers will be included. Assessing personal fitness levels is included.

339 Airline Food-Service Management
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Field trip, $50. Elective.
Airline food service, unique in the food and beverage industry, involves a thorough knowledge of the airline industry and depends on the state of the economy, the financial success of the airline industry, and economies of scale. Students study the planning of airline meals, their production by vendors, their distribution by specialized companies, and their assembly and delivery by caterers. A field trip to an airline's hub city enables students to visit flight kitchens, vendors, airline representatives and distributors. Guest speakers representing various sectors of the industry (airline food and beverage managers, airline marketing personnel, entrepreneurs who provide goods and services, and in-flight catering executives) are included.

430 Introduction to Wine and Spirits
Fall or spring. 2 credits. Limited to hotel school juniors, seniors, and graduate students, and seniors and graduate students in all other colleges. All students, except those in the hotel school, must be 21 years old. S-U grades only. Elective.
An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wines, spirits, and beers at retail outlets and in a restaurant setting. Lecture topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

(Preregistered students who do not attend the first class and fail to notify the course secretary of their absence are automatically dropped from the instructors' records. The student must then follow the normal drop procedure in his or her school.)

431 Seminar in Independent Restaurant Operations Management
Fall or spring. 3 credits. Limited to 12 students. Prerequisite: written permission of instructor. Five field trips required; maximum total cost, $250. Elective.
The course is designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Under the supervision of the instructor, and utilizing student-developed case studies, the students visit and analyze various independently owned restaurant operations. Analysis covers, but is not limited to, the restaurant's concept (market), organization, ownership, management, physical structure, staff, front- and back-of-the-house operations, and fiscal integrity. Readings relevant to current topics in the restaurant industry are required. Classes alternate weekly between field trips and seminar/case presentations.

433 Food-Service Management in Business, Industry, and Health Care Facilities
Spring, weeks 1–7. 2 credits. Limited to 25 juniors, seniors, and graduate students. Prerequisites: H Adm 136 and 236. Field trip, $150. Elective.
This course is designed to explore and analyze the food-service management in business, industry, and health-care facilities, e.g., office/industrial complexes, educational institutions, contract companies, and hospital and extended-care facilities. Characteristics of food-service organization structures, job descriptions, controls, systems design, equipment, and government/legal regulations will be presented. Course work involves readings, small investigative projects, discussions, local site visits, and a field trip.

434 Desserts Merchandising
Spring. 3 credits. Prerequisite: H Adm 236. Elective.
A hands-on course providing exposure to a variety of breads, pastries, cakes, and other desserts. Students develop production skills and an appreciation of quality and, by the end of the course, should be able to estimate the resources and time required for producing a particular recipe.

435 Selection, Procurement, and Supply Management
Spring. 3 credits. Limited to hotel school students. Prerequisite: H Adm 136 or 731. Elective.
This course assists students in developing and applying concepts of purchasing and supply management using the hotel and restaurant industries as models to understand the impact that this logistical support system has upon the long-term success of those businesses. Through lectures, discussions, and guest speakers, students are exposed to contemporary, and challenged by future, management practices and strategies used by this system. Additionally, the laboratory enables students to work with the major commodity food groups and become familiar with the market forms, quality ranges, yield, and cost considerations of those products.

436 Beverage Management
Fall or spring. 2 credits. Limited to 30 hotel school students. Prerequisite: H Adm 430. Elective (concentration requirement).
This course is designed for upper-class students who intend to pursue food and beverage as a career. The course deals specifically with the management of beverage operations. Lectures develop skills in and awareness of Dram shop; staff training and responsible customer service; beverage pricing; food and wine pairings; wine-list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lecturers highlight industry trends and outlooks.

437 Seminar in Culture and Cuisines
Fall. 3 credits. Limited to 20 students. Prerequisite: H Adm 236. Elective.
This seminar explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons and draw relationships among the food ways of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

[530 The Restaurant in Society
3 credits. Not offered 1990–91. Elective.
This seminar-based course looks at the restaurant from a broad social perspective. Topics include the historical development of the restaurant; cultural, social, and psychological factors affecting the customer and server; the social world of the restaurant; and the place of the restaurant in contemporary society. Relevant implications for both management and consumer are also discussed. Students undertake research projects as part of their participation in the course.]

[532 Seminar in Chain-Restaurant Operations Management
3 credits. Prerequisite: H Adm 136 or permission of instructor. Not offered 1990–91. Additional cost for field trips. Elective.
Chain restaurants account for 40 percent of food-service industry sales and 50 percent of customer traffic. After reviewing the history and development of chain restaurants, the course concentrates on service and operations-management issues. Strategies of marketing, expansion, and diversification are discussed. Chains from different industry segments are compared. Topics include corporate versus unit-level priorities and responsibilities, marketing, site selection, menu planning, product development, production planning, facility and equipment design, and recruitment and training. Students conduct research on individual chains and report back to the class.]

533 Current Issues in Food Safety and Sanitation
Spring. 3 credits. Prerequisite: H Adm 136, 236, or permission of instructor. Elective.
A study of current issues in food safety and sanitation procedures and regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis; legal responsibilities related to food, food handlers, and equipment and facilities; food-borne illness and other public-health concerns; and certification and training. Preparation for NIFI/NRA certification and the Food Protection (ETS) certification exam is offered with this course. The exam is optional.

534 Specialty Food and Beverage Operations: Guest Chefs
Fall or spring. 3 credits. Prerequisite: H Adm 335 or 732. Elective.
The course is designed for students with a strong food and beverage orientation, especially students considering careers in the hotel food and beverage environment, or those who anticipate interacting with current culinary trends. Working in groups, students market, organize, plan, produce, serve, and prepare the financial analysis and accounting relative to four guest chef specialty production nights, and with the chef they produce a dinner at the Statler Hotel.

535 Catering Management
Fall. 3 credits. Limited to 25 students. Prerequisite: H Adm 335 or permission of instructor. Elective.
The catering industry is among the fastest growing segments of the hospitality industry. This course examines on- and off-premise catering for business and social functions, as well as sports events and office catering. Topics include the organizational structure of catering operations; legal aspects of catering businesses; menu design for special functions and its operational implications; marketing from a caterer's perspective; function planning and management; staff recruitment, training, and supervision; and post-event analysis.

538 Gastronomy: Understanding Food-and-Wine-Pairing Principles
Spring. 2 credits. Limited to 20 hotel school students. Prerequisites: H Adm 430 and 436 (436 may be taken concurrently). Elective.
The course is specifically designed for students entering the food and beverage industry. Through tastings, students learn the principles of pairing wine with food and how to market the concept through wine-list development, on-premise merchandising, promotional events, and staff training. Students are required to design, organize, and present wine and food tastings that are attended by industry guests. Other topics include wine and health, current and pending legislation regarding the sale and consumption of wine, and varietal characteristics of wines produced around the world.

731 Graduate Food and Beverage Management
Fall. 3 credits. Limited to hotel school graduate students. Estimated cost of field trip, $150. M.P.S. requirement.
The course focuses on the technical, managerial, and human-resources skills needed to be successful in food-service management. Topics such as market analysis, concept development, menu planning, operations management, and marketing are addressed in a seminar format. Current and future issues affecting the food-service industry are addressed.

732 Graduate Restaurant Management
Spring. 3 credits. Limited to hotel school students. Prerequisite: H Adm 731. Estimated expense for clothing and utensils, $95. M.P.S. requirement.
A food and beverage management course in which the class operates an upscale restaurant. The production lab allows students to rotate through the various line positions of a restaurant operation. In turn, each student serves as the manager with responsibilities for menu planning, marketing, pricing, staffing, forecasting, and profit-and-loss analysis. In-depth discussions of management issues related to restaurant operation occur during the lectures/seminars.

MARKETING AND TOURISM

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school registrar in room 178 Statler Hall, telephone 255-3739.

243 Principles of Marketing
Fall or spring. 3 credits. Not open to freshmen. Required.
This course is intended to provide the undergraduate hotel administration student with an overview of the discipline of marketing as it applies to the hospitality industry. The primary aim is to understand how a marketing strategy is devised, especially the interrelationship of company objectives, internal resources, and the external operating environment. A second aim is to show how the special nature of services affects the development of marketing strategies in the hospitality industry.

244 Tourism I
Fall. 3 credits. Not open to freshmen. Elective.
An introductory course in the study of tourism. The origins and evolution of contemporary tourism are carefully examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass-volume tourist demand on destination development are explored through the use of selected limited case studies. A series of guest lectures by well-known experts from the travel industry highlight the economic operations and effects of tourism in both the public and private sectors.

245 Hotel Sales Management
Fall and spring. 2 credits. Elective.
The course emphasizes understanding and managing the sales function in hotels and is taught from the perspective of a director of sales. Topics include market-plan development, sales strategies, customer purchase behavior, allocation of resources, and evaluation of results. The course is normally taught by representatives of major hotel companies.

441 Advertising Strategies
Spring, weeks 1–7. 3 credits. Limited to 50 seniors and graduate students. Prerequisites: 3 credits each of psychology and marketing, or permission of instructor. Elective.
The development of effective advertising strategies for consumer goods and hospitality services. Lectures focus on principles drawn from psychology, communication theory, and marketing.

444 Tourism II
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: H Adm 244 plus six credits in economics and/or marketing, or equivalents, or written permission of instructor. Elective.
An advanced course in the study of tourism. Emphasis is placed on the development of the tourism industrial base and development and financing of superstructure and infrastructure. Econometric model development for demand predictions are examined and analyzed. Students are expected to engage in a wide range of discussion and analysis of the effects of tourism on various environments in social and economic terms. Case studies of various tourism-generating areas are used. Occasional guest lectures are given by experts in both public and private sectors.

449 International Marketing
Fall. 3 credits. Prerequisites: H Adm 281 and 282. Elective.
This course develops students' understanding of international marketing with emphasis on hospitality-industry applications. It focuses on (1) the similarities and differences that exist between domestic and international marketing and (2) the conduct of international marketing in various segments of the world.

541 Marketing Communication Strategy
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a previous marketing course. Elective.
Students learn about the key variables in marketing communication and their proper application in situation analysis; determination of objectives and budgets; analysis of media resources; message creation; and organization, coordination, and evaluation of the promotional program. The course uses text material, case studies, readings, lectures, and key speakers. Upon completion of the course the student should be able to develop, organize, and produce a credible promotion strategy and plan of action.

542 Marketing Communication Media
Spring. 3 credits. Elective.
The management of external communication programs for firms in the hospitality industry. Topics include advertising, public relations, sales promotion, direct mail, and telemarketing.

543 Marketing Research
Fall. 3 credits. Limited to 35 students. Limited to hotel school graduate students. Prerequisites: previous marketing course and 3 credits of statistics or H Adm 791. Elective.
The purchase and use of marketing research in the hospitality industry. The emphasis is on the management of the process rather than technical aspects of research methodology. Students have extensive opportunity to critique methodology, analyze data, present results, and make management recommendations.

544 Services Marketing
Spring. 3 credits. Limited to graduate students. Prerequisite: a previous marketing course. Elective.
Marketing principles applicable across the entire service sector. The marketing strategies of many service-industry firms are evaluated . New marketing approaches uniquely applicable to services are considered, as well as the reformulation of traditional principles from consumer- and industrial-goods marketing.

545 Services Marketing in the Hospitality Industry
Fall. 3 credits. Limited to hotel school students. Prerequisite: a marketing course. Elective.
This course translates the growing body of knowledge in services marketing to the development of effective management and marketing strategies for hospitality firms in competitive environments. Application of principles are emphasized through cases and a major project.

546 Marketing Planning for Hotels
Fall. 3 credits. Prerequisite: H Adm 243. Elective.
Students learn about the key variables in marketing planning and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, and action plans. The course uses text material, cases, relevant articles, lectures, and key speakers, and students learn to design and develop a comprehensive, targeted, and action-oriented marketing plan.

548 Marketing Practices in the Casino Industry
Fall. 2 credits. Limited to 25 juniors, seniors, and graduate students. Prerequisite: H Adm 243. Field trip, $150. Elective.
An overview of the history and scope of casino marketing practices and the behavior patterns of casino players. All market segments are analyzed to determine specific marketing mixes, and appropriate strategies for individual casinos will be evaluated. During a field trip to Atlantic City students analyze the market and determine each hotel's market position. Students research an assigned casino to formulate data for a marketing plan.

741 Graduate Marketing Management
Fall. 3 credits. M.P.S. requirement.
The management of the corporate marketing function, with emphasis on firms in the hospitality industry. The emphasis is on developing students' organizational, analytical, and decision-making capabilities through involvement in case experiences. No prior marketing knowledge is assumed.

742 Strategic Market Planning in the Hospitality Industry
Spring. 3 credits. Elective.
The application of strategic management concepts and principles to marketing in the hospitality industry through lectures, discussions, and the development of case studies.

PROPERTIES MANAGEMENT COURSES

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school register in room 178 Statler Hall, telephone 255-3739.

255 Hospitality-Facilities Development and Planning
Spring. 3 credits. Required.
Through lectures and labs, the course presents an introduction to and management overview of the problems and opportunities inherent in the development, planning, and construction of hospitality facilities. Course components include the project-development sequence; conceptual and space planning; architectural, engineering, and construction criteria; the interpretation of architectural and consultant drawings; and the construction process. The emphasis is on setting appropriate requirements, understanding industry practice, and implementing decisions within a balanced design, operations, and financial framework.

256 Insurance and Risk Management
Fall and spring. 3 credits. Elective.
A comprehensive look at risk management within a general business or institutional environment. Topics to be reviewed include the risk-management process; the role of loss-exposure identification; loss-control options, including insurance and non-insurance solutions; and the general legal environment that creates a potential for loss. Students will analyze and discuss business situations from a risk-management viewpoint.

350 Principles of Real Estate
Fall and spring. 3 credits. Elective.
This course approaches real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, to use real-estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real-estate investment, finance, and development.

351 Hospitality Facilities Design and Analysis
Fall. 3 credits. Prerequisite: H Adm 255 or 751 or permission of instructor. Elective (concentration requirement).
A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of restaurant and hotel plans. Students learn basic graphics techniques and apply them to planning problems for hospitality facilities.

352 Hotel Planning and Interior Design
Spring. 3 credits. Prerequisite: H Adm 351. Minimum cost of required field trip, $200. Elective.
A project course concerned with hotel planning, interior design, and renovation. Students establish the operator's criteria for the design of hotel guest rooms and public areas, prepare budgets, and develop preliminary conceptual designs leading to a substantial graphic presentation at the end of the term. Drawing ability is essential.

353 Introductory Food-Service Facilities Design
Spring. 3 credits. Limited to 15 students. Prerequisites: H Adm 351 and 335 for undergraduate students, H Adm 732 for graduate students; coregistration in H Adm 335 or 732 is acceptable; all others by written permission of instructor. Elective.
The course reviews basic concepts of food-service facilities design and planning, including space allocation, work flow, and equipment selection. In lectures and labs students plan, design, prepare drawings, and write specifications for a medium-size restaurant kitchen.

355 Hospitality Facilities Construction and Operation
Fall. 3 credits. Required.
An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering and maintenance departments. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations are considered.

356 Hospitality Risk Management
Spring. 3 credits. Elective.
The identification and management of risk associated with fire, security, and safety problems. Topics include design, equipment, staffing, employee training, emergency preparedness, and basic elements of insurance coverage.

358 Hospitality-Industry Real Estate
Spring. 3 credits. Prerequisite: H Adm 350. Elective.
The role of real estate as a factor in the production of income of hospitality businesses and the importance of real-estate asset management in increasing hospitality-corporation shareholder wealth are discussed and analyzed. The process of real-estate valuation and current issues in the valuation of hospitality properties are examined.

451 Seminar in Properties Management
Fall. 1 credit. Elective (concentration requirement).
A course in which faculty, graduate students, and invited speakers present and discuss issues in facilities design, development, and operation.

453 Advanced Food-Service Facilities Planning and Design
Fall. 3 credits. Limited to 12 students. Prerequisite: H Adm 353. Elective.
The course reviews the application of basic concepts of food-service facilities design and planning for a hotel project. Emphasis is on preparing a program, developing equipment layouts, and making presentations to clients.

454 Restaurant Planning
Spring. 3 credits. Prerequisite: H Adm 355 or 751. Elective.
Development, design, and construction of restaurants. Topics include market analysis, site selection, menu development, space allocation, trade practices, regulations, equipment and furnishings, cost estimations, financial analysis, and management responsibilities.

456 Hospitality Facilities Management
Spring. 3 credits. Elective.
Management of the physical plant of hospitality buildings. Basic building-systems design and operation, physical-plant maintenance, planning, and budget development; and management of energy programs. Case studies of hospitality facilities.

457 Advanced Development and Construction
Fall. 3 credits. Prerequisite: H Adm 355 or 751. Elective.
The treatment of development as a process, as viewed from the perspective of the owner. Topics include feasibility-study analysis, budgeting, scheduling, construction administration, value engineering, and issues related to site zoning and codes.

751 Project Development and Construction
Fall. 3 credits. Minimum cost of field trip, $200. M.P.S. requirement.
The major elements of the project-development, hotel-planning, and construction process. Topics include the role of the development team, feasibility studies, functional planning and design, architectural and engineering criteria, construction contracts, project scheduling, interpretation of architectural drawings, and building construction. A group project is included and a field trip is required.

COMMUNICATION COURSES

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school registrar in room 178 Statler Hall, telephone 255-3739.

165 Managerial Communication: Writing Principles and Process
Fall or spring. 3 credits. Each lecture limited to 18 students. (Because of the strict class-size limitation, a student who chooses to drop this course should notify the instructor no later than the end of the first week of class so another student can fill the opening.) Must be completed in the student's first or second semester after registering in the hotel school or upon being sponsored by the hotel school to the Division of Unclassified Students. Required.
An introduction to written communication within a business context. Students learn how to conceive, plan, and develop those written materials that provide much of the information that people in business need to form judgments and make decisions. Focusing on the specific principles, needs, and responsibilities of business communication, the course introduces students to the writing process: analyzing, organizing, using research sources, developing substance, and writing in a clear, precise style. Students write a variety of reports requiring different analytical approaches.

266 Intermediate French: Le Francais de l'Hotellerie
Spring. 3 credits. Limited to 15 students. Admission priority given to students with a special interest in the hospitality industry. Prerequisite: French 123 or equivalent or written permission of instructor. Elective.
This course offers continuing study of the French language, in the context of business affairs, with specific emphasis on the hospitality industry. Material presented considers cultural, geographic, economic, historical, political, and social contexts within which the business functions. The course is conducted in French, emphasizing a conversational approach. Specialized situations and vocabulary are used in building general competence in practical usage.

267 Intermediate Spanish: Espanol de Hoteleria
Spring. 3 credits. Prerequisite: Spanish 123 or CPT 560 minimum. Elective.
An intermediate-level course designed for students interested in improving their proficiency in the language within the thematic context of the hospitality and restaurant industries. The course provides a solid background of essential vocabulary, practice of all skills, and a review of the cultural background of the Hispanic world.

364 Advanced Business Writing
Fall or spring. 2 credits. Limited to 15 juniors, seniors, and graduate students. Prerequisite for undergraduates: H Adm 165 or completion of student's freshman writing requirement. Elective.
This course focuses on the written communications that demand special persuasiveness and control of tone. Writing assignments will give students a chance to apply the theories of communication, semantics, and human relations covered in the course. The kinds of communications that will be analyzed, evaluated, and written include persuasive messages to subordinates and superiors in an organization; sales letters and other promotion materials; and negative messages such as refusals, rejections, and responses to complaints. A major topic is the planning and executing of a job-hunting campaign, for which students prepare résumés, letters of application, and follow-up messages adapted to their individual needs.

365 Managerial Communication: Principles and Practices
Fall or spring. 3 credits. Limited to 24 juniors and seniors per lecture. (Because of the strict class-size limitation, a student who chooses to drop this course should notify the instructor no later than the end of the first week of class so another student can fill the opening.) Prerequisite: H Adm 165 or completion of student's freshman writing requirement, or H Adm 212 or permission of instructor. Required.
A broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

562 Special Topics in Communication
Fall or spring. Variable (1–3) credits. Limited to juniors, seniors, and graduate students. Elective.
A "special topics" course, with the theme selected each semester on the basis of student and industry needs as well as faculty expertise. Most recent offering: "Intercultural Communication in Business" (3 credits). See school registrar or communication department's faculty coordinator for details about current topic.

761 Organizational Communication for Managers
Fall or spring. 3 credits. Limited to 15 graduate students; recommended for second- or third-semester M.P.S. students. Elective.
A course in organizational communication focusing on the complex interactions that occur when people communicate in organizations. Using business cases and examples, the course highlights the political, sociological, ethical, and psychological dimensions of business communication. Students analyze communication problems and barriers and design organizational strategies to communicate effectively, whether one-to-one, in small groups, or with larger audiences. Cases are linked with an application exercise that helps students perfect their abilities to write, give oral presentations, or interact effectively with others in a professional, managerial context.

[765 Effective Communication in Organizations: A Laboratory Approach
Fall and spring, alternately. 1 credit. Not offered 1990–91. Elective.
Students learn and practice the principles and skills of effective organizational communication. Through case studies, role plays, and simulations, students analyze communication situations and apply communication principles to workplace situations. Emphasis is on the identification and analysis of communication problems and the appropriate application of oral and written communication strategies in business environments.]

INFORMATION TECHNOLOGY COURSES

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school registrar in room 178 Statler Hall, telephone 255-3739.

170 Macintosh Tools
Spring. 3 credits. Limited to 25 students outside the hotel school. Elective.
An introduction to business information systems and computer tools. Students learn basic business computing concepts such as system integrity and the user interface. Finally, the course introduces the student to the personal computer, using electronic spreadsheet, graphics, and word-processing applications. Work is carried out on a Macintosh computer using Microsoft Word and Microsoft Excel.

171 Keyboarding on the Macintosh
Fall, spring, or summer. 2 credits. Limited to 25 students per section. Elective.
An introduction to the Macintosh computer and a beginning course in alphanumeric keyboarding. Students learn word-processing skills during the second half of the course.

174 Microcomputing
Fall. 3 credits. Limited to hotel school freshmen or others with permission of the instructors. Spring and summer. 3 credits. Open enrollment. Required.
An introduction to microcomputing to develop functional computer fluency. Students develop skills in five generic areas: text, graphics, spreadsheet, list, and communications processing. The course is entirely lab oriented and students work on Macintosh personal computers.

274 Hotel Computing Applications
Fall or spring. 3 credits. Prerequisite: H Adm 174 or equivalent. Elective.
An introduction to management information systems as they are currently used in the hospitality industry. Specific topics include property management systems, reservation systems, communication networks, database structures, point-of-sale systems, methods of system selection, and cost justification. Computer laboratories provide hands-on experience with systems widely used in the hospitality industry and help to develop IBM PC/DOS skills.

374 End-User Business Computing Tools
Fall or spring. 3 credits. Prerequisite: H Adm 174 or equivalent. Elective.
This course explores the personal computer as a managerial tool for the hospitality industry. Concepts of modeling, database, and end-user computing are covered. Students learn to use specific software applications programs to solve original problems. All work is done on the IBM PS2.

571 Analysis and Design of Information Systems
Fall. 3 credits. Limited to 15 students. Elective.
For students who may become involved with the analysis and design of computer-based information systems (CBIS). The course is intended to develop competence and confidence in the participants' ability to plan for CBIS, specify their functional design, manage a systems adoption project, deal with system vendors, and function as organizational consultants on CBIS. The course assumes an elementary working knowledge of management information systems and basic business. The course is pragmatic and requires participant teams to analyze and design (and possibly build and test) a software application system.

572 Development of Decision Support Systems
Spring. 3 credits. Prerequisite: H Adm 174 or equivalent. Elective.
The use of computer-based systems to assist human decision makers by supporting their information requirements. The design, implementation, and use of such systems is one of today's fastest growing areas within information systems. The course's perspective is one of design—effective design both requires and enhances understanding.

774 Information Systems for Hospitality Managers
Spring. 3 credits. Limited to 35 students. M.P.S. Requirement.
The physical and technical computing environments in a multi-unit hospitality corporation. Information systems are viewed from various perspectives, i.e., as data-processing systems, management information systems, and decision support systems. The role of information systems in a strategic planning framework is explored. Organizational and infrastructural issues that enhance or detract from system success are explained.

LAW COURSES

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school registrar in room 178 Statler Hall, telephone 255-3739.

283 Law of Securities Regulation
Fall, weeks 1–7. 1 credit. Elective.
For students interested in the financing of new or expanding hotel and restaurant businesses through the sale of stocks and bonds, and the obligations of publicly owned hospitality companies and their officers and directors. The course covers fundamental aspects of the federal securities laws as applicable to the hospitality industry. Problems are drawn from hotels, restaurants, and related businesses.

385 Law of Business I
Fall. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel school students with permission of instructor. Elective.
This course is designed to enable the student to acquire a basic understanding of law and legal relationships in a business context. A variety of subjects are covered, all intended to aid a person in making decisions as an executive charged with managerial responsibilities.

387 Business and Hospitality Law
Fall or spring. 3 credits. Limited to juniors, seniors, and graduate students. Required.
An integrated chronological presentation of contract, agency, and tort concepts as they apply to the legal aspects of hospitality management. Appropriate federal, state, and local cases, statutes, and other materials are examined. The overall objective is to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions.

486 Historical Introduction to Public Hospitality Law
Summer. 3 credits. Elective.
An overview of the development of the legal rights of persons to travel and to have access to public accommodations. Historical sources focus upon the English common law, the United States Constitution, and federal and state civil rights legislation. The course reviews and examines changing American social attitudes toward travel and public accommodations and their influence upon travelers' legal rights and responsibilities. Comparative international legal developments are noted.

487 Real-Estate Law I
Offered on demand. 2 credits. Limited to juniors, seniors, and graduate students. Elective.
Laws governing the acquisition, ownership, and transfer of real estate, beginning with the purchase and sale of a family residence and leading to more-complex transactions involving hotels, motels, condominiums, cooperatives, syndications, and real-estate trusts. Financing aspects, including construction and building loans, mortgages, and mortgage foreclosures are treated from the viewpoint of lender and borrower. The legal relations of landlord and tenant are given special attention, and typical hotel and motel leases are dissected and scrutinized. Applicable tax considerations are focused on all transactions.

580 The Interplay of Law and Ethics in Service Industry Management
Fall and spring. 3 credits. Limited to 25 graduate students or by permission of instructor. Prerequisite: completion of all required hotel school M.P.S. core courses or by permission of instructor. Required.
This course is designed to involve graduate students in the ethical aspects of traditional law problems that confront service-industry managers and executives. The American legal environment will be explored as it affects business decisions in the areas of commerce, consumerism, administrative law and practice, regulation of anti-competitive marketing activities, and federal securities regulation.

OTHER COMMUNICATION, INFORMATION TECHNOLOGY, AND LAW COURSES

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school registrar in room 178 Statler Hall, telephone 255-3739.

191 Quantitative Methods
Spring. 3 credits. Required.
Procedures for collecting, classifying, summarizing, and presenting quantitative facts. Students should get an intuitive grasp of descriptive and inferential statistics. The how, when, and why of statistical applications in a variety of managerial situations, with emphasis on interpretation, not mathematical proofs.

490 Housing and Feeding the Homeless
Fall and spring. 4 credits. Limited to 21 students. Prerequisites: H Adm 325 and 303, or HSS 292 and HSS 375, or permission of instructor. Elective.
The course explores the economic, social, and political issues of our country's growing problem of homelessness, as well as the existing and proposed housing and feeding policies and delivery systems that attempt to deal with the issue. Students study the history of homelessness and strategies to alleviate the problem and spend approximately eight days at a shelter or emergency food program to analyze the program and resolve a managerial problem.

592 Service Operations Management
Fall. 3 credits. Prerequisites: H Adm 791 or equivalent. Elective.
This course concentrates on three aspects of service operations: delivery-system design (including process design, layout, and location), capacity management (inventory, overbooking, yield management, work measurement, and staffing), and quality management. The course provides students with the concepts and tools necessary to effectively manage a service organization.

599 Development and Management of Wellness in Business Organizations
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Field trip, $40. Elective.
An initial evaluation of personal wellness and a collective analysis of the class introduces design, implementation, and evaluation of wellness programs in organizations. Stressors that may cause illness are examined. Case studies and guest speakers from the industry address diagnosing the employee population, sustaining employee participation, evaluating cost/benefit aspects of wellness programs, and choosing alternative health-insurance strategies.

791 Graduate Quantitative Methods
Fall. 3 credits. M.P.S. requirement.
An introduction to management-science models and statistical techniques applicable to the hospitality industry. The application of specific quantitative methods to decision making in the hospitality industry. Topics include forecasting, decision analysis, linear programming, probability, and queuing. Computer software packages will be used to facilitate the decision-making process.

INDEPENDENT RESEARCH COURSES

600-690 Undergraduate Independent Study
Fall or spring. Variable credit. Prerequisite: written permission. Only the first three credits of directed study may count as hotel school electives during a student's undergraduate academic career. Additional directed study, if taken, is applied toward free electives, except for the Management Intern Program (12 credits). Permission in writing is required before course enrollment. Students should obtain a permission form from the hotel school's registrar. (Occasionally an independent research project can be added after the three-week deadline with support of the faculty sponsor and by formal petition.) Elective.
Students pursue independent research projects under the direction of a faculty member.

600 Undergraduate Independent Study in Operation Management

601 Management Intern Program I—Operations
6 credits.

602 Management Intern Program II—Academic
6 credits.

603 Hotel Ezra Cornell

610 Undergraduate Independent Study in Human-Resources Management

620 Undergraduate Independent Study in Financial Management

630 Undergraduate Independent Study in Food and Beverage Management

640 Undergraduate Independent Study in Marketing and Tourism

650 Undergraduate Independent Study in Properties Management

660 Undergraduate Independent Study in Communication

670 Undergraduate Independent Study in Information Technology/Computers

680 Undergraduate Independent Study in Law

690 Undergraduate Independent Study in Management Support—General

700–900 Graduate Independent Research
Fall or spring. Variable credit. Limited to graduate students. Prerequisite: written permission of instructor. Students should obtain a permission form from the hotel school's graduate office.
As appropriate, graduate students enroll in these courses for thesis or monograph research or for other independent directed study. Students must have in mind a project and obtain agreement from a faculty member to oversee and direct the study.

700 Graduate Independent Research in Operation Management

710 Graduate Independent Research in Human-Resources Management

720 Graduate Independent Research in Financial Management

730 Graduate Independent Research in Food and Beverage Management

740 Graduate Independent Research in Marketing and Tourism

750 Graduate Independent Research in Properties Management

760 Graduate Independent Research in Communication

770 Graduate Independent Research in Information Technology/Computers

780 Graduate Independent Research in Law

790 Graduate Independent Study in Management Support—General

802 Master of Science Thesis Research

803 Graduate Teaching Internship

805 M.P.S. Monograph I

806 M.P.S. Monograph II

900 Doctoral Thesis Research

NEW YORK STATE COLLEGE OF HUMAN ECOLOGY

ADMINISTRATION

Francille M. Firebaugh, dean

Charles McClintock, associate dean; Christine Olson, assistant dean; assistant director, Cornell University Agricultural Experiment Station

Lucinda A. Noble, associate dean; director of Cornell Cooperative Extension

Carol L. Anderson, assistant dean; associate director of Cornell Cooperative Extension

Brenda Bricker, director, admissions

Mary Rhodes, registrar and director, Student Services

FACILITIES

The College of Human Ecology, through its teaching, research, and extension programs, seeks to understand and improve the relations of people to their environments, especially to those settings most critical for growth and development—home, school, work, and leisure. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

The college is housed in Martha Van Rensselaer Hall. The Division of Nutritional Sciences, an intercollege division supported jointly by this college and the College of Agriculture and Life Sciences, has space in Savage Hall and in Martha Van Rensselaer Hall.

The buildings include administrative and faculty offices, classrooms, auditoriums, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and a computer-aided design laboratory; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; educational television studios; and a printing and reproduction facility. Also included are learning resource centers for career planning and academic study, a historical costume collection, a human metabolic research unit, a research animal facility, cold rooms, a constant temperature and humidity laboratory, and an experimental nursery school.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

W. Graham, director, office for planning and information systems

Mary Rhodes, college registrar and director, student services

Persons interested in undergraduate study in human ecology should contact the Office of Admissions, 172 Martha Van Rensselaer Hall. Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty are listed on subsequent pages at the beginning of the course descriptions for each department.

Matriculated students can find assistance with matters of academic credit and graduation requirements in the Office of the College Registrar, N101 Martha Van Rensselaer Hall. Assistance with academic advising, career planning and placement, and personal counseling may be obtained from the Office of Student Services, N101 Martha Van Rensselaer Hall.

The Students

The College of Human Ecology undergraduate enrollment is 1,286 with 54 percent in the upper division. About 320 students are graduated each year, and last year 239 freshmen and 144 transfer students matriculated. One hundred faculty members serve as advisers for undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is selective. In 1989, 887% of freshmen were in the top 10 percent of their high school graduating classes. Fifty-five percent had verbal Scholastic Aptitude Test (SAT) scores over 600 and 80 percent had math scores of 600 or better.

Approximately 75 percent of the student body comes from New York State, with the remainder from other parts of the United States and abroad. Twenty percent were identified as members of minority groups in 1990.

Approximately 185 graduate students have members of the college's faculty chairing their special committees. The college awards 41 master's degrees and 20 doctorates each year.

ACADEMIC PROGRAMS

Majors

Each department offers a major, and within most departmental majors there are specific options. The college also offers two interdepartmental majors. Selecting a major means choosing one option in one department. Although a student may satisfy the requirements of more than one major option, he or she is officially certified to graduate under only one. (The college urges students who satisfy more than one major or option to make note of this in the credentials they file in the Career Center and to seek recommendations from faculty associated with the options completed.) Majors include the following options.

Consumer Economics and Housing (CEH): The department supervises the department major and the policy analysis major.

Design and Environmental Analysis (DEA): interior design facility planning and management, human environment relations.

Human Development and Family Studies (HDFS): does not have separate options. Courses focus on cognitive, personality and social development; infant through adult development; abnormal development; and family studies.

Human Service Studies (HSS): does not have separate options. Courses focus on three content clusters: human service environments, programs, and processes. A professional internship and senior seminar are required. Students may meet the requirements of an accredited bachelor's degree program in social work.

Nutritional Sciences (NS): experimental and consumer food studies, nutrition, nutritional biochemistry, clinical nutrition, community nutrition. (By careful planning, students may also meet the minimum academic requirements of The American Dietetic Association.)

Textiles and Apparel (TXA): apparel design, apparel-textile management, fiber science.

Interdepartmental Major in Biology and Society (ID-BS).

Interdepartmental Major in Policy Analysis (ID-PA).

Individual Curriculum: It is possible to develop an individual program of study if none of the above programs fits particular educational and career objectives.

Changing Majors

Because any student's interests and goals may change as new options emerge, the college provides ways for students to change their majors. When a declared major no longer seems to meet a student's educational goals, a counselor or faculty adviser may be able to point out alternatives. If the student decides to make a change, a change-of-major form (available from the Office of the College Registrar, 146 Van Rensselaer Hall) ensures that the change is sent to the department in which the student wishes to major, so an adviser can be assigned to the student.

Students of Mature Status

The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of the average undergraduate. To facilitate the education of mature students, defined as those twenty-four years old or older at matriculation, the college has adopted certain procedures specifically for that group.

Mature students are permitted to enroll for as few as 6 credits without petitioning and are also permitted to extend their residency beyond the normal eight terms.

It is highly recommended that mature students contact Valeries Sellers, the director of the Continuing Education Information Service, B12 Ives Hall, for information on resources available through that office.

Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college; those with a bachelor's degree preparing for graduate study or jobs and careers in human ecology–related fields; or those who have interrupted their education and are considering completing degree programs. Students accepted in the non-degree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer or plan to terminate studies in the college at the end of the semester.

Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the state divisions of the university. Work taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree.

Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs, B12 Ives Hall. All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor.

At the time of registration, Empire State College students provide the extramural division with a completed copy of Empire State College's notification of cross-registration form number, SA-22, F-031, to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

CONSUMER ECONOMICS AND HOUSING

The behavior of people as consumers and family members and their interactions with private markets and public sectors of the economy are increasingly important as the economy becomes more service-based. One result has been an increasing demand from business and government for trained individuals who understand consumers, families, the markets in which they deal, and how public policies affect the markets and through them consumers and families. The demand has been sufficient to elevate salaries for well-trained individuals.

The consumer economics and housing major provides such training. The major combines economics with statistics, sociology, and family resource management to study how consumer markets work, how firms and consumers behave, the role governments play in consumer protection, how functions shift between households and markets as prices, incomes, social values, and legislation change, and how changes in the family affect consumer markets. Students interact with the faculty and with each other both in the classroom and in field-based learning experiences in the Ithaca area, New York City, Washington, or abroad. Students specialize within the major in two of the four areas within the department: consumers affairs and policy, family economics and demography, family resource management and decision-making, and housing.

Graduates in consumer economics and housing are prepared for a wide variety of consumer- and family-related positions in business and government. The major also provides an excellent foundation for further studies in economics, law, graduate business, and policy analysis.

The consumer economics and housing major is flexible. Students are assigned a faculty adviser by the advising coordinator unless the student wants a particular adviser. The earlier the decision to major in CEH is made, the greater the freedom to develop a program to meet individual educational or career goals. Transfer students are urged to discuss their plans with a faculty adviser as soon as possible. An appointment may be made directly with an adviser or with the advising coordinator, Peter Zorn.

DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop their multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory, shop, studio, and computer facilities permit exploration of innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the department's gallery. The DEA Resource Center includes books, journals, newsletters, and materials samples for student use.

Options

The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human-environment relations. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER).

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

Option I: Interior Design

The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based upon knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with one of the other options.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

Option II: Facility Planning and Management

This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health-care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, and the health-care industry. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human-Environment Relations

Human-environment relations focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. The effect of human capabilities or characteristics such as family structure, lifestyle, social class, and stage in life cycle on environmental needs and requirements is also a focus of the program. Human-environment relations is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising

All DEA majors are matched with a faculty adviser during their first semester by advising coordinator Michael Boyd, in 3M13A Martha Van Rensselaer Hall.

Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college to meet special needs helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN DEVELOPMENT AND FAMILY STUDIES

The programs of the Department of Human Development and Family Studies (HDFS) are concerned with how people develop throughout the life course. Of equal interest is the family as a context for individual development and as a part of the larger structure of society. An ecological perspective—the person in interaction with complex biological, situational, and environmental conditions of everyday life—is featured in many departmental courses.

Major social science disciplines concerned with the development of individuals and with the structure and function of families are represented among faculty members with backgrounds in psychology, sociology, history, and education. The department's programs of instruction, extension, and research provide diverse opportunities for students to prepare for career development or to acquire the bases for graduate study. Many of the department's majors are interested in clinical psychology, counseling, law, medicine, special education, or university teaching and research that require some graduate study. Others may go directly into employment in business or industry or take bachelor's-level positions as youth counselors, day-care workers, personnel assistants, research technicians, social program assistants, etc.

Academic Advising

Every HDFS major is assigned a faculty adviser in the department, and advising conferences are required at least twice a year. An adviser helps plan the course work and consults with the student about career options. The adviser can also help students find special opportunities for individual study or for experience outside the classroom. Although advisers must sign course schedule cards, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college. Students who need an adviser or who want to change advisers for any reason should check with the department office, in NG14 Martha Van Rensselaer Hall.

Curriculum

HDFS majors usually combine a broad liberal education with a more specialized focus on either a problem of human concern or a substantive area of concentration. Areas of specialization available within HDFS include infant, child, adolescent, and adult development; abnormal development; family studies; and social-personality and cognitive development. Some students combine an HDFS major with premedical or prelaw training or with specialized work in an area outside the department, such as communication arts, nutrition, business, or government.

During their first two years, students are expected to combine a variety of liberal arts courses with HDFS core courses HDFS 115 (Human Development: Infancy and Childhood); HDFS 150 (Families in Modern Society); HDFS 216 (Human Development: Adolescence and Youth); and HDFS 218 (Human Development: Adulthood and Aging). This encourages diversity yet ensures a common base for upper-level courses in the major. Courses within the department vary from lectures and discussions to research and independent study.

All students are encouraged to participate in an experiential learning course in their particular area of interest. The course may focus on a naturalistic or laboratory setting (e.g., nursery school, youth detention center, retirement home) or on a research setting (e.g., interviewing, administering tests, observing behavior).

An HDFS major also takes a number of upper-level departmental courses in particular areas as described in the Student Guide. Additional information is available in the HDFS Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

Math Requirement

HDFS majors are required to fulfill a math requirement by passing Education 115 or demonstrating equivalent competency by scoring 26 or above on the Cornell math assessment exam taken during orientation week.

Teaching Certification Option

The cooperative Cornell HDFS–State University College at Cortland education program is designed to meet New York State certification requirements for teaching grades N–6 and grades N–9. The program requires that the student spend three years at Cornell and the senior year and part of two summers registered in absentia at SUC Cortland.

This highly selective undergraduate program offers an alternative to the option of seeking a master's degree in education after the undergraduate studies at Cornell have been completed. Students interested in the program should discuss the merits of each option with the Coordinator of Undergraduate Education in NG22 MVR.

Course work at Cornell must be carefully planned. Elective options will be somewhat limited because it will be necessary to consider thirty-seven Cortland credits and an additional five to nine education courses at Cornell as electives. More information is available in the HDFS Office, NG14 Martha Van Rensselaer Hall.

Honors Program

The honors program leading to a Bachelor of Science degree with honors in HDFS is designed to provide in-depth research experience for students interested in graduate school and to challenge students who enjoy research. Interested students should consult the coordinator of the honors program during their sophomore year.

A grade-point average of 3.3 is recommended for entry into the program, although promising students who lack the grade-point average also may apply if they can otherwise demonstrate their potential for honors work. Honors students must take an approved course in research design, preferably in the sophomore or junior year.

Students spend part of their junior and senior year working on a thesis under faculty supervision, completing the project before March 15 of the senior year when the student's oral examination is held. More information is available in the department's Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

Foreign Language Requirement

The Department of Human Development and Family Studies is phasing in the foreign language requirement described below. Students entering in fall semester, 1990, or spring semester, 1991, are strongly encouraged, but not required, to complete the language requirement.

Language Requirement

The HDFS faculty believe that competence in a foreign language is an essential liberal arts goal for the educated HDFS student. Such exposure opens another culture for exploration at both the instrumental and expressive levels, helps students understand language itself, and

encourages knowledge of language as a fundamental intellectual tool and as an essential communicative asset with potential applied benefits. Work toward the foreign language requirement should be undertaken in the freshman and sophomore years.

The following departments teach foreign languages or literature or both in the College of Art and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

The language requirement may be satisfied in one or two ways:

1) by attaining PROFICIENCY in one language or
2) by attaining QUALIFICATION in two languages.

Proficiency

PROFICIENCY is attained by passing a 200-level course at Cornell (or Chinese or Japanese 161) or by equivalent achievement, to be determined by examination; see below under "Advanced Standing Credit."

Qualification

QUALIFICATION may be attained in any of the following four ways:

1) Three credits of secondary school study or passing NYS Regents Exam in any one language give QUALIFICATION in that language. This route to QUALIFICATION does not guarantee entrance into a 200-level course. The students who want to continue in this language to seek PROFICIENCY must be placed by examination.
2) Passing the requisite course: 102, 123, or 134 in languages taught by the Department of Modern Languages and Linguistics; Chinese 112–114 or Japanese 160; Japanese 141–142–241, Near Eastern Studies 102 or 122 in Hebrew, 112 in elementary classical Arabic, 214 in Egyptian Arabic or 138 in Turkish; Classics 103 or 104 in Greek; Classics 106 or 107 or 108 in Latin; Classics 112 in modern Greek; 132 in Sanskrit; AS & RC 134 in Swahili.
3) A score of 560 or better on the College Placement Test (CPT).
4) Placement in a 200-level course by special examination (in cases where no CPT is available).

A student may submit a 560 CPT score at the end of a course numbered 122, thus attaining QUALIFICATION without taking 123. This procedure is optional; the student with a score of 560 or better may want to take 123 to be better prepared for the 200-level courses.

Note: Completion of 131–132 language course sequence does not constitute QUALIFICATION.

Speakers of languages other than English may be awarded credit for their bilingual ability. Their English achievement is measured by the Test of English as a Foreign Language (TOEFL), a requirement for matriculation. Their performance in one other language learned outside the academic environment is measured by examination, and evidence of abilities in reading and writing, as well as speaking, is required. A maximum of 6 advanced placement credits are granted to students who demonstrate PROFICIENCY equivalent to course work at the 200 level or above at Cornell. Students may not earn credit both for PROFICIENCY in their native language and for studying English as a second language at Cornell.

Language Course Placement and Credit

Students who have had two or more years of high school study in a language may not register in any course in that language without being placed by examination. Nor may transfer students register without examination, even though they may have been given credit for language work elsewhere.

The type of examination depends on the language course and the level of achievement:

1) French, German, Italian, Russian, and Spanish courses: the standardized College Placement Test (CPT). Entering students who have not taken the CPT in high school and who want to continue their language study must take the CPT at Cornell during orientation week. Students may retake this examination at Cornell if they have studied the language a year or more since last taking the test. To do this, students register with the Academic and Career Counseling services, 203 Barnes Hall, and pay a fee.
2) Latin (all courses except 105 and 107): departmental examination.
3) Greek (all courses except 101, 104, and 111): departmental examination.
4) Arabic: departmental examination.
5) Hebrew: departmental examination.
6) Other languages: special examinations: see the professor in charge.
7) High achievement (students with a CPT score of 650 or better in French, German, Hebrew, Italian, Russian, and Spanish): the Cornell Advanced Standing Examination (CASE).

An entering or continuing student with high achievement scores should take the Cornell Advanced Standing Examination (CASE); even if the student does not want to do any further work in the language, the CASE may provide proficiency status for the language requirement and it may provide up to 6 hours of advanced standing credit. Students who do not have high achievement scores are eligible for the courses listed in the charts below, depending on their scores. For other languages, or for special problems, student should see the professor in charge.

Placement by departmental examination.

Advanced Standing Credit

Advanced standing credit may be entered on a student's record as follows.

Credit may be granted for high school work for the equivalent of language courses numbered 203, 204. The amount of credit is based on performance of one or more of the following examinations:

a) CPT Advanced Placement Examination. French, Spanish, and German: A score of 4 or 5 yields 3 credits on the French, Spanish, or German language examinations and literature examinations.

Hebrew: Up to 6 credits may be granted, depending on the student's score on the departmental examination.

Latin: Students should consult the Department of Classics, 120 Goldwin Smith Hall. Students must take the department's own placement examination during orientation week. A student who is permitted to register in a 300-level course will be given 6 advanced standing credits.

Greek and Modern Greek: For information concerning advanced placement, students should consult the chairman of the Department of Classics, 120 Goldwin Smith Hall.

b) Cornell Advanced Standing Examination (CASE). To be eligible for this examination the student must have achieved a score of 650 on the CPT. For details on registration, see "Language Course Placement and Credit" above. The maximum amount of credit is 6 hours.

c) Special examinations are given for languages where no CPT exists.

HUMAN SERVICE STUDIES

Faculty in the Department of Human Service Studies (HSS) prepare students for a variety of careers in programs that serve individuals, families, and the community. HSS graduates work in schools, social services, Cooperative Extension, health and mental health programs, and community development agencies.

They are employed in such positions as counselors, school teachers, social workers, community educators, planners, and researchers. Many HSS graduates pursue graduate study in law, education, medicine, social work, health, and a variety of social sciences. HSS majors come from diverse backgrounds, but they share a common goal of wanting to serve the needs of others.

HSS is unique in that it integrates a broad spectrum of courses offered by several departments and colleges and focuses them for professional practice in the human services. All HSS students take courses that provide a knowledge base in three content clusters:

1. Human service environments – course choices provide students with knowledge about the working context within which the human service provider functions, including a base in social psychology, group and organizational behavior, social system perspectives, power and leadership.
2. Human service programs – courses for this requirement are selected to provide the student an introduction to historical and current program models, barriers to service delivery, developments in health, education and social welfare—all in the context of both the client and the work done by the human service professional.
3. Human service processes – courses for this requirement are designed to provide students with methods to work effectively in human service programs and environments. Courses include planning and development content, program delivery modes, decision-making processes, basic social planning methods, and program evaluation.

All students take a professional internship and an integrative senior seminar. Regardless of their specific career goals, students acquire a broad understanding of human services and the ways they can collaborate to improve the human condition. In addition, students specialize in an area of concentration such as health, education, social welfare, policy, planning, or evaluation.

Academic Advising

It is important for a student who is interested in majoring in Human Service Studies to declare that major as early as possible. Once that is done, students work with their assigned faculty advisers to plan course work and related educational activities. Students are free to change advisers. Although faculty advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of courses and make sure that the program meets graduation requirements of the major and the college.

Social Work Program

The undergraduate social work major at Cornell has as its principal educational objective the preparation of students for beginning professional social work practice. In addition, the major prepares students for graduate education in social work and contributes to the enrichment of a college education by helping students understand social welfare needs, services, and issues.

The social work program is accredited by the Council on Social Work Education. Students who complete all requirements are eligible to apply for beginning-level employment as professional social workers or to apply for advanced standing in a graduate school of social work.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The curriculum includes the application of design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological developments.

Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special-study use.

Academic Advising

All TXA majors are matched with a faculty adviser by the advising coordinator, S. Kay Obendorf (208 Martha Van Rensselaer Hall). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin early to work with their advisers to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the advising coordinator. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid by the last week of classes.

Key Policy for Apparel Design Studios

To allow design students access to studios for out-of-class work at any hour in which Van Rensselaer Hall is open, and to provide security for the studios, the department has instituted a key policy. Each student in TXA 040, 145, 264, 367, 375, 425, 446, and 465 who submits a security deposit of $50 will be given a key to the studio in which his or her class is held. In the event that *any* key is lost, the studio will be rekeyed, and the cost will come from the security deposit of the student who lost the key. At the end of each semester, the studio will be assessed for missing and damaged equipment. The total amount assessed will be deducted from the security deposits of all students assigned to that studio. If all keys are returned and no damage or theft is reported, the security deposits will be returned at the end of the semester. Students who do not wish to work in the studio outside of class hours may elect not to have a key and therefore will not be required to submit a security deposit. Under no circumstances will these students be admitted to the studio outside of class hours.

Options

Students may select options in apparel design, apparel-textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve functional and aesthetic apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous course work, transfer students may need one or two extra semesters to fulfill the requirements of the major.

Option I: Apparel Design

The study of apparel design includes both functional and aesthetic considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

Option II: Apparel-Textile Management

Apparel and textile management combines the fields of apparel and textile with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication arts, as well as practical field experiences. This provides students with the experience of working with

professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Fiber Science).

Option III: Fiber Science

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

Career Opportunities

Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of new product development, design, management, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy, as well as for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including introductory courses in the fields of biochemistry, chemistry, mathematics, genetics, ecology, ethics, and history. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology must be taken in two of the following three concentrations: human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the human ecology Student Guide.

INTERDEPARTMENTAL MAJOR IN POLICY ANALYSIS

As our economy has become more complex, so too has the role of the public sector in our society. An understanding of governmental processes and of how public policies affect the several segments of society has become more important. Individuals with the ability to evaluate government programs critically and trace their impacts quantitatively to consumers, families, business, and industry are in demand at all levels of government and business. Supervised by the Department of Consumer Economics and Housing, the policy analysis major uses the resources of the college and the university to trace and estimate government's influence in the economy.

In the policy analysis major, the student gains a basic understanding of the role of government in the economy and the political environment in which policy is made. Students concentrate on learning the economic, cost/benefit, and statistical skills necessary to evaluate the performance of government programs and policies—consumer policy, housing policy, welfare policy, environmental policy, foreign policy, for example. Because experience in legislative, regulatory, and public administration activities is helpful in providing the context for policy analysis, involvement in Field and International Study, Cornell-in-Washington, and Cornell Abroad is encouraged. The specific requirements for policy analysis are listed under the interdepartmental majors.

Graduates in policy analysis are attractive to business and industry as well as to government because of their analytical skills in economics, statistics, and their knowledge of political processes, Students also use the major for further work in policy studies, law, and business administration.

The policy analysis major is flexible and allows individual program planning. The faculty adviser assigned by the undergraduate advising coordinator can help develop a program to meet individual educational and career goals. This is particularly important in constructing the appropriate policy concentrations. Transfer students are urged to contact their faculty adviser as soon as possible. An appointment may be made directly to talk either with an adviser or with the advising coordinator, Peter Zorn.

INDIVIDUAL CURRICULUM

A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator.

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made as early as possible and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, Patti Papapietro, in the Office of Student Services, will provide direction in formally developing a program of study. Although the individual curriculum coordinator must sign the course enrollment schedule during course enrollment each term, it is a student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her advisers and the program coordinator in advance of the program change.

SPECIAL OPPORTUNITIES

Several special programs allow students to receive academic credit for fieldwork and internship experience, to study in absentia, or to enter particular graduate programs after the junior year.

Teacher Certification in Home Economics

Students can combine any major in the college with additional course work that leads to a certificate of qualification for teaching home economics (kindergarten through twelfth grade) in New York State and a number of other states.

Human Ecology Field and International Study

Field Study

Field study enables students to learn from participation in a community and organizational setting and from reflection on that experience through discussion, reading, and writing. This process of integrating theory with practice distinguishes field study from work experience and provides the rationale for granting academic credit.

The Human Ecology Field and International Study Office, 159 Martha Van Rensselaer Hall, offers interdepartmental, prefield preparation and field-based courses with an interdisciplinary problem-solving approach to social issues. Field placements are located in the Ithaca area, New York City, Albany, Washington, D.C., Boston, and elsewhere. Courses are open to registration by all Cornell students.

International Study

Study abroad provides students with an opportunity to add an international dimension to their human ecology program through course work focusing on international problems and intercultural understanding and through sponsored programs of study abroad for which credit is available. Course work in a foreign institution will, in general, be planned to increase knowledge of the people and institutions of the country concerned; fieldwork may provide guided experience in family, community, or agency situations of the country concerned and in an area related to individual student interest in human ecology.

