CORNELL
UNIVERSITY

Cornell University Calendar 1990–91

Fall Semester

Friday, August 24	Residence halls open
Friday, August 24	Freshman Orientation begins
Sunday, August 26	New-student orientation begins
Tuesday–Wednesday, August 28–29	Registration–Course exchange
Thursday, August 30	Instruction begins, 7:30 a.m. Add/drop/change period begins
Monday, September 10	Physical education classes begin
Friday, September 21	Last day of add/drop/change period
Friday–Sunday, November 2–4	New-Student Parents' Weekend
Saturday, October 6	Fall recess: instruction suspended, 1:10 p.m.
Wednesday, October 10	Instruction resumes, 7:30 a.m.
Wednesday–Wednesday, October 24–November 7	Pre–course enrollment for spring 1990
Saturday, October 27	Homecoming Weekend
Wednesday, November 21	Thanksgiving recess: instruction suspended, 1:10 p.m.
Monday, November 26	Instruction resumes, 7:30 a.m.
Saturday, December 8	Instruction ends, 1:10 p.m.
Sunday–Wednesday, December 9–12	Study period
Thursday, December 13	Final examinations begin
Saturday, December 22	Final examinations end
Saturday, December 22	Residence halls close

Winter Session

Variable periods between Tuesday, December 25, and Friday, January 18

Spring Semester

Sunday, January 13	Residence halls open for continuing students
Monday, January 14	Residence halls open for new students
Thursday–Friday, January 17–18	Registration–Course exchange
Monday, January 21	Instruction begins, 7:30 a.m. Add/drop/change period begins
Monday, February 4	Physical education classes begin
Friday, February 15	Last day of add/drop/change period
Saturday, March 16	Spring recess: instruction suspended, 1:10 p.m.
Monday, March 25	Instruction resumes, 7:30 a.m.
Wednesday–Wednesday, March 27–April 10	Pre–course enrollment for fall 1990
Saturday, May 4	Instruction ends, 1:10 p.m.
Sunday–Wednesday, May 5–8	Study period
Thursday, May 9	Final examinations begin
Saturday, May 18	Final examinations end
Saturday, May 18	Residence halls close (students who are graduating may stay through Commencement Day)
Sunday–Saturday, May 19–25	Senior Week
Sunday, May 26	Commencement

Summer Session 1991

Three-Week Session	Wednesday, June 5–Friday, June 28
Eight-Week Session	Monday, June 17–Tuesday, August 13
Six-Week Session	Monday, July 1–Tuesday, August 13

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by Media Services at Cornell University.

1990-1991

Cornell University

(USPS 132-860)

Volume 82 of the series Cornell University consists of nine catalogs, of which this is number five, dated August 1, 1990. Issued once in February, once in June, two times in July, three times in August, and once in November. Published by Media Services, Cornell University, Comstock Hall, Ithaca, New York 14853-0998.

Second-class postage paid at Ithaca, New York.

Postmaster: Send address changes to "Cornell University," Vice President for Academic Programs, 309 Day Hall, Ithaca, NY 14853-2801.

University Administration

Frank H. T. Rhodes, president
Robert Barker, senior provost and chief operating officer
Malden C. Nesheim, provost
G. Tom Shires, provost for medical affairs
James E. Morley, Jr., senior vice president
John F. Burness, vice president for university relations
William D. Gurowitz, vice president for campus affairs
M. Stuart Lynn, vice president for information technologies
Larry I. Palmer, vice president for academic programs
Richard M. Ramin, vice president for public affairs
Frederick A. Rogers, vice president for finance and treasurer
Norman R. Scott, vice president for research and advanced studies
John R. Wiesenfeld, vice president for planning
Walter J. Relihan, Jr., university counsel and secretary of the corporation
James A. Sanderson, chief investment officer
Joycelyn R. Hart, associate vice president for human relations
Walter R. Lynn, dean of the University Faculty

Courses with names and descriptions enclosed in brackets—[ ]—are not offered 1990–91.

Introduction

Courses of Study contains information primarily concerned with academic resources and procedures, college and department programs, interdisciplinary programs, and undergraduate and graduate course offerings of the university. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City. Information about other important areas is available from other offices of the university or is included in publications distributed to students. Students should consult with their college's advising office for specific information on academic policies and procedures, degree programs and requirements. The following is a list of offices and information sources for specific information:

Undergraduate admissions. Information pertinent to prospective applicants is available from the Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, New York 14850-9988 (telephone: 607/255-5241).

Graduate School. Information pertaining to admission to the Graduate School may be obtained by contacting the Graduate School, 100 Sage Graduate Center, Ithaca, New York 14853-6201 (telephone: 607/255-4884).

Law School. Admission information for the Law School is available from the Law School, Myron Taylor Hall, Ithaca, New York 14853-4901 (telephone: 607/255-5141).

Samuel Curtis Johnson Graduate School of Management. Information is available from the Office of Admissions, 315 Malott Hall, Ithaca, New York 14853-4201 (telephone: 607/255-2327).

College of Veterinary Medicine. Admission information is available from the Admissions Office, Schurman Hall, Ithaca, New York 14853-6401 (telephone: 607/253-3000).

Medical College and Graduate School of Medical Sciences. Information regarding admissions is available from the Office of Admissions, 1300 York Avenue, New York, New York 10021 (telephone: 212/746-1067).

Financial aid, loans, and student employment. Information is available from the Office of Financial Aid, 203 Day Hall, Ithaca, New York 14853-2801 (telephone: 607/255-5145).

Student accounts. Information on CornellCard, a student charge card, and payment of bills is available by contacting the Office of the Bursar, 260 Day Hall, Ithaca, New York 14853-2801 (telephone: 607/255-2336).

Dining and residence halls. Information is sent to matriculating students and is available from Cornell Dining, 1140 North Balch Hall, Ithaca, New York 14853-1401, and the Department of Residence Life, 2117 North Balch Hall, Ithaca, New York 14853-1401.

Student responsibility and regulations. The *Campus Code of Conduct* describes the regulations and policies for maintaining public order on campus. Other statements of student responsibility are set forth in the *Policy Digest for Students, Faculty and Staff.* Publications are available for viewing on CUINFO, the university's electronic information system, and in print at the various university libraries, the Office of the Dean of Students, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

Health services. University Health Services provides comprehensive medical and psychological care at the Gannett Health Center, 10 Central Avenue, Ithaca, New York 14853-3101 (telephone: 607/255-4082), adjacent to Willard Straight Hall. Information may be obtained by writing or visiting the center.

EXPLANATION OF COURSE NUMBERING SYSTEM

The course levels have been assigned as follows:

100-level course—introductory course, no prerequisites, open to all qualified students

200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites

300-level course—upper-division course, open to juniors and seniors, prerequisites

400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent

500-level course—professional level (e.g., management, law, veterinary medicine)

600-level course—graduate-level course, open to upper-division students

700-level course—graduate-level course

800-level course—master's level, thesis, research

900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences

Architecture, Art, and Planning

Arts and Sciences

Biological Sciences

Engineering

Hotel Administration

Human Ecology

Industrial and Labor Relations

Nutritional Sciences

Officer Education

Group 2: Graduate professional divisions

Law

Management

Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses, 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found in the Course and Time Roster and the Course and Room Roster, each issued twice a year by the Office of the University Registrar. Students are also advised to consult the individual college and department offices for up-to-date course information.

ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. Requests to review documentation supporting its accreditation should be addressed to the Vice President of Academic Programs, Cornell University, 307 Day Hall, Ithaca, New York 14853–2801.

Advanced Placement of Freshmen

The final decision for awarding advanced placement credit at Cornell rests with each individual college. The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement and recommends AP credit for those who meet the standards. This recommendation is almost always based on some examination score. For policies governing advanced placement in a specific college, see the academic information section of that college. Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.

The Advanced Placement (AP) Program of the College Entrance Examination Board (CEEB) is the best known and most generally used of the programs that provide students with an opportunity to document participation in a college-level curriculum at the secondary level.

Advanced placement examinations. Examinations sponsored by the Advanced Placement Program of the College Entrance Examination Board are considered. Entering freshmen should have their scores sent to their college or school office (see the list at the end of this section). Placement and credit on the basis of these examinations will usually be determined during the summer, and students will be notified before course scheduling.

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations will appear in the orientation booklet that will be mailed to entering students in late summer. The departments that award advanced placement and credit on the basis of CEEB Advanced Placement Examinations or departmental examinations are shown below.

Transfer of credit. Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course descriptions to their college or school office (see the list at the end of this section). The award of credit or placement for such courses is determined by the appropriate departments according to individual school and college guidelines. Because policy for using advanced placement credit varies according to each college's or school's professional and academic goals, students should consult their college or school office to determine how they may use such credit.

Foreign credentials. Information regarding Cornell's advanced standing policy for foreign credentials may be obtained by contacting the Associate Director of International Admissions, Cornell University, 410 Thurston Avenue, Ithaca, New York 14850-2488, U.S.A. Students holding foreign credentials who feel they may be eligible for advanced standing consideration should contact the International Students and Scholars Office before enrollment for clarification of the advanced standing policy.

Written inquiries. Many department, school, and college offices encourage students to contact them with any questions they may have. Addresses given in the following sections may be completed by adding Ithaca, New York 14853.

Forwarding of scores and transcripts. Entering freshmen should have their advanced placement test scores sent to their school or college office.

College of Agriculture and Life Sciences
M. B. Mullenhoff
192 Roberts Hall

College of Architecture, Art, and Planning
Donna Kuhar
B2 West Sibley

College of Arts and Sciences
Michele T. Crane
M46 Goldwin Smith Hall

College of Engineering
Richard K. Mosher
170 Olin Hall

School of Hotel Administration
Mary Milks
138 Statler Hall

College of Human Ecology
Joyce H. McAllister
146 Van Rensselaer Hall

School of Industrial and Labor Relations
Virginia W. Freeman
101 Ives Hall

BIOLOGICAL SCIENCES

The Division of Biological Sciences grants advanced placement credits and exemption from introductory biology courses based on superior performance on the CEEB Advanced Placement Examination in biology.

Any student who earns a score of 5 on this examination may elect to receive eight credits and be permitted exemption from all introductory biology courses.

Students not majoring in biological sciences who score a 4 or 5 may receive, respectively, six or eight advanced placement credits. This will satisfy the distribution requirement in biological sciences for students in the College of Human Ecology, half of the distribution requirement in biological sciences for students in the College of Arts and Sciences, and a portion of the group B distribution requirement for students in the College of Agriculture and Life Sciences.

Biological sciences majors who receive a score of 5 may receive eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4. The student receiving a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101–102, 101/103, 102/104, or 103–104 (Biological Sciences, Lectures and Laboratory). These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (216–222 Stimson Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, Biological Sciences 101/103 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

CHEMISTRY

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207–208, an eight-credit sequence that includes qualitative analysis, and Chemistry 215–216, a nine-credit sequence that includes qualitative and quantitative analysis.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination in chemistry or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up, on the morning of the day of the examination, with Dr. Stanley Marcus, in 156 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking Chemistry 215–216 and should consult the Chemistry 215 instructor.

CLASSICS

For advanced placement and credit in Latin and Greek, students should consult the Department of Classics, Cornell University, 120 Goldwin Smith Hall.

Latin. Credit and placement are determined on the basis of a departmental examination. A student who is permitted to register in a 300-level course will be given six advanced placement credits.

Greek and Modern Greek. Credit and placement are determined on the basis of a departmental examination.

COMPUTER SCIENCE

Students who receive a score of 4 or 5 on the CEEB Advanced Placement Examination in computer science will receive four advanced placement credits and may take Computer Science 211, 212, or 222 (provided, in the case of Computer Science 222, the mathematics prerequisites are met). These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering or half the distribution requirement in mathematics for students in the College of Arts and Sciences.

Freshmen may also earn four credits by suitable performance on a departmental examination to be given during orientation week. Students who receive a score of 3 on the CEEB Advanced Placement Examination may choose, at their own risk and in consultation with their advisers, to go directly into a 200-level course without receiving credit for Computer Science 100. These students are strongly urged to take the departmental placement test. To take the departmental

examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

ECONOMICS

Students with a strong background in introductory economics may, with the consent of the instructor, register for intermediate courses without taking Economics 101–102.

ENGLISH

The English department will grant 3 credits to students who score 4 or 5 on the CEEB Advanced Placement Examination. The credits are granted automatically: no application to the department is required.

Students who receive scores of 700 or better on the CEEB College Placement Test in English composition, 700 or better on the CEEB College Placement Test in literature, or 4 or 5 on the CEEB Advanced Placement Examination are eligible to enroll, space permitting, in the following English freshman writing seminars: 270, 271, 272.

Advanced placement credits may not be used to fulfill requirements of the English major or distribution requirements of the College of Arts and Sciences.

GERMAN LITERATURE

The Department of German Studies will grant three credits to students with a score of 4 or 5 on the Advanced Placement Examination.

For information about the College Placement Test, see "Modern Languages," below.

HISTORY

The Department of History will grant four credits to students who score 4 or 5 on the CEEB Advanced Placement Examination in European history and four credits to those with such scores in the American history examination. Such credits are granted automatically, without application to the department.

These credits may not be used to fulfill requirements of the history major or distribution requirements of the College of Arts and Sciences.

HISTORY OF ART

The Department of History of Art will grant three credits to students who score 4 or 5 on the CEEB Advanced Placement Examination. Such credits are granted automatically, without application to the department.

These credits may not be used to fulfill requirements of the history of art major or distribution requirements of the College of Arts and Sciences.

MATHEMATICS

The Cornell calculus sequences discussed below are described under "Basic Sequences" in the Department of Mathematics section of this catalog.

The regular freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of analytic geometry and calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (calculus AB or calculus BC) during their senior year.

The following rules do not apply to students being admitted to the College of Engineering. See the college's brochure for a detailed statement.

Students with a grade of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 213, 221, or 293), but students entering Mathematics 293 may have to make up some material on partial differentiation. Students with a 3 on the BC examination or a 4 or 5 on the AB examination may take the appropriate second-semester course (Mathematics 112, 122, or 192). Students with a 2 on the BC examination or a 3 on the AB examination may take one of the second-semester courses (Mathematics 112 or 192). Advanced placement credit will be awarded appropriately; however, no credit will be granted for a grade of 1 on the BC or 1 or 2 on the AB examination.

A grade of 3 or higher on the BC examination satisfies the distribution requirement in mathematics for students in the College of Arts and Sciences.

Note, however, that the grade of 3 is not sufficient for a full year of advanced placement credit in mathematics.

The placement examination in mathematics is offered at Cornell only during orientation week and should be taken by students who

1) have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination;
2) have received a 2 on the BC examination or a 3 on the AB examination and want to enter the upper sequence; or
3) believe that the placement assigned on the strength of the CEEB Advanced Placement Examination is not high enough in their case.

Students are strongly urged to take the departmental placement test even if they feel that their grasp of the material is uncertain. The grade on this test does not become part of a student's record. No advance registration for the departmental examination is necessary.

MODERN LANGUAGES

Language placement tests. Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a College Placement Test (CPT). Language course placement is made using guidelines that match CPT reading scores with various levels of courses. In cases where no CPT exists for a particular language, the Department of Modern Languages and Linguistics designates a professor to handle placement for that language. Students who have had a year of formal study or substantial informal study since they last took a CPT should take the examination again during orientation week if they plan to continue course work.

Advanced standing credit. Advanced standing credit may be entered on a student's record as follows:

1) For high school work, three to six credits may be granted for the equivalent of 200-level courses. Credit is based on performance on the CEEB Advanced Placement Examination, Cornell's Advanced Standing Examination (CASE), or a special departmental examination. To be eligible for Cornell's Advanced Standing Examination, students must have earned a score of 650 or above on the reading section of the College Placement Test (CPT). A student who has received three credits by scoring 4 or 5 on the CEEB Advanced Placement Examination in languages is advised to take the Cornell Advanced Standing Examination. Outstanding performance on this examination could provide three additional credits.
2) For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student's Cornell record.
3) Native speakers of languages other than English may, on examination by the appropriate professor, be granted a maximum of six credits if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be considered only for those who pursue advanced work in their native language.

Information about times and places to take placement tests is available in the orientation booklet, from Academic and Career Counseling Services, and from the Department of Modern Languages and Linguistics. Students must register for the CPT examination at Academic and Career Counseling Services, 203 Barnes Hall, and pay a fee. For more information, see the College of Arts and Sciences section on language course placement, or contact the Department of Modern Languages and Linguistics, Cornell University, 203 Morrill Hall.

MUSIC

Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during orientation week. If special arrangements are made, the examination may be administered at other times during the academic year. All students interested in taking this examination should consult Professor E. Murray, 311 Lincoln Hall (telephone: 607/255-4675). Inquiries may be directed to the Department of Music, Cornell University, 104 Lincoln Hall (telephone: 607/255-4097).

Advanced Placement Program (CEEB) Examinations
Summary of Credit and Placement

Subject	*Score*	*Advanced Placement Credit*	*Placement*
Arabic	Department of Near Eastern Studies determines credit and placement based on departmental examination.		
Biology‡	5 (majors)•	8 credits or 4 credits	Placement out of all introductory courses. Students may select one of the options allowed for majors with a score of 4.
	4 (majors)•	4 credits	4 AP credits awarded after completion of 101–102, 101–103, 102–104, or 103–104. Consult department to determine which semester to take to complete introductory biology.
	5 (nonmajors)	8 credits	Placement out of all introductory courses.
	4 (nonmajors)	6 credits	Placement out of 109–110. Does not always satisfy the prerequisite for second- and third-level courses in biology.
Chemistry‡	5	4 credits	Department determines placement.
Computer science	4,5	4 credits	Department determines placement.
Economics	4,5	3 credits	3 credits each for micro and macro; 6 credits maximum.
English	4,5	3 credits	
French language	4,5	3 credits	Department of Modern Languages and Linguistics determines placement. Students may earn additional credit by taking CASE examination.†
French literature	4,5	3 credits (and proficiency)	Department of Romance Studies determines placement.
German language	4,5	3 credits	Department of Modern Languages and Linguistics determines placement. Students may earn additional credit by taking CASE examination.†
German literature	4,5	3 credits (and proficiency)	Department of German Studies determines placement.
American government and politics	4,5	3 credits	Placement out of Government.
Greek	Department of Classics determines credit and placement based on departmental examination.		
Hebrew	4,5	3 credits	Department of Near Eastern Studies determines placement.
American history	4,5	4 credits	
European history	4,5	4 credits	
History of art	4,5	3 credits	
Italian literature	4,5	3 credits (and proficiency)	Department of Romance Studies determines placement.
Latin	4,5	Department of Classics determines credit and placement based on departmental examination.	
Mathematics BC (excluding engineering students)	4,5	8 credits	Placement out of 111, 112. Permission to take 221, 293, or 213.
	3	4 credits	Placement out of 111. No advanced placement credit for students who take 111. Permission to take 112 or 192.
Mathematics AB (excluding engineering students)	4,5	4 credits	Placement out of 111. Permission to take 112, 122, or 192.
	3	4 credits	Placement out of 111. Permission to take 112 or 192.
	2	none	Students are strongly urged to take the mathematics placement examination.
Music	Department determines credit and placement based on departmental examination.		
Physics B‡	4,5	8 credits	Placement out of Physics 101–102.
	3	4 credits	Placement out of Physics 101.
Physics B, and Mathematics BC‡	5 4,5	4 credits in physics	Student may choose placement out of Physics 112 or 207 instead or Physics 101–102.
or Mathematics AB‡	5	4 credits in physics	Student may choose placement out of Physics 112 or 207 instead of Physics 101–102.
Physics C—Mechanics‡	4,5	4 credits	Student may choose placement out of Physics 112 or 207, or placement into Physics 116 with no AP credit. For more information, contact department representative.
Physics C—Electricity and Magnetism‡	5	Student may choose 4 credits for Physics 208 (or 213) or placement into Physics 217 with no AP credit. For more information, contact department representative.	
	4	Student may choose 4 credits for Physics 208 or placement into Physics 217 with no AP credit. For more information, contact department representative.	
Psychology	4,5	3 credits	
Sociology	Department determines credit and placement.		
Spanish language	4,5	3 credits	Department of Modern Languages and Linguistics determines placement. Students may earn additional credit by taking CASE examination.†
Spanish literature	4,5	3 credits (and proficiency)	Department of Romance Studies determines placement.
Turkish	Department of Near Eastern Studies determines credit and placement based on departmental examination.		

•Biological sciences majors and other students who expect to take advanced biology courses. These students will receive a total of 8 introductory biology credits (4 advanced placement credits and 4 course credits).
†Cornell Advanced Standing Examination. Contact the Department of Modern Languages and Linguistics, 203 Morrill Hall.
‡In the College of Arts and Sciences, AP credit may be used to satisfy half the distribution requirement in science.

NEAR EASTERN STUDIES

The Department of Near Eastern Studies will grant three credits to students with a score of 4 or 5 on the Advanced Placement Examination in Hebrew. For advanced placement and credit in Arabic and Turkish, students should consult the Department of Near Eastern Studies, 360 Rockefeller Hall. Advanced placement and credit are determined by departmental examination.

PHYSICS

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (physics B or physics C), certain international examinations, or the departmental examination (which may be taken during orientation week or at other times as arranged). For information about the departmental examination, students should consult Professor R. Cotts, 522 Clark Hall.

Physics B. Students earning a score of 4 or 5 may receive eight credits for Physics 101 and 102. Those earning a score of 5 in physics B with a score of 4 or 5 in calculus BC or a score of 5 in calculus AB may choose to accept four credits in Physics 112 or 207 instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C.

1) C—Mechanics Students earning a score of 4 or 5 may receive four credits for Physics 112 or 207, or for placement into Physics 116 with no AP credit.
2) C—Electricity and Magnetism Students earning a score of 5 will be eligible for four credits for Physics 208 or 213, or for placement into Physics 217 with no AP credit. Students earning a score of 4 will be eligible for four credits for Physics 208 or placement into Physics 217 with no AP credit. Students with scores of 4 or 5 and who have questions may first meet with the department representative, Professor R. Cotts, 522 Clark Hall, for advice on making a selection.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from Professor R. Cotts, 522 Clark Hall, or from the Department of Physics, Cornell University, 109 Clark Hall.

PSYCHOLOGY

Students who scored 4 or 5 on the CEEB College-Level Examination Program psychology test may receive three advanced placement credits in psychology. Those interested in taking further courses in psychology should consult a faculty member in the Department of Psychology, Cornell University, 232 Uris Hall.

Advanced placement based on the CEEB test may not be used to satisfy the distribution requirement in the College of Arts and Sciences. Credit toward the requirements of a major in psychology will depend on the recommendation of the student's major adviser.

ROMANCE STUDIES (FRENCH, ITALIAN, AND SPANISH LITERATURE)

The Department of Romance Studies grants three credits to students with a score of 4 or 5 on the Advanced Placement Examination in French, Italian, or Spanish literature or in French or Spanish language.

For information about the College Placement Test, see "Modern Languages," above.

University Registration

University registration is the process by which the university registrar and colleges certify the eligibility of students to enroll in courses and to purchase or use a variety of services available at the university, such as CornellCard, Co-op dining, libraries, special bus passes, and housing. University registration includes the issue and validation of the student identification card and the collection of information needed for the student directory and state and federal reports. University registration is based on the student's clearing past and current financial obligations by the date posted on the bursar's bill. ID validation and college registration are held on the dates stated in the university calendar at a time and place announced well in advance of the beginning of each semester.

REQUIRED IMMUNIZATION

Before registration at the university all students must be prepared to present proof of adequate immunization against diphtheria, tetanus, rubella, measles, and poliomyelitis.

LATE REGISTRATION

A student clearing his or her financial obligations after the stated date on the bursar's bill is considered late. Late registrants are assessed a finance charge on the bursar's bill.

The university does not permit after-the-fact registration in which persons attend classes and pass courses before seeking to register and receive official course credit.

The university reserves the right to require unauthorized unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university registrar will notify the appropriate college or school about such cases and ask that office to contact the person concerned.

COURSE ENROLLMENT

Course enrollment for each semester at Cornell takes place partway through the preceding semester. Dates are announced in advance and are usually posted in the school and college offices. Each college or school notifies students about special procedures. Students are often expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree. Students complete a course enrollment form, then return the form to their college office. Each student is sent a course confirmation statement listing the courses processed from the enrollment form. Class schedules are distributed later by the college offices, often during the same days as university registration.

New students and transfer students are sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

Students who fail to submit a course enrollment form during the designated period may be charged a late fee. The fees are listed in the chart in the following section.

COURSE DROP/ADD/CHANGE PERIOD

Students may adjust their schedules during drop/ add/change periods. The length of the periods varies according to colleges. A form is completed by the student and signed by both the student's adviser and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. See the chart on the following page for the course drop/add/change fee.

Late Course Enrollment and Late Drop/Add/Change Fees

Academic Unit	*Late Course Enrollment Fee*	*Late Course Drop/Add/ Change Fee*
College of Agriculture and Life Sciences	No fee	No fee
College of Architecture, Art, and Planning	$10	$10*
College of Arts and Sciences	$10*	$10*
College of Engineering Graduate School	$10	$10
School of Hotel Administration	No fee	No fee
College of Human Ecology	$10	$10*
School of Industrial and Labor Relations	No fee	No fee
Johnson Graduate School of Management	$10	$10
Athletics and physical education	$30	$30
Summer session and extramural courses	†	†
Division of Unclassified Students	No fee	No fee
Veterinary medicine	No fee	No fee

*Consult the college office for special considerations and requirements.

†Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.

AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. The student should inform the college of enrollment of his or her intent to return.

A student may withdraw from the university at the student's discretion. However, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Medical leaves are granted and processed through University Health Services.

INTERNAL TRANSFERS

Transfer from one undergraduate unit to another is not guaranteed. A student in good standing may apply to transfer from one college to another within the university. It is necessary for an internal transfer to inform the admitting college of the acceptance of admission within seven days of the offer of admission. Students interested in transfer within the university should consult with the appropriate school or college office, or the Division of Unclassified Students, 220 Day Hall (telephone: 255-4386).

DIVISION OF UNCLASSIFIED STUDENTS

The Division of Unclassified Students (DUS) assists Cornell undergraduates in transferring between colleges of the university when direct internal transfer is not possible. The division also serves as a counseling agency for students whose academic and career goals have changed. Such students are advised about alternatives within the Cornell system.

To apply to the division, students must

1) Make an appointment for an interview in DUS (telephone: 255-4386)
2) Complete the DUS application form and return it to the division office, 220 Day Hall
3) Submit application for transfer coupons to their college registrar, requesting transfer to DUS

Candidates are admitted to the division when, in the judgment of the DUS Administrative Committee, there is reasonable evidence that a transfer can be accomplished and that the proposed program is consistent with the student's stated objectives. Students are admitted for one semester but may be allowed to continue in the division for a second term if that is necessary and the student is making progress toward transfer.

Bursar Information

TUITION, FEES, AND EXPENSES

Tuition for Academic Year 1990-91

Endowed Divisions

Undergraduate

Architecture, Art, and Planning Arts and Sciences Engineering Hotel Administration Unclassified division	$15,120

Graduate

Graduate School (with major chair in an endowed division)	15,120

Professional

Law School	15,900
Management	16,100

Statutory Divisions

Undergraduate

Agriculture and Life Sciences Human Ecology Industrial and Labor Relations	
New York resident*	5,900
Nonresident*	10,840

Graduate

Graduate School (with major chair in agriculture, human ecology, or industrial and labor relations),	6,800
Graduate School—Veterinary Medicine	8,000

Professional

Veterinary Medicine	
New York resident*	9,450
Nonresident*	11,600

Summer Session (1990)

Per credit $315

Extramural Division

Per credit $360

Other Tuition and Fees

In absentia fees

Graduate	$200 per term
Undergraduate	$15 per term
Law and Management	$75 per term

Excess hours tuition rate for students in statutory units taking extra endowed credits

Per credit hour	$359.06

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

*Residency status is determined at the time of admission by the college. Change in residency status is determined by the bursar.

Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable $50 application fee when submitting an application for admission. The graduate application fee is $50.

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Students who terminate their registration with the university during a fall or spring semester in this manner will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week to the end of the semester, 100 percent.

Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

BILLING AND PAYMENT

Billing

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to registration day. All other charges, credits, and payments will appear on monthly statements mailed before the twenty-fifth of every month.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. *A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.*

All bills are due by the date stated on the bill; all payments must be *received* by that date to avoid *finance charges.* Payments are *not* processed by postmark.

Please inform the Office of the Bursar of any change in billing address. *Address changes made at other offices will not change the billing address.* The address initially used on billing statements will be the home address as listed on each student's application for admission.

Payments

An individual who has outstanding indebtedness to the university will not be allowed to register or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. If students' bills show a previous unpaid balance, they must arrange for payment by August 10 if they plan to register for the fall semester. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. *Since the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.*

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall, Ithaca, New York 14853-2801 (telephone: 607/255-2336).

ACCIDENT AND SICKNESS INSURANCE

The accident and sickness insurance charge on the July billing statement is for insurance for hospitalization, surgical fees, and major medical coverage for the period of August 28, 1990, through August 27, 1991. The cost of this insurance is lower than the average cost of comparable coverage under other group accident and health insurance policies. A brochure is included with the July bill.

For those who do not want medical insurance coverage, a medical insurance waiver form (included with the bursar's statement mailed in mid-July) must be completed and returned no later than the date specified on the waiver form. Waivers cannot be processed after this date. If a waiver form is lost or destroyed, a replacement can be obtained by contacting the Gannett Health Center (telephone: 607/255-6363).

University Requirements for Graduation

For degree requirements such as residency, number of credits, distribution of credits, and grade averages, see the individual requirements listed by each college or school or contact the college offices.

PHYSICAL EDUCATION

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding twenty hours a week). The Gannett Health Center can provide certifications based on health, and the Financial Aid Office can provide certifications of employment. Students should see the Department of Athletics and Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim test. All new students who do not pass a basic seventy-five-yard swim test are required to include swimming in their program of physical education unless they are excused by Gannett Health Center. All nonswimmers are required to register in beginning swim classes.

STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

Class Schedules and Examinations

CLASS ATTENDANCE AND ABSENCES

Students are expected to be present throughout each term at all meetings of courses for which they are registered.

The right to excuse a student from class rests at all times with the faculty member in charge of that class.

All lectures, recitations, and similar exercises start at 8 a.m., 9:05 a.m., 10:10 a.m., 11:15 a.m., 12:20 p.m., 1:25 p.m., 2:30 p.m., or 3:35 p.m. and last fifty minutes, except that on Tuesday and Thursday the first and second, the third and fourth, the fifth and sixth, and the seventh and eighth periods may be combined to allow for longer meeting times.

All laboratories and similar exercises that continue for 1 hour and 55 minutes, 2 hours and 25 minutes, or 3 hours are scheduled as shown below.

Schedule for Classes Longer than Fifty Minutes

1 hour and 55 minutes

8:00 a.m.–9:55 a.m.

10:10 a.m.–12:05 p.m.

12:20 p.m.–2:15 p.m.

2:30 p.m.–4:25 p.m.

7:30 p.m.–9:25 p.m.

2 hours and 25 minutes

7:30 a.m.–9:55 a.m.

10:10 a.m.–12:35 p.m.

2:00 p.m.–4:25 p.m.

7:30 p.m.–9:55 p.m.

3 hours

8:00 a.m.–11:00 a.m.

10:10 a.m.–1:10 p.m.

1:25 p.m.–4:25 p.m.

7:30 p.m.–10:30 p.m.

On Monday, Tuesday, Wednesday, and Thursday the hours of 4:25 to 7:30 p.m.; on Friday the hours after 4:25 p.m; on Saturday the hours after 12:05 p m.; and all day Sunday are free from all formal undergraduate class or laboratory exercises.

Evening classes are held only on Monday and Wednesday and only when regularly scheduled and included in written college announcements or when recommended by the Committee on Academic Records and Registration. Evening lectures, recitations, and similar exercises start at 7:30 and 8:35 p.m.; evening laboratories and similar exercises start at 7:30 p.m.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All such examinations must be scheduled with the Examination and Room Coordinator in the Office of the University Registrar. The dates and times of these examinations are listed in the *Course and Room Roster* for each term.

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the University Faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. Examinations not listed in the registrar's examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by permission of the dean of the faculty in accordance with existing faculty legislation.

EVENING EXAMINATIONS

Evening examinations, including makeup examinations, may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m. *without prior permission* from the Office of the University Faculty. Such prior permission is not, however, required for examinations or makeup examinations involving small numbers of students (generally thirty or less), provided that the scheduled time is acceptable to the students involved and that an alternative time to take the examination is provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Permission from the Office of the University Faculty to schedule on evenings other than Tuesdays or Thursdays or at a time prior to 7:30 p.m. will be granted only on the following conditions: *(a)* conditions such as the nature of the examination, room availability, a large number of conflicts, etc., justify such scheduling; and *(b)* an alternative time to take the examination *must* be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

If there is a conflict between an examination listed on the schedule developed at the annual evening prelim scheduling meeting and an examination not on the schedule, the examination on the schedule has priority, and the course not on the schedule *must* provide an alternative time for those students with a conflict. If there is a conflict between examinations, both of which are on the schedule developed at the annual evening prelim scheduling meeting or both of which are not on the schedule, the instructors of the courses involved *must* consult and agree on how to resolve the conflict. Both instructors *must* approach this resolution process with a willingness to provide an alternative or early examination.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in *Courses of Study* and *must* notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed.

Grading Guidelines

The official university grading system uses letter grades with pluses and minuses. Passing grades range from A + to D -; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

A+	=4.3	B+	=3.3	C+	=2.3	D+	=1.3
A	=4.0	B	=3.0	C	=2.0	D	=1.0
A–	=3.7	B-	=2.7	C-	=1.7	D-	=0.7
						F	=0.0

This is how a term average is computed:

Course	*Grade*	*Quality Points*		*Credits*		*Product*
Chemistry 103	B+	3.3		3		9.9
English 151	C–	1.7		3		5.1
DEA 145	B	3.0	x	4	=	12.0
CEH 100	B	3.0		3		9.0
DEA 111	C	2.0		3		6.0
Total				16		42.0

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U GRADES

On September 6, 1972, the University Faculty Council of Representatives passed the following legislation:

"Resolved, that:

A. the S-U system have symbol equivalents which are uniform within the university: "S" means C– or above; "U" means D+, D, D–, or failure.

B. S-U options be chosen by the student during the first three weeks of the term.

C. the Announcements and/or supplementary course registration material describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the term.

D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."

The rules for the S-U option are further defined by each of the Academic Units. They are as follows:

Agriculture and Life Sciences. (a) Must have 100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.

Architecture, Art, and Planning. (a) All courses specifically required for a degree excluded. Various departments may designate specific required courses where S-U will be permitted. (b) In a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the College Office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (b) Permission of instructor. (c) A minimum of 80 of the 120 hrs. required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (a) May take one Humanities and Social Sciences, Approved, or Free Elective per term after completing first semester. (b) This option may be elected during Pre-Course Enrollment or with the written permission of the instructor and adviser on an add/drop form in the first 3 weeks of classes. (c) Decision irrevocable after first 3 weeks of term.

Graduate School. (a) Seminars and Thesis Research courses are usually graded S/U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.

Hotel. (a) Maximum of four free-elective credit hours per term. (b) Exceptions are required hotel courses or elective hotel courses offered only on S-U basis.

Human Ecology. (a) Not part of student's major. (b) May be used in the 15 hours required outside the major in Human Ecology courses. (c) Not part of 39 hours required in humanities, natural sciences, and social science. (d) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (e) Permission of the instructor. (f) Available each of last four terms with a total of four S-U courses during student's college career.

Industrial and Labor Relations. (a) This option may be elected, if available in I&LR electives, or in out-of-college electives but not including directed studies. (b) Degree requirements include a minimum of 105 lettergrade (A + to D -) credits. (c) Student must also be in good academic standing. (d) A "U" is considered the equivalent of an "F" in determining a student's academic status. (e) Limited to two courses per term, not to exceed four hours in any one course.

Unclassified. (a) S-U grades permitted only when it is the only option or (b) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Veterinary Medicine. (a) There are seven courses in the veterinary core curriculum that are offered on an S-U basis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on a S/U basis at the option of the professor.

INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:

1) the student has a substantial equity at a passing level in the course with respect to work completed, and
2) the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official seal of the university and the signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the Office of the University Registrar, 222 Day Hall.

STUDENT RECORDS POLICY AND THE POSTING OF GRADES

The university policy on access to and release of student records reflects those principles issued by the provost in 1969 and 1973, but it has been amended to conform with the Family Educational Rights and Privacy Act of 1974 (Buckley Amendment). The law gives students some important rights: the right to inspect their records, the right to challenge incorrect information, and the right to keep specific types of records private.

It is the responsibility of each university department and faculty member maintaining such records to implement this policy by appropriate means. Specifically as it applies to grade posting, grades earned on examinations or in courses may not be posted by name. Posting by student ID number is, however, permissible. Although there is no federal or state legislation that pertains to the manner in which graded work is to be returned to students, the returning of such materials should be handled in such a manner as will preserve the student's privacy. For a full statement about Cornell's Student Records Policy, contact the Office of the Vice President for Academic Programs, 307 Day Hall.

Code of Academic Integrity[1]

Principle

Absolute integrity is expected of every Cornell student in all academic undertakings. Integrity entails a firm adherence to a set of values, and the values most essential to an academic community are grounded on the concept of honesty with respect to the intellectual efforts of oneself and others. While both students and faculty of Cornell assume the responsibility of maintaining and furthering these values, this document is concerned specifically with the conduct of students.

A Cornell student's submission of work for academic credit indicates that the work is the student's own. All outside assistance should be acknowledged, and the student's academic position truthfully reported at all times. In addition, Cornell student's have a right to expect academic integrity from each of their peers.

I. Guidelines for Students

A. General Responsibilities

1. A student shall in no way misrepresent his or her work.
2. A student shall in no way fraudulently or unfairly advance his or her academic position.
3. A student shall refuse to be a party to another student's failure to maintain academic integrity.
4. A student shall not in any other manner violate the principle of academic integrity.

B. Examples of Violations

The following actions are examples of activities that violate the Code of Academic Integrity and subject their actors to proceedings under the Code. This is not a definitive list.

1. Knowingly representing the work of others as one's own.
2. Using, obtaining or providing unauthorized assistance on examinations, papers, or any other academic work.
3. Fabricating data in support of laboratory or field work.
4. Forging a signature to certify completion of a course assignment or a recommendation to graduate school.
5. Unfairly advancing one's academic position by hoarding library materials.
6. Misrepresenting one's academic accomplishments.

C. Specific Guidelines for Courses

1. Examinations. During in-class examinations no student may use, give or receive any assistance or information not given in the examination or by the proctor. No student may take an examination for another student. Between the time a take-home examination is distributed and the time it is submitted by the student for grading, the student may not consult with any persons other than the course professor and teaching assistants regarding the examination. The student is responsible for understanding the conditions under which the examination will be taken.
2. Course Assignments. Students are encouraged to discuss the content of a course among themselves and to help each other to master it, but no student should receive help in doing a course assignment that is meant to test what he or she can do without help from others. Representing another's work as one's own is plagiarism and a violation of this Code. If materials are taken from published sources the student must clearly and completely cite the source of such materials. Work submitted by a student and used by a faculty member in the determination of a grade in a course may not be submitted by the student in a second course, unless such submission is approved in advance by the faculty member in the second course. If a student is submitting all or part of the same work simultaneously for the determination of a grade in two or more different courses, all faculty members in the courses involved must approve such submissions.
3. Academic Misconduct. A faculty member may impose a grade penalty for any misconduct in the classroom or examination room. Examples of academic misconduct include, but are not limited to, talking during an exam, bringing unauthorized materials into the exam room, and disruptive behavior in the classroom.

a. The faculty member must promptly notify the student of the reason for the imposition of a penalty for academic misconduct and the degree to which his or her grade will be affected.

b. Academic misconduct is not a violation of academic integrity. The student may, however, seek review by the Academic Integrity Hearing Board on the basis either that the finding of guilt is arbitrary and capricious or that the penalty for academic misconduct is excessive or inappropriate to the circumstances involved.[2]

D. Variances

A faculty member is responsible for informing his or her students and teaching assistants of variances from this Code that apply to work in his or her course. These variances should be clearly stated in writing at the beginning of the course or activity to which they apply.

E. Jurisdiction

The authority to determine whether a specific action shall be treated as a violation of academic integrity lies with the Academic Integrity Hearing Board.

II. Organization and Procedures

A. Students and staff members discovering an apparent violation should report the matter to the faculty member in charge of the course or to the chair of the appropriate Hearing Board. The chair is responsible for ensuring that all members of the school or college know to whom the report should be made.

B. Primary Hearing

1. Primary hearings are to be held by the faculty member unless the penalties available to him or her are inadequate, in which case, he or she may refer the case directly to the Hearing Board.

2. Notification. If, after investigation, possibly including a discussion with the student, a faculty member believes that a student has violated the Code of Academic Integrity, the charge shall include notification of a primary hearing to be held as soon as practical after the alleged infraction has come to the attention of the faculty member, but with at least one week's notice to the student. This notification period may be shortened by the agreement of both parties. The charge shall include notice of the availability of the Judicial Advisor.

3. Composition. At the primary hearing the following shall be present: the faculty member concerned, the student in question, and a third party independent witness. The independent witness shall be a faculty member or a student appointed by the Hearing Board Chair or the chair of the faculty member's department. The student may bring to the hearing an advisor and additional witnesses to testify to his or her innocence.

4. Procedure.

a. At the primary hearing, the faculty member shall present evidence in support of the charge against the student. The student shall be given the opportunity to respond and, if he or she wishes, to present evidence refuting the charge.

b. The function of the independent witness is to observe the proceedings impartially, and in the event of an appeal from the judgment of the faculty member, be prepared to testify as to the procedures followed.

c. After hearing the student, the faculty member may either dismiss the charge, or if there is clear and convincing evidence that the student has violated this Code, find the student guilty. If the student is found guilty, the faculty member may impose any suitable grade punishment including failure in the course.[3]

d. A student wishing to seek review of the decision may bring the case before the Academic Integrity Hearing Board of the faculty member's college.

e. A faculty member who gives a penalty for a violation of academic integrity shall immediately report this action and the nature of the violation in writing to the student and to the record-keeper of the faculty member's Academic Integrity Hearing Board. This record-keeper shall then be responsible for its communication to the record-keeper in the student's college.

f. If the student fails to attend the primary hearing without a compelling excuse, the hearing may proceed in his or her absence.

C. College Academic Integrity Hearing Boards

1. Composition. Each college and school in the University, including the Graduate School and the Division of Summer Session, Extramural Study, and Related Programs, shall establish its own Academic Integrity Hearing Board. A model Hearing Board consists of the following:

a. A chair who is a member of the faculty, and, preferably, an experienced Board member, appointed by the dean of the college for a two-year term.

b. Three faculty members elected for three-year terms by the faculty of the college, except that in the case of the Division of Summer Session, Extramural Study, and Related Programs the faculty members shall be appointed by the dean.

c. Three students elected by the student body of the college or appointed by the dean of the college for at least one year, and preferably two-year terms. When possible, student terms should be staggered.

d. A non-voting record-keeper responsible for keeping clear and complete records of the proceedings.

2. Jurisdiction

a. The student may seek review of the decision of the primary hearing if:

1) He or she believes the procedure was improper or unfair.

2) He or she contests the finding of the faculty member.

3) He or she believes the penalty was too strict considering the offense.

b. After holding a primary hearing, the faculty member may bring the case to the Hearing Board if he or she believes a failing grade is too lenient considering the offense.

c. A student found guilty of more than one violation of the Code may be summoned before the college Hearing Board by the dean of his or her college. The Hearing Board may impose an additional penalty for such repeated offenses.

d. The dean of student's college who receives a report that a student has committed a violation of academic integrity while attending another academic institution or while enrolled in a Cornell sponsored off-campus program may, if he or she feels the situation warrants, summon the student to appear before the College Hearing Board.

The Hearing Board may impose any penalty, including an additional penalty, it feels appropriate for the violation involved.

e. The Academic Integrity Hearing Board shall hear all cases that come before it de novo.

While the Hearing Board may recommend an increase in any penalty imposed at the primary hearing, it should consider raising the penalty, if it is the student seeking review, only in the exceptional case.

f. The individual seeking review shall notify the chair of the Hearing Board of the faculty member's college within ten working days of the primary hearing. An exception to this deadline may be granted at the discretion of the chair of the Hearing Board on a showing of good cause.

3. Procedures
   a. Each Board shall conform to procedures established by the Faculty Council of Representatives. Any college or school wishing to adopt a Board or procedures varying from this model must receive prior approval from the Dean of Faculty.
   b. The Academic Integrity Hearing Board shall convene as soon as practical after notification of a request for review, although seven days notice should be given to all parties if possible. If a grade for the student in the course must be submitted before a case can be decided, the faculty member shall record a grade of incomplete, pending a decision by the Hearing Board.
   c. Those present at the Hearing shall be:
      1) The student, who has the right to be accompanied by an advisor and/or relevant witnesses,
      2) The faculty member, who has the right to bring relevant witnesses,
      3) The third party independent witness, if a primary hearing was held,
      4) Any other person called by the chair.
   d. Should the student or faculty member fail to appear before the Hearing Board, the Board shall have full authority to proceed in his or her absence.
   e. The Board members shall hear all available parties to the dispute and examine all the evidence presented. The Board may solicit outside advice at the discretion of the chair. The chair shall preside over the Hearing to ensure that no party threatens, intimidates, or coerces any of the participants.
   f. The student shall have the right to present his or her case and to challenge the charges or the evidence. The student's advisor may assist the student in the presentation and questioning.
   g. At least two-thirds of the voting Board members shall be present at every Hearing, including two students and two faculty members. Both parties may agree in writing to waive this quorum. Of those present, a simple majority shall decide the issue. The chair shall vote only in the case of a tie vote. The Board shall find the student guilty only if there is clear and convincing evidence indicating that the student has violated this Code.[4]
   h. The chair shall notify each party to the dispute, in writing, of the Board's decision and, if appropriate, the penalty imposed. If the judgment of the faculty member is affirmed by the Board, or if the Board decides a different penalty is warranted, the dean of the faculty member's college and the dean of the student's college shall also receive the report.
   i. If the student's college is different from the faculty member's, the chair shall alter the composition of the Board hearing the case by substituting or adding one faculty member and one student from the Hearing Board of the student's college.
4. The Board may act in one or more of the following ways:
   a. Find the student innocent of the charge.
   b. Find the student guilty of the charge and
      1) Recommend to the faculty member that he or she reduce the penalty given.
      2) Affirm the faculty member's decision.
      3) Recommend that the faculty member record a failing grade for the course, or for some portion of it.
      4) Recommend to the dean of the student's college that the student be placed on probation (or the college's equivalent).
      5) Recommend to the dean of the student's college that the student be suspended from the University for a period of time.
      6) Recommend to the dean of the student's college that the words "declared guilty of violation of the Code of Academic Integrity" be recorded on the student's transcript. The Hearing Board may set a date after which the student may petition the Board to have these words deleted from the transcript.
      7) Recommend to the dean of the student's college that the student be expelled from the University.
      8) Recommend to the dean of the student's college any other suitable action, including counseling, community service, or reprimand.
5. The student may seek review of the decision of the Hearing Board to the dean of the student's college within four weeks of the Board's decision. Exceptions to this deadline may be granted by the dean of the student's college on a showing of good cause. The dean may not increase the penalty recommended by the Hearing Board unless the Hearing Board had original jurisdiction in the case. The dean of the student's college should ensure that the recommendation of the Hearing Board is carried out or should give the Hearing Board and the parties a written explanation of why the recommendation was disregarded.
6. Annual Reports. Each college Academic Integrity Hearing Board shall submit a summary report of its proceedings (without identifying any particular student) to the Dean of the Faculty at the end of the academic year. The names of the members of the Board and any significant departures in procedures should be reported as well.
7. The existing school honor codes (as in the College of Veterinary Medicine and the Law School) are not governed by the foregoing legislation, but current versions of these honor codes must be kept on file with the Office of the Dean of Faculty.

   In the case of allegations against a student enrolled in a course subject to a school honor code but registered in another college, all actions beyond the primary hearing revert to the Hearing Board of the student's college.
8. Records of Action
   a. If the student is found guilty, a record of the outcome of the case and the nature of the violation shall be kept by the Hearing Board, and copies shall be sent to the record-keeper in the student's college, if different. Unless the decision provides for notation on the student's transcript, this record shall be disclosed only to deans of colleges or Hearing Boards considering other charges against the same student. A student may waive this right to confidentiality.
   b. If the student is found not guilty by the Hearing Board, all records of the case, including the report of the primary hearing, shall be expunged from the files of the record-keeper.

---

[1] Adopted by the Faculty Council of Representatives, May 24, 1976, Records, pp. 4525–27C, Appendix A; March 11, 1981, Records pp. 5298–5303C; May 12, 1982, Records, pp. 5505–06C; April 10, 1985, Records pp. 5991–6002C and May 15, 1985, Records, pp. 6073–84.

[2] "Arbitrary and Capricious" describes actions which have not sound basis in law, facto, or reason or are grounded solely in bad faith or personal desires. A determination is arbitrary and capricious only if it is one no reasonable mind could reach.

[3] "Clear and convincing" as a standard of proof refers to a quantum of evidence beyond a mere preponderance but below that characterized as "beyond a reasonable doubt" and such that it will produce in the mind of the trier of fact a firm belief as to the facts sought to be established.

[4] See the definition at section II.B.4.c.

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects. Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects. All proposals involving human subjects in any category must be submitted to the committee for review. Inquiries, communications, and requests for guidelines should be directed to the committee's Executive Secretary, 117 Day Hall (255-5014). The guidelines are also available on CUINFO under OSP (Office of Sponsored Programs).

USE OF ANIMALS FOR COURSES

The Cornell University Institutional Animal Care and Use Committee has made the following statement on the use of animals for courses: "In certain courses the use of vertebrate animals serves as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is available from departments in which the courses are offered. A student who is reluctant to voice his or her concerns about animal use in a particular course, or who thinks these concerns have not received proper attention, may seek assistance from the director of the Cornell Center for Research Animal Resources (253-3516)."

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

Urie Bronfenbrenner, chair, G60e Van Rensselaer Hall

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent visiting scholars who would periodically visit the university to supplement the activities of the permanent university faculty. Professors-at-Large, who serve for a six-year term, are full members of the faculty when in residence.

Term Ending in 1990

Heilbron, John L., historian of science. University of California, Berkeley
Lewis, Bernard, Islamicist. Princeton University
Welty, Eudora, novelist and short story writer

Term Ending in 1991

Marshall, Geoffrey, political theorist. Queen's College, Oxford
Rutter, Michael, psychiatrist. Institute of Psychiatry, University of London
Southwood, Sir Richard, biologist. Linacre Professor of Zoology, Oxford

Term Ending in 1992

Choay, Françoise, historian of architecture and city planning. Institut d'Urbanisme, University of Paris
Mazrui, Ali A., Africanist, political scientist. University of Michigan and University of Jos, Nigeria
Thorne, Kip, astrophysicist. California Institute of Technology

Term Ending in 1993

Allegre, Claude J., geological scientist. University of Paris
Billington, David, civil engineer. Princeton University
Wehner, Rüdinger, zoologist and behavioral neurophysiologist. University of Zurich

Term Ending in 1994

Biggs, Peter M., veterinary scientist. President, United Kingdom Institute of Biology
Johnson, Barbara, literary critic. Harvard University
Panofsky, Wolfgang K. H., physicist. Committee on International Security and Arms Control, National Academy of Sciences; Stanford University

Term Ending in 1995

Doniger, Wendy, historian of religions. University of Chicago
Kon, Igor S., sociologist and ethnologist. USSR Academy of Pedagogical Sciences
Levine, Raphael D., chemical physicist. The Hebrew University of Jerusalem
Swaminathan, M. S., natural ecologist. President, National Academy of Sciences, India

Term Ending in 1996

Lloyd, Geoffrey E. R., Professor of Ancient Philosophy and Science and Master of Darwin College, Cambridge University
Myers, Norman, consultant scientist on conservation and management of tropical diversity
Rowlinson, John Shipley, chemical engineer, Oxford University

CENTER FOR APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, Sage Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments (Abbreviations: Bio S = Biological Sciences, Chem E = Chemical Engineering, CS = Computer Science, EE = Electrical Engineering, M&AE = Mechanical and Aerospace Engineering, OR&IE = Operations Research and Industrial Engineering, and T&AM = Theoretical and Applied Mechanics.)

Selected Applied Mathematics Courses

Basic Graduate Courses in Applied Mathematics (and Analysis)

Math 413–414 Introduction to Analysis
Math 433–434 Introduction to Algebra
Math 511–512 Real and Complex Analysis
Math 521 Measure Theory and Lebesgue Integration
Math 522 Applied Functional Analysis
Math 531–532 Algebra
Math 551 Introductory Algebraic Topology
Math 515–516 Mathematical Methods in Physics
T&AM 612–613 Methods of Applied Mathematics

Analysis (and Differential Equations)

Math 517–518 (also Math 427) Ordinary Differential Equations
Math 519–520 (also Math 428) Partial Differential Equations
Math 552 Differentiable Manifolds
Math 611–612 Seminar in Analysis
Math 613 Functional Analysis
Math 615 Fourier Analysis
Math 622 Riemann Surfaces
Math 623 Several Complex Variables
Math 627–628 Seminar in Partial Differential Equations

Logic and Theory of Computing

CS 671 Introduction to Automated Reasoning
CS 682 Theory of Computing
CS 715 Seminar in Programming Refinement Logics
Math 581 Logic
Math 681–682 Seminar in Logic
Math 683 Model Theory
Math 684 Recursion Theory
Math 685 Metamathematics
Math 687 Set Theory
Math 688 Topics in Applied Logic

Discrete and Numerical Mathematics

CS 621 Matrix Computations
CS 622 Numerical Optimization and Nonlinear Algebraic Equations
CS 681 Analysis of Algorithms
CS 721–722 Advanced Topics in Numerical Analysis
CS 729 Seminar in Numerical Analysis
EE 543 VLSI Architectures and Algorithms
Math 425 Numerical Solution of Differential Equations
Math 627–628 Seminar in Partial Differential Equations
Math 655 (also CS 655) Mathematical Foundations for Computer Modeling and Simulation

OR&IE 627 Dynamic Programming
OR&IE 630–631 Mathematical Programming I and II
OR&IE 632 Nonlinear Programming
OR&IE 633 Graph Theory and Network Flows
OR&IE 634 Combinatorial Optimization
OR&IE 636 Integer Programming
OR&IE 639 Convex Analysis

Information Communication and Control Theory

EE 411 Random Signals in Communications and Signal Processing
EE 425 Digital Signal Processing
EE 468 Communication Theory
EE 521 Theory of Linear Systems
EE 522 Theory of Nonlinear Systems
EE 526 Advanced Signal Processing
EE 528 Multisensor Digital Signal Processing
EE 561 Error Control Codes
EE 562 Fundamental Information Theory
EE 567 Digital Communication
EE 573 Estimation and Control in Discrete Linear Systems
EE 574 Optimal Control and Estimation for Continuous Systems

Mathematical Biology

Bio S 662 Mathematical Ecology
Stat & Biom 451 Mathematical Modeling of Populations

Mathematical Economics

Econ 519 Econometrics I
Econ 520 Econometrics II
Econ 610 Stochastic Economics: Concepts and Techniques
Econ 617–618 Mathematical Economics
Econ 619–620 Advanced Topics in Econometrics

Mechanics and Dynamics

Chem E 731 Advanced Fluid Mechanics and Heat Transfer
Chem E 734 Fluid Mechanics in Suspensions
Chem E 751 Mathematical Methods of Chemical Engineering Analysis
Chem E 753 Analysis of Nonlinear Engineering Systems: Stability, Bifurcation, and Continuation
EE 681 (also A&EP 761) Kinetic Theory
M&AE 601 Foundations of Fluid Dynamics and Aerodynamics
M&AE 602 Incompressible Aerodynamics
M&AE 603 Compressible Aerodynamics
M&AE 704 Viscous Flows
M&AE 732 Analysis of Turbulent Flows
M&AE 733 Stability of Fluid Flow
M&AE 734 Turbulence and Turbulent Flow
M&AE 736 Computational Aerodynamics
M&AE 737 Computational Fluid Mechanics and Heat Transfer
T&AM 570 Intermediate Dynamics
T&AM 671 Advanced Dynamics
T&AM 672 Celestial Mechanics (also Astro 579)
T&AM 673 Mechanics of the Solar System (also Astro 571)
T&AM 675 Nonlinear Vibrations
T&AM 751 Continuum Mechanics and Thermodynamics
T&AM 752 Nonlinear Elasticity
T&AM 776 Qualitative Theory of Dynamical Systems

Probability and Statistics

EE 562 Fundamental Information Theory
EE 563 Communication Networks
EE 564 Decision Making and Estimation
EE 566 Queuing Networks
EE 664 Foundations of Inference and Decision Making
Math 571–572 Probability Theory
Math 573 Experimental Design and Multivariate Analysis
Math 574 Probability and Statistics
Math 575 Sequential Analysis, Multiple Decision Problems
Math 577 Nonparametric Statistics
Math 670 Topics in Statistics
Math 674 Multivariate Analysis
Math 675 Statistical Decision Theory
Math 677–678 Stochastic Processes
OR&IE 561 Queuing Theory and Its Applications
OR&IE 563 Applied Time-Series Analysis

CENTER FOR ENVIRONMENTAL RESEARCH

470 Hollister Hall, 255-7535

The Center for Environmental Research is a campuswide center that promotes and coordinates a comprehensive program of interdisciplinary research, teaching, and outreach activities on environmental issues. CER's seven major programs are (1) the Ecosystems Research Center (ERC), an Environmental Protection Agency–designated center of excellence in ecosystems science; (2) the Cornell Laboratory for Environmental Applications of Remote Sensing (CLEARS), which conducts teaching, research, and outreach activities on remote sensing and resource inventory and analysis; (3) the Water Resources Institute, which conducts research and public service activities related to water quality and supply; (4) the Waste Management Institute and the New York State Solid Waste Combustion Institute, an independent entity located at Cornell's Waste Management Institute, which conduct research and outreach on waste-management issues; (5) the Environmental Policy Program, which addresses the policy aspects of issues such as biotechnology, hazardous waste management, and regulation of toxic substances; (6) the Global Environment Program, which conducts research on environmental problems at the global scale such as climate change, stratospheric ozone depletion, and trans-boundary air pollution; and (7) the Biological Resources Program, which coordinates and conducts research activities relevant to the conservation, regulation, and management of biological resources, especially in marine environments.

Courses

Although CER does not engage in teaching, courses relevant to the programs are offered in appropriate departments: (1) ecosystems science through the Section of Ecology and Systematics and the Department of Natural Resources; (2) remote sensing through the departments of Civil and Environmental Engineering and Soil, Crop, and Atmospheric Sciences; (3) water resources primarily through the departments of Agricultural and Biological Engineering; Soil, Crop and Atmospheric Sciences; and Civil and Environmental Engineering; (4) waste management primarily through the departments of Environmental Engineering, Agricultural and Biological Engineering, and Agricultural Economics; (5) environmental policy through Toxicology, Natural Resources, and City and Regional Planning; (6) and biological resources through the Division of Biological Sciences.

Material relevant to global environmental issues is covered by courses in several departments, including Environmental Engineering, Mechanical and Aerospace Engineering, Agricultural Engineering, Geology, Natural Resources, Rural Sociology, Agricultural Economics, and the Section of Ecology and Systematics.

Because courses relating to environmental policy are not indexed by that title, representative courses are listed below that should be of interest to those who would like to study environmental policy.

Religion, Ethics, and the Environment (Natural Resources 407)
Policy, Planning and Administration (Natural Resources 608)
Seminar in Environmental Values (Natural Resources 611)
Environmental Policy (Natural Resources 661)
Legal Aspects of Land-Use Planning (City and Regional Planning 653)
Land Resources Protection Law (City and Regional Planning 656)
Public Policy and Preservation Planning (City and Regional Planning 665)
Environmental Politics (City and Regional Planning 480)
Environmental Ethics (Philosophy 246 and Biological Sciences 206)
Economic Analysis of Government (Civil and Environmental Engineering 322 and Economics 308)
Risk Management of Toxic Chemicals (Biological Sciences 659)

CENTER FOR INTERNATIONAL STUDIES

The Center for International Studies (CIS) was established in 1961 to encourage, coordinate, and support comparative and interdisciplinary research on international subjects. In a mutually dependent world, international problems require interdisciplinary collaboration, and CIS coordinates and assists such collaborative efforts both on campus and in the field. Charged with the responsibility of furthering international and comparative research and teaching—involving efforts in almost every unit of the university—over the past three decades, CIS has evolved into an administrative focus for more than twenty international programs.

The Center for International Studies at Cornell is one of the largest and most diverse in the United States. Currently it oversees five Title VI National Resource Centers (East Asia, Latin American Studies, South Asia, Southeast Asia, and Western Societies), as well as sixteen topical programs and the university study-abroad program. Over 500 faculty voluntarily collaborate in the center's programs and well over 300 graduate students are involved directly in its international programs. Undergraduate concentrations in International Relations and Modern European Societies serve 285 students.

Cornell is committed to the application and expansion of its resources to study the global community in all its complexity. These resources include a faculty of preeminent scholars and teachers, excellent research facilities, ability to teach forty-five languages, and a library system with more than 2,500,000 volumes on topics related to international and comparative studies.

As the world changes, Cornell's international programs change to study those developments. In addition to area studies, these programs focus on topics as varied and vital as international competitiveness, agriculture, nutrition, population, law, planning, politics, economics, and world peace. These areas and topics change as interest, demand, and potential warrant. As one program gains enough momentum and recognition to attract its own resources, the center applies its resources to another pilot activity that brings faculty and students together across customary professional and departmental boundaries.

In addition, CIS was recently given responsibility by the university to redesign and expand foreign study options for Cornellians, which has resulted in our Cornell Abroad Program. The center also encourages international research and travel by students through its annual Travel Grant Program.