Opportunities for study abroad are available for human ecology students in several ways: through Cornell Abroad, through U.S. college-sponsored programs abroad, and through direct enrollment in a foreign university. In each case, students will remain registered at Cornell during the overseas study, and their study abroad will be credited as part of their Cornell degree program. Applications for study abroad should be submitted to the study-abroad adviser in the Field and International Study Office.

University Programs

Africana Studies and Research Center

Courses taken in the Africana Studies and Research Center (ASRC) may be used to meet some of the distribution requirements of the college. Up to two courses or 8 credits of such courses may be applied toward the 12 additional credits in natural and social sciences (section I-C of the graduation requirements) or toward the 9 additional credits in communication, analysis, and the humanities (section II-B). This allowance is in addition to the freshman writing seminar credits that may be taken in ASRC. Other courses taken in the center count as endowed division electives.

A list of ASRC courses approved to meet distribution requirements or as electives is available in the Office of Student Services and in the Office of the College Registrar.

Double-Registration Programs

Johnson Graduate School of Management

A limited number of highly qualified students from Cornell undergraduate divisions, including human ecology, may be accepted by the Johnson Graduate School of Management after the junior year. Students need the approval of the admissions office and the registrar in the College of Human Ecology. Accepted students should be aware that if the management course work taken in the senior year is in excess of the 21 additional credits allowed in the Cornell endowed divisions, they will be charged for the additional credits on a per-credit basis. Students entering this program must also complete requirements for the degree and major in Human Ecology.

Law School

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior-year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions to discuss the extraordinary admissions criteria. Since students accepted to this program will be spending their senior year in the Cornell Law School, they need to plan ahead to ensure that distribution requirements for the B.S. degree from the College of Human Ecology will be met. Successful applicants need the approval of the college registrar.

Cornell Medical College

A limited number of highly qualified students from three Cornell divisions, including the College of Human Ecology, may be accepted by the Cornell Medical College after the junior year. To be considered for this program, the student must have completed 105 credits toward graduation by the end of the junior year. Students also need to plan ahead to ensure that distribution requirements for the bachelor of science degree will be met. Accepted students receive 15 credits toward the B.S. degree from their first year of study at the College of Medicine. Interested students should contact the Health Careers Program office in 203 Barnes Hall.

Off-Campus Programs

New York State Assembly Internships

A limited number of session internships with the New York State Assembly are available in spring semester to students of sophomore status and above who are enrolled in New York State colleges or universities. Human ecology students apply to the program through the student's major department. The New York State Assembly also sponsors a summer internship. Further information about internship programs may be obtained through the Field and International Study Office, 170 Martha Van Rensselaer Hall.

Ithaca College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca College. Students pay regular tuition to Cornell and only special fees to Ithaca College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Ithaca College.

Cornell students are eligible to register only in Ithaca College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Ithaca College courses is on a space-available basis. Participation in this program is not guaranteed, and Ithaca College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, 146 Martha Van Rensselaer Hall.

PLANNING A PROGRAM OF STUDY

Academic Advising

When students decide to major in a particular department, they are assigned to a faculty adviser by the advising coordinator in that department. The advising coordinator can help match the student's needs with the special interests of a faculty member. Students are free to change advisers as their own interests change and should see the advising coordinator to discuss such a change. Faculty advisers and counselors in the Office of Student Services, N101 Martha Van Rensselaer Hall, are available to discuss course requirements and sequences, and electives inside or outside the college, as well as future goals and career opportunities. Although advisers must sign the course enrollment schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college. Advising coordinators in each department are happy to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors who are available for planning and referral to department resource faculty.

Completing Graduation Requirements

A summary of record is kept for each student in the Office of the College Registrar, 146 Martha Van Rensselaer Hall. At fall registration each continuing student receives a copy showing which major and graduation requirements have already been met. It is important to check this summary and to bring any questions to the attention of staff members in the Office of the College Registrar. Although a student may complete the requirements of more than one major, he or she is officially certified to graduate under only one.

Electives

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and department advisers are available to discuss which courses may interest students and round out their educations.

Students should consult the index of this Announcement for information on where different subjects are taught in the university. Some subjects are taught in more than one division of the university.

Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the College Entrance Examination Board (CEEB) achievement test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Students in human ecology who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Students who wish to study abroad may find that many study-abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study. For more detailed information, see the section "Advanced Placement of Freshmen."

GRADUATION REQUIREMENTS FOR THE DEGREE OF BACHELOR OF SCIENCE

General

Students applying as undergraduates who do not have the required academic unit in biology, chemistry, or physics are required to show evidence of having met this deficiency before matriculation in the college.

Freshmen and sophomores are required to enroll in at least one human ecology course per semester.

To graduate, students need to

1) meet college credit and distribution requirements,
2) complete requirements for a major,
3) achieve a cumulative average of 1.7 (C–) or better,
4) fulfill residency requirements, and

5) complete two terms of physical education within the first two semesters.

College Requirements

These are the general areas of study and specific courses and credits required of every student in the college. The major you choose may require specific courses listed below or may leave you free to choose among certain courses listed there.

I. Natural and Social Sciences (24 credits)

A. *Natural sciences* (6 credits) selected from Biological Sciences 101–103,102–104,105–106, 109–110; Chemistry 103–104, 207–208, 215–216; and Physics 101–102,112, 201 or 202, 207–208. Biological sciences courses must be taken sequentially.

B. *Social sciences* (6 credits) selected from economics (including CEH 110,111 but excluding Agricultural Economics 221 and 310); psychology (including Education 110, 311, 317; DEA 150; HDFS 115, 216, 217, 218, 219); sociology (including rural sociology, CEH 148, and HDFS 150). Do not take both Economics 101 *and* CEH 110; Economics 102 *and* CEH 111; Psychology 275 *and* HDFS 360; Rural Sociology 101 *and* Sociology 101; or Sociology 243 *and* HDFS 150; they are equivalent courses.

C. *Additional credits* (12 credits) selected from any subjects listed above or from courses in anthropology (except archaeology); Astronomy 101 or 102; biochemistry; microbiology; genetics and development; Geological Sciences 101; and government.

II. Communication, Analysis, and the Humanities (15 credits)

A. *Freshman writing seminars* (6 credits) selected from courses listed in the freshman writing seminar brochure.

B. *Additional credits* (9 credits) selected from art; communication; comparative literature; computer science; drawing; English; ancient or modern foreign languages; history; history of art; history of architecture; mathematics; music; Natural Resources 407; philosophy; statistics (students should not take both Industrial and Labor Relations 210 *and* Agricultural Economics 310, since the courses are substantially the same); theatre arts; DEA 101,111, or 115; HSS 292; TXA 125, 375; and selected ASRC courses (list available in the Office of Student Services, N101 Martha Van Rensselaer Hall).

III. Human Ecology (40 credits)

A. *Requirements for the major* (the number of credits required varies by major and option).

B. *Fifteen credits to include course work in at least two departments outside the major* with two courses totaling 6 credits minimum in one department and one 3-credit course in a second department. Not more than 3 credits of the15 may be in special studies 400, 401, 402, either departmental or FIS (Field and International Study). HE 100 cannot be used to fulfill this requirement, nor can an undergraduate teaching assistantship designated "403."

IV. Additional Credits (41 credits)

A. *Requirements for the major* (number of credits varies from 0 to 15 credits).

B. *Electives* (number of credits varies from 26 to 41 credits).

Credit requirements in this section are met through courses in the *state divisions of Cornell:*

- College of Human Ecology (in addition to courses in sections I, II, and III)
- College of Agriculture and Life Sciences
- School of Industrial and Labor Relations
- College of Veterinary Medicine

and through courses in the *endowed divisions of Cornell:*

- Africana Studies and Research Center
- College of Architecture, Art, and Planning
- College of Arts and Sciences
- College of Engineering
- School of Hotel Administration
- Johnson Graduate School of Management

Courses in the endowed divisions in this section may not exceed a total of 21 credits.

V. Physical Education (2 credits)

Students who have successfully fulfilled these requirements should have completed at least two terms of physical education in their freshman year.

Related Policies

College course requirement. Freshmen and sophomores are required to enroll in at least one course in the College of Human Ecology each semester. Students who fail to comply with this requirement will be reviewed by the Committee on Academic Status for appropriate action.

Section II. Students who score 4 or 5 on the Princeton AP Exam are awarded 3 credits in English. In addition, students who score 5 on the Princeton Exam are exempt from one freshman writing seminar in addition to the 3 English credits awarded.

In sections I, II, and III, the required credits listed are the minimums; credits taken in excess of those minimums (section I, 24 credits; section II, 15 credits and section III, 40 credits) count toward electives (section IV, 41 credits).

In sections I and II, courses specified by the major to meet the requirements in the sections may either be used as meeting the credit requirements in those sections or be applied toward the additional credits in section IV.

Section IV. *There is no limit to the number of credits that may be taken in the state divisions of Cornell,* and therefore students may choose to take additional state credits and graduate with more than 120 credits.

Credits in the endowed divisions in this section may not exceed 21. Any course taken in an endowed division for which a grade of F or U is received will be counted *against* the 21 endowed credits allowed.

Elective credits earned in Cornell's endowed divisions during summer session, in absentia credits, and transfer credits are counted as credits earned in the state divisions and therefore do not count against the 21 credits allowed in the endowed divisions in meeting the requirements of this section.

Not more than 21 credits in section IV may be taken in the endowed divisions of the university except under *both* of the following conditions:

1) The students must have senior status (must be in the final two semesters prior to graduation);

2) Payment must be made for each credit taken in excess of the 21 allowed, *whether or not the courses are passed.* For the precise fee per credit, students should call the Office of the Bursar.

Related Policies for Transfer Students

Section I-A. Transfers who are entering human ecology programs in consumer economics and housing, design and environmental analysis, human service studies (with the exception of the social work program), and policy analysis can satisfy the College of Human Ecology's natural science graduation requirements with any course(s) taken to meet a former college's natural science requirements as long as the course(s) transferred dealt with matter, energy, and their interrelationships and transformations. Courses in areas such as psychology and mathematics are not included, even though courses in these areas may have been taken to meet a former institution's natural science requirement.

Section II-A. Transfer students should have taken at least 6 credits in courses in English composition or in courses requiring substantial writing and offering instruction in writing equivalent to that offered in the freshmen writing seminar program at Cornell. Students who have not fulfilled this requirement before transferring must fulfill it after matriculation.

Section III-B. External transfer students can meet the requirement for course work outside the major in the College of Human Ecology by completion of either of the following:

1) 15 credits of work, outside their department, comprised of transfer credit and credit earned in the college,

or

2) credits all taken in this college (no transfer credit is allowed to meet this requirement), on the basis of the status of the student's matriculation and prorated as follows:

Status at Matriculation	*Cornell Human Ecology Credits to Satisfy Work outside the Major*
Freshman (1-25 transfer credits)	15
Sophomore (26-55 transfer credits)	12
Junior (56-85 transfer credits)	9
Senior (86-120 transfer credits)	9

In both options, the courses must be in at least two departments outside the major with two courses comprising 6 credits in one department and at least one 3-credit course in a second department. Transfer students from other Cornell divisions are required to take the full 15 credits outside the major.

Note that transfer students are still responsible for completing a total of 40 human ecology credits under section III.

Section IV. Transferred credits for courses applied toward electives do not reduce the 21 Cornell endowed credits that students are allowed. Courses with a passing grade below C– will not transfer to meet human ecology degree requirements.

Section V. Transfer students who have had the equivalent of two semesters of college (and therefore enter as sophomores) are not required to take physical education at Cornell, regardless of whether they took physical education at their first college. Exemption or postponement for medical reasons must be cleared by Gannett Health Center. For further information about exemption from, or postponement of, physical education, students should consult the college registrar, Mary Rhodes, in 146 Martha Van Rensselaer Hall.

Related Policies for Freshmen

Section V. Freshmen are required to take two semesters of physical education during their freshman year. Freshman transfer students entering with 12 or more credits have their physical education requirement reduced to one term.

Residency Requirements

All college curricula are planned to fit within an eight-semester program. An average schedule of 15 credits a semester (in addition to physical education) is considered standard, and if pursued for eight semesters will provide the credits needed for graduation. If the student completes all the requirements—for the major, for distribution, for total credits, and for cumulative average—in fewer than eight semesters, the degree may be conferred at the end of the semester in which the last requirements are met. Students who plan to receive their degrees early should notify the college registrar at the beginning of the semester so that their names can be placed on the list of degree candidates.

Sometimes a student (particularly a transfer student) may need an additional semester to complete a program. To register for a semester beyond the eighth, the student submits a petition to the college registrar. The petition should detail the reasons for wanting to enroll for the extra semester and include a list of courses planned for the additional semester. Such requests are usually granted when there appears to be no feasible way for the student to complete the professional curriculum or the degree requirements without the extra semester.

Freshmen entering the college with 15 transfer credits have seven semesters in which to complete the degree. Transfer students must complete at least 60 credits at Cornell.

Mature students (those at least twenty-four years old at the time of matriculation) are not required to petition the college registrar for approval to study beyond the usual eight semesters.

Exemptions from Requirements

Students who want an exemption from a specific graduation or major requirement may petition, and approval may be given under certain circumstances. Full information about the petition process is given in the human ecology Student Guide. Petition forms are available in the Office of Student Services, N101 Martha Van Rensselaer Hall.

PROCEDURES

Course Enrollment

Course enrollment occurs in two steps. During pre-enrollment students request courses, and at university registration students complete information forms, receive their schedules, and have their university IDs validated.

Students are expected to complete course enrollment during specified times each semester. Failure to do so carries a $10 penalty, which can be waived only if circumstances are completely beyond the student's control. It is the student's responsibility to find out the dates of course enrollment.

Freshmen and transfer students enrolling for the first time in the university in the fall term pre-enroll in their courses during the summer before they arrive on campus.

Continuing students pre-enroll for fall semester in March or April, and pre-enroll for spring semester in October or November preceding the beginning of the term.

Since new students starting at midyear do not have an opportunity to enroll in courses until after they arrive on campus, the college tries to reserve places for them in human ecology courses. The orientation schedule given to all new students lists a specified time for enrolling in such courses. For the first three weeks of the term, new students have an opportunity to add courses in other divisions of the university as well as in human ecology.

Pre-enrollment

Course pre-enrollment materials are mailed to each new student. Continuing students are notified of course pre-enrollment dates by poster and by notices in the *Cornell Daily Sun*. Course pre-enrollment materials are available for continuing students in the Office of Student Services, N101 Martha Van Rensselaer Hall.

Before or during course pre-enrollment, students discuss their program plans with a department adviser or a college counselor in the Office of Student Services. For their advising sessions, students need the list of last-minute changes issued by the college registrar, and the *Course and Time Roster* issued by the university registrar. Students must have their course enrollment schedule signed by their departmental major faculty adviser, or if they have not declared a major, by a college counselor.

Students file completed pre-enrollment materials by the announced deadline in the Office of the College Registrar, 146 Martha Van Rensselaer Hall.

The following policies and procedures apply to course enrollment.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in *Cornell University: Courses of Study*. For such courses, students must obtain the instructor's permission before filing their course enrollment form during the pre-enrollment period. Instructors indicate their permission to take the course by signing the student's course enrollment form.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in 312 Malott Hall.

Special Studies Courses

Each department in the College of Human Ecology (CEH, DEA, HDFS, HSS, DNS, and TXA as well as the Field and International Study Program) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. Those courses are normally taken by upperclass students, and work is supervised on an individual basis by a faculty member in the department in which the course is offered. It is important for students to use the appropriate course number (300,400,401, or 402) for a special project.

A student who wants to take special studies courses talks with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a multicopy special studies form, a multicopy description of the study to be pursued. The student obtains the signatures of the instructor and the department chair as well as the student's department adviser before submitting it to the Office of the College Registrar. The student also must complete a course registration form in the Office of the College Registrar. Special studies forms and instructions are available in the Office of Student Services.

To register in a special studies course taught in a department outside the college, students should follow the procedures established for that department.

Course Loads

The normal course load in the college ranges from 12 to 18 credits. *During the course enrollment period no student may enroll for more than 15 credits or five courses, whichever is greater, without special permission from the college registrar.* To receive permission, a student attaches a note to the course schedule, citing reason(s) for carrying a heavier load, before submitting it to the Office of the College Registrar.

Credits beyond 15 may be added during the first three weeks of the semester without special permission.

Students should avoid planning excessive work loads; the time required to keep abreast of courses tends to increase as the semester progresses. *Courses cannot be dropped after the seventh week of classes without petitioning,* so students should try to avoid the need to drop courses.

Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education). In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and

advice on how to proceed are available from the Office of Student Services, N101 MVR.

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar for more information.)

Students of mature status may carry 6 to 12 credits without petitioning and may have their tuition prorated. However, at the beginning of each term, mature students planning to take a light course load should pick up a proration of tuition form from the Office of the College Registrar, fill it out, have it signed by the college registrar, and return it to the bursar's office in Day Hall.

Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in *Cornell University: Courses of Study*. Student's professional goals may be considered. Those students not admitted to a course may be placed on a waiting list and will find a note to that effect attached to the course enrollment printout.

Late Course Enrollment

Students who do not file a course enrollment form during the course pre-enrollment period usually must wait until the beginning of the semester to enroll and must pay a $10 fee. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 146 MVR as soon as possible. The college registrar can explain available options on course enrollment procedures under such circumstances.

University Registration

University registration for human ecology students occurs in the auditorium of MVR Hall during the week preceding the start of classes. The Office of the University Registrar announces the specific times of registration.

At registration, students first have their ID validated and pick up a college registration card at the university table immediately inside the door of MVR auditorium.

Next, students fill out the college registration card and proceed to the college table where they submit their college registration card; in return, they receive a computer printout of courses for which they are officially enrolled.

Important: Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, and other data. If there are errors, students must correct them immediately. Procedures for correcting errors in the printout as well as making changes for other reasons are described below under **Course Enrollment Changes.**

Students also receive a *Course and Room Roster* which indicates the locations of their classes.

During university registration in the fall semester, each continuing student receives a copy of his or her **summary of record** from the Office of the College Registrar. This summary shows graduation and major requirements that the student has completed. Students are responsible for assuring that their academic program meets graduation requirements. Resolve any questions about graduation requirements with the appropriate staff person in the Office of the College Registrar. Students may direct questions about their academic programs to their faculty adviser or to a counselor in the Office of Student Services.

Late University Registration

A student clearing his or her financial obligations **after** the deadline date on the bursar's bill is considered late. **Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due.** Starting the fourth week of the term the assessment for late registration is as follows:

fourth week	$85
fifth week	$95
sixth week	$105

After the sixth week, $25 is charged for each additional week. After completing late university registration, the student submits the college registration card to the Office of the College Registrar and receives a computer printout of the courses for which he or she is officially registered. *Students who fail to register by the seventh week of the term will be withdrawn from the university. Should withdrawn students wish to return, they must reapply through the admissions committee.*

Course Enrollment Changes

Deadlines

- During the first three weeks of the term, courses may be added or dropped without charge.
- From the fourth through the seventh week of the term, course changes may be made with the permission of the instructor and payment of a $10 processing fee.
- After the seventh week of the term, no course change may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond a student's control (for example, illness). A student petitioning for medical reasons should provide substantiating medical evidence with the petition.
- A student who submits a petition after the seventh week of the term requesting permission to drop a course must attach a statement from his or her faculty adviser to that petition indicating whether or not the advisor supports the request.
- After the eighth week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of **W** (Withdrawn), and the course will remain on the official transcript.
- After the third week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.

Deadlines for Half-Term Courses

Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add classes after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course. (See **Petition Process, General Petition Form** for information on the procedure.)

Procedures

It is to the student's advantage to make any necessary course enrollment changes as early in the term as possible. Adding new courses early makes it easier for the student to keep up with course work. Dropping an unneeded course early makes room in the course for other students who may need it for their academic programs.

Ideally students evaluate their course work load carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Some procedures required for course enrollment are also required for course enrollment changes. For example, the instructor's permission must be obtained for a course requiring it, and the same forms for special studies courses must be completed. Aside from the procedures listed below for course enrollment changes, all course change forms for nutritional science majors must be signed by the faculty department adviser.

Waiting List: The Office of the College Registrar maintains waiting lists for students who want to enroll in courses that have been filled. Waiting lists are maintained on a first-come, first-served basis without regard to seniority or other factors. To keep their names active on a waiting list, students must **check in person every 48 hours** with the Office of the College Registrar; names of students who do not check in are automatically dropped from the list.

Limited enrollment classes: Students who do not attend the first two class sessions of courses with limited enrollment are automatically dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

There is no charge for course changes completed during the first three weeks of the term. To make course changes during the **first three weeks**, a student takes the following five steps:

1) Obtains a course-change form from the Office of the College Registrar, 146 MVR, or from the Office of Student Services, N101 MVR.
2) Completes the form and takes it to the appropriate office for signature: for human ecology courses, the forms should be taken to the Office of the College Registrar; for courses outside the college, the forms should be taken to the appropriate departmental office in the other college.

3) Makes sure that his or her name is added to the list of enrolled students for a course being added, or removed from the class list for a course being dropped. Asks the person recording the change to sign the optical mark course form.

4) **Submits all signed forms to the Office of the College Registrar, including the forms for out-of-college courses.** Changes are not completed until the signed forms are filed in that office. If a student does not drop a course that he or she no longer attends, the student is in danger of receiving an **F** in the course.

5) Receives carbon copies of each course change form at the time it is submitted. It is important for students to keep these copies to verify later that the forms were filed.

To make course changes during the **fourth through seventh** weeks of the term, a student takes the following steps:

1) Completes the five steps listed above for changes made during the first three weeks.

2) Obtains the instructors' signatures on the course change form for human ecology courses.

3) Pays a $10 fee.

To make course changes **after the seventh week** of the term, a student must file a general petition form. (See the section below, **Petition Process**.) Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

In absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology.

To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing may study in absentia but will not receive transcript credit until they have been returned to good standing by the Committee on Academic Status. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.

In absentia petition forms are available in the Office of Student Services, N101 MVR. The student completes the form, has it signed by his or her faculty adviser, attaches catalog descriptions for the courses that will be taken, then submits the form to the Office of the College Registrar, 146 MVR.

Students receive notice of the petition decision by means of a letter from the college registrar. If the petition is granted, students also receive a form with the letter which must be completed and returned with the fee of $15 to the Office of the College Registrar to complete in absentia registration. If the in absentia study is undertaken during the summer, the $15 fee is charged only if the summer study is for more than 8 credit hours.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. A student's petition for more than 15 credits in absentia may be allowed under the following conditions: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements for his or her major. If in absentia credit is sought for a modern foreign language in which the student has done work, approval of the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be obtained. The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades to the office of the College Registrar in the College of Human Ecology. Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted **only** for those courses with grades of C- or better. Only credits (not course names and grades) for in absentia study appear on the Cornell University transcript.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by requesting an extension in writing from the Office of the College Registrar.

A student considering a leave of absence is urged to discuss plans with a counselor in the Office of Student Services, N101 MVR. The counselor can supply the necessary forms for the student to complete and file with the Office of the College Registrar, 146 MVR.

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

Withdrawal

A withdrawal is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Student Services and the Office of the College Registrar. A student considering such an action is urged to discuss plans with a counselor in the Office of Student Services, N101 MVR.

In some instances a student may be given a withdrawal by the Office of the College Registrar. A student who leaves the college without an approved leave of absence or does not return after the leave has expired will be given a withdrawal after the seventh week of the term in which he or she fails to register.

A student who has withdrawn from the college or who has been given a withdrawal by the Office of the College Registrar and who wishes to return at a later date must reapply through the Committee on Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

Petition Process

The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the **Course Enrollment Changes** section above for some of the important deadlines. If unsure about a deadline, check with a counselor in the Office of Student Services, N101 MVR, or with the Office of the College Registrar, 146 MVR.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor in the Office of Student Services or with the college registrar.

Students may appeal petitions denied by the college registrar to the Committee on Academic Status. Students who appeal a denied petition must attach a statement from the student's faculty adviser before CAS will consider the appeal.

Two kinds of petition forms are available. The uses for both forms are described in the *Human Ecology Student Guide*.

General Petition Form

The general petition form is available in the Office of Student Services, N101 MVR, and in the Office of the College Registrar, 146 MVR. After completing the form, submit it to the Office of the College Registrar. Students learn the result of the petition process for the general petition form by checking their mail folder in the student lounge of MVR.

In absentia Petition Form

The in absentia petition form is available in the Office of Student Services, N101 MVR, and in the Office of the College Registrar, 146 MVR. After completing the form, submit it to the Office of the College Registrar. In absentia petitions must have attached to them the catalog descriptions of the courses for which credit is requested from the other institution. In absentia petition decisions are sent to students via the U.S. postal service.

GRADES

See the "Grading Guidelines" section for information on the official university grading policies.

S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in the *Cornell University: Courses of Study*. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C– or better; for work below that level, a U must be given. No grade point assignment is given to S, and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives an S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the Dean's List must take at least 12 credits for the usual A–F grades.

Only juniors and seniors may take an S-U grade in courses in which the grade of S or U is optional; however, sophomores may take courses in which *only* the grade of S or U is offered. A student may take no more than four courses (or 12 credits) on an S-U basis during his or her college career; however, more than one S-U course can be taken in one semester. S-U courses may be taken only as electives or in the 15 credits required in the college outside the major unless the requirements for a specific major indicate otherwise. Freshmen enrolled in English 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the freshman writing seminar requirement.

To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis, then obtain the instructor's permission and signature on a special S-U form. The student files the S-U form and completes an add/drop/change form in the Office of the College Registrar before the end of the third week of the term. After the third week of the term, students must petition the college registrar to change S-U grading status, but such petitions may not be granted. Forms are available in the Office of the College Registrar and in the Office of Student Services.

Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete.

Beginning fall 1984, a grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete will be automatically converted to an F.

When a student wants to receive a grade of incomplete, a conference should be arranged with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called *explanation for reporting a final grade of* **F** *or incomplete*, which has been signed by both the instructor and the student, must be submitted by the instructor. This form is submitted with the final grade sheets whenever a grade of incomplete is given.

This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course.

If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing part of the form and turning it in to the Office of the College Registrar with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Office of the College Registrar to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears on the student's official transcript, with an asterisk and the final grade received, for the semester in which the student was registered for the course.

A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Office of the College Registrar (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

NOTE: Grades received more than three weeks after the end of a term are NOT computed in the student's term average when computing the Dean's list. Therefore, a student who feels a missing grade or a grade change will make them eligible for the Dean's list must have that grade reported to the Office of the College Registrar no later than the end of the third week after the term has ended. For purposes of this rule, the last day of final exams is the last day of the term.

ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits with letter grades other than S or U and who have a semester grade point average of 3.5 or above. No student who has received an F or U in an academic course will be eligible.

Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of not less than B. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected.

Bachelor of Science with honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and Family Studies and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division.

Bachelor of Science with distinction recognizes outstanding scholastic achievement. Consideration will be given to seniors whose academic standing at the end of seven semesters is in the top 10 percent of the graduating class. The honor is conferred on those seniors who are in the top 5 percent of the class after grade point averages have been adjusted by including grades for transfer work and after grades earned in the fifth, sixth, and seventh terms have been given double weighting in the final average. The graduating class includes students who will complete requirements for Bachelor of Science degrees in January, May, or August of the same calendar year.

To be eligible for consideration, transfer students must have completed 45 credits at Cornell. In determining the academic standing of a transfer student, previous work taken at another institution is included in the computation of the student's academic average. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, **Phi Kappa Phi**, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines.

To be eligible for membership students must rank in the top ten percent of the senior class, or in the top five percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

NONDEPARTMENTAL COURSE

100 Critical Reading and Thinking
Fall, spring, or summer. 2 credits. Enrollment limited. Priority is given to freshmen and sophomores; juniors and seniors are admitted with permission of the instructor. S-U grades only.

Fall and spring: sec, T R 10:10 or 11:15, plus two 1-hour labs to be arranged. H. Selco.

The objective of this course is to enable students to increase critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and learning skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

INTERDEPARTMENTAL COURSES

Field and International Study Program

S. Beck, director; R. Bounous, D. Giles, F. McCarthy, S. Gaber

Field Study

Field study enables students to learn from participation in a community and organizational setting and from critical reflection on that experience through discussion, reading, and writing. This process of integrating theory with practice distinguishes experiential education. Students earn credit by participating in internships and community-based research.

The Field and International Study Program (159 Martha Van Rensselaer Hall) offers courses in pre-field preparation and field-based courses with an interdisciplinary problem-solving approach to social issues. Field study programs are located in the Ithaca area, New York City, and Washington, D.C., with other opportunities possible through arrangements with Field and International Study Program faculty. Courses are open to registration by all Cornell students.

International Study

Study abroad provides students with an opportunity to add an international dimension to their human ecology program through course work focusing on international problems and intercultural understanding and through sponsored programs of study abroad for which credit may be earned. Course work in a foreign institution will, in general, be planned to increase knowledge of the people and institutions of the country concerned; fieldwork may provide guided experience in family, community, or agency situtions of the country concerned and in an area related to individual student interest in human ecology.

Opportunities for study abroad are available for human ecology students in several ways: through Cornell Abroad, through U.S. college-sponsored programs abroad, and through direct enrollment in a foreign university. Information and applications for study abroad are available in the Field and International Study Program office (MVR 159).

100 Skills for Learning in the Field
Fall or spring. 2 credits. Prerequisite: permission of instructor.

First 7 weeks of semester; W 1:30–4:25. Fall or spring. R. Bounous.

This course trains students to become more effective field learners and enables them to understand and cope with the complex demands of a field placement. Topics include experiential learning, cross-cultural communication, ethnocentricism and cultural relativism, participant observation, investigative interviewing, critical thinking, understanding nonverbal communication, identifying sources of information in the community, and analyzing verbal presentations. All of the concepts are applied through work assignments.

200 Preparation for Fieldwork: Perspectives in Human Ecology
Fall or spring. 4 credits. Limited to 25 students per section. Prerequisite: permission of instructor. Required of all students planning to do FIS 400-level field study or research.

T R 10:10–12:05 or 2:30–4:25. D. Giles.

Introduces students to skills essential for field study, internships, community research, and other experiential learning courses. This course focuses on understanding the multiple cultural and social settings that students will encounter in the small group, organizational, and community contexts of their field study. Through a cycle of active learning and reflection, students gain experience in analysis of assumptions and biases, participant observation and interviewing skills, effective verbal and non-verbal communication, and group dynamics. By structuring and reflecting upon their own learning, students are prepared for self-directed, experience-based learning that is the core of field and international study. Working in small task groups, students apply and synthesize these skills in community-based projects. Previous semesters' projects included "Collegetown Redevelopment," "Long-Term Health Care," "Recycling Behavior in Student Neighborhoods," and "Rural Housing Needs."

210 Preparation for International and Cross-Cultural Experience
Fall or spring. 3 credits. Not open to freshmen. Prerequisite: permission of instructor; preference given to students planning to study abroad or participate in international internships.

T R 12:20–1:40. F. McCarthy.

The course has two main objectives. One is to prepare students for international and cross-cultural experience through the application of observation and interviewing skills, analysis of social and cultural factors in selected countries, and consideration of key issues such as poverty, inequality, industrialization, and class and gender exploitation; the second is to link social factors to the use and distribution of natural resources and provide a framework for understanding the social control of resources and its effects on the life chances and experience of people. Class activities include discussion, lectures, field experiences, skill development, and a small-group presentation. Students will develop interviewing and observation skills through projects that will focus on the countries in which they intend to study or intern. Strongly recommended for students planning to study abroad, to do international internships, or to take FIS 410. FIS 210 may be substituted for FIS 200 with permission of instructor.

400 Directed Readings
For study that predominantly involves library research and independent reading.

401 Empirical Research
For study that predominantly involves data collection and analysis.

402 Supervised Fieldwork
Fall, spring, or summer. 3–15 credits. Limited to 20 students. Prerequisite: FIS 200. Enrollment by permission of instructor. Applications due in the Field and International Study Office during the preceding semester's course enrollment period.

Hours to be arranged. Faculty.

Supervised field study involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice. Credit is variable to allow for combined departmental and interdepartmental sponsorship and supervision.

Information on placement opportunities is available in the Field Study Office, 159 Martha Van Rensselaer Hall. Students should begin planning at least a semester in advance for field study.

403 Teaching Apprenticeship
For study that includes assisting faculty with instruction.

406 Sponsored Field Learning or Internships
Fall or spring. 6–15 credits. Limited to 15 students; intended for juniors and seniors. Prerequisite: FIS 200. Enrollment by permission of instructor. Applications are due in the Field and International Study Office during the preceding semester's course enrollment period.

Hours to be arranged. S. Beck.

A course for students seeking interdepartmental sponsorship and supervision of participation in structured, off-campus field experiences or internships operated by non-Cornell or non-credit-granting institutions or agencies. Completion of course requirements is signified by a formal presentation to the college community upon return to Cornell (graduating seniors may make special arrangements). Credit is variable to allow students to arrange for combined interdepartmental and departmental sponsorship and supervision.

Information on course enrollment and internship opportunities is available in the Field Study Office, 159 Martha Van Rensselaer Hall. Students should begin planning more than one full semester before leaving campus for an internship.

407 Field Experience in Community Problem Solving
Fall or spring. 6–15 credits. Limited to 25 students; intended for juniors or seniors. Prerequisite: FIS 200. Enrollment by permission of instructor. Applications due in the Field and International Study Office during the preceding semester's course enrollment period.
Sem, R 1:30–4:25; hours in the field to be arranged. Faculty.
A course designed to provide students with a structured, closely supervised field experience encompassing an ecological approach to human problem solving. Interdepartmental teams of up to fifteen students will contract with community businesses, agencies, and organizations as special-projects staff members delegated primary responsibility for problem solving in a designated area of agency need. Students spend twenty hours each week working directly on the projects, three hours each week in seminar, and additional time completing seminar readings and assignments. The seminar is aimed at assisting students in systematically analyzing the complex factors that affect the implementation of new programs, policies, or projects in upstate community settings. Set in this context, the field placement is viewed as a case study in the ecology of organizational decision making.

Supervision of all projects is provided jointly by the course instructor and appropriate agency personnel. In addition, each project is subject to review twice during the semester by an oversight committee composed of community and faculty representatives with relevant expertise. Completion of the course is signified by formal presentation of project results to the contracting organization's staff, board of directors, or other appropriate administrative units and to members of the oversight committee, together with submission of an academic analysis of the implementation process to the course instructor.

Credit is variable to allow students to arrange for combined interdepartmental and departmental sponsorship and supervision.

Information on projects is available during course enrollment in the Field and International Study Office, 159 Martha Van Rensselaer Hall. Students may assist in the planning and project-identification process by making their interests known to the office a full semester before intended enrollment in the course.

408 The Ecology of Urban Organizations: New York City Field Experience
Fall or spring. 9–15 credits. Limited to 25 students; intended for juniors and first-semester seniors. Prerequisites: FIS 200 and permission of instructor. Applications due in the Field and International Study Office during the preceding semester's course enrollment period. Students may enroll in FIS 408 for up to 15 FIS credits. Information on placements is available in 159 Martha Van Rensselaer Hall. Students should begin planning at least one semester before they apply to this course.
K. Reardon.
A course designed to enhance students' understanding of organizational behavior and decision making through a program that integrates internship experience with classroom learning. Students, participating as interns in a variety of New York City agencies and firms, are challenged to examine interpersonal, institutional, interorganizational, and environmental factors that shape professional practice and human problem solving in formal organizations. From an ecological perspective, students explore how such factors as employee motivation, organizational culture, formal structure, communication patterns, leadership style, technology, demographics, politics, and regional economics influence patterns of staff interactions, management policy, and organizational initiatives. Student placements exist in advertising, communication, fashion design, financial services, government, health care, human services, retailing, and many other fields. Weekly seminars include lectures, discussions, simulations, speakers, cultural events, and field trips to neighborhoods and organizations throughout the New York metropolitan area.

409 The Ecology of Organizations in the Upstate Region: Ithaca-Area Field Experience
Fall or spring. 4–15 credits. Limited to 25 students. Prerequisites: FIS 200 and permission of instructor. Applications are due in the Field and International Study Office during the preceding semester's course enrollment period. Weekly seminar meets concurrently with HSS 414.
Sem, T 1:30–4:25; hours in the field to be arranged. Faculty.
A variable-credit course designed to give students an in-depth understanding of contemporary organizations and the forces that shape and influence them. The course combines participation in a community setting within commuting distance of the Cornell campus with a weekly seminar that provides the skills, concepts, and theories necessary for understanding organizations and the critical issues they face. Students can arrange for combined interdepartmental and departmental sponsorship and supervision.

Information on placement opportunities is available in the Field and International Study Office, 159 Martha Van Rensselaer Hall. Students should begin planning at least a semester in advance for field study.

410 Advanced Seminar: Analysis of International Experience
Fall or spring. 3 credits. Prerequisites: experience abroad and permission of instructor.
T R 2:30–4. F. McCarthy.
This course provides a context for the integration and interpretation of cross-cultural experience for students returning to the United States after extended periods abroad. Building on an understanding of international processes shaping and directing an interdependent world, the course relates personal experience to socioeconomic factors structuring living situations at home and abroad. Among the issues to be pursued are reentry and (re)acculturation, patterns and conditions of work, relationships and patterns of exchange, ideology and social explanation, personal autonomy and institutional contexts, power and authority, gender exploitation and oppression, and forms of response. The course will feature readings, special projects, presentations, and discussions encouraging and facilitating the analysis and understanding of individual cross-cultural experience. The purpose of the course is to encourage the analysis and integration of cross-cultural experience in relation to international processes, academic interests, and personal concerns of students.

CONSUMER ECONOMICS AND HOUSING

W. K. Bryant, chair; J. Gerner, graduate faculty representative; P. Zorn, undergraduate advising coordinator; R. Avery, W. K. Bryant, P. Chi, F. Firebaugh, J. Gerner, N. Glasgow, L. Gosse, R. Heck, J. Hogarth, L. Jacobsen, R. Key, E. S. Maynes, D. Mont, P. Pollak, J. Reschovsky, N. C. Saltford, J. Swanson, E. Trzcinski, P. Zorn.

110 Introduction to Consumer Economics
Fall. 3 credits. S-U grades optional. Students who have taken Economics 101 or another introductory microeconomics course should not register for this course.
M W F 9:05; sec. to be arranged. P. Zorn.
Principles of microeconomics with an emphasis on applicability to consumers. The course acquaints students with the basic economic models of household and firm behavior and their interaction in markets. The goal is to provide students with the ability to analyze the economic implications of consumer decisions and public policies.

111 Introduction to Consumer Economics II
Spring. 3 credits. S-U grades optional. Students who have taken Economics 102 or another introductory macroeconomics course should not register for this course.
M W F 11:15. R. Avery.
Principles of macroeconomics with an emphasis on the relevance of economic policies to consumers and households. Topics include national income accounting, aggregate demand and aggregate supply, the role of monetary and fiscal policy in confronting the problems of inflation and unemployment, and international economics.

210 Intermediate Microeconomics
Fall. 4 credits. Prerequisite: CEH 110 or equivalent. Course packets on sale in department at approximate cost of $15.
Lecs, M W F 10:10 or 11:15; disc, W 2:30 or 3:35 or R 2:30 or 3:35. Two evening prelims. L. Gosse.
Theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; risk.

212 Family Resource Management
Fall. 3 credits. Not open to freshmen. S-U grades optional. Class notes for sale at Kinko's.
M W F 2:30. R. Key.
An introduction to management concepts and theories of efficient resource utilization from a social systems perspective. The focus is on the family's use of resources to attain goals and meet demands. A systems framework is used to analyze family managerial behavior throughout the life-cycle and specific situations such as single-parent, blended, and low-income families.

232 Consumer Decision Making
Spring. 3 credits. Prerequisite: CEH 110 or permission of instructor.
M W F 10:10. E. S. Maynes.
This course is designed to help individuals make more effective choices as consumers. In pursuit of this goal, the course introduces the student to relevant concepts, theories, and research from economics, consumer economics, marketing, and statistics. Topics covered include informationally imperfect markets, assessing consumer information, seeking redress, bargaining, dealing with inflation, decision-making rules, the concept and measurement of quality, and consumerism. Students prepare price-quality maps of local consumer markets. A second part of the course introduces the student to the concept of consumer sovereignty and assesses the performance of markets as critiqued by economists and consumerists.

233 Marketing and the Consumer
Spring. 3 credits. Prerequisite: CEH 110 or equivalent.
T R 8:40–9:55. Staff.
This course introduces students to marketing—the processes and institutions by which products are conceived, tested, priced, advertised, distributed, and evaluated. Case studies and outside lecturers are used to impart reality to the course. Emphasis is given to the viewpoint of both the seller and the consumer. Students are required to undertake a paper involving a marketing problem.

247 Housing and Society
Spring. 3 credits. S-U grades optional.
M W F 11:15. Two evening prelims.
P. Chi.
A survey of contemporary American housing issues as related to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and governmental actions to alleviate housing problems.

300 Special Studies for Undergraduates
Fall or spring. Credits to be arranged.
Hours to be arranged. Staff.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake, on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

301 Special Studies for Undergraduates
Fall or spring. 1 credit. Prerequisite: a course in introductory microeconomics and coregistration in a CEH 300- or higher-level course. S-U grades only.
Six 1-1/2 hour lecs, weeks 2–4 of term.
Hours to be arranged. Staff.
Topics covered will be utility maximization, marginal analyses, derivation of demand curves, price and income effects, present value, and other relevant topics.

315 Personal Financial Management
Fall. 3 credits. Preference given to human ecology students; limit 200; not open to freshmen. S-U grades optional.
M W F 9:05. Evening prelim. R. Heck.
The study of personal financial management at various income levels and during different stages of the family life cycle. Topics include the use of budgets and record keeping in achieving family economic goals, the role of credit and the need for financial counseling, economic risks and available protection, and alternative forms of saving and investment.

325 Economic Organization of the Household
Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.
M W F 1:25. Evening prelims.
W. K. Bryant.
Theories and empirical evidence about how households spend their resources are used to investigate the ways they alter the amounts and proportions of time and money spent in various activities, their size, and their form in response to changing economic forces.

330 The Economics of Consumer Policy
Fall. 3 credits. Open to juniors, seniors, and graduate students. Prerequisites: CEH 110–111 or permission of instructor. Class packets on sale at Campus Store.
T R 10:10–11:25. Staff.
Students are acquainted with the basic approaches to consumer policy and perform economic analyses of specific consumer policy issues. Three specific areas of policy intervention are addressed: externalities and public goods; anti-trust and regulation of "Natural" monopolies; and markets characterized by imperfect information. Policy discussions are reinforced through the use of specific real-world examples. Students are required to submit a research paper focusing on one specific area of policy intervention discussed in class.

341 The Economics of Consumers' Housing Decisions
Fall. 3 credits. Prerequisite: CEH 110 or equivalent. Recommended: CEH 210 or equivalent. S-U grades optional.
T R 1–2:15. P. Zorn.
This course is designed to acquaint students with the economic issues associated with consumers' housing decisions. The focus of the course is on the development of economic models that characterize these decisions, although attention is also paid to the empirical support for the models. The specific decisions considered include: housing consumption, mobility, tenure choice, home improvement, housing maintenance, and mortgage choice. As time permits, the issue of discrimination in the mortgage and housing markets is also considered.

348 Household and Family Demography
Spring. 3 credits. Prerequisite: RSOC 101 or equivalent. S-U grades optional. Students cannot receive credit for both CEH 348 and CEH 148.
T R 10:10–11:25. L. Jacobsen.
This course identifies important trends in U.S. household and family structure, examines the demographic, social, and economic forces behind recent changes in household structure, and evaluates current and future consequences and policy implications of these changes for both households and society. Topics include historical and contemporary trends in the size and composition of families and households, trends in marriage, divorce, remarriage, contraception, childbearing, and living arrangements, and interrelationships between household division of labor. Policy implications of all of the above are also considered.

355 Wealth and Income
Fall. 3 credits. Open to sophomores, juniors, and seniors; graduate students may elect to audit and write a research paper for 1 to 2 credits under CEH 600. Prerequisites: CEH 110–111 or equivalent. S-U grades optional.
M W F 1:25. J. Gerner.
The wealth and income positions of American households are defined and described and their economic determinants discussed along with the impacts of tax and expenditure policies and the economics of the political positions for and against such policies.

356 The Economics of Welfare Policy
Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.
M W F 9:05. D. Mont.
Using the tools of economics, this course examines welfare policy. Included are an examination of which populations are affected, what behavior various policies are likely to engender, and how much income redistribution occurs as a result of various welfare policies. Also evaluated are various proposals for welfare reform.

365 Economics of Consumer Law
Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.
M W F 1:25; sec to be arranged. Staff.
Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, products liability, and accident law, as well as of the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

400–401–402 Special Studies for Undergraduates
Fall and spring. Credits to be arranged. S-U grades optional.
Hours to be arranged. Staff.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of CEH not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake, on a form available from the Counseling Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

400 Directed Readings
For study that predominantly involves library research and independent reading.

401 Empirical Research
For study that predominantly involves data collection and analysis.

402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

[411 Time as a Human Resource
Spring. 3 credits. Prerequisite: one course in sociology. Recommended: one course in microeconomics. S-U grades optional. Class notes for sale at Kinko's. Offered alternate years. Not offered 1990–91. Next offered 1991–92.
T R 10:10–11:25. R. Key.
A set of historical and contemporary readings examining time management concepts and applications. Investigates changes in time use of family members in relation to social change. Explores meanings of market work, household work, and leisure in the context of family choices at different stages of the life cycle. Investigates current research concerning time allocations made by family members to household and market work. Examines use of time as a measure of household production.]

415 Financial and Human Capital Investments
Fall. 3 credits. Prerequisites: CEH 110 or 111; CEH 315.
T R 10:10–11:25. R. Heck.
This course approaches investment decisions from the viewpoint of the individual consumer and/or household. Investigates a broad array of investment choices including: human capital investments in one's self and other family members; real estate investments; small businesses; and the traditional financial investments such as bonds, stocks, and mutual funds. Analyzes each investment choice within a general cost/benefit framework using basic economic principles or concepts of imputed values/costs; time costs; after-tax values; expected values (risk); present and future values, and in light of the goals and financial plan of the household.

[431 Consumer Behavior
Fall. 3 credits. Open to seniors and graduate students. Prerequisite: CEH 110 or equivalent.
T R 12:20–2:15. Staff.
This course applies the concepts, models, and research techniques of the behavioral sciences to the explanation and prediction of consumer behavior. The student is exposed to representative theories, models, problems, and research techniques. Special efforts are made to ensure that students encounter problems approached from both seller and consumer viewpoints as well as from the disciplines of economics and social psychology. Once a week graduate students and undergraduates meet in separate sessions to review and appraise representative pieces of consumer behavior research.]

433 Consumerism and the Consumer Affairs Professional
Spring. 3 credits. Prerequisite: junior or senior status. Offered alternate years.
T R 1:25–2:40. Staff.
This course is intended for students who in the future might become part of or come into contact with (1) consumerism, (2) the consumer movement, and (3) the consumer affairs profession. The course analyzes interactions among consumers, the consumer movement, and consumer representatives in business and government. The history, present state, and probable future and function of consumerism and the field of consumer affairs will be treated. Extensive use will be made of presentations by consumer affairs professionals from corporations, consumer organizations, and government.

434 Financial and Credit Markets and Policy
Spring. 3 credits. Prerequisite: CEH 111. S-U grades optional.
T R 8:40–9:55. R. Avery.
This course will look at the structure of financial markets in the United States. A number of different markets and institutions will be examined including: banks, savings and loans, insurance companies, pension funds, government bond markets, credit unions, and finance companies. The principles underlying government regulation of these institutions will be explored, as well as management problems and concerns. The emphasis will be on learning the institutional environment, not on personal finance.

444 Housing for the Elderly
Fall. 3 credits. Prerequisite: CEH 247 or permission of instructor. S-U grades optional.
T R 2:30–3:45. P. Chi.
This course focuses on the housing needs of the elderly, their current housing conditions—living arrangements, tenure patterns, housing quality and housing expense burden—and socioeconomic and psychological aspects of the housing environment of the elderly. Attention is also given to government housing programs for the elderly, integrating housing and related social service activities, and options for alternative housing.

445 Housing, Neighborhood, and Community
Spring. 3 credits. Prerequisite: CEH 247 or permission of instructor. S-U grades optional. Offered alternate years.
M W F 2:30–3:45. P. Chi.
A study of interrelationships between housing conditions, neighborhood transition, and community development. Both theoretical and empirical perspectives on residential patterns, neighborhood change, and community power will be examined. Special attention is also given to government policies that deal with fair housing, residential segregation, neighborhood revitalization, and community development.

448 Housing Programs and Policy
Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.
M W F 9:05. J. Reschovsky.
An analysis of government tax, regulatory, and expenditure programs that affect the housing market. Programs and policies at the federal, state, and local levels will be investigated. Detailed consideration will be given to assisted housing programs, community development activities, tax policies, housing finance, fair housing, zoning, and other governmental activities that deal with housing. Economic theory will be used to evaluate these policies.

450 Economics of Health, Health-care Expenditures, and Health Policy
Fall. 3 credits. Prerequisite: CEH 110 or equivalent.
T R 1–2:15. Staff.
A study of the health-care market as distinguished from other markets by consumers' relative information disadvantage. Topics include a theoretical and institutional analysis of the health-care system and its role in the consumer decision-making process, conflicts of interest between institutional objectives of health-care providers and public and private health-care insurers as they relate to inefficient provision of medical services, and the role of government intervention and alternative systems of medical care provision in reducing medical costs and increasing accessibility.

485 Evaluation of Public Policies
Fall. 3 credits. Prerequisites: CEH 110 or equivalent and an introductory statistics course. Recommended: CEH 210 or equivalent.
M W F 10:10. J. Reschovsky.
This course provides an introduction to the techniques used to evaluate public policies and programs. It will begin with a review of basic concepts in evaluative research: causal inference, validity, and experimental and quasi-experimental designs. The remainder of the course will concentrate on the tools of cost benefit analysis as a device for evaluating the effectiveness of government programs. Discussions of the techniques, issues, and problems of cost benefit analysis will be highlighted by examples of its use in a variety of public policy areas. Economic analysis and statistical techniques will be emphasized.

600 Special Problems for Graduate Students
Fall and spring. S-U grades optional.
Hours to be arranged. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the head of the department and the instructor.

601 Research Workshop in Consumer Economics and Housing
Fall and spring. 1–3 credits. S-U grades only.
W 12:20. Staff.
Research seminar designed to provide a forum for graduate students in consumer economics and housing to present their own thesis research at an early stage and to provide critical input for other graduate students.

602 Family Resource Management Concepts
Fall. 3 credits. Prerequisite: graduate standing. Class notes for sale at Kinko's.
T R 2:30–3:45. R. Key.
Introduction at the graduate level to theories and empirical research on family resource allocation behavior. Particular attention is paid to problems associated with the modeling and measurement of theoretical concepts.

603 Economics of Consumer Demand
Fall. 3 credits. Prerequisite: CEH 210, or Economics 311 or 313 or concurrent enrollment in one of the three. S-U grades optional.
M W F 10:10. J. Gerner.
Introduction at the graduate level to theory and empirical research on household demand, consumption, and savings. Particular attention is paid to problems associated with the demand for consumer durables, with applications to housing.

604 Economics of Household Behavior
Spring. 3 credits. Prerequisite: CEH 210 or Economics 311 or 313 or concurrent enrollment in one of the three. S-U grades optional.
M W F 1:25. D. Mont.
Examination of theoretical and empirical literature concerning market work, human capital formation, household production, and family formation.

605 Information and Regulation
Spring. 3 credits. Prerequisite: CEH 603. Class packets on sale at Campus Store.
M W F 2:30. Staff.
A survey of the problems and policies accompanying informational failures and other market failures with regard to consumer well-being. Governmental regulation of products, of producers, of consumers, and of prices is examined. Antitrust activity, disclosure requirements, advertising restrictions, and regulatory agencies are examined in terms of their ability to serve the public interest or to serve special interests. Economic analysis, rather than institutional structure, is emphasized.

606 Demographic Techniques
Fall. 3 credits. S-U grades optional.
T R 12:20–1:35. L. Jacobsen.
This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, standardization and decomposition of differences in rates, life-table analysis, cohort analysis, sources and quality of demographic data, population estimation and projection, and stable population models. Special data sources and methodological issues pertaining to population dynamics and to changes in families and households are also considered.

[607 Econometric Topics
Spring. 3 credits. S-U grades only. Prerequisite: Ag Econ 710 or equivalent. Offered alternate years. Not offered 1990–91. Next offered 1991–92.
M W 2:30–3:45. R. Avery.
An advanced econometric course consisting of two separate modules. The first module will cover household survey methodology including sample design, questionnaire development, data weighing, and imputation. The second module will focus on limited dependent variable models. Linear probability, logistic probit, and tobit models will be examined as well as problems of sample section bias.]

[702 Household Resource Allocation
Spring. 2 credits. Prerequisite: CEH 602 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91. Next offered 1991–92.
Hours to be arranged. Staff.
Family resource allocation is studied in the context of decision processes, and the behavior of decision makers. The relationship of decision making to family management is also explored.]

706 Fundamentals of Housing
Fall. 2 credits. Prerequisite: graduate standing or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91. Next offered 1991–92.
M W 2:30–3:45. P. Chi.
A survey of housing as a field of graduate study. Consideration of the spatial context and institutional setting of housing, the structure and performance of the housing market, housing finance, the house-building industry, the nature and impact of government housing programs, and the social and economic effects of housing regulations.]

703 Consumption and Demand Analysis
Spring. 2 credits. Prerequisite: intermediate microeconomics, CEH 603, and CEH 604; or permission of instructor. S-U grades optional. Offered alternate years.
Offered second 7 weeks of term.
R 1–4:00. W. K. Bryant.
Major developments in the theory of household behavior with applications to consumption, saving, demand, and expenditure behavior of households. Complete demand systems are surveyed along with theoretically justified specifications of price, income, and demographic variables. The empirical implications of household production for demand are examined. If time permits empirical implications for demand of bargaining models of the household are discussed.

[704 Family Economics
Fall. 2 credits. Prerequisite: CEH 604 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
Hours to be arranged. D. Mont.
This course examines the public sector policies that influence family time-allocation decisions. Particular attention will be given to the time allocated by female family members to non-household activities and how these activities are influenced by outside economic forces and by internal family characteristics.]