Although the center has both an endowment and an appropriation from the university to support interdisciplinary international studies, Cornell monies are only a fraction of the total funds involved in international studies at Cornell. Programs seek funding from foundations, the federal government, alumni, and international agencies, a process that the center assists with as necessary. When particular programs are in a low budget cycle, rather than allowing them to lapse, the center continues to support those that show promise to keep the voluntary faculty groups operating together until new outside funding can be acquired.

Current programs coordinated by the Center for International Studies include the following:

Master of Professional Studies in International Development
Norman Uphoff, Field Representative
170E Uris Hall

A program intended for midcareer practitioners is sponsored by the center and leads to a Master of Professional Studies in International Development. Interested individuals should apply through the Graduate School.

Program on International Relations
Peter Katzenstein
Walter S. Carpenter Professor of International Studies
160 Uris Hall

Undergraduates interested in an international relations concentration should see Professor Katzenstein.

CENTER FOR STATISTICS

The Cornell Center for Statistics coordinates universitywide activities in statistics and probability at the graduate and research level. Students interested in graduate study in probability and statistics can apply to the Field of Statistics or to one of the other graduate fields of study that offer related course work.

Students in the Field of Statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for graduate study in statistics and probability, students should contact the director of the Statistics Center, 272 Caldwell Hall.

Graduate students can design many different programs within the Field of Statistics. These can be broadly grouped as follows: biometry, biostatistics, economic and social statistics, operations research, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

Below are listed selected courses in probability and statistics of interest to graduate students in the field.

Economics

519 Econometrics I

520 Econometrics II

619 Topics in Econometrics I

620 Topics in Econometrics II

Electrical Engineering

467 Communication Systems I

561 Error Control Codes

562 Fundamental Information Theory

563 Communication Networks

564 Decision Making and Estimation

566 Queuing Networks

568 Communication Systems II

663 Advanced Topics in Information Theory

664 Foundations of Probability

Industrial and Labor Relations

310 Design of Sample Surveys

312 Applied Regression Methods

410 Techniques of Multivariate Analysis

411 Statistical Analysis of Qualitative Data

510–511 Introductory Statistics for the Social Sciences

610 Seminar in Modern Data Analysis

711 Sensitivity Analysis in Linear Regression

712 Theory of Sampling

713 Empirical Processes with a Statistical Application

Mathematics

471 Basic Probability

472 Statistics

571–572 Probability Theory

574 Mathematical Statistics

575 Sequential Analysis, Multiple Decision Problems

577 Nonparametric Statistics

670 Topics in Statistics

674 Multivariate Analysis

675 Statistical Decision Theory

677–678 Stochastic Processes

Operations Research

561 Queuing Theory and Its Application

562 Inventory Theory

563 Applied Time Series Analysis

565 Statistics for Manufacturing

570 Statistical Methods in Quality and Reliability Control

580 Digital Systems Simulation

630–631 Mathematical Programming I and II

632 Nonlinear Programming

637 Dynamic Programming

645 Game Theory I

652 Advanced Inventory Control

660 Applied Probability

661 Applied Stochastic Processes

662 Advanced Stochastic Processes

663 Time-Series Analysis

664 Deterministic and Stochastic Control

665 Advanced Queuing Theory

670 Applied Statistics

671 Intermediate Applied Statistics

672 Statistical Decision Theory

673 Nonparametric Statistical Analysis

674 Design of Experiments

675 Statistical Analysis of Qualitative Data

676 Statistical Analysis of Life Data

677 Statistical Selection and Ranking Procedures

680 Simulation

Statistics and Biometry

408 Theory of Probability

409 Theory of Statistics

417 Matrix Algebra

601–603 Statistical Methods I, II, and III

605 Applied Regression Analysis

606 Sampling Biological Populations

607 Nonparametric and Distribution-Free Statistical Methods

662 Mathematical Ecology

699 Special Problems in Statistics and Biometry

701 Advanced Biometry

717 Linear Models

718 Variance Components

797 Statistical Consulting

COGNITIVE STUDIES

Frank Keil, Department of Psychology, and Sally McConnell-Ginet, Department of Modern Languages and Linguistics, co-directors

Beverly Scofield, cognitive studies coordinator, 225 Uris Hall (telephone: 255-6431)

Cognitive studies is a new and rapidly growing field of study that focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theoretical, experimental, and computational—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive studies has drawn primarily from the disciplines of computer science, linguistics, philosophy, and psychology. In the College of Arts and Sciences the field of cognitive studies is primarily represented by faculty in these departments, as well as in mathematics. It is also represented by faculty in the Department of Human Development and Family Studies (College of Human Ecology), in the Section of Neurobiology and Behavior (Division of Biological Sciences), in the Department of Education (College of Agriculture and Life Sciences), and in the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Concentration" in the College of Arts and Sciences section.

Graduate Programs

At the graduate level Cornell offers a graduate field minor in cognitive studies. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each student, fosters highly interdisciplinary committees. It is the norm for students interested in cognitive studies to have faculty members from such departments as Philosophy, Computer Science, Modern Languages and Linguistics, and Psychology on common committees. For further information on the graduate Field of Cognitive Studies, contact Barbara Lust, graduate faculty representative, NG28 Van Rensselaer Hall (telephone: 607/255-0829).

Courses

Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section "Special Programs and Interdisciplinary Studies."

CORNELL ABROAD

Cornell Abroad offers undergraduates a wide variety of academic programs that are intellectually rigorous, academically and socially diverse, and culturally enriching. Study abroad is considered an integral part of students' formal education complementing and enhancing their study in Ithaca. Qualified students may study abroad by attending a program sponsored directly by Cornell or another American institution, or by enrolling in a foreign university. In all cases students must enroll through Cornell Abroad.

LOCATIONS ABROAD

Cornell undergraduates regularly study in approximately 40 different countries and enroll in more than 240 programs and universities throughout the world. The university and several colleges at Cornell have established a number of their own foreign study programs and affiliations with selected institutions abroad. In addition to a challenging course of study at a foreign university, the programs offer the experience of immersion in the foreign life and culture.

Cornell Abroad has programs or affiliations with the following universities or programs:

EAST ASIA

China
- Peking and Nanjing Universities, Chinese Language and Study Programs, University of International Business and Economics: Chinese Business and Society Program (CIEE)
- Xiamen University, PRC

Japan
- Kyoto Center for Japanese Studies
- Inter-University Center for Japanese Language Studies

Korea
- Yonsei University, Seoul

SOUTH ASIA

India
University of New Delhi

SOUTHEAST ASIA

Indonesia
Institut Keguruan Dan Ilmu Pendidikan (IKIP), Malang (CIEE)

Australia
Curtain University of Technology, Perth
University of Sydney, Sydney
University of New South Wales, Sydney
Macquarie University, Sydney
University of Technology, Sydney
The University of Wollongong, Wollongong

EUROPE (EASTERN)

Soviet Union
Leningrad State University (CIEE)
School of Slavonic and East European Studies Programs in various locations

EUROPE (WESTERN)

Belgium
Université Catholique de Louvain (Le Département des Sciences Politiques et Sociales)

Denmark
International Study Program in Copenhagen (DIS)

France
Cornell's EDUCO program: Université de Paris 7, Paris 1, Institut d'Études Politiques de Paris (Sciences Po)
University of Paris: Critical Studies Program (CIEE)

Germany
Universität Hamburg
Technische Universität Darmstadt

Ireland
University of Limerick
Trinity College, Dublin, Ireland

Italy
Cornell College of Art and Architecture in Rome
Intercollegiate Center for Classical Studies in Rome

Spain

Universidad de Sevilla (with three weeks in Madrid)

Sweden
Agricultural College of Sweden, Uppsala
The Swedish Program at the University of Stockholm

Switzerland
Université de Genève

United Kingdom
University of Bristol
Cambridge University
University of Edinburgh
University of Manchester
Oxford University
University of Reading
University of Sussex
University of London:
King's College
University College
Imperial College of Science and Technology
London School of Economics and Political Science
Queen Mary Westfield College
School of Oriental and African Studies
School of Slavonic and East European Studies

LATIN AMERICA

Honduras	Escuela Agrícola Panamericana, Zamorano
Mexico	Instituto Tecnológico y de Estudios Superiores de Monterrey
Mexico	Universidad de las Américas-Puebla

MIDDLE EAST

Egypt	American University in Cairo
Israel	Ben Gurion University
	Haifa University
	Hebrew University of Jerusalem
	Technion (Israel Institute of Technology)
	Tel Aviv University

Other Locations Abroad

Cornell students are not limited to the locations listed above. In recent years, they have also studied in other universities in the countries mentioned above as well as ones in Argentina, Austria, Brazil, Colombia, Costa Rica, Dominican Republic, Ecuador, Greece, Honduras, Hungary, Jamaica, Kenya, Nepal, New Zealand, Nigeria, the Philippines, and the West Indies.

Externally Sponsored Programs or Enrollment in a Foreign University

Undergraduates also apply through Cornell Abroad to a wide variety of study abroad programs sponsored by other American colleges and to nonaffiliated foreign universities. Cornell Abroad forwards all applications to the programs or universities for the students. Those attending programs or universities approved by their Cornell college will remain registered at Cornell, receive credit for approved coursework, and continue to be eligible for financial aid.

Who Studies Abroad

All Cornell undergraduate students are eligible to study abroad. Since most Cornell colleges or schools require that students complete at least sixty hours of their undergraduate credit on the Cornell campus, students who transfer to Cornell as juniors generally cannot count study abroad credit toward their Cornell degree.

When Students Study Abroad

Cornell students may study abroad their sophomore, junior, or senior year. After weighing a number of considerations, many students find that their junior year is the most satisfactory time to study abroad. To ensure preparation for the program which best meets a student's needs, it is important to begin planning for study abroad early in the freshman year.

Transfer of Credits and Grades

Only students applying through Cornell Abroad will receive credit for their work abroad. Cornell Abroad has catalogs, program materials, course syllabi, and program evaluations to help students plan their studies abroad. As part of the application process, students must obtain approval of their academic plans from their college study abroad adviser listed at the end of this article.

While policies and procedures vary from one Cornell college or school to the next, all Cornell colleges and schools regularly accept credits for study abroad, normally 30 credits per year or 12–20 per semester when students have taken a full load according to the standards of the foreign institution. After their return, their college will review their work and make the final decision concerning transfer of credit. The Cornell transcript will indicate the courses taken, the credits earned, and the foreign grades received. Cornell will not translate the value of each grade into an American equivalent, and will not compute them into the Cornell grade point average.

Foreign Language Requirements

Many programs abroad require two years or the equivalent of college-level language study. Students should make firm plans for foreign language study early in their freshman year if they would like to study in a country in which English is not the primary language.

For students who do not have proficiency in a foreign language, there are still some options outside of English-speaking countries. For example, Cornell Abroad sends students to programs taught in English in Belgium, Denmark, Egypt, Hong Kong, Indonesia, Israel, Italy, Korea, and Sweden. Many students in these programs do not start studying the country's language until they are abroad, but it is desirable to start studying the language at least a year before going abroad, if possible.

Length of Stay

Cornell students study abroad for one semester or the academic year. When possible, it is often desirable to study for the entire year. It takes time to adjust successfully to a different educational system, language, and culture. The full year provides a more complete immersion in the foreign country's academic life and culture. Students who are studying in foreign languages especially find it to be beneficial to study for a year. Most students find that it requires the full year to gain fluency.

There are practical sides to this question as well. In many cases, foreign universities have year-long courses. As a result, semester students often miss half of their courses and have more limited course options than full-year students. The choices of universities can be limited for semester students as well.

Many students at Cornell find it necessary to limit their study abroad to one semester. Cornell Abroad has information on a number of strong semester programs.

Housing Arrangements

Students generally have the option of living with a selected family, in a university dormitory room, or in an apartment. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Admission and Application Procedure

All students who wish to receive Cornell credit for study abroad must fill out the Cornell Abroad application materials available in 474 Uris Hall or the college study abroad offices. All application materials should be submitted to Cornell Abroad or, if your college prefers, your college study abroad office. Cornell Abroad will forward all applications to the appropriate institutions.

Application Deadlines

Deadlines for Cornell affiliated programs

October 15, 1990 for spring term 1991 study abroad except in the case of British universities.

December 1, 1990 for 1991–92 at Oxford or Cambridge.

January 31, 1991 for the 1991–92 Kyoto Center for Japanese Studies program.

February 15, 1991 for studying in 1991–92 at most universities and in the spring semester 1992 at British universities, though British universities sometimes will consider applications for the spring semester as late as October 15 of the previous year.

Deadlines for external programs and direct enrollment

The application deadlines for external programs and direct enrollment in foreign universities vary by program. Students should submit complete application materials to Cornell Abroad at least two weeks before the program or university deadline.

Costs

When studying abroad, candidates for a Cornell degree pay the tuition of the foreign university or the specific program. Tuitions vary considreably by program. In addition, they continue to pay the regular Cornell University fee (*not* tuition), which is $1,480 per semester in 1990–91. Students studying in the United Kingdom and Israel pay an additional semester fee of $250 for the Cornell Centers there unless they are attending a British program sponsored by another American university. Detailed information on costs is available at the Cornell Abroad office.

Financial Aid

All student going abroad, whether through a Cornell program or a program sponsored by another institution, are eligible for financial aid as consistent with general university policy.

Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (for students from all colleges): Urbain J. DeWinter, Director and Lucy Barcelo, Assistant Director, 474 Uris Hall.

In addition to individual advising, Cornell Abroad offers catalogs, program materials, course syllabi, program evaluations, books, videotapes, and a series of information meetings that are advertised in the *Cornell Daily Sun.*

College study abroad advisers:

Agriculture and Life Sciences: Donald Burgett, Roberts Hall;

Architecture, Art, and Planning: Professor Christian Otto, 140E Sibley Hall;

Arts and Sciences: Assistant Dean Beatrice Rosenberg, 55 Goldwin Smith Hall;

Engineering: Associate Dean Richard Lance, 219 Kimball Hall;

Hotel Administration: Professor William Kaven, 545F Statler Hall;

Human Ecology: Florence McCarthy, 170B Martha Van Rensselaer Hall;

Industrial and Labor Relations: Laura Lewis, 101 Ives Hall.

CORNELL-IN-WASHINGTON PROGRAM

The Cornell-in-Washington Program offers students from all colleges within the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research or design projects, and work as externs. The program is administered by the Vice President for Academic Programs and a Faculty Council representing several undergraduate colleges of the university. There are two components of the Washington Program; Public Policy and Architecture. Eligible students in one component may enroll in courses in the other.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, DC 20037. The academic, office, and studio space is located on the first floor; twenty-seven residential units for students and faculty are on the upper floors.

Cornell-in-Washington is a program of instruction, research, and externships in the nation's capital. The program is open to qualified juniors, seniors, and graduate students from all participating colleges, schools, and divisions of the university. Full academic credit can be earned for the semester. Programs are offered in public policy and architecture. Public policy students enroll in Government 500 (cross-listed for statutory credit), which involves a major research study carried out in conjunction with an externship. Students may work as externs with congressional committee offices, executive-branch agencies, interest groups, research institutions and other organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, architectural history, natural resources, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. *A description of the architecture program may be found in the College of Architecture, Art, and Planning section.*

Tuition

Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing

Apartments may be rented at the Cornell Center during the academic year and during the summer. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of $150 is required to reserve a space. Students are discouraged from bringing automobiles; street parking is not available. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the Center.

Applications

Application forms are available from the Cornell-in-Washington office at 131A Sage Hall. Applications should be submitted the semester prior to participation and admissions are made on a rolling basis. It is to the student's advantage to apply early.

Information

Regular information meetings are held in early October and March. These meetings are advertised in the *Cornell Daily Sun* and on campus bulletin boards. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell-in-Washington office at 131A Sage Hall (607) 255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS

In conjunction with the College of Arts and Sciences, Cornell's Institute for Public Affairs (CIPA) is now offering a five-year dual-degree program for Cornell students. Those enrolling in this program would remain in Ithaca a fifth year after the BA or BS and earn an MPA (Master of Public Administration) degree. A semester in the Cornell-in-Washington Program is recommended.

Cornell's MPA program seeks to provide students with:

- a thorough understanding of the political processes through which issues, problems, and policies are formulated
- an understanding of the economic bases for government action in a market economy, including both micro and macro economic techniques and problems
- competence in the quantitative methods needed to analyze and evaluate programs and policies
- familiarity with public budgets and finance
- a thorough knowledge of the behavior of both public and private organizations and their management
- familiarity with the regulatory process
- sensitivity to the moral and ethical dimensions of policy questions
- an understanding of the historical context and development of governmental programs

If you are interested in pursuing a career in public service either in an administrative or a policy position in the government or the not-for-profit sector, you may qualify to complete an MPA at Cornell with only one additional year of study. Additional information is available at the CIPA office, 131A Sage Hall, 255-4090.

CORNELL PLANTATIONS

A museum of living plants and natural history resources, Cornell Plantations encompasses the arboretum, botanical garden, and natural areas of Cornell University totaling nearly 3,000 acres that include the woodlands and gorges bordering the central campus. Plantations lands provide outdoor laboratories for academic programs and research in disciplines ranging from geology to landscape architecture. All accessioned plant types are labelled. The F. R. Newman Arboretum specializes in trees and shrubs native to New York State. The botanical garden features herbs, flowers for cutting and drying, garden perennials, heritage and modern vegetables, international crops and weeds, rock garden plants, peonies, flowering groundcovers, rhododendrons and companion plants, and plants native to the Cayuga Lake Basin. Gardens on campus exhibit rhododendrons and azaleas, unusual plants for horticultural study, and poisonous plants. Orchids are displayed in the Daisy Farrand Solarium at A. D. White House. Nearly 2,000 acres of land in and around Tompkins County are set aside as nature preserves providing quality examples of native vegetation and protection for rare species and communities for class and research use. Faculty are asked to notify the Program Coordinator (255-9638) before scheduling class visits or beginning research. The Education Program offers non-credit courses, lecture series, symposia, special events, and interpretive tours. Students are encouraged to volunteer as photographers, authors, guides, and workers. Publications include the quarterly *Cornell Plantations*, newsletters, a semiannual insert in the *Cornell Chronicle*, and *Garden Pages* which provide interpretive materials for the collections. Research on locally endangered plant species is being conducted to provide management guidelines for conservation. In addition, a life science curriculum for elementary schools, LEAP, has been produced based on conceptual-development teaching methods. Maps, publications, and information are available at the garden gift shop in the Lewis Headquarters Building, Cornell Plantations, One Plantations Road, Ithaca, NY 14850-2799 (255-3020).

HISPANIC AMERICAN STUDIES PROGRAM

292 Caldwell Hall (telephone: 255-3197)

The Hispanic American Studies Program is an interdisciplinary academic program that focuses on the contributions, concerns, and welfare of those persons of Hispanic origin who reside in the United States. It includes support for historical, linguistic, literary, social, economic, and political studies of this diverse group of Americans. To this end the program objectives are (1) to expand the available course curriculum by providing both undergraduate and graduate courses pertaining to Hispanic American subject matters; (2) to enlarge the size of the Hispanic American faculty at Cornell through permanent appointments and visiting appointments; and (3) to enhance the Hispanic American academic environment on campus through support of such activities as lectures, conferences, seminars, exhibits, and research activities.

1990–91 Course Offerings

Because courses relating to Hispanic American Studies are not indexed by that title, courses of particular relevance are listed below. Please refer to the appropriate department for details.

ENGR 355: Understanding Cultural Differences in the Engineering Work Environment

HSS 280/ASR 280: Racism in American Society

HSS 370: Social Welfare as a Social Institution

ILR 469: Immigration and the American Labor Force

ILR 628: Cross-Cultural Studies in Organizational Behavior

SOC 265: Hispanic Americans

SPAND 204: Intermediate Composition and Conversation

SPAND 366/LING 366: Spanish in the United States

SPANL 311–312: Advanced Composition and Conversation

SPANL 332: The Modern Drama in Spanish America

SPANL 346: Hispanic Caribbean Culture and Literature

SPANL 390: Fiction of Modern Hispanic Women

SPANL 396: Modern US-Hispanic Prose Fiction

SPANL 397: Colombian Literature

SPANL 492: Latin American Women Writers

SPANL 105 FWS: Paradise Lost: Biculturalism in America

SPANL 106 FWS: Searching for Self in Hispanic fiction

SPANL 107 FWS: The Literature of American Hispanic/Ethnic Women Writers

LING 113 FWS: Two Worlds—Dos Mundos

SPANL 119 FWS: Letters from el Barrio: A Sense of Place in Hispanic American Fiction

SPANL 125 FWS: The City of Hispanic Novels

SPANL 126 FWS: The Complex Fate: Self-Identity and Conflict in the Literature of United States Hispanics and Other Ethnic Groups

PROGRAM IN COMPARATIVE AND ENVIRONMENTAL TOXICOLOGY

J. W. Gillett, director, 16 Fernow Hall, 255-8008 or 255-2163

The Cornell Program in Comparative and Environmental Toxicology is coordinated and facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

Graduate Studies

The major in the graduate Field of Environmental Toxicology promotes training leading to the M.S. or Ph.D. degrees and provides both breadth and depth in environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Specialization tracks include cellular and biochemical toxicology; nutritional toxicology; ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research of the faculty associated with the program is focused on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) and with the ecosystems with which these organisms are associated.

Courses

Courses in environmental toxicology are cosponsored by the university academic departments and are open to all graduate students and to those undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below, and details of course content are provided elsewhere in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the graduate faculty representative, 16 Fernow Hall (telephone: 255-8008).

Note: Bracketed courses are not offered 1990–91.

[Tox 370 Pesticides and the Environment (Entomology 370)]
[Tox 419 Animal Cytogenetics (Animal Science 419)]
Tox 438 Cell Proliferation and Oncogenic Viruses (Biological Sciences 438)
Tox 528 Pharmacology (Veterinary Medicine 528)
[Tox 607 Ecotoxicology (Natural Resources 607)]
Tox 610 Introductory Chemical and Environmental Toxicology (Food Science 610)
Tox 611 Molecular Toxicology (Nutritional Sciences 611)
Tox 621 Clinical Veterinary Toxicology (Veterinary Medicine 621)
Tox 640 Principles of Toxicological Pathology (Veterinary Medicine 640)
[Tox 651 Nutrition and the Chemical Environment (Nutritional Sciences 651)]
[Tox 659 Risk Management of Toxic Chemicals (Biological Sciences 659 and Biology and Society 459)]

[Tox 690 Insect Toxicology and Insecticidal Chemistry (Entomology 690)]
Tox 698 Current Topics in Environmental Toxicology (Nutritional Sciences 700, NatRes 698, Ag & Bio Eng 698)
Tox 702 Seminar in Toxicology
Tox 751 Professional Responsibilities of Toxicologists (Biological Sciences 751)
Tox 899 Master's Thesis and Research
Tox 999 Doctoral Thesis and Research

PROGRAM ON SCIENCE, TECHNOLOGY, AND SOCIETY

Sheila Jasanoff, director
632 Clark Hall, 255-3810

The Program on Science, Technology, and Society (STS) is an academic unit that engages in teaching and research concerning the interaction of science and technology with social and political institutions. The program's activities can be divided into four areas: social relations of science and technology; science, technology, and public policy; ethics and values in science and technology; and biology and society. The core faculty of STS is drawn from the social sciences, the humanities, law, biological sciences, and engineering. In cooperation with faculty in other Cornell departments and centers, the STS Program administers two undergraduate curricular offerings: a concentration in Science, Technology, and Society and a major in Biology and Society. The program does not currently enroll students for advanced degrees. However, advanced degree candidates enrolled in established graduate programs at Cornell may work with STS faculty on the interrelations of science, technology, and society.

Graduate Studies

STS does not enroll students for advanced degrees. Rather, the program cooperates with departments in the various colleges to facilitate teaching and research on STS issues. Faculty members affiliated with the STS program are also members of graduate fields of study such as ecology, engineering, history and philosophy of science and technology, government, philosophy, rural sociology, sociology, and environmental toxicology. It is possible to undertake research and course work in the area of science, technology, and society in one of the aforementioned fields, as well as in others. A minor concentration in science and technology policy is available in the graduate field of public affairs and in the Master of Professional Studies (International Development) degree. Further information about these graduate programs may be obtained by contacting the Graduate School.

Undergraduate Studies

Information concerning the STS program, including a list of STS-related courses offered throughout the university and information concerning individual courses of study, may be obtained from the STS program office, 632 Clark Hall (telephone: 255-3810), or the Biology and Society office, 275 Clark Hall (telephone: 255-6042).

Science, Technology, and Society Concentration

Sheila Jasanoff, director; Paul Edwards, Science, Technology and Society; Walter R. Lynn, Civil and Environmental Engineering; June Fessenden MacDonald, Biochemistry; Trevor Pinch, Science, Technology and Society; Alison Power, Ecology and Systematics; Peter Taylor, Science, Technology and Society; and Milton Wachsberg, Philosophy.

The undergraduate concentration in Science, Technology, and Society (STS) is designed for students who wish to engage in a systematic, interdisciplinary exploration of the role of science and technology in modern societies. The concentration is intended for students with varied academic interests and career goals. It offers majors in the natural sciences and engineering an opportunity to explore the social, political, and ethical implications of their selected fields of specialization. At the same time, it offers students majoring in the humanities and social sciences a chance to study the processes, products, and impacts of science and technology from varied disciplinary perspectives. Drawing on course offerings in several departments, programs, and colleges, the STS concentration permits students to develop an individualized program of study closely related to their major field. STS courses are organized under four major headings: social relations of science and technology; science, technology, and public policy; ethics and values in science and technology; and biology, medicine, and society.

To satisfy the requirements for the STS concentration, students must complete a minimum of four courses selected from the following list. At least one course should be chosen from the list of core courses. The remaining three courses should be chosen in consultation with an STS faculty adviser and must be drawn from at least two of the areas described below.

Interested students may obtain further information about advisers and courses by contacting the STS main office, 632 Clark Hall, 255-3810.

STS Core Courses

B&Soc 407 Law, Science, and Public Values (also Govt 407)
B&Soc 415 The Politics of Technical Decisions (also CRP 541, Mgmt NBA 686, Govt 628)
B&Soc 442 Social and Political Studies of Science (also Soc 355, CRP 442)
Hist 281–282 Science in Western Civilization
Hist 380 Social History of Western Technology

Social Relations of Science and Technology

B&Soc 288 History of Biology (also Hist 288, BioS 202)
B&Soc 300 Investigative Research on Social Impact of Science
B&Soc 460 Social Analysis of Ecological Change
Comm 352 Science Writing for the Mass Media
Comm 360 Science Writing for Public Information
Comm 626 Impact of Communication Technologies
Comm 666 Perspectives on Science Communication
Engr 101 The Computer Age (also CS 101)
Engr 250 Technology in Western Society (also EE 250)
Engr 292 The Electrical and Electronic Revolutions (also EE 292)
Hist 287 Evolution (also BioS 207)
Hist 433 Comparative History of Science
Hist 444 Historical Issues of Gender and Science (also Wms Stds 444)
Hist 686 Historiography of Science and Technology
Hist 687 History of Agricultural Science
ILR 626 Science and Innovation in Industry
N Res 331 Beyond the Year 2000 (also Govt 331)
Psych 277 Psychology of Sex Roles (also Wms Stds 277, Soc 277)
R Soc 208 Technology and Society
R Soc 324 Environment and Society

Science, Technology, and Public Policy

B&Soc 406 Biotechnology and Law
B&Soc 426 Medicine and the Law
CEE 598 Decision Making in Engineering Systems
Econ 302 The Impact and Control of Technological Change (also Govt 302, CRP 440)
Engr 400 Science, Risk, and Public Policy (also T&AM 400, Econ 358)
Govt 381 The Politics of Defense Spending
Govt 483 The Military and New Technology
ILR 374 Technology and the Worker
Phys 206 War and Peace in a Nuclear Age

Ethics and Values in Science and Technology

B&Soc 205 Ethics and Health Care (also Phil 245, BioS 205)
B&Soc 206 Ethics and the Environment (also Phil 246, BioS 206)
Engr 360 Ethical Issues in Engineering
HSS 600.7 Professional Ethics and Public Policy
N Res 407 Religion, Ethics, and the Environment
Phil 381 Philosophy of Science: Knowledge and Objectivity

Biology, Medicine, and Society

B&Soc 232 Recombinant DNA Technology and Its Applications (also BioS 232)
B&Soc 301 Biology and Society: Social Construction of Life (also BioS 301)
B&Soc 434 Biotechnology: Science Values and Policy (also BioS 434)
B&Soc 469 Food, Agriculture, and Society (also BioS 469)
B&Soc 482 Human Genetics and Society
Entomol 370 Pesticides and the Environment (also Tox 370)
Hist 233 Agriculture, Technology and Society
N Res 401 Environmental and Natural Resources Policies
Psych 387 Health and Diseases

Biology and Society Major

The Biology and Society major is designed for students who desire strong training in biology and who also wish to acquire a background in the social, political, and ethical dimensions of the biological sciences. Many of the most critical problems of our time—food and population, genetic engineering and new medical technologies, drug abuse and testing for drugs, the AIDS epidemic, and environmental degradation—are innately biological or have an irreducible biological component. At the same time, each is inherently a social concern whose resolution involves complex relations between biological and sociocultural forces. The Biology and Society major is intended to provide students the technical knowledge and analytical skills they need to systematically address these and many other social-biological issues.

The undergraduate curriculum in biology and society is a major in the College of Arts and Sciences and in the College of Human Ecology. It is also offered as an optional curriculum for undergraduates entering the General Studies Program of the New York State College of Agriculture and Life Sciences. Information and application materials may be obtained from the Biology and Society office, 275 Clark Hall (255-6042).

Biology and Society Courses

Freshman Writing Seminars

B&Soc 103 In the Company of Animals
B&Soc 104 Ecosystems and Ego Systems
B&Soc 108 Living on the Land
B&Soc 109 Women and Nature (also Eng 105.5)
B&Soc 113 Writing as a Naturalist (also Eng 113)
B&Soc 115 The American Way

Foundation Courses

B&Soc 205 Ethics and Health Care (also BioS 205, Phil 245)
B&Soc 206 Ethics and the Environment (also BioS 206, Phil 246)
B&Soc 288 History of Biology (also Hist 288, BioS 202)

Core Courses

Phil 286 Science and Human Nature
B&Soc 301 Biology and Society: The Social Construction of Life (also BioS 301)

Issues

B&Soc 201 Biotechnology: The "New" Biology (also BioS 201)
B&Soc 232 Recombinant DNA Technology and Its Applications (also BioS 232)
B&Soc 300 Investigative Research on the Social Impact of Science
B&Soc 322 Medicine and Civilization
B&Soc 347 Human Growth and Development: Biological and Social Psychological Considerations (also HDFS 347, NS 347)
B&Soc 407 Law, Science, and Public Values (also Govt 407)
B&Soc 469 Food, Agriculture, and Society (also BioS 469)

Senior Seminars

B&Soc 404 Human Fertility in Developing Nations (also R Soc 408)
B&Soc 406 Biotechnology and Law
B&Soc 414 Population Policies (also R Soc 418)
B&Soc 415 The Politics of Technical Decisions I (also CRP 541, Govt 628)
B&Soc 426 Medicine and the Law
B&Soc 428 Medical Service Issues in Health Administration (also HSS 628)
B&Soc 434 Biotechnology: Science Policy and Values (also BioS 434)
B&Soc 442 Social and Political Studies of Science (also CRP 442)
B&Soc 451 AIDS and Society
B&Soc 460 Social Analysis of Ecological Change (also R Soc 660)
B&Soc 461 Environmental Policy (also BioS 661)

Other Biology and Society Courses

B&Soc 375 Independent Study
B&Soc 400 Undergraduate Seminar in Biology and Society
B&Soc 499 Honors Project

Other Courses by STS Faculty

The Politics of Technical Decisions II (Soc 516, CRP 542 and Govt 629)
Professional Practice (CEE 503)
Professional Responsibilities of Toxicologists (Tox 751 and BioS 751)
Biotechnology Transfer: Professional Issues and Social Concerns (BioS 755)
Ecology of Agricultural Systems (BioS 473 and Agron 473)
Classical Sociology Theory (R Soc 603)
Ecological Perspectives on Social Change (R Soc 721)
Ethical Theory (Phil 341)
Ethics and the Philosophy of Mind (Phil 442)

VISUAL STUDIES

Robert Ascher, Department of Anthropology, and Marilyn Rivchin, Department of Theatre Arts, advisers

Visual Studies as a distinct area of intellectual activity comprehends the analysis of visual forms, especially symbolic visual forms, from a range of historical, scientific, sociological, and aesthetic points of view. Images can be analyzed within a variety of contexts and by means of a variety of methods, and their study is therefore ideally conceived of in transdisciplinary terms. And since the creation of images has an important bearing on their analysis, visual studies concerns itself with practice as well as theory.