705 Consumer Policy
Fall. 2 credits. Prerequisite: intermediate microeconomics. S-U grades optional. Offered alternate years.
Offered first 7 weeks of term. W 2–4:25.
J. Reschovsky.
An examination of consumer policy in the United States. An interdisciplinary approach will be used in which the theoretical rationale for consumer protection laws, the political processes that mold the shape of current consumer policy, and the administrative, legal, and organizational constraints under which consumer policies operate are explored. In addition, techniques for the economic evaluation of government programs and regulations will be taught and applied to current consumer-protection policies.

[707 Advanced Demography
Spring. 2 credits. Prerequisite: CEH 606 or equivalent. S-U grades optional. Offered alternate years. Not offered 1990–91.
T 3–5:25. L. Jacobsen.
This course examines the size and composition of households and families in the United States, variations in family and household structure among major subgroups, and changes in family and household structure over time and over the life cycle. The demographic processes underlying changes in families and households are examined separately, including marriage, fertility, mortality, and divorce. The determinants of changes in these underlying processes and in family and household structure are analyzed, along with the consequences of these changes for housing demand and consumption, women's labor force participation, household divisions of labor, living arrangements, and economic well-being and poverty.]

708 Family Finance
Fall. 2 credits. Prerequisites: an introductory statistics course, CEH 315 or equivalent, and CEH 602. S-U grades optional. Offered alternate years.
W 2–4:25. R. Heck.
The study of management theory applied to the financial dimension of the household. Resource use is examined, emphasizing financial resources such as income, expenditures, savings, credit, and investments. A critical examination of current theories in the area of management and a survey of literature in the fields are included.

899 Master's Thesis and Research
Fall and spring. Prerequisite: permission of the chair of graduate committee and instructor. S-U grades optional.
Graduate faculty.

999 Doctoral Thesis and Research
Fall and spring. Prerequisite: permission of the chair of graduate committee and instructor. S-U grades optional.
Graduate faculty.

DESIGN AND ENVIRONMENTAL ANALYSIS COURSES

W. R. Sims, chair; F. D. Becker, graduate faculty representative; M. Boyd, undergraduate advising coordinator; A. Basinger, R. Beckman, A. Bushnell, S. Danko, P. Eshelman, C. E. Garner, A. Hedge, J. Laquatra, J. A. McCarty, G. C. Millican, E. R. Ostrander

101 Design I: Fundamentals
Fall. 3 credits. Each section limited to 18 students. Permission of instructor required. Priority given to interior design majors. Option I majors must take DEA 101 in fall. Approximate cost of materials, $60.
Fall: M W 1:25–4:25, T R 10:10–1:10.
A studio course introducing the fundamental vocabulary and principles of two-dimensional design. Students experiment with the development of form through problem-solving approaches.

102 Design II: Fundamentals
Spring. 3 credits. Interior design students only. Permission of instructor required. Priority given to Option I DEA majors. B– or higher in DEA 101 required to register for this course. Option I majors must take DEA 102 and 115 concurrently. Approximate cost of materials, $200; shop fee, $10.
T R 10:10–1:10. A. Bushnell.
A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

111 Introduction to Design
Spring. 3 credits.
M W F 12:20. R. Beckman.
Introduction to the field of design for students in any academic area. The course reviews the spectrum of design activities, examining various movements in the visual arts and differences among designers in philosophical premises, social and functional roles, and cultural positions. Also examined are how requirements in the built environment are affected by the interaction of people, design, and materials. Lectures and visual material are presented by DEA faculty members and visiting design professionals.

114 Drawing
Spring. 3 credits. Each section limited to 18 students. Priority given to DEA majors. Minimum cost of materials, $50.
M W 1:25–4:25. M. Boyd.
A studio drawing course open to students without previous drawing experience. Focus is on descriptive, design-oriented drawing to improve abilities of visual analysis, develop visual communication skills, and enhance general visual awareness.

115 Drawing for Interior Design
Spring. 3 credits. Interior design students only. Priority given to DEA majors. Option I majors must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $100.
T R 1:25–4:25. A. Bushnell.
A studio drawing course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

117 Drawing the Clothed Figure
Spring. 3 credits. Enrollment limited to 18 students. A basic drawing course is highly recommended. Priority given to TXA Option I students. S-U grades optional. Approximate cost of textbook, $30; minimum cost of supplies, $40.
M W 10:10–1:10. C. Garner.
To improve the student's ability to illustrate two-dimensionally the interaction of draped fabric and the human form and to develop awareness of clothing as a design medium. Emphasis is on development of techniques and skills in selected media necessary for the communication of design ideas.

150 Introduction to Human-Environment Relations
Fall. 3 credits.
M W F 12:20–1:10. F. Becker, A. Hedge, W. Sims.
Introduction to the influence of physical environment on human behavior. Topics include environmental influences on crowding, community, crime, and friendship; environmental needs associated with characteristics such as stages in life cycle, life styles, social class, family structures, and handicaps; person-environment fit for lighting, acoustics, indoor air quality and ventilation, and thermal comfort; introduction to human factors and systems analysis; effects of environment on perception-cognition; user-responsive design; participatory design programming; and post occupancy evaluation.

201 Design III: Basic Interior Design
Fall. 5 credits. Each section limited to 18 students. Prerequisites: DEA 101,102, and 115 (minimum grades of B–.) Recommended: DEA 111 and 150. Coregistration in DEA 203 is required. Minimum cost of materials, $150; shop fee, $10; optional field trip, approximately $100; diazo machine fee, $8.
M 1:25–3:20, W 1:25–4:25, and T R 10:10–1:10. A. Bushnell.
Beginning interior design studio. Focus is on development of basic proficiency in interior design skills. The course is structured around a series of elementary interior and interior-product design problems of 3 to 5 weeks in length.

202 Design IV: Basic Interior Design
Spring. 5 credits. Each section limited to 18 students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 111 and 204. Minimum cost of materials, $120; diazo machine fee, $8.
M 1:25–2:15 and T W R 1:25–4:25. P. Eshelman.
Second interior design studio. Emphasis of the course is on continued development of basic proficiency in design skills through exposure to a selected set of interior and interior-product design problems of limited complexity. Each problem of 3 to 5 weeks duration is structured to emphasize different aspects of the design process.

203 Design Communications
Fall. 1 credit. Priority given to DEA majors.
M 3:20–5:25. S. Danko.
Communication techniques for architectural and interior designers. Students study the various forms of communication used throughout the design process, from programming and conceptualization through construction documentation, and the most effective utilization of those forms. Both verbal and visual presentation methods are stressed.

204 Introduction to Building Technology
Spring. 1 credit.
M 2:30–4:25. W. Sims.
Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems.

210 Responsive Design for the Elderly
Spring. 2 credits. 7-week course. Prerequisite: DEA 150
T R 9:05. E. Ostrander.
The course deals with the rationale, database, and design requirements for creating responsive designs that address elderly user's needs. The literature on conceptual models, theories, and research approaches used to create data-based design requirements and guidelines are investigated. This information should be understood by anyone who intends to design, plan, or manage physical environments that meet the needs of "old" people.

250 The Environment and Social Behavior
Fall. 3 credits. Prerequisite: DEA 150 or permission of instructor.
T R 3:35–5. F. Becker.
A combination seminar-and-lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, communication, community, and crime is explored. Also covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

251 Historic Design I: Furniture and Interior Design
Spring. 3 credits. Prerequisites: DEA 101 and 111. Recommended sequence: DEA 251, 252, and 353.
M W F 9:05. G. C. Millican.
A study of the patterns of historical development and change in architecture, furniture, and interiors from people's earliest expressions to mid–eighteenth century as they reflect the changing cultural framework of Western civilization, excluding America.

252 Historic Design II: Furniture and Interior Design
Fall. 3 credits. Prerequisite: DEA 101. Corequisite: DEA 111. Recommended sequence: DEA 251, 252, and 353.
M W F 9:05. G. C. Millican.
A study of the patterns of historical development and change as revealed through American architecture, furniture, and interiors, 1650–1885. Design forms are considered individually, collectively, and in their historical context as they express the efforts, values, and ideals of American civilization.

261 Fundamentals of Interior Design
Fall. 3 credits. Enrollment limited to 20 students. Intended for nonmajors but open to DEA majors. Minimum cost of materials, $30.
T R 1:25–4:25. G. C. Millican.
A studio course that emphasizes the fundamental principles of design applied to the planning of residential interiors and coordinated with family and individual needs. Studio problems explore choices of materials, space planning, and selection and arrangement of furniture, lighting, and color. Illustrated lectures, readings, and introductory drafting and rendering techniques are presented.

300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged.
Hours to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

301 Design V: Intermediate Interior Design
Fall. 5 credits. Prerequisites: DEA 111,150, 201, 202, 203, and 204. Corequisite: DEA 303. Recommended: DEA 459. Minimum cost of materials, $150; shop fee, $10; optional field trip, approximately $100; diazo machine fee, $8.
T R 10:10–1:10, M 1:25–3:20, or W 1:25–4:25. R. Beckman.
Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, 3 to 5 weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

302 Design VI: Intermediate Interior Design
Spring. 5 credits. Prerequisites: DEA 301 and 303. Corequisite: DEA 304. Minimum cost of materials, $150; shop fee, $10; diazo machine fee, $8.
M T R 1:25–4:25, and W 1:25–2:15.
S. Danko.
Second-semester, intermediate-level interior design studio. Continued emphasis on development of design skills and exposure to generic problem types with an emphasis on communication and construction detailing. National design competitions form the basis for studio projects.

303 Introduction to Furnishings, Materials, and Finishes
Fall. 1 credit.
W 3:30–5:25. P. Eshelman.
Basic understanding of furniture types and systems; interior products and equipment such as work-stations; window, wall, and floor coverings; ceiling and lighting systems; and materials and finishes. Emphasis is placed on criteria for selection of furnishings materials and finishes for typical interior design and facility management problems.

304 Introduction to Professional Practice of Interior Design
Spring. 1 credit.
W 2:30–4:25. A. Basinger.
Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, legal responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

325 Human Factors: Ergonomics–Anthropometrics
Spring. 3 credits. Recommended: A 3-credit statistics course and DEA 150.
T R 9:05–11. A. Hedge.
Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Course includes practical exercises and field project work.

[348 Environmental Graphics and Signing
Spring. 3 credits. Recommended: design background. Limited to 20 students. Approximate cost of materials $50. Not offered 1990. Next offered spring 1991.
M W 10:10–1:10. M. Boyd.
A studio course dealing with both the functional and visual aspects of environmental graphics. Includes projects in interior and exterior graphics, signing, and directional systems.]

349 Graphic Design
Spring. 3 credits. Enrollment limited to 20 students. Recommended: design background. Priority given to DEA majors. Approximate cost of materials, $50.
M W 10:10–1:10. M. Boyd.
The fundamentals of lettering, typography, layout, and presentation techniques. Printing processes and the application of photography and illustration are also covered. A series of projects explores problems typical of the graphic design field.

350 Human Factors: The Ambient Environment
Fall. 3 credits. Recommended: DEA 150.
T R 1:25–3. A. Hedge.
An introduction to human-factors considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. The ambient environment is viewed as a support system that should promote human efficiency, productivity, health, and safety. Emphasis is placed on the implications for planning, design, and management of settings and facilities. Course includes a field project.

[353 Historic Design III: Contemporary Design
Spring. 3 credits. Recommended sequence: DEA 251, 252, and 353.
M W F 11:15–12:05. G. C. Millican.
A historical study of the emergence and development of contemporary design, 1885 to the present. Examines the social, economic, technical, and stylistic forces that shape the design forms of the present and includes a critical analysis of selected examples of architecture, interiors, and furniture.]

361 Residential Design
Spring. 3 credits. Approximate cost of materials, $30.
T R 9:05–12:05. G. C. Millican.
An introduction to residential architectural design. While designing a solution for specific occupant needs, students consider site, orientation, climate, and materials. Drafting work consists of plans, elevations, perspectives, and presentation of solutions. Lectures, discussions, and required readings.

400–401–402–403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the Counseling Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

400 Directed Readings
For study that predominantly involves library research and independent reading.

401 Empirical Research
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

403 Teaching Apprenticeship
For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

454 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor. Letter grades only. Minimum cost of materials, $100.
T R 1:25–4:25. W. Sims.
For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, space forecasting, space allocation policies, programming, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered.

455 Research Methods in Human–Environment Relations
Spring. 3 credits. Prerequisites: DEA 150 or permission of instructor, and a statistics course.
M W F 9:05. E. Ostrander.
The course develops the student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

459 Programming Methods in Design
Fall. 3 credits.
M W F 11:15. E. Ostrander.
Introduction to environmental programming. Emphasis on formulation of building requirements from user characteristics and limitations. Diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users and operators. Methods include systems analysis, soft system, behavior circuit, behavior setting, and user characteristic approaches. Selection of appropriate methods to suit problems and creation of new methods or techniques are emphasized.

499 Design VII: Advanced Interior Design
Fall and spring. 6 credits. Option I majors must take 6 credits of DEA 499. They are strongly encouraged to satisfy the basic 6-hour DEA 499 requirement in the fall semester and to continue with an additional studio in the spring semester. Prerequisites: DEA 301, 302, 303, and 304. DEA 302 and 499 may not be taken concurrently. Minimum cost of materials, $150; diazo machine fee, $8 per semester.
M T W R 1:25–4:25. Department faculty.
A comprehensive design–problem-solving experience involving completion of an advanced interior design problem selected by the student and approved by the instructor. The course consists of five phases of three to four weeks each: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional quality design presentation.

600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
Independent advanced work by graduate students recommended by their chair and approved by the head of the department and instructor.

645 Design Process and Methods
Spring. 3 credits. Limited to 15 graduate and advanced undergraduate students. Prerequisite for undergraduates: permission of instructor.
T R 11:15–12:45. S. Danko.
Focuses on thinking processes and techniques that support creative problem solving. Design methodologies of famous designers such as da Vinci, Ben Franklin, and Charles Eames will be examined through discussions and applications to short studio problems by the students. Topics include a historical overview of the design process and methods in both professional practice and education, creative problem solving in management and design, perceptual blocks to creativity, and the inherent merits and pitfalls in the four realms of thinking: analytical, intuitive, synthetic, and evaluative.

648 Computer-Aided Space Planning and Design
Fall. 3 credits. Limited to 12 graduate and advanced undergraduate students. Prerequisites for undergraduates: DEA 201 and 202 or permission of instructor.
Lec, T R 9:05; lab 1, T R 10:10–12:05; lab 2, TR 12:20–2:15. P. Eshelman.
Familiarizes students with computer applications in the planning and design of spaces. Lectures and readings cover needs assessment, furniture and equipment inventory, affinity diagramming, block diagramming, space layout, and specification and schedule preparation for furniture, equipment, and finishes. Laboratories involve the application of computer-aided processes in planning and designing a variety of spaces.

[650 Programming Methods in Design
Fall. 4 credits. Recommended: DEA 325, 350, and 455. Not offered 1989–90.
M W F 11:15 and an hour to be arranged. E. Ostrander.
A course intended for graduate students who want a more thorough introduction to environmental programming methods than is provided by DEA 459. Each student is required to attend DEA 459 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects.]

651 Human Factors: Ergonomics-Anthropometrics
Spring. 4 credits. Recommended: DEA 150.
T R 9:05–11 and an hour to be arranged. A. Hedge.
A course intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 325. Each student is required to attend DEA 325 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects.

652 Human Factors: The Ambient Environment
Fall. 4 credits. Recommended: A 3-credit statistics course and DEA 150.
T R 2:30–4 and one hour to be arranged. A. Hedge.
A course intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 350. Each student is required to attend DEA 350 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects.

653 Psychology of Workplace Design
Spring. 3 credits. Prerequisite: DEA 250/660 or permission of instructor.
M 7–10 p.m. F. Becker.
Intended for students interested in the planning, design, and management of facilities for complex organizations. The purpose of the course is to explore how characteristics of the workplace, including furniture and equipment and policies governing their use and allocation, affect individual and organizational effectiveness. Special topics, such as the human implications of new information technologies and work at home, are also covered.

654 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: permission of instructor. Letter grades only. Minimum cost of materials, $100.
T R 1:25–4:25 and a one-hour seminar to be arranged. W. Sims.
For graduates in facility planning and management. The purpose of the course is to provide basic tools, techniques, and concepts useful in the planning, design, and management of complex facilities. Covers strategic and tactical planning for facilities, space forecasting, space allocation policies, programming, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered.

656 Research Methods in Human-Environment Relations
Spring. 4 credits. Prerequisites: DEA 150 or permission of instructor, and a statistics course. Letter grades only.
M W F 9:05, and an hour to be arranged. E. Ostrander.
The course develops the graduate student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Students attend DEA 455 lectures but have more extensive readings and projects and meet an additional hour each week.

659 Seminar on Facility Planning and Management
Fall. 1 credit. For graduate students and advanced undergraduates interested in careers in facility planning and management. S-U grades only.
M 4:30–5:45. F. Becker.
Series of seminars led by Cornell faculty members and other professionals directly involved in facility planning and management. Topics include strategic space planning, space standards, office automation, project management, energy conservation, building systems, wire management, lighting, and acoustics.

660 The Environment and Social Behavior
Fall. 4 credits. Prerequisite: DEA 150 or permission of instructor.
T R 3:35–5, plus an hour to be arranged. F. Becker.
A combination seminar-and-lecture course for graduate students with interests in social sciences, facility management, or design. Graduate students attend DEA 250 lectures but have more-extensive readings and meet an additional hour each week.

668 Design Theory Seminar
Fall. 3 credits. Enrollment limited to 15 students.
R 3:20–7:00. R. Beckman.
Directed toward advanced undergraduate and graduate students with interest in the theory of design. The purpose is to provide an understanding of major theoretical ideas underlying design movements of the twentieth century. Explores these ideas through readings, lectures by faculty and visitors, student presentations of research papers, and seminar discussions.

899 Master's Thesis and Research
Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Department graduate faculty

HUMAN DEVELOPMENT AND FAMILY STUDIES COURSES

G. Suci, chair; S. Cornelius, graduate faculty representative; P. Schoggen, undergraduate advising coordinator; U. Bronfenbrenner, J. Brumberg, S. Ceci, M. Cochran, J. Condry, J. Doris, J. Eckenrode, S. Hamilton, C. Hazan, B. Koslowski, L. C. Lee, M. Lenzenweger, B. Lust, P. Moen, M. Potts, H. Ricciuti, S. Robertson, J. Ross-Bernstein, R. Savin-Williams, S. West, E. Wethington

[111 Observation
Spring. 3 credits. Not offered 1990–91.
M W F 10:10. P. Schoggen.
An overview of methods of observing people and the settings in which they behave, in order to develop observational skills, increase understanding of behavior and its development, and acquaint students with basic methodological concepts underlying the scientific study of behavioral development with emphasis on children. Direct experience in applying observational methods in laboratory and real-life settings is emphasized. Discussion groups may accompany the observation experience.]

115 Human Development: Infancy and Childhood
Fall or summer. 3 credits. S-U grades optional.
M W F 11:15. P. Schoggen and participating lecturers.
Provides a broad overview of theories, research methods, and the status of scientific knowledge about human development from infancy through childhood. Attention is focused on the interplay of psychological and environmental factors in changing behavior and shaping individuals' perceptual, linguistic, neurophysiological, social, and cognitive development.

150 Families in Modern Society
Spring or summer. 3 credits. S-U grades optional. Students cannot receive credit for both HDFS 150 and Sociology 243.
M W F 11:15. P. Moen.
Contemporary family roles and functions are considered as they appear in U.S. history, as they change over the life course, and as they are influenced by cultural and economic forces that impinge on them.

216 Human Development: Adolescence and Youth
Spring or summer. 3 credits. Prerequisite: HDFS 115. S–U grades optional.
M W F 12:20. Staff.
Provides a broad overview of theories, issues, and research in the study of human development from early adolescence to early adulthood (youth). Attention is focused on the interplay of biological and cognitive factors, interpersonal relationships, social structure, and cultural values in shaping the individual's development. The role of adolescence in both the individual's life course and the evolution of the culture as a whole is also considered. Familial, peer group, educational, and work contexts for development are discussed.

218 Human Development: Adulthood and Aging
Fall. 3 credits: Prerequisite: HDFS 115. S-U grades optional.
M W F 2:30. Staff.
Provides a general introduction to theories and research in adult development and aging. Psychological, social, and biological changes from youth through late adulthood are discussed. Both individual development within generations and differences among generations are emphasized.

242 Participation with Groups of Children in the Early Years
Fall or spring. 4 credits (3 credits possible, but not recommended). Limited to 20 students (limit depends on availability of placements and of supervision). Prerequisites: HDFS 115 and permission of instructor. Recommended: HDFS 111 or Interdepartmental 100. S-U grades optional.
W 10:10–12:05, plus 2 half-days of field work (for 4 credits) or 1 half-day of fieldwork (for 3 credits). In morning or afternoon. S. West.
A field-based course designed to combine experience in child-care centers with theory and supervision, intended to develop the student's ability to understand and relate effectively to young children. Course structure integrates lectures and discussions, workshops, films, projects, reading, writing, and sharing of field experiences. Students are placed in local nursery schools, day-care centers, Head Start programs, and kindergartens.

[243 Participation with Groups of Children Ages Six through Twelve
Fall. 4 credits. Limited to 20 students (limit depends on availability of placements). Permission of instructor required. Prerequisites: HDFS 115. Recommended: HDFS 111. Not offered 1990–91.
R 10:10–12:05, plus 2 half-days of fieldwork. Staff.
A field-study course structured to integrate knowledge from practicum, lectures, discussions, and readings to provide a better understanding of child development in school settings. Each student will work in one classroom with an experienced teacher.]

[258 Historical Development of Women as Professionals, 1800 to the Present (also Women's Studies 238)
Spring. 3 credits. S-U grades optional. Human ecology students must register for HDFS 258. Not offered 1990–91.
T R 10:10–11:40. J. Brumberg.
The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, and the sciences. Lectures, reading, and discussion are geared to identifying the cultural patterns that fostered the conception of gender-specific work, and the particular historical circumstances that created these different work opportunities. The evolution of "professionalism" and the consequences of professionalism for women, family structures, and American society are also discussed.]

270 Abnormal Development and Psychopathology
Spring. 3 credits. Limited to sophomores, juniors, and seniors. Prerequisites: HDFS 115, Psychology 101, or Education 110; a course in statistics (e.g., Psych 350, Soc 301, Educ 352 or 353, Ag Ec 310 or equivalent); and an introductory biology course.
M W F 11:15. M. Lenzenweger.
A research-based survey of the cognitive, emotional, and biological aspects of abnormal development across the life span. The major mental illnesses will be covered, including schizophrenia, anxiety disorders, affective disorders, and personality disorders as well as psychopathological disorders of childhood. Emphasis will be placed on the development of psychopathology, current theories and models of etiology, and intervention strategies. This course is intended to be a rigorous introduction to the scientific study of psychopathology and psychopathological development; minimal attention to psychotherapy.

300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged.
Hours to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the coordinator of undergraduate education, is filed at course registration or during the change-of registration period.

[313 Problematic Behavior in Adolescence
Fall. 3 credits. Prerequisite: HDFS 216. Offered alternate years. Not offered 1990–91.
M W F 9:05. Staff.
This course focuses on (1) various biological, psychological, and sociological theories that attempt to explain deviant behavior among adolescents; (2) research that addresses issues of problematic behavior; and (3) presentations by human services personnel and agencies concerning their programs and policies toward problematic adolescents. These will be integrated during class discussions.]

[333 Cognitive Processes in Development
Fall. 3 credits. Prerequisite: HDFS 115 or equivalent. Not offered 1990–91.
M W F 11:15. Staff.
A survey of theories and problems in the development of selected cognitive processes: attention, perception, mediation processes, and language. The focus is on the first two years of life.]

344 Infant Behavior and Development
Fall. 3 credits. Prerequisites: HDFS 115, a biology course, and a statistics course. Not open to freshmen.
T R 1:00–2:15. S. Robertson.
Behavior and development from conception through the first two years after birth will be examined in traditional areas (e.g., perception, cognition, socioemotional, language, motor). The fundamental interconnectedness of these aspects of development will be strongly emphasized, as well as their relation to the biology of fetal and infant development. Topics with implications for general theories of development will be emphasized (e.g., the functional significance of early behavior, the nature of continuity and change, the role of the environment in development). Conditions which put infants at risk for poor development (e.g., premature birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights) will also be considered. An emphasis on research methodology in the study of early behavior and development will be maintained throughout the course.

346 The Role and Meaning of Play
Spring. 2 credits. Limited to 30 juniors and seniors. Prerequisite: HDFS 115. Recommended: HDFS 111.
W 7:30–9 p.m. J. Ross-Bernstein.
The aim of this course is to examine the play of children ages three through seven. Through seminar discussions, workshops, films, and individualized research, the student will explore the meanings and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

347 Human Growth and Development: Biological and Social Psychological Considerations (also Biology and Society 347 and Nutritional Sciences 347)
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and HDFS 115 or Psychology 101. Offered alternate years.
M W F 1:25. J. Haas, S. Robertson.
A review of major patterns of physical growth from the fetal period through adolescence, with consideration given to biological and socioenvironmental determinants of growth, as well as to physical and psychological consequences of variations in growth patterns. Normal patterns of growth are examined; an analysis of major sources of variations in growth (normal and atypical) follows.

348 Advanced Participation in Preschool Settings
Fall or spring. 3 or 4 credits. Prerequisites: HDFS 242 and permission of instructor. Recommended: HDFS 346.
Two or 3 half-days' participation (morning or afternoon) and an hour group conference each week.
Ross-Bernstein/West.
An advanced, supervised fieldwork experience with a focus on helping children build relationships to support learning and personal development. Students are expected to define their own goals and assess progress with supervising teacher and instructor; to keep a journal; and to plan, carry out, and evaluate weekly activities for children in a variety of curriculum areas.

[354 Families in Cross-cultural Perspective
Fall. 3 credits. Prerequisites: HDFS 115 and HDFS 150 or Rural Sociology 100, or equivalent. S-U grades optional. Not offered 1990–91.
M W F 11:15. Staff.
The sociological study of families from a comparative perspective, looking at similarities and differences across cultures and across ethnic groups. A major focus is on the interdependence of the family system and social institutions.]

[359 American Families in Historical Perspective (also Women's Studies 357)
Spring. 3 credits. Prerequisite: HDFS 150 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HDFS 359. Not offered 1990–91.
TR 2:30–4. J. Brumberg.
This course provides an introduction to and overview of problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate the pattern of American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with changing cultural conceptions of sexuality, sex roles, generational relationships, stages of life, and life events. Students are required to do a major research paper on the history of their family, covering at least two generations, and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.]

360 Personality Development in Childhood
Spring. 3 credits. Prerequisites: HDFS 115 or Psychology 101, plus one other course in HDFS or psychology. Students cannot receive credit for both HDFS 360 and Psychology 275.
T R 12:20–2. C. Hazan.
Study of relevant theoretical approaches to, and empirical findings regarding, the development of the child's personality. The influence of parents and other environmental factors on the child are examined. Topics covered include attachment, autonomy, identification, moral development, and social behavior.

[361 The Development of Social Behavior
Spring. 3 credits. Limited to 100 students. Prerequisite: HDFS 115 or Psychology 128. Offered alternate years. Not offered 1990–91.
M W F 12:20. Staff.
Issues in the development of social behavior are viewed from the perspective of theory and research. An attempt is made to apply our understanding of social behavior to education, childbearing, and group behavior. Likely topics include bases of social behavior in early childhood, the role of peers, the development of aggressive behavior, the development and functioning of attitude and value systems, conformity and deviation, and the function and limits of experimental research in the study of social development.]

362 Close Relationships across the Lifespan
Fall. 3 credits. Prerequisite: HDFS 115 or equivalent. S-U grades optional.
T R 12:20–2. C. Hazan.
This course analyzes the nature and function of close relationships from infancy through adulthood. Special emphasis is given to the interplay between innate tendencies and social experience, and the effects of social cognitive development. The material presented is drawn from a wide variety of theoretical and empirical literatures. Topics include attachment in human infants, childhood relationships with parents and peers, interpersonal attraction, intimacy and commitment, marriage, divorce, and the role of close relationships in physical and mental health.

364 The Psychology of Television
Spring. 3 credits. Limited to 100 students. Preference given to juniors and seniors. Prerequisite: a developmental or psychology course; HDFS 115 or Psychology 101 preferred.
M W F 12:20. J. Condry.
This course offers a historical and topical survey of the research literature regarding the influence of television. Topics include (1) the introduction of television from 1950 to 1960 and its direct effects, (2) the audience for television, (3) the content of television, (4) behavioral mechanisms of influence: imitation, disinhibition, arousal/desensitization, (5) the psychological research of the 1960s and 1970s; cognitive mechanisms of influence; mainstreaming and resonance; formal features, comprehension, and perceived reality; current issues in research from 1980 on; the role of advertisements; government policies and advertisements; and television over the life span.

[372 Typical and Atypical Intellectual Development
Spring. 3 credits. Prerequisites: HDFS 115, a course in statistics, and a course in biology. Not offered 1990–91.
T R 10:10–11:30. S. Ceci.
This course provides an intensive historical examination of both normal and abnormal intelligence, focusing on the antecedents of contemporary views of the heritability of intelligence, brain-behavior linkages, expertise, generality, and cognitive modifiability. It concludes with an examination of current theories, with an emphasis on the instructor's own bioecological theory.]

[397 Experimental Child Psychology
Fall. 4 credits. Prerequisites: one course in statistics and permission of instructor. Intended primarily for students interested in entering graduate programs involving further research training. Not offered 1990–91.
T R 2:30–4; lab, hours to be arranged.
L. C. Lee.
A study of experimental methodology in research with children. Includes lectures, discussions, and practicum experiences covering general experimental design, statistics, and styles and strategies of working with children.]

398 Junior Honors Seminar
Fall. 2 credits. Permission of the coordinator of the honors program required for registration. Enrollment limited to students in the honors program.
Hours to be arranged. R. Savin-Williams.
Reports and discussion of research and selected thesis topics by faculty and honors students.

400–401–402–403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. Enrollment limited to juniors and seniors with a minimum 3.0 G.P.A. Permission required. Prerequisites: HDFS 115, 150, 216, 218 or an equivalent number of courses in pyschology or sociology. S-U grades optional.
Hours to be arranged. Department faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HDFS not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake, on a form available from the Student Services Office. This form must be signed by the instructor directing the study, the student's faculty adviser, and the coordinator of undergraduate education (NG21 Martha Van Rensselaer Hall) and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study (guidelines for each are available in NG14 Martha Van Rensselaer Hall):

400 Directed Readings
Prerequisites: In addition to those listed above, a statistics or methods course and at least one course directly linked to the area of study.
For study that predominantly involves library research and independent study.

401 Empirical Research
Prerequisites: In addition to those listed above, a statistics or methods course and at least one course directly linked to the area of study.
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

402 Supervised Fieldwork
Prerequisites: In addition to those listed above, an observation or participation course.
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

403 Teaching Apprenticeship
Prerequisites: In addition to those listed above, must have taken the course or equivalent and received a grade of B+ or higher.
For study that includes assisting faculty with instruction.

[414 Policies and Programs for Adolescents
Spring. 3 credits. Prerequisite: HDFS 216, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
T R 12:20–2:15. S. Hamilton.
Plans and practices intended to foster adolescent development are examined in the light of needs identified by theory and research. The key question is how societal and governmental institutions support or hinder the transition of adolescents to adulthood. Current issues, especially secondary school reform and youth employment, provide focal points for examining actual and proposed policies and programs. The course also addresses the nature of social policy and its relation to social science.]

431 Learning in Children
Fall. 3 credits. Prerequisite: HDFS 115 or equivalent. Limited to 20 students.
T 10:10–12:05. Field experience to be individually arranged. M. Potts.
Examines diverse theories and models of learning and their differing implications for real-world situations that require learning or relearning. Considers the interrelations of learning and development and of learning and intelligence. Through fieldwork, application is made to the assessment of learning processes in the cognitive domain and to implementation of the variables which affect learning.

432 Cognitive Development and Education
Spring. 3 credits. Prerequisite: HDFS 115 or equivalent. Limited to 20 students.
T 10:10 12:05; field experience to be individually assigned. M. Potts.
This course defines basic cognitive processes that underlie education (for example, linguistic processes that underlie language comprehension and production; numerical processes that underlie mathematics; perceptual processes that underlie reading) and reviews research on the development and learning of these processes in children. A laboratory component focuses on assessment and facilitation of cognitive competencies as they bear on one educational subject.

[434 The Growth of the Mind: A View from Piaget's Theory
Spring. 4 credits. Open to undergraduate and graduate students. Prerequisites: A course in human experimental psychology, statistics, or HDFS 115 or equivalent; or permission of the instructor. S-U grades optional. Not offered 1990–91.
Lecs, M W F 1:25. B. Lust.
In this course the fundamental issues of cognition are introduced through the framework of Piaget's comprehensive theory of cognitive development. What is the nature of human intelligence? of logical and scientific reasoning? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation and how does it exist in the initial state? What are the cognitive characteristics of the initial state? What is the relation of the acquisition of knowledge and understanding to their final representation? In the study of those issues, how can epistemology and experimental psychology be related through the experimental method?

Basic issues of cognition are introduced and discussed throughout: for example, the roles of innateness and learning, the distinction between competence and performance, and the relation between induction and deduction in the acquisition of knowledge. Those psychological issues are set in a context of basic epistemological issues involving the tension between rationalism and empiricism.

Although the course will focus on Piaget's theory and experimental results, current research in cognitive development will be introduced and contrasted.]

436 Language Development (also Psychology 436 and Linguistics 436)
Spring. 4 credits. Open to undergraduate and graduate students. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. S-U grades optional. Offered alternate years.
T R 11:40–12:55. B. Lust.
This course is a survey of basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of Universal Grammar and the biological foundations for acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

438 Thinking and Reasoning
Fall. 3 Credits. Prerequisite: HDFS 115.
W 2:30–5. B. Koslowski.
The course will examine the areas of logical thinking (in formal as well as real-world contexts), the process of making logical and "natural" inferences, problem solving and transfer, causal reasoning, scientific reasoning, theories of evidence and expert vs. novice reasoning. Two general issues will run through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kind of thinking that is required by the types of problems and issues that arise and must be dealt with in the real world.

440 Internship in Cornell Nursery School
Fall or spring. 10–12 credits. Prerequisites: HDFS 115 and 242. Recommended: HDFS 346 and 348. Permission of instructor required.
M–F 8–1 or 10:30–4:30. Staff.
Opportunity to integrate theory with practice and to develop understanding of preschool children and their families. Placement as assistant teacher in the morning or afternoon program and participation in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and director.

[456 Families and Social Policy
Fall. 3–4 credits. Prerequisite: one course in the area of the family or in sociology. S-U grades optional. Not offered 1990–91.
Hours to be arranged. P. Moen.
An examination of the intended and unintended family consequences of governmental policies, using case studies in areas such as social welfare, day care, and employment. The policy implications of changes in the structure and composition of families are also considered.]

464 Developmental Theory and Research on Homosexuality
Spring. 4 credits. Permission of instructor required.
Hours to be announced.
R. Savin-Williams.
The course will address a sensitive and controversial subject in a scientific fashion. The theoretical and empirical literatures that focus on the development and maintenance of a homosexual identity, homosexual behavior, and cultural responses to homosexuality will be covered. Although the issue, homosexuality, is specific, it reflects the larger issues of sexual identity, personality/social development, and environmental and biological influences on human development.

[481 Introduction to Ecological Psychology
Fall. 3 credits. Limited to graduate and upper-division undergraduate students. Prerequisite: permission of instructor. Letter grades only. Not offered 1990–91.
T R 3–4:25. P. Schoggen.
A broad survey of the theory, concepts, methods, and empirical research in ecological psychology, the study of molar human behavior in relation to the naturally occurring molar environment of everyday life. The first part of the course examines the problem of observing, recording, and analyzing the continuous stream of individual behavior under natural conditions, with special concern for child behavior and development. The rest of the course is devoted to the study of behavior settings, the immediate environmental contexts of molar human behavior. We will be particularly concerned with the usefulness of behavior settings in empirical studies of person-environment interaction at all stages of the life course from infancy through old age. A course description with typical readings is available from the instructor.]

488 Development in Context (also Psychology 488)
Spring. 4 credits. Open to juniors, seniors, and graduate students. Prerequisites: one course in statistics (which may be taken simultaneously) and two courses in social sciences, or one in human biology and one in social sciences. Letter grades only.
T R 2:30–4:25. U. Bronfenbrenner.
The course examines highlights of what is known about human development in the actual settings in which human beings live and grow. The material presented reveals how development in its various aspects—cognitive, emotional, and social—occurs through the progressive interplay between the maturing capacities and characteristics of an active, exploring, thinking human organism and the changing situational, cultural, and historical contexts in which the person lives. Particular emphasis is given to the role of family, peer group, school, workplace, community, and social structure and belief systems of the larger society. Course work is carried out primarily through the analysis of selected studies that shed light on critical issues in development. The main focus is not on the specific findings but on key processes and principles of development to which the findings point. Students are offered guidance and experience in analyzing and evaluating research reports, with particular emphasis on the nature and intellectual excitement of the scientific process and on the implications of scientific knowledge for public policy and practice. The course is organized in terms of successive stages in the life course. At each stage the material presented will emphasize change and continuity in the two-way developmental processes taking place between a biologically maturing person and the progressively more complex environments into which the person moves through life.

498 Senior Honors Seminar
Fall and spring. 1 credit. Required for, and limited to, seniors in the HDFS honors program.
Hours to be arranged. R. Savin-Williams.
This seminar is devoted to discussion and presentation of honors theses being completed by the senior students.

499 Senior Honors Thesis
Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional.
Department faculty.

Topics Courses

Fall or spring. 2–4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required.
Hours to be arranged. Department faculty.
This series of courses provides an opportunity for advanced undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

415 Topics in Adolescent Development

435 Topics in Cognitive Development

445 Topics in Early-Childhood Education and Development

455 Topics in Family Studies

465 Topics in Social and Personality Development

475 Topics in Atypical Development

485 Topics in the Ecology of Human Development

The Graduate Program

HDFS graduate courses are only open to undergraduates with instructor's permission.

General Courses

[617 Adolescence
Spring. 3 credits. Not offered 1990–91.
Hours to be arranged. Staff.
Critical examination of seminal theoretical and empirical writings on adolescent development. Empirical research on specific questions chosen by students is considered in the light of these approaches.]

[631 Cognitive Development
Spring. 3 credits. Letter grades only. Offered alternate years. Not offered 1990–91.
Hours to be arranged. Staff.
Faculty members involved in the course will present their area of specialization in cognitive development. These areas will include perception, attention, memory, language, thinking and reasoning, learning, creativity, and intelligence.]

[640 Infancy
Spring. 3 credits. Not offered 1990–91.
R 9–11:30. S. Robertson.
Critical review of major issues of contemporary concern in the field of infant behavior and development, based on readings of selected research papers and review articles. The overall intent is to develop an analytic understanding of where the field stands at present with respect to various topical issues and to identify directions for future research.]

[641 Early-Childhood Education
Fall. 3 credits. Not offered 1990–91.
W 1:25–4:00. M. Potts.
Survey of major issues in the theoretical and research literature of early-childhood education.]

650 Contemporary Family Theory and Research
Fall. 3 credits.
T 9:30–12. E. Wethington.
Sociological and psychological theories and research in the area of the family are examined with reference to the relationship between the family and society, the processes of socialization and social control, the reproduction of gender and social class, and the development of deviance.

[660 Personality and Socialization
Fall. 3 credits. Not offered 1990–91.
Hours to be arranged. J. Condry.
Major issues in personality development and socialization, with special emphasis on theoretical models and empirical issues.]

670 Developmental Psychopathology
Spring. 3 credits. Prerequisite: an undergraduate course in abnormal psychology or psychopathology; a course in multivariate statistics; and substantive course work in neurobiology or related biological science.
Hours to be arranged. M. Lenzenweger.
Overview of current theories and empirical research on functional and organically based psychological disorders. Topic areas to be covered include autism, schizophrenia, anxiety disorders, affective disorders, and personality disorders. Focus is on the developmental and etiology of psychopathology.

Topical Seminars

Seminars offered irregularly, with changing topics and instructors. Content, hours, credit, and instructors to be announced. Seminars offer concentrated study of specific theoretical and research issues.

618 Seminar in Adolescence
Topics include peer relations, parent-teen relationships, self-esteem, youth and history, work, and moral development.

633 Seminar on Language Development
Topics include acquisition of meaning in infancy, precursors of language in early infancy, and atypical language development.

635 Seminar in Cognitive Development
Topics include early attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

645 Seminar on Infancy
Topics covered in depth include the role of emotions in early development, infant stimulation and early experience, and the assessment of infant developmental competencies.

646 Seminar in Early-Childhood Education
Topics include analysis of models and settings, design of assessment techniques, program evaluation, and early childhood in a cross-cultural context.

655 Seminar in Family Studies
Topics include the sociology of marital status, the single-parent family, work-family linkages, women and work, and families and social change.

665 Seminar in Personality and Social Development
Focuses on selected issues related to personality and social development. The issues selected vary each year according to current importance in the field and student interests.

675 Seminar in Developmental Psychopathology
Topics include learning disabilities, therapeutic interventions in atypical development, child abuse and maltreatment, family factors in the etiology of functional disorders, and cognitive characteristics of atypical groups.

685 Seminar in Human Development and Family Studies
Topics include development of self-concept, sex-role identity, observational methods, and interviews in developmental research.

690 Seminar on Ecology of Human Development
Topics include the institutional setting as a determinant of behavior, the poor family, and the identification and measurement of ecological variables.

Individualized Special Instruction

700–706 Special Studies for Graduate Students
Fall or spring. Credits and hours to be arranged. S-U grades at discretion of instructor.
Department faculty.
Independent advanced work by graduate students recommended by their Special Committee chair with approval of the instructor.

700 Directed Readings
For study that predominantly involves library research and independent study.

701 Empirical Research
For study that predominantly involves collection and analysis of research data.

702 Practicum
For study that predominantly involves field experience in community settings.

703 Teaching Assistantship
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

704 Research Assistantship
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

705 Extension Assistantship
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

706 Supervised Teaching
For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

899 Master's Thesis and Research
Fall or spring. Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.
Department graduate faculty.

999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.
Department graduate faculty.

HUMAN SERVICE STUDIES COURSES

J. Ford, chair; M. Minot, graduate faculty representative; C. Reed, undergraduate advising coordinator; J. Allen, R. J. Babcock, D. Barr, R. Battistella, R. Bounous, D. Brown, R. Buchanan, C. Crawford, J. Greene, A. Hahn, I. Lazar, C. McClintock, B. J. Mueller, L. A. Noble, A. Parrot, C. Shapiro, L. Street, D. Tobias, W. Trochim, B. L. Yerka, J. Ziegler

101 Human Services in Contemporary Society
Fall. 3 credits. Limited to freshmen and sophomores or permission of instructor.
Hours to be arranged. D. Barr.
A lecture and discussion course designed as an introduction to the community base of services. Current and historical human services are examined. Emphasis is placed on social services, education, and health and mental health services. Barriers to service delivery are discussed, such as racism, sexism, classism, sexual preference, physical disability, and age. Issues that impact on service delivery will also be discussed, including civil rights, structure of the family, employment, and equal opportunity.

203 Groups and Organizations
Spring. 3 credits.
M W F 10:10. L. Street.
A basic course in the social psychology of small groups and human service organizations. Study of group processes includes self-perception and interpersonal perception of roles, norms, communication, power, and leadership. Students apply what has been learned about small groups to the study of issues in human service organizations (for example, goals, evaluation, structure, technology, relationships between organizations and clients, environment, and change).

210 The Elements of Helping
Spring. 3 credits. Limited to 20 students. *Not* recommended for social work majors. S-U optional.
M 7:30–10. R. Babcock.
An introduction to the theoretical and practical aspects of human service processes. Included is an overview of the helping relationship covering roles, characteristics, relationships, dilemmas, and career issues of helpers. The course focuses on understanding and development of helping skills. Through role playing and exercises, students deal with basics such as attending, listening, responding, empathy, respect, genuineness, and confronting. Other topics include self-awareness, learning, communication, and conflict management.

225 Education as a Human Service
Fall. 3 credits.
M W F 11:15. M. Minot.
This course is concerned with the role of the educator as a professional provider of preventive and remedial intervention through knowledge that results in intentional changes in cognitive, affective, or psychomotor skills of individuals. Educators, in collaboration with other human service professionals, facilitate human growth and development. The course includes an overview of educational programs that use human ecology content in selected human services delivery systems and settings. Emphasis is placed upon the competencies and responsibilities of professionals assuming the educative role.

246 Determinants of Behavior
Fall. 3 credits. Prerequisites: introductory sociology and introductory psychology and one course in human development.
M W F 2:30. J. Mueller.
Provides an interdisciplinary knowledge base for human service professionals. Examines social behavior in the human environment from ecological, ethological, historical, cultural, and social system perspectives. Applications are made to professional practice at the micro level (counseling with individuals and families or other small groups) and at the macro level (social planning for vulnerable groups in our society).

280 Racism in American Society (also ASRC 280)
Fall. 3 credits.
W 7:30–10 p.m. D. Barr, J. Turner.
The purpose of this course is to explore the historical, political, and sociological dimensions of racism in American society. A major goal will be to understand the presence and persistence of racial inequality and the relationship of human services to the problems of racism.

292 Research Methods
Spring. 3 credits.
W 7:30–10 p.m. C. McClintock.
Students will learn the logic and methods of social science research and develop skill in transforming issues of interest to them into researchable questions. Readings, written assignments, and in-class exercises focus on stating hypotheses, designing studies to test hypotheses, measuring variables, and interpreting findings.

300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged.
Hours to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for training in a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. This form, signed by both the instructor directing the study and the head of the department, should be filed at course registration during the change-of-registration period.

315 Human Sexuality
Spring. 3 credits. Limited to 500 students. Prerequisite: an introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: one course in biology. S-U grades optional.
W 7:30–10 p.m.; sec to be arranged.
A. Parrot.
The aim of this course is to provide students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. There will be a social policy orientation focusing on the evolution of sexual norms, customs, and legislation within changing sociopolitical systems. Biological developmental components of human sexuality will also be addressed. An underlying issue is the influence of our social and cultural system on the development of sexual needs, standards, and values. Research and theory in human sexuality will be explored in an interdisciplinary approach drawing on human and organizational behavior, biology, history, communication arts, education, research theory, law, sociology, and psychology.

[325 Health-care Services and the Consumer
Fall. 3 credits. Limited to 30 students. S-U grades optional. Offered alternate years. Next offered 1991–92.
Hours to be arranged. A. Parrot.
Developments in the health field that affect the availability and kinds of health services. Emphasis is placed on interrelationships between institutions and agencies and the part each can play in prevention, diagnosis, and treatment of disease and disability. Focus will include historical and current trends, quality health care, consumer issues, ethical issues, politics and policies, and the problems of health care.]

330 Ecology and Epidemiology of Health
Fall. 3 credits. Prerequisite: a statistics or research design course. Recommended: biology course. S-U grades optional. Offered alternate years.
Hours to be arranged. Staff.
Ecological and epidemiological approaches to the problems of achieving human health within the physical, social, and mental environment. The course introduces epidemiological methods to the students and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires' disease, plague, cancer, herpes, and chlamydia. Application of epidemiology to health care will be discussed.

340 The Politics of Public Budgeting
Spring. 3 credits. Limited to 50 students: juniors, seniors, or permission of instructor.
T R 10:10–11:25. R. Buchanan.
The course examines the theory and practice that have developed to plan and control raising and spending public funds. The study of public budgeting includes the examination of techniques for controlling spending and methods for raising revenues. Because these fiscal decisions are made in a political environment, the course will take a multidisciplinary approach, synthesizing both the political and economic aspects of budgeting. Students will assume the roles of the different actors in the budgetary process to learn both the institutional dynamics of the process and the political constraints involved.

360 Introduction to Program Planning and Development
Fall and spring. 3 credits. Not offered spring 1991.
M W F 9:05. M. Minot.
The course provides an introduction to program planning and development in the delivery of human services. Models of program planning, development, and delivery will be analyzed in relation to practice. The processes of conceptualizing a program and the context of planning and development (political, organizational, economic, and social) will be examined. Basic tools and techniques available to planners will be identified and selected skills developed. Issues related to ethics, power/authority, confidentiality, and accountability will be included. Professional roles and competencies needed will be highlighted throughout the course. Students will apply the planning and development process to individual projects.

370 Social Welfare as a Social Institution
Fall. 3 credits.
M W F 9:05. J. Allen.
A philosophical and historical introduction to social welfare services. The course reviews the social contexts from which programs and the profession of social work have evolved. It discusses the political and ideological processes through which public policy is formed and how policies are translated into social welfare programs. Basic issues in welfare are discussed in the context of present program designs, public concerns, and the interrelationships and support of services in the community.

400–401–403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
For independent study by an individual student in advanced work in a field of HSS not otherwise provided in the department or elsewhere at the university, or for study on an experimental basis with a group of students in advanced work not otherwise provided in the department or at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the Counseling Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

400 Directed Readings
For study that predominantly involves library research and independent readings.

401 Empirical Research
For study that predominantly involves data collection and analysis or laboratory or studio projects.

403 Teaching Apprenticeship
Prerequisite: Students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance. For study that includes assisting faculty with instruction.

414 Professional Internship in Human Service Studies
Fall, spring, or summer. 4–7 credits. Limited to juniors and seniors majoring in human service studies. Prerequisite: FIS 100 or permission of instructor. Pre-course enrollment is required. Weekly seminar meets concurrently with FIS 409.
Sem, T 1:30–4:25. Placement hours to be arranged. R. Bounous.
Students intern for a minimum of 10 hours a week in a human service organization and attend a weekly seminar with a focus on integrating classroom and field-based learning. The course is structured as an opportunity for students to learn experientially and, at the same time, provide meaningful services to human service organizations. Interns are expected to take active roles in structuring, monitoring, and assessing their learning under the guidance of a faculty instructor.

[417 The Politics of Power in the Human Services
Spring. 3 credits. Offered alternate years. Next offered 1991–92.
Hours to be arranged. Staff.
The framework of the course will take an analytical world view with some understanding of a capitalist political economy and the historically colonial relationship between the American ruling class and peoples of color, the poor, and the powerless. In addition, the course will analyze the effects of these structural and historical facts on people's lives today. The relationship between a classed, racist, and sexist society and the human services will also be included by exploring the nature of empowerment. The course will focus systematically on both micro and macro levels.]

[460 Human Service Planning Methods
Spring. 3 credits. Prerequisite: HSS 292. Not offered 1990–91.
Hours to be arranged. Staff.
The course is designed to bridge theory-oriented social planning courses and practicums. It is intended to introduce undergraduates to basic tools and techniques that social planners use. Five modules are included that explain and provide experience in how social planners collect, analyze, and synthesize information and data in planning and policy development in the human services and that take into account the political and social contexts of the process.]

465 Community Decision Making
Fall. 3 credits. S-U grades optional.
T R 12:20–2:15. Staff.
Identification and discussion of factors that influence the outcome of community issues. Topics include political participation, decision-making processes, the interests and resources of key decision makers, and community change. Concurrent participation in community activities is desirable but not required.

471–472 Social Work Practice I and II
Introduction to concepts and methods used in a generalist, task-centered model of social work practice. Examination of the values and ethics of professional practice. Students learn skills appropriate for working with individuals, groups, families, and communities. Class content is integrated with concurrent supervised fieldwork. Placements are made in social agencies in Tompkins and surrounding counties. Students are encouraged to provide their own transportation, but car pools will be arranged for those who cannot. The department reimburses transportation costs when funds are available, but students may have to pay their own expenses. A lab fee for field-related expenses will be charged to every student in the course. Each student must have a current driver's license.

471 Social Work Practice I
Fall. 9 credits. Limited to 25 social work students. Prerequisites: introductory psychology, introductory sociology, one course in human development, grades of C+ or better in HSS 246 and 370, and permission of instructor before registration.
Lecs, M W 10:10–12:05; fieldwork, T R for 8 hours each day. C. Shapiro, R. Bounous.

472 Social Work Practice II
Spring. 9 credits. Limited to 25 social work students. Prerequisites: grade of B– or better in HSS 471 and satisfactory performance in fieldwork.
Lecs, M W 10:10–12:05; fieldwork, T R for 8 hours each day. C. Shapiro, R. Bounous.

473 Section 01 Senior Seminar in Social Work
Spring. 3 credits. Prerequisites: HSS 471–472. (HSS 472 may be taken concurrently).
M W 1:25–2:40. C. Shapiro.
The course integrates and expands on learning from courses in human behavior, social policy, and social work methods. Topics will include professional ethics, human responses to loss, and lifestyle diversity, with an emphasis on integrating theory with issues in professional practice.

473 Section 02 Senior Seminar
Fall and spring. 3 credits. Prerequisite: field work or permission of instructor. Limited to 18 junior and senior HSS majors.
Hours to be arranged. Staff.
The course will focus on a particular problem, such as poverty, crime, illiteracy, teen pregnancy, and so forth. Solutions to the problem will be sought by applying an understanding of the areas of human service environments, programs, and processes. Specifically, those solutions will be sought via student analysis and definition of the problem, assessments of both current or existing and desired or ideal human services needed to address the problem, and identification of the desired outcomes of such services or of resolution of the problem. Through this process, students will also learn effective ways to create social changes. Work requirements include several individual short papers and a group project.

475 Social Policy
Spring. 3 credits. Prerequisite: HSS 370 or Government 111 or Sociology 141. S-U grades optional. Students should have field or work experience in a human-service program before or while taking this course.
M W 11:15–12:20. J. Allen.
An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service-delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

476 Housing and Feeding the Homeless (also Hotel Administration 490)
Fall and spring. 4 credits. Limited to 20 students.
T R 8:40–9:55. J. Ford, J. Eyster, A. Hales
Through lectures, class discussion, and a field placement practicum, students will explore the economic, social, and political issues of our country's growing problem of homelessness and the existing and proposed housing and feeding policies and delivery systems that are attempting to deal with homelessness. Students will study the history of homelessness, the description of the subgroups of the homeless population, and strategies to prevent and alleviate the problem. The fieldwork involved in this course will require approximately eight days spread over the semester at a project location.

Topical Seminars and Practicums

Seminars and practicums, offered periodically and reflecting faculty and student interest, with changing topics and instructors. Content, time, credits, and instructors to be announced. Seminars and practicums offer concentrated study in a specific human service area or in the education, planning, or evaluation processes within human services.

613 Seminar in Health and Mental Health Services
Spring. 3 credits. Limited to graduate students. S-U grades only.
Hours to be arranged. I. Lazar.
Topics include the effects of new knowledge and problems on the organization and delivery of health and mental health services, developments in health and mental health policies and legislation, and the planning of community mental health services. Current challenges to the delivery of health services, including alcohol and drug problems, AIDS, stress-related disabilities, and depression, will be examined.

669 Seminar in Program Planning and Development
Topics include microlevel program planning, third-sector organizations, and intergovernmental influences on program planning, policy formation, program implementation, and mainstreaming. Two or more human services are examined.

[697 Seminar in Program Evaluation and Evaluative Research
Spring. Not offered 1990–91.
W 12:20–1:10. J. Greene.
The seminar is topically organized according to student and faculty projects. Focuses on professional issues in evaluation practice, including consulting, ethics and standards, preparation of conference and publication materials, and various methodological issues.]

Continuing Education for Professionals

These courses are not a part of the department's regular graduate offerings but are designed to provide continuing education for professionals through the extramural division.

507–508 Professional Improvement I and II
Fall, spring, or summer. 3–6 credits. Enrollment is determined by various factors, including nature of content, funding, resources, facilities, and instructor. S-U grades optional. Intended for extramural (evening) and off-campus instruction. May be repeated with the permission of the instructor.
A series of special-problem seminars, classes, and activities designed for in-service and continuing education of practitioners in helping professions, such as home economics teachers, social workers, public health planners, and adult educators. Specific content of each course varies with group being served but includes work and class time appropriate to number of credits.

The Graduate Program

Human service studies graduate courses are open to undergraduates only with the instructor's permission.

The courses listed below will be taught regularly (annually or in alternate years).

622 Health and Human Services Management
Fall. 3 credits.
T R 12:20–2:15. D. Brown.
Designed as an integrating seminar for students interested in health and human services administration and consulting, the course focuses on the management process and attempts to develop students' problem-solving and decision-making skills through the analysis of cases. The case method is particularly suited to strengthen diagnostic, analytical, and conceptual processes as well as managerial skills by facilitating synthesis, integration, and the application of theory to actual situations. A number of major themes are explored, such as matrix organization, governance and corporate structure, professional relationships, organization culture, leadership and change, motivation, group processes, conflict management, and negotiation.

625 Health Care Services: Consumer and Ethical Perspectives
Fall. 3 credits. Limited to 30 students; undergraduates with permission of instructor. Offered alternate years.
The course will focus on consumer and ethical issues faced by the health care field today. Broad topics to be discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, private industry role in health care, services for the medically indigent and elderly, practitioner burnout and training, who should receive transplants, reproductive technology availability, using animals in medical research, and baby and granny doe cases.

627 Legal Aspects of Health-Services Delivery
Spring. 3 credits.
Hours to be arranged. Staff.
This course introduces principles of the law that are specifically applicable to health-services delivery. Topics considered include the liability of hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges; and confidential communications.

628 Medical-Service Issues in Health Administration (also Biology and Society 428)
Spring. 3 credits.
M W 2:15–3:30. V. Utermohlen.
A survey of the issues that affect interactions between the health-care consumer and the medical team, including disease processes (how disease occurs and progresses), the health-care team and illness, third-party payment and illness, and resource allocation.

629 Strategic Planning and Marketing in Health Care
Spring. 3 credits.
T R 12:20–2:15. D. Brown.
The course is designed for students interested in the strategic planning process who may be pursuing careers in health-care management, health planning, and management consulting. It attempts to integrate and apply students' knowledge, skills, and analytical abilities in the planning and implementation of health services at the institutional level. The strategic planning process is viewed as an essential part of corporate management, a dynamic endeavor that enables organizations to cope with change and meet community health-care needs in an increasingly competitive environment. Useful concepts and methods for assessing internal and external opportunities are stressed. Cases, visiting discussion leaders, and student reports help to focus and synthesize the course sessions and materials. The cases include analyses of organization and strategies for planning, environmental assessment, marketing approaches, political strategy formulation, diversification and corporate restructuring, and hospital systems.

630 Comparative Health-Care Systems: Canada, the United States, and Third World Countries
Fall. 3 credits. Open to graduate students and seniors.
Hours to be arranged. J. Ford.
An overview of health services is given within the larger context of the social and economic development policies of Canada, the United States, and third world countries. Sociocultural, economic, and managerial factors are stressed as keys to the formulation of realistic strategies. Resource allocations for health services are assessed against the backdrop of changing rates of economic growth. The relevance of high-technology solutions in developing countries is examined.

631 Primary Health-Care Services: Policy and Planning
Spring. 3 credits. S-U grades optional.
T R 2:30–3:45. R. Battistella.
The concept of primary care is used to enhance understanding of the direction and purpose of ongoing changes in health services organization and financing. Pressures on indemnity insurance and solo fee-for-service medicine are examined in the context of the transition of unmanaged to managed delivery systems. The course is divided into two parts: Part 1 examines the development of health maintenance organizations and related forms of managed care against the backdrop of larger public policy concerns. Part 2 centers on administrative-financial topics associated with the design, marketing, and operation of managed delivery systems in highly competitive markets. Considerable attention is given to the relationship between physicians and management with respect to such subjects as medical practice styles, productivity, quality assurance, and outcome measurement. The consumer health care behavior literature is reviewed in the light of marketing strategies and utilization control objectives. Many of the managerial topics are found amplified by a select group of visiting speakers.

632 Labor Relations in the Health Industry
Spring. 1 credit.
W 4–6:30 (course meets for 5 sessions only). W. Abelow.
This course provides an overview of major topics and current issues concerning unionization in the health industry. It emphasizes a practical, direct approach to dealing with union organizing and elections, collective bargaining, strikes, and labor contract administration in the health industry. The history of unionization in the field and an analysis of applicable laws are covered. Particular emphasis is placed on the role of government and other regulatory agencies in the negotiation process. Students work with current actual cases and materials. Students have the option of taking a final examination or submitting a short research paper.

633 HMO Development and Management
Spring. 1 credit.
T 4:00–6 (course meets for 4 sessions only). F. Yanni.
The major goal of this course is to provide students with the conceptual framework for understanding the role of health maintenance organizations (HMOs) in today's health economy and to provide an introduction to the planning, development, and operation of HMOs.

634 Health Care Organization—Providers and Reimbursement
Fall. 3 credits. Limited to 30 students.
Prerequisite: graduate standing or permission of the instructor.
T R 12:20–1:45. R. Buchanan.
The course will provide an introduction at the graduate level to the organization of health providers in the United States, the interrelationships of health services, and major sources and methods of paying for care. The course will describe how health services are structured in the United States and how these different services interrelate along the continuum of care. The course will describe and analyze the different sources of payments and how reimbursement policies affect the type and location of care provided. Innovations by the public and private sectors in the delivery and reimbursement of health care will also be presented.

635 Field Studies in Health Administration and Planning
Fall or spring. 1–4 credits.
Hours to be arranged. D. Brown.
Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the school's faculty.

636 Financial Management of Health and Human Service Organizations
Spring. 3 credits. Limited to 30 students.
Prerequisite: a financial accounting course or permission of instructor.
T R 12:20–2:15. R. Buchanan.
The objectives of the course are to provide students with a basic understanding of the financial environment surrounding health and human service administrators and to acquaint students with the financial tools necessary to manage health and human service organizations. The course presents an overview of the financial markets and the methods and techniques used in the financial management of health and human service organizations. It will focus mainly on health-care organizations, but the financial practices and approaches presented in the readings and class discussions will also be appropriate to other human service agencies. In addition to discussing acute-care hospitals, the course will present an understanding of the financial management of long-term-care facilities, HMOs, home health care, hospice programs, and other human-service programs.

[652 Preparing Professionals in the Human Services
Spring. 3 credits. S-U grades optional.
Offered alternate years; next offered 1991–92.
T R 10:10–11:25. M. Minot.
Students analyze the assumptions and concepts that underlie preprofessional and continuing professional education for volunteers, paraprofessionals, and professionals in the human services (for example, adult and continuing education, health, home economics, and social work education). A variety of preservice and in-service programs will be analyzed in terms of goals, means of implementation, and evaluation. Factors that influence programs are examined, including educational setting, licensure, accreditation, legislation, evaluation of performance. Students have opportunities to participate in educational programs in human service professions and community education. Students may develop or modify a model for providing professional education at the preservice or in-service levels.]

655 Leadership in Human Services
Spring. 3 credits. Limited to 20 students. S-U grades optional.
W 7:30–10 p.m. R. Babcock.
The course surveys some classic and contemporary leadership theories and their associated theories of personality and motivation. Human service organizations are examined in terms of their unique leadership needs and responses to various leadership styles. Through lectures, case analyses, visiting speakers, and student presentations, the relationships between leadership theories and the special features of human service organizations are explored. Translating leadership theory into practice is emphasized. Special leadership topics, such as gender and race, volunteerism, ethics, and working with boards of directors, will be considered, according to class interest.

658 Professional Ethics and Public Policy
Spring. 3 credits. Limited to 16 students.
Hours to be arranged. J. Ziegler.
This course will explore current issues of ethics and public policy against a background of theories of ethical behavior. Questions of how public officials and managers of public and non-profit agencies and private enterprises act will be examined. How do standards of ethical behavior in the professions get established? How are public policy issues with ethical implications resolved? Readings will be drawn from political philosophy, contemporary social science, and imaginative writing. Class participation is essential. Open to seniors and graduate students.

660 Social Policy and Program Planning in Human Services
Spring. 3 credits. S-U grades optional.
M W 11:15–12:20. J. Allen.
A review of the public policy process in education, health, and social welfare services as it pertains to program development. The course includes the history, definitions, and boundaries of the policy process; the relationships of the policy process to political economy, social structure, intergovernmental relations, and cultural values and beliefs; theories of planning and program development in human services; the role of evaluation in program planning and implementation, with special emphasis on monitoring and feedback of effects into the policy and planning process; selected current issues in policy and planning processes, such as regulatory and legislative constraints; the respective roles of clients or consumers and professional planners and providers; and problems and prospects in the coordination among the various human services.

661 Designing and Implementing Health and Human Service Programs
Spring. 3 credits. Limited to graduate students. S-U grades optional.
M 4–7. I. Lazar.
The translation of legislation into programs will be described, and the major sources of support for health and human service agencies and projects will be examined. Students will learn to identify potential sources of program support and to develop applications and campaigns for such support. Grant-proposal writing, response to contract requests from governmental agencies, applications to foundations, and techniques of fund-raising will be described and practiced. Students will be expected to write several grant proposals under conditions and time constraints simulating the actual processes. As part of the simulation there will be no grades of incomplete or late papers accepted in this course.

664 The Intergovernmental System and Human Service Program Planning
Fall. 3 credits. Open to seniors who have had a course in American government.
T R 2:30–4. J. Ziegler.
An in-depth review of the intergovernmental system in America and its relevance to the formulation of human service and urban/rural economic development policies and programs. Issues of decision making, fiscal arrangements, and public and private sector interactions are explored as they are affected by intergovernmental relationships. The course provides students with an analytic framework for understanding public policy issues in human services, education, and economic development among various governmental levels.

[665 Human Service Politics in the Local Arena
Spring. 3 credits. Offered alternate years. Next offered 1991–92.
T R 10:10–11:25. A. Hahn.
This seminar investigates policy making in the local political arena, with special reference to human service programs and issues. (Graduate students who need an introduction to the local political arena should consider taking HSS 465 prior to this course.) Topics include community power and citizen participation, with special reference to social movements and social movement organizations. Implications for both practice and research will be emphasized.]

670 Management in Public and Nonprofit Organizations
Fall. 3 credits.
T 6:30–9 p.m. C. Crawford.
This course presents an overview of the distinctive characteristics of organizations in public and private nonprofit sectors and their implications for managing human service organizations. Through a mixture of theoretical and case-study literature students will become familiar with the major conceptual and managerial issues that confront the administrator in health and human service agencies in the public and nonprofit sector.

671 Decision Tools for Administrators and Planners
Spring. 3 credits.
T 6:30–9 p.m. C. Crawford.
This is a decision course that will familiarize students with a variety of tools that can be used to conceptualize problems, decision alternatives, criteria, and futures and to essentially improve the decision-making process. Students will acquire a basic understanding of how people cope with decisional conflicts and the sources of error in decision processes. They will also be introduced to techniques that can be applied in making decisions.

672 Management Information Systems in Health and Human Services
Spring. 3 credits.
W 1:00–3:30. C. Crawford.
This course reviews how information systems can be developed and made useful for administrators and other professional staff in human services. Readings and assignments reflect a balance between technical and organizational or human aspects of information systems. Major topics include the organizational and managerial context for information systems in the human services, approaches to systems analysis and database development, data analysis for decision making, and presenting information for understanding programs and policies. Students will do computer assignments and case studies of management information systems issues in human service and other organizational settings.

[674 Organizational Behavior in Human Services
Fall. 3 credits. Limited to 20 students. S-U optional. Not offered 1990–91.
W 7:30–10 p.m. R. Babcock.
The course surveys organizational behavior in human service organizations with emphasis on the micro dimensions. Similarities and differences among human service and other organizations are stressed. Individual behavior at the human service workplace is viewed in relation to topics such as personality, motivation, group dynamics, communication, leadership, power, and conflict. A seminar format is followed, including lectures, group discussions, student presentations, exercises, and case studies.]

685 Health and Welfare Policy
Fall. 3 credits.
T R 10:10–11:25. R. Battistella.
Health and welfare issues are seen as reflecting alternate solutions to the broader institutional problems of allocation (economics), control (politics), and normative behavior (morality). A basic tenet is that health and welfare policy is deeply rooted in social values and the availability of economic resources. Health policy is interpreted from a multidisciplinary perspective in which change emanates from structural dynamics accompanying socioeconomic development such as the evaluation of the economy from the entrepreneurial to the managerial to the post-industrial stages, together with shifts in social and political ideology—libertarianism, welfare statism, and secular humanism.

688 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems
Spring. 3 credits.
T R 10:10–11:25. R. Battistella.
Alternatives for the organization and delivery of long-term care services are examined within the context of public-financing constraints. Progressive long-term care is viewed as a continuum encompassing medical and social services positioned to optimize independent living. Relevant experience from other highly developed countries is presented. Visiting speakers from the government and the private sector are featured, and field trips provide additional insights into the many challenges and opportunities in long-term care policy and management.

690 Measurement for Program Evaluation and Research
Fall. 3 credits.
Hours to be arranged. Staff.
The course reviews measurement theory and its application to the evaluation of human service programs. Topics include validity; reliability; scaling methods; basic principles of instrument design; and methods of data collection, including interviewing strategies, testing, self-reports, observation and content analysis, and data coding. Attention is given to issues such as ethical and managerial concerns that arise in applied settings.

691 Program Evaluation and Research Design
Spring. 3 credits.
T R 2:30–3:45. W. Trochim.
This course reviews research design and its application to the evaluation of human service programs. Major topics include experimental, quasi-experimental, cross-sectional, and exploratory research designs; basic sampling theory; and use of qualitative and quantitative methods. Attention is given to issues that arise in the application of research designs to the evaluation of programs, including problems of randomization, causal inference, replication, and utilization of results. Skills covered include stating and testing hypotheses, critical analysis of research reports, use of computers in research, and development of a research proposal.

[692–693 Program Evaluation In Theory and Practice
692, fall; 693, spring. 4 credits each semester. Prerequisites for HSS 692: 690 and 691 or 696, or permission of instructor. Prerequisite for HSS 693: 692. Students must register for both semesters. Offered alternate years. Next offered 1991–92.
Hours to be arranged. J. Greene.
This course constitutes a one- or two-semester practicum in which the class designs and conducts a program evaluation in the human services. Students are involved in all phases of the evaluation from design through the production and dissemination of a final report. Emphasis is on research methods in the social sciences. Application of knowledge developed in prerequisite courses is stressed (for example, planning and managing an evaluation, ethics, methods of data collection, data processing, and strategies for analysis and feedback of results).]

695 Strategies for Policy and Program Evaluation
Fall. 3 credits. Prerequisites: HSS 690 and 691 or 696, or equivalent. Offered alternate years.
T R 2:30–3:45. J. Greene.
This course examines a wide range of approaches to the evaluation of policies and programs in the human services. The approaches are examined with respect to their purposes, key audiences, and methodologies, as well as their philosophical, political, and value frameworks. Analysis of commonalities and differences across evaluation approaches is used to judge the appropriateness of a given strategy for a particular context.

696 Qualitative Methods for Program Evaluation
Spring. 3 credits. Prerequisites: HSS 690 and 691 or equivalent.
T R 1:25–2:40. W. Trochim.
This course presents a qualitative approach to applied research and the evaluation of human service programs. Topics include the epistemological assumptions underlying this approach, questions of entry into setting, methods for data collection and data analysis, reporting, confidentiality of participants, and the ethics of qualitative inquiry. The course aims to help students understand how, when, and why a qualitative approach to social inquiry can be used appropriately and effectively and how qualitative and quantitative approaches might be mixed effectively.

699 MPS Problem Solving Project
Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge for independent advanced work. S-U grades optional.
Field faculty.

704–705 Internship In Human Service Studies
Fall, spring, or summer. 1–15 credits. S-U grades optional.
Hours to be arranged. Graduate faculty.
Internship placement in human services is determined by availability and students' academic and professional goals. Opportunities are available in public and private, human service organizations at the national, state, and local levels in positions consistent with students' needs and desires. The duration of an internship is negotiated between the student and the agency, while course credit and residence units are arranged between the student and the Special Committee.

790 Advanced Seminar In Program Evaluation
Spring. 3 credits. S-U grades optional. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
This course is intended for students with at least three courses in evaluation (HSS 690 series or equivalent) and statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research, with emphasis on the links between program evaluation and program planning and administration. Attention is given to two or more service areas (education, health, social welfare) and to applications across those areas.

899 Master's Thesis and Research
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Department graduate faculty.

999 Doctoral Thesis and Research
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Department graduate faculty.

TEXTILES AND APPAREL COURSES

S. K. Obendorf, chair and undergraduate advising coordinator; P. Schwartz, graduate faculty representative; G. Atkin, C. C. Chu, C. Coffman, G. DeWeese, M. Govindaraj, S. Hester, F. Kozen, A. T. Lemley, A. Netravali, S. Niezelski, A. Racine, N. Saltford, L. Wagenet, S. M. Watkins, B. Ziegert

040 Apparel Studio
Fall. 1 credit. Limited to 12 students; open to TXA majors or students transferring into TXA. Minimum cost of materials, $40; lab fee, $5.
Lec, F 8–9:55. A. Racine.
An introduction to the concepts of shaping, reinforcing, joining, and detailing textile materials in a variety of apparel forms. A remedial course to help students reach the level of proficiency in construction skills necessary for further study in apparel design.

125 Art and Visual Thinking
Fall. 3 credits.
Lecs, T R 3–4:25. S. Niezelski.
An introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations and films, lectures emphasize relationships between visual forms and technology and social, political, and cultural interpretations that distinguish works of art from other man-made objects. Museum and gallery visits arranged when feasible.

135 Introduction to Textiles
Fall. 3 credits. Each lab limited to 16 students. Prerequisite or corequisite: Chemistry 103 or 207. Maximum cost of supplies and textbook, $40; lab fee, $10.
Lecs, T R 1:25–2:15; lab, T 2:30–4:25, or R 2:30–4:25. A. Netravali.
An introduction to the basic properties of textile materials, with consideration of their technology, consumer uses, and economic importance. Behavior of textile materials is observed in a variety of environmental conditions that influence aesthetics, comfort, and performance. This course is designed to provide a basis for further study in textiles, but it also contains sufficiently broad coverage of the subject to be used as an elective course.

144 Introduction to Apparel Design
Summer only. 3 credits. Limited to 20 students. Prerequisite: permission of the instructor. Cost of supplies and materials, $50.
A. Racine.
A studio course that focuses on designing apparel through the flat-pattern method. Students use original sketches as a basis for their designs and develop full-scale patterns for individual and group projects that are brought to various stages of completion. Emphasis is placed on creative expression and a thorough understanding of principles and techniques needed to produce apparel.

145 Apparel Design I
Spring. 4 credits. Limited to 15 students; priority given to TXA majors or students transferring into TXA. Prerequisite: TXA 040 or basic sewing skills. Recommended: an art or drawing course. Apparel design majors should take course during the first year. Minimum cost of materials, $100; lab fee, $10.
Lecs and labs, T R 1:25–4:25. A. Racine.
Intensive study of principles and processes of flat-pattern design and fitting techniques, with emphasis on development of creative expression in fashion apparel.

146 Clothing: The Portable Environment
Fall. 3 credits. Average cost of materials, $30; lab fee, $10.
Lec, T R 10:10–12:05. S. Watkins.
An introduction to the physical function of clothing for individuals of varying ages, for sports and recreation, for the physically handicapped, for a variety of occupations and climates, and for hazardous environments such as under water or outer space.

238 Textiles for Interiors
Fall. 3 credits (2 credits with TXA 135 prerequisite; enter course 10/1/90).
M W F 9:05. F. Kozen.
An introduction to textile products for residential and contact interiors. Students learn to select fibers and fabrics based on their properties and product end-use requirements. Product performance evaluation and specification are stressed. Until October 1, course is an introduction to fiber, yarn, and fabric production and characteristics.

[242 Apparel Industry: Field Experience
Spring-term break. 1 credit. S-U grades only. Approximate cost, $350–$400. $150 deposit required before spring semester begins; remainder required by February 15. Offered alternate years. Not offered 1990–91.
Staff.
A five-day field trip to a major apparel center such as New York City. Cost includes accommodation and museum visits. Tours cover fiber, fabric, and design firms; manufacturers; retailers; and promotion and media establishments of the multifaceted apparel and textile industry.]

245 Dress: A Reflection of American Women's Roles
Fall and summer. 3 credits. Enrollment limited to 40 students. S-U grades optional.
M W 12:20–2:15. A. Racine.
Historical survey of changing patterns of American women's dress from the colonial period to the present day and of cultural, economic, and political forces that affected changes and women's development. Slides, film clips, and the Cornell University Costume Collection will be used for lectures and discussion. Students will investigate various topics in fashion, etiquette, and the roles of women.

264 Apparel Design II
Fall. 4 credits. Each section limited to 10 students. Prerequisite: TXA 145. Recommended: two art or drawing courses. Apparel design majors should take TXA 264 and 367 in the same academic year, preferably during the sophomore year. Minimum cost of materials, $100; lab fee, $10.
M W 1:25–4:25. Staff.
This studio course examines two interrelated methods of apparel design. Through exercises, principles and processes of draping, fitting, and advanced flat pattern making are studied. Assigned problems require the students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged.
Hours to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

331 The Textile and Apparel Industries
Fall. 4 credits. Prerequisites: Economics 101 and 102 or CEH 110 and 111 and an upper-division course in either apparel or textiles, excluding field experiences. Course fee, $12.
Lecs, T R 8:30–9:55; rec, W 3:35 or W 7:30–8:20 p.m. S. Hester.
A critical review of the textile and apparel industries, including structure and marketing practices, and government policies that affect industry decisions and operations in such areas as energy, safety, and the environment. The role of labor unions is examined as well as the effects of international trade of textile and apparel products.

336 Fundamentals of Color and Dyeing
Fall. 4 credits. Prerequisite: College Natural Science Requirements. Lab fee, $15.
Lecs, M W F 10:10–11; lab, M 1:25–4:25. C. C. Chu.
Color is an extremely important and useful factor in everybody's daily life, e.g., the clothes we wear, the food we eat, the house we live in. This course will emphasize theories and scientific principles of color, providing a framework for the use of colors in design, marketing, or research. How colorants are used on fabrics will be addressed. Although fabrics are chiefly used to illustrate color in the class, much of the information and knowledge will be useful to non-textile majors. Guest lecturers from industry will provide the practical aspects of color in business.

337 Formation and Structure of Textile Fabrics
Spring. 3 credits. Prerequisite: TXA 135. Recommended: college algebra.
Lecs, M W F 9:05. P. Schwartz.
This course covers (1) how fabrics are made (2) how the method of manufacture influences fabrics properties, and (3) how the method of manufacture limits potential applications of fabrics. The technical aspects of textile fabrics are covered in detail. Available production technologies are reviewed. Properties of woven, knitted, and nonconventional fabrics, methods of producing structural designs, and means of designing fabrics to specifications are covered.

367 Apparel Design III
Spring. 3 credits. Prerequisite: TXA 264. Recommended: 3 art or drawing courses. Apparel design majors should take TXA 264 and 367 in the same academic year, preferably during the sophomore year. Minimum cost of materials, $100; lab fee, $10.
M W 1:25–3:20. A. Racine.
Advanced apparel students prepared to challenge and refine their design skills will be presented with a variety of complex studio problems in apparel design. The Cornell Costume Collection is used for illustration and inspiration.

375 Visual Studies: Color and Surface Design
Spring. 3 credits. Minimum cost of materials, $75; lab fee, $10.
T R 1:25–4:25. S. Niezelski.
This studio experience is augumented by slide presentations that demonstrate the use of decorative and repeat patterns as an applied textile art form; lecture materials reference both the history and current trends in surface design and color. Projects explore design problem-solving skills, systems of color classification, and principles of two-dimensional form; portfolio presentation skills are emphasized.

400–401–402–403 Special Independent Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of TXA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the Counseling Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

400 Directed Readings
For study that predominantly involves library research and independent reading.

401 Empirical Research
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

403 Teaching Apprenticeships
Fall or spring. 2–4 credits. Prerequisites: student must have upperclass standing, have demonstrated a high level of performance in the subject to be taught and in the overall academic program, and have permission of the instructor and the department chair. S-U grades only.

Apprenticeship includes both a study of teaching methods in the field and assisting the faculty with instruction.

425 Computer-Aided Apparel Design
Fall. 3 credits. Prerequisites: TXA 367 and 3 art or drawing courses. Minimum cost of materials, $50. Lab fee, $10.
Lecs, TR 2:30–4:25; lab, F 12:20–2:15. A. Racine.
An advanced studio course that uses microcomputers and the AutoCAD software program for solving a variety of problems in apparel design. The computer is used in all stages of the design process from conception to presentation.

431 The Textile and Apparel Industries—Field Experiences
Spring-term break. 1 credit. Prerequisite: TXA 331. S-U grades only. Offered alternate years. Students are responsible for trip expenses, approximately $400.
S. Hester.
A one-week field experience in the textile regions of the South. Students have the opportunity to see various textile processes, including fiber production, knitting, weaving, dyeing and finishing, and designing. In addition, seminars with executives of each participating firm relate theory to current practice.

432 Product Quality Assessment
Spring. 3 credits. Prerequisites: TXA 135 and Statistics. Lab fee, $15.
Lecs, M W 1:25–2:15; lab, W 2:30–4:25. A. Netravali.
This course covers the testing and evaluation of textile fibers, yarns, fabrics, and garments, with emphases on the meaning and use of standards, the philosophy of testing, quality control, and statistical evaluation of test data. Common day-to-day tests done in textile and apparel industry will be reviewed and their significance discussed. Laboratory sections will be used to introduce students to various test methods and to generate data for analysis and evaluation.

439 Biomedical Materials and Devices for Human Body Repair
Spring. S-U grades optional. Prerequisites: College Natural Science Requirement. Juniors and seniors preferred. (Chem. 103–104, or Biol. 101–103).
Lecs,T 3:35. C. C. Chu.
Survey of materials and devices for repair of injured, diseases, or aged human tissues/organs. It includes properties of synthetic and biological materials, wound healing processes, medical devices for repair of wounds, blood vessels, hearts, joints, bones, nerves, male impotence, vision/hearing/voice, and drug control/release.

446 Apparel Design: Intermediate Functional Clothing Design
Spring. 3 credits. Prerequisites: TXA 146 and TXA 264 or permission of instructor. Not available to students who have taken DEA 445. 1 field trip, approximate cost $125; minimum cost of materials, $100; lab fee, $10.
Lecs,T R 9:05–12:05. S. Watkins.
Advanced physical theory concerned with the function of clothing. Special current topics in the field will be studied. Students will be engaged in both group and individual research projects that result in the design and development of apparel items.

461 Issues in Management and Marketing
Spring. 3 credits. Prerequisite: TXA 331 or permission of instructor. Course fee, $12.
Lecs, T R 1:25–2:55. S. Hester.
The course will focus on management and marketing issues of concern to the textile and apparel sector. Management topics will include labor and productivity issues, governmental interaction, adoption of technology, and the problem of foreign competition. Topics in distribution and marketing will address the importance of industry-consumer interaction, changes in the domestic and international marketplace, and the role of trade and consumer associations.

465 Apparel Design: Product Development and Presentation
Fall. 3 credits. Prerequisites: minimum of three drawing or art courses and TXA 367 or permission of instructor. Minimum cost, $100; lab fee, $10.
T R 1:25–4:25. Staff.
Through studio problems in apparel design, students examine the influence of manufacturing technology and cost on apparel products. Lines of garments are developed to various stages from sketches to finished samples.

600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

[620 Physical Properties of Fiber-Forming Polymers and Fibers
Fall. 3 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, M W 2:30–3:45. A. Netravali.
Formation and properties of fiber-forming polymers, rubbery, glassy, and crystalline states. Dynamics of network response. Fiber structure, relationship between chemical structure and physical properties of man-made and natural fibers. Mechanical, thermal, and viscoelastic properties of fibers and testing methods.]

[621 Characterization of Fibrous Materials
Spring. 3 credits. Prerequisite: TXA 620 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
M W F 12:20. P. Schwartz.
A study of the principles of the major analytical characterization methods and the application of these methods to the study of fiber properties and structure. Topics include microscopy, x-ray diffraction, spectroscopy, magnetic resonance, and mass spectrometry. The student completing this course should be able to select methods and measurements that would best characterize a given structural property.]

[631 Textiles and Apparel: International Production and Trade
Spring. 3 credits. Prerequisite: TXA 331, Econ 361, or permission of instructor. Offered alternate years. Not offered 1990–91. Course fee, $12.
T R 8:30–9:55. S. Hester.
The course will focus on worldwide patterns of production and trade in the textile and apparel industries. Reasons for international trade will be examined, as well as the international environment that underlies trade in those commodities. Other topics include the international organizations and agreements relevant to textiles and apparel and the resulting protective trade policies on the part of developed and developing nations.]

635 Special Topics in Textiles
Fall. 1–3 credits. Prerequisite: permission of instructor.
M W F 2:30–3:45. A. Netravali.
An in-depth study of one or more selected topics in polymers, fibers, or textiles. The course content will vary; consult instructor for more details.

636 Fiber Chemistry
Fall. 3 credits. Offered alternate years. Prerequisite: permission of instructor.
Lecs, M W F 11:15. C. C. Chu.
An in-depth coverage of the important natural and synthetic fibers currently being used in industry, agriculture, medicine, apparel, and engineering. They include cellulose, silk, wool, polyesters, polyamides, polypropylenes, and acrylics. In each fiber, the synthesis of polymer, fiber formation, and structure, chemical and physical properties, and applications will be discussed.

637 Graduate Seminar in Textiles and Apparel
Fall and spring. No credit. S-U only.
R 12:20–1:10. R. Schwartz, fall; M. Govindaraj, spring.
New developments, research, and topics of major concern to the field of textiles and apparel are discussed by faculty members, students, and speakers from industry, government, and academia.

639 Mechanics of Fibrous Structures
Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years.
M W F 10:10. P. Schwartz.
A study of the mechanics of textile structures: creep phenomena and the dynamic properties of fibers and yarns; idealized yarn and fabric models and their relationship to research data; special topics in the deformation of yarns and fabrics in tensile, shear, and compression stress; fabric bending and buckling; and the mechanical behavior of nonwoven textile materials.

899 Master's Thesis and Research
Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Field graduate faculty.

999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Field graduate faculty.

NEW YORK STATE SCHOOL OF INDUSTRIAL AND LABOR RELATIONS

ADMINISTRATION

David B. Lipsky, dean

Robert Smith, associate dean, academic affairs

Ronald L. Seeber, associate dean, extension and public affairs

Jonathon Levy, assistant dean, administration

James E. McPherson, assistant dean, Office of Student Services

Shirley Harper, librarian

Ronald G. Ehrenberg, director, research

Theodore Lindsley, director, school relations

Frances Benson, director, publications

Tom Herson, director of budget

Lawrence K. Williams, graduate faculty representative

Donald Cullen, editor, *Industrial and Labor Relations Review*

DEGREE PROGRAM

	Degree
Industrial and Labor Relations	B.S.

THE SCHOOL

The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university, and it tries to maintain the small-college atmosphere that would be expected of an institution that has about 630 undergraduates and approximately 100 graduate students.

The school is located in a unified complex of classroom buildings, library, and administrative and faculty offices clustered around two courtyards. Daily classroom activities and other school events provide opportunities for students and faculty to interact. ILR students are members of the larger Cornell community and participate fully in its programs.

Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of recent entering classes, and minority students comprise about 20 percent of new freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in the field, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History

In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

Economic and Social Statistics

Economic and Social Statistics includes the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.

International and Comparative Labor Relations

International and Comparative Labor Relations is concerned with industrial and labor relations systems and labor markets in other parts of the world. Countries include those in Western Europe, as well as the newly industrializing countries in Asia and the Third World.

Labor Economics

Labor Economics deals with labor markets: that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include the following: analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior

By studying individuals, groups, single organizations, and associations or organizations, persons in the field of Organizational Behavior understand human behavior within organizations as well as the actions of the organizations themselves. At the individual level of analysis, courses consider motivation, leadership, attitudes, personality, group processes, organizational change, and worker participation. At the organizational level, courses examine occupations, deviance in the work place, conflict, power, organizational design, public policy regarding organizations, and industrial conflict. The department also offers courses on research methods in organizational research and general survey courses in both psychological and sociological research.

Personnel and Human Resource Studies

This department offers specialization in personnel management or human resource studies. Personnel management focuses on employer-employee relationships and deals with such topics as human-resource planning, staffing, computer applications to personnel, personnel information systems, training, management development, performance appraisal, compensation administration, organization development, and the sociological environment of personnel management. The study of human resource policy focuses on government efforts to enhance the population's ability to be employed. Although primarily concerned with governmental measures that influence the supply of labor (for example, training, education, health, mobility, and immigration), the subject area also includes policies in private industry that relate to the demands for labor.

A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.

RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of Bachelor of Science, Master of Industrial and Labor Relations, Master of Science, and Doctor of Philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty and faculty committees to administer degree programs for the school and many of the school's support services. The office's responsibilities include the admitting and orienting of new students, maintaining students' personal and academic records, and counseling students on personal and academic problems. The office also works closely with seniors who are planning graduate study.

Counseling and Advising

New students will be provided advising on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school's academic departments names faculty members to serve as advisers for students who wish to consult with them regarding career possibilities in the field, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be raised with counselors in the Office of Student Services.

Minority Programs

Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to (1) minority students and (2) low-income students meeting program guidelines. The purpose of these programs is to open access to a Cornell education for capable students who otherwise might not secure the admissions consideration, financial assistance, or supportive services necessary for their success at the university. The associate director for minority education in the Office of Student Services provides academic and personal counseling to all ILR minority students. ILR offers a variety of support services to enhance academic achievement. For details, prospective students should contact ILR Admissions.

STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances.

One such option is the five-year ILR master's degree. With early planning, some students may earn the M.S. degree in the fifth year. Using another option, some ILR students arrange for dual registration in the Johnson Graduate School of Management, earning their bachelor's degree in ILR and a master's degree in the Johnson Graduate School of Management after five years of study.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs," below.

Study abroad options are also available at a number of foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today's problems and involve fieldwork in the Ithaca area and elsewhere in New York State.

The ILR program allows juniors and seniors who want to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

Study In Absentia

Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee. Course work taken in absentia is usually not evaluated for transfer credit until the work has been completed and the student has returned to the school. Students then submit a course syllabus and other evidence of content to the chairman of the department that might have offered the respective course, or to a counselor in the Office of Student Services if the course is more appropriate as a general elective.

Leave of Absence or Withdrawal

If a student desires to withdraw or to take a leave of absence from the university, an interview should be scheduled with a counselor in the Office of Student Services. Counselors will assist students in petitioning for approval of a leave of absence and in contacting the appropriate offices or departments of the university.

REQUIREMENTS FOR GRADUATION

To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student needs to successfully complete 120 credits. This requires eight terms for an average of 30 credits a year although some students accelerate their studies.

Required Courses

(55 credits)

The curriculum prescribes the courses and subjects listed in the table below, to be taken in the terms indicated during the freshman, sophomore, and junior years. In the senior year, all courses will be electives.

Course or Subject	Credits	Term
Freshman Year		
Freshman Seminars*	6	Fall and spring
Econ 101–102, Micro-Macroeconomics*	6	Fall and spring
Psych 101, Introduction to Psychology*	3	Fall
ILRCB 100, United States Labor History in the Nineteenth Century	3	Fall
ILROB 120, Macro Organizational Behavior and Analysis	3	Fall
ILRST 210, Statistics I	4	Spring
Any two of the following:	6	Spring
ILRCB 101, United States Labor History in the Twentieth Century		
ILRLE 140, Development of Economic Institutions		
ILROB 121, Micro Organizational Behavior and Analysis		
Physical education	0	Fall and spring
Sophomore Year		
ILRCB 201, Labor Relations Law and Legislation	3	Fall
ILRLE 240, Economics of Wages and Employment	3	Fall
ILRST 211, Statistics II	3	Fall
ILRPR 260, Personnel Management	3	Fall or spring
ILRCB 200, Collective Bargaining	3	Spring
Ag Econ 221, Financial Accounting	3	Spring
ILRCB 101 or ILRLE 140 or ILROB 121	3	Spring
Junior Year		
ILRLE 340, Economic Security	3	Fall or spring

*College of Arts and Sciences

Elective Courses

(65 credits)

From the courses offered by the school, students must select a minimum of 27 credits of ILR elective courses. No more than 9 of these credits may be satisfied by ILR 499, Directed Studies, or ILR 497–498, Internships, or ILR 495, Honors Program.

Undergraduates are required to select one course in the humanities and one intensive writing course (each for a minimum of three credits) from a list of designated courses to be completed during the sophomore, junior, or senior years.

The remaining 33 credits may be selected from the courses of any other college at Cornell, but a student who takes more than 33 credits in the endowed colleges (the College of Architecture, Art, and Planning; the College of Arts and Sciences; the Johnson Graduate School of Management; the College of Engineering; and the School of Hotel Administration) will be billed for the additional tuition at the current cost per credit.

The number of credits that may be taken in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.

SCHEDULING AND ATTENDANCE

Schedule Changes

Occasionally it may be necessary for a student to request changes in his or her course schedule either before a term begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance

It is each student's responsibility to attend all scheduled classes unless approved excuses have been given by the faculty. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:

1) participation in authorized university activities such as athletic events, dramatic productions, or debates;
2) medical problems supported by a record of clinic or infirmary treatment;
3) serious illness or death in the immediate family;
4) other circumstances beyond the student's control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

ACADEMIC STANDING AND GRADES

Academic Integrity

In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1) knowingly representing the work of others as one's own;
2) using or obtaining unauthorized assistance in any academic work;
3) fabricating data in laboratory or field work;
4) giving fraudulent assistance to others;
5) fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 101 Ives Hall.

Dean's List

A Dean's List is compiled for each of the four undergraduate classes each term on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:

1) achievement of a term average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for juniors and seniors of 3.6 or better;
2) a minimum course load for the term of 12 letter-graded credits;
3) completion of all courses registered for at the beginning of the term;
4) satisfaction of all good-standing requirements.

Academic Standing

Good standing requires that all of the following criteria be met at the end of each term:

1) an average of C– (1.7) for the semester's work, including a minimum of 8 completed and letter-graded credits;
2) no failing grades in any course, including physical education;
3) a cumulative average of C– (1.7) for all completed terms.

If at the end of any term a student fails to maintain good standing or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student does not improve after the written warning, he or she may be denied permission to register for the next term.

Involuntary Separation from the School for Academic Reasons

A student may be denied permission to reregister at the end of any term when he or she has failed:

1) to establish good standing after a semester on warning;
2) to maintain an average of 1.7 in any term after a previous record of warning;
3) to achieve good standing after being on warning any two previous semesters;
4) two or more courses in one term or has a term average of 1.0 or below.

The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 1.7.

S-U Grading Policy

An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1) the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;
2) students are limited to registering in two S-U courses a term;
3) S-U registration is limited to 4 credits for each course;
4) students registering for S-U grades must be in good standing;
5) students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C– and a grade of S for any grade of C– or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Grades of Incomplete

A grade of incomplete is assigned when the course has not been completed for reasons that are acceptable to the instructor. It is understood that the work may be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which it may be made up must be made with the instructor. The school's policy allows a maximum of two full terms of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

SPECIAL ACADEMIC PROGRAMS

To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Dual Registration in the Johnson Graduate School of Management

Dual informal registration in the Johnson Graduate School of Management leads to a Bachelor of Science degree in industrial and labor relations and a master's degree in management after five years of study and is open to students who meet the requirements of the Johnson Graduate School of Management.

Early planning by each student, preferably in the sophomore year, is desirable to ensure that the expectations of the Johnson Graduate School of Management and ILR curriculum requirements are fulfilled. Students interested in the very limited and selective program of the Johnson Graduate School of Management should contact the Admissions Office, 319 Malott Hall, and a counselor at the Office of Student Services.

Five-Year Master of Science Degree Program

With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish concentrated study in an area of specialization in the school for a Master of Science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Internships

The Credit Internship Program has provided students with a vivid understanding of problems in labor and industrial relations through observation and participation in "real-life" labor problem solving. A number of selected students spend a term of the junior year in Albany, New York City, or Washington, D.C., in close contact with practitioners. Their activities include independent research under direction of ILR faculty members and seminars drawing on fieldwork experience with employers, labor organizations, and government agencies. More information about this program is available from the Office of Student Services.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for 3 credits in each term) to research, write, and then defend the thesis.

Study Abroad

Cornell students with strong academic records and the necessary preparation in required and elective courses are encouraged to consider study abroad. The university currently has agreements with universities in Germany, Israel, England, and the Scandinavian countries that permit undergraduates to register for courses while maintaining Cornell registration and financial aid for a semester or a year. Information about those opportunities may be requested from Cornell Abroad, in the Center for International Studies, 130 Uris Hall.

Some study abroad programs require the development of language proficiency and preparation in appropriate courses at Cornell. Students should consult the Office of Student Services and Cornell Abroad in the freshman and sophomore years to be sure that they comply with the academic and procedural requirements for study abroad.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

J. Burton, chair; G. Brooks, T. Crivens, D. Cullen, C. Daniel, I. DeVault, C. Erickson, M. Gold, C. Gramm, J. Gross, H. Katz, G. Korman, R. Lieberwitz, S. Kuruvilla, D. Lipsky, P. Ross, N. Salvatore, R. Seeber, J. Windmuller

100 Introduction to U.S. Labor History: Nineteenth Century
Fall. 3 credits.
C. Daniel, I. DeVault, G. Korman, N. Salvatore.
This two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States through the end of the nineteenth century.

101 Introduction to U.S. Labor History: The Twentieth Century
Spring. 3 credits.
C. Daniel, I. DeVault, G. Korman, N. Salvatore.
This two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States from the end of the nineteenth century up to the present.

200 Collective Bargaining
Fall or spring. 3 credits.
C. Erickson, C. Gramm, H. Katz, S. Kuruvilla.
A comprehensive study of collective bargaining; the negotiation and scope of contracts; the day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; and the problem of dealing with industrial conflict.

201 Labor Relations Law and Legislation
Fall, spring, or summer. 3 credits.
T. Crivens, M. Gold, J. Gross, R. Lieberwitz.
A survey of the law governing labor relations. The legal framework in which the collective bargaining relationship is established and bargaining takes place is analyzed. Problems of the administration and enforcement of collective agreements are considered, as are problems of protecting individual employee rights in the collective labor relations context. Also serves as an introduction to the legal system and method and to legal and constitutional problems of governmental regulation of industrial and labor relations.

301 Labor Union Administration
Fall. 3 credits. Prerequisites: ILRCB 100 and 201.
G. Brooks.
Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations: the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the many different aspects of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions that began in the sixties and continues today. All of these will involve a study of union constitutions and other primary documents, in addition to secondary readings. Attention will be given to relevant legislation, current problems of unions, and the eternal problems of attaining union democracy.

303 Research Seminar in the Social History of American Workers
Fall or spring. 4 credits. Limited to upperclass students who have demonstrated their ability to undertake independent work and who have received permission of the instructor.
G. Korman.
An examination of a different subject each year.

304 Seminar in the History, Administration, and Theories of Industrial Relations in the United States
Fall or spring. 4 credits. Prerequisite: permission of instructor.
C. Daniel, I. DeVault, G. Korman, N. Salvatore.
Designed to explore the social, economic and political background of industrial relations in the history of the United States. Examines a different subject each year.

305 Labor in Industrializing America: 1865–1920
Fall. 3 credits. Prerequisites: ILRCB 100 and 101.
N. Salvatore.
Examines the experience of working people in the years between the Civil War and World War I. It will explore both the workers themselves—their organization, diverse cultures, ethnic and racial traditions, and political activities—and the dramatic changes in industry that restructured American life during this period.

381 Jewish Workers in Europe and America, 1835–1948
Fall or spring. 4 credits. Open to sophomores, juniors, and seniors.
G. Korman.
This course in comparative history examines the complex experiences of the Yiddish-speaking immigrant workers and their families. A special subject of interest is the extraordinary history of the Jewish working classes between 1924 and 1948.

[384 Women and Unions
Fall or spring. 4 credits. Not offered 1990–91.
I. DeVault.
This seminar will explore women's participation in the United States labor movement in the nineteenth and twentieth centuries. Issues covered will include women workers' relations with male-dominated union movements, the role of cross-class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women union leaders and activities, and others.]

400 Union Organizing
Spring, weeks 1–7. 2 credits.
2 meetings each week. D. Cullen.
This course explores various aspects of unions' attempts to organize workers: why some workers join unions and others do not; the techniques used by both unions and employers during organizing campaigns; and the present law of organizing and proposed amendments to that law. Includes an examination.

403 The Law of Workers' Compensation
Fall, weeks 1–7. 2 credits. Prerequisite: ILRCB 201/501 or permission of instructor.
J. Burton.
A survey of legal aspects of workers' compensation, the program that provides cash benefits, medical care, and rehabilitation services to workers disabled by work-related injuries and diseases.

404 Contract Administration
Fall, weeks 1–7. 2 credits. Prerequisites: undergraduates, ILRCB 200 and 201; graduate students, ILRCB 500 and 501.
Staff.
This course bridges the gap between ILRCB 200 (500), Collective Bargaining, and ILRCB 602, Arbitration. It focuses on various aspects of dispute settlement process prior to final resolution. The intent of the course is to expand the knowledge of students rather than to develop personal skills. It includes such topics as (1) the historical development of contractual grievance process, (2) the merits of various alternative processes that have been adopted by unions and managements in the United States, (3) the impact of external law on the behavior of the parties in the adjustment process, (4) a comparison of the U. S. system with systems in other industrialized economies, (5) current issues and problems in the systems, (6) nonunion grievance processes, and (7) ongoing experimental alternatives to the standard systems.

406 History of the Black Worker in the United States
Fall. 3 credits. Prerequisite: ILRCB 100.
J. Gross.
Intended to introduce the student to the history of the black worker in the United States through a review and analysis of the existing literature of black labor history and through source documents from the National Archives. Discussions will center around the black worker in agriculture, industry, and government; black worker migrations; black workers and organized labor; and black workers, discrimination, and the law.

407 Contemporary Trade Union Movement
Fall. 3 credits. Prerequisites: ILRCB 100/502, upperclass standing.
N. Salvatore.
An examination of contemporary trade union issues in the context of labor's history since World War II. Among the issues to be discussed are centralization of union power, union democracy, political action, and strategies of collective bargaining. A series of speakers from the union movement will address the class. Midterm, final, and term paper are required.

482 Ethics at Work
Fall or spring. 7 weeks. 2 credits.
M. Gold.
Major theories of ethics are used to examine a number of ethical issues in the employment relationship, including genetic screening of job applicants, random drug testing of employees, affirmative action, discipline for off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

484 Employment Discrimination and the Law
Fall. 4 credits. Prerequisite: ILRCB 201/501 or equivalent.
T. Crivens, M. Gold.
An examination of legal problems involving employment discrimination based on race, color, religion, sex, national origin, or age. The impact of developing principles of law on preemployment inquiries and testing, seniority and promotions, and other personnel policies, practices, and procedures are discussed. The requirements of affirmative action under Executive Order 11246, as amended, are analyzed. Special attention is given to the role of state law in resolving employment discrimination claims and the procedural framework for raising and adjudicating such claims before administrative agencies and the courts.

485 The Law of Occupational Safety and Health
Fall, weeks 7–14. 2 credits. Prerequisite: ILRCB 201/501 or permission of instructor.
J. Burton.
Primary concern is legal developments concerning the Occupational Safety and Health Act of 1970. Limited attention to related legal issues such as arbitration of safety and health issues.

488 Liberty and Justice for All
Fall. 3 credits. Limited to 16 students.
M. Gold.
An examination of contemporary issues from the perspectives of philosophy, law, and the social sciences. Topics will be selected from among the following: affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

495 Honors Program
Fall and spring (yearlong course). 3 credits each term. Admission to the ILR senior honors program may be obtained under the following circumstances: (a) students must be in the upper 20 percent of their class at the end of their junior year; (b) an honors project, entailing research leading to completion of a thesis, must be proposed to an ILR faculty member who agrees to act as thesis supervisor; and (c) the project, endorsed by the proposed faculty sponsor, is submitted to the Committee on Academic Standards and Scholarships. Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and preparation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department chair, and a representative of the Academic Standards and Scholarship Committee.

497–498 Internship
Fall or spring. 497, 3 credits; 498, 6 credits.
Staff.
All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the Committee on Academic Standards and Scholarship. Upon approval of the internship, the Office of Student Services will register each student for 497, for 3 credits graded A+ to F for individual research, and for 498, for 6 credits graded S-U, for completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

499 Directed Studies
Fall or spring. 3 credits.
For individual research, conducted under the direction of a member of the faculty, in a special area of labor relations not covered by regular course offerings. Registration is normally limited to seniors who have demonstrated ability to undertake independent work. Eligible students should consult a counselor in the Office of Student Services at the time of course registration to arrange for formal submission of their projects for approval by the Academic Standards and Scholarship Committee.

500 Collective Bargaining
Fall or spring. 3 credits. Open only to graduate students. Recommended: ILRCB 501 taken previously or concurrently.
C. Gramm, H. Katz, S. Kuruvilla.
A comprehensive study of collective bargaining, with special emphasis on philosophy, structures, process of negotiations, and administration of agreements. Attention is also given to problems of handling and settling industrial controversy, the various substantive issues, and important developments and trends in collective bargaining.

501 Labor and Employment Law
Fall, spring, or summer. 3 credits.
T. Crivens, M. Gold, R. Lieberwitz.
A survey and analysis of the law governing labor relations and employee rights at the workplace. The first half of the course examines the legal framework within which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy.

502 History of Industrial Relations in the United States since 1865
Spring. 3 credits.
C. Daniel, I. DeVault, G. Korman, N. Salvatore.
This introductory survey course emphasizes historical developments in the twentieth century. Special studies include labor union struggles over organizational alternatives and such other topics as industrial conflicts, working-class life styles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

[600 Advanced Seminar in Labor Arbitration
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: ILRCB 602 or equivalent and permission of instructor. Not offered 1990–91.
J. Gross.
An advanced seminar in labor arbitration emphasizing the practical aspects of current labor arbitration techniques and problems. Subjects considered range from laboratory exercises in the presentation of an arbitration case, the preparation of prehearing and posthearing briefs, and the writing of an arbitration opinion and award, to the investigation and evaluation of the experience of labor arbitrators, with selected case problems arising in state and federal employment and public education as well as in the private sector.]

[601 The Bargaining Process: Theory and Practice
Fall. 3 credits. Prerequisite: ILRCB 200/500. Not offered 1990–91.
D. Lipsky.
Focus is on theories of the bargaining process, including economic, behavioral, game-theoretic, political, and social-psychological approaches to the bargaining problem. Will consider union wage policy, particularly the formulation of union goals in bargaining. Union and management preparation for negotiations, bargaining strategies and tactics, and bargaining power are some of the facets of the bargaining process that will be discussed. Attempts at empirical verification of various bargaining theories will also be considered. Theoretical and analytical principles will be developed in assigned readings and class discussions. The application and practical relevance of these principles will be explored through mock negotiations and other exercises.]

602 Arbitration
Fall or spring. 4 credits. Limited to 21 students. Prerequisites: undergraduates, ILRCB 200; graduate students, ILRCB 500; permission of instructor.
J. Gross.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

[603 Governmental Adjustment of Labor Disputes
Fall or spring. 3 or 4 credits. Prerequisites: undergraduates, ILRCB 200; graduate students, ILRCB 500. Not offered 1990–91.
Staff.
An examination of the various governmental techniques for dealing with labor disputes in both the private and public sectors, including mediation, fact-finding arbitration (both voluntary and compulsory), the use of injunctions, and seizure. The course also examines the application of these techniques under the Railway Labor Act, Taft-Hartley Act, and various state acts.]

604 Readings in the Literature of American Radicalism and Dissent
Fall or spring. 3 credits. Limited to seniors and graduate students.
N. Salvatore.
Each term, concentration is on a different historical aspect of American radicalism and dissent.

605 Readings in the History of Industrial Relations in the United States
Fall. 3 credits. Limited to seniors and graduate students.
C. Daniel, G. Korman, N. Salvatore.
A seminar covering, intensively, original printed sources and scholarly accounts for different periods in American history.