In addition to the courses listed below, which represent only a sampling of formal curricular offerings pertinent to visual studies, interested students should be aware of the programs and facilities available in the Herbert F. Johnson Museum of Art and the ETV Center of the College of Human Ecology, as well as the frequent showings by Cornell Cinema and Pentangle II.

Courses

Some of these courses may not be taught in 1990–91. For information about availability consult the appropriate departmental listings.

Asian American Images in Film (Asian Studies 435)
Black Communication Media and Film Workshop (Africana Studies 303)
Cinema to Literature (Italian 399)
Color, Form, Space (Art 110)
Computer Graphics (Architecture 334 and Computer Science 417)
Dance, Theatre and Film of the 1960s (Theatre Arts 400)
Design I and II (Design and Environmental Analysis 101–102)
Documenting the Depression: Film, Literature, and Memory (History 476)
Ethnographic Film (Anthropology 205)
Fiction and Film in France (French 499)
Film and Performance (Theatre Arts 311)
Freshman Seminar in Visual Analysis (History of Art 103)
Fundamentals of 16-mm Filmmaking (Theatre Arts 377)
History and Theory of Commercial Narrative Film (Theatre Arts 311)
The History of the Book (English 450)
How to Look at Works of Art (History of Art 104)
Image Analysis I (Landforms) and II (Physical Environments) (Civil and Environmental Engineering 613–614)
Impact of Communication Technologies (Communication 626 [643])
Introduction to Film Analysis: Meaning and Value (Theatre Arts 374)
Introduction to Mass Media (Communication 120)
Introductory Photo I (Art 161–162 and Architecture 251)
The Japanese Film (Asian Studies 313)
Literature to Cinema (Italian 390)
Looking at Dance (Theatre Arts 150)
The Medieval Illuminated Book (History of Art 337)
Modern Experimental Optics (Physics 330)
Myth onto Film (Anthropology 653 and Theatre Arts 653)
New German Cinema (German 676)
Perception (Psychology 205)
Photo Communication (Communication 234)
Philosophical Problems of Classical Film (Theatre Arts 476)
Psychology of Visual Communication (Psychology 347)
Public Aesthetics: Art, Video, and Spectacle in the Age of Technology (English 453)
Russian Film of the 1920s and French Film of the 1960s (Theatre Arts 378)
Seminar in Museum Issues (History of Art 407)
Seminar on Ethnographic Film (Anthropology 450)
Spanish Film (Spanish 399)
Theorizing Film: Image—Narration—Psychoanalysis (French 695)
Theory of Design (Design and Environmental Analysis III)
Topics in Recent Film Theory (Theatre Arts 654)
Video Communication (Communication 348)
Vision (Genetics and Development 395)
Visual Anthropology (Anthropology 453)
Visual Communication (Communication 230)
Visual Ideology (German 660 and Theatre Arts 660)
Visual Perception (Psychology 305)
Writing about Film (Theatre Arts 108 and English 108)

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, consumer economics and housing (College of Human Ecology), and industrial and labor relations.

Applied economics and business management. This program is designed to prepare students for a career in business or in public service. Emphasis is placed on the application of economic theory and management principles. Students are required to satisfy the distribution requirements of the College of Agriculture and Life Sciences, which include courses in the social sciences and humanities. Four areas of specialization are available: agricultural and applied economics, business management and marketing, farm business management and finance, and food industry management.

Economics. This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

Engineering. This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities; more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

Hotel administration. The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and allied fields. Instruction is provided in the areas of administration and general management, human-resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.

Consumer economics and housing. Study in the department develops an understanding of the market economy from both buyers' and sellers' perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers' rights and responsibilities.

Industrial and labor relations focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of individual workers; negotiation and conflict resolution; and the economic and technological changes that affect the jobs that people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employed.

Related Areas

Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of Government, and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the South Asia Program, and the Africana Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

Combined Degree Programs

Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-registrant program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

SELECTED BUSINESS AND MANAGEMENT COURSES

Accounting

Ag Ec 221	Financial Accounting
Ag Ec 323	Managerial Accounting
H Adm 120	Basic Principles of Accounting and Financial Management
H Adm 220	Managerial Accounting
H Adm 221	Financial Accounting
JGSM NBA 500	Intermediate Accounting
JGSM NBA 501	Advanced Accounting
JGSM NBA 505	Auditing
OR&IE 350	Cost Accounting Analysis and Control

Communications

Comm 201	Oral Communication
Comm 204	Effective Listening
Comm 272	Principles of Public Relations and Advertising
Comm 301	Business and Professional Speaking
Comm 372	Advanced Advertising
H Adm 165	Introduction to Writing for Business
H Adm 265	Effective Oral Communication
H Adm 364	Advanced Business Writing

Computing

Ag Ec 412	Introduction to Mathematical Programming
Ag Ec 413	Information Systems and Decision Analysis
Ag En 204	Introduction to Computer Uses
CS 100	Introduction to Computer Programming
CS 101	The Computer Age
CS 102	Introduction to Microcomputer Applications
Educ 247	Instructional Applications of the Microcomputer
H Adm 174	Information Systems
H Adm 274	Hotel Computing Applications
H Adm 374	End-User Business Computing Tools

Economics

Ag Ec 332	Economics of the Public Sector
Ag Ec 452	Resource Economics
CEE 321	Microeconomic Analysis
CEH 310	Intermediate Microeconomics
CEH 355	Wealth and Income
Econ 101	Introductory Microeconomics
Econ 102	Introductory Macroeconomics
Econ 301	Economics of Market Failure
Econ 313	Intermediate Microeconomic Theory
Econ 317	Intermediate Mathematical Economics I
Econ 318	Intermediate Mathematical Economics II
Econ 338	Macroeconomic Policy
Econ 341	Labor Economics
Econ 342	Problems in Labor Economics (also I&LR 343)

Econ 351	Industrial Organization
Econ 358	Current Economic Issues
I&LR 240	Economics of Wages and Employment
I&LR 340	Economic Security
I&LR 440	Economics of Fringe Benefits

Entrepreneurship

Ag Ec 325	Personal Enterprise and Small Business Management
Ag Ec 425	Counseling Small Business
JGSM NBA 300	Entrepreneurship and Enterprise

Finance

Ag Ec 324	Financial Management
Ag Ec 404	Advanced Agricultural Finance Seminar
Ag Ec 405	Farm Finance
Ag Ec 407	Financial Management in Farming
CEH 315	Personal Financial Management
Econ 331	Money and Credit
Econ 333	Theory and Practice of Asset Markets
Econ 336	Public Finance: Resource Allocation
H Adm 125	Finance
H Adm 222	Hospitality Financial Management
H Adm 322	Investment Management
H Adm 326	Corporate Finance
OR&IE 451	Economic Analysis of Engineering and Management

International Business

Ag Ec 100	Introduction to Global Economic Issues
Ag Ec 444	Export Marketing
Econ 102	Introductory Macroeconomics
Econ 314	Intermediate Macroeconomics Theory
Econ 325	Economic History of Latin America
Econ 329	Eastern Europe Today: Economics, Government, Culture (also Government 326 and Russian 329)
Econ 330	The Soviet Union: Politics, Economics, and Culture (also Government 330 and Russian 330)
Econ 338	Macroeconomic Policy
Econ 366	The Economy of the Soviet Union
Econ 369	Selected Topics in Socialist Economies: China
Econ 561	International Trade Theory and Policy
Econ 562	International Monetary Theory and Policy
Govt 354	America in the World Economy
Japan 141–142	Introductory Japanese for Business Purposes
Japan 241–242	Intermediate Japanese for Business Purposes
NES 463	International Trade, Market, and Politics in the Ancient Near East

Law, Regulation, and Ethics

Ag Ec 320	Business Law
Ag Ec 321	Law of Business Associations
Ag Ec 322	Taxation in Business and Personal Decision Making

CRP 654	Real Estate Development I: Advanced Analysis and Critique
CRP 655	Real Estate Development II: Advanced Analysis and Critique
CRP 664	Economics and Financing of Neighborhood Conservation and Preservation
H Adm 323	Real Estate Finance
H Adm 350	Personal Real Estate Investment

Transportation

CEE 361	Introduction to Transportation Engineering
CEE 660	Transportation Planning and Policy

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. Freshman writing seminars, required of nearly all Cornell freshmen, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology leads to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.
3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.
4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

   The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences.

   It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty often offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a freshman writing seminar). In addition, many medical schools require or recommend at least one advanced biological science course, such as genetics, embryology, histology, or physiology.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

Qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance into a double registration program arranged between Cornell University and Cornell University Medical College in New York City. This program allows registered students to save one year in pursuit of the bachelor's and M.D. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 203 Barnes Hall, Ithaca, New York, 14853-1601.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student is not accepted into veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the New York State College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the New York State College of Veterinary Medicine at Cornell, may vary slightly at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admission to the New York State College of Veterinary Medicine, obtained by writing to the Office of Admissions, New York State College of Veterinary Medicine, Cornell University, C117 Schurman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the New York State College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 203 Barnes Hall, Ithaca, New York 14853-1601.

NEW YORK STATE COLLEGE OF AGRICULTURE AND LIFE SCIENCES

ADMINISTRATION

David L. Call, dean

Kenneth E. Wing, associate dean

William G. Boldt, assistant dean for public affairs

George J. Conneman, director of academic programs

Elizabeth A. Oltenacu, associate director of academic programs

Brian F. Chabot, acting director of research

David L. Brown, associate director of research

Lucinda A. Noble, director of cooperative extension

R. David Smith, associate director of cooperative extension

Larry W. Zuidema, acting director of international agriculture

Office of Academic Programs Staff

Student services: Donald Burgett, Lisa Ryan, Catherine Thompson

Records: Tom Wakula

Registrar: Mary Milks

Admissions: Richard Church, Laura Herlands, Susan Miller, Randy Stewart

Career development: William Alberta

Department Chairs

Agricultural and biological engineering: G. E. Rehkugler, Riley-Robb Hall

Agricultural economics: W. G. Tomek, Warren Hall

Animal science: J. M. Elliot, Morrison Hall

Communication: R. D. Colle, Kennedy Hall

Education: R. E. Ripple, Kennedy Hall

Entomology: Q. D. Wheeler, Comstock Hall

Floriculture and ornamental horticulture: G. L. Good, Plant Science Building

Food science: R. A. Ledford, Stocking Hall

Microbiology: W. C. Ghiorse, Stocking Hall

Natural resources: J. P. Lassoie, Fernow Hall

Plant breeding and biometry: W. R. Coffman, Emerson Hall

Plant pathology: W. E. Fry, Plant Science Building

Pomology: G. H. Oberly, Plant Science Building

Poultry and avian sciences: R. E. Austic, Rice Hall

Rural sociology: D. L. Poston, Warren Hall

Soil, crop and atmospheric sciences: R. J. Wagenet, Emerson Hall

Vegetable crops: E. E. Ewing, Plant Science Building

Facilities

The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Office of Student Services and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Board and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current graduate field representatives are also listed.

Agriculture [M. P.S. (Agr.)], G. Conneman, Roberts Hall

Agricultural and Biological Engineering, W. Gunkel, Riley-Robb Hall

Agricultural Economics, L. Tauer, Warren Hall

Animal Breeding, J. Pollak, Morrison Hall

Animal Science, R. Quaas, Morrison Hall

*Biochemistry, Molecular and Cell Biology; V. Vogt, Biotechnology Building

Biometry, S. Schwager, Warren Hall

*Botany, K. Niklas, Plant Science Building

Communication [M.P.S. (COMM)], C. Glynn, Kennedy Hall

Development Sociology, T. Lyson, Warren Hall

*Ecology and Evolutionary Biology, N. Hairston, Jr., Corson Hall

Education [also M.A.T.], H. Cushman, Kennedy Hall

Entomology, B. Peckarsky, Comstock Hall

Environmental Toxicology, R. Schwartz, Martha Van Rensselaer Hall

Floriculture and Ornamental Horticulture, K. Mudge, Plant Science Building

Food Science and Technology, D. Miller, Stocking Hall

*Genetics, C. Aquadro, Biotechnology Building

International Agricultural and Rural Development [M.P.S. (Agr.)], F. Young, Warren Hall

Landscape Architecture [M.L.A.], L. Mirin, W. Sibley Hall

Microbiology, S. Zinder, Stocking Hall

Natural Resources, R. Oglesby, Fernow Hall

*Neurobiology and Behavior, R. Harris-Warrick, Seeley Mudd Hall

Nutrition, B. Lewis, Martha Van Rensselaer Hall

*Physiology, J. Wooten, Vet Research Tower

Plant Breeding, E. Earle, Bradfield Hall

Plant Pathology, S. Beer, Plant Science Building

Plant Protection [M.P.S. (Agr.)], G. Bergstrom, Plant Science Building

Pomology, L. Powell, Plant Science Building

Soil, Crop and Atmospheric Sciences, J. Peverly, Bradfield Hall

Statistics, G. Casella, Warren Hall

Vegetable Crops, P. Ludford, Plant Science Building

*Division of Biological Sciences

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in sixteen major fields. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations within the major field.

Agricultural and Biological Engineering: G. Rehkugler, 104 Riley-Robb Hall

Animal Sciences: E. J. Pollak, B-22 Morrison Hall

Applied Economics and Business Management: O. Forker, 254 Warren Hall

Biological Sciences, Division of: H. Stinson, 200 Stimson Hall

Communication: S. Warland, Kennedy Hall

Education: G. Posner, Kennedy Hall

Entomology: R. Roush, 6130 Comstock Hall

Food Science: J. Sherbon, 207 Stocking Hall

Landscape Architecture: D. Krall, 451 Roberts Hall

Microbiology: V. Stewart, 412a Stocking Hall

Natural Resources: H. Brumsted, 122e Fernow Hall

Plant Science Units (Plant Biology, Breeding, Pathology/Protection, Floriculture, Pomology, Vegetable Crops): J. Lorbeer, 424 Plant Science Building

Rural Sociology: D. Poston, 133 Warren Hall

Soil, Crop and Atmospheric Sciences: T. Scott, 1001 Bradfield Hall

Statistics and Biometry: C. McCulloch, 338 Warren Hall

Special Agricultural Studies (ALS): D. Burgett, Roberts Hall

Summary of Basic College Requirements for Graduation

1. Credit Hours

a. Minimum: 120

b. Minimum with letter grade: 100

c. Maximum independent study, teaching experience, internships: 15

d. Minimum College of Agriculture and Life Sciences: 55

e. Maximum from endowed colleges without additional charge: 55

f. Maximum transferred in: 60; minimum at Cornell: 60

Note: Credits received for physical education and for certain other courses, such as Mathematics 109, Education 005 and LSC courses, do not count toward the 120 hours but are included on the transcript and in the grade-point average.

2. Residence

a. Normally, eight full-time semesters

b. Seven semesters, if all other degree requirements are met, with a grade-point average of 2.0

c. Minimum of 12 credits per semester

d. Minimum of two semesters, including the final semester prior to graduation, in the College of Agriculture and Life Sciences (residency in the Division of Unclassified Students [DUS] does not count toward residency in the college)

e. Students who have completed 8 semesters in residence at Cornell, including two in the college, and who have 8 or fewer credits remaining for graduation may petition for approval to complete this work elsewhere.

3. Physical Education

a. Completion of university requirement for two terms of work

b. Transfer students may be exempt from part or all of the requirement.

Note: Requests for postponement or exemption should be made in writing to the University Faculty Committee on Physical Education. Questions should be referred to Alan Gantert, Teagle Hall (255-4286).

4. Grade-Point Average (GPA)

a. Cumulative GPA: 1.7 or above must be maintained

b. Final GPA: 1.7 for a minimum of 12 credits in final term before graduation.

Note: Only grades earned at Cornell and while registered in the college are included.

5. Distribution

The purpose of the distribution requirement is to acquaint students with a broad range of subject matter. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe; through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live. Through development of written and oral expression skills, students master the essentials of effective communication.

Credits received for independent study, field, teaching, or work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline such as Education 005, will not be counted.

Group A: Physical Sciences. 9 credits of 100- or 200- level courses, in at least two disciplines, including at least one course in chemistry or physics.

Soil, Crop and Atmospheric Sciences 131
Astronomy
Chemistry
Geology
*Mathematics (excluding Education 005 and Mathematics 109)
Education 115
Physics

*The college mathematics requirement is described below.

Group B: Biological Sciences. 9 credits, including 6 of introductory biological science.

Biological Sciences (except 152, 202, 205, 206, 208, 209, 301)
Animal Sciences 220, 221
Entomology 212
Microbiology
Plant Breeding 225
Plant Pathology 301, 309

Group C: Social Sciences and Humanities. 12 credits (6 in each of the following two categories):

Social Sciences. 100- through 400-level courses in the following departments (excluding Freshman Seminars):

Archaeology
Anthropology
Economics
Government (including Africana Studies 190)
Psychology
Sociology (including Rural Sociology)
CEH 110/CEH 111 (cannot receive credit for these courses and Econ 101/Econ 102)
Education 311, 317
HDFS 150 (cannot receive credit for this course and Soc 243)

Humanities. 100- through 400-level courses in the following departments (excluding Freshman Seminars and language courses):

Africana Studies (humanities and history)
Asian and Near Eastern Studies (History and Literature)
Classics
Comparative Literature
English (literature only)
French, German, Italian, Russian, and Spanish (literature only)
History
History of Art/Architecture
Music and Theatre Arts (theory, literature, and history only)
Philosophy (also Natural Resources 407)
ALS 100, 318

Group D: Written and Oral Expression. 9 credits, of which at least 6 must be in written expression, selected from the following:

Freshman Seminars
Communication 161, 201, 350, 352, 360, 363, 365
English 280–281, 288–289, 382–385, 388–389
Hotel Administration 365

6. Mathematics

The faculty requires minimum competency in mathematics as a requisite to satisfactory pursuit of a degree. All students must complete, with a passing grade, one course in mathematics at Cornell as part of the physical sciences requirement. Advanced placement credit in mathematics or transfer credit in a college calculus course may be presented to meet this requirement.

a. The ALS Mathematics Placement test: All entering undergraduates, including those presenting advanced placement or transfer credit in college calculus, must take the test, which is administered free of charge just prior to registration each semester. Students with accepted advance placement or transfer credit in college calculus will not need to complete a mathematics course at Cornell, unless required by the major. No student may repeat the placement test. It consists of fifty sample questions from arithmetic, algebra, geometry, trigonometry, and basic calculus. The index score is determined by the number of correct answers minus one quarter of the number of incorrect answers.

b. The index score is used to help students select appropriate courses. If a high index score (currently defined as equal to or greater than 30) is attained, the mathematics requirement in physical sciences is waived. If a low index score (of 12 or less) is attained, the student is to enroll in Education 005 before selecting a mathematics course to fulfill the requirement.

c. When presenting mathematics transfer credit (other than calculus), a student may

- include precalculus credits along with the calculus credits
- transfer up to 6 credits to the physical sciences requirement, if the index score is 30 or above
- not transfer that credit to the physical sciences requirement if the index score is from 13 to 29 (credit is, however, counted toward graduation)
- not transfer any credit in mathematics if the index score is below 13.

7. Faculty Adviser

a. Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study and enroll in courses appropriate to the degree programs offered by the college.

b. Course enrollment each semester should be planned in consultation with the faculty adviser. The signature of the faculty adviser indicates approval of, or at least consent to, the choice of courses made and is required before the course enrollment can be processed.

c. All academic plans, such as acceleration and graduate study, should be made in consultation with the student's faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

8. Progress toward the Degree

a. The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a summary of record form.

b. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters, but must notify the College Registrar of their intent prior to the graduation date. A student who wishes to continue study after graduation must apply for admission as a special student.

c. Graduation with distinction: Students who rank in the top 10 percent of the college's graduates on the basis of the GPA for the last 60 credits completed at Cornell will be graduated with distinction.

STUDENTS

Undergraduate enrollment is approximately 3,000, with about 56 percent in the upper division. Each year about 850 students are graduated, while 650 freshmen and 250 transfer students are enrolled. Members of the faculty of the college serve as chairs of the Special Committees of about 1,000 graduate students.

Admission

The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula.

Most students come from New York State, but around 25 percent come from other parts of the United States or abroad. About half of the undergraduates are women. Approximately 11 percent are identified as members of minority ethnic groups.

Transfer Students

Approximately 18 to 20 percent of the ALS undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.

A Cornell student in good standing may apply for intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, Roberts Hall. The procedure includes filing a transfer request and submitting a letter explaining reasons for making the transfer.

Consideration is given to students who have demonstrated an interest in their intended field of study, by taking appropriate prerequisite courses and courses within this area of study. Academic achievement is also considered. Students are seldom allowed to transfer during their freshman year.

In some cases a student may be referred to the Division of Unclassified Students to study for one semester before entering the college. A second semester is considered under unusual circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students

A limited number of non-degree candidates who want to take selected courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience and a list of the courses they want to take. For more information, students should contact the Admissions Office, Roberts Hall.

Part-time Students

All students in the College of Agriculture and Life Sciences are expected to be enrolled as full-time students in a registered program of study. Part-time students must register in the Division of Summer Session, Extramural Courses, and Related Programs. The Continuing Education Information Service, B-12 Ives Hall, provides information, counseling, and special programs for mature students throughout the university.

Off-Campus Students

Programs in which students study off campus but enroll for Cornell credit include SEA semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell-in-Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

Leave of Absence

A student considering taking a leave of absence from the university should contact the Office of Student Services. A petition must be filed when requesting a leave of a semester or more. Students returning from a leave of absence do not need to reapply for admission; they should contact Student Services.

Withdrawal

A student who finds it necessary to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good standing. Students who have withdrawn and who later decide to return must apply to the Admissions Office.

Graduation

Diplomas are prepared by the Office of the University Registrar and distributed to those who have completed the degree requirements and have been approved by the college faculty.

ADVISING AND COUNSELING SERVICES

Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while they are in college. They believe that personal contact on a one-to-one basis is an important way to identify individual differences and needs of students. Faculty members believe that they can and should be an important source of information and advice on both academic and personal matters. Thus they consider advising to be an important and integral part of the undergraduate program.

The Office of Student Services has overall responsibility for coordinating the college advising and academic counseling program. Each student enrolled in the college is assigned to a faculty adviser in the major field of study for aid in developing a program of study and to a peer adviser who has volunteered to help with problems of a general nature relating to personal matters and campus life.

Student Services provides a variety of services for undergraduates in the College of Agriculture and Life Sciences. The staff is available to help students with academic, social, and personal concerns. In addition, learning skills information and tutoring is offered, at no charge, by the college's honor society, Ho-Nun-De-Kah. Assistance is also available for students considering submitting petitions for waiver of college regulations.

The office is located on the first floor of Roberts Hall. Appointments are not necessary and questions regarding services and procedures should be directed to Donald Burgett and the Student Services staff.

Minority students in the College of Agriculture and Life Sciences receive counseling, tutoring, advising, and referral to agencies that will meet their special needs. The Educational Opportunity Program (EOP) is a state-supported program intended to assist New York State students who meet specific economic and academic criteria set by the State Programs Office and the NYS Board of Regents. Eligible students are accepted during the admissions process.

For further information, please contact Catherine Thompson in Roberts Hall.

The Office of Career Development offers a variety of services to all students and alumni of the college. Career development includes self-awareness and assessment, career exploration, decision making, and job search. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

An active on-campus recruitment program is integrated with the other services provided by the office. Extensive job vacancy files are updated daily and a bulletin of select job listings is published each month. The Career Library contains an extensive collection of current and useful material. The Sigi Plus system is a computer-assisted guidance system that can help in career and educational planning, providing useful information and ideas about work-related interests, skills and values, and occupations and careers. Internships, summer jobs, job search presentations, and assistance with resume writing are other activities of interest.

The office, in conjunction with a network of college faculty members, assists students throughout their undergraduate years. For further information students should contact William Alberta and the staff in Roberts Hall.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations provide supplemental aid for students in the college who are eligible for aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall, after students have a financial aid package established through the university office in Day Hall. Grants recommended by the college Financial Aid and Scholarship Committee are processed through the university's Office of Financial Aid.

A small loan fund is administered by the college through the Office of Academic Programs to assist students facing short-term emergencies. The loans are interest-free and are usually made for no more than ninety days. For information and an application form students should contact the Office of Academic Programs, Roberts Hall.

Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1) Students assume responsibility for the content and integrity of the work they submit, such as papers, examinations, or reports.

2) Students are guilty of violating the code if they
   - knowingly represent the work of others as their own
   - use or obtain unauthorized assistance in any academic work
   - give fraudulent assistance to another student
   - fabricate data in support of laboratory or field work
   - forge a signature to certify completion or approval
   - knowingly deprive other students of library resources, laboratory equipment, computer programs, and similar aids
   - in any other manner violate the principle of absolute integrity

3) Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.

4) Faculty members fulfill their responsibility to
   - maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
   - make clear the conditions under which examinations are to be given
   - make clear the consequences of violating any aspects of the code
   - provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do on their own without help from others
   - state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
   - approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
   - monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students' submitted work must be their own and no one else's

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides for informal resolution of most perceived violations through a primary hearing between the faculty member and the student involved. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the coordinator of student services, who serves as a nonvoting record keeper. Professor J. Bugliari is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Office of Student Services, Roberts Hall.

ACADEMIC POLICIES AND PROCEDURES

Records

The college registrar maintains for each student a complete record of academic achievement. A permanent record card is on file for each matriculated student and is updated whenever new information becomes available. Staff members are available in Roberts Hall to consult with students regarding the assignment of credit toward meeting distribution and elective requirements and to verify the official summary of record.

The Committee on Academic Achievement and Petitions is a standing committee of six college faculty members and two students. On behalf of the faculty and subject to its review, the committee

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of all students not meeting academic requirements
- receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
- acts upon readmission requests from persons whose previous enrollment was terminated by the committee
- notifies the petitioner in writing of the action taken by the committee

Good academic standing means a student is eligible for, or has been allowed to register and enroll in, academic course work for the current semester. Whether an individual student is in good academic standing is determined by the college registrar and the Committee on Academic Achievement and Petitions.

A petition to be exempt from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Office of Student Services, Roberts Hall.

A petition is usually prepared with the assistance of a student's faculty adviser, whose signature is required; it indicates the adviser's awareness of the petition. The adviser's recommendation is helpful to the committee. The committee determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

Registration Procedures

All students must register with the university and this college at the beginning of each semester. Registration materials are available at a time and place announced each term by the Office of the University Registrar.

Course Enrollment Procedures

To enroll in courses, students pick up materials from the college Registrar's Office, Roberts Hall; plan a schedule in consultation with their adviser; and return the completed forms to the Registrar's Office for verification and processing. Class lists are generated on the basis of the properly filed course enrollment forms.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study statement. Students who will be studying off campus or abroad should file the intent to study off campus form to ensure that proper registration will occur. Both forms are available from the college registrar, Roberts Hall.

Students may enroll again for a course in which they received a grade of F in a previous semester. The grade received the second time will be recorded and both grades calculated as part of their GPA.

Students should not enroll again for a course in which they received an incomplete. Work for that course should be completed. The instructor will file an incomplete make-up form. An incomplete not made up by the end of two successive semesters of registration reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Students enrolled in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the two grades for the same course.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student at the Registrar's Office, Roberts Hall, on an official form provided for that purpose.

Add/Drop/Changes are made by filing properly signed forms in the Registrar's Office, Roberts Hall. Approval and signature of the faculty adviser and course instructor are required to add or to drop a course.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the term and may drop courses until the end of the sixth week.

Students wishing to withdraw from a course after the end of the sixth week must petition to the college Committee on Academic Achievement and Petitions. A form is available in Student Services, Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to the end of the sixth week of the semester.

If the petition to drop a course is approved after the end of the eighth week of classes, the course remains on the student's record and a W (for "withdrawal") is recorded on the transcript.

Grade Reports

Grade reports for the fall term are included in spring term registration materials; grade reports for the spring term are mailed to students at their home addresses unless alternative addresses are reported to the college or university registrar by mid-May.

Academic Deficiency Policies

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. In case of students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings to students, suspending them, decreeing that they may not reregister, granting them leaves of absence, and advising them to withdraw.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 1.7
- cumulative GPA of at least 1.7
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C– (1.7) or higher are prima facie evidence of satisfactory progress.

HONORS PROGRAM

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of the 55 at Cornell. Also, the student must have attained a cumulative grade-point average of at least 3.0 at the time of entry.

Interested students must make written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. An application form is available from the college registrar, Roberts Hall, or from the area committee chair. (Biological sciences students should get applications at 200 Stimson Hall.)

Written approval of the faculty member who will direct the research and of the honors committee in the area is required. After the college registrar verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Academic credit may also be earned by enrolling in an appropriate independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in doing the research.

The honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with honors.

Students in the College of Agriculture and Life Sciences wishing to participate in the honors program must be accepted in one of the program areas approved by the faculty. Students are not eligible for honors by participating in a program offered by another college or administrative unit.

Animal Sciences

Faculty committee: J. A. Marsh, chair; H. F. Hintz, R. L. Quaas

The objective of the animal sciences honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing an honors project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the honors project. That should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 496, Animal Sciences Honors Seminar, which is offered in the fall semester.

- Register for 3 credit hours of AS 499, Undergraduate Research, for the research project during a semester prior to that in which the honors thesis will be completed. Additional AS 499 credit on other topics may be taken in earlier semesters if the student so desires. AS 499 credit will not be given during the last semester of the student's honors project.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the honors committee and to a selected external reviewer by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the honors committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor, the external reviewer, and the honors committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 102 Rice Hall.

Biological Sciences

Students interested in the honors program in the biological sciences should consult with their faculty advisers early in their junior year. Applications and details pertaining to program requirements may be obtained from the Division Office for Academic Affairs, 200 Stimson Hall. Also see Biological Sciences section in this catalog. Information on faculty research activities is available in the Behrman Biology Center, G20 Stimson Hall.