606 Theories of Industrial Relations Systems
Fall or spring. 3 credits. Limited to seniors and graduate students. Prerequisites: seniors, ILRCB 100, 101, 200; graduate students, ILRCB 500.
H. Katz.
This course will trace the evolution of theory and research on industrial relations. Topics include: theories of the labor movement, institutional models and evidence regarding what unions do, the origins of internal labor markets and their relationship with unionization, models of strikes, empirical assessments of arbitration, research on union decline, and empirical evidence of the impacts of new technology.

607 Values in Law, Economics, and Industrial Relations
Fall or spring. 3 credits.
J. Gross.
An examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussions and student research projects will use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as: discrimination; law, economics and the state; work and business; power, conflict and protest; and rights and justice.

608 Special Topics in Collective Bargaining Labor Law, and Legislation
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 201; graduate students, ILRCB 502.
Staff.
The areas of study are determined each semester by the instructor offering the seminar.

609 Law of Workers' Compensation
Fall. 3 or 4 credits. Prerequisite: ILRCB 201/501 or permission of instructor.
J. Burton.
A survey of legal aspects of workers' compensation, the program that provides cash benefits, medical care, and rehabilitation services to workers disabled by work-related injuries and diseases. Includes a brief introduction to the disability benefits provided by the Social Security program and to negligence suits by injured workers.

650 Service Work and Workers in Historical Perspective
Fall or spring. 3 credits.
I. DeVault.
This course takes a historical perspective on the development of a service economy in the United States. Readings will include general and theoretical works, but the main focus will be recent historical scholarship on specific occupations and situations in the "nonproductive" workforce. Students will explore primary sources for research on the subject and write research papers.

651 Industrial Relations in Transition
Spring. 3 credits. Limited to seniors and graduate students.
C. Erickson, H. Katz.
Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Will review recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Will also review the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material will focus on industrial relations practice in the private sector in the United States, although some attention will be paid to developments in Western Europe, the United Kingdom, and Japan.

655 Employment Law
Spring. 3 credits. Prerequisites: ILRCB 201/501.
M. Gold, C. Gramm, or J. Burton.
This course will examine a number of major federal and state laws designed to protect workers in their employment relationships. The historical and theoretical rationales; the major statutory, judicial, and administrative developments; and evidence of the effectiveness of each law will be examined. Where pertinent, consideration will also be given to current controversies surrounding the laws. The material covered will be selected from the following: the Fair Labor Standards Act, unemployment insurance, workers' compensation, the Occupational Safety and Health Act, the Employee Retirement Income Security Act, the doctrine of employment at will, Social Security, workers' right-to-know, plant closings, and protection of workers' privacy.

680 Problems in Union Democracy
Fall or spring. 3 credits.
M. Gold.
Unions are considered as an example of private government, and union democracy is examined by standards and customary practices in both public and private governments. Included are such elements as elections; self-government by majority; rights of minorities; the judicial process, including impartial review; local-national relationships; constituency and representation; the legislative process; and executive power and functions. The regulation of private government by the state will be considered.

681 Selected Topics in Labor and Employment Law
Fall or spring. 3 credits. Prerequisite: ILRCB 201/501 or equivalent.
M. Gold, R. Lieberwitz.
A survey of the law of employment discrimination, internal union democracy, public sector labor relations, and individual rights in the workplace such as privacy, free speech, and due process. Topics covered may vary with the instructor.

682 Seminar in Labor Relations Law and Legislation
Fall or spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor.
R. Lieberwitz.
Legal problems in public employment and other areas of labor relations affecting the public interest.

683 Research Seminar in the History of Industrial Relations
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 100 and 101; graduate students, ILRCB 502.
G. Brooks, C. Daniel, I. DeVault, G. Korman, N. Salvatore.
The areas of study are determined each semester by the instructor offering the seminar.

686 Collective Bargaining in the Public Sector
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 200 and 201; graduate students, ILRCB 500 and 501.
Staff.
An examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. The variety of legislative approaches to such matters as representation rights, unfair practices, scope of bargaining, impasse procedures, and the strike against government are considered along with implications of collective bargaining for public policy and its formulation.

687 Current Issues in Collective Bargaining
Fall or spring. 3 or 4 credits. Limited to 25 students. Prerequisites: ILRCB 200/500, and permission of instructor.
Staff.
An intensive study of the most significant current issues and problems facing employers and unions in their relations with each other, with particular emphasis on the substantive matters in contract negotiations and administration of the provisions of collective bargaining agreements. A major research paper is usually required.

689 Constitutional Aspects of Labor Law
Spring. 3 credits.
R. Lieberwitz.
In-depth analysis of the Supreme Court decisions that interpret the United States Constitution as it applies in the workplace. This study will focus on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.

703 Theory and Research in Collective Bargaining
Spring. 3 credits. Open to graduate students who have had ILRCB 500 and ILROB 723 or their equivalents. Recommended: a statistics course beyond the level of ILRST 510.
C. Gramm.
This is a second-level course in collective bargaining that builds on the institutional research covered in ILRCB 500. The existing literature in the area of collective bargaining is appraised for its theoretical and empirical content. Efforts are made to explore the appropriate role for theory and empirical analysis in moving research in collective bargaining toward a more analytical perspective and to identify and appraise the underlying paradigms used to study collective bargaining-related issues.

705 The Economics of Collective Bargaining
Spring. 3 credits. Prerequisites: ILRCB 500; ILRLE 540 (or their equivalents) and an understanding of multiple regression analysis; or permission of instructor.
Staff.
Focuses on both the economic analysis of unions and collective bargaining in our economy and on the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productibility, earnings inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

784 Employment Discrimination and the Law
Fall. 4 credits. Prerequisite: ILRCB 501 or equivalent.
T. Crivens, M. Gold.
An examination of legal problems involving employment discrimination based on race, color, religion, sex, national origin, or age. The impact of developing principles of law on preemployment inquiries and testing, seniority and promotions and other personnel policies, and practices and procedures are discussed. The requirements of affirmative action under Executive Order 11246, as amended, are analyzed. Special attention is given to the role of state law in resolving employment discrimination claims and the procedural framework for raising and adjudicating such claims before administrative agencies and the courts.

798 Internship
Fall or spring. 1–3 credits.
Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRCB 798 must be approved by the faculty member who will supervise the project.

799 Directed Studies
Fall or spring. Credit to be arranged.
For individual research conducted under the direction of a member of the faculty.

980 Workshop in Collective Bargaining, Labor Law, and Labor History
Fall and spring. 2 credits. Enrollment limited to M.S. and Ph.D. candidates in the department. S-U grades only.
Staff.
This workshop is designed to provide a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course will be expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that student's thesis research.

ECONOMIC AND SOCIAL STATISTICS

I. Blumen, A. Hadi, P. McCarthy, P. Velleman, M. Wells.

210 Statistical Reasoning I
Fall or spring. 4 credits. Not open to engineering or graduate students. Attendance at the first discussion section of the term is essential.
An introduction to the basic concepts of statistics: measures of location and dispersion, estimation and confidence intervals, hypothesis tests, regression and correlation. Students are taught to use a computer at the beginning of the term and use it for weekly assignments.

211 Statistical Reasoning II
Fall or spring. 3 credits. Prerequisite: ILRST 210 or suitable introductory statistics course. Attendance at the first discussion section of the term is essential.
A continuation of ILRST 210. Application of statistical techniques to the social sciences. Topics include statistical inference, review of simple regression, multiple regression and correlation, applications of regression, elements of time series analysis, and the design of sample surveys. A computer is used throughout the course. (Students who have taken an introductory course in statistics without a computer will be expected to obtain brief instruction during the first few weeks of the semester.)

310 Design of Sample Surveys
Fall. 3 credits. Prerequisite: two terms of statistics.
P. McCarthy.
Application of statistical methods to the sampling of human populations. A thorough treatment of the concepts and problems of sample design with respect to cost, procedures of estimation, and measurement of sampling error. Analysis of nonsampling errors and their effects on survey results (for example, interviewer bias and response error). Illustrative materials are drawn from such fields as market research and attitude and opinion research.

312 Applied Regression Methods
Spring. 3 credits. Prerequisite: ILRST 211 or equivalent.
A. Hadi.
The course starts with a review of those parts of matrix algebra that provide the vocabulary and skill necessary to construct and manipulate linear regression models. The standard least-squares theory is then developed, and regression analysis techniques are applied to problems arising in economics, industry, government, and the social sciences. Computer packages are used as an aid to obtain problem solutions. Additional topics are deviation from assumptions, multicollinearity, variable selection methods, and analysis of variance.

[313 Graphical Methods for Data Analysis
Fall. 3 credits. Prerequisite: ILRST 211 or equivalent. Not offered 1990–91.
Staff.
Classical and recently developed graphical methods for analysis and display. Characteristics of effective and honest graphs with comparison of alternative methods for understanding data. Includes study of current computer programs and methods expected to be practical in the near future: graphing of univariate data, bivariate plots, multivariate data, graphical methods of data analysis; the specification, modification, and control of graphs; study of interaction between choice of display and underlying patterns.]

410 Techniques of Multivariate Analysis
Fall. 3 credits. Prerequisite: two statistics courses or permission of instructor.
Staff.
The techniques of multivariate statistical analysis, the associated assumptions, the rationale for choices among techniques, and illustrative applications. Some matrix algebra and related mathematics are introduced. Includes some regression; correlation; principle components; multivariate tests on means, variances, and covariances; relations between sets of variates; and discriminatory analysis.

411 Statistical Analysis of Qualitative Data
Spring. 3 credits. Prerequisite: two statistics courses or permission of instructor.
Staff.
An advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variates, rank-order methods, and other nonparametric statistical techniques, including those related to chi-squared.

499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

510 Statistical Methods for the Social Sciences I
Fall or spring. 4 credits.
A nonmathematical course for graduate students in the social sciences without previous training in statistical method. Emphasis is on discussion of technical aspects of statistical analysis and on initiative in selecting and applying statistical methods to research problems. The subjects ordinarily covered include analysis of frequency distributions, regression and correlation analysis, and selected topics from the area of statistical inference. Students are taught to use a computer at the beginning of the term and use it for weekly assignments.

511 Statistical Methods for the Social Sciences II
Fall or spring. 3 credits. Prerequisite: ILRST 510 or an equivalent introductory statistics course.
This is a second course in statistics for graduate students that emphasizes applications in the social sciences. Topics include review of simple linear regression, multiple regression (theory, model building, model violations), and analysis of variance. Statistical computing packages are used extensively. (Students who have taken an introductory course in statistics without a computer course will be expected to obtain brief instruction during the first few weeks of the semester.)

610 Seminar in Modern Data Analysis
Spring. 3 credits. Prerequisite: two statistics courses or permission of instructor.
P. Velleman.
An advanced survey of modern data analysis methods. Topics include exploratory data analysis, robust methods, regression methods, and diagnostics. Extensive outside readings cover recent and historical work. Participants should have some knowledge of multiple regression, including the use of matrices (ILRST 312 may be taken concurrently), and some experience using a computer.

611 Statistical Computing
Spring. 3 credits. Prerequisites: Linear algebra, knowledge of a programming language, and statistics at least through multiple regression.
P. Velleman, M. Wells.
A survey of new aspects of statistical computing using the recent book on the subject by Ronald Thisted. Includes: basic numerical methods, numerical linear algebra, nonlinear statistical methods, numerical integration and approximation, smoothing and density estimation. Additional special topics may include: Monte Carlo methods, statistical graphics, computing-intensive methods, parallel computation, computing environments. Designed for graduate students in the statistical sciences and related fields interested in new advances. Students may be asked to write programs in a programming language of their choice.

711 Sensitivity Analysis in Linear Regression
Fall. 3 credits. Prerequisite: ILRST 312 or equivalent.
A. Hadi.
A course on regression for students in statistical sciences and related fields. Attempts to narrow the gap between the theory and practical application of the linear regression model. Classical and recently developed statistical procedures are discussed. Students will be expected to read articles and thoroughly analyze real-life data sets using computer-packaged programs. Topics include role of variables in a regression equation, regression diagnostics (outliers, leverage points, influential observations, generalized linear models, errors-in-variables, and multicollinearity.

712 Theory of Sampling
Fall. 3 credits. Prerequisite: calculus and at least one semester of mathematical statistics.
P. J. McCarthy.
A companion course to ILRST 310, Design of Sample Surveys, stressing the development of the fundamentals of sampling theory.
Attention is paid to recent progress in the field. Occasional illustrative material is given to indicate the application of the theory.

[713 Empirical Processes with Statistical Applications
Fall. 3 credits. Prerequisite: a course at the technical level of Math 572 and 574 or permission of instructor. Not offered 1990–91.
Staff.
The statistical analysis of life history data is playing an increasing role in the social, natural, and physical sciences. We will formulate and solve various practical problems in the statistical analysis of life history data using the modern theory of stochastic processes. We will examine the martingale dynamics for point processes relevant to life history data. Both parametric and nonparametric inference for multiplicative intensity models will be considered. The large sample properties of the proposed procedures will be discussed in detail using recent extensions of functional central limit theorems for martingales.]

799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

INTERNATIONAL AND COMPARATIVE LABOR RELATIONS

G. Fields, chair; J. Abowd, J. Bishop, G. Boyer, I. DeVault, H. Katz, G. Korman, S. Kuruvilla, J. Windmuller

330 Comparative Industrial Relations Systems: Western Europe
Fall. 3 credits (1 additional credit may be arranged with the instructor). Open to juniors and seniors.
Staff.
This course is intended to provide an overview of contemporary industrial relations in several Western European countries, especially Britain, France, West Germany, and Sweden. Particular attention will be given to the role of labor organizations, employers, and government, recent developments in labor relations law and collective bargaining, and current issues in labor-management relations. National industrial relations systems will constitute the principal units of analysis but attempts at comparisons will be made throughout the term.

331 Comparative Industrial Relations Systems: Non-Western Countries
Spring. 3 credits (1 additional credit may be arranged with the instructor). Open to juniors and seniors.
Staff.
A study of the industrial relations systems of less-developed countries and industrialized non-Western countries, including Japan, the Soviet Union, Yugoslavia, India, and several others. Emphasis is on government labor policies, trade unions, and collective bargaining. Also included is a review of international organizations concerned with labor problems.

332 Labor in Developing Economies
Spring. 3 credits. Prerequisite: ILRLE 240, Economics 311, or permission of instructor.
G. Fields.
The economic problems of labor in less-developed nations. Among the subjects included are determinants of income and wage structures in less-developed countries; labor demand and unemployment; labor supply and migration; human resource policy; and development strategy and employment growth.

337 Special Topics: Comparative History of Women and Work
Fall. 4 credits.
I. DeVault.
This seminar will explore the similarities and differences between different cultures' assumptions about the work of women as well as women's experiences in varying work circumstances throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course will consist of indepth examinations of specific work situations or occupations across time and geography. Comparative examples will be taken from the United States, Europe, and the Third World.

[381 Jewish Workers in Europe and America, 1835–1948
Fall or spring. 4 credits. Open to sophomores, juniors, and seniors. Not offered 1990–91.
Staff.
For description, see the section Collective Bargaining, Labor Law, and Labor History.]

430 European Labor History
Fall. 3 credits.
J. Windmuller.
The development of trade unions in Great Britain, France, and Germany between 1850 and 1950. Patterns of union organization, political party trade union links, the growth of industrial relations systems, and the evolution of public policies toward labor are emphasized.

[448 Topics in Twentieth Century Economic History: The Economics of Depression and the Rise of the Managed Economy
Fall. 4 credits. Prerequisites: ILRLE 240 or Economics 312. Not offered 1990–91.
G. Boyer.
For description, see the section on Labor Economics.]

499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

530 Comparative Industrial Relations Systems: Western Europe
Fall. 3 credits. For graduate students.
Staff.
Students in this course attend the lectures in ILRIR 330 (see description for ILRIR 330). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRIR 330 and related topics.

531 Comparative Industrial Relations Systems: Non-Western Countries
Spring. 3 credits. For graduate students.
Staff.
Students in this course will attend the lectures in ILRIR 331 (see description for ILRIR 331). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRIR 331 and related topics.

532 Labor in Developing Economies
Spring. 3 credits. For graduate students.
G. Fields.
Students in this course attend the lectures in ILRIR 332 (see description for ILRIR 332). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRIR 332 and additional topics.

537 Comparative History of Women and Work
Fall. 4 credits. For graduate students.
I. DeVault.
Students in this course attend the lectures in ILRIR 337 (see description for ILRIR 337). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRIR 337 and additional topics.

630 Seminar in International and Comparative Labor Problems
Spring. 3 credits.
J. Windmuller.
This seminar will be concerned with international aspects of labor organizations and industrial relations. Specific topics will include an examination of international labor movements, the role of the International Labor Organization, the international affairs interests of unions in the United States and other countries, and the labor relations policies of multinational corporations.

643 Special Topics in Labor Economics
Fall or spring. 3 or 4 credits.
Staff.
For description, see the section on Labor Economics.

698 International Human Resource Policies and Institutions
Fall. 3 credits.
J. Bishop.
For description, see the section on Personnel and Human Resource Studies.

799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

LABOR ECONOMICS

R. Hutchens, chair; J. Abowd, R. Aronson, G. Boyer, J. Burton, R. Ehrenberg, G. Fields, G. Jakubson, O. Mitchell, R. Smith

140 Development of Economic Institutions
Spring. 3 credits. Prerequisite for non-ILR students: permission of instructor.
G. Boyer.
Provides students with an understanding of the historical roots of the economic system currently dominant in Western Europe and the United States. The course will focus on (a) the process of European economic growth prior to 1914, (b) the effect of industrialization on labor in Great Britain, and (c) the historical evolution of economic thought from Adam Smith to J. M. Keynes.

240 Economics of Wages and Employment
Fall, spring, or summer. 3 credits. Prerequisites: Economics 101–102 or equivalent.
Staff.
This course analyzes the characteristics and problems of the labor market by applying to them the theory and elementary tools of economics. Behavior on both the demand (employer) and supply (employee) sides of the market is analyzed to gain a deeper understanding of the effects of various government programs targeted at the labor market. Topics covered include education and training, fringe benefits and the structure of compensation, labor-force participation and its relationship to household production, issues regarding occupational choice, an analysis of migration, labor-market discrimination, and the effects of unions.

332 Labor in Developing Economies
Spring. 3 credits.
G. Fields.
For description, see the section International and Comparative Labor Relations.

340 Economic Security
Fall or spring. 3 credits.
J. Burton, R. Hutchens, G. Jakubson.
The economic and social effects of income security measures. Analysis of programs offering protection against economic loss due to industrial accident, temporary and permanent disability, illness, old age, premature death, and unemployment, as well as private efforts to provide security, and the problems of integrating public and private programs. An examination is made of proposals for amending or modifying economic security measures.

343 Problems in Labor Economics
Fall or spring. 3 or 4 credits.
Staff.
Devoted to new policy issues and to recent literature in the field. The specific content and emphasis varies in response to the interests of the faculty member teaching the course. A course will be offered in 1989–90 on social experiments and economic policy.

[344 Comparative Economic Systems: Soviet Russia
Fall. 4 credits. Not offered 1990–91.
A comparative analysis of the principles, structure, and performance of the economy of Soviet Russia. Special attention is devoted to industry and labor.]

345 Corporate Finance and Labor Markets
Spring. 4 credits. Prerequisites: ECON 101, 102 or equivalent, and accounting.
J. Abowd.
The course covers the following topics (with emphasis on labor market applications and implications): (1) the concept of net present value, the valuation of real corporate assets, and the relations between risk and return; (2) capital budgeting decisions and the cost of capital; (3) investment financing decisions and the role of financial markets; (4) capital structure, the Modigliani-Miller propositions, and the relation between debt and equity financing; (5) valuation of corporate debt, options, and other financial assets; and (6) financial planning mergers, and portfolio management. Students must attend the lab.

348 The Economics of Unemployment
Fall. 4 credits. Prerequisite: ILRLE 240/540 or permission of instructor.
R. Smith.
This course introduces students to several issues fundamental to an understanding of unemployment: the social costs; definitional questions and measurement problems; the patterns of unemployment; and the various types of unemployment, their causes, and the policies that can or have been pursued to alleviate unemployment. The course is designed for undergraduate and graduate students who have taken a survey course in labor economics or its equivalent.

441 Income Distribution
Fall. 4 credits. Open to upperclass and graduate students.
R. Hutchens.
Explores income distribution in the United States and the world. Topics to be covered include functional and size distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth.

442 Economics of Employee Benefits
Spring. 4 credits.
O. Mitchell.
An analysis and appraisal of private health, welfare, and pension plans. Consideration of the origin and development of employer, union, and joint programs and a critical examination of the financing, administration, and general effectiveness of the plans.

446 Labor Market Discrimination
Fall or spring. 4 credits.
O. Mitchell.
Examines differences in labor market rewards by gender, race, age, and other worker characteristics from both a theoretical and an empirical perspective. Economic modeling and statistical methodology (including computer analysis) are stressed. Students need some background in microeconomics and data analysis.

447 Economic Policy toward the Aging
Fall. 4 credits.
O. Mitchell.
Explores labor market and social policy concerning older workers and retirees. Topics to be covered include labor market trends of the elderly, labor market institutions affecting older people (e. g., mandatory retirement, unemployment, pensions), and government policies, Social Security, health insurance, and retirement income regulation. Cross-national perspectives will be addressed as well.

448 Topics in Twentieth Century Economic History: The Economics of Depression and the Rise of the Managed Economy
Fall. 4 credits. Prerequisites: ILRLE 240 or Economics 312.
G. Boyer.
Topics covered include: the causes of the Great Depression in the United States; the economics of the New Deal; the causes of high unemployment in interwar Great Britain; the rise of Keynesian economics and the development of demand management policies in Great Britain and the United States after 1945.

495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

497–498 Internship
Fall or spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

532 Labor in Developing Economies
Spring. 3 credits.
G. Fields.
For description, see the section International and Comparative Labor Relations.

540 Labor Economics
Fall or summer. 3 credits. Prerequisites: Economics 101–102 or equivalent. Required of graduate students majoring or minoring in labor economics and M.I.L.R. candidates.
Staff.
This course analyzes the characteristics and problems of the labor market by applying to them the theory and elementary tools of economics. Behavior on both the demand (employer) and supply (employee) sides of the market is analyzed to gain a deeper understanding of the effects of various government programs targeted at the labor market. Topics covered include education and training, fringe benefits and the structure of compensation, labor-force participation and its relationship to household production, issues regarding occupational choice, an analysis of migration, labor-market discrimination, and the effects of unions.

541 Social Security and Protective Labor Legislation
Spring. 3 credits. Prerequisite: ILRLE 540. Normally required of graduate students majoring or minoring in labor economics and required of M.I.L.R. candidates.
J. Burton, R. Hutchens, G. Jakubson.
The economic and social effects of income security measures. Analysis of programs offering protection against economic loss due to industrial accident, temporary and permanent disability, illness, old age, premature death, and unemployment, as well as private efforts to provide security, and the problems of integrating public and private programs. An examination is made of proposals for amending or modifying economic security measures.

642 Work and Welfare: Interactions between Cash-Transfer Programs and the Labor Market
Fall. 4 credits. Prerequisite: some familiarity with microeconomics.
R. Hutchens.
Emphasizes policy issues in analyzing the relationship between the labor market and cash-transfer programs such as social security, public assistance, and unemployment and wages in determining the level and distribution of cash transfers. Investigates the connection between cash transfers and labor supply. Topics include determinants of cash-transfer demand and supply, the negative income tax experiments, and program incentives for withdrawal from the labor force (for example, incentives for early retirement implicit in old-age insurance). A paper on a specific program is required.

643 Special Topics in Labor Economics
Fall or spring. 3 or 4 credits.
Staff.
Devoted to new policy issues and to recent literature in the field. The specific content and emphasis varies in response to the interests of the faculty member teaching the course. Courses offered in 1989–90 include economic policy toward the elderly, economics of collective bargaining, twentieth-century economic history, income maintenance policy, economics of discrimination, and models for limited dependent variables and panel data.

644 The Economics of Occupational Safety and Health
Spring. 4 credits.
R. Smith.
The course analyzes the problem of occupational injuries and illnesses in the United States. The first section concentrates on legal requirements, judicial interpretations, and legal implications of the Occupational Safety and Health Act, then shifts to such questions as the need for, and appropriate goals of, the act; the stringency of safety standards considered in a benefit-cost framework; the difficulties in enforcing the act; and estimates of the impact of the act.

647 Evaluation of Social Programs
Fall. 4 credits.
R. Ehrenberg.
An introduction to the methodologies used by economists to evaluate the impacts of social-action programs and legislation. General evaluation methodology, cost-benefit analysis, and econometrics are discussed. Case studies are considered to illustrate the uses of these techniques, to acquaint the student with major current government programs and legislation, and to estimate these programs' economic impacts. Throughout, the primary analytic framework used by the instructor is microeconomics.

648 Economic Analysis of the University
Spring. 4 credits.
R. Ehrenberg.
This course seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can be usefully applied to analyze resource allocation decisions at universities. Among the topics covered are financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussions of the extensive readings will be supplemented by presentations by Cornell administrators and outside speakers who have been engaged in university resource allocation decisions or have done research on the subject.

740 Economic Analysis of Collective Bargaining
Fall. 4 credits.
J. Abowd.
Examines theoretical and empirical advances in the study of the development of bargaining units and the ongoing relation between organized employees and their employers. It concentrates on economic models that link the performance of the firm and product market to the outcomes of the organizing and bargaining processes. Bargaining unit formation, contract negotiation, strikes, employer investment decisions, employment, profitability and capital valuations are all considered. Detailed statistical analyses that use bargaining unit level information on characteristics of the international, national, and local labor and product markets are part of the course.

741 Analysis of Longitudinal Data in the Social Sciences
Spring. 4 credits.
G. Jakubson.
Considers methods for the analysis of longitudinal data, that is, data in which a set of individual units are followed over time. The focus will be on both estimation and specification testing of these models. The course will consider how these statistical models are linked to underlying theories in the social sciences. Course coverage will include panel data methods (including fixed vs. random effects models for both linear and non-linear systems) and, if time permits, duration analysis.

742 Economics of Employee Benefits
Spring. 3 credits.
O. Mitchell.
Students in this course attend the lectures in ILRLE 442 (see description for 442). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in 442 and additional topics.

744 Seminar in Labor Economics
Fall. 3 credits. ILRLE 744 and 745 constitute the Ph.D.-level sequence in labor economics.
R. Ehrenberg.
Reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas.

745 Seminar in Labor Economics
Spring. 3 credits.
R. Hutchens G. Jakubson.
Reading and discussion of selected topics in labor economics in the fields of theory, institutions, and policy.

746 Labor Market Discrimination
Fall or spring. 4 credits.
O. Mitchell.
Students in this course attend the lectures in ILRLE 446 (see description for ILRLE 446). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRLE 446 and additional topics.

747 Economic Policy toward the Aging
Fall. 4 credits.
O. Mitchell.
Students in this course attend the lectures in ILRLE 447 (see description for 447). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in 447 and additional topics.

798 Internship
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

940 Workshop in Labor Economics
Fall or spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations.
Focus is on the formulation, design, and execution of dissertations. Preliminary plans and portions of completed work are presented for discussion.

ORGANIZATIONAL BEHAVIOR

T. Hammer, chair; S. Bacharach, S. Barley, L. Gruenfeld, W. Sonnenstuhl, R. Stern, P. Tolbert, H. Trice, L. Williams

120 Introduction to Macro Organizational Behavior and Analysis
Fall. 3 credits.
Staff.
The relationship between industry and the economy as a whole and its implications for other social institutions in American society (including stratification, politics, and American values) is discussed. The nature of industrial organizations and of complex organizations in general, emphasizing authority relations, goals, the division of labor, and bureaucracy.

121 Introduction to Micro Organizational Behavior and Analysis
Spring or summer. 3 credits.
Staff.
Deals with the relationship between the individual and the organization and such basic psychological processes as need satisfaction, perception, attitude formation, and decision making. The individual is described and examined as a formal and informal group member. Within this area, particular emphasis is placed on leadership, problem solving, and conflict resolution.

320 The Psychology of Industrial Engineering
Fall. 4 credits.
T. Hammer.
A study of the human factors in the industrial engineering of work, workplaces, tools, and machinery. The course examines the aspects of individual and social psychology that operate in the work setting and that should be taken into account in the design of jobs. These include limitations of the human sensory system; individual difference in skills, abilities, motives, and needs; group dynamics; intrinsic motivation; job satisfaction; conflict.

323 Introduction to the Study of Attitudes
Fall. 4 credits. Open to juniors and seniors.
Staff.
Designed to acquaint the student with what is known about (1) origins of human attitudes, (2) the determinants of attitude change, and (3) the measurement of attitude differences. Studies employing clinical, experimental, and survey techniques are discussed. Each student designs, executes, and analyzes his or her own research study.

324 Work Organizations, Troubled Employees, and Employee Assistance Programs
Spring. 3 credits. Limited to 40 students. Prerequisite: one or more courses in sociology and psychology.
H. Trice.
Focus is on the relationship between organizational life and psychiatric-criminal behaviors. Covers (1) the nature and etiology of psychiatric disorders such as alcoholism, other drug and substance abuse, and the major neuroses; (2) corporate and white-collar criminal behavior; (3) the role of occupational and organizational risk factors in etiology; (4) various types of organizations that represent societal responses to troubled employees—mental hospitals, prisons, jails, halfway houses, shelter workshops, and self-help groups such as Alcoholics Anonymous. Puts differential emphasis on programs within work organizations that attempt to deal with troubled employees, job-based alcoholism, and employee assistance programs. Field format divides class into small groups for application in local relevant organizations. The development, strategies, and management of employee assistance programs will receive special attention.

325 Organizations and Social Inequality
Spring. 4 credits.
Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. Marxist conceptions of class and Weberian conceptions of job authority will be examined to see what additional power they add to the explanation of social inequality, particularly in regard to income attainment. As the central unit of analysis in the course will be organizations, a historical section will be included that deals with the evolution of current control and compensation structures in large-scale organizations.

326 Sociology of Occupations
Fall or spring. 3 credits. Limited to 45 students. Prerequisite: one or more courses in sociology.
H. Trice.
Focuses on (1) the societal characteristics of occupations: division of labor, social stratification, mandate and license, occupational ideologies, stories, and tradition; (2) nature and expression of professionalization of occupations; (3) organizational characteristics of occupations: accommodation to formal organizations, occupational associations, and occupational mix; (4) social psychological characteristics of occupations: temperamental and intellectual role demands, occupational attraction, identity, and commitment, and occupational self-images; (5) relationship between occupational structure and organizational structure. Field format divides class into small groups for application among local occupational groups.

327 Psychology of Industrial Conflict
Fall. 4 credits.
Staff.
An application of frustration theory to the analysis of conflict and stress in organizations and society. Comparisons are made between industrial relations, race relations, international relations, and other settings. Readings include behavioral research findings from a variety of studies in industry. Relevant contributions from experimental, social, and clinical psychology are also considered.

328 Cooperation, Competition, and Conflict Resolution
Spring. 4 credits. Prerequisite: two courses in social psychology or equivalent.
An examination of theory and empirical evidence relating to the resolution of interpersonal, intergroup, and international conflict. Specific attention is devoted to studying factors that contribute to the development of cooperative or competitive bonds between parties to a conflict. The following topics are studied: the availability and use of threat; the credibility, intensity, and costs of threat; fractioning and escalating conflict. Personality and situational factors that regulate conflict intensification are stressed.

329 Organizational Cultures
Fall or spring. 3 credits. Limited to 45 students. Prerequisite: one or more courses in sociology.
H. Trice.
This course reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations in workplaces such as corporations and unions. The course first examines the nature of ideologies as sense-making definitions of behavior, concentrating on the cultural forms that carry these cultural messages, rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention will be given to rites and ceremonials as a cultural form in organizational life that consolidates many of these expressive forms into one. The course will examine types of ceremonial behavior such as rites of passage, rites of enhancement, and rites of degradation, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior will also receive attention, especially the part played by occupational subcultures in formal organizations. Emphasis will be placed on empirical examples from both the organizational behavior literature and the professor's field research. Field format divides class into small groups for application in local relevant organizations.

370 The Study of Work Motivation
Fall. 4 credits. Open to juniors and seniors with permission of instructor.
Staff.
Designed to acquaint the student with the basic concepts and theories of human motivation with implications for organizational change and job design. Focus is on theories of worker motivation and on research approaches and results as these apply to individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental, social, and clinical psychology. Each student will design, execute, and analyze a research study of his or her own.

371 Individual Differences and Organizational Behavior
Fall or summer. 4 credits. Recommended: some acquaintance with the substance and methods of behavioral or social science
L. Gruenfeld.
This course examines personality from a comparative psychodynamic point of view. Social behavior, authority relationships, and work motivation are used to illustrate how various theories could be applied to understand behavior and experience in organizations.

372 Sociological Models of Organizations
Spring. 3 credits. Prerequisites: ILROB 120 and 121 or equivalent.
P. Tolbert.
Introduces students to the basic issues involved in the sociological analysis of organizations. Traces organizational theory from Max Weber to the most recent research. Among the themes to be discussed are internal structure of organizations, communication in organizations, decentralization, organizational change, organizational technology, and organizational environments.

373 Organizational Behavior Simulations
Fall. 3 credits. Prerequisites: ILROB 120 and 121 or equivalent.
R. Stern.
Basic principles of organizational behavior are studied through readings and participation in four simulation games. The first game, The Organizational Game: Design, Change, and Development, by Miles and Randolph, simulates traditional organization, while the second, The Fuzzy Game, by Paton and Lockett, simulates a cooperative. A third game models executive decision making and a fourth, work organization. Organizational design, decision making, and conflict are the central topics of discussion. The contrasting bases of power in the organizations permits the study of the assumptions underlying organization structure and process.

374 Technology and the Worker
Fall. 3 credits.
S. Barley.
Examines theory and research pertaining to the social implications of technology and technological change for the work worlds of blue-collar, white-collar, and professional workers. At issue are alternate conceptions of technology as a social phenomenon, approaches to the study of technology in the workplace, the reactions of individuals and groups to technological change, the construction of a technology's social meaning, and the management of technological change. A broad range of technologies will be considered, but particular emphasis will be given to automation, electronic data processing, and sophisticated microelectronic technologies, including CAD-CAM systems, telecommunication networks, medical imaging technologies, artificial intelligence, and personal computers.

421 Studies in Organizational Behavior: Regulating the Corporation
Fall or summer. 3 credits.
R. Stern.
Will examine public and private power from an organizational perspective. The resource-dependence approach to organization-environment relations provides a framework for interpreting government attempts at the regulation of corporate behavior. Topics cover the structure and functioning of government regulatory agencies and corporate responses to regulation, including corporate strategy, change, and political influence. The role of interest groups such as consumer or citizens organizations is also considered. Research and case materials focus on the implementation of environmental protection, occupational health and safety, equal opportunity, antitrust, and rate-setting regulations.

422 Organizations and Deviance
Fall. 3 credits.
W. Sonnenstuhl.
Focuses upon the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and promotion. Examines the origins of such behaviors within organizations, the processes by which they became institutionalized, and the processes by which they become defined as deviant organizational actions. Within this context, the course will examine such contemporary cases as Exxon's Valdez oil spill, Iran–Contragate, drug testing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work within an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.

423 Evaluation of Social Action Programs
Fall or spring. 3 credits.
H. Trice.
A consideration of the principles and strategies involved in evaluation research, experimental research designs, process evaluation, and adaptations of cost benefits and cost efficiency to determine the extent to which intervention programs in fields such as training and therapy accomplish their goals. The adaptation of these strategies to large social contexts such as child guidance clinics, mental health clinics, and programs in the poverty areas, such as Head Start, is considered. Includes fieldwork and emphasizes assessment of program implementation.

424 Study of Public Sector Bureaucracy
Spring. 3 credits. Prerequisite: permission of instructor.
S. Bacharach.
Field research in public sector organization such as a school bureaucracy or a social welfare bureaucracy. Students conduct a major study into which they integrate themes from organizational theory. Theoretical issues such as decentralization, participation, and communication are discussed in the seminar.

425 Sociology of Industrial Conflict
Spring. 4 credits.
R. Stern.
The focus is on the variety of theoretical and empirical evidence available concerning social, economic, and political causes of industrial conflict. The manifestations of conflict, such as strikes, labor turnover, absenteeism, and sabotage, and the influence of the environments in which they occur are emphasized.

426 Theories of Industrial Society
Fall. 4 credits. Prerequisites: ILROB 120 and permission of instructor.
S. Bacharach.
Concentrates primarily on the works of Weber and Marx and will consist of readings in the original texts.

427 The Professions: Organization and Control
Fall. 4 credits.
P. Tolbert.
Focus is on the sources of power and control exercised by professional groups in contemporary society. A number of issues will be examined in this context including the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control that professional associations have over their members, relations between professionals and nonprofessionals in organizations, and the relationship between unionization and professionalization of occupations.

472 Applied Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 120 and 121.
S. Bacharach.
Introduces students to intermediate theory of organizational behavior. It will specifically concentrate on teaching students to use organizational theories for analytical and applied purposes. Among the issues to be addressed are organizational structure, work processes, organizational politics, organizational design, job design, incentive systems, and quality-of-work-life programs.

475 Organizational and Political Behavior in School Districts
Fall. 4 credits. Enrollment limited. Prerequisite: permission of instructor.
S. Bacharach.
This course is intended to provide students with research experience through the study of the administrative and governance processes in school districts. The students will be required to work with school district and union personnel while investigating the following areas: (a) structure and process of decision making in urban and rural school districts, (b) organizational conflict as reflected in school board meetings, (c) the variations in, and effect of, leadership style, as evidenced by different superintendents' advisory techniques, (d) the collective bargaining process as reflected in both contracts and actual negotiations, (e) the effect of the Taylor Law on the structure and process of decision making in school districts, and (f) the effects of administrative law on conflict in school districts. Students will be responsible for the collection of data and the presentation of a final report of their project.

476 Unions and Public Policy in School Districts
Spring. 4 credits. Enrollment limited. Prerequisite: permission of instructor.
S. Bacharach.
A continuation of ILROB 475, but 475 is not a prerequisite. This course is strictly a research field seminar. Students will be required to work with school districts and union personnel while investigating the following areas: (a) labor contracts with school districts, (b) relations between teachers' unions, school boards, and superintendents, (c) teachers' unions' involvement with school district policies.

478 Applied Topics in Organizational Behavior
Fall. 4 credits. Prerequisites: two courses in organizational behavior beyond the 100 level.
L. Williams.
Reading and classroom discussion will be devoted to each of three topics. The topics are industrial gerontology, with a particular focus on retirement; technology and the office; and gender and personality as organizational variables. Readings will be primarily from journal articles. Students will have a research task for each topic.

495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

497–498 Internship
Fall or spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

520 Micro Organizational Behavior and Analysis
Fall or spring. 3 credits.
Staff.
Survey of concepts, theories, and research from the fields of organizational and social psychology as these relate to the behavior of individuals and groups in organizations. Job attitudes, motivation, performance, leadership and power, group formation, perception, and organizational climate. A preliminary course for advanced work in organizational behavior.

521 Macro Organizational Behavior and Analysis
Spring. 3 credits.
Staff.
Formal organizations are studied from the perspectives of classical organization theory, human relations theory, and comparative and cross-cultural analysis. Contemporary theories and quantitative approaches to organizational structure are also considered in some detail. Intended to be preliminary to more intensive work in organizational behavior.

620 Theories of Organizational Change, Innovation, and Evaluation
Spring. 4 credits. Prerequisites: two organizational behavior courses at the 300 level, or advanced courses in sociology or psychology.
H. Trice.
This seminar examines the dynamics of individual, structural, and environmental factors operating in organizational change in general, and in the implementation and use of innovations within formal organizations in particular. The role of evaluative research in assessing the effectiveness of the implementation of innovations and in determining organizational effectiveness are analyzed. Several case studies of organizational change in government, unions, and private industry are examined. The emphasis is on conceptual frameworks for analyzing organizational change and mounting evaluative research on innovations. Readings are interdisciplinary and include sociology, psychology, and political science.

621 Organizational Diagnosis Intervention and Development
Spring. 4 credits. Prerequisites: undergraduates, ILROB 120 and 121; graduate students, ILROB 520 and 521 or equivalent; and permission of instructor.
L. Gruenfeld.
This applied course considers theories and techniques for the identification and improvement of organizational problems at the behavioral (micro) level. Methods for the implementing of change are evaluated in the light of several normative and descriptive theories of individual and group development and effectiveness. The course emphasizes both quantitative and qualitative data processing procedures.

622 Organizations and Environments
Spring. 3 credits.
P. Tolbert.
This course will survey the literature on organization-environment relations including work on organizational dependence and power, management of uncertainty, and other aspects of interorganizational cooperation and conflict. The objective of the course is to provide students with a general theoretical understanding of the way in which organizations can shape their environment and in which the environment constrains and shapes organizations.

624 Groups in Work Organizations
Fall. 4 credits. Enrollment limited. Permission of instructor required.
L. Gruenfeld.
This is an experiential learning course designed primarily for advanced students who have a comprehensive background in the theory and methods of the behavioral sciences. Work group members study their roles and relationships to each other, the task, other work groups, and especially authorities. Students write a number of self-reflective papers in which they conceptualize their experiences and relate them to theory and method in organizational behavior and experience.

625 Labor and Monopoly Capital: The Growth of Large United States Firms in the Past Century
Spring, 7 weeks only. 2 credits.
Staff.
A critical review of two recent books with very different explanations for the rise of large, hierarchically differentiated corporations in the United States: Harry Braverman,

Labor and Monopoly Capital, and Alfred D. Chandler, The Divisible Hand. These books are supplemented by articles on patterns of industrialization and internal structural transformation of large firms in the United States economy.

626 Science and Innovation in Industry
Fall. 3 credits. Prerequisites: ILROB 120, 121/520, 521 or permission of instructor.
S. Barley.
This course seeks to impart an understanding of how industrial R&D is organized, as well as an appreciation for the practical problems that arise when firms employ a significant number of scientists, engineers, and other technical workers. It is designed for students who have a general research interest in industrial R&D or who anticipate working for firms in which R&D plays an important role. The course will bring relevant theoretical perspectives to bear on pragmatic issues surrounding technical innovation and the employment of scientists and engineers. Representative topics include: the organization of scientific and technical communities, the industrialization of research, the nature of scientific and technical work, new patterns of industrial relations, organizational strategies for fostering innovation, and the careers of scientists and engineers.

627 Leadership in Organizations
Spring. 3 credits. Prerequisites: two organizational behavior courses at the 300 level or advanced courses in sociology or psychology.
L. Gruenfeld.
An examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Personality, situational factors, intergroup processes, interpersonal perception as well as motivation to lead and to follow will be discussed. The implications for leadership training, organization development, and action research are explored.

628 Cross-Cultural Studies in Organizational Behavior
Spring. 3 credits. Limited. Permission of instructor before registering in course.
L. Gruenfeld.
Designed for students interested in social psychological theory and research in international culture comparisons of behavior and experience in organizations. Variables such as power distance, individualism-collectivism, universalism-particularism and attitudes toward authority as well as work motivation will be examined. Upon completion of the readings and discussion of conceptual materials and consideration of several major international comparison studies, each student will prepare and present a paper on a topic of his/her own choice usually related to his/her country of origin (China, Japan, German, USA, etc.).

629 Personality in Organization
Fall. 4 credits. Open to undergraduates with permission of instructor.
L. Williams.
This advanced course considers psychodynamic theories of organizational diagnosis at the individual and group levels. Topics include leadership, power, authority, work motivation, intervention, and change. The topics are discussed and applied in small study groups. The professor's role is as a consultant and resource person. Class members study and research their own behavior and present their qualitative and quantitative findings to the class. Students are expected to have background and interest in both research methods and theory.

670 Employee Assistance Programs: Social Movement and Emerging Occupation
Spring. 4 credits. Limited to seniors and graduate students with permission of instructor.
H. Trice.
The seminar analyzes the general nature of social movements and considers how the EAP movement fits into that perspective. Will examine the distinctive core tasks performed by EAP workers. These join with the unique ideology of compassion derived from the social movement to form the ingredients for an emerging occupation. Other specific features of this emerging occupation that will be examined are: the types of employee behavioral problems encountered in working populations, role of supervisors, union stewards, and peers in EAP referrals, the role of EAP workers in working with job performance problems, use of constructive confrontation in supervisory/steward training. Will analyze clinical issues involved in EAP work and the interface between the workplace and the treatment place. Similarly, both internal and external marketing of EAPs will be examined, followed by a review of the relationship between these programs and contractual agreements, "just cause" in alcohol, drug, and mental health arbitration cases, including drug testing.

671 Organizations as Social Networks
Spring. 3 credits. Prerequisites: one or more courses in organizational behavior, sociology, psychology, anthropology, or political science. A course in statistics or research methods would be helpful.
S. Barley.
Increasing attention has been devoted to the idea that social structures can be fruitfully investigated as social networks. In particular, organizational and inter-organizational structures may be analyzed as patterned relationships among individuals, groups, and even other organizations. Such networks appear to be strong predictors of a variety of social dynamics including attitude similarity, the diffusion of innovation, turnover, and the allocation of organizational resources. A variety of methods for collecting and analyzing network data including: graph theory, sociometry, clique detection, centrality analysis, blockmodeling, and the quadratic assignment procedures will be used. Recent published research will involve work with actual data sets and relevant computer programs.

674 Social Regulation and Control of Institutions
Spring, 7 weeks only. 2 credits. Prerequisites: two organizational behavior courses at the 300 level, or advanced courses in sociology or psychology.
R. Stern.
Interorganizational relations are examined in terms of network control agents and target objects. The dynamics of control relationships based on political bargaining, the distribution of power, economic rewards and costs, and historical circumstances are examined in the context of their evolution through organizational adaptation to the environment. Subject matter includes theories of organizational change and application of a control perspective to the institutions of American business, government regulations, athletics, and education.

675 Cooperative Strategies for Improving Organizational Performance
Spring. 4 credits.
M. Gaffney.
The course will concentrate on presentation and analysis of a series of case studies involving projects using cooperative strategies to improve organizational performance. Emphasis will be given to cases in which union and management have been working together to enhance productivity and the quality of working life. Cases will be examined against a background of the research literature on improving organizational performance. Students will be responsible for a term paper.

676 Systems of Labor Participation in Management
Fall. 4 credits. Prerequisites: senior standing and permission of instructor.
T. Hammer.
Examines the theory and practice of worker participation in systems ranging from informal shop-level participation to self-management. Special emphasis is placed on socio-technical systems of job design and work restructuring that give workers control over the labor process. Attention is also given to legislated programs of participation (codetermination) and to participation in employee-owned firms.

677 Seminar in Field Research I
Fall. 4 credits. Enrollment limited. Prerequisite: permission of instructor.
H. Trice.
Recent research efforts are examined and the dynamic nature of the research process is emphasized. The realities of field research are explored, including problems of gaining and sustaining rapport, the initial development of research interviews and observation data, and their conversion to quantitative instruments. Participants share in the exploration of appropriate theories and concepts, and the possibility of actual field participation in an ongoing research project is explored.

678 Seminar in Field Research II
Spring. 4 credits. Prerequisites: ILROB 677 and permission of instructor.
H. Trice.
Continuation of recent research efforts is examined, and the dynamic nature of the research process is emphasized. The realities of field research are explored, including problems of gaining and sustaining rapport, the initial development of research interviews and observation data and their conversion to quantitative instruments. Participants share in the exploration of appropriate theories and concepts, and the possibility of actual field participation in an ongoing research project is explored.

720 Issues of Measurement in Research on Organizations
Fall. 4 credits.
T. Hammer.
Concerns the study of tests and measures used to assess central variables in organizational behavior and related fields. Students will learn where to find measures suitable for their research purposes and will examine the theories that define the constructs being measured; the empirical information available about different measures; construction, reliability, and validity; and the ways in which the instruments have been used in research and practice.

721 Advanced Micro Organizational Behavior
Spring. 3 credits. Prerequisites: ILROB 520 and 521.
Staff.
Examines the historical development of psychological theories of organizations and contemporary issues in micro organizational research. The course will emphasize reading and analysis of primary source material.

722 Advanced Macro Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520 and 521.
Staff.
Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. The course will emphasize reading and analysis of primary source material.

723 Behavioral Research Theory, Strategy, and Methods I
Fall. 4 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll.
L. Williams.
Materials studied in ILROB 723 and 724 include (1) theoretical, conceptual, and ethical questions; (2) survey research and attitude-scaling procedures; (3) laboratory research methods; (4) participant observation and interview methods; (5) use of documents and qualitative data analysis. Provides students with important philosophical background for doing research and exposes them to a well-balanced, interdisciplinary set of quantitative and qualitative research tools.

724 Behavioral Research Theory, Strategy, and Methods II
Spring. 3 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll.
Staff.
Course will cover (a) data analysis and interpretation through the study of psychometric theory, (b) traditional problems encountered in the assessment of human and organizational characteristics, (c) the use of different methods of data analysis, and (d) an examination of the limitations imposed on data analysis and interpretation by traditional measures. Examples of topics covered in the course: the use of Chi-square, t-tests, ANOVA, simple and multiple correlation and regression, reliability and validity analyses, causal models, factor analysis, scale construction.

725 Analysis of Published Research in Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520 and 521 and one year of statistics.
R. Stern, L. Gruenfeld.
An advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

726 Selected Topics in Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520 and 521 and permission of instructor.
S. Barley.
An advanced proseminar that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves will change from year to year depending on participants' interests. Course is designed to allow students and the instructor to jointly pursue significant scholarly inquiry into one or more arenas of organizational theory. Emphasis will be placed on exploring the relevance of tradition in related disciplines (anthropology, linguistics, philosophy, sociology, etc.) that may enrich our understanding of organizational life.

727 Work and Industrial Conflict
Spring, weeks 7–14. 2 credits.
R. Stern.
A concentrated examination of the sociology of industrial conflict. The seminar focuses on classic formulations of conflict theory in sociology, then the social, political, economic causes of industrial conflict. Forms of conflict to be studied include strikes, turnover, absenteeism, and sabotage. Some discussion of the implications of various types of worker management of firms for industrial conflict will be included.

728 Theories of Motivation and Leadership
Spring. 2 or 4 credits. Prerequisites: ILROB 520 and 521.
T. Hammer.
Two independent but sequence-connected minicourses.

(1) Theories of Work Motivation. 7 weeks. 2 credits.
Course will provide an introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students will examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used in practice in work organizations.

(2) Theories of Leadership and Power. 7 weeks. 2 credits.
Several current microtheories of leadership-power and related research are examined. The disciplinary perspective employed is social psychology and the level of analysis emphasized is action and experience of individuals in groups.

729 Organizational Change and Intervention
Fall. 3 credits. Graduate students only; no exceptions.
L. Williams.
This seminar is concerned with planned and unplanned change in organizations. It is designed to analyze theory in practice. Particular attention will be paid to the role of internal and external change agents. Several applied research programs such as the Center for Creative Leadership, Tavistock, and SRC will also be examined. Class members will be encouraged to analyze contemporary changes such as mergers and acquisitions.

770 The Cultures of Work Organizations
Fall. 3 credits. Open only to graduate students.
H. Trice.
The course considers both administrative and occupational cultures in the workplace. It takes an anthropology perspective, focusing on ideologies as the main ingredient of cultures but emphasizing the role of cultural forms, e.g., myths, stories, sagas, language, rites and ceremonials, and physical settings of meaning. It pays special attention to the place of subcultures and countercultures in the makeup of administrative culture and to occupations as a major source of subcultures. The role of the environment in which organizations are embedded, and its influence on workplace cultures, is also included. Forms of cultural leadership and approaches to reading and changing cultures are also considered.

772 Interpretative and Anthropological Approaches for Studying Organizations
Fall. 3 credits. Prerequisites: two graduate-level courses in organizational behavior, sociology, anthropology, or psychology.
S. Barley.
Focuses on a variety of interpretative and anthropological methods for studying and analyzing organizational life. By reading and discussing examples of published research and by conducting their own field research, students will become familiar with the following research traditions as they have been used in organization studies: participant observation, ethnography, ethnomethodology, ethnosemantics, textual analysis, graphic analysis, and critical theory. The constraints and benefits of each approach will be emphasized as will be the actual research procedures used by those who employ the approach.

798 Internship
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

920 Organizational Behavior Workshop
Fall. 2 credits. Limited to M.S. and Ph.D. candidates in the department. S-U grades only.
Staff.
This workshop is designed to provide a forum for the presentation of current research undertaken by faculty members and graduate students in the Department of Organizational Behavior and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course will be expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that student's thesis research.

PERSONNEL AND HUMAN RESOURCE STUDIES

J. Boudreau, chair; J. Bishop, R. Bretz, V. Briggs, L. Dyer, W. Frank, B. Gerhart, G. Milkovich, R. Risley, E. vonBorstel, W. Wasmuth.

260 Personnel Management
Fall, spring, and summer. 3 credits. Open only to ILR students. Non–ILR students may take ILRPR 461.
Staff.
An introductory overview of the management of human resources from an institutional perspective. Topics include human resource decisions dealing with staffing, employee development, work-system rewards, and employee relations. Emphasis is on (a) problem-solving and decision-making approaches; (b) operational methods, technologies, and practices; (c) application of relevant behavioral science theory and research; and (d) legislation and other environmental constraints having an important bearing on the effective utilization of human resources by an enterprise.

266 Personal Computer Basics
Fall, spring, and summer. 2 credits. Limited to 20 students.
E. vonBorstel.
This 7-week course provides basic skills in the use of IBM personal computers (PCs). It covers basic hardware, terminology, fundamentals of the Disk Operating System, LOTUS 1–2–3, and dBASE III Plus. Emphasis is placed on hands-on experience using examples demonstrating human resource issues and PC-based solutions. This course is a prerequisite to several advanced Human Resource Management electives.

360 Human Resource Economics and Public Policy
Fall or spring. 3 credits. Open to sophomores, juniors, and seniors.
V. Briggs, J. Bishop.
A review of contemporary labor-market trends, data systems, and theories pertaining to public efforts to use and develop the employment potential of the nation's human resources. The major segments of the nation's educational training enterprise—public education, higher education, employer-provided training, apprenticeship, and special training programs for the disadvantaged—is examined in depth. Special policy issues pertaining to youth, rural workers, welfare reform, job creation, worker relocation, economic development, targeted tax credits, industrial policy, and "enterprise zone" proposals will be examined. Comparisons are made with other industrialized nations.