Entomology

Faculty committee: W. L. Brown, Jr., chair; D. Pimentel, M. J. Tauber

An honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences (see the requirements at the beginning of this section). The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for study in a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for honors study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for honors study.

The honors committee requires that an undergraduate who is interested in embarking upon an honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year, so that a research project can be carefully planned. The possibility of conducting some research during the junior year and/or summer should be discussed.
- Discuss the project with an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. (The faculty adviser will be of assistance in determining which faculty entomologist might be the best supervisor, the decision being based primarily on available faculty members' areas of expertise.)
- Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objects or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Present a completed application to the chair of the entomology honors committee no later than the end of the third week of the first semester of the senior year. Earlier submission is encouraged.
- Submit a brief progress report, approved by the project supervisor, to the entomology honors committee by midterm of the semester in which the student will complete his or her graduation requirements.
- Present a formal seminar reporting the significant findings of the research to the Department of Entomology (preferably as a Jugatae seminar) in the last semester of the senior year.
- Submit two copies of the final project report (honors thesis) to the chair of the entomology area honors committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee from the department honors committee. The committee will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the chair no later than the last day of classes.

Natural Resources

Faculty committee: M. E. Richmond, chair; J. W. Kelley, R. J. McNeil

The honors program in natural resources provides an opportunity for undergraduates to participate in independent research in the areas of fisheries and aquatic science, forest science, wildlife science, ecotoxicology, and conservation. The subject matter and nature of the research experience may be quite varied in this program but require the guidance and supervision of a faculty member with substantial interest and expertise in the problem area chosen.

In addition to meeting requirements of the college, the student is expected to do the following:

- Register for the honors program in the junior year or earlier.
- Select a faculty adviser who will help identify and formulate a research problem.
- Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Describe and summarize the work in the format of a conventional master's thesis or in the form of a scientific paper ready for journal submission. About half of the theses have been published.
- Work closely with at least two faculty or staff members who will agree to serve as readers for the thesis. Provide readers with a copy of the guidelines for evaluation of honors theses, available from the department's honors program committee.

Nutritional Sciences

Faculty committee: T. C. Campbell, chair; W. J. Arion, C. Campbell

The honors program in nutritional sciences is designed to provide the academically talented undergraduate with the opportunity to become involved in a faculty research program. This program is available to students majoring in general studies with a concentration in nutritional sciences. Students are selected in the spring semester of the sophomore year on the basis of scholastic achievement, cumulative grade point average, and motivation for independent study. Students interested in participating in the honors program should consult their faculty advisers or contact committee chair Professor T. Colin Campbell, N204 Martha Van Rensselaer Hall, and submit their application to the honors committee.

In addition to meeting requirements of the college, to qualify for graduation with honors, students must:

- Maintain high scholastic achievement.
- Satisfactorily complete the junior seminars, NS 398 and 498. Students are required to complete biochemistry by the end of the first semester of the junior year, and strongly encouraged to complete NS 332, Laboratory Methods in Nutritional Sciences, by the end of the junior year.
- Satisfactorily complete NS 499, Honors Problem, with a minimum of 6 credits, during the senior year. To do so they must (1) attend a one-hour senior seminar, fall and spring, (2) plan and carry out an independent research problem in consultation with a faculty adviser, (3) submit for approval a written thesis to the division honors committee, (4) present a final seminar on their research, and (5) register for honors with the ALS college registrar by the first two weeks of the senior year.

A copy of the honors program guidelines are available in the division's Undergraduate Office, 335 Martha Van Rensselaer Hall, or from the honors chair.

Physical Sciences

Faculty committee: C. E. McCulloch, chair; G. W. Fick, J.-Y. Parlange, J. W. Sherbon

The honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Agricultural and Biological Engineering; Soil, Crop, and Atmospheric Sciences; Food Science; or in the Biometrics Unit.

Students must be enrolled in the program for a minimum of two semesters and must also enroll in the appropriate departmental independent study course for a total of at least 6 credits. They must submit a report of their research to the honors committee at least four weeks prior to the end of instruction of the semester in which they expect to graduate.

Details of the program can be obtained from the chair of the physical sciences honors committee.

Plant Sciences

Faculty committee: A. M. Petrovic, chair; L. L. Creasy, R. L. Obendorf, H. C. Wien, R. P. Korf, S. H. Zinder

Before acceptance into the program, students must submit to the chair of the plant sciences honors committee a completed application and a one-page tentative project proposal by the end of the second week of classes in the first semester of their senior year. The project proposal should include a clear statement of the objective(s) of the research, methodology, and needs for space, equipment, and supplies (attached budget required). The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has seen and approved the project plan. Full committee approval is needed for acceptance into the program.

Completion of the honors program in plant sciences requires two copies of a report of independent research in the honors program to be submitted to the chair of the honors committee before the last day of classes of the semester in which the degree is sought. The report should be written in the format for research publication required by that discipline of plant science in which the student is enrolled. The report must be accompanied by a letter of recommendation from the supervisor of the research, that letter reflecting the supervisor's familiarity with the research and providing an evaluation of the performance and a recommendation for graduation with honors.

The honors committee will review the report, and, if a majority of the committee votes favorably, the chair will recommend graduation with honors for that student in a letter to the director of academic programs. One copy of the report will be returned to the student. The other will be shelved in Mann Library.

Social Sciences

Faculty committee: T. A. Hirschl, chair; J. M. Conrad, E. J. Haller, D. F. Schwartz

Acceptance into the behavioral and social sciences honors program of the College of Agriculture and Life Sciences is contingent on meeting all the criteria described above, on information in the student's written application, and on a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the first semester of the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement.

The proposal must be 5–10 typed, double-spaced pages in length and include the following sections:

- **Research Topic:** This section should contain a statement of the problem to be studied or the topic of interest. The relevant literature should be briefly reviewed and the background of the problem or topic discussed; a more extensive bibliography should be included.
- **Research Questions/Empirical Hypotheses:** This section should contain specific questions to be answered or hypotheses to be empirically tested via collection of data and statistical analysis or some other mode of analysis accepted in the social sciences.
- **Research Methods:** This section should contain a dicussion of models to be constructed, data collection procedures (including survey instruments or experiments, if appropriate), and methods of analysis.
- **Expected Significance:** What new knowledge or information is likely to be forthcoming and why is it important?

Faculty advisers must be members of the graduate faculty. Exceptions to this rule will be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions will be granted pending petition to the social science honors committee. Students may register for independent study directed by the faculty adviser in conjunction with an honors project.

Honors degrees are awarded upon approval of the honors thesis by the social science honors committee. The research should deal with a substantive issue within one of the fields in the social sciences. Both the results of the research and the methodology or the argument by which the results were achieved must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal within the appropriate fields. Four copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the faculty member supervising the work also must be submitted. Approval of the thesis requires a majority vote of the honors committee.

INTERCOLLEGE PROGRAMS

The College of Agriculture and Life Sciences does not participate in any dual-degree programs. Study for the Bachelor of Science is the only undergraduate degree program offered.

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, Roberts Hall, to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management upon completion of the B.S degree in Agriculture and Life Sciences may take a program of management courses in their senior year if it is approved by their college faculty adviser as part of their undergraduate program. In certain cases an "upset" tuition charge, equal to the endowed undergraduate tuition rate, will be applied for undergraduate statutory college students taking excess credit hours from endowed colleges and schools. Inquiries should be directed to the university bursar.

Students in the Field Program in Agricultural and Biological Engineering are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years and jointly enrolled in this college and the College of Engineering in the junior and senior years. Students pay the engineering college tuition in the junior year. The curriculum is accredited by the Accreditation Board for Engineering and Technology. The B.S. degree is awarded in cooperation with the College of Engineering.

The Program in Landscape Architecture is cosponsored by the Department of Floriculture and Ornamental Horticulture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning. The program offers a first professional degree curriculum in landscape architecture at both undergraduate and graduate levels, as well as a graduate second professional degree program.

The Division of Nutritional Sciences is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate nutrition major is based in the College of Human Ecology. Students in Agriculture and Life Sciences may study nutrition in areas such as animal sciences, poultry and avian sciences, food-industry management, food science, microbiology, pomology, and vegetable crops. Students may also plan a concentration in biological sciences or a concentration in general studies in agriculture to include a human nutrition component.

The Program on Science, Technology, and Society is an academic unit that engages in teaching and research involving the interactions of science and technology with social and political institutions. The program draws its students, faculty, and research staff from the various divisions of the university, including the College of Agriculture and Life Sciences. It offers an interdisciplinary undergraduate curriculum in Biology and Society. A concentration in general studies in the agriculture major may be planned in consultation with a faculty adviser to include a biology and society component. Further information, including a list of courses, may be obtained from the program office, 632 Clark Hall.

The American Indian Program (AIP) is a multidisciplinary intercollege program with instructional, research, and extension components. The instructional core consists of courses focusing on American Indian life with emphasis on the Iroquois and other Indians of the Northeast. A description of the program and general information is available from the director of the American Indian Program, Caldwell Hall.

The Comparative and Environmental Toxicology Program is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 16 Fernow Hall.

The Cornell Laboratory of Environmental Applications of Remote Sensing (CLEARS) is an interdisciplinary intercollege center with teaching, research, and extension components affiliated with the College of Agriculture and Life Sciences and the School of Civil and Environmental Engineering. A description of the program and general information is available from the director through the CLEARS office in Hollister Hall.

OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

An Intent to Study Off Campus form should be filed with the college registrar before leaving campus. Tuition may be reduced. In some cases stipends or cost of living allowances are provided. Students should consult with the Office of Financial Aid if receiving financial aid and clear all accounts with the bursar prior to departure.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Students receive an intensive orientation to state government and attend a lecture-seminar program composed of three two-credit components and offered by professors-in-residence. An internship experience, supervised by an internship committee, provides up to six academic credits. Independent study and research courses offered by the various departments in ALS and/or courses offered by academic institutions in the Albany areas may be elected.

Three opportunities are available. The Assembly Intern Program provides a placement with a member of staff of the New York State Assembly. The Senate Assistants Program has placements with New York State senators and selected staff. The Albany Semester Program provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor.

Applicants are screened by the ALS Internship Committee in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least twelve credits must be carried to meet the residence requirement. Seniors should note that the last term average must be 1.7 or above.

All interns will audit the orientation sessions and meet participation requirements in at least two of the lecture-seminar sections. The paper required in each section constitutes an independent study project to be directed and evaluated by a Cornell faculty member in an appropriate discipline. Normally a faculty member will not sponsor more than one of the independent study courses for any one student. To receive academic credit for the internship, students enroll in ALS 400, for an S-U grade only.

Information and applications are available in the Career Development Office, Roberts Hall.

Cornell-in-Washington

Students in all colleges apply for the Cornell-in-Washington program through the Department of Government, 134 McGraw Hall. ALS students admitted to the program should file the off-campus study form with the college registrar prior to leaving campus. Selection of courses should be made in consultation with an academic faculty adviser to assure that the courses are appropriate for the degree program being pursued. The course enrollment forms should be filed in the office of the college registrar as soon as course selection is completed and approved.

SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is twelve weeks in length. Six weeks are spent in Woods Hole, the following six weeks are spent on either one of SEA's two sailing vessels: the R/V Westward, or the R/V Corwith Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall. ALS students should file the intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduate, beginning graduate students, and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," under the section on the Division of Biological Sciences, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717.

Internships

Several departments in the college offer supervised internships for academic credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for placement, for planning the program of work, and for evaluation of student performance.

For internships not governed by an established internship course, the student must enroll in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreed-upon credits.

In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study, Research, Teaching, or Internship form, available in the Registrar's Office, Roberts Hall.

A maximum of 15 of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. A maximum of 6 credits per term may be earned in independent study. No more than 6 of the 15 credits allowed for independent study may be awarded for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The 6-credit allotment includes transfer credit and credit for internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, postsecondary, and cooperative extension teaching internships in the Department of Education.

The College of Agriculture and Life Sciences does not offer a field study option. In general, a rather narrow view is taken towards awarding academic credit for work experience, "life" experience, or apprenticeships. Credit will only be assigned or accepted in cases where a professor is directly involved in determining both the course content and in evaluating a student's work. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit.

All students enrolling for an internship must file an independent study, research, teaching, or internship form with the Scheduling Office. If the study is to take place off campus, the Intent to Study Off Campus form should also be filed with the college registrar.

Overseas Academic Programs

The Cornell Abroad program is open to students in all colleges of the university. Students in the College of Agriculture and Life Sciences should consult with their faculty adviser and the college registrar to ensure that credit received for academic work abroad will meet requirements for graduation. The Office of Student Services, Roberts Hall, has information and application forms.

Cooperative arrangements with the University of Reading, in England, and the University of Dublin, in Ireland, enable the college to endorse several students for a year of study under a tutor in those schools. The Swedish exchange program is operated in cooperation with the Agricultural College of Sweden at Uppsala. The ALS student selected to participate in the Swedish exchange spends the

junior year at Uppsala. All essential expenses in Sweden, including a living allowance, are provided by a student group there. Round-trip air transportation must be paid by the student. An exchange student from Uppsala spends a year at Cornell, supported by the college and the Cornell student in Sweden.

MAJOR FIELDS OF STUDY

The college curriculum emphasizes the biological and physical sciences and the technology basic to the study of agriculture and life sciences. The sixteen major program areas reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet minimum distribution requirements of the college.

Agricultural and Biological Engineering

Agricultural and biological engineering links engineering and technology with the biological, social, environmental, and agricultural sciences. It is the branch of engineering that serves the public sector all the way from the grower to the consumer in addition to contributing to the public interest in other ways. The primary challenge is to apply engineering principles to solve problems in the agricultural and food industries. Applications involve production, processing, distribution, cost, environmental quality, safety, and computer utilization. An increasingly important and emerging aspect of the field is the engineering activity related to biotechnology. A strong mixture of engineering and biology is the feature that makes this program area unique.

Students in this program area study topics such as biological engineering, food engineering, soil and water conservation, mechanical systems, waste management, small-scale energy production and management, international agriculture, structures and building design, design and construction of secondary roads, and environmental quality engineering.

The program area, which includes two distinct academic programs—agricultural engineering and biosystems technology—is offered by the Department of Agricultural and Biological Engineering. The department is located in Riley-Robb Hall, and operates specialized facilities that are among the largest and most complete agricultural engineering facilities in the world.

The agricultural engineering program has four concentrations: Agricultural Engineering, Biological Engineering, Environmental Systems, and Food Engineering, and is intended for the student who is particularly interested in the theoretical and fundamental aspects of engineering required for design and research. The student must be highly motivated and have a strong aptitude for mathematics and the sciences. Biological, social, and agricultural sciences are integrated into this specialization, but the physical sciences dominate. The academic program is accredited by the Accreditation Board for Engineering and Technology and is jointly sponsored by the New York State College of Agriculture and Life Sciences and the College of Engineering. Students double register in both colleges during their junior and senior years. The program provides excellent preparation for a variety of positions in industry, and qualified graduates often continue study in a Master of Engineering, Master of Science, or doctoral degree program, or in veterinary science or medicine.

For specific course requirements and other information, see the section on the College of Engineering.

The biosystems technology program emphasizes the applied and technical aspects of agricultural, biological and environmental systems. The curriculum incorporates courses in basic biological and physical sciences as well as engineering, soil, crop and atmospheric sciences, agricultural economics, natural resources, and animal, plant, and food sciences.

Concentrations include agricultural systems, biological systems, and environmental systems. The student develops his or her own program of advanced and elective courses in consultation with a faculty adviser and may have an informal minor in an area such as communication, business, education, or international agriculture.

Specific course requirements for the academic program in biosystems technology are:

		Credits
A.	*Basic Subjects*	
1.	Calculus	8
2.	Chemistry	6
3.	Physics	8
4.	Introductory biological science	6
5.	Computer applications	4
6.	Statistics or probability	3
7.	Economics	3
8.	Oral communication	3
B.	*Advanced and Applied Subjects*	
1.	Five courses in the agricultural, biological, or environmental sciences	15
2.	Five engineering courses at the 300 level or above; at least 9 credits in agricultural and biological engineering	15
C.	*Electives*	
	Additional courses to complete college requirements	
D.	*Total (minimum)*	*120*

For further details on both the agricultural engineering and biosystems technology specializations, see the department's undergraduate program brochure, available at 106 Riley-Robb Hall.

Animal Sciences

The animal sciences program area involves two departments—the Department of Animal Science (in Morrison Hall) and the Department of Poultry and Avian Sciences (in Rice Hall)—which offer a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and meat science. While emphasis in subject matter is directed toward farm-animal species, including dairy and beef cattle, horses, poultry, pigs, and sheep, laboratory and other species are used in research and teaching programs as well. The departments have extensive facilities for raising animals and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals at a convenient location on campus.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 12 credits) students select production (minimum, 6 credits) and advanced (minimum, 6 credits) courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, breeding, management, meat science). Dairy management, for example, is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Supporting courses in other departments are readily available and strongly encouraged. Thus, some students elect a program emphasizing supportive preparation in the basic physical and biological sciences appropriate to graduate or professional study following graduation. Others elect a program heavily oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. Those are but two examples of the programs that can be developed to meet a student's career interests. It is highly recommended that students obtain appropriate fieldwork experience during summers.

Several special training opportunities exist for highly motivated students. Upperclass students whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or for honors) or assist with teaching (for credit). The Dairy Management Fellows program and the Livestock Fellows program offer an equally challenging but different type of experience for a highly select group of students.

Applied Economics and Business Management

The undergraduate program in applied economics and business management is based in the Department of Agricultural Economics. Courses in agricultural economics are supplemented with others in related areas such as computer science, economics, sociology, history, government, industrial and labor relations, hotel administration, consumer economics, animal sciences, plant sciences, natural resources, mathematics, and statistics.

Four areas of specialization are offered:

Agricultural and applied economics provides a general program in the economics of the agricultural sector and of resource use. It is an appropriate major for those students who (1) are interested in applied economics; (2) want to survey offerings in agricultural economics, such as management, marketing, economic development and policy, public affairs management, and resource economics; and (3) want to prepare for graduate work in agricultural economics. It is an appropriate option for those interested in the application of the principles of economics to problems in both the public and private sector.

Business management and marketing applies the principles of economics and the tools of management to prepare students for careers in business. Special emphasis is given to developing decision-making skills and to the study of the structure and practices of business institutions. Market analysis, sales, banking, merchandising, production management, and general business management are fields for which students may prepare.

Farm business management and finance is intended for students with farm experience who are interested in farming or in preparing for work in farm management or farm finance, in cooperative extension, or in farm cooperatives.

Food-industry management is designed for students interested in management or sales positions with the processing, manufacturing, or distribution segments of the food industry.

In planning a course schedule, students must work closely with their faculty adviser. Each area of specialization has its own unique set of required and recommended courses, yet all the areas have enough flexibility to satisfy the interests and abilities of each individual student.

Biological Sciences

The program of study in biology is offered by the Division of Biological Sciences. Students enroll in either the College of Agriculture and Life Sciences or the College of Arts and Sciences.

Programs of study within the biology major include general biology; animal physiology and anatomy; biochemistry; botany; cell biology; ecology, systematics, and evolution; genetics and development; neurobiology and behavior; and an independent study option. Programs of study are described under the Division of Biological Sciences.

Communication

Everyone relates to others through the process of communication. Whether these human linkages are personal or through the mass media, there is an increasing need for individuals who can help establish communication relationships and make them more efficient and effective. Individuals who are able to do this must have good communication skills themselves and must comprehend the social psychology of human communication. Students in the Department of Communication have the opportunity to learn both the social science underlying human communication and the most effective means of adapting written, interpersonal, audio, and visual communication to audiences. The curriculum emphasizes learning communication theory along with communication skills.

Students elect one of five different sequences by the beginning of their junior year: public communication, electronic media, publication, interpersonal communication, or science communication. Each sequence has a required core of courses that includes Theories of Human Communication, Introduction to Mass Media, Visual Communication, and Oral Communication.

Public communication prepares students for careers as communication, information, or public relations specialists in a wide variety of organizations. Required courses for this sequence include communication planning and strategy, survey research, communication in organizations, and visual communication. There is heavy emphasis on developing writing skills.

Electronic media is a special track within the public communication sequence emphasizing structure and application of electronic media. The track prepares students for careers in electronic media or information agencies in which they must work with electronic media. Required courses include electronic media production, visual communication, media writing, and mass media industries. There is an emphasis on planning and writing skills, and on development of an in-depth understanding of media industry audiences and economic structure.

Publication provides an excellent background for working as an editor or writer in virtually any organization. Such work might include preparing annual reports, editing an employee newspaper, writing sales or marketing literature, or writing news stories. Required courses for this sequence are taken in writing, media law, publication design, and communication theory. Students serve as staff members for the Cornell Countryman for one or two terms. The publication sequence provides students with a good background for science communication.

Interpersonal communication coupled with a carefully designed concentration prepares students for careers in human service professions, such as personnel administration, training, or sales and consulting. The sequence also may be used to prepare for graduate study in communication and other social sciences. Required courses for this sequence are taken in communication theory, survey research, and persuasion. Electives include such courses as small group communication, listening, intercultural communication, and organizational communication.

Science communication combines the superior resources of Cornell's natural and social science courses with a broad range of courses in communication principles and skills to offer students the background needed to succeed in positions that involve the communication of scientific and technical information. The sequence emphasizes courses in writing and those involving production in various media. The sequence is appropriate for those who are interested in communicating with the general public or with scientific and technical constituents.

In addition to the requirements for a sequence, a concentration of at least 12 credits outside the department is required. The concentration helps orient students to a communication career in either a business, government, education, or public service organization or to a very specific profession such as agribusiness public relations or science communication.

Students are strongly encouraged to seek practical communication experience through part-time or summer employment, the department's internship course, or the campus media. Work experience contributes to a portfolio of professional materials that is invaluable in obtaining a position in communication.

Detailed descriptions of the sequences and the guidelines for the selection of elective courses are available from the Department of Communication, Kennedy Hall.

Education

The focus in the Department of Education is on how teaching and learning take place in school and nonschool settings, as well as on the role of education in our society. Students study concepts and develop competencies necessary to analyze educational situations critically and to plan, implement, and evaluate educational programs. Students in the program area take a core curriculum:

- A course in general psychology
- A course in educational psychology (e.g., Education 311)
- A course in the social, historical, and philosophical foundations of education (e.g., Education 271, 370, 472)
- A field experience (e.g., Education 402, 403, 409, 420, 430)

Three specializations are available at the undergraduate level

Agricultural Education concentration. This program leads to teaching agriculture in secondary schools and two-year colleges, positions in extension education, international agricultural education, and in related careers in the public and private sectors. It is intended for students who have good academic ability, experience in agriculture, interest in youth and young adults, and the ability to work with people.

Within this concentration students may obtain certification to teach agricultural education in secondary schools and in related areas by completing the concentration course requirements, by student teaching, and by passing a state examination. Plant and animal science, mechanization, conservation, and agricultural business are the areas most frequently taught in secondary schools. Students who complete certification requirements are provisionally certified for 5 years. A master's degree is required for permanent certification within five years after first employment in teaching. Persons with a baccalaureate degree in technical agriculture may earn certification through a master's degree in agricultural education. Students who major outside of education may also obtain a teaching certificate in agriculture by completing the certification program and passing the state examination.

Directed field experiences, internships, and selected education courses are used to prepare students for agricultural educator positions not requiring certification. Further information is available from the agricultural education coordinator, Kennedy Hall (Tel: 607/255–2197).

General Education. By selecting courses in the Department of Education, students can prepare for positions in areas such as counseling, youth-group leadership, cooperative extension, and the Peace Corps. Students

can also prepare themselves for graduate programs in science education, environmental education, educational psychology, research methods, extension, adult and continuing education, and the social/economic/legal/philosophical foundations of education.

Teacher Education in Science and Mathematics. Students at Cornell may pursue teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. Teacher Education in Science and Mathematics (TESM) is a university program jointly conducted by the departments of education and mathematics. Although TESM offers options for undergraduate and graduate study, most students enroll in a five-year program, which combines an undergraduate major in mathematics or one of the sciences with a one-year Master of Arts in Teaching (MAT). Students from any college at Cornell are eligible to apply to the program as undergraduates. Undergraduate students in TESM do not normally major in education.

Students completing their studies as undergraduates, and having completed their student teaching, are normally eligible for provisional teaching certification from the State Education Department, effective for five years. Students completing the graduate program earn the master's degree required for permanent certification.

For more information, contact the TESM Student Support Specialist at (607) 255-9255 or the program coordinator, Professor Carlsen (607) 255-9257.

Entomology

The intent of this curriculum is to provide students with a basic background in the biological and environmental sciences, with a special emphasis on the study of insects. Many students pursue graduate studies in entomology or related sciences upon completion of the B.S. degree, and the requirements are based on a preprofessional degree. Those who do not anticipate graduate training are urged to select electives of immediate value to the careers they plan. Some suggestions are made in section B below.

A. Specific Requirements

Basic Sciences

College mathematics, including calculus
A course in physics
Chemistry 103–104 or 207–208
Chemistry 253 (organic)

General Biology

Introductory biology
Biological Sciences 330 or 331, Principles of Biochemistry
Biological Sciences 311, Introductory Animal Physiology
Biological Sciences 281, Genetics, or Plant Breeding 225, Plant Genetics
Biological Sciences 221, Neurobiology and Behavior
Biological Sciences 261, General Ecology

Entomology

Entomology 212, Insect Biology, or 241, Applied Entomology
Entomology 322, Insect Morphology
Entomology 331, Insect Taxonomy

Two courses selected from the groups below. Both may not be from the same group:

Group a

Entomology 444, Integrated Pest Management
Entomology 677, Biological Control
Entomology 690, Insect Toxicology and Insecticidal Chemistry

Group b

Entomology 455, Insect Ecology
Entomology 471, Ecology and Systematics of Freshwater Invertebrates

Group c

Entomology 452, Medical Entomology
Entomology 453, Insect Pathology
Entomology 483, Insect Physiology

B. Suggested Electives

The choice of electives should reflect a student's particular interests within entomology. Two broadly distinct areas of interest are the impact of insects on human welfare and the more basic aspects of insect biology. Courses in botany, evolution, invertebrate zoology, microbiology, cell biology and histology, vertebrate biology, statistics, foreign languages, scientific writing, oral communication, plant pathology, and other areas of agriculture are also recommended.

Food Science

The food science program area is designed to provide students with the basic skills and knowledge necessary to ensure an adequate general food supply. Students take a core of fundamental courses and in consultation with faculty advisers select courses suitable for specific career objectives. The core is designed to meet minimum guidelines of the Institute of Food Technologists, the professional society of U.S. food scientists. The flexibility of the food science program allows students to prepare for a variety of positions in industry, government, or education. Some of the positions and areas of work require graduate training. Opportunities for graduate study exist at a number of universities, including Cornell.

During the first two years, students are required to take the two-semester introductory courses in biology, chemistry, and physics plus introductory courses in microbiology, calculus, food science, and nutrition. During the last two years, students take courses dealing with the application of science and technology to the processing, preservation, distribution, and utilization of foods. This includes the following required courses: Food Analysis, Food Engineering I, Sanitation and Public Health, Food Processing I and II, Food Chemistry, Sensory and Objective Evaluations of Foods, Food Microbiology, Food Chemistry Laboratory, and introductory statistics. Students also take courses in the social sciences and humanities to meet the general college requirements.

Students may choose additional courses in chemistry, microbiology, or nutrition in preparation for careers in research and development; in mathematics and engineering, for careers in processing and engineering; in marketing and business management; or in a variety of production courses related to specific commodities. Emphasis may be placed on the international aspects of food science.

Students are strongly encouraged to obtain further competence in one or more areas of emphasis. Lists of recommended courses are available for many areas, but the student is free to select courses for special objectives. The areas of emphasis include processing technology; food chemistry; nutritional aspects of processing; technology and management; dairy science; meat, poultry, and fish technology; food microbiology; and international food development.

A state-of-the-art food processing and development laboratory, a full-scale dairy plant, and extensive research laboratory facilities are available for training, research, and employment.

Landscape Architecture Program

The Landscape Architecture Program focuses on the art of landscape design as an expression of cultural values combined with natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, architecture, and city and regional planning.

The program offers a course of study that prepares students intellectually, technically, artistically, and ethically for the practice of landscape architecture. The curriculum focuses upon graphic communication, basic and advanced design methods, landscape history, plant materials, construction technology, theory, and professional practice. Design studios focus upon the integration of site requirements as applied to specific sites at a variety of scales. Projects range from urban design and housing to parks and garden design.

The Landscape Architecture Program offers three professional degree alternatives: a two-year graduate curriculum for those who have undergraduate degrees in landscape architecture or architecture, a three-year graduate curriculum for those who have a four-year undergraduate degree in another field and a four-year Bachelor of Science degree. Graduate studies in landscape architecture are administered through the Graduate School and lead to a Master of Landscape Architecture degree. Undergraduate studies in landscape architecture are administered through the College of Agriculture and Life Sciences.

Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad

The faculty encourages study abroad and has two formally structured programs. The *Denmark International Study* (DIS) program is available primarily to senior undergraduates in their fall semester and is administered through Cornell Abroad. The *Rome Program* is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

First Year

Fall Term	*Credits*
*FR DR 109, Nature Drawing	3
†Biological sciences elective	3
†Physical sciences elective	3
†Social sciences or humanities elective	3
†Written or oral expression elective	3
	15
Spring Term	
*LA 142, Introduction to Landscape Architecture	4
†Biological sciences elective	3
†Social sciences or humanities elective	3
†Written or oral expression elective	3
‡Free elective	3
	16

Second Year

Fall Term	
*LA 480, Principles of Spatial Design	3
*LA 201, Design, Theory, and Composition	6
Free elective	3
*HORT 335, Woody Plant Materials for Landscape Use	3
	15
Spring Term	
*LA 202, Design, Composition, and Theory	6
*LA 521, History of European Landscape Architecture	3
†Written or oral expression elective	3
†Physical sciences elective	3
	15

Third Year

Fall Term	
*LA 301, Site Design and Detailing	6
*LA 310, Site Engineering	4
†LA 522, History of American Landscape Architecture	3
‡LA 491, Design and Plant Establishment	3
	16

	12
Summary of credit requirements	
*Specialization requirements	80
‡Free electives	10
	90

Second professional degree curriculum. The two-year Master of Landscape Architecture (M.L.A.) curriculum serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants are therefore expected to hold a bachelor's degree in landscape architecture or architecture from an accredited program.

The objectives of the two-year M.L.A. curriculum are to permit students to conduct research relating to landscape architecture and to provide advanced education and training to individuals who may wish to teach, practice, or conduct applied research in landscape architecture. Students are permitted considerable flexibility in establishing programs that take full advantage of the teaching and research resources of the university.

Students admitted to the two-year M.L.A. curriculum are required to complete 60 credits of course work as approved by the members of their graduate committee. This must include at least two advanced studios, a graduate seminar, and a thesis or final master's project.

Microbiology

Microbiology is concerned with both basic and applied study of microorganisms such as bacteria, fungi, and viruses. Microorganisms touch many areas of human activity such as food production and nutrient and waste recycling, in addition to causing infectious diseases. Fundamental knowledge of microbiology is crucial for continued advances in basic biological sciences such as biochemistry and genetics as well as in applied areas such as agriculture, soil, crop, and atmospheric sciences, animal sciences, bioengineering, ecology, food science, medicine, and natural resources. Microbiology also provides the basis for the new and exciting disciplines of genetic engineering and biotechnology.