361 Effective Supervision
Fall or summer. 3 credits. Limited to juniors and seniors. Prerequisite: ILRPR 260 or equivalent.
W. Wasmuth.
This course covers twenty-five major topics that make a critical difference in the life of a newly appointed or experienced supervisor. Theoretical and real-life case examples are provided from office, factory, union, nonunion, large, and small organizations and cover technical, psychological, social, and political issues at the supervisory level.

365 New York State Human Resource and Employee Relations Issues and Policies
Fall or spring. 3 credits. Open to I&LR students participating in an Albany internship.
Staff.
This seminar will consider functions, current issues, and policy development in New York State human resource development and employee relations. The role of the state in protective labor law administration; human resource programs; its function as a neutral party in labor disputes in the public and private sector; and legislation affecting employee-employer relations and economic development will be reviewed. Students will be assigned individual research topics that will be discussed in the seminar and developed into a term paper.

366 Women at Work
Fall or spring. 3 or 4 credits. Prerequisite: ILRPR 260 or equivalent.
Staff.
Various aspects of female occupational roles in twentieth-century United States. Historical, social, and legal factors that influence women's choice of careers, work socialization and training, and subsequent labor-market experience are considered. Working women's entry-level jobs, opportunities for advancement, and income are compared to men's.

460 Human Resource Management for Small Business
Fall. 4 credits.
R. Risley.
This course will be taught using a series of case studies developed from small firms. After an initial introductory section exploring the human resource management issues most critical to the growth and development of small businesses, the balance of the course will focus on selected human resource management issues raised by the various case studies. Students will analyze the problems of each case and prepare a report setting forth their recommendations for resolving the human resource problems and achieving the desired business objectives. Every second week the class will meet for a two-hour session to present and discuss the student reports concerning each case. Owners and managers of the small business firms studied will be present to discuss each case with the students.

461 Human Resource Management in Organization
Fall and spring. 4 credits. Open to juniors and seniors out-of-college ONLY.
R. Bretz, W. Frank.
An introductory level survey course that is designed to introduce the student to the methods and processes of human resource management in work organizations. It is primarily intended to acquaint non-industrial relations majors with the personnel management function so that they may better understand the rationale behind human resource decisions. Factors external to the organization are discussed in regard to their impact on human resource decision making. The course includes the integration of topics such as analyzing and designing jobs; the causes and consequences of employee satisfaction, attendance, and turnover; motivating and evaluating employee performance; recruiting and selecting employees; compensating the work force; and dealing with organized labor unions. Throughout the course, emphasis is placed on the importance of the supervisor or manager in the implementation of personnel policy.

468 Strategic Organization and Human Resources Management Simulation
3 credits. Limited to juniors and seniors. Prerequisite: ILRPR 260 or equivalent.
W. Wasmuth.
This course uses a simulation model and an open-systems approach as means to enhance students' skills in strategic planning and managerial decision making. Attention will be given to the implications and efforts of strategic human resources managerial and supervisory decisions as measured by ten organizational performance indicators, including quality of work life, employee productivity, customer satisfaction, employee retention, internal control, and the bottom line. Each student will be assigned to a group (team) of five members and must be committed to the work of that group. An individual research paper is also required.

469 Immigration and the American Labor Force
Fall. 3 credits.
V. Briggs.
Assesses the role that immigration continues to play as a source of human resource development in the United States. Immigration will be placed in an evolutionary context but primary attention will be given to post-1965 development. In addition to legal immigration, border commuters, illegal immigration, "maquiladoras," refugees, asylees, and nonimmigrant workers are also examined. Comparisons are also made with immigration systems of other nations. Public policy aspects are explored in depth.

495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

497–498 Internship
Fall or spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

560 Personnel Management
Fall or spring. 3 credits. Open only to graduate students.
Staff.
A survey course covering the major areas of the management of human behavior in work organizations. Consideration is given to such aspects of personnel work as job analysis, motivation, human resource planning, recruitment and selection, training, management development, organization development, compensation, and employee and labor relations. Emphasis is on the application of theory and research to the solution of personnel problems.

653 Personnel and Human Resource Management: Policy and Practices
Fall. 4 credits. Limited to 30 students, seniors and graduate students only. Prerequisites: ILRPR 260/560, electives in personnel and human resource management, and permission of instructor.
R. Risley.
This seminar will be concerned with issues of current importance to leading practitioners and explore the policies and practices developed to meet organizational goals. Changing concepts of the P/HR function within organizations and new policies and programs to meet changing needs will receive special attention. Outstanding leaders from the practitioner area will serve as guest seminar leaders during the term. Students will be required to do background reading for each topic as well as read the advanced material prepared by the guest leader. Students should be prepared to be active participants in the seminar discussions.

657 Employer Training: Economic and International Perspectives
3 credits.
J. Bishop.
Examines the training and learning that occurs on jobs from both an econmic and comparative international perspective. Will investigate the scale of the training enterprise, how it is accomplished, why some companies and nations train much more than others and what impact training has on organizational performance and national competitiveness. Training will also be examined from the worker's perspective. The distinction between training and learning, how individuals influence the amount of training they receive and what determines the amount and kind of training they desire. The training institutions and customs of countries like Japan, Sweden, Germany, France, and the United Kingdom will be compared to their American counterparts and an effort will be made to understand why investments in employer training are so much more substantial in Japan and Germany than in the United States and whether there is any role for public policy in the stimulation or improvement of employer training.

658 Training and Development: Theory and Practice (also Education 685, Communication 685, and International Agriculture 685)
Spring and summer. 4 credits.
F 9:05–12:05. W. Frank, D. Deshler, R. Colle.
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

659 Internal Staffing: Managing Careers in Organizations
Spring or summer. 4 credits. Limited to 30 students. Prerequisites: ILRST 210/510 and ILRPR 260/560 or equivalent and permission of instructor.
Staff.
Analysis of the movements of people within organizations and the management of career development processes. Selected topics include job search and choice processes, career planning methods and techniques, career and life stages, mentorships, employment security programs, midlife career changes, career and family integration, criteria for internal promotions, succession planning, and the role of performance evaluation and assessment centers in placement decisions.

660 Seminar in Personnel or Human Resource Studies
Fall or spring. 3 credits.
Staff.
A "floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

661 Applied Personnel and Organizational Development Practice
Spring. 3 credits. Prerequisites: undergraduates, ILRPR 260; graduate students, ILRPR 560 or equivalent.
Staff.
Deals with personnel development technique and organizational development intervention methodology. Students examine and practice group methods, feedback and processing technique, active listening, one-to-one counseling, behavior modeling, role playing, the case method, team building, survey-guided intervention, and other relevant methods, techniques, and issues. This course combines pertinent literature with the opportunity for hands-on practice in a workshop setting. Students have responsibility for developing and delivering scholarly papers that explore a specific method, technique, and/or critical issue. In addition, a final project requires a comprehensive proposal that describes an organizational development intervention.

662 Managing an Organization through Simulation Training
Spring or summer. 3 credits. Limited to a total of 40 ILR and hotel administration students, seniors and graduate students only. Prerequisite: ILRPR 260/560 or equivalent and permission of instructor.
W. Wasmuth.
Techniques of simulation are applied to a hotel banquet facility to enable students working in a small group (task force) to accomplish the following objectives: (1) plan and develop strategies to solve a variety of realistic problems in a supportive low-risk simulated setting; (2) provide direct feedback to the participants as to the effects of their decisions on ten organizational performance indicators, including morale, turnover, productivity, customer satisfaction, and profit/loss; (3) understand the interrelationships of the indicators and of various parts of an organization through an open systems approach; (4) develop an awareness of how group interaction affects the quality and timeliness of team decision making; (5) demonstrate communication skills in organizing and reporting significant results of team accomplishments. Also, each student will prepare an individual research project that focuses on some aspect of the simulation experience.

663 Performance Appraisal and Organizational Effectiveness
Fall. 4 credits. Limited to 30. Prerequisites: ILRPR 260/560 and one course in statistics.
R. Bretz.
This course covers the measurement and evaluation of both individual and organizational performance. It is based on the concept that organizational effectiveness and performance are largely a function of the effectiveness and performance of individuals within the organization. Improving organizational effectiveness and productivity involves improving the effectiveness and performance of individuals and work groups that make up the organization. The course begins by exploring the concept of organizational effectiveness, proceeds with a treatment of the measurement of work performance at the individual and group levels, and concludes with an emphasis on planning, measuring, and controlling organizational performance through the integration of performance from the organization to the individual levels. Different methods of appraising performance are considered and evaluated in terms of their impact on the individual, the appraiser, and the organization.

664 Seminar in Organizational Communication
Spring. 3 credits. Prerequisite: permission of instructor.
W. Frank.
Seminar centers on selected issues and relevant research involved in the study of communication with formal organizations. Organizational structure and design, patterns of information flow, and individual and group determinants of communication effectiveness will be important concerns.

665 Case Studies in Personnel Administration
Spring. 4 credits. Enrollment limited. Prerequisite: ILRPR 260/560 plus two other courses in personnel and human resource studies and permission of instructor.
Staff.
An analysis of personnel management activities and their impact on organizational objectives and administration. Cases, incidents, and field data derived from a variety of institutional settings provide a framework for examining and explaining the various roles played by personnel managers. Students with a special interest in personnel are encouraged to use this course as a "capstone" to their studies.

666 Cost-Benefit Analysis for Human Resource Management
Spring. 4 credits. Prerequisites: ILRPR 260/560 or equivalent, one course in statistics, one elective in personnel and human resource studies, and permission of instructor.
J. Boudreau.
This seminar explores how to account for the contribution of personnel and human resource management programs and decisions to achieving organizational goals. It emphasizes a systematic decision-making system that organizes the discipline of personnel and human resource management and can assist in planning and evaluating programs. Topics include the role of financial-accounting statements in managing personnel and human resources, cost-benefit analysis for programs, managing human resources as a profit center, and identifying personnel and human resource management constituents to address their goals.

667 Employee Relations
Fall. 4 credits. Prerequisites: ILRPR 260/560 or equivalent and permission of instructor.
L. Dyer.
Explores the policies, programs, and practices used by employers to promote the just and humane treatment of employees, especially managerial, professional, and other employees not covered by collective bargaining contracts. Includes such policies as the protection of employee rights and the nature of processes used to allocate organizational opportunities and rewards; such programs as employee assistance plans and due process procedures; and elements of such practices as employee communication and supervision. Treats these as a "package" to be considered in totality and developed strategically. Considers variations in employee relations strategies, the motives of employers in establishing such strategies, and the effects of these strategies on relevant individual and organizational outcomes.

668 Staffing: Employee Selection and Utilization
Fall or spring. 4 credits. Prerequisites: ILRST 510/511 and ILRPR 260/560 or equivalent, plus ILRPR 266; working knowledge of factor analysis, item analysis, regression analysis, and ANOVA; and permission of instructor.
J. Boudreau.
An analysis of the staffing process as applied to employing organizations. Topics include employment planning, recruitment, selection processes and techniques, legal issues in selection, and the relationship between staffing and other organizational practices.

669 Administration of Compensation
Fall or spring. 4 credits. Limited to 30 students. Prerequisites: ILRPR 260/560 or equivalent, ILRPR 266 and basic statistics or permission of instructor.
B. Gerhart, G. Milkovich, R. Risley.
Major emphasis is on the decisions and issues involved in the design and administration of pay systems. Topics include behavioral and economic theories and research related to compensation, administration, and factors influencing decisions about pay levels, hierarchies, forms, and administration of pay. Also focuses on the effects of various pay systems on employee behaviors and firm performance.

690 Personnel Information Systems
Spring. 4 credits. Limited to 20 students. Prerequisites: ILRPR 260/560 or the equivalent; ILRPR 266; advanced electives in personnel; at least one course in statistics; and permission of instructor.
B. Gerhart.
Explores the development, implementation, and management of computerized personnel information systems and their use in human resource management. Intermingles two types of activities. One (the more theoretical) involves the study of the essential components of such systems and the steps involved in designing and running them. The other (the more applied) involves the actual use of systems on both the PC (e.g., dBASE III PLUS) and the mainframe (e.g., SAS). Considerable in- and out-of-class time is spent working through a series of exercises that require (1) the identification of data needs, (2) the retrieval of appropriate data from one of two databases, (3) data analysis, and (4) data presentation. The objective is for students to develop the skills needed to become intelligent users of database management systems in personnel work.

691 Human Resource Planning
Spring. 4 credits. Limited to 30 students. Prerequisites: ILRPR 560 or equivalent, one course in statistics, and permission of instructor.
L. Dyer, G. Milkovich.
The process of human resource planning as practiced by public and private employers. Included are topics such as forecasting human resource needs, programming, techniques to meet forecasted needs, and methods of controlling an organization's supply of human resources. The seminar is organized around a computer simulation game in which students make policy and program decisions for a fictional organization. Decisions are evaluated on the basis of their contributions to the organization's human resource and profit objectives.

692 Training the Displaced and Disadvantaged
Fall or spring. 3 credits. Prerequisite: permission of instructor.
J. Bishop.
Examines public and private efforts to lower unemployment and underemployment of displaced and disadvantaged workers. The seminar examines the scope of the problem, its causes, and why specific programs have worked and others have not. Topics covered will include training for displaced workers, rehabilitation of the disabled, job-search training, tax credits for hiring, vocational training, literacy instruction, EEO, public service employment, assisting new business, and industrial policy. The seminar also investigates how the structure of the economy influences the ability of targeted training and job creation to achieve sustained reductions in unemployment and draws lessons from the experience of other societies.

693 Design and Administration of Training Programs
Spring. 3 credits. Prerequisites: ILRPR 560 or equivalent and permission of instructor.
W. Frank.
An analysis and exploration of the training and retraining function as applied in business, government, and industrial organizations. Consideration is given to learning theory as well as to the concept framework and practical approaches with which learning activities are developed at the workplace at all levels.

694 Personal Computer Applications in Human Resource Management and Labor Relations
Spring. 4 credits. Limited to 22 students. Prerequisites: ILRPR 260/560 or equivalent; ILRPR 266; at least one upper-level PHRS elective; basic statistics; and permission of instructor.
J. Boudreau, B. Gerhart.
Personal computers are gaining increasing use in organization decision making. This is true in human resource management and labor relations as well as in other areas. This course is designed to present students with current personal computer software packages and to explore how they can be used to improve human resource decision making. The course involves hands-on personal computer cases designed to present human resource situations that can be analyzed using PC applications. In addition, students will have opportunities to design their own applications and present them to the class.

695 Education, Technology, and Productivity
Fall. 3 credits.
J. Bishop.
The seminar investigates the nexus between the education and training occurring in schools and at the workplace and the technological progressiveness, productivity, and competitiveness of firms, individuals, and nations. We will investigate (1) how technological progress is changing the nature of work and what this implies for reform of education and training, (2) why United States productivity has not increased in the past fourteen years, (3) how education and training contribute to the growth and competitiveness, (4) why educational achievement has declined, and (5) how the responsibility for education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

696 Personnel Administration and Government Regulations
Fall. 4 credits. Prerequisite: ILRPR 260 or equivalent.
R. Risley.
A survey and analysis of government legislation and regulations affecting human resource management in nongovernment organizations, examining the framework within which management must operate. Government agencies' methods of enforcement of such regulations and the firms' responsibilities for failure to comply with these legal requirements are considered. Emphasis will be on human resource policy development and administration to meet legal requirements. Topics include FLSA, OSHA, ERISA, Employee Rights, Employment at Will, EAP and Title VII.

698 International Human Resource Policies and Institutions
Fall. 3 credits.
J. Bishop.
A comparative study of human resource policies and institutions in Western Europe, North America, Japan, and East Asia (with special emphasis on math and science education) and of the effects of these institutions on productivity, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship and higher education. Data on the consequences of policies is presented and an effort made to understand how human resource policies and institutions have contributed to the rapid growth and low levels of inequality in Europe, Japan, and the Pacific Rim nations. Another focus of the course is understanding the causes of the low levels of achievement of American high school students relative to their counterparts abroad.

699 Contemporary European Labor Markets
Spring. 3 or 4 credits (1 additional credit available for those who elect to prepare a special report).
J. Bishop.
Aggregate unemployment rates in Europe have risen from 3–4 percent in the 1960s to 11 percent in the late 1980s. The course is an examination of the causes and consequences of this transformation of European labor markets. In the process of addressing these questions, we review the recent history of these economies, their labor market institutions, and government labor market policies in a comparative framework. Some European nations—Sweden, Norway, Switzerland, and Austria—have kept their unemployment rates low and the reasons for their success will be explored. The question of why economies that performed so well in the 1960s are performing so poorly now can only be addressed in the context of an overall theory of unemployment. The course examines the debate that currently rages over the causes of European unemployment and between the advocates of Keynesian, new classical (rational expectations and real business cycle theorists), and new Keynsian (efficiency wage, implicit contracts, and overlapping contracts) theories of aggregate unemployment.

760 Seminar in Personnel or Human Resource Studies
Fall or spring. 3 credits. Prerequisites: ILRPR 560, ILRST 510/511, and ILRPR 669 and permission of instructor.
Staff.
A "floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

761 Human Resource Economics and Public Policy
Spring. 3 credits.
V. Briggs.
A review of contemporary labor-market trends, data collection systems, and theories as they relate to public policy efforts to develop the employment potential of the nation's human resources. The major segments of the nation's educational training enterprise—public education, higher education, employer-provided training, apprenticeship, and special training programs for the disadvantaged—are examined in depth. Special policy issues pertaining to youth, rural workers, welfare reform, job creation, industrial policy, wage subsidies, and worker relocation will be examined. The role of research to policy formulation and methods of evaluation of social programs will be reviewed. Comparison will also be made with other industrialized nations.

769 Topics in Compensation Theory and Research
Fall. 4 credits. Prerequisite: ILRPR 669.
G. Milkovich.
Examines recent developments in theory, research, and practice related to compensation. Discussion emphasizes the relevance of theory and research to compensation decision making. Topics include strategic perspectives, variable compensation including gainsharing, bonus, spot awards, etc., risk and leverage in pay, egalitarian and meritorious structures, and the relationship between pay, employee behaviors, and organization.

798 Internship
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

960 Workshop in Personnel and Human Resource Studies
Fall or spring. 2 credits. Enrollment limited to M.S. and Ph.D. candidates. S-U grades only.
Staff.
The workshop is designed to provide a forum for the presentation and critical discussion of current research being undertaken by graduate students, faculty members, and invited guests in the field of personnel and human resource studies. All M.S. and Ph.D. candidates in the Department of Personnel and Human Resource Studies are urged to enroll; candidates in other departments are cordially invited to do so. Each participant will have an opportunity to benefit from the collective wisdom of the others in the formulation, design, and execution of his or her research, as well as to become current on the latest developments in the field.

INTERDEPARTMENTAL COURSES

150 Employment Policy and Practice
Fall or spring. 3 credits.
O. Mitchell.
The object of this course is to introduce non–I&LR students to labor market policy and practice. Throughout the semester we emphasize topical issues and problems, including effective compensation policy, the value of education and training, causes and consequences of women's work and poverty, racial differences in labor market status, the political economy of income support programs, the current and future status of labor unions, the impact of baby boomers on pay and promotion, the proper role of regulation in the labor market, the productivity gap, and how trade and migration affect wages and jobs. Other topics will be added depending on student interest.

451 Science, Technology, and the American Economy
Fall or spring. 4 credits.
V. Briggs.
Examines the influences of the growth of science and the spread of technology on the development of the American economy. Although attention will be given to evolutionary influences, the primary focus will be upon the post-World War II experiences as a result of the introduction of electronics. The vantage point will be the linkage of these developments with employment, unemployment, income, and productivity considerations. Public policy issues such as research and development policy, national defense priorities, the development of the biotechnology industry, the agricultural revolution, savings and investment rates, retraining and education needs, etc., will be explored. The experiences of other industrial nations will also be discussed.

452 Writing in Industrial and Labor Relations
Fall or spring. 3 credits. Limited to 20 students.
J. Farley.
This course will require close reading of four books in the field of industrial and labor relations and careful writing about them. Students will also have an opportunity to practice writing about the world of work for different audiences with an eye to publication.

ILR EXTENSION

Metropolitan

The following courses are open only to participants in the Extension Division in New York City. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs. ILR Credit and Certificate Program courses at the Labor College are offered for four credits. Courses and course credits earned in Extension Division certificate programs are not automatically accepted as transfer credits or as a basis of admission to the resident ILR undergraduate and graduate programs in Ithaca. Student applications for course transfer are evaluated by the ILR school on an individual basis.

210 Statistical Reasoning I
Fall or spring. 4 credits.
An introduction to the basic concepts of statistics: measures of location and dispersion, estimation and confidence intervals, hypothesis tests, regression and correlation. Students are taught to use a computer at the beginning of the term and use it for weekly assignments.

260 Personnel Management
Fall or spring. 3 credits.
Focuses on management of personnel in organizations. Deals with manpower planning, recruiting, selection, wage and salary administration, training, performance appraisal, organizational development, and the administration of personnel department activities. Special attention is paid to government manpower policy and its implication for personnel management.

301 Labor Union Administration
Fall or spring. 3 credits.
A review of the operations of American unions, including a general theoretical framework but with major emphasis on practical operating experience. The course will consider the formal government of unions; organizational or institutional purposes and objectives and how these are achieved; underlying structure and relationship among members, locals, and national organizations; the performance of the primary function of organizing; negotiating; contract administration; and the effect of the Landrum-Griffin Act.

326 Sociology of Occupations
Fall or spring. 3 credits.
Focuses on (1) the changing character of American occupations within the context of social change; (2) occupational status—differences in income, prestige, and power and the resultant general phenomenon of social stratification; (3) vertical and horizontal occupational mobility; (4) recruitment and socialization into occupational roles; (5) the process of professionalization; and (6) comparison of personnel occupations with the career and organizational patterns of other occupations. A major sociological theme is the relationship between occupational structure and workplace structure.

346 Economics of Collective Bargaining
Fall or spring. 3 credits.
Economic aspects of the negotiation, terms, and effects of union-management agreements at the individual firm, industry regional, and national levels. Topics examined include forces influencing contract demands and terms, employer adaptation to higher wages and benefits; interindustry differences in competitiveness, firm size, and markets; regional location of industry, international competition; government regulations; labor supply; inflation, recession, and unemployment.

350 History of Industrial Relations in the United States
Fall or spring. 3 credits.
This review of the history of industrial relations in the United States emphasizes developments in the twentieth century. The course concentrates on the American worker, both union and nonunion; labor movements; and the environmental forces that have shaped industrial relations in the United States. Readings are selected from scholarly accounts and original sources.

351 Collective Bargaining
Fall or spring. 3 credits.
A comprehensive study of collective bargaining; the negotiation and scope of contracts; the day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; and the problem of dealing with industrial conflict.

352 Labor Relations Law and Legislation
Fall or spring. 3 credits.
A survey of the law governing labor relations. The legal framework in which the collective bargaining relationship is established and bargaining takes place is analyzed. Problems of the administration and enforcement of collective agreements are considered, as are problems of protecting individual employee rights in the collective labor relations context. Also serves as an introduction to the legal system and method and to legal and constitutional problems of governmental regulation of industrial and labor relations.

353 Statistics (Statistical Reasoning)
Fall or spring. 3 credits.
An introduction to the basic concepts of statistics: description of frequency distribution (averages, dispersion, and simple correlation) and introduction to statistical inference. Prerequisite to certain specialized courses on applications of statistics offered in various departments.

367 Safety and Health in the Workplace
Fall or spring. 3 credits.
To provide basic education and training in workplace safety and health. The course will focus on applicable federal and state laws, standards for safety and health, industrial hygiene, and such health concerns as asbestos, radon, and AIDS. Practical experience will be provided through workplace walk-through safety and health inspections and in use of industrial hygiene equipment that measure noise, temperature, humidity, airflow, and airborne toxics.

400 Union Organizing
This course explores various aspects of unions' attempts to organize workers; why some workers join unions and others do not; the techniques used by both unions and employers during organizing campaigns; and the present law of organizing and proposed amendments to the law.

440 Health, Welfare, and Pension Plans
Fall or spring. 3 credits.
An analysis and appraisal of private health, welfare, and pension plans. A consideration of the origin and development of employer, union, and joint programs and a critical examination of the financing, administration, and general effectiveness of the plans.

602 Arbitration
Fall or spring. 3 credits.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

681 Labor Relations Law
Fall or spring. 3 credits.
An advanced course in labor law, covering such topics as emergency labor disputes, legal problems of labor relations in public employment, labor and the antitrust laws, civil rights legislation, rights of individual employees and union members, and legal problems of union administration.

684 Employment Discrimination and the Law
Fall or spring. 3 credits.
An examination of legal problems involving employment discrimination based upon race, color, religion, sex, national origin, or age. The impact of developing principles of law on preemployment inquiries and testing, seniority and promotions, and other personnel policies, practices, and procedures will be discussed. The prerequisites of affirmative action under Executive Order No 11246, as amended, will be analyzed. Special attention will be given to the role of state law in resolving employment discrimination claims and the procedural framework for raising and adjudicating such claims before administrative agencies and the courts.

687 Current Issues in Collective Bargaining
Fall or spring. 3 or 4 credits.
An intensive study of the most significant current issues and problems facing employers and unions in their relations with each other, with particular emphasis on the substantive matters in contract negotiations and administration of the provisions of collective bargaining agreements. A major research paper is usually required.

Statewide

The following courses are open to participants in the Extension Division's statewide credit programs in labor studies and management studies. Extension offices are based in Buffalo, Albany, Rochester, Ithaca, New York City, and Long Island. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs.

241 Arbitration
3 credits.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

242 Public Sector Collective Bargaining
Fall or spring. 3 credits.
This course is designed as an introduction to collective bargaining in the public sector. The course examines the historical development of bargaining in public employment, the evolution of state and federal and bargaining theory and practices, as well as impasse resolutions techniques frequently found in this sector. Special emphasis will be given to developing an understanding of the similarities and differences between public and private sector bargaining and how they have affected tactics and strategies employed by the parties.

243 Growth of American Business and Management History
Fall or spring. 3 credits.
The growth and cycles of American business enterprise produced significant changes in education, government, work, the family, the ethnic composition of the population, and the landscape. As business and industry expanded, new methods evolved for managing these enterprises. This course will examine the development of managerial practices, the relationship of management to the work force, and the social ramifications of capitalist expansion.

245 Public Sector Labor Law
3 credits.
A survey and analysis of the New York State Public Employees Fair Employment Act is made as well as a comparison with other state laws covering public employees. The course will examine the extent to which the law protects and regulates concerted actions by employees in the public sector. The intent is to study and understand the law as written, but more importantly how it has been interpreted by the courts of New York State in its application. Major emphasis will be employee and employer rights, including recognition and certification, improper practices, strikes, grievances, and disciplinary procedures of the New York State Public Employment Relations Board.

247 Labor and the American Economy
3 credits.
Will help the student understand how economic theories relate to the economic problems confronting the American citizen in general and the American union member in particular. Emphasis will be placed on contemporary economic theories and how their proponents attempt to solve American economic problems.

251 Principles and Practices of Management
Fall or spring. 3 credits.
Presents the theory and processes of management with an emphasis on supervision. Management functions of planning, organizing, staffing, and evaluating are included. Concepts and theories are presented, and case studies are analyzed. Motivating people, exercising leadership, and effectively developing employees are emphasized.

252 Contract Bargaining
Fall or spring. 3 credits.
Examines the principles of contract bargaining, including bargaining environments and structures as well as standards used in bargaining. Students will learn to prepare bargaining demands, cost economic items, draft noneconomic contract language, negotiate economic and noneconomic issues, and resolve a contract bargaining impasse. The course will consider the impact of contract bargaining outcomes on workers, unions, employers, and the public.

253 Contract Administration
Fall or spring. 3 credits.
Focuses on the role of the steward in administering the union contract in the workplace. Students will evaluate grievance and arbitration contract clauses, the grievance procedure in practice, the role of the union steward, the role of local and international unions, negotiation of grievances, and preparation for arbitration. Students will analyze the impact of grievance and arbitration procedures on workers, unions, and employers.

254 Labor Law
Fall or spring. 3 credits.
Examines the principles of labor law by looking at social philosophy and the historical context of federal labor legislation from the 1930s. Students will concentrate on major provisions of the National Labor Relations Act, examining how the National Labor Relations Board and the federal courts have interpreted the national labor laws. Discussion will include new directions in labor legislation and interpretation with consideration given to the impact of labor law on workers, unions, and employers.

255 Labor History
Fall or spring. 3 credits.
Reviews American labor history from the prespective of workers' social dimensions of the development of the working class, reform and revolutionary movements, and the emergence of craft, industrial, and public employee unions. Included will be a discussion of the development of trade union institutions and leaders and the evolution of union political activities and collective bargaining. Special attention will be paid to the involvement of women and minority workers with unions.

256 Dispute Resolution
Fall or spring. 3 credits.
Examines third-party participation in dispute resolution in private and public sector collective bargaining. Development of dispute resolution methods in American labor relations; issues and practices in neutral, binding arbitration of grievances and mediation; conciliation; and fact finding procedures will be discussed. We will also look at exclusive labor-management mechanisms to settle industry disputes.

257 Personnel Administration
Fall or spring. 3 credits.
Designed to provide an overview of personnel practices in the modern organization. It will focus on manpower planning, employment, training and development, motivation and compensation, and performance appraisal and communication for students who are currently supervisors or personnel practitioners or for those aspiring to those positions.

258 Organizational Behavior
Fall or spring. 3 credits.
Designed to illustrate how behavioral science theory leads to research and how theory and research provide a basis for practical application in business, industry, education, and government.

259 Union Administration
Fall or spring. 3 credits.
Focus is on the principles and practices of effective union administration. Students will study the dynamics of democratic organizations and the development of organizational leadership. The course explores alternative methods of decision making and lines of responsibility. The legal obligations of unions and union officials will be discussed and analyzed. The course also examines the structure and evolution of relationships inside the labor movement.

263 Trends in Worker Participation
Fall or spring. 3 credits.
This course will examine the existence of worker participation models in the context of our changing global economy. We will examine both the external and internal forces that are giving rise to greater labor-management cooperation on the one hand, and increased management hostility toward unions, on the other. We will examine the historical struggle of workers and management for control over the work process and the impact that decades of Taylorism have had in shaping the labor-management relationship. We will review worker participation structures in Germany, Sweden, and Japan, and discuss their usefulness as a model for the American workplace. Finally, it will examine case studies of joint-decision making approaches in U.S. workplaces, with a special emphasis on the auto industry.

264 Contemporary Labor Problems
Fall or spring. 3 credits.
A survey of the major challenges that confront the American labor movement. Students are briefed on the background of each problem and discuss and analyze a broad range of solutions proposed by the experts.

357 Labor Education I
Fall or spring. 3 credits.
An examination will be made of labor education and its origin, development, scope, form, functions, curricula, goals, issues, and roles in universities, unions, and other organizations. Attention will be devoted to various practical aspects associated with the administration of programs and to labor education as an occupation. The course will involve students in field activities in connection with current Extension Division programs.

358 Labor Education II
Fall or spring. 3 credits.
The course will be divided into two parts: Part I is planned to develop an understanding of the theories of program organization and administration, including budgeting, which is necessary if labor education is to be transferred to the local union level. Part II joins theory and practice in the effort to (1) provide rank and file union leaders with the opportunity to develop and use research skills, (2) garner subject matter expertise, (3) formulate course outlines from which to teach, and (4) select appropriate teaching methods and prepare materials for classroom use. Practice teaching is a necessary component of such an advanced course, again providing experiences that combine theory and practice.

359 Directed Studies in Labor Education
Fall or spring. 3 credits.
Designed to grant credit for fieldwork under the direction of members of the faculty. Third semester of an intensive training program in labor education for mature students with demonstrated ability to undertake independent work who have been carefully screened and selected for participation in this course. Combines 180 hours of fieldwork in a union education or related program with 3-hour seminars in the classroom. Classroom meetings are devoted to (1) in-depth analysis of union experiences in relation to labor education, theory, method, and techniques, and (2) individual consultations.

360 Labor Education III
2 credits.
This is a course designed to give labor educators advanced teaching techniques and specific methodology for expanding their training. Instruction will be combined with practical teaching experience in three, three-hour laboratories. Students will learn to polish their presentation style by studying voice projection, rhetorical techniques, timing and pacing of class units, controlling individual disruptors to the progress of the class, and, finally, summarizing the work accomplished.

363 Wages and Salary System Design
3 credits.
An examination of compensation practices and special issues affecting wage and salary systems. Topics to be discussed include: determining pay level and structure, employee equity, incentive plans, and performance evaluation. Will also examine benefits and legislation that are relevant to compensation practices and theories.

364 Labor, Government, and Politics
3 credits.
A survey of the ways the American political system affects labor and how organized labor affects the system through voting, political parties, and interest groups.

FACULTY ROSTER

Abowd, John M., Ph.D., U. of Chicago. Prof., Labor Economics
Bacharach, Samuel, Ph.D., U. of Wisconsin. Prof., Organizational Behavior
Barley, Stephen R., Ph.D., Mass. Inst. of Technology. Asst. Prof., Organizational Behavior
Bishop, John H., Ph.D., U. of Michigan. Assoc. Prof., Personnel and Human Resource Studies
Blumen, Isadore, Ph.D., U. of North Carolina. Prof. Emeritus, Economic and Social Statistics
Boudreau, John W., Ph.D., Purdue U. Assoc. Prof., Personnel and Human Resource Studies
Boyer, George R., Ph.D., U. of Wisconsin. Assoc. Prof., Labor Economics
Bretz, Robert D. Jr., Ph.D., U. of Kansas. Asst. Prof., Personnel and Human Resource Studies
Briggs, Vernon M., Jr., Ph.D., Michigan State U. Prof., Personnel and Human Resource Studies
Brooks, George W., M. A., Brown U. Prof. Emeritus, Collective Bargaining, Labor Law, and Labor History
Burton, John F., Jr., Ph.D., U. of Michigan. Prof., Collective Bargaining, Labor Law, and Labor History/Labor Economics
Crivens, Thelma A., J. D., George Washington U. Asst. Prof., Collective Bargaining, Labor Law, and Labor History
Cullen, Donald E., Ph.D., Cornell U. Prof., Collective Bargaining, Labor Law, and Labor History

LAW SCHOOL

ADMINISTRATION

Russell K. Osgood, dean of the law faculty and professor of law

Jane L. Hammond, law librarian and professor of law

Robert A. Hillman, associate dean for academic affairs and professor of law

Anne Lukingbeal, associate dean for student affairs

Albert C. Neimeth, associate dean and director of alumni affairs and placement

Frances M. Bullis, assistant dean for development and public affairs

Richard D. Geiger, assistant dean for admissions

LAW SCHOOL

The primary function of the Law School is to prepare attorneys for both public and private practice who are equipped to render skillful professional service and who are thoroughly conscious of the important role played by the law as a means of social control. The curriculum is designed to prepare students for admission to the bar in all American states and territories.

Ordinarily, a student who is admitted to the Law School must have a baccalaureate degree from an approved college or university. The course of study leading to the degree of Doctor of Law (J.D.) covers three academic years. A number of students will be admitted to a program of study leading to the degree of Doctor of Law "with specialization in international legal affairs."

There are combined graduate degree programs with the Johnson Graduate School of Management, the College of Arts and Sciences, the Department of City and Regional Planning, the School of Industrial and Labor Relations, and the graduate divisions in economics, history, and philosophy, as well as a special opportunity for highly qualified undergraduates in the College of Arts and Sciences to register in the Law School during their senior year.

The graduate program of the Cornell Law School admits only a few students each year. The LL.M. degree (Master of Laws, Legum Magister) and the J.S.D. degree (Doctor of the Science of Law, Jurisprudentiae Scientiae Doctor) are conferred. A small number of law graduates may also be admitted as special students, to pursue advanced legal studies without being degree candidates.

For further information, refer to the Law School catalog, obtainable from the assistant dean for admissions, Myron Taylor Hall.

FIRST-YEAR COURSES

500 Civil Procedure

502 Constitutional Law

504 Contracts

506 Criminal Justice

507 Legal Process

508 Practice Training I

509 Practice Training II

512 Property

515 Torts

UPPERCLASS COURSES

600 Accounting and Finance for Lawyers

602 Administrative Law

603 Admiralty

604 Advanced Civil Procedure

605 Alternative Dispute Resolution

607 American Indian Law

608 American Tort Law from a European Perspective

609 Antitrust Law

610 Arbitration (also ILR 602)

611 Asian Americans, Civil Rights, and the Law

614 Civil Rights Legislation

616 Commercial Law

618 Comparative Law

619 Comparative Public Law of the United States and the United Kingdom

620 Conflict of Laws

621 Constitutional Law II: The First Amendment

622 Corporations

624 Criminal Procedure

626 Debtor-Creditor Law

634 Employment Law

635 Environmental Aspects of Water

636 Environmental Law

640 Evidence

642 Family Law

643 Federal Courts

644 Federal Income Taxation

645 Feminist Jurisprudence

648 Gender Discrimination

649 Government Benefit Law

650 Immigration and Refugee Law

651 Injunctions

652 Insurance

653 Intellectual Property

654 Intellectual Property in Europe

655 International Business Transactions

657 International Taxation

658 Labor Law

660 Land-Use Planning

661 Law and Economics

663 Law and Social Science

665 The Law of Mergers and Acquisitions (also NBA 572)

666 Law, Society, and Morality (also Philosophy 342)

668 Lawyers, Clients, and Society

672 Local Government

677 Products Liability

679 Public International Law

681 Resolution of Private International Disputes

682 Securities Regulation

684 Soviet Law

685 Sports Law

688 Taxation of Corporations and Shareholders

690 Taxation of Partnership Income

692 Trial Advocacy

694 Trusts and Estates

PROBLEM COURSES AND SEMINARS

700 American History: African-Americans and the Supreme Court

702 American Legal Theory

704 Children in Litigation Clinic

707 Commercial Shopping Centers Development

708 Constitutional Law and Political Theory

710 Contemporary Legal Theory (also Philosophy 444)

712 Current Topics in Anglo-American Criminal Justice

716 Empirical Studies of the Legal System

718 Employment Litigation Seminar

720 Estate Planning Clinic

723 The European Community—Integration Through Law

724 European Legal History

725 Family Law Clinic

726 Federal Litigation

727 Government Benefits Clinic

728 History of the Canon Law: Marriage

JOHNSON GRADUATE SCHOOL OF MANAGEMENT

ADMINISTRATION

Alan G. Merten, dean

Thomas R. Dyckman, associate dean for academic affairs

Dick R. Wittink, director, doctoral program

James W. Schmotter, associate dean

Ann L. Calkins, assistant dean for external relations

Mariea Noblitt, director of admissions

Paul Brenner, director of corporate relations

Nancy A. Culligan, business manager and director of personnel

Laurie Foltman, director of career services

Linda Myers, managing editor, *Cornell Enterprise*, and publications coordinator

Rhea J. Nickerson, assistant to the dean

Donald Schnedeker, librarian

Harriet Peters, director of advising and student activities

Linda Pike, managing editor, *Administrative Science Quarterly*

John P. McKeown, director of finance and business operations and director of executive education

Ann C. Weibel, director of financial aid, and registrar

L. Joseph Thomas, director of the Executive Development Program

Eugene Ziegler, director of computing services

The Johnson Graduate School of Management prepares men and women for managerial careers in business. The school offers course work in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they will operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the Master of Business Administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Ten percent of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining 90 percent following work experience.

Combined degree programs allow highly qualified Cornell students to register in the school during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available in the Cornell University Announcement, Johnson Graduate School of Management, obtainable from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, Malott Hall.

UNDERGRADUATE ONLY

NBA 300 Entrepreneurship and Enterprise
Prerequisite: Introductory Accounting or equivalent, or permission of instructor.

This course provides a disciplined look at the entrepreneur and small business management. It deals with the formation and the acquisition of enterprises from the viewpoint of individuals who desire to become the principal owners. Reviews include legal and tax aspects, valuation techniques, organization forms, and venture-capital sources, as well as planning techniques necessary to launch a successful venture.

NCC COMMON CORE COURSES

NCC 500 Financial Accounting
NCC 501 Quantitative Methods for Management
NCC 502 Microeconomics for Management
NCC 503 Marketing Management
NCC 504 Behavioral and Organizational Science
NCC 505 Macroeconomics and International Trade
NCC 506 Managerial Finance
NCC 507 Management Information Systems
NCC 508 Production and Operations Management

NBA MANAGEMENT ELECTIVE COURSES

Accounting

NBA 500 Intermediate Accounting
NBA 501 Advanced Accounting
NBA 502 Managerial Cost Accounting
NBA 504 Taxation Affecting Business and Personal Decision Making

DIVISION OF NUTRITIONAL SCIENCES

ADMINISTRATION

Cutberto Garza, director

Carole Bisogni, associate director for academic affairs

Betty Lewis, graduate faculty representative, Field of Nutrition

T. Colin Campbell and William Arion, division honors chairs

THE DIVISION

Nutritional science deals with the intricate relationship of food, nutrition, and health. At Cornell, the focal point for this broad field of study, which ranges from nutrient chemistry to world hunger, is the Division of Nutritional Sciences.

The division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences and brings together specialists from many disciplines in the biological and social sciences. Their work covers undergraduate and graduate teaching, nutrition research, and nutrition education for the public through Cornell Cooperative Extension.

The faculty in the division are working toward two closely related goals: increasing our knowledge of nutrition and health, and applying what we know to people's everyday problems. This approach carries over to undergraduate education. Students who major in nutritional sciences learn how to interpret basic research from the laboratory and from the social sciences. They also come to understand the practical implications of their studies. Many students have the chance to test out their ideas by conducting a research project or working in the community.

FACILITIES

Most of the faculty members of the division work in Savage Hall and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, those buildings contain research facilities, specialized laboratories, a human metabolic research unit, and interactive terminals for the university's computer system.

The division's Learning Resource Center in Martha Van Rensselaer Hall is used by many students for individual study and small group discussions. The Learning Resources Center contains class materials, audiovisual aids, and supplementary books and periodicals for independent study and special projects in nutrition. Savage Hall also has a graduate reading room.

THE MAJOR

The B.S. degree program with a major in nutritional sciences (NS) provides students with thorough foundations in the basic sciences and the broad field of nutritional sciences. By supplementing the core curriculum with different electives, students can pursue a variety of career interests including medicine and other health careers, fitness and sports nutrition, clinical nutrition, dietetics, nutritional biochemistry, nutrition education and communications, and consumer foods and agriculture.

ACADEMIC ADVISING

Every student majoring in nutritional sciences is assigned a faculty adviser from the division. An effort is made to match interests, and students may change advisers at any time if their goals and interests change. Regular student-adviser conferences are required at least twice a year. The adviser not only helps students select courses but can often suggest opportunities for individual study or experience outside the classroom.

The specific course requirements for graduation are available on request. Questions about undergraduate study should be addressed to Carole Bisogni, associate director for academic affairs, 335 Martha Van Rensselaer Hall.

THE CORE CURRICULUM

In 1990 the faculty revised the undergraduate requirements for a nutrition major establishing a single option or core curriculum for all students entering the major in August 1990. The curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and math as well as introductory courses in the social sciences. Students complete five core courses in nutritional sciences: Nutrition and Health: Concepts and Controversies, Social Science Perspectives on Human Nutrition, Nutritional and Physicochemical Aspects of Foods, Physiological and Biochemical Bases of Nutrition, and Methods in Nutritional Sciences. Students select a minimum of three advanced courses in nutritional sciences in the area of their interest.

A strong foundation in chemistry and biology is required for the major. New majors, including transfer students, should plan chemistry courses carefully to assure the appropriate sequence of courses. All students who have adequate preparation in high school mathematics and chemistry are encouraged to take Chemistry 207–208. For information about specific course requirements for the core curriculum, consult the Human Ecology Student Guide or obtain information from the division's Academic Affairs Office, 335 MVR.

Students entering the major before August 1990 may complete the requirements in effect when they matriculated or they may complete the new requirements. Students should contact their advisers or the DNS Academic Affairs Office, 335 MVR, for information about switching to the new requirements.

CAREER OPTIONS AND COURSE PLANNING

The core curriculum is viewed as the minimum requirements for a major in nutritional sciences. Students should consult with their advisers to develop course programs that will prepare them for entry-level jobs or graduate study in the field(s) of their particular interests. Independent study involving research or field study may be chosen to enhance a course program. A summary of suggested areas from which students can choose electives for different career interests follows.

Medicine and Other Health Careers: Students add physics and calculus to the core curriculum. Nutrition courses of special interest include those focused on the relationship of nutrition to disease, behavior, growth, development, and aging. Other electives may include genetics, advanced biology, sociology, psychology, humanities, public policy, and language.

Fitness and Sports Medicine: Students can complete the Applied Exercise Science Concentration at Ithaca College which includes courses in kinesiology, exercise physiology, and biomechanics. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs Office, 335 MVR.

Dietetics and Clinical Nutrition: Students can complete the academic requirements for the American Dietetic Association (ADA) by adding courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care to the core curriculum. For additional information about meeting ADA requirements see Anne Kendall-Casella, N206B MVR, or Joan Koch, 373 MVR.

Nutritional Biochemistry: Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

Nutrition Communications and Community Nutrition: Suggested electives include courses in communications, education, human development, human service studies, public policy, and nutritional sciences courses related to community nutrition, maternal and child nutrition, geriatric nutrition, nutrition and disease, and food economics.

Consumer Foods: Recommended electives include courses in business, economics, communications, food science, microbiology, and nutritional science courses related to the physicochemical aspects of foods, management, experimental foods, and food chemistry.

FIELD STUDY

Structured field experience in a community agency or health-care facility can be taken for credit in several ways: through the Human Ecology Field and International Study Program, as an independent study course, as a class project, or as a summer study project.

INDEPENDENT STUDY ELECTIVES

Independent study courses (NS 400, 401, 402) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty adviser and the approval of Carole Bisogni or consider applying to the honors program.

HONORS PROGRAM

The honors program, leading to a B.S. degree with honors in nutritional sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major option in nutritional sciences, students in the honors program take courses on designing and evaluating research, complete an original piece of research, and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development. Animals may be used in some research studies.

For more information, students should contact T. Colin Campbell, N204 Martha Van Rensselaer Hall or William Arion, 227 Savage Hall, honors chairs.

COURSES RECOMMENDED FOR NONMAJORS

Courses in nutritional sciences can strengthen programs of study in biological sciences, biology and society, medicine, agriculture, food science, human development, human services, and other fields.

NS 115, Nutrition and Health: Concepts and Controversies, is open to all students. After NS 115, nonmajors with limited backgrounds in chemistry and biology may elect NS 245, Social Science Perspectives on Human Nutrition; NS 222, Maternal and Child Nutrition; NS 247, Food for Contemporary Living; NS 315, Obesity and the Regulation of Body Weight; NS 349, Geriatric Nutrition; and NS 457, National and International Food Economics. Nonmajors with strong backgrounds in chemistry and the biological sciences may consider NS 331, Physiological and Biochemical Bases of Human Nutrition, as well as many advanced nutritional sciences courses.

GRADUATE PROGRAMS

Graduate study is administered by the Field of Nutrition, a group of more than fifty faculty members from throughout the university who have a common interest in nutritional problems. In the M.S. and Ph.D. degree programs, students may specialize in animal nutrition, human nutrition, international nutrition, nutritional biochemistry, foods, or general nutrition. Research is emphasized in all graduate programs. Field experience may be a component of concentrations in community, international and public-health nutrition, and nutrition education.

The specialties and interests represented by faculty in the Field of Nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choice and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy, and students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, interested persons may write for the brochure Graduate Study in Nutrition, available from the Graduate Faculty Representative, Field of Nutrition, Cornell University, MVR Hall, Ithaca, New York 14853-6301; telephone (607)255-4410.

COURSES

115 Nutrition and Health: Concepts and Controversies
Fall. 3 credits. S-U grades optional.
M W F 1:25. Evening prelims, times to be arranged. D. Levitsky.
This course is intended to be an introduction to the basic concepts of nutritional sciences and the role that nutrition, exercise, and other health behaviors play in the promotion of human health. Concepts and contemporary controversies involved in weight control, cardio-vascular disease, cancer, special nutrition of infants and elderly, and nutrition and behavior will be discussed. Emphasis is on understanding the biological mechanisms through which good nutrition and regular exercise influence health.

222 Maternal and Child Nutrition
Spring. 3 credits. Prerequisites: NS 115 and a college biology course or permission of the instructor. S-U grades optional.
M W F 1:25. V. Utermohlen.
Involves the study of nutritional requirements in pregnancy, lactation, infancy, and childhood growth through adolescence. Topics include the relationship between maternal diet and pregnancy outcome; analysis of different methods of infant feeding; and nutritional status of pregnant women, children, and adolescents in the United States and in developing countries.

245 Social Science Perspectives on Human Nutrition
Fall. 3 credits. Prerequisite: NS 115.
M W F 2:30. J. Sobal, D. Sanjur.
Social science theories, concepts, and methods that contribute to understanding of human food and nutrition will be presented, including perspectives from history, anthropology, sociology, psychology, demography, economics and political/policy science. The course will provide integration of biological and social science frameworks for viewing human nutrition, as well as examine differences between social science and biological viewpoints. Students will apply social science analysis to contemporary nutrition topics, issues, and problems.

247 Food for Contemporary Living
Fall and spring. 3 credits. Each section limited to 16 students. Prerequisite: NS 115. Permission of instructor during course registration required (permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall). Laboratory coat required. Three evening prelims to be arranged.
Lec, M 12:20; lab, T R 10:10–12:40.
J. Koch.
This course will promote an understanding and integration of sound nutritional practice in the scientific concepts and techniques of food preparation in a health-conscious society. High priority will be given to factors that influence meal planning, selection, and preparation of food, such as resources available; ethnic, cultural, and behavioral considerations; food presentation; as well as sensory quality evaluation. A positive regard for safe food handling practices and storage procedures is stressed.

300 Special Studies for Undergraduates
Fall or spring. Prerequisites: permission of instructor. S-U grades optional.
Special arrangements to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of-registration period.

[420 Nutritional Aspects of Raw and Processed Foods (also Food Science 420)
Fall. 3 credits. Prerequisites: organic chemistry and Food 100 or NS 115. S-U grades optional. Not offered 1990–91.
M W F 12:20. D. Miller.
An evaluation of factors that affect the nutritional quality of foods and diets. Nutritional quality is defined. Methods and approaches for assessing nutritional quality are presented. Factors that may alter the nutritional quality of foods and food supplies (e.g., agricultural practices, processing, storage, cooking, fortification, government regulations, and new technologies) are discussed.]

[315 Obesity and the Regulation of Body Weight (also Psychology 315)
Spring. 3 credits. Prerequisites: NS 115, Psych 101. Not offered 1990–91. S-U grades optional.
T R 1:30–3. D. Levitsky.
This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, genetics of obesity, role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.]

331 Physiological and Biochemical Bases of Human Nutrition
Spring. 3 credits. Prerequisites: Biological Sciences 330 or 331 or equivalent. S-U grades optional.
M W F 10:10. T. C. Campbell.
The biochemical and physiological bases for human nutritional requirements, including digestion and absorption, energy metabolism, food intake regulation, lipids, carbohydrates, protein and amino acids, minerals, vitamins, and relationship of nutrition to major chronic diseases.

332 Methods in Nutritional Sciences
Spring. 3 credits. Each section limited to 18 students. Prerequisites: NS 245, NS 345, NS 331 or concurrent registration and permission of instructor during course registration (permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall). Two evening prelims to be scheduled.
Lec, M 12:20; labs, M W 1:25–4 or T R 8:15–10:45 or T R 1:25–4. M. Kazarinoff, K. Rasmussen.
Introduction to principles and procedure of analytical techniques and data analysis in human nutrition with emphasis on analytical skills and technical knowledge necessary to understand how we know about nutrient functions and how we measure and interpret nutrient status of individuals. Topics will include methods of analysis of nutrients and metabolites in foods, tissues, and body fluids and methods for assessing individual food intake and nutrition knowledge, attitudes, and practice. A limited number of experiments using variations in diet and various techniques for obtaining and analyzing samples will be conducted to further understanding of the principles underlying the observational methods, their associated problems and pitfalls, and their reliability. The course will culminate with an independent project in which student will adapt a published procedure to test a hypothesis they have identified.

345 Nutritional and Physicochemical Aspects of Food
Spring. 3 credits. Prerequisite: college course in organic chemistry or biochemistry. S–U grades optional.
T R 2–3:15. R. Parker, B. Lewis.
This course offers students exposure to a wide range of issues related to nutritional, physical, and chemical properties of foods. Emphasis will be placed on determinants of food quality (appearance, flavor, odor, texture, nutritional value), including structural and compositional factors, physiological, enzymic and nonenzymic phenomena, and processing and preparation techniques. Also discussed will be issues related to food safety, regulation, and food composition data bases.

346 Introduction to Physicochemical Aspects of Food—Laboratory
Spring. 2 credits. Each section limited to 18 students. Prerequisites: NS 345 or concurrent registration, a college course in organic chemistry, and permission of instructor during course registration (permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall). S-U grades optional.
M W 2–4:25. R. Parker, B. Lewis.
Laboratory exercises designed to illustrate principles related to food quality and ingredient functionality and to introduce students to the analytical methodology associated with food evaluation.

347 Human Growth and Development: Biological and Social Psychological Considerations (also Human Development and Family Studies 347 and Biology and Sociology 347)
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent; Human Development and Family Studies 115 or Psychology 101 and NS 115 or equivalent. Offered alternate years.
M W F 1:25. J. Haas, S. Robertson.
A review of major patterns of physical growth from the fetal period through adolescence, with consideration of biological and socioenvironmental determinants of growth, as well as physical and psychological consequences of variations in growth patterns. An examination of normal patterns of growth is followed by an analysis of major sources of variations (normal and atypical).

349 Geriatric Nutrition
Fall. 3 credits. Prerequisites: NS 115.
M W F 10:10. D. Roe.
Aims of the course are to acquaint students with effects of aging on nutritional needs; to teach them methods of nutritional assessment that are appropriate for use with the elderly; and to give them information on nutritional interventions that have been shown to have positive effects on the nutritional and health status of older individuals.

361 Biochemistry and Human Behavior (also Psychology 361)
Fall. 3 credits. Prerequisites: Biological Sciences 101–102, Chemistry 103–104, Psychology 123, or permission of instructor. A fundamental knowledge of human biology and chemistry is essential. S-U grades optional.
M W F 9:05. B. Strupp.
A survey of the scientific literature on the role of brain and body biochemical changes as determinants of human behavior. The topics covered include action and effects of psychopharmacologic agents, the biology of learning and memory, the role of abnormal biochemistry in cognitive disorders, biochemical theories of psychosis, and effects of nutrition on behavior.

378 Food, Nutrition, and Service Management
Fall. 3 credits. Prerequisites: NS 247 or permission of instructor. S-U grades optional.
T R 2:30–4:05. J. Koch.
Applications of organization and management principles and theory to foodservice organizations, operations, and nutrition services. Emphasis is placed on leadership development, decision making/problem solving; procurement, production, distribution and quality assurance in food and nutrition services; human resource management; and financial planning in food and nutrition services. Other experiences may be possible in community foodservice operations.

398 Honors in Nutritional Sciences
Fall. 1 credit. Limited to students admitted to the division honors program. S-U grades only.
T 2:30–4. Division faculty.
Research design. Analysis of research papers on selected topics.

400–401–402–403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional.
Division faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of nutritional sciences not otherwise provided through course work in the division or elsewhere at the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the associate director for academic affairs. The form, available from the Counseling Office, is filed at course registration or within the change-of-registration period. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to the associate director for academic affairs as early as possible.

400 Directed Readings
For study that predominantly involves library research and independent reading.

401 Empirical Research
For study that predominantly involves data collection and analysis or laboratory or studio projects.

402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

403 Teaching Apprenticeship
For study that includes assisting faculty with instruction.

[415 Field-based Learning in Nutrition
Fall, spring, or summer. 2–6 credits. S-U grades optional. Prerequisites: junior, senior, or graduate standing; 9 hours of coursework in NS; and permission of instructor. Not offered 1990–91.
Hours in placement arranged individually.
Undergraduate and graduate students are placed, according to their interests and backgrounds, in organizations and agencies that provide nutrition and food services. Students may be required to provide their own transportation to placements.]

441 Nutrition and Disease
Fall. 4 credits. Prerequisites: NS 331 and a human physiology course. S-U grades optional.
M W F 10:10 and F 8. V. Utermohlen.
Study of the physiologic and metabolic anomalies in chronic and acute illnesses and the principles of nutritional therapy and prevention. The topics covered include diabetes mellitus, starvation, obesity, nutritional assessment, nutritional pharmacology, severe injury, infection, cancer, gastrointestinal diseases, liver disorders, renal diseases, cardiovascular diseases, and pediatrics. Original research papers, books, review papers, and publications of professional organizations are used throughout the course.

442 Implementation of Nutrition Care
Fall. 3 credits. Limited enrollment. Prerequisites: NS 247, concurrent registration in NS 441 (or equivalent background in either course), and permission of instructor during course registration. (Permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall.) S-U grades optional.
Lec, M W 9:05; lab 1 T 2:30–4:20, lab 2 R 11:15–1:10. A. Kendall Casella.
Development of skills necessary to implement nutrition care plans: interviewing and counseling, dietary assessment, calculation of therapeutic diets and menu planning, and quality assurance are covered.

445 Community Nutrition and Health
Spring. 3 credits. Prerequisites: NS 245 and NS 331 or concurrent enrollment in 331. S-U grades optional. The field-project component of this course may involve off-campus activity; students are responsible for their own transportation.
M F 11:15; disc, W 2:30–4:30. A. Gillespie and Division faculty.
Study of human nutrition and health problems from a community perspective; programs and policies related to nutrition at local, state, and federal levels; and approaches and techniques for effective application of social science theories and research in community nutrition programs.

446 Physiochemical Aspects of Food
Fall. 3 credits. Prerequisite: biochemistry, which may be taken concurrently. S-U grades optional.
M W F 9:05. G. Armbruster.
The relation of food quality to (a) rheological properties of food systems, (b) oxidation and reduction reactions, and (c) enzymatic and nonenzymatic browning. Covers physical and chemical factors accounting for the color, flavor, and texture of natural and processed foods.

447 Physiochemical Aspects of Food—Laboratory
Fall. 1 credit. Prerequisite: NS 446 or concurrent registration. S-U grades optional.
T 1:25–4:25. G. Armbruster.
Laboratory experiments designed to illustrate the effect of varying ingredients and treatment on the quality of food products. Objective testing methods are used to determine food quality characteristics.

448 Physiochemical Aspects of Food—Laboratory
Fall. 1 credit. Prerequisite: NS 446 or concurrent registration. S-U grades optional.
R 1:25–4:25. G. Armbruster.
Laboratory experiments designed to illustrate (a) the physiochemical behavior of colloidal systems, (b) chemical reactions of some food components, and (c) effects of temperature, pH, moisture, inorganic salts, and enzymes on physiochemical changes in natural foods, food components, and food mixtures.

456 Experimental Foods Methods
Spring. 3 credits. Prerequisites: NS 446, 447 and/or 448.
Labs, T R 1:25–4:25. G. Armbruster.
Application of the scientific method in the design and performance of experimental food problems and the interpretation and evaluation of results. Evaluation of the use of instruments and chemical and sensory methods in the measurement of food properties. Independent problems.

457 National and International Food Economics
Spring. 3 credits. Prerequisites: Econ 101 or CEH 110 and junior standing, or permission of instructor. S-U grades optional.
M W F 9:05. E. Thorbecke.
Examination of individual components essential for an understanding of the United States and world food economies. Analysis of the world food economy. Review and analysis of (a) the major economic factors determining the demand for food, the composition of food consumption, and nutritional intake; and (b) the major economic factors affecting food production and supply. Examination and evaluation of the effectiveness of various food policies and programs in altering food consumption patterns. Principles of nutritional planning in developing countries within the context of the process of economic and social development.

488 Applied Dietetics in Foodservice Systems
Spring. 3 credits. Limited to 30 students. Prerequisites: NS 378, Applied Microbiology, learning theory course, and permission of instructor (permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall). S-U grades optional. Uniform required.
Lec, M W 9:05; lab, M or W 1:30–6. J. Koch.
Students will gain experience in care and use of institutional equipment, menu planning, recipe development, job analysis and evaluation, volume food production, applied sanitation, in-service training, and other skills required to operate/manage a foodservice program. Some laboratories will be arranged through Cornell Dining.

498 Honors in Nutritional Sciences
Spring. 1 credit. Limited to students admitted to the division honors program. Students may register in NS 499 concurrently.
T 2:30–4. T. C. Campbell, coordinator.
Informal presentation and discussion of current topics in food and nutrition in which all members participate. Written reports on topics discussed may be requested. Delineation of honors research problems in consultation with faculty adviser.

499 Honors Problem
Fall and spring. Credits to be arranged. Open only to students in the division honors program.
Disc, T 11:15, plus additional hours to be arranged. Division faculty;
T. C. Campbell, coordinator.
An independent literature, laboratory, or field investigation. Students should plan to spread the work over two semesters.

600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. Limited to graduate students recommended by their chair and approved by the instructor in charge. S-U grades optional.
Hours to be arranged. Division faculty.
Emphasis on independent advanced work. Experience in research laboratories in the division may be arranged.

601–604 Advanced Nutrition Series
A series of nutrition courses offered jointly by the Division of Nutritional Sciences and the Departments of Animal Science and Poultry Science. Prerequisites: courses in nutrition, physiology, and biochemistry, including intermediary metabolism, or permission of instructor.

601 Proteins and Amino Acids (also Animal Science 601)
Fall. 2 credits. Prerequisites: physiology, biochemistry, and nutrition, or permission of instructors. Letter grade only. Offered even-numbered years. Not offered 1991–92.
Hours to be arranged. R. E. Austic.
A course in amino acid and protein nutrition with emphasis on the dynamic aspects of protein digestion and amino acid absorption, protein and amino acid metabolism, nutrient interrelationships, assessment of protein quality, and amino acid availability and amino acid requirements in humans.

602 Lipids
Fall. 2 credits.
T R 11:15. A. Bensadoun.
Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is on critical analysis of current topics of lipid methodology, lipid absorption, lipoprotein secretion, structure, and catabolism; mechanisms of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

604 The Vitamins
Fall. 2 credits.
T R 10:10. G. F. Combs, Jr.
Lectures on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

[607 Nitrogen Metabolism (also Biological Sciences 650)
Spring. 2 credits. Prerequisites: Chemistry 358 or 360 and Biological Sciences 330 or 331, or permission of instructor. Offered alternate years. Not offered 1990–91.
T R 9:05. Staff.
The course will cover most aspects of nitrogen metabolism. The first section will consider nitrogen fixation and assimilation in bacteria and the metabolism and biological importance of purines, pyrimidines, porphyrins, alkaloids, and amines. This will be followed by discussion of the pathways of amino acid biosynthesis and degradation. The final section will include discussion of protein

turnover and degradation, nitrogen excretion, and interorgan relationships in higher organisms. Emphasis throughout the course will be on hormonal, developmental, and molecular biological aspects of metabolic regulation and evolutionary differences.]

[611 Molecular Toxicology (also Toxicology 611)
Spring. 2 credits. Prerequisite: full-year 400-level course in biochemistry or equivalent. S-U grades optional. Offered alternate years. Next offered 1991–92.
Hours to be arranged. Staff.
A study of fundamental biochemical mechanisms of absorption, transport, metabolism, and excretion of drugs, carcinogens, and toxicants. Emphasis on oxidative and conjugative pathways of metabolism and of environmental and nutritional factors that influence toxicant metabolism and disposition. Methods of evaluating in vivo and in vitro metabolism.]

612 Methods of Assessing Physical Growth in Children
Spring. 3 credits. Limited to graduate students and students who have permission of the instructor. A previous course in statistics required. S-U grades optional.
Lec, T 1:25; labs, R 1:25–4:25; disc, T 2:15–3:05. J. Haas.
A laboratory course to train students in methods and techniques used to assess the physical growth and development of children. The methods explored are those applicable for field or community studies and cover anthropometry, body composition, skeletal age, maturity indicators, physical fitness, and energy expenditure.

614 Topics in Maternal and Child Nutrition
Fall. 3 credits. Prerequisites: NS 331, and 222 or 347, Biological Sciences 311, and permission of instructor.
T R 9:05–10:30. K. Rasmussen.
Advanced course on the role of nutrition during pregnancy and lactation. Feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized.

616 Readings in Food
Fall. 2 credits. Prerequisite: organic chemistry. Recommended: biochemistry. S-U grades optional. May be repeated for credit with permission of instructor.
W 7:30–9:25 p.m. N. Mondy.
Critical review of selected topics in the current literature. Emphasis on experimental data and basic scientific principles underlying modern theory and practice relative to food quality. Training in oral and written presentations of scientific information.

617 Teaching Seminar
Fall or spring, first half of semester. 1 credit. Limited to division graduate students and students who have permission of the instructor. S-U grades only.
Hours to be arranged. C. Bisogni, D. Taylor-Way.
A series of workshops focusing on development of teaching skills for guiding classroom learning in lecture, discussion, and laboratory settings. Preparation of content, presentation, and interaction techniques and evaluative methods are emphasized in relation to the student's specific teaching assignment. Videotape simulations provide opportunity for practice and analysis of teaching behaviors.

618 Teaching Experience
Fall or spring. No credit. Limited to division graduate students and students who have permission of instructor. No grades given.
Hours to be arranged. Division faculty; C. Bisogni, coordinator.
Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

619 Field of Nutrition Seminar (also Animal Science 619)
Fall or spring. No credit. No grades given.
M 4:30. Faculty and guest lecturers.
Lectures on current research in nutrition.

[620 Food Carbohydrates (also Food Science 620)
Spring. 2 credits. Prerequisites: Biological Sciences 330 or equivalent. Letter grades only. Offered alternate years; next offered 1991–92.
T R 10:10. J. Brady, B. Lewis.
A consideration of the chemistry of carbohydrates, including sugars and complex carbohydrates (starches, pectins, hemicelluloses, gums, cellulose, and conjugated carbohydrates). Emphasis is on intrinsic chemistry, functionality in food systems, and changes occurring during food processing and storage.]

626 Special Topics in Food
Spring. 2 credits.
Hours to be arranged. G. Armbruster, B. Lewis.
Current research related to food is reviewed in the context of basic principles and their application to the quality of food.

627 Special Topics in Food
Spring. 2 credits. Prerequisite: organic chemistry. Recommended: biochemistry. S-U grades optional. May be repeated for credit with permission of instructor.
W 7:30–9:30 p.m. N. Mondy.
Current research related to international food production and processing and toxicants in the food chain.

630–633 Advanced Nutrition Laboratory
Fall or spring. 1–5 credits. Limited to 12 students.
630: T 2:30–5:30, S 9–12. 631–633: T R 2:30–5:30. Division faculty.
Laboratories on the anthropometric, dietary, clinical, and biochemical assessment of human nutritional status. The individual courses are taught in sequence over the entire semester. Any or all of the modules may be taken for credit.

630 Anthropometric Assessment
Spring, weeks 3–5. 1 credit. Prerequisites: NS 331 or equivalent and permission of instructor.
T 2:30–5:30, S 9–12. J. Haas.
Overview of methods of assessing nutritional and health status, techniques of anthropometry, body composition, energy expenditure and physical performance applicable to children and adults.

[631 Dietary Assessment
Fall. 1 credit. 7 weeks only. Prerequisites: statistics and NS 331 or equivalent. Enrollment limited. Not offered fall 1990.
R 2:30–5:30. D. Sanjur.
Study of methods and techniques for assessing dietary intakes at the individual and household levels.]

632 Clinical Assessment
Spring. 1 credit. Prerequisites: NS 441, 630, 631, and Biological Sciences 330 or 331; NS 332 or Biological Sciences 430; and permission of instructor.
T R 2:30–5:30. V. Utermohlen and division faculty.
Study of methods and techniques for clinical assessment of nutritional status and diagnosis of nutritional disorders.

633 Human Metabolic Studies
Spring. 1 credit. Prerequisite: NS 331. Limited to 20 students. S-U grades optional.
Hours to be arranged; 6 meetings over a 3-week period, 2-1/2 hours each.
D. Roe.
Instruction in the principles of human metabolic studies and how these are carried out. Includes how to plan and write a protocol for a study; how to select an appropriate experimental design; how to select subjects; how to design, prepare, and analyze diets; how to make collections of urine and feces; and how to examine data for subject period and treatment effects. Assigned readings, which will be discussed in class, will be from selected recent papers in which techniques of human metabolic studies are described. Learning experiences will include participation in a six-day study.

[634 Vitamins and Coenzymes (also Biological Sciences 634)
Spring. 2 credits. Prerequisites: organic chemistry 253 or 357–358 and Biological Sciences 330 or 331, or their equivalents in biochemistry. Offered alternate years. Next offered 1991–92.
T R 10:10. M. N. Kazarinoff.
Lectures on the chemistry, biochemistry, and physiology of vitamins and coenzymes. Emphasis is placed on the relationship of structure and function, and mechanisms are examined in detail. Readings from the current primary literature are assigned weekly.]

635 Mechanisms of Metabolic Regulation (also Biological Sciences 635)
Spring. 2 credits. Prerequisites: Chemistry 358 or 360 and either Biological Sciences 330 or 331 or permission of instructor. Offered alternate years.
T R 9:05. Division faculty.
Lectures only. The identification and characterization of regulatory steps in metabolism are considered from both theoretical and practical aspects. The intracellular mechanisms of regulation are stressed, with specific examples examined in detail.

636 Integration and Coordination of Energy Metabolism(also Biological Sciences 637)
Fall. 3 credits. Prerequisites: Biological Sciences 330 and 331, or equivalent.
M W F 9:05. W. J. Arion.
The elements and dynamics of energy metabolism in higher animals are systematically developed through biochemical characterizations of the metabolic components and structure of major tissues and organs, stressing correlations with physiologic functions.

Mechanisms that control energy metabolism within individual tissues and coordinate these processes in an intact animal are analyzed in the contexts of selected physiologic and pathologic stresses.

637 Epidemiology of Nutrition
Spring. 3 credits. Taught in conjunction with Advanced Epidemiology (Vet Med 665). Limited to graduate students. Prerequisites: Statistics and Biometry 602 or 604 or equivalent, NS 331 or equivalent, Vet Med 664 or equivalent.

Hours to be announced. J.-P. Habicht.

Course covers principles of nutritional epidemiology, impact assessment of nutrition intervention programs, and nutritional surveillance. Teaching principles of using nutritional information for decision making, including the levels of evidence about nutrition and health for making decisions. The course shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

638 Epidemiology of Nutrition Seminar
Spring. 3 credits. Reserved for graduate students planning field intervention studies; by permission of instructor. Prerequisite: NS 636.

Hours to be announced. J.-P. Habicht.

Covers the meta-analysis, design, measurement, and analytic issues involved in developing, implementing, and analyzing studies of field interventions with nutritional impact.

639 Epidemiology Seminar (also Statistics and Biometry 639)
Fall and spring. 1 credit. Limited to graduate students; others by permission of instructor. S-U grades only.

Hours to be announced. J.-P. Habicht, H. Erb.

This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

644 Community Nutrition Research Seminar
Fall and spring. No credit. No grades given.

Hours to be announced. A. Gillespie and community nutrition faculty.

This seminar series focuses on research presentations in nutrition education and other areas of community nutrition. Cornell faculty and graduate students and outside invited speakers present research proposals, results from ongoing research, theoretical bases for research, program evaluations, and discuss current issues in community nutrition research. The format varies but always includes discussion by participants.

645 Community Nutrition
Spring. 2 credits. Limited to graduate students with a major or minor in human nutrition who have had a previous course in community nutrition.

M 1:25–3. A. Gillespie and community nutrition faculty.

Students will be actively involved in discussing community nutrition needs assessments, program planning and development, evaluation of impact, the implications of public policy and current issues in community nutrition.

646 Seminar in Physicochemical Aspects of Food
Spring. 1–3 credits. Prerequisite: a college course in organic chemistry or biochemistry. S-U grades optional.

T R 2–3:15; disc to be arranged. B. Lewis, R. Parker.

An introduction to physicochemical aspects of food, for graduate students who have had limited or no work in this area. The seminar uses the lectures of NS 345 as a basis for supplementary readings and critical review of research on selected topics.

650 Public Health Nutrition
Spring. 3 credits. For graduate students with a major or minor in nutrition and undergraduate nutrition majors in their senior year. Prerequisite: NS 331 or equivalent.

M W F 9:05. D. Roe.

Lectures cover social, environmental, and disease variables that influence the nutrition of infants, children, and adults. Students gain experience in nutritional assessment methods. Endemic nutritional problems (such as obesity, dental caries, and anemias) of public health importance of the United States are discussed. Student presentations are made in class. Field experience is offered.

[651 Nutrition and the Chemical Environment (also Toxicology 651)
Fall. 3 credits. Prerequisite: NS 331 or equivalent. S-U grades optional. Not offered 1990–91.

M W F 11:15. D. Roe.

An overview of interactions between drugs and nutrients is presented. Specific lecture topics include food-drug incompatibilities, drug-induced nutritional deficiencies, and nutritional teratology. Students will obtain methods skills in selection of animal models, in nutritional pharmacology, and in research designs appropriate to human studies.]

652 Nutrition Counseling
Spring. 1 or 2 credits. Prerequisites: NS 441 and 442. S-U grades only.

W 10:10–12:05. J. Koch.

Principles and procedures of nutritional counseling in clinical practice. Emphasis on subject matter and process skills necessary to develop, implement, and evaluate nutritional care plans for individuals and groups. Includes workshops, simulation techniques, and work with clients in selected settings.

659 The Nutrition, Physiology, and Biochemistry of Mineral Elements (also Veterinary Medicine 759 and Biological Science 615)
Fall. 3 credits. Prerequisites: basic physiology, intermediate biochemistry, and general nutrition. Offered alternate years. Not offered 1991–92.

M W F 9:05. R. Schwartz, D. R. Van Campen, R. H. Wasserman, C. C. McCormick.

Lectures and discussions on nutritional aspects and physiological, biochemical, and hormonal factors relating to the major macro and micro elements. Included is information on the chemistry of ions and complexes, methods used in research on biologically important minerals, absorption, transport, homeostasis, essentiality, toxicity, and requirements of mineral elements. Lectures and class discussions will emphasize recent developments and experimental approaches.

660 Special Topics in Nutrition
Fall or spring. 3 credits maximum each term. Registration by permission of the instructor.

Hours to be arranged. Division faculty.

Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered. Topics may be changed so that the course may be repeated for credit.

669 Field Seminar on Nutrition in Government
Spring. 1 credit. Limited to 15 students. S-U grades only.

V. Utermohlen.

This 2–3 day seminar provides an overview of policy decision making and implementation of nutrition programs at the state and national levels. Seminars alternate yearly between Washington, D.C. and Albany, NY. Provides opportunities to meet and confer with staff members of the legislature and selected government and private agencies. An orientation meeting and follow-up group discussion and summary report are also part of this seminar.

[670 Clinical Field Studies
Fall, spring, or summer. 15 credits maximum. Limited to graduate students in clinical nutrition. Prerequisites: NS 441, 442, 630, 631, 632, 633 and 652. S-U grades only. Not offered 1990–91.

Full-time study at off-campus clinical sites. Division faculty.

The delivery of nutritional care in hospitals, outpatient clinics, and community settings.]

680 International Nutrition Problems, Policy and Programs
Fall. 3 credits. Prerequisite: permission of instructor.

T R 11:15–12:30. M. Latham.

Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can assist poor countries and communities to improve their nutritional and health status.

681 Nutritional and Public Health Importance of Human Parasitic Infections
Fall. 2 credits. Prerequisites: graduate student status or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1991–92.

M 1:25–3:20. L. Stephenson and staff.

Reviews the scientific evidence for relationships between human nutritional status and common human parasitic infections. Concentrates on malnutrition (protein-energy malnutrition, anemia) in developing countries. Parasitic infections emphasized are malaria, hookworm, ascaris, schistosomiasis, and trichuriasis. Format is lecture-demonstration-discussion.

[682 Isotope Kinetics (also Biological Sciences 752)
Spring. 2 credits. Prerequisite: calculus. S-U grades optional. Not offered 1990–91.
Hours to be arranged. Division faculty.
Quantitative analysis of the transport and distribution of nutrients, metabolites, and drugs in multicompartmental systems. The material will be presented as lectures, discussion groups, and problem sets.]

683 Field Studies in International/ Community Nutrition
Fall. 1 credit. Graduate student status or permission of instructor required. S-U grades only.
Hours to be arranged; 12 class hours on 3 Saturdays. L. Stephenson.
Reviews practical considerations in conducting field research in developing countries, including (1) seeking fundings (where, how, when), (2) experimental design issues (choice of population, design, sample sizes, ethics), (3) choice of procedures (laboratory and other), and (4) planning for and carrying out data collection (including specifics of purchasing equipment and supplies; transport of equipment, self and data; health precautions; and data collection and coding). Also includes how to a) construct a C.V., b) write an abstract and prepare a clear 10-minute talk with legible slides (FASEB formation), and c) when, where, and how to publish research results. Extensive handouts. Lecture/demonstration/discussion.

685 Food and Nutrition Policy (also Agricultural Economics 685)
Fall. 3 credits. Prerequisites: Consumer Economics and Housing 310 or Consumer Economics and Housing 603 or Economics 311 or 313 or Agricultural Economics 415 or equivalent. Knowledge of multiple regression. S-U grades optional.
M W 1:15–2:25. P. Pinstrup-Andersen.
The course will identify the principal links between human nutrition and government action, with emphasis on developing countries. The process of policy formation, including economic and political factors, will be discussed. Political-economy issues, including the influence of and conflict among interest groups and rent-seeking behavior related to food and nutrition policies and programs, will be analyzed. The role of nutrition information and surveillance in policy design, implementation, and evaluation will be analyzed along with methodologies for empirical analysis of food and nutrition policy. Findings and analytical methodologies from case studies in developing countries will be used as appropriate. The role of improved nutrition in economic development as both an indicator of welfare and a productivity-enhancing factor as well as basic relationships among nutrition, poverty, food, health, and household behavior will be briefly presented at the beginning of the course to provide a context for policy discussions.

695 Seminar in International Nutrition, Agriculture, and Development Policy (also International Agriculture 695)
Spring. 1 credit. Prerequisite: Permission of instructor.
Hours to be announced. T. Brun.
Concentrates on major issues in food and nutrition policies as they relate to agriculture. Issues include Africa's nutritional and agricultural decline, lessons from China and Vietnam, the cash crop-food crop debate, and the nutritional impact of several agricultural programs. Emphasis is placed on agricultural policies that are leading to growth and equity.

698 International Nutrition Seminar
Fall and spring. No credit. No grades given.
R 12:20–1:10. M. Latham.
This seminar series consists of presentations by Cornell faculty and graduate students, and by outside invited speakers. Speakers cover a range of topics which relate to nutritional problems, policy, and programs in the non-industrialized countries. Some presentations consist of discussion of a proposed research protocol. Sometimes a debate or forum is organized to allow a broad-ranging discussion of an issue related to international food and nutrition.

699 Special Topics in International Nutrition
Fall and spring. 3 credits maximum each term. Registration by permission of instructor.
M. Latham and faculty in Program in International Nutrition.
This option is designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. Usually one or more students will approach a professor and arrange for tutorial study on an agreed topic. This will usually be achieved by extensive use of literature and discussions of this with the faculty members. In certain semesters it may consist of a small seminar or lecture course on a subject not now adequately convered in an existing course. On occasion it may involve laboratory or field work. Because the topics change, the course may be repeated for credit.

700 Current Topics in Toxicology (also Toxicology 698)
Fall or spring. 1–3 credits. S-U grades optional.
Hours to be arranged. Staff.
A discussion of the most current developments in various areas of toxicological research and testing. Faculty and students will participate jointly in evaluating research findings and provide seminars and discussion of such material. For information regarding topic, instructor, and credit, contact the office of the Graduate Field of Environmental Toxicology, 16 Fernow Hall, 255–8008.

702 Seminar in Toxicology (also Toxicology 702)
Fall or spring. 1 credit. S-U grades only.
F 12:20. Staff.
The seminar program covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology and ecotoxicology and environmental chemistry. Included are presentations of basic research studies as well as fundamental concepts and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

703 Seminar in Nutritional Science
Fall and spring. 1 credit. S-U grades only.
T 12:20 or W 12:20. Division faculty.
Presentations of original articles pertinent to the Nutritional Sciences. Students will learn how to make professional presentations and how to critique the presentations by others. In addition, students will learn how to read and interpret original articles published in a wide variety of journals.

899 Master's Thesis and Research
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Division graduate faculty.

999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Division graduate faculty.

FACULTY ROSTER

Arion, William J., Ph.D., U. of N. Dakota. Prof.
Armbruster, Gertrude, Ph.D., Washington State U. Assoc. Prof.
Bensadoun, Andre, Ph.D., Cornell U. Prof., Nutritional Sciences/Physiology
Bisogni, Carole, Ph.D., Cornell U. Assoc. Prof. and Associate Director for Academic Affairs
Brenna, Thomas, Ph.D., Cornell U. Asst. Prof.
Brink, Muriel, M.S., Michigan State U. Prof.
Brun, Thierry, Ph.D., U. of California, Berkeley. Visiting Prof.
Campbell, Cathy C., Ph.D., Cornell U. Asst. Prof.
Campbell, T. Colin, Ph.D., Cornell U. Jacob Gould Schurman Professor of Nutritional Biochemistry
Chen, Junshi, M.D., Peking Medical College, China. Adjunct Prof.
Cowell, Catherine, M.S., U. of Connecticut. Adjunct Prof.
Crompton, D. W. T., Ph.D., Sc.D., U. of Cambridge (England). Adjunct Prof.
Garza, Cutberto, M.D., Baylor College; Ph.D., MIT. Director and Prof.
Gillespie, Ardyth, Ph.D., Iowa State U. Prof.
Haas, Jere D., Ph.D., Pennsylvania State U. Prof.
Habicht, Jean-Pierre, Ph.D., Massachusetts Inst. of Technology. James Jamison Professor of Nutritional Epidemiology
Kazarinoff, Michael N., Ph.D., Cornell U. Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Latham, Michael C., D.T.M.&H., U. of London (England). Prof.
Levitsky, David A., Ph.D., Rutgers U. Assoc. Prof.
Lewis, Bertha A., Ph.D., U. of Minnesota. Assoc. Prof.
Mondy, Nell I., Ph.D., Cornell U. Prof.
Nesheim, Malden C., Ph.D., Cornell U. Prof.
Olson, Christine M., Ph.D., U. of Wisconsin. Assoc. Prof.
Parker, Robert S., Ph.D., Oregon State U. Assoc. Prof.
Pinstrup-Andersen, Per, Ph.D., Oklahoma State U. of Agriculture and Applied Science. Prof.
Rasmussen, Kathleen M., Sc.D., Harvard U. Assoc. Prof.

Rivlin, Richard S., M.D., U. of London (England). Prof.
Roe, Daphne A., M.D., U. of London (England). Prof.
Sanjur, Diva M., Ph.D., Cornell U. Prof.
Schwartz, Ruth A., Ph.D., U. of London (England). Prof.
Sobal, Jeffery, Ph.D., U. of Pennsylvania. Assoc. Prof.
Stephenson, Lani, Ph.D., Cornell U. Assoc. Prof.
Stipanuk, Martha H., Ph.D., U. of Wisconsin. Assoc. Prof.
Thorbecke, Erik, Ph.D., U. of California. H. E. Babcock Professor of Economics and Food Economics
Utermohlen, Virginia, M.D., Columbia U. Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology

Other Teaching Personnel

Kendall Casella, Anne, R.D., Ph.D., Cornell University. Lecturer
Koch, Joan M. L., R.D., Ph.D., Cornell University. Senior Lecturer
Strupp, Barbara, Ph.D., Cornell University. Lecturer

Joint Appointees

Apgar, B. Jean, Visiting Assoc. Prof., U.S. Plant, Soil, and Nutrition Laboratory/Nutritional Sciences
Bauman, Dale, Prof., Animal Science/ Nutritional Sciences
Combs, Gerald F., Jr., Prof., Poultry Science/ Nutritional Sciences
McCormick, Charles, Assoc. Prof., Poultry Science/Nutritional Sciences
Miller, Dennis, Assoc. Prof., Food Science/ Nutritional Sciences
Van Campen, Darrell R., Assoc. Prof., U.S. Plant, Soil, and Nutrition Laboratory/ Nutritional Sciences
VanSoest, Peter J., Prof., Animal Science/ Nutritional Sciences
Warner, Richard G., Prof., Animal Science/ Nutritional Sciences

OFFICER EDUCATION

Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914, establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1916, and the evolution of a program that, while teaching drill and ceremonies, places greater emphasis on the development of leadership and managerial skills. Throughout the years, Cornell's program of officer education has provided many outstanding civilian and military leaders well equipped for success as a result of knowledge and skills gained from their involvement in the officer education program while pursuing undergraduate and graduate degrees.

The programs of officer education allow the student to prepare for a commission as an officer in either the United States Army, Navy, Marine Corps, or Air Force. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

MILITARY SCIENCE

Lieutenant Colonel Robert N. d'Entremont, Quartermaster Corps, United States Army, Professor of Military Science and Commanding Officer, U.S. Army ROTC Instructor Group

Major Edward R. Murdough, Engineer Corps, United States Army Reserve

Major Robert E. Newman, Field Artillery, United States Army National Guard

Major James S. Jenkins, Jr., Infantry, United States Army

Captain Timothy M. Kaseman, Aviation, United States Army

Captain Frank G. Keating, Quartermaster Corps, United States Army

United States Army ROTC Program

The primary objective of the Army Officer Education Program at Cornell is to commission the officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential.

These objectives are achieved through a program normally covering four years. A two-year program is available, however, and is discussed in a later section. The program includes specific courses in military science, more general academic subjects that assure a well-rounded education, practical training in leadership through participation in the Cadet Corps (including attendance at one six-week summer camp at an Army installation), and the opportunity to participate in a number of extracurricular activities. The combination prepares the student for commissioning and effective performance in the many branches of the Army. The student's academic major, academic performance, leadership ability, personal desires, and the needs of the Army determine the branch of the Army in which he or she is commissioned upon graduation.

Requirements for Enrolling

Applicants must be citizens of the United States (Noncitizens may enroll in selected portions of the program.)

An applicant's vision must be correctible to a minimum of 20/20 in one eye and 20/400 in the other eye. Height must be at least sixty inches for men, fifty-eight inches for women, and no more than eighty inches for men and seventy-two inches for women, although exceptions may be considered. The weight requirement varies according to age, height, and sex. Overall sound mental and physical condition is essential, and students are required to undergo periodic physical examinations. Enrollment in the program is subject to the approval of the professor of military science.

Enrollment in specific courses by students not formally enrolled in the program must be approved by course instructors.

Four-Year Program

The Four-Year Program is open to students in their freshman year or, with the approval of military and university authorities, to sophomores in a five-year degree program. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced standing.

Under the Four-Year Program students enroll in the Basic Course (Mil S I and II) during the first two years, and the Advanced Course (Mil S III and IV) during the next two years. A total of fourteen credits of military subjects is taken. In addition, academic-enrichment courses are required in such fields as written communications, math logic, computer science, human behavior, military history, and perhaps a foreign language. Specific requirements are determined by the student and his or her adviser after initial enrollment. Throughout the four years, cadets spend an additional two hours each week each semester in practical leadership training for which there is no academic credit. All cadets attend a six-week camp, with pay, between the junior and senior years.

Basic Course (Mil S I and Mil S II)

Students in the first year of the Basic Course take one classroom course in military science in the fall and spring semesters, for which they receive academic credit. These courses include study of the U.S. organization for defense and principles and techniques of leadership and management.

Students also participate in leadership modules that include rappelling, orienteering, drill and ceremony, physical training, winter survival, and individual tactical training. These modules are designed to promote personal development and enrichment. While they do not receive academic credit for these activities, students receive physical education credit. Typical freshman participation in Army officer education is 48 1/2 program-related hours.

During the fall of the second year, the student takes a three-credit class in military history, including the evolution of warfare and armed conflict in society. In the spring, the student takes a one-credit course in map reading and spends approximately two hours a week in practical leadership training, land navigation, and military skills.

Advanced Course (Mil S III and Mil S IV)

The Advanced Course of the Four-Year Program is open to students who have successfully completed the Basic Course and are accepted by the Professor of Military Science for further enrollment. It is also open to students who have gained appropriate advanced standing through either successful completion of basic summer programs (see the description of the Two-Year Program) or prior military training. Any student entering the Advanced Course must have two years of academic work remaining at Cornell or another degree-granting institution. The student must pass such physical and aptitude tests as may be prescribed. In addition, the past performance and desire of each student is evaluated to determine if he or she has the potential for eventual commissioning.

When students are accepted for the Advanced Course, they execute a written contract with the U.S. government. Under terms of the contract, they agree to complete the Advanced Course and to accept a commission if tendered. Concurrently with the signing of the contract, students enlist in the United States Army Reserve for control purposes.

Classroom study in the Advanced Course includes one military science course each semester on such subjects as leadership and management, small-unit tactics, and command and staff organization and functions. The two hours a week of practical leadership training continues, and between the junior and senior years all cadets attend a six-week advanced summer camp currently conducted at Fort Bragg, North Carolina.

Two-Year Program

The Two-Year Program consists of the last two years (the Advanced Course) of the regular Four-Year Program. To qualify for the Two-Year Program, a student must successfully complete a six-week summer Basic Camp or receive placement credit for prior military service.

The Two-Year Program is open to selected students who have two years of academic study remaining at Cornell or another accredited degree-granting institution.

Applications are accepted October to April of the sophomore year. Selectees complete the six-week camp before registering in the Advanced Course the following fall. They must also meet specified physical requirements and execute the same written contract as those students who enter the Advanced Course after completing the regular Basic Course. Selected students may be eligible for up to six academic credit hours for successful completion of Basic Camp.

Scholarships

Scholarships are awarded on the basis of merit and are available for two, three, or four years. AROTC scholarships are awarded each year to outstanding Basic Camp participants and students in the freshman and sophomore classes. Cadets who are awarded scholarships continue to receive support until graduation as long as they fulfill the requirements. Scholarship cadets receive a stipend for university tuition, required fees, textbooks, and classroom materials for the duration of their scholarship. Scholarship cadets and Advanced Course cadets also receive $100 a month for up to ten months a year.

Commissioning

All students who successfully complete the Advanced Course, including the advanced summer camp, are commissioned as second lieutenants in the United States Army Reserve or Regular Army upon graduation.

Distinguished Military Graduates

Selected senior cadets with high academic achievement and outstanding military qualities are designated Distinguished Military Graduates after fulfilling all obligations for a baccalaureate degree. All cadets, scholarship and nonscholarship, are eligible to compete for this distinction.

Service Obligations

A variety of active duty and reserve combinations are available. The manpower requirements of the Army and the qualifications of the cadets determine the option.

An officer beginning active duty first attends the Officer Basic Course (normally ten to sixteen weeks) of the assigned branch. Upon completion of this course the officer is assigned to a unit and location that is determined by the desires of the individual and the requirements of the Army. Those officers selected for reserve duty attend the Officer Basic Course, after which they are released to reserve status.

Nonscholarship cadets accepting a Regular Army commission serve a minimum of three years on active duty followed by up to five years in reserve status.

Scholarship cadets, whether commissioned in the Regular Army or the Reserve, generally serve four years on active duty and four years in reserve status; however, some may serve eight years on reserve duty.

Choice of Branch

Cadets in the second year of the Advanced Course (normally the senior year) may specify the branch of the Army—such as Infantry, Corps of Engineers, Armor, Signal Corps, Field Artillery, Air Defense, Artillery, Ordnance, Chemical, Adjutant General, Quartermaster, Finance, Medical Service, Military Intelligence, Military Police—in which they prefer to serve. They are notified in the spring, before commissioning, of the branch to which they are assigned. The likelihood of appointment in a chosen branch depends upon the student's academic and officer education performance, degree area, and the needs of the Army at that time.

Graduate Study

Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of needs of the service. Admission to graduate school is the student's responsibility.

Benefits

Each cadet in the Advanced Course (Mil S III and Mil S IV) receives $100 a month for up to ten months a year. While attending the advanced summer camp (between the junior and senior years), each cadet receives approximately $600 and an allowance for travel to and from camp. Each semester approximately $180 is provided to cover textbooks, supplies, and fees for scholarship recipients.

A cadet in the Two-Year Program receives the same payments as cadets in the Advanced Course and, in addition, receives approximately $700 and a travel allowance for summer Basic Camp attendance before entering the Advanced Course.

Military Science Courses

All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course.

Freshman Year (Mil S I)

Mil S 101 United States Organization for Defense
Fall. 1 credit. Required.
Staff.
Students examine the U.S. defense structure in terms of organization, mission, personnel, and relationships among military forces and between the military forces and various branches and departments of the government. The United States Army force structure is examined at all levels. The complexities and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction.

Mil S 102 Leadership Theory
Spring. 1 credit. Required.
Staff.
This course allows students to develop a basic understanding and appreciation of the theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of varying styles of leadership on motivation and organization effectiveness. The student is introduced to the concepts of integrity, ethics, and professionalism.

Sophomore Year (Mil S II)

Mil S 321 Armed Conflict and Society
Fall. 3 credits. Required.
3 classes each week. Presentation by Army, Marine Corps, Navy, and Air Force instructors with guest lecturers, primarily from government and history departments. A study of modern warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities and values; the evolution of warfare, including principles of war, weapons, and associated equipment; and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

Mil S 222 Mapping: Land Navigation
Spring. 1 credit. Required.
Staff.
This course provides practical knowledge of the various forms of topographic representation. Students interpret and use maps in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences from physical, social, and climatic factors. Portions of the course offer practical experience in land navigation and orienteering.

Junior Year (Mil S III)

Mil S 331 Theory and Dynamics of the Military Team
Fall. 2 credits. Required.
Staff.
After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to leadership responsibilities of the commander as the team coordinator. Additionally, students have an opportunity to develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

Mil S 332 Leadership in Small-Unit Operations
Spring. 2 credits. Required.
Staff.
This course provides an understanding of the nature of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing the leader's decisions; the processes of planning, coordinating, and directing the operations of military units to include troop-leading procedures; and development of operation plans and orders.

Senior Year (Mil S IV)

Mil S 441 Contemporary Military Environment I
Fall. 2 credits. Required.
Staff.
An overview of the functions, responsibilities, and interrelationships between the small-unit leader, the commander, and the staff, using a combat arms battalion as a typical organizational structure. Detailed discussions focus on actions of the small-unit leader, communication skills, the military justice and legal system, the threat environment, and the logistical support of the army in the field.

Mil S 442 Contemporary Military Environment II
Spring. 2 credits. Required.
Staff.
A continuation of Mil S 424. Students examine the leadership environment of the Army officer. Conferences and seminars examine the techniques of effective military leadership with special attention given to professionalism and ethical considerations in the armed forces during peacetime and armed conflict.

Practical Leadership Training

All Army Officer-Education Students

In the leadership laboratory, all of these objectives are accomplished by emphasizing practical exercises and firsthand experience. Types of practical laboratory activities include an introduction to rifle marksmanship, mountaineering, physical training, land navigation and orienteering, signal communications, tactics, and orientations and training exercises at military installations.

As with many laboratory periods, no credit is given, and participation is required for successful completion of the AROTC program. Students will receive physical education credit for the laboratory. Students register as follows:

Mil S I Leadership Laboratory I
Fall Spring
Mil S 151 Mil S 152
Mil S I cadets select either rappelling-drill and physical training, or ranger training. In the spring, class choices are winter survival–land navigation or ranger training. These interesting and challenging activities do not provide academic credit but may be used for physical education credit if adequate hours have been accrued.

Mil S II Leadership Laboratory II
Fall Spring
Mil S 251 Mil S 252
Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include familiarization in rifle marksmanship, orienteering, drill and ceremonies, signal communications, physical fitness training, tactics and field exercises, and discussions.

Mil S III Leadership Laboratory III
Fall Spring
Mil S 351 Mil S 352
Cadets meet for two hours a week to prepare for a six-week summer camp that follows the junior year. Emphasis is on the development of individual skills in leadership techniques and practical skills. Cadets rotate among leadership positions to develop an ability to apply decision-making processes to a myriad of situations. They also acquire technical expertise and proficiency in signal communications, physical fitness, drill and ceremonies, rappelling, orienteering, tactics, water survival, and other military skills. This also includes two to three hours a week devoted to physical fitness.

Mil S IV Leadership Laboratory IV
Fall Spring
Mil S 451 Mil S 452
Senior cadets plan and operate the leadership laboratory programs for Mil S I–III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. This also includes two to three hours a week devoted to physical fitness.

Professional Military Education (PME) Requirements

In addition to the ROTC classes and leadership laboratories above, a number of courses are required as part of the student's academic program. These courses are offered by the university and round out the student's professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: human behavior, written communication skills, military history, math logic, and an introduction to computers. These courses must be completed prior to graduation and commissioning. Courses that meet these requirements are approved by the Professor of Military Science.

NAVAL SCIENCE

Captain J. R. Carey, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit

Lieutenant J. M. Fleming, United States Navy Reserve

Major J. M. Higgins, United States Marine Corps

Commander D. R. Kukulski, United States Navy

Lieutenant S. R. LaPorte, United States Navy

Lieutenant J. D. Lilly, United States Navy

Lieutenant W. A. Powell, United States Navy

The objective of the Naval Officer Education Program is to prepare selected students for service as commissioned officers in the United States Navy or United States Marine Corps by supplementing their undergraduate education with instruction in essential concepts of naval science and fostering development in the qualities of leadership, integrity, and dedication to their country and the naval services. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs on a case-by-case basis.

The objective is achieved through a broad program, normally covering four years, that combines specific courses in naval science and specified academic subjects to supplement weekly professional development sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

Non–naval officer education students. Though the Navy–Marine Corps program has been designed to prepare future officers, Naval science courses are open to all students at Cornell University as space limitations allow.

Requirements for Enrollment

An applicant for Naval ROTC at Cornell must be a citizen of the United States. Applicants must have reached their seventeenth birthday by June 30 of the entering year and be less than twenty-five years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for applicants who have prior active duty military service. Applicants must also meet physical and medical requirements. Interested students should visit the Naval ROTC Unit in Barton Hall.

Programs

There are two types of Naval programs: the Scholarship Program and the College Program. They differ primarily in benefits to the student and type of commission earned.

Scholarship Program

The Naval Officer Education Program provides approximately five thousand scholarships in more than sixty-six universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided students during college preceding the award of the baccalaureate degree.

Benefits

The program provides uniforms, full tuition, most instructional fees, textbooks, nonconsumable supplies, and $100 a month for a maximum of forty months.

Successful completion of the Scholarship Program leads to a regular commission in the Navy or Marine Corps. At Cornell University over 90 percent of NROTC students have a scholarship. Students entering NROTC without a scholarship are entitled to compete for one-, two-, or three-year scholarships controlled by the Chief of Naval Education and Training.

Entering the Scholarship Program

There are three ways to enter the Scholarship Program:

First, by applying for the national competition each year. This entails filling out and sending an appropriate application; being interviewed; having a physical examination; and applying to, and being accepted by, one of the colleges or universities throughout the country that offers an NROTC program.

Second, by enrolling in the College Program at Cornell and being recommended by the professor of naval science for a scholarship after at least one semester in the program.

Third, by entering through the Two-Year Scholarship Program.

College Program

There are two College Programs available. Both lead to a commission in the Naval or Marine Corps Reserve and a minimum of three years of active duty.

Each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of $100 a month from the beginning of the junior year.

The regular College Program is three to four years long. Academic requirements for students in this program are somewhat less than those for scholarship students, as noted in the curriculum section of this booklet.

The Two-Year College Program begins the summer before the junior year, when students attend a required program with pay at the Naval Science Institute in Newport, Rhode Island.

Summer Training

Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship, the unit sail-training vessel Vindicator, or with a naval activity anywhere in the world for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years. While attending summer training sessions, midshipmen are paid approximately $500 a month.

Active Duty Requirements

As required by Section 2107, Title 10, United States Code, selected applicants must enlist in the United States Naval Reserve for eight years in pay grade E-1 (seamen recruit) before being appointed midshipman, USNR, and receiving compensation. Students who are disenrolled from the NROTC Scholarship Program for

reasons beyond their control will, upon disenrollment, be discharged from their enlisted status. It should be understood that two years' active enlisted service may be required of those students who default on the terms of their NROTC contract after the beginning of their sophomore year.

Officers commissioned in the Regular Navy or Marine Corps serve on active duty for a minimum of four years. Those commissioned in the Naval or Marine Corps Reserve serve a minimum of three years on active duty. Specialized training following commissioning adds additional active duty requirements in some cases.

Choice of Assignment

Graduates have an opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign the newly commissioned officer the duty of his or her choice.

Among the types of assignments are duty in nuclear propulsion for surface ships and submarines, naval aviation, and large and small surface ships. Other specialties are available on a limited basis.

Marine Corps Options

The United States Marine Corps is an integral part of the Naval Services and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed second lieutenants in the United States Marine Corps.

Marine-option midshipmen will follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen will be taught Marine oriented courses by a Marine officer instructor. For first class summer training (after the junior year), known as the USMC Officer Candidate School, Marine-option students will travel to Quantico, Virginia, where they will undergo six weeks of intensive training. Upon commissioning the following year as second lieutenants, they will be assigned to the Basic School at Quantico, Virginia. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the duties available are Infantry, Aviation, Artillery, Tracked Vehicles, Engineers, Communications, Electronics, Supply, Administration, and Computer Science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, in this country or overseas.

The Marine Corps has a postgraduate training system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Florida, along with their Navy counterparts.

Curriculum

A student has three categories of requirements to fulfill as a midshipman. The first of these requirements is a weekly naval professional development session each semester. The second requirement is a naval science course each semester. The last set of requirements consists of other required courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.

Naval Professional Laboratories

Nav S 141–142, 241–242, 341–342, or 441–442

All students in the program participate in one ninety-minute professional development session each week. The session is held from 2:30 until 4:00 on Wednesday afternoon. This period is planned and implemented for the most part by the midshipmen officers in the battalion organization and consists of both drill and professional information briefings. Students gain experience in actual leadership situations and at the same time learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

Naval Science Courses

All Navy and Marine midshipmen take one naval science course together each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students are required to take the History of Amphibious Warfare and the Evolution of War courses in either their junior or senior year, depending on when the courses are offered.

Freshman Year (Navy and Marines)

Nav S 101 Fundamentals of Naval Science

Fall. No credit.
Two-hour class each week (lecture-recitation). Lt. Walter A. Powell, USN.

A study of fundamental aspects of naval science, including its conceptional contributions to sea power, factors involved in the physical development of naval forces, resources that must be managed, and prospects for the future.

Nav S 102 Naval Ship Systems I (also Mechanical and Aerospace Engineering 101)

Spring. 3 credits. Three lecture-recitation classes each week.
Prof. M. Louge, Lt. Walter A. Powell, USN.

An introduction to primary ship-systems and their interrelationship. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are considered.

Nav S 157 Principles of Sailing

Fall and spring. Physical education credit.
One class each week.
Lt. Walter A. Powell, USN.

Instruction in basic sailing skills and safety principles. Students sail small and large boats on Cayuga Lake, weather permitting. Focus is U.S. Navy Class B inshore skipper and offshore crewman A certifications.

Sophomore Year (Navy and Marines)

Nav S 201 Naval Ships Systems II (Weapons)

Fall. 3 credits.
Three classes each week.
Lt. John M. Fleming, USNR,
Lt. Jason D. Lilly, USN.

The principles and theories used in the development of naval weapons systems are examined. Initially, extensive study is made of sensing and detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, tracking, stability, and weapons control and delivery.

Nav S 202 Sea Power and Maritime Affairs

Spring. 3 credits.
Three classes each week.
Lt. John M. Fleming, USNR,
Lt. Jason D. Lilly, USN.

Discussions examine the history of the Navy as a force in diplomacy. Relationships between Congress and the military for determining the national defense policy are also explored. An integrated examination of current events and issues gives a historical perspective throughout the course.

Junior Year (Navy)

Nav S 301 Principles of Navigation (also Agricultural Engineering 305)

Fall 4 credits.
Four classes each week (lecture-recitation-project work).
Lt. Steven R. LaForte, USN.

The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, tides and currents, and soundings. It also includes celestial navigation, time, spherical trigonometry, motion of the stars and sun, star identification, position fixing, use of the nautical almanac, electronic navigation systems, and air navigation.

Nav S 302 Naval Operations

Spring. 3 credits.
Three lectures each week.
Lt. Steven R. LaForte, USN.

The course covers the application of command and control principles and the integration of sensors and weapons systems in the conduct of naval operations. Visual and electronic communications methods, data-systems employment, tactical disposition of forces, and fleet logistics support are studied. Topics in shiphandling are also discussed.

Senior Year (Navy)

Nav S 401 Organizational Behavior and Small Group Processes (also Hotel Administration 414)

Fall. 3 credits.

Current research is examined to provide a conceptual framework for understanding group processes within organizations. In addition, students participate in experiential laboratories aimed at enhancing their effectiveness as members or leaders of groups. Topics include stages of group development, leadership, decision making, motivation, individual versus group needs, organizational communication, power, and organizational change.

Nav S 402 Naval Administration Topics

Spring. Two credits.

Two classes each week. Cdr. Dennis R. Kukulski, USN.

A variety of topics important to the naval officer for both professional and managerial development are reviewed. The material is directed at the midshipman for his own understanding of naval administration and for use in the role of the division officer in counseling his subordinates. Through the use of lectures, situation problems, and role playing, the student will learn about the various aspects of Navy management and administration.

Junior or Senior Year (Marine Options)

Nav S 310 Evolution of War

Fall. 3 credits.

3 classes each week. Major James M. Higgins, USMC.

A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities and values; the evolution of warfare, including principles of war, weapons, and associated equipment; and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

Nav S 410 History of Amphibious Warfare

Spring. 3 credits.

Three lectures-recitations each week. Major James M. Higgins, USMC.

The history of the development, theory, techniques, and conduct of amphibious operations from 490 B.C. to the present. Special emphasis will be on amphibious operations conducted in the central Pacific during World War II. Additionally, the future potential of amphibious operations will be discussed.

Other Required Courses

Navy Option Scholarship Program

To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):

American military affairs or national security policy (one year)

English (one year)

calculus (one year)

calculus-based physics (one year)

computer science (one term)

modern foreign language (one term)—this requirement may be waived by the professor of naval science under some circumstances.

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.

Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences to meet the technological requirements of the modern Navy.

Navy Option College Program

Navy-option College Program students must complete one year of college-level study in mathematics, physical science, and English as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year; the physical science course by the end of the senior year. In addition, one term of computer science is required. College Program students who desire entry into the Navy-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students to be eligible and competitive for a scholarship controlled by the Chief of Naval Education and Training.

Marine Option

Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major is eligible for a commission in the United States Marine Corps or United States Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students meet with the Marine officer instructors for naval professional laboratories and take two naval science courses. In addition, two semesters of courses (a minimum of three hours each) in the subject area of American military affairs or national security policy are required. One semester of a modern foreign language must be completed.

University Courses

A wide range of courses satisfy Naval ROTC specified courses. Students should consult their naval science adviser concerning appropriate course selections. A partial list of those Cornell University courses that meet academic requirements of the program follows.

Calculus

Math 111, and 112 or 122 Calculus

Math 191 and 193 or 192 Calculus for Engineers

Physics

Phys 112 or 116, and Phys 213 or 217

Phys 207–208 Fundamentals of Physics

Computer Science

Engr 100 Introduction to Computer Programming

Com S 100 Introduction to Computer Programming

Com S 102 Introduction to Microcomputer Applications

Ag En 102 Introduction to Microcomputer Applications

Ag Ed 247 Instructional Applications of the Microcomputer

American Military Affairs or National Security Policy

An updated list of courses satisfying the prerequisites of this category is published annually.

English

Fulfilled by completing freshman writing seminar course requirements.