The undergraduate major in microbiology provides excellent preparation for graduate study in many areas of biological science, as well as for professional study in medical, veterinary, or dental school. Microbiology graduates can pursue careers in biotechnology or industrial microbiology, clinical microbiology, food microbiology, or pharmaceutical microbiology. Microbiologists also work as technicians in university, government, industry, or hospital research laboratories.

Study in microbiology emphasizes laboratory as well as classroom training and requires a rigorous background in basic sciences. Courses in general biology, genetics, general chemistry, organic chemistry, biochemistry, biochemistry laboratory, physics, and calculus are required. The required microbiology courses include introductory microbiology, advanced general microbiology, microbial physiology, microbial genetics, either pathogenic microbiology or immunology (taught in the College of Veterinary Medicine), and at least two microbiology laboratory courses. Electives include courses in procaryotic cytology, bacterial diversity, tissue culture techniques, soil microbiology, food microbiology, and microbial engineering. Students with good academic records are encouraged to conduct independent research during their senior year.

Students interested in clinical microbiology may apply to the Clinical Microbiology Specialization Program. Students selected for the program spend their senior year at Cornell Medical College and the New York Hospital, studying and working in clinical microbiology. Applicants must have completed their departmental course requirements by the end of their junior year.

More information may be obtained from the Department of Microbiology, Stocking Hall. A pamphlet entitled *Microbiology in Your Future* can be obtained without charge by writing to the American Society for Microbiology, 1913 I Street N.W., Washington, D.C. 20006.

Natural Resources

The undergraduate curriculum is designed to provide an enduring and broadly applicable education. The focus of study is on the systems that yield our renewable natural resources (water, forests, fish, and wildlife) and includes emphasis on both natural sciences and human organizations involved with resource management. Students are provided with an opportunity to understand the scientific, ethical, and societal basis for the protection and management of renewable resources through the application of ecological principles and knowledge of social needs.

The program is based in the Department of Natural Resources and is housed in Fernow Hall, named after the father of American forestry. The curriculum helps prepare students for a wide range of careers and can serve as a base for graduate work in numerous fields. Students are prepared to appreciate and understand their natural environment and humanity's interactions with it. A foundation is developed for the many students who continue with graduate professional training in natural resource science and management, including wildlife, fisheries, and forest sciences, aquatic systems, and policy studies.

Students are encouraged to study in each of the seven learning areas listed below:

1) Understanding basic substrates for life: geology, soils, water resources
2) Understanding natural processes: chemistry, physics, ecology, field biology, meteorology
3) Understanding how organisms, populations, and ecosystems function: biology, physiology, anatomy, behavior, ecology, population dynamics
4) Understanding how people and their institutions function: psychology, sociology, political science, government, history, anthropology, law, economics
5) Identifying and measuring the environment: taxonomy, remote sensing, mathematics, statistics
6) Understanding resource management processes: communication, analysis, planning, philosophy, computer science, decision making, law, ethics
7) Learning about the world: Students should recognize that not all learning takes place in the classroom. Exploring different careers, participating in campus and community activities, and conducting independent research all contribute to continuing growth.

Students need not select an area of concentration, but those who wish to do so may specialize further in wildlife science, forest science, aquatic science, fishery science, or natural resource policy and management.

Opportunities for field-oriented studies are available at the Arnot Forest Teaching and Research Center; the Cornell Biological Field Station, on the shore of Oneida Lake; and the Uihlein Maple Syrup Research and Extension Field Station at Lake Placid.

Students should seek relevant work experience to complement their academic studies.

Plant Sciences

Plant sciences students may specialize in general plant science, plant biology, plant breeding, plant pathology, plant protection, or horticultural sciences, including floriculture and ornamental horticulture, pomology, and vegetable crops. Students with well-defined interests may specialize when they enter college. Others may start in the general plant sciences curriculum and, if they desire, specialize after the second year.

Plant sciences is a multidepartmental program area, sponsored by the Department of Plant Breeding in Emerson Hall, and the departments of Floriculture and Ornamental Horticulture, Plant Pathology, Pomology, and Vegetable Crops, all located in the Plant Science Building.

General plant science is intended for students whose interest in studying plants has not yet centered on any one of the more specialized groups within the area. Students may continue with this option throughout their undergraduate years, particularly if they are likely to be interested in and qualified for advanced studies beyond the bachelor's degree. Students who plan to seek employment upon graduation may prefer to specialize. There are, however, opportunities for general plant science graduates at the bachelor's degree level in the service and supply industries as extension agents, as teachers, and as research technicians.

More than one hundred courses are offered that deal directly with some area of plant science. Other courses relating to plant science are offered in agronomy and biological sciences. In addition, an interest in plant science may be combined with some other area of specialization, such as agricultural and biological engineering, education, extension, statistics, international agriculture, food science, or agricultural economics.

Undergraduates are encouraged to obtain practical experience. It may involve research under the direction of a faculty member or work in a commercial industry or research institute or on a farm. Departments will assist students looking for positions that would provide useful experience.

Floriculture and ornamental horticulture applies principles of plant science and business management to the production and marketing of florist, nursery, and turfgrass crops, as well as to the selection and management of plants for both indoor and outdoor landscapes. Programs prepare students for careers at the professional and managerial levels in horticultural business, research, teaching, communications, and extension and public education.

The core curriculum consists of the following courses:

Hort 101, Introduction to Horticultural Science
Hort 102, General Horticulture
Hort 230, Woody Plant Materials
Hort 300, Garden and Interior Plants I
Hort 400, Principles of Plant Propagation
Bio S 241, Plant Biology (Introductory Botany)
Bio S 242, Plant Physiology (lecture)
Bio S 244, Plant Physiology (laboratory)
SCAS 260, Introduction to Soil Science
Entom 241, Applied Entomology, or Entom 212, Insect Biology
Pl Pa 301, Introductory Plant Pathology

Although mastery of these subject areas is considered essential for students planning to enter a floriculture or landscape horticulture career, justifiable exceptions to the core curriculum may be granted by the student's adviser.

With permission of the adviser, a transfer student may receive core curriculum credit for similar courses taken at other institutions provided that transfer credit is granted by the college. In addition, all transfer students must complete a minimum of 12 credits in floriculture and ornamental horticulture courses at Cornell. No more than two of the following landscape architecture courses may be included in this 12-credit requirement: LA 140, LA 220, LA 310, or LA 312. No other landscape architecture or freehand drawing courses may be applied to the requirement because they do not contain horticultural subject matter.

Students may select an area of emphasis in either floriculture or landscape horticulture. Specialization in floriculture prepares students for careers in management of the production of crops in greenhouses and wholesale- and retail-florist marketing, whereas specialization in landscape horticulture trains students for careers in nursery-crop production, turfgrass management, landscape contracting and service, retail- and wholesale-marketing of nursery products and services, botanical garden and arboretum management, urban horticulture, and related areas. Some students choose to pursue a general program in floriculture and landscape horticulture including courses in both areas. Similarly, programs in horticultural business management, research, teaching, extension and public education, and communications/journalism may be arranged across two specialization areas. Students wishing to prepare for graduate study in horticultural science may develop a program in basic sciences and their application in horticultural science. Lists of recommended courses for the areas of specialization are available from student

advisers and from the undergraduate program coordinator.

Working with his or her faculty adviser, each student will tailor a program to achieve individual educational objectives in floriculture, landscape horticulture, or general horticultural science. A core of management courses also is recommended for students planning horticultural business careers. Students are also encouraged to take courses in these areas: agricultural and biological engineering, soil science, computer science, ecology, entomology, geology, plant pathology, plant physiology, oral and written expression, plant taxonomy, and weed sciences. Use of electives to pursue study in the humanities and in other areas of special interest to the student is encouraged and provides opportunities for broadening and enriching learning experiences. Numerous opportunities to become familiar with the horticultural industries and professions are provided through field trips, guest lectures, undergraduate seminars, independent or small-group study, optional internships, and work-experience programs.

Questions concerning the undergraduate curriculum, advising, and related manners should be addressed to Dr. Carl F. Gortzig, Undergraduate Program Coordinator, Department of Floriculture and Ornamental Horticulture, 20 Plant Science Building, Ithaca, New York 14853-5908 (telephone: 607/255-3090).

The department's office is 20 Plant Science Building. Departmental facilities include classrooms and laboratories in the Plant Science Building, greenhouse and laboratory facilities at the Kenneth Post Laboratory, the Test Garden, the Turfgrass Research Field and Laboratory, landscape architecture studios on the fourth floor, Roberts Hall (entrance Kennedy Hall), and freehand drawing studios in Mann Library.

Plant biology provides undergraduates with preparation for graduate study in the plant sciences that stresses basic, rather than applied, research. In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied areas that seem appropriate. Options include molecular biology, plant physiology, plant biology, genetics, cytology, organic chemistry, biochemistry, anatomy, taxonomy, ecology and evolution, and statistics. A core of courses, including mathematics, plant biology and physiology, and cytology, is strongly suggested. However, different specialties within plant biology afford a flexible curriculum.

Plant breeding provides undergraduates with (1) preparation for graduate study leading to advanced degrees in plant breeding and plant genetics and (2) preparation for work in producing and marketing plant varieties and making varietal recommendations and for positions in seed analysis, regulation, and quality control.

In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied fields best suited to his or her individual goals. Options include plant breeding and plant genetics; genetics, cytology, and cytogenetics; mathematics (calculus) and statistics; organic chemistry and biochemistry; plant anatomy, ecology, and physiology; crop production; and plant pathology and disease control.

Plant pathology requires broad training in the physical and biological sciences and a general background in crop production with emphasis on crop protection. Specific requirements depend upon a student's career interests. Career options include working as a mycological or microbiological technician, biological research technician, technical representative for agricultural industry, cooperative extension agent, plant protection technician, or biology teacher. Students may also be interested in graduate work in plant pathology or some other area of biology.

A core of basic and applied courses is strongly suggested, including chemistry, mathematics, physics and biological sciences, plant breeding, and plant pathology. Courses chosen from soil, crop, and atmospheric sciences, entomology, floriculture and ornamental horticulture, pomology, or vegetable crops complete the program.

Plant protection is offered for students who are interested in pest management or plant protection. The study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production may prepare students for careers in agribusiness, the agrichemical industry, cooperative extension, pest management consulting, state and federal regulatory work, and a variety of other technical positions. Although designed as a terminal program for students desiring a practical preparation in general plant protection, this specialization may also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

The following subjects are considered essential to the plant protection specialization: botany and plant physiology, general ecology, soils, crop science, and microbial ecology. Additional courses in introductory entomology, integrated introductory plant pathology, plant disease control, weed science, and integrated pest management are recommended. Students should plan to take a total of 62 to 70 credits in courses required and recommended for the specialization.

In addition, a number of other subjects pertinent to plant protection are recommended, depending upon the student's interests: agricultural economics, agricultural and biological engineering, soil, crop, and atmospheric sciences, biochemistry, communication, pathology and entomology, general physics, genetics, meteorology, mycology, pesticides in the environment, and plant anatomy. Employment involving practical experience in plant protection between the junior and senior years is encouraged. The job may be on a farm, at an experimental station, with an agrichemical company, or with a regulatory agency.

Pomology (the science of fruit growing) provides students with knowledge of the scientific technology and the influence of environmental factors on the production, handling, and storage of deciduous fruit crops. New York is a national leader in fruit production. An on-farm value of over $155 million generates an estimated $620 million for the state's economy.

Courses are selected by students in consultation with a faculty adviser. Flexibility in programs makes it possible to establish a course of study to fit the desired goals of individual students. The diverse pomology curriculum, complemented by courses in basic sciences and arts and electives in a student's area of interest, prepares pomology majors for a career in fruit production, agricultural business related to the fruit industry, storage and merchandising, or professional pomology. Job opportunities for graduates can be found in fruit production, marketing, sales and service, research, teaching, and extension.

Vegetable Crops is offered for students with an interest in either applied or basic aspects of vegetable production. The high value of vegetables and their importance in the human diet assures a continued demand for trained personnel in all aspects of vegetable technology. A flexible curriculum is provided to prepare undergraduates for careers in a diversity of fields, including: horticultural research, teaching, extension, production, processing, and marketing. A faculty adviser assists individual students in the selection of courses, which usually include: general horticulture, soils, botany, vegetable types and identification, vegetable production, and post-harvest handling or marketing. Additional course work depends upon the interest of the student, and may include: vegetable physiology, plant breeding, entomology, plant pathology, weed science, ecology, soil, crop, and atmospheric sciences, nutritional science, agricultural economics, international agriculture, and agricultural and biological engineering.

The vegetable industry is an economically important component of agriculture in New York and in the United States. Recently, there has been increased interest in growing vegetables in tropical countries. Exciting challenges are facing the industry. Greater awareness of environmental and health issues is driving a change toward farming practices that depend less upon agricultural chemicals than in the recent past. New technologies are being developed and implemented to help growers make this change while remaining profitable. Among these technologies are: integrated pest management, genetic engineering, breeding for insect and disease resistance, low-input and organic cropping systems, and cultural practices that improve production efficiency and conserve agricultural resources.

The Department of Vegetable Crops has on-campus greenhouses and laboratories as well as two research farms in the Ithaca area that support our teaching program. Students are encouraged to gain hands-on experience growing vegetables and to pursue their individual interests through course work and by taking advantage of the many resources available in the College of Agriculture and Life Sciences.

Rural Sociology

Technological, economic, demographic, and environmental changes are social processes, and each has major impacts on individuals, social groups, societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. Among the topic areas in which faculty members in the Department of Rural Sociology specialize are international agricultural and rural development, community and regional development and changes in the United States, environmental sociology, sociology of agriculture, rural industrialization and labor markets, technology and social change, population and development, political economy, gender and social change, and

research methodology. Students acquire background in one or more of these areas by specializing in one of the three concentrations described below. Each of the concentrations, through its required courses, provides background in both domestic and international aspects of the subject matter. Normally, students will develop a specialization with either a domestic or international emphasis by choosing appropriate elective courses for their concentration. Regardless of the area of specialization, however, all students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.

Recognizing that students are concerned with future career opportunities, the undergraduate program emphasizes acquisition of skills as well as general knowledge in preparation for jobs or further study upon graduation. Accordingly, students are expected to become involved in the application of theory, methodology, principles, and concepts in the analysis of practical problems. The concentration in social data and policy analysis is particularly well suited to providing skills in research and policy analysis that will be useful for students who wish to obtain employment after completion of the baccalaureate degree.

Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S., or Ph.D.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Development Sociology, both of which are located in Warren Hall. For many years, the department and graduate field have been recognized as among the top programs in the country, and both are known for innovative program orientations. The department is particularly well known for providing instruction in international as well as domestic aspects of development, environmental sociology, sociology of agriculture, population studies, and other topics. Faculty members in this department are committed to both quality instruction and research programs.

Being located in a college of agriculture, faculty members maintain strong ties with the technical fields in the college as well as with the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Women in Development Program, the Rural Development Program, the Hispanic Studies Program, the Program on Science, Technology, and Society, and the Center for International Studies. Nearly half of the department faculty are associated with one or more area studies programs (the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, or the Institute for African Development). Department members also maintain working relations with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to supplement their course work by electing courses in these other departments and programs, thereby rounding out their educations by acquiring different perspectives.

The undergraduate concentrations offered in rural sociology include development sociology; population, environment, and society; and social data and policy analysis. The concentrations vary in terms of course requirements and credits needed for graduation.

All students majoring in rural sociology are expected to take four core courses: an introductory course (R Soc 101 or 102), methods (R Soc 213), theory (R Soc 301), and a course in statistics.

The concentration in development sociology provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. The required courses provide background in the sociology of development in both the advanced and developing countries. Students normally select a set of elective courses in which either domestic or international development is emphasized. The required and elective courses provide background in several aspects of development sociology, including (1) an understanding of the processes of socioeconomic development in low-income or Third World countries and training in the formulation of strategies to enhance the socioeconomic well-being of citizens of those countries, (2) analysis of the social structures and processes for development in nonmetropolitan settings in the United States, (3) analysis of the processes of agricultural change and development in industrialized and low-income countries, and (4) an understanding of the processes of technological development and change in agriculture and other rural industries in developed and developing countries.

Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Total credits required, including the four core courses: 27

Courses Required	*Credits*
R Soc 205, Rural Sociology and International Development	
or R Soc 208, Technology and Society	3
R Soc 370, Comparative Issues in Social Stratification	3
R Soc 436, Small Towns in Metropolitan Society: Changing Structures and Quality of Life	3
	9

Electives for the Concentration

At least six credits must be selected from a list of complementary courses for the concentration in development sociology. The list of courses is available in 133 Warren Hall.

The concentration in population, environment, and society provides an understanding of (1) the causes and consequences of the major components of population change—fertility, mortality, and migration; (2) the major patterns of population distribution and population characteristics in the United States and the developing world, (3) the relationships between social structure and the biophysical environment, and (4) the relationships between population change and natural resource utilization in development. Students normally select the elective courses for the major in such a way as to stress either population studies or sociological aspects of natural resources and the environment.

Students are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and evolution, environmental studies, and natural resources.

Total credits required, including the four core courses: 27

Courses Required	*Credits*
R Soc 201, Population Dynamics	3
R Soc 324, Environment and Society	3
R Soc 438, Social Demography, or R Soc 440, Social Impact of Rapid Resource Development	3
	9

Electives for the Concentration

At least six credits must be selected from a list of complementary courses for the concentration in population, environment, and society. The list of courses is available in 133 Warren Hall.

The concentration in social data and policy analysis provides (1) in-depth knowledge of research methodology, statistics, and computer applications, (2) an understanding of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organizations, communities, regions, and states, and (3) knowledge and practice in policy analysis. Students ordinarily select electives for the concentration in order to specialize in either policy analysis or in a particular area of public policy (international development policy, domestic rural development policy, environmental policy, or population policy).

In addition to the required courses listed below, students in the concentration in social data and policy analysis are required to take Soc 301, Evaluating Statistical Evidence, as their statistics course for meeting the core requirements of the major.

Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

Total credits required, including the four core courses: 27–29

Courses Required	*Credits*
R Soc 201, Population Dynamics, or R Soc 205, Rural Sociology and International Development, or R Soc 206, Gender and Society, or R Soc 208, Technology and Society	3
Soc 303, Primary Data Collection and Design [4 credits], or HSS 292, Research Design and Analysis, or Comm 382, Survey Research Methods	3–4
ABEN 102, Introduction to Microcomputer Applications, or CRP 421, Introduction to Computers in Planning [4 credits]	3–4
	9–11

Electives for the Concentration

At least six credits to be selected from a list of complementary courses for the concentration in social data and policy analysis. The list is available in 133 Warren Hall.

Brochures are available from rural sociology faculty members.

Soil, Crop, and Atmospheric Sciences

The Soil, Crop, and Atmospheric Sciences department is intended to provide students with a solid foundation in the basic sciences. Special emphasis can be placed in one of five specializations; agronomy, crop science, atmospheric science, soil science, or weed science. Many students pursue a general program in the department to maximize job opportunities upon graduation. Specialization is required at the graduate level.

Crop science is the application of basic biological and ecological concepts to the production and management of field crops. Examples of field crops are alfalfa, corn, soybeans, and wheat. Courses required include general biology, botany, plant physiology, general chemistry, mathematics, computing, crops, and soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in crops, soils, crop physiology, economics, communication, plant pathology, entomology, nutrition, genetics, microbiology, and climatology. Students planning graduate or professional study beyond the bachelor's degree should take advanced course work in biochemistry and botany; qualitative, quantitative, and organic chemistry; and calculus, physics, and statistics.

Atmospheric science is the study of the atmosphere and the processes that shape our weather. The core curriculum in meteorology is designed to provide students with an understanding of the fundamental physical and dynamic properties and processes of the atmosphere. All students are required to complete a minimum of three semesters of calculus; two semesters of physics; a semester each of chemistry, computer science, and statistics; and a sequence of eight courses covering observational, general, theoretical, and synoptic meteorology. Additional courses are available for students interested in subjects of agricultural meteorology, climatology, physical meteorology, and statistical meteorology. The curriculum satisfies the basic requirements for employment as a professional meteorologist and provides a sound background for graduate study or work in the numerous specialized areas of meteorological science. Students are encouraged to choose additional course work in related or complementary areas of interest, such as agriculture, biology, computer science, mathematics, statistics, physics, chemistry, or engineering.

Soil science is the application of basic physical and biological science to the classification, use, and management of soils on an ecologically sound basis. The curriculum in soil science combines training in the physical and biological sciences with a thorough background in soil science. Students take 16 credits in soil science, including 4 credits in the introductory course and 12 credits chosen from more advanced courses in soil science. In addition, 10 credits of chemistry, 6 credits of mathematics, and 6 credits of physics, as well as supporting biological sciences courses, are expected to satisfy the major.

Weed science is that branch of pest management which emphasizes the principles and practice of weed control. The scientific basis for mechanical, cultural, chemical, and biological control procedures is considered. Plant physiology, ecology, organic chemistry, and biochemistry are required in addition to fifteen credits in weed science and plant protection. The specialization is offered cooperatively by the departments of Soil, Crop, and Atmospheric Sciences, Floriculture and Ornamental Horticulture, and Vegetable Crops so that a variety of managed plant systems may be studied.

Statistics and Biometry

Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization, and drawing conclusions based on probability statements. Biometry is the application of mathematical and statistical techniques to the life sciences. Students with ability in mathematics and an interest in its applications will find this a challenging specialization.

The work of a statistician or biometrician can encompass research, teaching, consulting, and computing in almost any mix and in a wide variety of applications. Opportunities for employment are abundant in universities, in government and in businesses and industries ranging from large corporations to small consulting firms, and salaries are usually excellent.

While satisfying course requirements for a specialization in statistics and biometry, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, economics, and the social sciences that involve numerical data and their interpretation.

Students specializing in this area are required to take computer science courses (e.g., Computer Science 100 and 211), mathematics courses (at least three semesters of calculus), and statistics courses (Statistics and Biometry 200, 215, 408–409, 417, 601–602 and 607 and Industrial and Labor Relations 310). Work experience gained through summer employment or undergraduate teaching is highly recommended. Students should contact Charles E. McCulloch for information.

Special Programs in Agriculture and Life Sciences

Some students are interested in pursuing a general education in the agricultural sciences. Others are uncertain about career objectives in agriculture and the life sciences. The opportunity to develop an independent major in general studies in agriculture and the life sciences is available for such students. In consultation with a faculty adviser, they may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one or several academic units of the university.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, the attitudes, and the analytical ability that a general education fosters. A course of study for a special program must be planned with and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special programs are available in the Office of Student Services, Roberts Hall.

General studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected in those and other areas of individual interest or career aspiration.

International agriculture provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural modernization in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in international agriculture are designed to acquaint students with the socioeconomic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and with various world areas for which study programs exist. The study of a foreign language is required.

In addition to the college distribution requirement, students majoring in international agriculture must take a minimum of 30 credits. A minimum of 7 credits in international agriculture and 8 credits in a modern foreign language are required. The other courses recommended are drawn from a wide range of disciplines. The objective is to acquaint students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

DESCRIPTION OF COURSES

Undergraduate and graduate courses in the college are offered through the seventeen academic departments and also through the Divisions of Biological Sciences and Nutritional Sciences.

Descriptions of courses, both undergraduate and graduate, are given by department, arranged in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

NONDEPARTMENTAL COURSES

ALS 100 American Indian Studies: An Introduction

Fall. 3 credits. S-U grades optional.
Lec, W 7–10 p.m. Robert W. Venables.
This course provides a foundation for the study of American Indians. Emphasis will be placed on social, cultural, historical, educational, and human development. Guest lecturers from Cornell's staff and the Indian community will serve to broaden the scope of the course.

ALS 127 Introduction to Farm Techniques
127, fall and spring. 1 credit each semester. Prerequisite: permission of instructor. S-U grades only. Contact C. Pace, Roberts Hall, for scheduling. Limited to 8 students per section.
T or W, 1:25–4:30. Class assembles in the lobby of Roberts Hall for transport to various facilities. J. G. Whitcomb.
Practical instruction in the basic skills of farming and field research. Includes safe tractor and equipment operation and maintenance; harvesting and planting crops; safe use of pesticides; caring for and handling dairy and beef animals, sheep, and poultry; and milking by machine and by hand. General orientation in the day-to-day procedures of farm operation. Field trips to area farms and agribusinesses will provide knowledge of farmers' skills, problems, and way of life.

ALS 318 Ethnohistory of the Northern Iroquois
Fall. 3 or 4 credits. S-U grades optional.
Lec, T 1:25–4:30. Robert W. Venables.
The development of Iroquois (Houdenosaunee) culture is traced from the Archaic period to the present day. Changes in cultural ecology, social organization, and world view are examined. Supplemental information is drawn from accounts of neighboring groups in southern Canada and western New England. Approximately one-third of the course is devoted to contemporary issues faced by the Iroquois people.

ALS 400 Internship
Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only.
Staff.
Students may register only for internships approved by the College Internship Committee. Currently, the opportunities are available in the New York State Assembly Intern Program, the New York State Senate Session Assistant's Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor, stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

ALS 500 Cornell-in-Washington Program
Agriculture and Life Sciences students may register for this course when they are accepted for the public policy portion of the Cornell-in-Washington Program. An assignment with a suitable externship of at least 25 hours per week is expected. Students must satisfy the requirements of the relevant core instruction in methods and policy offered for externs, including any papers required. Credit and grading will be that designated by the CIW Program for the term taken. Applications are made through the Department of Government, 134 McGraw Hall.
Staff.

Participation is required in any structured learning activities associated with the internship.

ALS 661 Environmental Policy (also Biological Sciences 661 and Biology and Society 461)
Fall and spring. 3 credits each term. Limited to 12 students. Prerequisite: permission of instructor.
Sem R 2:30–4:30 p.m. D. Pimentel.
This course uses an interdisciplinary approach to focus on complex environmental and energy problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

G. E. Rehkugler, chair; L. D. Albright, D. J. Aneshansley, J. A. Bartsch, J. K. Campbell, T. J. Cook, J. R. Cooke, A. K. Datta, R. C. Derksen, R. B. Furry, K. G. Gebremedhin, R. W. Guest, W. W. Gunkel, D. A. Haith, P. E. Hillman, J. B. Hunter, W. W. Irish, L. H. Irwin, W. J. Jewell, H. A. Longhouse, D. C. Ludington, J. Y. Parlange, R. E. Pitt, T. S. Steenhuis, M. B. Timmons, L. P. Walker, M. F. Walter

102 Introduction to Microcomputer Applications (also Computer Science 102)
Fall. 3 credits. S-U grades optional. Each lab section limited to 16 students. Not open to students enrolled in the College of Engineering or to students who have taken any prior computer courses at Cornell. Students in statutory colleges must enroll in Agricultural and Biological Engineering 102.
Lecs, T R 10:10 or 12:20; lab M 1:25–4:25 or 7:30–10:30 p.m., T 1:25–4:25, W 1:25–4:25 or 7:30–10:30 p.m., or R 1:25–4:25. 1 evening prelim.
P. E. Hillman and computer science staff.
An introduction to the use of application packages on microcomputers using the Macintosh. An attempt will be made to assess and demonstrate the capability and limitations of the current generation of personal computers through software for word processing, spreadsheets, database, and other applications. The course will involve very little programming using high-level languages.

110 Farm Metal Work
Spring. 2 credits.
Lec, R 9:05; labs, M T or R 1:25–4:25, M 7–10 p.m. T. J. Cook.
M, T and R labs, each limited to 18 students, include instruction in sheet metal work, pipe fitting, hot and cold metal work, and arc and acetylene welding.

132 Farm Carpentry
Fall. 2 credits. Each lab limited to 15 students.
Lec, T 9:05; labs, T W or R 1:25–4:25, M 7–10 p.m. T. J. Cook.
Instruction in the fundamentals of farm carpentry, including concrete work, and equipment and buildings constructed of wood. Each student is required to plan and construct an approved carpentry project.

151 Introduction to Computing
Fall. 4 credits.
M W 11:15; labs, W or R or F. 12:20–2:20 or 2:30–4:30. L. D. Albright.
An introduction to computer programming and concepts of problem analysis and algorithm development in an engineering context. The structured programming language, Pascal, is used, implemented on interactive personal computers, and applied to problems of interest in agricultural and biological engineering. No previous programming experience is assumed. An introduction to the use of spreadsheet programs for engineering is included as an option.

153 Engineering Drawing
Fall. 2 credits. Limited to 30 students (15 in each lab).
Lec, M 9:05; lab, T or W 1:25–4:25.
H. A. Longhouse.
Designed to promote an understanding of engineering universal graphic language. The lectures and laboratories develop working knowledge of drawing conventions, drafting techniques, and their application to machine and pictorial drawing problems. The course will involve both instrument and Autocad computer drawings.

200 Undergraduate Seminar
Spring. 1 credit. S-U grades optional.
Lec, M 2:30. G. E. Rehkugler.
A forum to discuss the contemporary and future role of agricultural and biological engineering in society. A required course for majors in Agricultural and Biological Engineering academic programs. A series of lectures will be given by practicing engineers, Cornell faculty members, and students. Laboratory demonstrations in major areas of the field are also included. Written critiques are required.

204 Introduction to Computer Uses
Spring. 4 credits. Each lab section limited to 20 students. S-U grades optional.
Lecs, T R 11:15; lab, T, W or R 1:25–2:15. 2 evening prelims. R. B. Furry.
An introductory course in computing for those interested in using microcomputers to handle data. Topics include preparing and processing computer programs in Pascal and FORTRAN. No prior knowledge of computers or computer languages is necessary.

221 Plane Surveying
Fall. 3 credits. S-U grades optional.
Lab, M 1:25–4:25; lecs, M W 12:20.
H. A. Longhouse.
Principles and practice of measurement of distance, elevation, and direction. Use and care of equipment is stressed during field problems related to mapping, engineering design, and construction. Other topics include surveying specifications, error analysis, and standards of accuracy.

250 Engineering Applications in Biological Systems
Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year.
Lec, M W F 12:20. R. E. Pitt.
Case studies of engineering problems in agricultural and biological systems, including animal and crop production, environmental control, energy, and food engineering. Emphasis is on the application of mathematics, physics, the engineering sciences, and biology to energy and mass balances in agricultural systems.

301 Introduction to Energy Technology
Spring. 3 credits. Prerequisite: high school or college physics. S-U grades optional. Offered alternate years.
Lec, M W F 10:10. L. D. Albright.
Basic concepts of energy transfer and traditional and alternate sources of energy. Design of small systems and appropriate technology are emphasized. Topics include heating, cooling, solar energy, electricity, hydropower, wind power, biogas production, and energy economics.

305 Principles of Navigation
Fall. 4 credits.
Lecs, M W F 9:05 or 12:20; rec, R 9:05 or 12:20. W. W. Gunkel.
Coordinated systems, chart projections, navigational aids, instruments, compass observations, tides and currents, soundings. Celestial navigation: time, spherical trigonometry, motion of stars and sun, star identification, position fixing. Nautical Almanac. Electronic navigation.

310 Advanced Farm Metal Work
Spring. 1 credit (2-credit option available). Prerequisite: Agricultural and Biological Engineering 110 or permission of instructor.
Lab F 1:25-4 (second lab must be arranged for 2-credit option). T. J. Cook.
Advanced welding and metal construction project.

311 Farm Machinery
Fall. 3 credits. Each lab limited to 16 students. Prerequisite: high school physics or equivalent.
Lecs, T R 11:15; rec-lab, T or W 1:25–4:25. J. K. Campbell.
A study of the operating principles, use, selection, and methods of estimating costs of owning and operating farm machines. Lab work includes practice in the calibration of planting, fertilizing, and pesticide application machinery, and study of the functional characteristics of agricultural machines and

312 Engines and Tractors for Agricultural Applications
Spring. 3 credits. Each lab limited to 16 students. Students missing the first week of classes without permission of the instructor are dropped so others may register. Prerequisite: high school physics or equivalent.
Lecs, T R 11:15; lab, M T or W 1:25–4:25. W. W. Gunkel.
A study of the principles of operation, adjustment, and maintenance of internal combustion engines and tractors. Topics include engine cycles, fuels, lubricants, carburetion, fuel injection systems, ignition, charging circuits, valve reconditioning, engine testing, transmissions, traction, and human factors in tractor operation.

315 Electotechnology
Spring. 3 credits. Prerequisite: Physics 102 or equivalent.
Lecs, T R 10:10; lab, T or R 1:25-4:25. D. C. Ludington.
A study of electrotechnology. Topics covered include: fundamentals of AC and DC circuits, power distribution, electrical safety, motors, lighting, control of electrical systems, batteries, solid-state electronics, digital logic, integrated circuits, and computer control. Laboratories offer hands-on experience.

321 Soil and Water Management
Spring. 2 credits. S-U grades optional. Concurrent registration in SCAS 321 required. Prerequisite: SCAS 190 or 260.
Lec, M W 9:05; disc-lab, M 1:25–4:25. M. Walter, R. Oglesby, T. Scott, N. Bills.
An interdisciplinary course intended to introduce students to the general principles of soil and water interaction and to the effects of human intervention in these processes. Aspects of soil and water management, including hydrology, soil erosion, irrigation, drainage, and water quality are examined. Case studies from both the United States and the tropics are used to illustrate basic principles.

331 Environmental Control for Agricultural Production Systems
Fall. 4 credits. S-U grades optional.
T R 12:20; F 12:20–2:15. K. G. Gebremedhin.
A study of analysis and design of agricultural production environments, ventilation design, regulation and control, animal physiology and homeothermy, material handling, waste management, alternate energy sources on the farm, and farmstead layout. Specific farmstead production systems (dairy, swine, poultry, fruit, and vegetable storage facilities) are discussed. A systems approach to agricultural production is emphasized. A project is expected at the end of the semester.

350 Transport and Kinetic Principles
Fall. 3 credits. Prerequisites or concurrent registration in Math 294 and fluid mechanics.
Lecs, M W F 11:15. A. K. Datta.
Integration of heat and mass transfer combined with reaction kinetics in the context of agricultural and biological systems. Emphasis is on physical understanding of transport processes and simple reaction rates with application examples from plant and animal biology, soil, the environment, and food processing.

367 Introduction to Biological Engineering
Spring. 3 credits. Prerequisites: one year each calculus and introductory biology; minimum one term each college chemistry and physics. Not open to freshmen. S-U grades optional.
Lecs, T R 10:10; lab, R 1:25–4:25. J. B. Hunter.
Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, neuromuscular electrical signals, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.

371 Introduction to Hydrology and Ground-Water Pollution
Fall. 3 credits. Prerequisites: knowledge of soils and one year of calculus.
Lecs, T R 9:05; lab, R 1:25–3:20. T. S. Steenhuis.
Introduction to basic hydrologic processes that focuses on the description of water in the unsaturated and saturated soil. The interaction of hydrologic processes with chemical transport processes is discussed. Emphasizes basic understanding of the processes involved. Case studies are used to illustrate the theory.

401 Career Development in Agricultural and Biological Engineering
Fall. 1 credit. Limited to seniors. S-U grades only.
Lec, T 12:20. G. E. Rehkugler.
A career development seminar for majors in the field of agricultural and biological engineering. Presentations of career opportunities in corporations, independent businesses, consulting, and public service. Professionalism, ethics, and public policy issues are discussed.

435 Principles of Aquaculture
Spring. 3 credits. Prerequisite: junior and above. S-U grades optional.
Lecs, T R 1:25–3. M. B. Timmons, W. D. Youngs, C. A. Bisogni, G. A. German, G. L. Rumsey, P. R. Bowser, and J. M. Regenstein.
An in-depth treatment of the principles of aquaculuture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate's previous course background and interests.

450 Instrument Design
Fall. 3 credits. Prerequisites: Math 293 or equivalent, physics or electrical science, computer programming.
Lecs M W F (first 4 weeks) 12:20; lab to be arranged. D. J. Aneshansley.
An introduction to static and dynamic characteristics of instruments, electronic instruments, digital and analog signal conditioning circuits and techniques, data acquisition and instrument control with personal computers and micro-controllers, and computer data analysis. Biological and agricultural examples of instrument problems and designs are used. A final design project is required.

451 Biomass Conversion Processes for Energy and Chemicals
Spring. 3 credits. Prerequisites: Agricultural and Biological Engineering 250 and 350, Mathematics 294, thermodynamics (co-registration permissible), and Chemistry 207 or equivalent.
Lecs, M W F 9:05. L. P. Walker.
There are a variety of physical and biological processes available for converting plants and other biomass resources into energy, industrial chemicals, and foods. The design of these processes is accomplished through fusing concepts from biochemistry, microbiology, and plant biology with the concepts and methods of engineering. There are four major components to this course: plants as biochemical resources, heat and mass transfer, enzyme catalysis, and fermentation kinetics. Each component is concluded with a case study that demonstrates how the scientific concepts and methods are used to design a biomass conversion process.

[461 Agromechanical Engineering: Machine Systems and Design
Fall. 3 credits. Prerequisites: Agricultural and Biological Engineering 250 and mechanical design or equivalent. Offered alternate years. Not offered fall 1990.
Lecs, T R 10:10; lab, R 1:25–4:25.
W. W. Gunkel.
Principles of design and analysis of agricultural machines to meet functional requirements. Emphasis is given to computer-aided analysis and design, selection of construction materials, and testing procedures. Engineering creativity, economic considerations, and safety are also stressed.]

462 Agromechanical Engineering: Power and Traction
Spring. 3 credits. Prerequisites: engineering dynamics, thermodynamics, and Agricultural and Biological Engineering 250. Offered alternate years.
Lecs, T R 10:10; lab, R 1:25–4:25.
W. W. Gunkel.
Synthesis of engineering sciences in the analysis, design, and testing of internal combustion engines and traction devices. Study areas include vehicle statics and dynamics, soil-machine interaction, electro-hydraulic control systems, human factors in vehicle design, and machine reliability. Computer analysis involves Runge-Kutta simulation, the finite element method, and digital data acquisition and processing. Students gain experience in modern laboratory and field testing.

465 Agricultural Processing Systems
Fall. 3 credits. Prerequisite: Agricultural and Biological Engineering 250. Offered alternate years.
Lecs, T R 11:15; lab, W 2–4:25.
R. B. Furry.
Grain drying, flow measurement, and material handling for agricultural engineering applications, with an introduction to system simulation, dimensional analysis, and similitude.

466 Food Engineering: Design of Equipment and Processes
Spring. 3 credits. Prerequisite: courses in either fluid mechanics and heat transfer or unit operations in food processing.
T R 9:05, F 1:25–3:25. A. K. Datta.
A transport phenomena based quantitative engineering approach to basic and advanced food processing concepts including thermal processing, concentration, drying, freezing, separation, etc.

467 Bioprocessing Applications in Agriculture
Fall. 4 credits. S-U grades optional. Prerequisites: Biochemistry 231, college biology and calculus, one year each; Agricultural and Biological Engineering 250 or Engineering 219, or senior standing in life sciences. May not be taken for credit after Chemical Engineering 643.
T R 10:10–12. J. B. Hunter.
An introduction to microbial and enzymatic process technology for engineers and life scientists. A substantial introduction to process engineering is illustrated by case studies of food and agricultural bioprocesses. Emphasis on engineering analysis and design. Suitable for both engineers and life scientists seeking careers in the biotechnology industry.

471 Geohydrology (also Geology 445 and Civil and Environmental Engineering 431. Students enrolled in the statutory colleges must enroll in Agricultural and Biological Engineering 471.)
Fall. 3 credits. Prerequisites: Mathematics 294 and Engineering 202.
Lecs, M W F 10:10. T. S. Steenhuis, J.-Y. Parlange, A. L. Bloom, W. H. Brutsaert, L. M. Cathles.
An intermediate course in surface and ground-water flow and related design factors. Includes principles of fluid flow, the hydrologic cycle, natural channel dynamics and sediment transport, description and behavior of natural aquifers, ground-water hydraulics, soil water, and solute transport.

475 Environmental Systems Analysis
Spring. 3 credits. Prerequisites: computer programming and one year of calculus.
M W F 11:15. D. A. Haith.
Systems analysis and its use in environmental quality management. Emphasis is on mathematical modeling of environmental problems, translation of models into efficient computational algorithms, and use of computer simulation and optimization procedures (search techniques, linear programming, dynamic programming, and separable programming) to evaluate management alternatives. Applications include pollution control and resource management problems.

481 Design of Wood Structures
Spring. 3 credits. Prerequisite: permission of instructor.
Lecs, M W 11:15; disc-lab. T 1:25–4:25.
K. G. Gebremedhin.
Computer-aided and design code manual procedures of timber engineering of agricultural, commercial, and industrial structures. Estimation of design loads, timber stress properties, design of columns, beams, trusses, rigid and post-frame buildings, shear walls, horizontal diaphragms, connections, and special timber structural systems.

482 Environmental Control for Animals and Plants
Spring. 3 credits. Prerequisite: Agricultural and Biological Engineering 250.
Lecs, T R 11:15; lab, M 1:25–4:25.
L. D. Albright.
Analysis and design of the thermal and aerial environment of animal housing and greenhouses. Heat flow, air flow, psychrometrics, energy balances, thermal modeling, mechanical and natural ventilation, solar energy, and weather phenomena.

491 Highway Engineering (also Civil and Environmental Engineering 642)
Spring. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently).
Lec, F 12:20–2:15; lab, M 1:25–4:25.
L. H. Irwin.
An introduction to highway engineering with an emphasis on design. Students will work in teams to apply the current standards and design criteria used in professional practice to several laboratory design projects. Topics of discussion include route location and design, traffic engineering, economic analysis, human factors and public safety, hydrology and drainage design, highway materials, pavement design, and maintenance.

497 Special Topics in Agricultural and Biological Engineering
Fall or spring. 1–4 credits. S-U option. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work and assign the grade.
Staff.
Special work in any area of agricultural and biological engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

498 Undergraduate Teaching
Fall or spring. 1–3 credits. Prerequisite: written permission of instructor.
Staff.
The student assists in teaching an agricultural and biological engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

499 Undergraduate Research
Fall or spring. 1–3 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class. Adequate training for work proposed. Written permission of instructor.
Staff.
Research in any area of agricultural or biological engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

501–502 M.P.S. Project
Fall and spring. 1–6 credits. Required of each M.P.S. candidate in the field.
Hours to be arranged. Staff.
A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

551–552 Agricultural and Biological Engineering Design Project
Fall and spring. 6 credits. Prerequisite: admission to the M.Eng.(Agr.) degree program.
Hours to be arranged. D. J. Aneshansley and staff.
Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. However, there is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s).

652 Instrumentation
Spring. 3 credits. Prerequisites: Linear differential equations, Fourier Transforms, experience with computer data-acquisition systems, introductory biology and introductory physics, or permission of the instructor.
Lecs, T R 12:20; lab to be arranged.
D. J. Aneshansley.
Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers will be emphasized. Digital signal processing techniques will also be included. A final project is required.

655 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: Mathematics 293 or equivalent.
Lecs, M W F 12:20. J.-Y. Parlange.
Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, structure of organizations).

665 Engineering Properties of Foods (also Food Science 665)
Fall. 2 credits. Prerequisite: course in transport processes or unit operations as applied to foods; or permission of instructor.
Lecs, T R 12:20. S. S. H. Rizvi, A. K. Datta.
Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical basis of the measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.

671 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: two calculus courses and fluid mechanics.
Lecs T R 3:35–4:50. J.-Y. Parlange, T. S. Steenhuis.
The course encompasses the full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. Offered alternately with Civil and Environmental Engineering 633—a complementary, but not identical, course.

672 Drainage
Spring. 4 credits. Prerequisites: Agricultural and Biological Engineering 371 and two calculus courses.
Lecs, M W F 10:10; lab, T 1:25–4:25.
T. S. Steenhuis.
The physics of groundwater flow with specific reference to tile drainage. Critical review of benefits of drainage as well as a thorough analysis of the design of drainage systems. Effects of drainage on water quality will be discussed. Laboratories are used to measure physical parameters used in drainage designs.

673 Irrigation Systems
Spring. 3 credits. Prerequisite: permission of instructor.
M W F 10:10. M. F. Walter.
An introduction with a systems perspective to the design and implementation of irrigation. Topics include systems planning and appraisal, irrigation structures and measuring devices, water distribution, and scheduling. Emphasis will be on getting a broad understanding of irrigation systems in the Third World through the use of case studies.

[677 Treatment and Disposal of Agricultural Wastes
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
3 lecs, hours to be arranged. W. J. Jewell.
Emphasis is on the causes of agricultural waste problems and the application of fundamentals of treatment and control methods to minimize related pollution. Fundamentals of biological, physical, and chemical pollution control methods are applied to wastes from animals, food production, and food and fiber processing, with actual systems as examples.]

678 Nonpoint Source Models
Fall. 3 credits. Prerequisites: computer programming and calculus.
Lecs, M W F 11:15. D. H. Haith.
Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include urban and rural runoff, lake eutrophication, groundwater waste loadings from land disposal sites, pesticides and nutrients in agricultural drainage, irrigation return flows, and watershed stream-flow and sediment yield.

679 Use of Land for Waste Treatment and Disposal
Spring. 3 credits. Prerequisite: permission of instructor.
Lecs, T R 3:35–4:50. W. J. Jewell.
Covers social, legal, and technical factors; the properties of land and crop systems that make land application of wastes a viable alternative; and the use of fundamentals in the development of regulations and the design of full-scale units.

682 Building Environment Control
Spring. 3 credits. Prerequisites: one course in building environment control and a course in heat transfer. Offered alternate years.
Hours to be arranged. L. D. Albright.
Topics include thermal interactions of animals and plants with their environments, time-dependent thermal modeling of buildings, natural ventilation processes in buildings, sensors and controllers, and psychrometric processes.

685 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: Theoretical and Applied Mechanics 310 or permission of instructor.
M W F 1:25–2:40. J. R. Cooke.
Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

692 Pavement Engineering (also Civil and Environmental Engineering 643)
Fall. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering.
Lecs, M F 12:20–2:15; lab, M 1:25–4:25.
L. H. Irwin.
Application of geotechnical engineering principles to the selection of materials and the design of highway and airfield pavements. Laboratory will provide experience with materials testing, asphalt concrete mix design, and chemical soil stabilization. Topics of discussion will include properties of asphalts and aggregates; bituminous mixture design; base courses; soil stabilization methods; seal-coat design; design of flexible and rigid pavements; design for frost conditions; and pavement evaluation using nondestructive test methods.

700 General Seminar
Fall. No credit. S-U grades only.
M 12:20. Staff.
Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

701 Special Topics in Agricultural and Biological Engineering
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades optional.
Hours to be arranged. Staff.
Topics are arranged by the staff at the beginning of the term.

750 Orientation for Research
Fall. 1 credit. Limited to newly joining graduate students. S-U grades only.
Lecs, first 7 weeks, M 3:35; remainder to be arranged. W. W. Gunkel.
An introduction to departmental research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

754 Sociotechnical Aspects of Irrigation (also Rural Sociology 754, Agricultural Economics 754, and Government 644)
Spring. 2–3 credits. S-U grades optional.
Hours to be arranged. M. Walter, R. Barker, W. Coward, N. Uphoff.
Examines irrigated agriculture and its relation to agricultural development. Emphasis on social processes within irrigation systems and interactions with social setting, including political and administrative aspects. Provides an opportunity to examine systematically the institutional and organizational policy issues associated with the design and operation of systems of irrigated agriculture in developing countries.

761 Power and Machinery Seminar
Spring. 1 credit. Limited to graduate students. Prerequisite: permission of instructor. S-U grades only.
Hours to be arranged. W. W. Gunkel.
Study and discussions of research and new developments in agricultural power and machinery.

771 Soil and Water Engineering Seminar
Fall and spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional.
Hours to be arranged. T. S. Steenhuis, M. F. Walter, J.-Y. Parlange.
Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

775 Agricultural Waste Management Seminar
Spring. 1 credit. Prerequisite: permission of instructor. S-U grades only.
Hours to be arranged. Staff.
Management of agricultural wastes, with emphasis on physical, chemical, biological, and economic factors affecting waste production, treatment and handling, utilization, and disposal.

781 Agricultural Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.
Disc to be arranged. K. G. Gebremedhin.
Consideration of farmstead production systems, with emphasis on biological, economic, environmental, and structural requirements.

785 Biological Engineering Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.
Disc to be arranged. J. R. Cooke.
The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

AGRICULTURAL ECONOMICS

W. G. Tomek, chair; D. J. Allee, B. L. Anderson, R. D. Aplin, R. Barker, N. L. Bills, R. N. Boisvert, J. Brake, K. Bryant, J. B. Bugliari, D. L. Call, G. L. Casler, L. D. Chapman, G. J. Conneman, J. Conrad, H. de Gorter, E. E. Figueroa, O. D. Forker, G. A. German, D. A. Grossman, R. Herdt, M. Hubbert, M. Hudson, H. M. Kaiser, R. J. Kalter, W. A. Knoblauch, S. C. Kyle, E. L. LaDue, D. Lee, W. H. Lesser, E. W. McLaughlin, R. A. Milligan, T. D. Mount, A. M. Novakovic, P. Pinstrup-Andersen, T. T. Poleman, J. Pratt, C. Ranney, D. G. Sisler, B. F. Stanton, D. Streeter, L. Tauer, E. Thorbecke, C. van Es, G. B. White, L. S. Willett, K. Wing

Courses by Subject

Farm management, finance, and production economics: 302, 401, 402, 404, 405, 406, 407, 408, 409, 605, 608, 708

Statistics, quantitative methods, and price analysis: 310, 410, 411, 412, 413, 415, 710, 711, 712, 713, 717

Business management, law, and accounting: 120, 221, 320, 321, 322, 323, 324, 325, 420, 422, 424, 425, 426

Public policy: 332, 431, 630, 631, 730, 731

Marketing and food distribution: 240, 340, 342, 346, 347, 443, 444, 448, 449, 640, 641, 740, 741

Resource economics: 252, 452, 454, 651, 652, 750, 754

Economics of development: 464, 660, 663, 664, 685, 763

General, contemporary issues, research, and other: 100, 380, 492, 497, 498, 499, 699, 700

100 Introduction to Global Economic Issues
Fall. 3 credits.
Lecs, M W F 11:15. 2 evening prelims. D. Sisler.
The economics and geography of world agriculture, providing a basis for understanding past development and future changes. Elementary economic principles, historical development, physical geography, and population growth are studied in their relation to agricultural development and the economic problems of farmers. Where possible, current domestic and foreign agricultural issues are used to illustrate principles.

120 Introduction to Business Management
Spring. 3 credits.
Lecs, M W F 10:10 or 11:15; disc, M 2:30–4:25 or 7:30–9:25 p.m. (3 secs); T 8–9:55, 12:20–2:15, 1–2:55, or 2:30–4:25; W 8–9:55, 10:10–12:05, 2:30–4:25, 7:30–9:25 p.m. (2 secs); R 8–9:55 or 2:30–4:25. In weeks when discs are held, there will be no W lecture. 2 evening prelims. G. A. German.
Principles and tools useful in performing four major functions of management: planning, organizing, directing and leading, and controlling. Within this framework, consideration is given to the firm's internal and external environments; forms of business ownership; financial statements; cost behavior; and a few key concepts and tools in financial management.

221 Financial Accounting
Spring. 3 credits. Not open to freshmen.
Lecs, M F 10:10 or 11:15; lab, T 10:10–12:05 (2 secs), 12:20–2:15, or 2:30–4:25; W 10:10–12:05 (2 secs), 12:20–2:15 (2 secs), 2:30–4:25 (2 secs), or 7–9 p.m. (3 secs); R 10:10–12:05, 12:20–2:15, or 2:30–4:25. 2 evening prelims and a comprehensive final. M. Hubbert.
A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, and statements interpretation. Elements examined include inventory, depreciation, internal control of assets, time value of money, notes, stocks, bonds, and the statement of cash flows. Limited use of a financial data base of publicly held companies.

[240 Marketing
Fall. 3 credits. Not offered 1990–91.
Lecs, M W F 10:10; lab, M 2:30–4:25, T 12:20–2:15 or 2:30–4:25, W 2:30–4:25, R 12:20–2:15 or 2:30–4:25, or F 10:10–12:05. In weeks labs are held, there will be no F lecture. E. W. McLaughlin.
An introductory study of the food marketing system and the society it serves, including the goals and practices of producers and marketers (in such areas as buying and selling, grading, transporting, packaging, and advertising), price-making institutions (such as commodity futures markets), the behavior and purchasing practices of consumers, and the interrelationships among those groups.]

252 Natural Resource and Environmental Economics
Spring. 3 credits. Recommended: Economics 101.
Lecs, M W F 9:05. D. Chapman.
An introduction to the concepts and methods of analysis in the public and private use of resources, particularly benefit-cost analysis and discounting. Major current problems in global warming, agriculture, forestry, acid rain, energy use, and world petroleum resources. The growing world trade in resource-intensive manufactured products and the impact on income, employment, and pollution. Comparative resource use and environmental protection in industrialized and developing countries.

302 Farm Business Management
Fall. 4 credits. Not open to freshmen. This course is a prerequisite for Agricultural Economics 402 and 405.
Lecs, M W F 9:05; lab, T W or R 1:25–4:25. On days farms are visited, the lab period is 1:25–5:30. W. A. Knoblauch.
An intensive study of problems associated with planning, organizing, operating, and managing a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include management information systems, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, and machinery.

310 Introductory Statistics
Fall or spring. 4 credits. Prerequisite: Education 115 or equivalent level of algebra.
Lecs, M W F 1:25; lab T 9:05–11 or 1:25–3:20 (2 labs); W 11:15–1:10 or 2:30–4:25 (2 labs); or R 9:05–11, 12:20–2:15, or 2:30–4:25 (2 labs). 3 evening exams. C. van Es.
An introduction to statistical methods. Topics to be covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

320 Business Law
Fall. 3 credits. Limited to juniors, seniors, and graduate students.
Lecs, M W F 9:05. 1 evening prelim. J. B. Bugliari and D. A. Grossman.
Consideration is given chiefly to legal problems of particular interest to persons who expect to engage in business. Emphasis is on the law pertaining to personal property, contracts, agency, real property, and the landlord-tenant relationship.

321 Law of Business Associations
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: Agricultural Economics 320 or permission of instructor. 321 and 420 may be taken concurrently.
Lec, T R 2:30–4. 1 evening prelim. J. B. Bugliari.
The first portion of this course examines the formation and operation of business enterprises, particularly partnerships and corporations. The second portion of the course will review government regulations and control of business organizations. Special attention will be given to the antitrust laws, consumer protection legislation, and environmental protection legislation.

322 Taxation in Business and Personal Decision Making
Spring. 3 credits. Recommended: background in accounting and business law.
Lecs, M W 2:30; section to be arranged. D. A. Grossman.
The impact of taxation on business and personal decision making. After a brief discussion of tax policy, an in-depth examination is conducted of federal income, estate and gift taxes affecting individuals and business entities. Both tax management and tax reporting are stressed.

323 Managerial Accounting
Fall. 3 credits. Prerequisite: Agricultural Economics 221 or equivalent.
Lecs, M W 12:20; disc, R 10:10–12:05, 12:20–2:15 (2 secs), or 2:30–4:25; or F 10:10–12:05, 12:20–2:15 (2 secs), or 1:25–3:20. 2 evening prelims, a third exam, and a project on an electronic spreadsheet. M. Hubbert.
An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, inventory control, variance analysis, measuring divisional performance, and accounting systems in the manufacturing environment. Limited use of Lotus on the IBM PC.

324 Financial Management
Spring. 4 credits. Prerequisite: Agricultural Economics 120 or equivalent. Recommended: Agricultural Economics 221 and 310 or equivalents.
Lecs, M W F 9:05; disc, W 2:30–4:25 or R 9:05–11, 12:20–2:15, or 2:30–4:25, or F 10:10–12:05 or 12:20–2:15. 2 evening prelims. B. L. Anderson.
Focuses on three major questions facing management: how to evaluate capital investment decisions, how to raise the capital to finance the firm, and how to generate sufficient cash flows to meet the firm's cash obligations. Major topics include methods to analyze capital decisions, impact of taxes, techniques for handling risk and uncertainty, effects of inflation, sources and costs of debt and equity, capital structure, leverage, and working capital management. Microcomputers are used for analyzing financial problems. No previous computer experience is required.

325 Personal Enterprise and Small Business Management
Spring. 3 credits. Limited to 220 juniors and seniors. Prerequisites: Agricultural Economics 120 and 221 or permission of instructor.
Lec, M W 1:25–2:15; Disc, F 10:10–12:05 (2 secs) or F 2:30–4:25 (2 secs). M. Hudson.
Designed to acquaint students with the changing role of small businesses in the global economy. Special emphasis on the problems of starting a new business, including strategic planning, financing, marketing, and managing growth. The term project involves group development of a business plan. Case studies will be used to illustrate a variety of business problems. Visiting entrepreneurs will also share experiences about a variety of small business formats, topics, and issues.

332 Economics of the Public Sector
Spring. 3 credits. Limited to 150 juniors and seniors. Prerequisite: Economics 101 or equivalent.
Lecs, T R 12:20–2:15. C. Ranney.
The application of economic concepts to evaluation of the structure and performance of the public sectors of the economy. Emphasis on microeconomic analysis of public finance and public resource allocation. Principal topics: market failure, articulation of public choice and interests, evaluation of public decisions, and current public policy.

340 Futures and Options Trading
Spring. 2 credits. Restricted to seniors. Prerequisites: Economics 101 and Agricultural Economics 240.
Lec, T R 12:20–2:15. D. Streeter.
The focus of the course is on the use of agricultural financial futures and options as marketing and management tools. A primary objective is to understand how companies, financial institutions, and farm businesses can employ hedging strategies to manage risk. All but the final lecture will be held during weeks 1–7. During weeks 7–15 students will participate in a computerized simulated hedging exercise, with a concluding lecture in week 15.

342 Marketing Management
Fall. 3 credits. Limited to ALS majors. Prerequisites: Agricultural Economics 240 and Economics 101–102.
Lecs, M W F 10:10; disc, R 12:20–1:50 or 2:30–4 (3 secs), F 10:10–11:40 (2 secs), or 12:20–1:50 (2 secs). In weeks discs are held, there is no F lecture. E. W. McLaughlin.
Deals with the central link between marketing at the societal level and everyday consumption by the general public. As such, this course emphasizes the management aspects of marketing by considering consumer behavior, strategies in product and brand selection, pricing, promotion, sales forecasting, and channel selection. Identification and generation of economic data necessary for marketing decisions are considered. Public policy and ethical dimensions of marketing are examined.

346 Dairy Markets and Policy
Fall. 3 credits. Limited to juniors and seniors. Prerequisite: Economics 101 or equivalent.
Lecs, T R 8:30–9:55. A. M. Novakovic.
A survey of the structural and institutional characteristics of dairy markets and the analysis of policy issues, pricing systems, and government programs, including marketing orders, price supports, and import policies.

347 Marketing Fruits, Vegetables, and Ornamental Products
Fall. 3 credits. S-U grades optional.
Lec M W F 12:20. A field trip of one or two days. E. E. Figueroa.
A study of fruits, vegetables, and ornamental markets, including seasonal variations. Role of market intermediaries, role of government agencies, and the price discovery process. Discussion and description of horticultural product market orders in the U. S. The emerging importance of interregional and international markets.

380 Independent Honors Research in Social Science
Fall or spring. 1–6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program.

401 Agricultural Law
Spring. 3 credits. Limited to juniors, seniors, and graduate students.
Sems, M W F 10:10. D. A. Grossman.
Law and government regulation as they apply to agriculture and the use of land for agricultural production. Topics covered may include legal issues in installment sales and financing, farm leases, cooperatives, employment, soil and water management, farm land, preservation and use, and ownership of animals.

402 Advanced Farm Business Management
Spring. 3 credits. Prerequisite: Agricultural Economics 302 or equivalent.
Lecs, M W 9:05; disc, W 1:25–3:20. G. L. Casler.
Emphasis is on evaluating the profitability of alternative investments and enterprises. Principal topics include strategic planning, the effects of income taxes on investment decisions, capital investment analysis, linear programming, labor management, and financial risk and uncertainty. Experience in computer applications to farm business management is provided. Previous computer experience is not required.

404 Advanced Agricultural Finance Seminar
Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered.
W 3:35–5:30. E. L. LaDue.
A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Farm Credit Banks of Springfield, one week in Farm Credit Association offices, an all-day field trip observing FHA financing during fall term, a four-day trip to financial institutions in New York City during intersession, and lecture-discussions in the spring term. Representatives from banking, agribusiness, finance, and similar areas participate in spring-term lecture-discussion sessions.

405 Farm Finance
Spring. 4 credits. Prerequisite: Agricultural Economics 302 or equivalent.
Lecs, M W F 10:10; disc, T 1:25–3:20. E. L. LaDue.
The principles and practices used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

406 Farm and Rural Real Estate Appraisal
Spring, weeks 7–15. 2 credits. Limited to 45 students. Prerequisites: Agricultural Economics 302 or equivalent and permission of instructor.
Lec, R 11:15; lab, R 1:25–5:30. 6 half-day field trips, 1 all-day field trip. G. J. Conneman.
The basic concepts and principles involved in appraisal. Factors governing the price of farms and rural real estate and methods of valuation are studied. Practice in appraising farms and other rural properties.

[407 Financial Management in Farming
Fall. Weeks 1–9. 2 credits. Limited to ALS majors. Prerequisite: Agricultural Economics 405. Not offered 1990–91.
Lecs, M W 1:25. J. R. Brake.
Financial markets and policies affecting agriculture and farmers. How money and capital markets affect credit cost and availability in agriculture. Insurance concepts for farmers. Financial considerations in starting to farm. Issues in choice of farm organizational structure.]

408 Seminar in Farm Business Decision Making
Fall (1 week in intersession). 1 credit. Prerequisites: Agricultural Economics 302 and 405 or equivalent, and permission of instructor.
M T W R F 8–5. G. J. Conneman.
Develops method of analyzing farm business management problems. Gives student experience in identifying alternatives in problem solving. Provides opportunities to analyze and evaluate actual farm situations. Two field trips and intensive work with a farm family.