Extracurricular Activities

The NROTC midshipman at Cornell is offered a broad range of activities in which to participate. Each summer, as an optional part of their summer training, midshipmen sail aboard the unit sail-training vessel Vindicator to distant ports of call. Back at Cayuga Lake, a highly respected sail-training program offers instruction, both in small sailboats and in large-boat sailing on board Vindicator, to all who want to participate. The unit offers a comprehensive sports program in which most midshipmen participate. The naval unit has won the Independent Division All Sports Trophy for fifteen of the last twenty-one years. Midshipmen participate in a myriad of social events, including the annual Navy/Marine Corps ball, the All-Service military ball, and traditional naval mess nights.

DEPARTMENT OF AEROSPACE STUDIES

Colonel Kent E. Wolcott, United States Air Force, Professor of Aerospace Studies and Commander, Air Force ROTC Detachment 520

Captain James D. Marchio, United States Air Force

Captain Timothy E. Edem, United States Air Force

Captain Peter Sefcik, Jr., United States Air Force

The objective of the Air Force officer education program at Cornell is to prepare men and women for positions as officers in the United States Air Force. The program is designed to teach students about the role, mission, and organization of the Air Force and the historical development of airpower, and to develop their leadership and management skills. Additionally, students study national security policy and formulation and the role of the military in a modern democratic society. The objectives are achieved through Four-Year and Two-Year programs. These programs include specific courses in aerospace studies and practical laboratories.

Entering students are assigned to one of five categories: flying (pilot-navigator), missile, nonrated operations, engineering-science, and nontechnical. These assignments are based on the student's preferences, qualifications, and academic field of study and the needs of the Air Force.

Requirements for Enrollment

The Air Force officer education program is open to any undergraduate or graduate student enrolled in any major field of study. The student's academic course of study is often a prime factor in determining the kind of career pursued in the Air Force. (See Air Force Careers, below.)

Applicants must be U.S. citizens. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission.

Applicants who are interested in flying (as pilot or navigator) or missile duty should make that request known at the time they enter the program.

All applicants receive physical examinations at no cost and, to be accepted, must meet certain physical requirements.

Those students who are interested in qualifying for flying categories (pilot or navigator) must meet more stringent physical requirements. Students are given physicals at Air Force expense to determine if they qualify.

Though the program is designed to prepare future Air Force officers, Department of Aerospace Studies courses are open to all students at Cornell.

Four-Year Program

The Four-Year Program is open to all freshmen. Sophomores may enter the program but require departmental approval. Students in a five-year degree program may enroll in their freshman or sophomore year.

Veterans of the U.S. armed forces and students entering Cornell from military schools may receive advanced standing, subject to approval by the Professor of Aerospace Studies.

The Four-Year Program consists of the General Military Course (GMC) and the Professional Officer Course (POC). For scholarship cadets, the first year of the GMC carries no military commitment, and students may withdraw at any time. For nonscholarship cadets, both years of the GMC carry no military commitment, and students may withdraw at any time.

General Military Course

Students in the General Military Course (GMC) take one credit of classroom work offered by the Department of Aerospace Studies each semester. During the freshman year the student examines the organization and mission of the United States Air Force and the role of U.S. military forces in the contemporary world. In the sophomore year, the student studies the history and development of military aviation and American air power. In both years, officership and professionalism within the United States Air Force are emphasized.

Students also spend 1-1/2 hours a week in a leadership laboratory. Leadership Laboratory provides cadets with the opportunity to put into practice those skills they learn in their aerospace studies classes. These laboratories focus on the development of officer qualities through such activities as drill and ceremonies, a variety of guest speakers, and practical leadership exercises. In addition, all students participate in summer field training for four weeks between their sophomore and junior years.

Professional Officer Course

The Professional Officer Course (POC) is a two-year advanced course of instruction. Students who are accepted for the POC must have successfully completed or validated the basic course and must meet the academic and physical standards. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if tendered, a commission in the United States Air Force on graduation.

Classroom study in the POC requires three hours a week each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military's role in American society. Leadership laboratory requires a minimum of 1-1/2 hours a week in the junior and senior years. In the leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership and management learned in the classroom.

Two-Year Program

The Two-Year Program consists of the last two years (Professional Officer Course) of the regular Four-Year Program plus a six-week summer training course preceding enrollment. (Details of the Professional Officer Course are given above.)

The Two-Year Program is open to all students with two years of academic study remaining at Cornell (graduate or undergraduate) or at schools under crosstown or consortium agreement. Applications are accepted from October through April of the year preceding the applicant's planned entry into the program. Selectees are then required to successfully complete a six-week summer training program at government expense.

Scholarships

Air Force ROTC offers four-year scholarships on a competitive basis to high school seniors and graduates who will major in selected scientific and technical areas such as engineering, mathematics, meteorology, and computer science. Four-year scholarships also are awarded on a limited basis to individuals who will major in nontechnical areas. Scholarship information can be obtained from a high school counselor, from Air Force ROTC officers at a campus offering Air Force ROTC, from a local Air Force recruiter, or from AFROTC/RROO, Maxwell AFB, AL 36112–6663. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. Students should apply early.

Scholarships for 3-1/2, 3, 2-1/2, and 2 years also are available to college students. Applications for these scholarships should be made to the Professor of Aerospace Studies during the freshman or sophomore years of college. Special one-year scholarships are available to students majoring in meteorology, electrical engineering, and computer science. Applications for these scholarships should be made to the Professor of Aerospace Studies during the junior year of college. All selections are based on the student's major, scores achieved on the Air Force Officer Qualifying Test, the student's overall grade point average, and the rating from an interview board composed of Air Force ROTC staff officers. All scholarships pay, at a minimum, $8,000 toward tuition and provide a $100 monthly nontaxable allowance during the school year.

Fees

An initial uniform deposit of $30 is required on entry into AFROTC. There are two subsequent $30 uniform payments due, one on entry into the POC and the final one before commissioning, at which point the cadet owns the uniform.

Benefits

All cadets in the advanced program (POC) receive a $100-a-month, nontaxable subsistence allowance for the academic year. During the four- or six-week summer field training (see below), each cadet receives the pay allowance authorized by current directives, plus an allowance for travel to and from the field site. Most textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in field trips made to Air Force bases throughout the country. Scholarship and advanced cadets (POC) are entitled to space-available travel on Air Force aircraft flying within the continental United States.

Field Training

There are two types of field training: a four-week course for cadets in the Four-Year Program and a six-week course for Two-Year Program applicants. Students in these programs normally attend field training between their sophomore and junior years. Field training is hosted each summer by several active Air Force installations.

Field training is designed to stimulate the development of military leadership and skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training; physical training; small arms training; a social-actions program; and supplemental training. Special emphasis is placed on career orientation and interaction with other young officers in fields of interest to the student. The six-week training program is unique because it has an additional sixty hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses.

Pilot candidates attend a three-week light aircraft training program between their junior and senior years unless they already hold a private pilot's certificate. Objectives of the program are to train and motivate qualified cadets toward a rated career and to screen those cadets who have the potential to become Air Force pilots.

In addition to field training, cadets may volunteer and, if selected, attend one of many Advanced Training Programs. Some of these programs include Army Airborne Training, Cadet Training Officer Program, Strategic Defense Initiative Organization (SDIO), and the Royal Air Force Exchange Program.

Commissioning Obligations

All students who successfully complete the AFROTC advanced program (POC) and who are awarded a baccalaureate degree and are tendered a commission enter the Air Force as second lieutenants.

Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilots are required to serve on active duty for eight years after completing flying training and receiving their aeronautical rating. Navigators serve five years after completing training. Some newly commissioned officers are allowed to postpone active service to earn advanced degrees through the Educational Delay Program.

Air Force Careers

Air Force policy has been to assign new officers to a career field appropriate to their educational background. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, aeronautics, astronautics, design and development, the biological sciences, computer design and maintenance, meteorology, space, or various other engineering and scientific fields. Those graduating in the nontechnical category can anticipate assignments in manpower management, administration, logistics, police and investigation, intelligence, personnel, transportation, information, and numerous other career fields, including nonrated operations. They will use their educational backgrounds in positions of responsibility and be given the opportunity to develop further their managerial and administrative skills.

Any undergraduate major is suitable for those who are qualified and interested in becoming pilots or navigators. After completion of flying training they are assigned primary duties flying various kinds of aircraft.

Officers who elect missile duty will train and be assigned to one of the operational missile bases as a crew member. This type of assignment provides an opportunity for a young officer to obtain command experience.

Curriculum

Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years.

Freshman Year

Air S 161 United States Military Forces
Fall. 1 credit.
One class each week.
A study of current U.S. military forces with emphasis on the analysis of the doctrine and mission of the United States Air Force. Army and Navy operations, as contributions to the total national defense, are reviewed. Current factors affecting today's professional military officers are considered.

Air S 162 Aerospace Operations
Spring. 1 credit.
One class each week plus a field trip to a local military installation.
The aerospace forces of the United States are studied with emphasis on the organization and resources of the United States Air Force. The elements of strategic offensive, defensive general-purpose, and aerospace support forces throughout the world are also studied.

Sophomore Year

Air S 211 Development of Military Aviation
Fall. 1 credit.
One class each week.
Factors leading to the development of aviation and the concepts and doctrine for the employment of air power are studied. Topics to be reviewed and analyzed include the history of manned flight, the effects of World War I on the uses of aviation, the development of pre–World War II aircraft, and the political struggles for an independent U.S. air arm. The role of air power in World War II, including strategic bombing, tactical air power, and the role of air superiority in warfare, is examined.

Air S 212 American Air Power since 1947
Spring. 1 credit.
One class each week.
The employment of the Air Force since World War II in military and nonmilitary operations to support national objectives is discussed. Effects of technology on defense policy and strategy are reviewed. The part played by the air forces in activities such as the Berlin airlift and national and international relief missions is discussed. The role of air power in the Korean conflict, the Cuban crisis, and the Vietnam War is examined from the viewpoint of technology and tactical doctrine.

Junior Year

Air S 331 Leadership and Communicative Skills
Fall. 3 credits.
Two classes each week.
The course is divided into three major parts. Part one provides an introduction to the principles and techniques used in the development of effective communication skills through the use of the interpersonal communication model. Part two explores the impact that both individual and group behavior have on organizational goals, with special emphasis on management theories that have evolved to explain human motivation. Part three deals with leadership as a function of the management principle of directing. Attention is given to the impact that various leadership styles have on human motivation and organizational effectiveness. Current leadership research and theory and the responsibilities of command are considered. Case-study exercises and oral and written assignments are required.

Air S 332 Management
Spring. 3 credits.
Two classes each week.
Introductory course that deals with the basic principles of management, including planning, organizing, staffing, and controlling. Students will visit local production facilities to observe the latest manufacturing techniques and study quantitative methods and computer-generated financial reports used to enhance the management decision-making process. Also considered is the role of management in the development of a corporate code of ethics. Case studies, problem sets, and oral presentations are required.

Senior Year

Air S 462 National Security Forces in Contemporary American Society
Fall. 3 credits.
Two classes each week.
This course examines American national security policies in the post-World War II period by seeking to understand the people, politics, and processes involved in their formulation and implementation.

AS 463 Political-Military Relations
Spring. 4 credits.
Cadets enroll in a pre-designated Cornell University government department course dealing with U.S. national security affairs. In addition, cadets are required to meet for a 50-minute weekly discussion section.

Leadership Laboratory Courses

All Air Force cadets spend at least 1-1/2 hours a week throughout the academic year in a leadership laboratory, for which no academic credit is given. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are also expected to participate in an evening dining-in and to meet minimum physical fitness and weight standards each semester.

Air S 141–142 Initial Military Experiences
Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. Field trip to a local military installation.

Air S 241–242 Intermediate Military Experiences
Develops skills in giving commands for drill and ceremonies. Introduction to the Air Force base environment in which the Air Force officer functions. Includes a look at career areas available based on academic majors. Students experience and participate in leadership situations through military drills and ceremonies. Field trip to a local military installation.

Air S 341–342 Junior Officer Leadership
Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on comprehending the importance of applying effective human relations in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns common to selected Air Force officer career fields and into the U.S. Air Force Educational Delay Program.

Air S 441 Advanced Leadership Experiences
Command leadership in operating a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups and participate in self-analysis of leadership and managerial abilities.

Air S 442 Precommissioning Laboratory
Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.

DEPARTMENT OF PHYSICAL EDUCATION AND ATHLETICS

ADMINISTRATION

Alan E. Gantert, director

George S. "Jack" Writer, assistant director

COURSES

The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University.

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at physical education course registration. Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, since the curriculum is frequently reviewed and changed.

Alexander Technique
Fall and spring.
One class a week, Helen Newman Hall.
Exercise routines that increase sensory awareness.

Basic Archery
Fall and spring. Two classes a week, Fieldhouse.
Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at twenty, thirty, and forty yards.

Intermediate Archery
Fall and spring.
For those who have basic experience.

Badminton
Fall and spring. Helen Newman Hall.
Two classes a week.
Fundamental shots, scoring, and general play.

Basketball
Fall and spring. Barton Hall and Fieldhouse.
Two classes a week.
Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

Bowling
Fall and spring. Fee charged.
Two classes a week, Helen Newman Hall.
For the beginning and intermediate bowler. Shoe rental is included in the fee.

Boxing
Fall and spring.
Two classes a week, Teagle Hall.
Fundamentals of training methods.

Equitation
Fall and spring. Fee charged.
One class a week, Cornell Equestrian Center. Class days and hours are arranged at registration.
Instruction varies according to riding ability and experience.

Fieldhockey
Spring.
Two classes a week, Fieldhouse and Schoellkopf stadium.
Instruction in basic and advanced skills. 6-aside competition on astroturf surface.

Fitness and Conditioning
Fall and spring.
Two classes a week. Teagle Hall.
Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

Fitness–Exercise–Nutrition
Fall and spring.
Two classes a week, Helen Newman Hall.
Ways in which exercises may be used in weight control, the role of nutrition and diet in weight control, and the design of an individual exercise and running program.

Fitness for Women
Fall and spring.
Two classes a week, Helen Newman Hall.
Fitness program that is geared toward women's own interests and abilities. Nutrition, time management, relaxation techniques, and stress management are included.

Flexibility and Toning
Fall and spring.
Two classes a week, Helen Newman Hall.
Overall stretching exercises.

Judo
Fall and spring. Fee charged.
Two classes a week, Teagle Hall.
Conditions and increases suppleness. Develops skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

Lacrosse
Fall.
Two classes a week, Helen Newman Field.
Instruction and practice in basic skills (cradling, passing, catching, goal shooting, checking) and team play.

Nautilus
Fall and spring. Enrollment limited to capacity of facilities. Fee charged.
Two classes a week, Schoellkopf Hall.
Advanced weight lifting on specifically designed apparatus. There are ten stations in the room.

Power Lifting
Fall and spring.
Teagle Hall.
Introduces the student to the proper use of free weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

Racket Games
Fall and spring.
Two classes a week, Grumman Squash Courts.
Racquetball, squash, badminton, tennis, and deck tennis. Playing fundamentals, scoring, and rules are stressed. Interclass competition.

Racquetball
Fall and spring. Fee charged.
Two classes a week, Grumman Squash Courts.
Instruction at all levels. Equipment is furnished. Protective eye wear required, but not provided.

Racquetball II
For those who have playing experience and want interclass competition.
One class per week.

Relaxation and Stress Management
Fall and spring.
Two classes a week, Helen Newman Hall.
Introduction to basic relaxation techniques for the reduction of everyday stress. Techniques will be taught that can be used in normal everyday living situations.

Soccer
Spring.
Two classes a week, Schoellkopf Field.
Introduction to the game. Includes basic individual skills (passing, trapping, shooting) and team play and strategy.

Indoor Soccer
Spring.
Two classes a week for seven weeks, Fieldhouse.
Basic skills of soccer covered along with tactics specific to indoor soccer.

Squash
Fall and spring. Fee charged.
Two classes a week, Grumman Squash Courts.
Classes for all levels of play. Equipment is furnished. Protective eye wear required, but not provided.

Triathlon
Fall and spring. Fee charged.
Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

Weight Training
Fall and spring.
Two classes a week, Teagle Hall.
Classes include instruction in correct lifting techniques involving all muscle groups. Recreational classes are established for experienced lifters; structured classes are for novices. Universal weights are used.

Wellness and Fitness
Fall and spring.
Two classes a week, Helen Newman Hall Wellness Lab.
Flexibility exercises and strength-building concepts with various equipment and cardiovascular endurance tests. Body-fat testing and submaximal treadmill test included.

Aquatic Courses

Beginning Swimming
Fall, spring, and summer.
Two classes a week, Helen Newman Hall and Teagle Hall.
Instruction and practice in basic skills leading to passing the basic swimming proficiency test.

Advanced Beginning Swimming
Fall and spring.
Two classes a week, Helen Newman Hall and Teagle Hall.
This course is ideal for all who have taken one term of Beginning Swimming, regardless of whether the swimming test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, sidestroke, breaststroke, diving, treading water, and underwater swimming. The primary objective of the advanced beginning swim course is to strengthen the student's confidence and competence.

Intermediate Swimming
Fall and spring.
Two classes a week, Helen Newman Hall and Teagle Hall.
Practice and perfection of basic skills and five basic strokes.

Advanced Swimming
Fall and spring.
Two classes a week, Helen Newman Hall and Teagle Hall.
Practice and perfection of the eleven basic strokes.

Basic and Emergency Water Safety
Fall and spring.
Two classes a week, Helen Newman Hall.
The American Red Cross Basic and Emergency Water Safety course involves practice and execution of survival techniques and lifesaving skills. Emergency Water Safety is a prerequisite for W.S.I.

Lifeguard Training
Fall and spring.
One class a week, Teagle Hall.
An American Red Cross certification course. Practice and execution of survival and lifesaving skills. Certification is awarded on satisfactory completion of the course.

American Red Cross Water Safety Instructor Certification
Fall and spring. Prerequisite: American Red Cross emergency water safety course.
Three or five classes a week, Helen Newman Hall and Teagle Hall. Students must not miss first class.
American Red Cross water safety instructor certification is awarded on satisfactory completion of the course.

Water Safety Instructor Refresher Course
Spring.
Five classes a week, Teagle Hall.
Selected sessions of the basic water safety instructor certification course.

Introduction to Water Aerobics
Fall and spring.
Two classes a week, Teagle Hall and Helen Newman Hall.
Offers the participant all the components of a standard aerobics class with music, rhythmical routines, resistance activities, cardiovascular conditioning, stretching, and flexibility but in an aquatic environment.

Scuba Diving
Fall, spring, and summer. Fee charged.
Teagle Hall.
Program includes skill training in a pool and open-water training in Cayuga Lake. P. A. D. I. certification awarded upon successful completion.

Advanced Open-Water Scuba Diving
Fall and spring. Fee charged.
Advanced-level open-water training in Cayuga Lake. For those who have completed the basic course.

Rescue Diver
Fall and spring. Fee charged.
Advanced course for scuba divers. For those who have completed Advanced Open-Water Scuba Diving.

Dive Master
Fall and spring. Fee charged.
Hours to be arranged. Teagle Hall.
Advanced-level scuba course open only to those who have completed the rescue diver course.

Bahamas Scuba Diving
Fall and spring. Fee charged.
This course is offered during intersession periods. One week of sailing and diving in the Bahamas. See the information sheet at the registration table.

Beginning Synchronized Swimming
Fall.
Two classes a week, Helen Newman Hall.
Sculling stunts, including the tub, marlin, log roll, front and back tuck somersaults, and front and back pikes.

Advanced Synchronized Swimming
Spring.
Two classes a week, Helen Newman Hall.
Preparing, practicing for, and presenting an aquatic show.

Aquatic Conditioning
Fall and spring. Prerequisite: good swimming ability.
Two classes a week, Teagle Hall and Helen Newman Hall.
Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period.

Board Sailing (Wind Surfing)
Fall, spring, and summer. Fee charged.
Ten instructional lessons plus free practice times. The equipment is furnished.
A Mistral Board Sailing Academy certificate is awarded on successful completion of the course.

Water Skiing
Fall and summer. Fee charged.
Three classes a week.
Introductory course for beginning water skiers. Conducted on the east shore of Cayuga Lake. Students must provide their own transportation to and from the lake.

Dance

Aerobic Dance
Fall and spring. Fee charged.
Two classes a week.
A simple dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

Ballroom Dancing
Fall and spring. Fee charged. Students and their partners must sign up at course registration.
Includes instruction in the waltz, Charleston, rumba, and tango.

Dance
Fall and spring.
Two or three classes a week, Helen Newman Hall/Center for Performing Arts.
Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to some advanced courses, since they require the mental and physical ability to perform more-complex phrases in various styles.

African Dance
Ballet I, II, III
Jazz Dance I, II
Modern Dance I, II, III, IV

Fencing

Fencing I
Fall and spring. Fee charged.
Two classes a week, Helen Newman Hall.
Includes warm-up exercises and all basic offensive and defensive moves. Equipment is furnished.

Fencing II
Fall and spring. Fee charged. Prerequisite: Fencing I or the equivalent.
Two classes a week, Helen Newman Hall.
Interclass competition is stressed. Equipment is furnished.

First Aid

Standard First Aid
Fall and spring. Textbook fee charged.
Two classes a week, Schoellkopf Hall.
American Red Cross standard first-aid course. Certification is awarded on satisfactory completion of the course.

Advanced First Aid
Fall and spring. Fee charged.
American Red Cross certification is awarded on satisfactory completion of the course.

Cardiopulmonary Resuscitation (CPR)
Fall and spring. No credit. Fee charged.
One class a week for four weeks, Schoellkopf Hall.
American Red Cross CPR certification is issued on satisfactory completion of the course.

Golf

Instruction in Golf
Fall and spring. Fee charged.
Two classes a week, Moakley golf course.
Instruction by PGA professional is geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more-advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals. Equipment is furnished.

Recreational Golf
Fall and spring. Limited to students who are experienced golfers. Fee charged.
Moakley golf course.
Students must provide their own clubs. Twelve rounds of nine holes each must be played to complete the program.

Gymnastics

Beginning Gymnastics
Fall and spring.
Two classes a week, Teagle Hall.
Basic instruction in tumbling, dance for gymnastics, and use of all pieces of apparatus.

Intermediate Gymnastics
Fall and spring.
Two classes a week, Teagle Hall.
Beginning gymnastics or interscholastic or collegiate team experience.

Jogging

Jogging
Fall, spring, and summer.
Two classes a week, Barton Hall and track.
A program to meet the needs of each participant. Increases capacity from jogging a few hundred yards to three miles at the end of twelve weeks.

Jogging Tours
Fall and spring.
Two classes a week, Barton Hall.
Each class consists of a two-to-three-mile jogging tour of a local area.

Martial Arts

Basic Karate
Fall and spring. Fee charged.
Two evening classes a week, Teagle Hall.
A beginning course taught by professional staff.

Advanced Karate
Fall and spring. Fee charged.
Two evening classes a week, Teagle Hall.
Open to those who have taken Basic Karate or the equivalent.

Kung Fu
Fall and spring.
Two classes a week, Teagle Hall.
Exploration of conditioning and fitness procedures used in the major martial arts, such as karate or judo. Covers circular movement for generating strong blocks, kicks, and punches.

Martial Arts and Aerobic Exercises
Fall and spring.
Three classes a week, Teagle Hall.
Blend of ten basic martial-art techniques in a framework of rhythmic exercises.

Self-Defense for Women
Fall and spring. Fee charged.
Hours to be arranged, Teagle Hall.
Basic methods of physical protection for women.

Tae Kwon Do
Fall and spring. Fee charged.
A Korean martial art distinguished by its emphasis on high and powerful kicks. Basic kicking, punching, and blocking are emphasized.

T'ai Chi Chuan I and II
Fall and spring.
Two classes a week, Teagle Hall.
Introduction to T'ai Chi, a system of graceful, slow-movement exercises that aim at nurturing relaxation, deep breathing, and improved circulation.

Outdoor Program

See the brochure Cornell University Outdoor Program at registration for more information about courses.

Backpacking in the Finger Lakes Region
Fall, spring.
Classes lead to a full weekend on the trail.

Bicycle Day Touring
Fall and spring.
Afternoon or weekend rides. No overnights.

Bicycle Touring and Camping
Fall and spring.
Rides lead to overnight weekend tours.

Mountain Biking
Fall and spring.
One afternoon per week for five weeks.

Canoe Camping
Fall, spring, and summer.
Outings finish with an Adirondacks expedition.

Canoeing, Flat-Water
Fall, spring, and summer.
Afternoon or weekend outings to local lakes and streams. No overnights.

Canoeing, White-Water
Fall and spring.
Includes three days of white-water trips.

Caving
Fall and spring.
Explore caves in Pennsylvania.

Cross-Country Skiing I and II
Spring.
Six 3 1/2-hour classes. Meets once each week immediately following spring registration.
Van transportation provided for groups of twelve students and two instructors. Ski rental optional.

Cross-Country Skiing–Day Touring
Spring.
Four full-day weekend outings.
Emphasis on backwoods touring. Ski rental optional.

Telemark Skiing
Spring.
Three evenings of lift skiing, local area, plus one afternoon of backcountry skiing.

Adirondack Ski Expedition
Winter break.
Ten-day winter camping and skiing trip.

Hiking in the Finger Lakes Region
Fall and spring.
Includes four weekend days of hiking.

Technical Ice-climbing
Spring.
Includes four weekend days of climbing in February or four days during January break.

White-Water Kayaking I & II
Fall and spring.
Includes three days of white-water trips plus pool sessions.

Environmental Awareness
Fall and spring.
A backpacking/hiking course for those interested in the local ecology.

Outdoor Leadership
Fall and spring.
For those interested in becoming Outdoor Program instructors.

Basic Rock Climbing
Fall, spring, and summer. No experience required.
Meets one afternoon a week for eight weeks.
Uses indoor Lindseth climbing wall for all classes.

Shawangunks Rock-climbing Expedition
Fall and spring.
Includes a four-day climbing camp.

Basic Mountaineering Skills
Fall, spring, and summer.
Seven afternoons at local parks and wilderness areas, some classes on indoor Lindseth climbing wall.

Wilderness Emergency Care
Fall and spring.
Friday evenings plus weekend.
Training in medical care for the backcountry. Awards Standard First Aid and CPR certification.

Wilderness Skills—Expedition
Fall and spring.
Introductory course. Includes a wilderness backpacking expedition during fall break or spring break.

Wyoming Mountaineering Expedition
Summer.
Full-time course for the entire month of June to train outdoor instructors.

Riflery

Riflery
Fall and spring. Fee charged.
Two classes a week, Barton Hall.
Instruction and practice in the techniques of target riflery from various shooting positions.

Trap and Skeet Shooting
Fall and spring. Fee charged.
Two-hour class one afternoon a week, Teagle Hall.
Includes lectures and shooting at the Tompkins County Rod and Gun Club range. Guns and shells are furnished.

Hunter Safety
Fall and spring.
Hours to be arranged, Barton Hall.
Instruction in hunter safety leads to New York State certification for bow and gun.

Basic Pistol
Fall and spring.
Barton Hall range.
Instruction in the use of the pistol in the three modes of fifty-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis placed on safety and responsibility while firing.

Introduction to Fly Fishing and Basic Flytying Techniques
Fall and spring. Fee charged.
One class a week, Helen Newman Hall/Schoellkopf Hall.
Introduction in fly casting skills and the art of tying artificial flies. Special Conditions: N.Y.S. fishing license required and each student must provide their own wader boots.

Sailing

Principles of Sailing
Fall, spring, and summer. Fee charged.
One class a week, Cayuga Lake.
Instruction in basic sailing skills and safety principles. Students sail small and large boats on Cayuga Lake, weather permitting.

Intermediate Sailing
Fall. Fee charged.
One class a week, Cayuga Lake.
Instruction in more-advanced techniques for those already familiar with the basic principles of sailing.

Skating

Introduction to Skating
Fall and spring. For beginning to intermediate skaters. Fee charged.
Three classes a week for half a term, Lynah Rink.
Students provide their own hockey skates or rent them at Lynah Rink.

Beginning and Low-intermediate Figure Skating
Fall and spring. Fee charged.
Three classes a week for half a term, Lynah Rink.
Instruction and practice in basic figure skating techniques: forward and backward, cross-overs, turns, and spirals. Students provide their own figure skates or rent them at Lynah Rink.

Intermediate and Advanced Figure Skating
Fall and spring. Limited to experienced skaters. Fee charged.
Three classes a week for half a term, Lynah Rink
Advanced figure skating techniques. Students provide their own figure skates or rent them at Lynah Rink.

High-intermediate and Advanced Figure Skating
Fall and spring. Fee charged.
Three classes a week, Lynah Rink.
Advanced figure skating techniques. Students provide their own figure skates or rent them at Lynah Rink.

Introduction to Ice Hockey
Fall and spring. Fee charged.
Two classes a week, Lynah Rink.
Stick handling, passing, and shooting are stressed. Students provide their own skates and sticks; all other equipment is furnished.

Intermediate Hockey
Fall and spring. Fee charged. Prerequisite: beginning hockey or participation in organized hockey.
Two classes a week, Lynah Rink.
This course is designed for the intermediate hockey player. Advanced techniques taught include positioning, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants. All other necessary equipment will be supplied.

Skiing

Skiing Conditioning
Fall.
Two classes a week, Helen Newman Hall.
Exercises designed to increase flexibility, strength, and endurance in preparation for the ski season.

Downhill Skiing
Spring. Fee charged.
One class a week, Greek Peak or Song Mountain.
Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks. Bus transportation to Song Mountain (Friday only).

Cross-Country Skiing - See Outdoor Program.

Tennis

Indoor Tennis
Spring. Fee charged.
Two classes a week, Kite Hill tennis bubble.
Classes for all levels of play. Emphasizes strategy for intermediate and advanced groups. Space limitation requires doubles play.

Beginning Outdoor Tennis
Fall.
Three classes a week for half a term. Helen Newman courts.
Instruction and practice in basic strokes (forehand, backhand, serve).

Intermediate Outdoor Tennis
Fall.
Three classes a week for half a term. Kite Hill courts.
Use of fundamental strokes, lobs, and drop shots; doubles strategy.

Advanced Outdoor Tennis
Fall. Limited to experienced players.
Three classes a week for half a term. Kite Hill courts.
Emphasizes strategy.

Volleyball

Introduction to Volleyball
Fall and spring.
Two classes a week, Barton Hall.
Fundamentals of ball handling, serves, defensive blocks, and position play are stressed. Classes will scrimmage.

Intermediate Volleyball
Fall and spring.
Two classes a week, Barton Hall.
Passing and blocking strategy; scrimmages in class.

Advanced Volleyball
Fall and spring.
Two classes a week, Fieldhouse.
Offensive and defensive team strategy is emphasized in class scrimmages.

Yoga

Yoga I
Fall, spring, and summer. Fee charged.
Two classes a week, Teagle Hall.
Fundamentals of hatha-yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

Yoga II
Fall and spring. Fee charged. Two classes a week, Teagle Hall.
Designed for those who have completed Yoga I or its equivalent.

Independent Study

Independent Study
Fall and spring.
Independent study is designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities will be based on personal fitness programs. A term paper is required. Special permission to enter this program must be granted by the program director.

SUMMER SESSION, EXTRAMURAL STUDY, AND RELATED PROGRAMS

THE DIVISION

Cornell University's Division of Summer Session, Extramural Study, and Related Programs provides a wide variety of educational opportunities beyond the degree-granting programs of the university. These programs serve virtually all age groups in a great variety of formats and time frames. The division office is located in B12 Ives Hall, Ithaca, New York 14853-3901 (telephone: 607/255-4987).

ADMINISTRATION

Charles W. Jermy, Jr., acting dean

Jennifer T. Cook, summer session catalog production manager

Alicia C. Dowd, division media manager

Judith K. Eger, director, Programs in Professional Education and Special Programs

Abby H. Eller, director, Cornell University Summer College

Mary K. Gloster, administrative course coordinator

Ralph Janis, director, Cornell's Adult University

Anita M. Krook, registrar, summer session and extramural study

Valerie A. Sellers, director of administration

Diane E. Sheridan, director of finance

Judy M. VanDermark, director, Cornell University Conference Services

SUMMER SESSION

The Cornell University Summer Session provides unique and unusually attractive opportunities for study and recreation at a time when the Cornell campus and the Finger Lakes region of central New York are at their loveliest and the Ithaca weather is at its best. Participants may choose from a wide spectrum of courses scheduled during three-, eight-, and six-week sessions. In addition, dozens of special programs are presented in varying formats, including on-site fieldwork and overseas study. Although admission is open to persons of all ages, the majority of summer session participants are matriculated Cornell students. Classes meet daily and are usually kept small to foster a close association between students and teachers. For information, consult the Summer Session Office, B12 Ives Hall, or call 607/255-4987.

SUMMER COLLEGE

High school juniors and seniors attend regular university courses through Cornell University Summer College and may earn college credit. They also explore career options through specially designed workshops. Students live in residence halls, become familiar with campus life, and attend seminars describing the college admissions process. The program is designed to help ease the transition from high school to college. For information call 607/255-6203.

EXTRAMURAL STUDY

The extensive credit-course offerings of the university are available to area residents on a part-time basis. Those interested may apply for admission to practically any course in the university and will be admitted if they receive the instructor's written approval. The division also offers an Official Visitor's Program that allows persons to attend classes in many divisions of the university on a space-available basis at a reduced charge. Visitors are required to obtain written permission of the instructor. In this program no credit is given and no record is kept of attendance or performance. For information, contact the Extramural Office in B12 Ives Hall or call 607/255-4987.

WINTER SESSION

Winter Session provides an opportunity to earn three to four credits between the fall and spring semesters. This quiet time on campus allows students to enjoy classes that are generally smaller and to concentrate on intensive study. Students may enroll in scheduled courses or design an independent study with a faculty member.

CORNELL'S ADULT UNIVERSITY

Cornell's Adult University (CAU) offers one-week noncredit courses on campus during the summer and weekend seminars at off-campus locations during the fall and spring. Conceived as a program for alumni, CAU has greatly broadened its mission in the area of adult education. All courses and seminars are inspired by the belief that learning never ends and that one of the roles of a great university is to provide a bridge between traditional, formal education and informal, noncredit study. For information, consult Cornell's Adult University, 626B Thurston Avenue, or call 607/255-6260.

PROGRAMS IN PROFESSIONAL EDUCATION

Because of Cornell's leadership in both theoretical and applied research, the university offers unique opportunities for professional growth to persons in science, technology, government, business, and industry. The division's Programs in Professional Education are intensive updates taught by Cornell faculty members whose research involves areas of importance to the corporate sector and the professions. Programs in Professional Education can also respond to the needs and interests of corporations and professional societies by developing programs both on and off campus that are suited to their particular educational purposes. For information, telephone 607/255-7259.

CONFERENCE SERVICES

Excellent facilities, a beautiful campus, and a conference office concerned with each group's special needs make Cornell an ideal setting for conferences and meetings. Professional groups from all over the country come to Cornell to take advantage of this special learning environment. The staff is available to answer questions, advise on creative program ideas, assist in planning, make special arrangements, secure accommodations, and handle other administrative details. For information about conferences at Cornell, consult Cornell University Conference Services, Box 3, Robert Purcell Union, or call 607/255-6290.

CONTINUING EDUCATION INFORMATION SERVICE

The extramural study registrar provides free information, counseling, and referral to women and men who have been out of school for several years and want to resume their education. Anyone who wants to take courses, begin an undergraduate or graduate degree program, or complete an unfinished degree is welcome to meet with the registrar. Information is available on all schools and departments of the university; opportunities for part-time and full-time study; special courses, workshops, and seminars; and community resources for older students. A small library includes information on educational opportunities at local institutions of higher learning, financial aid, work-study programs, and admission procedures. For information, contact Continuing Education Information Service, B12 Ives Hall, or call 607/255-4987.

SUMMER COURSE ROSTER

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session Office, B12 Ives Hall, or call 607/255-4987. The summer session catalog is published in February. A preliminary course roster is available on CUINFO beginning in November.

Africana Studies

484 Politics, Conflict, and Social Change in Southern Africa

A program in African languages is also offered. Consult the department for a complete listing.

Agricultural Economics

310 Introductory Statistics

320 Business Law

Anthropology

101–102 Introduction to Anthropology

242 American Indian Philosophies I: Power and World Views

Archaeology

100 Introduction to Archaeology

300/333 The Crannog Archaeology Project

360 Field Archaeology in Greece

361 Summer Program in Etruscan Archaeology at La Piana

Other field study opportunities are usually available through this department.

Architecture

125 Introductory Architecture Studio

131 Introduction to Architecture

Consult the Department of Architecture office for a complete list of summer design offerings.

NEW YORK STATE COLLEGE OF VETERINARY MEDICINE

ADMINISTRATION

Robert D. Phemister, dean

S. Gordon Campbell, associate dean for academic affairs

Douglas D. McGregor, associate dean for research

Donald F. Smith, associate dean for veterinary education

Neil L. Norcross, secretary of the college

John A. Lambert, assistant dean for administration

John C. Semmler, assistant dean for public affairs

Marcia J. Sawyer, director of student affairs and admissions

Gloria R. Crissey, registrar, director of financial aid

DEPARTMENT CHAIRS

Anatomy: A. deLahunta

Avian and Aquatic Animal Medicine: B. Calnek

Clinical Sciences: D. Smith

Microbiology, Immunology, and Parasitology: R. Avery

Pathology: B. Pauli

Pharmacology: G. Sharp

Physiology: D. Robertshaw

THE COLLEGE

The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease.

Graduates of the college receive the Doctor of Veterinary Medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice or become engaged in one of the increasing number of other biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to Doctors of Veterinary Medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of Master of Science or Doctor of Philosophy.

More detailed information is contained in the Announcement of the New York State College of Veterinary Medicine, which may be obtained by writing to the college.

Note: 500- and 600-level courses are open only to veterinary students except by written permission from the instructor.

ANATOMY

500 Gross Anatomy: Small Animal Fall.
501 Gross Anatomy: Large Animal Spring.
502 Microscopic Anatomy First year.
504 Neuroanatomy and Clinical Neurology First year.
505 Applied Anatomy Fall.
506 Applied Anatomy Spring.
507 Animal Development Fall.
508 Anatomy of the Fish and Bird Spring.
600 Special Projects in Anatomy Fall and spring.
601 Research Opportunities in Veterinary Medicine Fall, January, spring, and summer.
602 Advanced Clinical Neurology Fall.

AVIAN AND AQUATIC ANIMAL MEDICINE

[255 Poultry Hygiene and Disease Spring.]
555 Avian Diseases Fall.

516 Infectious Diseases I: Bacteriology and Mycology Fall.
517 Infectious Diseases II: Virology and Viral Diseases Fall.
518 Infectious Diseases III: Infectious and Zoonotic Diseases Spring.
605 Special Projects in Microbiology Fall and spring.
606 Small Animal Infectious Diseases Spring.
607 Virus Diseases of Cattle Fall.
609 A Health Program for Sheep Spring.
615 Research Opportunities in Veterinary Medicine Fall, spring, and summer.
651 Clinical Parasitology of Avian Species Spring.
700 The Biology of Animal Viruses and Viral Pathogenesis Fall.
[705 Advanced Immunology Lectures Spring.]
706 Immunology Seminar Series Fall and spring.
707 Advanced Work in Bacteriology, Virology, Immunology Fall and spring.
[708 Selected Topics in Animal Virology Spring.]
709 Laboratory Methods of Diagnosis Fall and spring.
710 Microbiology Seminars Fall and spring.
713 Special Projects in Immunology: Topic to be announced Spring.
737 Advanced Work in Parasitology Fall and spring.
[767 Immunoparasitology Spring.]
783 Seminars in Parasitology Fall and spring.

PATHOLOGY

535 Veterinary Pathology I Fall.
536 Veterinary Pathology II Spring.
539 Introduction to Laboratory Animal Medicine Spring.
540 Pathology Service Fall and spring.
549 Laboratory Animal Clinical Rotation Spring.
571 Clinical Pathology Spring.
636 Wildlife Pathology Fall.
637 Postmortem Pathology Fall and spring.
638 The Bottom Line Fall and spring.
639 Autotutorial in Laboratory Animal Medicine and Science Fall and spring.
640 Principles of Toxicological Pathology Fall.
641 Clinical Immunology Spring.
[642 Public Policy and Laboratory Animal Science Spring.]
643 The Use of Animal Models to Explore Physiologic and Pathologic Mechanisms in Animals and Man Fall.
[701 Pathobiology of Disease: Cell Growth, Differentiation, and Neoplastic Transformation Spring.]
[702 Pathobiology of Disease: Tumor Cell Biology Spring.]
[703 Pathobiology of Disease: Extracellular Matrix Spring.]
[704 Pathobiology of Disease: Advanced Immunopathology Fall.]
[705 Pathobiology of Disease: Toxicologic Pathology Fall.]
[706 Pathobiology of Disease: Advanced Reproductive Pathology Fall.]
[707 Pathobiology of Disease: The Inflammatory Process Spring.]
[708 Pathobiology of Disease: Inherited Neuromuscular Diseases Spring.]
[709 Pathobiology of Disease: Advanced Clinical Pathology Spring.]
[710 Pathobiology of Disease: Advanced Neuropathobiology Fall.]
[711 Pathobiology of Disease: Metabolic Bone Disorders Fall.]
[712 Pathobiology of Disease: Laboratory Animal Pathology Fall.]
736 Pathology of Nutritional Diseases Spring.
788 Seminar in Surgical Pathology Fall and spring.
789 Seminar in Necropsy Pathology Fall and spring.
793 Lectures in General Pathology Fall.
794 Lectures in Special Pathology Spring.
796 Medical Primatology Fall.

PHARMACOLOGY

528 Pharmacology I Fall.
529 Pharmacology II Spring.
610 Introduction to Chemical and Environmental Toxicology (also Toxicology 610) (also Food Science 610) Fall.
620 Advanced Clinical Pharmacology Spring.
621 Toxicology (also Toxicology 621) Spring.
622 Special Projects in Pharmacology Fall, spring, and summer.
629 Research Opportunities in Veterinary Medicine Fall, January, spring, and summer.
[700 Calcium and Other Second Messengers in Cell Activation Fall.]
[701 Receptors and Ion Channels Spring.]
[703 Receptor Binding: Theory and Techniques (also Biological Sciences 790, Sec. 02) Spring.]
704 CNS Neuropharmacology: Mechanisms-Synaptic Transmission Fall.
705 Mechanisms of Receptor-G Protein-Coupled Signal Transduction Spring.

Special Projects and Research

[711 The Role of Calcium in Stimulus-Secretion Coupling Fall, spring, and summer.]
[712 The Receptor for Immunoglobulin E on Tumor Mast Cells Fall, spring, and summer.]
713 Mechanisms of Growth-Factor Action Fall, spring, and summer.
[714 Central Nervous System Neurotransmitters Fall, spring, and summer.]
716 Neurobiology of Seizure Disorders Fall, spring, and summer.
717 Single-Channel Recording Fall, spring, and summer.
718 Structure-Function of the Nicotinic Acetylcholine Receptor Fall, spring, and summer.
719 Computer Modeling of Drug-Receptor Interactions Fall, spring, and summer.
720 Modulation of Nicotinic Acetylcholine Receptor Function by Substance P Fall, spring, and summer.
721 Molecular Mechanisms of Pharmacological Blockade of Voltage-Dependent Calcium Channels Fall, spring, and summer.

[723 The Role of Calcium in the Control of Electrolyte Transport Fall and spring.]

[724 The Control of Hormone Secretion Fall and spring.]

Special Topics

741 Neuromodulation Fall, spring, and summer.

742 Receptor Mechanisms Fall, spring, and summer.

743 Neuropeptides Fall, spring, and summer.

744 Voltage-dependent Calcium Channels Fall, spring, and summer.

745 Neuropharmacology Fall, spring, and summer

746 Electrophysiological Techniques Fall, spring, and summer.

[747 Amino Acid Neurotransmitters Fall, spring, and summer.]

[748 Stimulus-Secretion Coupling Fall, spring, and summer.]

[749 Second Messengers in Cell Activation Fall, spring, and summer.]

[750 Cell Calcium Fall, spring, and summer.]

[751 Receptors in the Immune System Fall, spring, and summer.]

[752 Mediators of Inflammation Fall, spring, and summer.]

753 Clinical Pharmacology Fall.

754 G Proteins in Signal Transduction Fall, spring, and summer.

755 Calcium in the Control of Hormone Secretion Fall.

756 Mechanisms of Calcium Handling Fall and spring.

757 Intestinal Electrolyte Transport Fall and spring.

759 Receptor Binding Techniques Fall, spring, and summer.

760 Advanced Topics in Pharmacology Fall, spring, and summer

770 Graduate Research in Pharmacology Fall, spring, and summer.

PHYSIOLOGY

Biological Basis of Sex Differences (Biological Sciences 214) Fall.

Histology: The Biology of the Tissues (Biological Sciences 313) Fall.

Cellular Physiology (Biological Sciences 316) Spring.

346 Introductory Animal Physiology, Lectures (also Biological Sciences 311) Fall.

348 Introductory Animal Physiology, Laboratory (also Biological Sciences 319) Fall.

Seminar in Anatomy and Physiology (Biological Sciences 410) Fall and spring.

Mammalian Physiology (Biological Sciences 458) Spring.

Undergraduate Research in Biology (Biological Sciences 499) Fall and spring.

526 Systems Physiology I Fall.

527 Systems Physiology II Spring.

528 Veterinary Ethics Fall and spring.

612 Research Opportunities in Veterinary Medicine Fall, spring, and summer.

Lipids (Biological Sciences 619 and Nutritional Sciences 602) Fall.

625 Problems in Dog and Cat Behavior Spring.

626 Problems in Equine Behavior Spring.

627 Acid-Base Relations (also Biological Sciences 715) Fall, spring, and summer.

628 Graduate Research in Animal Physiology (also Biological Sciences 719) Fall and spring.

Plasma Lipoproteins (Biological Sciences 712) Spring.

Cardiac Electrophysiology (Biological Sciences 713) Fall.

Physiology of Pregnancy (Biological Sciences 714) Spring.

Seminar on Insect Physiology (Biological Sciences 716, also Entomology 685) Spring.

Structure and Function of Joints with Emphasis on Arthritis (Biological Sciences 717) Fall.

[Evolution of Color Vision (Biological Sciences 718) Spring.]

720 Special Problems in Physiology Fall and spring.

726 Systems Physiology I Fall.

727 Systems Physiology II Spring.

752 Biological Membranes and Nutrient Transfer (also Biological Sciences 618) Spring.

[Animal Biotechnology (Biological Sciences 753) Fall.]

[758 Molecular Mechanisms of Hormone Action (also Biological Sciences 658) Spring.]

759 Nutrition and Physiology of Mineral Elements (also Biological Sciences 615 and 659) Fall.

Fundamentals of Endocrinology, Lecture (Animal Science 427) Fall.

Fundamentals of Endocrinology, Laboratory (Animal Science 428) Fall.

FACULTY ROSTER

Antczak, Douglas F., Ph.D., U. of Cambridge (England) Assoc. Prof., Microbiology, Immunology, and Parasitology

Appel, Max J., Ph.D, Cornell U. Prof. Microbiology, Immunology, and Parasitology

Appleton, Judith A., Ph.D., U. of Georgia. Asst. Prof., Microbiology, Immunology, and Parasitology

Avery, Roger J., Ph.D., U. of Newcastle-upon-Tyne (England) Prof., Microbiology, Immunology, and Parasitology

Babish, John, Ph.D., Cornell U. Assoc. Prof., Pharmacology

Ball, Barry A., Ph.D., Cornell U. Asst. Prof., Clinical Sciences

Barr, Stephen C., Ph.D., Louisiana State U. Asst. Prof., Clinical Sciences

Beck, Kathy A., D.V.M., Washington State U. Asst. Prof., Clinical Sciences

Bell, Robin G., Ph.D., Australian National U. Assoc. Prof., Microbiology, Immunology, and Parasitology

Blue, Julia T., Ph.D., U. of Pennsylvania. Assoc. Prof., Clinical Sciences

Bowman, Dwight D., Ph.D., Tulane U. Asst. Prof., Microbiology, Immunology, and Parasitology

Bowser, Paul R., Ph.D., Auburn U. Assoc Prof., Avian and Aquatic Animal Medicine

Calnek, Bruce W., D.V.M., Cornell U. Prof., Avian and Aquatic Animal Medicine

Campbell, S. Gordon, Ph.D., Cornell U. Prof., Microbiology, Immunology, and Parasitology

Carmichael, Leland E., Ph.D., Cornell U. John M. Olin Professor of Virology, Microbiology, Immunology, and Parasitology

Casey, James W., Ph.D., U. of Chicago. Assoc. Prof., Microbiology, Immunology, and Parasitology

Center, Sharon A., D.V.M., U. of California at Davis. Assoc. Prof., Clinical Sciences

Cerione, Richard A., Ph.D., Rutgers U. Asst. Prof., Pharmacology

Cooper, Barry J., Ph.D., U. of Sydney (Australia). Assoc. Prof., Pathology

Corradino, Robert A., Ph.D., Cornell U. Assoc. Prof. Physiology/(Section of Physiology)

Cummings, John F., Ph.D., Cornell U. Prof., Anatomy

deLahunta, Alexander, Ph.D., Cornell U. Prof., Anatomy

Dobson, Alan, Ph.D., U. of Aberdeen (Scotland). Prof., Physiology/(Section of Physiology)

Dubovi, Edward J., Ph.D, U. of Pittsburgh. Assoc. Prof., Diagnostic Laboratory

Ducharme, Normand G., D.V.M., U. of Montreal (Canada). Assoc. Prof., Clinical Sciences

Erb, Hollis N., Ph.D., U. of Guelph (Canada). Assoc. Prof., Clinical Sciences

Farnum, Cornelia, Ph.D., U. of Wisconsin. Asst. Prof., Anatomy

Fewtrell, Clare, D.Phil., U. of Oxford (England). Assoc. Prof., Pharmacology

Flanders, James A., D.V.M., U. of California at Davis. Asst. Prof., Clinical Sciences

Fortune, Joanne E., Ph.D, Cornell U. Assoc. Prof., Physiology

Fox, Francis H., D.V.M., Cornell U. Prof., Clinical Sciences

French, Tracy W., D.V.M., Purdue U. Assoc. Prof., Pathology

Fubini, Susan L., D.V.M., U. of Georgia. Asst. Prof., Clinical Sciences

Gilbert, Robert O., M. Med. Vet., U. of Pretoria (South Africa). Asst. Prof., Clinical Sciences

Gilmour, Robert F., Jr., Ph.D., SUNY—Upstate Medical Center. Assoc. Prof., Physiology

Gleed, Robin D., D.V.A., U. of Liverpool (England). Assoc. Prof., Clinical Sciences

Gould, Willard J. III, D.V.M., Cornell U. Asst. Prof., Clinical Sciences

Grohn, Yrjo T., Ph.D., College of Veterinary Medicine, Helsinki (Finland). Asst. Prof., Clinical Sciences

Guard, Charles L. III, Ph.D., Case Western Reserve U. Assoc. Prof., Clinical Sciences

Hackett, Richard P., Jr., D.V.M., Ohio State U. Assoc. Prof., Clinical Sciences

Hansel, William, Ph.D., Cornell U. Prof., Physiology/(Section of Physiology)

Harvey, H. Jay, D.V.M., Kansas State U. Assoc. Prof., Clinical Sciences

Henion, John D., Ph.D., SUNY at Albany. Assoc. Prof., Diagnostic Laboratory

Hermanson, John W., Ph.D., U. of Florida. Asst. Prof., Anatomy

Hintz, Harold F., Ph.D., Cornell U. Prof., Clinical Sciences

Hornbuckle, William E., D.V.M., Oklahoma State U. Assoc. Prof., Clinical Sciences

Horne, William A., Ph.D., Cornell U. Asst. Prof., Pharmacology

Houpt, Katherine A., Ph.D., U. of Pennsylvania. Prof., Physiology/(Section of Physiology)

Houpt, T. Richard, Ph.D., U. of Tennessee. Prof., Physiology/(Section of Physiology)

Jacobson, Richard H., Ph.D., Montana State U. Assoc. Prof., Diagnostic Laboratory
Kaderly, Robert E., Ph.D., Ohio State U. Assoc. Prof., Clinical Sciences
Kallfelz, Francis A., Ph.D., Cornell U. Prof., Clinical Sciences
Kern, Thomas J., D.V.M., U. of Missouri. Assoc. Prof., Clinical Sciences
King, John M., Ph.D, Cornell U. Prof., Pathology
Krook, Lennart P., Ph.D., Royal Veterinary Coll. at Stockholm (Sweden). Prof., Pathology
Lein, Donald H., Ph.D., U. of Connecticut. Assoc. Prof., Diagnostic Laboratory
Lewis, Robert M., D.V.M., Washington State U. Prof., Pathology
Lopez, Jorge W., Ph.D., U. of Illinois. Asst. Prof., Diagnostic Laboratory
Lowe, John E., D.V.M., Cornell U. Assoc. Prof., Diagnostic Laboratory
Lucio, Benjamin, Ph.D., Cornell U. Assoc. Prof., Avian and Aquatic Animal Medicine
Ludders, John W., D.V.M., Washington State U. Assoc. Prof., Clinical Sciences
Lust, George, Ph.D., Cornell U. Prof., Microbiology, Immunology, and Parasitology
McGregor, Douglas D., D.Phil., U. of Oxford (England). Prof., Microbiology, Immunology, and Parasitology
Maylin, George A., Ph.D., Cornell U. Assoc. Prof., Diagnostic Laboratory
Mechor, Gerald D., M.V.S., Western College of Veterinary Medicine. Asst. Prof., Clinical Sciences
Meyers-Wallen, Vicki N., Ph.D., U. of Pennsylvania. Asst. Prof., Clinical Sciences
Miller, William H., Jr., V.M.D., U. of Pennsylvania. Asst. Prof., Clinical Sciences
Minor, Ronald R., Ph.D., U. of Pennsylvania. Prof., Pathology
Mohammed, Hussni, O., Ph.D., U. of California at Davis. Asst Prof., Clinical Sciences

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, age, or handicap. The university is committed to the maintenance of affirmative-action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX may be referred to Cornell's Title IX coordinator (coordinator of women's services) at the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853-2801 (telephone: 607 255-3976).

Cornell University is committed to assisting those persons with disabilities who have special needs. A brochure describing services for persons with disabilities may be obtained by writing to the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853-2801. Other questions or requests for special assistance may also be directed to that office.