409 Farm Management Workshop
Fall. 1 credit. Limited to seniors and graduate students.
T 12:20-2. B. F. Stanton and staff.
Presentation and interpretation of research in farm management and production economics. Participants take part in seminars reporting on research methodology and results obtained. Students prepare a summary and evaluation of a recent research publication during the semester.

410 Business Statistics
Spring. 3 credits. Prerequisite: Agricultural Economics 310 or equivalent.
Lecs, M W F 10:10. C. van Es.
This course focuses on five major topics used to analyze data from marketing research, business, and economics. Topics studied are: survey sampling procedures, nonparametric methods, index numbers, time series and forecasting, and experimental design and ANOVA. The course will involve a research project designed to give experience in collecting and interpreting data.

411 Introduction to Econometrics
Spring. 3 credits. Prerequisite: Agricultural Economics 310 or equivalent.
Lecs, T R 10:10–11:25. J. Pratt.
The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed, and simultaneous equation models are introduced. Students are required to specify, estimate, and report the results of an empirical model.

412 Introduction to Mathematical Programming
Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: Agricultural Economics 310 or equivalent.
Lecs, M W 9:05; lab, W 12:20-2:15. H. M. Kaiser.
This is primarily a course in applied linear programming, but some basic nonlinear programming techniques will be covered. The links between theoretical and empirical models are stressed in this course. Emphasis will be placed on model building, estimation, and interpretation of results. Some topics include applied linear, quadratic, and integer programming to common decision-making problems.

413 Information Systems and Decision Analysis
Spring. 3 credits. Limited to 60 juniors and seniors. Prerequisites: Agricultural and Biological Engineering 102 or equivalent, Economics 101 or equivalent, and Agricultural Economics 310.
Lecs, M W 11:15; lab, R 10:10–12:05 or F 9:05–11. D. Streeter.
The focus of the course is on management decision making and the support provided by management information systems. The student will learn the behavioral assumptions made in economics about decision making and the decision rules that result. Techniques for implementing the decision rules will be introduced (decision trees, network analysis, Markov analysis, sensitivity analysis), as well as the statistical techniques (simulation, forecasting) used to produce the information necessary to the decision process. The topics will be discussed in a variety of decision settings (inventory, congestion, planning, and scheduling).

415 Price Analysis
Fall. 3 credits. Prerequisite: Economics 101–102 or equivalent. S-U grades optional.
Lecs, M W F 11:15. L. S. Willett.
The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

420 Advanced Business Law
Spring. 3 credits. Limited to juniors, seniors, and graduate students.
Lecs, T R 8:30–9:55. J. B. Bugliari.
Designed to provide a fairly detailed and comprehensive legal background in areas of commercial law affecting the operation of business enterprises. Particular consideration is given to the law pertaining to bailments, sales, secured transactions, bankruptcy, and commercial paper.

422 Estate Planning
Fall. 1 credit. Limited to upperclass students. S-U grades only.
Lec, M 4. J. B. Bugliari.
Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and probate procedures are covered.

424 Business Policy
Fall. 3 credits. Limited to seniors majoring in business management and marketing.
T R 9:05–10:35, 11:05–12:35, or 2:30–4. R. D. Aplin.
An integrating course that examines business policy formulation and implementation from the standpoint of the general manager of an organization, focusing on decision making and leadership. The course is built around a series of cases. Several guest executives. Emphasizes improving oral and written communication skills.

425 Counseling Small Business
Fall. 3 credits. Prerequisites: Agricultural Economics 220, 221, and 341 and permission of instructor.
Lec, W 2:30–4:25. M. Hudson.
Allows students to serve as consultants to small businesses throughout New York State. Provides the opportunity to identify and confront problems facing small personal enterprises. Encourages the application of basic business courses to an actual business and the witnessing, first hand, of the results of firm-level decision making. Student teams meet with the instructor at predesignated times throughout the semester.

426 Cooperative Management and Strategies
Spring. 3 credits. Recommended: Agricultural Economics 120 or equivalent. Estimated cost of field trip, $50.
Lecs, M W F 12:20. 2-day field trip required. B. L. Anderson.
Investigates the unique aspects of cooperative business organizations. Topics are approached from the points of view of management, the board of directors, and members and include cooperative principles, legislation, taxation, as well as cooperative management, financial and marketing strategies. Primary focus is on operating cooperatives in agriculture and the management and strategic alternatives they face.

431 Food and Agricultural Policies
Fall. 3 credits.
Lecs, T R 9:05; disc, R 11:15 or 1:25, or F 10:10. B. F. Stanton.
The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.

443 Food-Industry Management
Fall. 4 credits. Limited to juniors and seniors. Prerequisite: Agricultural Economics 448 or 342 or permission of instructor.
Lecs, T R 9:05–10:35; sec, T 2–3:30. G. A. German.
A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday session.

444 Export Marketing
Fall. 3 credits. Prerequisite: graduate or upperclass standing. Estimated cost of field trip, $150. Limited to 40 students.
Lec, R 2:30–4:45. Overnight field trip to New York City required. W. H. Lesser.
An exploration of the processes and procedures for export marketing. Emphasis is placed on financing arrangements and on alternative risk-reducing strategies. Organization for export marketing is discussed along with government export-promotion programs. This course is intended to provide practical information on the process of marketing overseas. Students participate in a custom-developed, competitive export-trading simulation.

448 Food Merchandising
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: Agricultural Economics 240.

Lecs, T R 10:10–11:25. G. A. German.
Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising are examined, including buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

449 Applications in Strategic Marketing
Fall. 2 credits. Prerequisite: Agricultural Economics 342 or permission of instructor. Cost of field trips, about $275.

W 2:30–4. Two 1-day field trips to the upstate area and a 3-day trip to the New York City area during intersession, just prior to registration. E. W. McLaughlin.
Focuses on the major components of strategic marketing with an applied orientation: product mix, distribution, pricing, advertising and promotion, and market research. The international dimensions of marketing are emphasized. Students are given firsthand exposure to a wide range of marketing strategies through field trips, guest lectures, case studies, group exercises, and development of a strategic marketing plan.

452 Resource Economics
Fall. 3 credits. Prerequisites: Mathematics 111 and Economics 313.

Lecs, T R 10:10; disc, M 2:30. J. Conrad.
This course develops economic models for renewable resources, exhaustible resources, and environmental quality. Applications to fisheries, forestry, oil and gas, and air and water pollution are presented. Emphasis is on the microeconomic foundations in resource economics and the policy implications for resource management.

454 The History and Economics of Whaling in North America (also History 413)
Spring. 4 credits. Prerequisites: Economics 101–102. Offered alternate years.

Lec, T R 2:30–4:20. D. Usner, J. Conrad.
The whaling industry of 19th-century America is a rich source of documents and data describing the people, resources, and technology that contributed to the development of the United States. Social relations, cross-cultural influences, economic motivations, prices, markets, resource dynamics, and technical change will be examined during the rise and fall of this unique American industry.

464 Economics of Agricultural Development
Spring. 3 credits. Prerequisites: Agricultural Economics 100, Economics 101–102, or permission of instructor.

Lecs, T R 8:40–9:55. S. Kyle.
This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector will be covered in order to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries will be used to illustrate the basis for economic analysis.

492 Contemporary Issues Seminar: Development in Southern Africa (also Education 492)
Spring. 2 credits. Limited to 25 juniors and seniors.

Hours to be arranged. D. Chapman, J. Volmink.
A contemporary issues seminar about economic and social issues in the development of Southern Africa. Natural resources as the basis for trade and manufacturing. Potential for agriculture. Education, health, and public sector development. Economic integration and political conflict. Apartheid as a regional problem. Opportunities and obstacles to regional development. Summer field trip for additional credit is possible.

497 Special Topics
Fall or spring. Variable credit. Written permission from the staff member who will supervise the work and assign the grade must be attached to course enrollment material.

Hours to be arranged. Staff.
Special projects designed by faculty members to supplement existing classes.

498 Supervised Teaching Experience
Fall or spring. 1–3 credits. Total of 4 credits maximum during undergraduate program.

Hours to be arranged. Staff.
Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

499 Undergraduate Research
Fall or spring. 1–4 credits. Limited to seniors with grade-point averages of at least 2.7. Prerequisite: written permission of the staff member who will supervise the work and assign the grade; this permission must be attached to course enrollment material. S-U grades optional.
Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision.

605 Agricultural Finance and Capital Management
Fall. 3 credits. Prerequisite: Agricultural Economics 402 or 405, or equivalent. Offered alternate years. $25 charge for reading materials; no text.

T R 8:40–9:55. L. Tauer, E. LaDue.
Advanced topics in capital management and financing of agriculture. Special emphasis on current issues. Example topics: farm-sector funds flows, financial risk and decision analysis, agricultural finance policy, financial intermediation and intermediaries, firm growth, inflation investment-replacement models, and selected topics on financing agriculture in developing countries.

608 Production Economics
Fall. 3 credits. Prerequisite: Economics 311 or equivalent. Recommended: Mathematics 111 or equivalent.

Lecs, M W F 10:10. L. W. Tauer.
The theory of production economics with emphasis on applications to agriculture. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

630 Policy Analysis I: Welfare Theory, Agriculture, and Trade
Spring. 4 credits. Prerequisites: Agricultural Economics 608 or Consumer Economics 603, Economics 313, or equivalent intermediate micro theory incorporating calculus.

Lecs T R 8–9:55. C. Ranney and D. Lee.
The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

631 Policy Analysis II: Resources and Agricultural Development
Fall. 4 credits. Prerequisite: Agricultural Economics 630. May not be offered 1990–91.

Lecs, T R 8–9:55. D. Chapman and staff.
The first half of this course covers issues related to natural resources. Beginning with an overview of benefit-cost analysis and project evaluation, the course continues by considering global and transnational resource topics including exhaustible and renewable resource theory, externalities, and international environmental problems. Issues related to the role of resources in development. The second half of the semester focuses on the analysis of policies for agricultural growth and development. Theories of growth and agriculture's role in the development process are discussed. Macroeconomic and sectoral policies affecting production, consumption, and trade are evaluated.

640 Analysis of Agricultural Markets
Fall, weeks 1–7. 2 credits. Prerequisites: Agricultural Economics 415 and 411 or equivalents.

Lecs, T R 12:20–2:15. L. Willett.
This course is about markets for agricultural products. Focus is placed on identifying their distinguishing characteristics, establishing criteria for evaluating performance, analyzing models for price determination and farm-retail marketing margins, and evaluating selected public-policy issues related to market performance.

641 Commodity Futures Markets
Fall, weeks 8–14. 2 credits. Prerequisites: Agricultural Economics 411 and 415 or equivalents. Recommended: Agricultural Economics 640.

Lecs, T R 12:20–2:15. W. G. Tomek.
This course is primarily about markets for agricultural futures contracts. Emphasis is placed on price behavior on cash and futures markets and the relationships among prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

651 Economics of Resource Use
Fall. 4 credits. Economics 509 or Agricultural Economics 452 recommended. May not be offered 1990–91.

Lec-sem, hours to be arranged.
D. Chapman.
Introduction to recent literature on theory and applied analysis. Dynamic optimization and resource use, externality theory and its application to environmental economics. Principles of utility regulation. Ecosystem modeling. Economic growth and resource use. Selected topics.

652 Land Economics Problems
Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional.

Hours to be arranged. D. J. Allee.
Special work on any subject in the field of land economics.

660 Food, Population, and Employment
Spring. 3 credits. S-U grades optional.

T R 12:20–1:40. T. T. Poleman.
Designed to introduce first-year graduate students to the interrelated problems of food, population, and employment in developing countries. Food economics, the world food situation, and the outlook for feeding an eventual global population of 10 to 11 billion are emphasized. Employment is seen as the key variable influencing both population growth and effective demand for food. The record of various development strategies is examined.

[663 Macroeconomic Issues in Agricultural Development
Fall. 3 credits. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.

Lec to be arranged. E. Thorbecke.
Issues such as the role of agriculture in economic development, the household farm as a producing and consuming unit, operation of product and factor markets in agricultural and rural areas, structural transformation of agriculture in the process of economic development, theories of agricultural development, and agricultural and rural development strategies and models. The approach followed is theoretical, quantitative, and empirical.]

664 Microeconomic Issues in Agricultural Development
Spring. 3 credits. Prerequisite: Agricultural Economics 608, Economics 311, or permission of instructor. S-U grades optional.

T R 4:30–5:55. R. Barker.
Issues such as production efficiency, induced technological change, allocation of research resources, and the distribution of benefits from new technology are discussed. The theoretical argument is related to applied research problems.

685 Food and Nutrition Policy (also Nutritional Sciences 685)
Fall. 3 credits. Prerequisites: Consumer Economics and Housing 603 or Economics 311 or 313 or Agricultural Economics 415 or Consumer Economics and Housing 310 or equivalent. Knowledge of multiple regression. S-U grades optional.

Lecs, M W 1:15–2:25.
P. Pinstrup-Andersen.
The course will identify the principal links between human nutrition and government action, with emphasis on developing countries. The process of policy formation, including economic and political factors, will be discussed. Political economy issues, including the influence of and conflict among interest groups and rent-seeking behavior related to food and nutrition policies and programs, will be analyzed. The role of nutrition information and surveillance in policy design, implementation, and evaluation will be analyzed along with methodologies for empirical analysis of food and nutrition policy. Findings and analytical methodologies from case studies in developing countries will be used, as appropriate. The role of improved nutrition in economic development both as an indicator of welfare and as a productivity-enhancing factor as well as basic relationships among nutrition, poverty, food, health, and household behavior will be briefly presented at the beginning of the course to provide a context for policy discussions.

699 M.P.S. Research
1–6 credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report.

700 Topics in Agricultural Economics
Fall or spring. Limited to graduate students. Credit, class hours, and other details arranged with a faculty member.
This course is used to offer special topics in agricultural economics that are not covered in regular class offerings. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

708 Advanced Production Economics
Fall. 3 credits. Prerequisite: Agricultural Economics 608, 710, or equivalents; Economics 509 is highly recommended. Offered alternate years.

Hours to be arranged. R. N. Boisvert.
Theoretical and mathematical developments in production economics, with emphasis on estimating micro- and macro-production relationships, scale economies, technical change, factor substitution. Recent developments in flexible functional forms, duality and dynamic adjustment models are emphasized. Discussions of several other selected topics such as risk, supply response, and household production functions change from year to year based on student interest.

710 Econometrics I
Spring. 4 credits. Prerequisite: enough preparation in matrix algebra and statistics (e.g., Statistics 417 and 601) to read J. Johnston, Econometric Methods, 3d edition, chapters 5ff.

Lecs, T R 2:30–4:25. W. G. Tomek.
This course provides an intermediate-level treatment of linear statistical models used in econometrics, including distributed lag specifications, disturbance-related sets of equations, and simultaneous linear models. Common problems such as collinearity, specification error, and autocorrelated disturbances are covered. Students seeking an introduction to econometrics should take Agricultural Economics 411.

711 Econometrics II
Fall. 4 credits. Prerequisite: Agricultural Economics 710 or equivalent. Statistics 417 recommended.

Lecs, T R 10:10–12:05. T. D. Mount.
Coverage beyond that of Agricultural Economics 710 of the linear regression models, including alternative methods of incorporating non-sample information and testing restrictions, diagnostic techniques for collinearity and influential observations, pooling data, stochastic coefficients, limited dependent variables and latent variables.

712 Quantitative Methods I
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of Statistics 417 is highly recommended.

Lecs, M W 9:05–11. R. N. Boisvert.
A comprehensive treatment of linear programming and its extensions, including postoptimality analysis, goal programming, and the transportation model. Special topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

713 Quantitative Methods II
Spring. 4 credits. Prerequisites: Economics 509 and Agricultural Economics 710.

Lecs, W F 9:05–11. J. M. Conrad, T. D. Mount.
This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of numerical and econometric analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

717 Research Methods in Agricultural Economics
Spring. 2 credits. Limited to graduate students.

M 1:25–3:20. B. F. Stanton, D. G. Sisler.
Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

730 Seminar on Agricultural Trade Policy
Spring. 3 credits. Limited to graduate students. Prerequisites: Agricultural Economics 630–631 and basic familiarity with quantitative methods.
F 1:25–4. Staff.
A discussion of selected topics in agricultural trade policy, such as the linkage between domestic agricultural and trade policies, instability and market stabilization, and agricultural trade and development. The preparation of a term paper is an important part of the course.

731 Seminar on Agricultural Policy
Spring. 2 credits. Limited to graduate students. Offered alternate years.
W 12:20–2:15. H. de Gorter.
A review of the professional literature relating to agricultural policy issues and techniques appropriate to the analysis of such issues.

740 Agricultural Markets and Public Policy
Spring, weeks 1–7. 2 credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the Agricultural Economics 411 level or higher. Recommended: Agricultural Economics 640.
T R 12:20–2:15. W. H. Lesser.
Develops the concepts and methodology for applying and analyzing the effects of public-policy directives to the improvement of performance in the U.S. food marketing system. Topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination systems in agriculture.

741 Space, Trade, and Commodity Analysis
Spring, weeks 8–14. 2 credits. Limited to graduate students. Recommended: Agricultural Economics 640.
T R 12:20–2:15. Staff.
Principal topics are spatial relationships in markets, the analysis of export supply-import demand for a single country, international commodity models, and models of commodity trade.

750 Economics of Renewable Resources
Spring. 4 credits. Prerequisites: Economics 509 and 518, or Agricultural Economics 713.
Hours to be arranged. J. M. Conrad.
This course is concerned with the optimal allocation of renewable resources. Bioeconomic models of fishing and forestry are presented along with models of groundwater and residuals (environmental) management. Theory, applications, and management policy are considered.

754 Sociotechnical Aspects of Irrigation (also Rural Sociology 754, Agricultural and Biological Engineering 754, and Government 644)
Spring. 2 or 3 credits. S-U grades optional.
Hours to be arranged. R. Barker, W. Coward, N. Uphoff, M. Walter.
Examines irrigated agriculture and its relation to agricultural development. Emphasis on social processes within irrigation systems and interactions with social setting, including political and administrative aspects. Provides an opportunity to examine systematically the institutional and organizational policy issues associated with the design and operation of systems of irrigated agriculture in developing countries.

763 Macro Policy in Developing Countries
Spring. 3 credits. Prerequisites: Economics 509, 510, 513 (may be taken concurrently), or permission of instructor. Offered alternate years.
Lecs, T R 12:20–1:35. S. Kyle.
This course examines macroeconomics policies in developing countries and their interaction with economic growth, development, and stability. Theoretical models useful for analysis of macro policies will be covered as well as an examination of empirical studies. Emphasis will be on research topics of current interest to students and professionals in the field, particularly those relating to the interaction of macro policy with micro and sectoral analysis.

ANIMAL SCIENCES

Department of Animal Science: J. M. Elliot, chair; B. J. Apgar, D. E. Bauman, D. H. Beermann, A. W. Bell, R. W. Blake, R. D. Boyd, W. R. Butler, L. E. Chase, W. B. Currie, H. N. Erb, R. W. Everett, J. D. Ferguson, R. H. Foote, D. G. Fox, D. M. Galton, R. C. Gorewit, H. F. Hintz, D. E. Hogue, L. R. Jones, W. G. Merrill, E. A. Oltenacu, P. A. Oltenacu, J. E. Parks, E. J. Pollak, R. L. Quaas, J. B. Russell, S. W. Sabin, H. F. Schryver, R. D. Smith, B. E. Straw, M. L. Thonney, D. R. Van Campen, P. J. Van Soest, M. J. Wylie

Department of Poultry and Avian Sciences: R. E. Austic, chair; P. W. Aho, R. C. Baker, S. E. Bloom, G. F. Combs, Jr., R. R. Dietert, P. A. Johnson, K. Keshavarz, H. G. Ketola, C. C. McCormick, J. A. Marsh, J. M. Regenstein, G. L. Rumsey, C. S. Winstead

100 Domestic Animal Biology I
Fall. 3 credits. S-U grades optional.
Lec, M W F 9:05; lab/disc, T W R 2–4:25.
W. B. Currie, M. L. Thonney, and staff.
An introduction to the science of raising animals in the context of commercial animal production. Lectures and labs address the biology of economically important species (morphology, anatomy, and physiology) and application of the biology to the management of animals within major livestock industries. Topics covered include fundamentals of anatomy, regulatory mechanisms, vital systems, digestion, and metabolism. Students care for small numbers of cattle, sheep, pigs, and chickens in different phases of their life cycle to maximize hands-on contact. Living animals will be used noninvasively, and fresh organs and tissues from dead animals will be used in laboratories.

105 Contemporary Perspectives of Animal Science
Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers.
T 1:25 or W 12:20. R. C. Gorewit.
A forum to discuss the contemporary and future role of animals in relation to human needs and students' career planning.

150 Domestic Animal Biology II
Spring. 4 credits. S-U grades optional.
Lec, M W F 9:05; lab/disc T W R 2–4:25.
W. B. Currie and staff.
Second of a two-semester sequence (100/150) applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the husbandry of animals within major livestock industries. Fresh tissues and organs from dead animals will be used in laboratories.

212 Livestock Nutrition
Fall. 4 credits. Prerequisite: Chemistry 104 or 208. Recommended: Animal Sciences 100 and 150.
Lecs, M W F 11:15; lab, M T W R or F 1:25–4:25, or R 10:10–12:20. A. W. Bell.
An introduction to animal nutrition, including digestive physiology and metabolism of livestock species; nutrient properties and requirements for different aspects of animal production; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

213 Nutrition of Companion Animals
Spring, weeks 1–7. 1 credit. Prerequisite: Animal Sciences 212 or equivalent. Offered alternate years only.
W 7:30–9:25 p.m. H. F. Hintz.
Nutrition of companion animals, with emphasis on the dog and cat. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

[214 Nutrition of Exotic Animals
Spring, weeks 1–7. 1 credit. Prerequisite: Animal Science 212. Offered alternate years only. Not offered 1990–91.
Lec W 7:30–9:30 p.m. H. F. Hintz.
Principles of nutrition for exotic animals including birds and fish. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation will be discussed. Signs of nutrient deficiencies and excesses will be described.]

221 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: a year of college biology.
Lecs, T R 9:05; disc, T W R or F 2–4:25.
E. J. Pollak.
An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection and mating systems on animal populations.

230 Poultry Biology
Spring. 3 credits.
Lecs, T R 11:15; lab, W 2–4:25. Field trips during lab periods may last longer.
R. E. Austic.
Designed to acquaint the student with the scope of the poultry industry. Emphasis is on the principles of avian biology and their application in the various facets of poultry production. Some laboratory sessions involve dissection and/or the handling of live poultry.

251 Dairy Cattle Selection
Spring. 2 credits.
Lab, W 12:20–4:25. D. M. Galton, C. R. Holtz.
Emphasis on economical and type traits to be used in the selection and evaluation of dairy cattle. Practical sessions include planned trips to dairy herds in the state.

265 Horses
Spring. 3 credits. Prerequisites: Animal Sciences 100 and 150 or permission of instructor. S-U grades optional.
Lecs, T R 10:10; lab, R 1:25–4:25.
H. F. Hintz.
Selection, management, feeding, breeding, and training of light horses.

290 Meat Science
Fall. 3 credits.
Lecs, T R 10:10; lab, M T or W 1:25–4:25.
D. H. Beermann and staff.
An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include meat-animal slaughter, meat cutting, wholesale and retail cut identification, anatomy, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants is taken.

300 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: Animal Science 100–150 or equivalent and one year of introductory biology.
Lecs, M W F 10:10. J. Parks.
Comparative anatomy and physiology of domestic animal reproduction. Fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental and applied aspects of reproduction.

301 Animal Reproduction and Development Lab
Spring. 1 credit. Prerequisite: Animal Science 100–150 or equivalent. Concurrent enrollment in or completion of Animal Science 300 required to register.
Labs, M W or F 1:25–4:25. Each lab limited to 30 students. J. Parks.
Demonstration of fundamental principles and applied aspects of domestic animal reproduction. Dissection and examination of tissues from vertebrate animals will be included in selected laboratories.

305 Farm Animal Behavior
Spring. 2 credits. Prerequisites: an introductory course in animal physiology and an introductory course in genetics; at least one animal production course is recommended. S-U grades optional.
Lec, T R 11:15. E. A. Oltenacu and K. A. Houpt.
The behavior of production species (avian and mammalian) influences the success of any management program. Students will study behaviors relating to feeding, reproduction, and social interactions of poultry, cattle, sheep, and swine. Management systems for commercial livestock production and their implications for animal behavior and welfare will be stressed.

312 Applied Animal Nutrition
Spring. 4 credits. Limited to 40 students. Prerequisites: Animal Science 100, 150, and 212 (or equivalents). Recommended: 1 semester oganic chemistry. S-U grades optional.
Lecs, M W F 10:10; lab, R 1:25–4:25.
R. D. Boyd and D. G. Fox.
Provides in-depth training in applied animal nutrition. Appropriate for students considering careers as nutritional consultants or who intend to enter graduate school in nutrition. An appropriate balance between biological concepts and applied feeding practices is attained with particular emphasis on the dynamics of nutrient requirements in various physiological states of both ruminant and nonruminant farm animals.

[321 Seminar: Horse Genetics
Spring. 1 credit. Prerequisite: Animal Sciences 265 or permission of instructor. Recommended: Animal Sciences 221 or Biological Sciences 281. Not offered 1990–91.
M T or W 9:05. Staff.
A discussion of genetics of the horse, with special reference to simply inherited traits and selection for quantitative traits.]

[330 Commercial Poultry Production
Fall. 1–2 credits. Prerequisites: Animal Sciences 100, 150, and 230 or permission of instructor. Offered alternate years. Not offered 1990–91.
F 2–4 (occasional field trips run past 4 p.m.). K. Keshavarz.
The course emphasizes production and business management aspects of commercial poultry farm operation and is designed to acquaint the student with current technology involved in commercial poultry production.]

332 Poultry Hygiene and Disease (also Veterinary Medicine 255)
Spring, alternate years. 2 credits. Minimum enrollment, 5 students; maximum enrollment, 15 students. Prerequisites: Microbiology 290 and permission of the instructor.
Lec and lab, W 2:05–4:25.
B. Lucio-Martinez.
Selected diseases of poultry are used as models to discuss control through eradication or immunization. Includes laboratory sessions on anatomy of the chicken, bleeding, euthanasia, and necropsy techniques. Common serological techniques will be demonstrated.

340 Decision Analysis in Dairy Systems
Fall. 2 credits.
Lecs, T R 10:10. P. A. Oltenacu.
The concepts of decision making under uncertainty are presented. The course covers model building for a decision problem, assessment and revision of probabilities, value of information, options for making a choice, and preference theory and methods for dealing with risk, such as risk sharing and diversification. The concepts are presented in an animal production context.

341 Physiology of Lactation
Spring. 3 credits. Prerequisite: Animal Sciences 150 or Animal Sciences 300 or equivalent.
Lecs, T R 9:05; lab, R 2–4:25.
R. C. Gorewit.
The physiology of milk production is covered with emphasis on mammary gland development, anatomy, hormonal control of milk secretion, and the biosynthesis of milk constituents. The dairy cow serves as the model system, but all livestock species are considered.

350 Dairy Cattle
Fall. 3 credits. S-U grades optional. Recommended: Animal Sciences 150 or equivalent, 212 and 221.
Lecs, T R 10:10; lab, M T R 1:25–4.
D. M. Galton, C. R. Holtz.
Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for Animal Sciences 351.

351 Dairy Herd Management
Spring. 4 credits. Prerequisites: Animal Sciences 350 or permission of instructor. Recommended: Agricultural Economics 302.
Lecs, M W F 11:15; labs, M T 1:25–4:25, F (alternate weeks) 1:25–4:25.
D. M. Galton and staff.
Application of scientific principles to practical herd management with components of reproduction, genetics, milking, housing, and records. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

360 Beef Cattle
Spring. 3 credits. Prerequisite: Animal Science 100, 150 or equivalent, 212, 221, or permission of instructor.
Lecs, T R 10:10; lab, W 2–4:25.
M. L. Thonney.
Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with the management skills needed for a beef operation. Students are required to spend several days during the semester feeding and caring for cattle and observing calving.

370 Swine Production
Fall. 3 credits. Limited to 80 students; each lab limited to 40 students. Prerequisites: Animal Science 150 or equivalent, 212, 221, or permission of instructor.
Lecs, T R 11:15; lab, T or W 2–4:25.
R. D. Boyd.
The objective is to provide an opportunity to acquire practical knowledge and a technical basis for making decisions in various types of swine enterprises. Emphasis on the types of production systems; selection and breeding programs; reproductive, farrowing, and lactation management; nutrition; herd health; and housing facilities. Laboratories are designed to extend and apply principles discussed in lecture and to provide students with the opportunity to develop management skills.

380 Sheep
Fall. 3 credits. Prerequisites: Animal Sciences 100 and 150. Recommended: Animal Sciences 212 and 221.
Lec, T R 9:05; lab and disc periods, W 1:25–4:25 every other week.
D. E. Hogue.
The breeding, feeding, management, and selection of sheep. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved practices.

392 Animal Growth Biology
Fall. 2 credits. Not open to freshmen; sophomores by permission of instructor only. Prerequisites: one year of college biology and one course in animal or human physiology, Animal Science 212 and 221.
Lec, R 1:25–3:25; disc, F 1:25–2:15.
D. H. Beermann.
A detailed discussion of the anatomy and physiology of growth in domestic farm animals. Cellular aspects of tissue-growth patterns, their relationship to body composition, and measurement of growth and body composition will be discussed. Endocrine, genetic, nutritional, and pharmacological influences on growth, metabolism, and body composition will be emphasized.

400 Tropical Livestock Production
Spring. 3 credits. Prerequisite: Animal Sciences 150 or equivalent, 212, or 221 or permission of instructor.
Lecs, T R 9:05; disc W 1:25–3:20.
R. W. Blake.
An analysis of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Principles, real examples, and independent study projects will help identify research to improve food security.

401 Dairy Production Seminar
Spring. 1 credit. Limited to juniors and seniors.
Disc, M 7 p.m. D. E. Bauman.
Students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students make oral and written reports.

402 Seminar in Animal Sciences
Spring. 1 credit. Limited to juniors and seniors. May be repeated. S-U grades optional.
M 4:30; then hours to be arranged.
W. R. Butler and staff.
Review of literature pertinent to topics of animal science or reports of undergraduate research and honors projects. Students present oral and written reports.

[403 Tropical Forages
Spring. 2 credits. Limited to seniors and graduate students except by permission of instructor. Prerequisites: crop production and livestock nutrition. Offered alternate years. Not offered 1990–91.
Lecs, T R 12:20. P. J. VanSoest.
An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value forages and crop residues; physiology of digestion of ruminants that affects feeding behavior of various species; problems of chemical inhibitors in plants; and utilization of tropical forages as hay or silage.]

410 Principles of Animal Nutrition
Fall. 3 credits. Prerequisite: organic chemistry. Recommended: biochemistry or concurrent registration in a biochemistry course.
M W F 11:15; 2 discs to be arranged.
2 evening prelims to be arranged.
C. C. McCormick.
A fundamental approach to nutrition focusing on the metabolism as well as the biochemical and physiological function of the known nutrients. The basic principles of nutrition are elaborated with examples drawn from a broad range of animal species, including humans. Emphasis is also directed toward nutritional techniques and the application of the topics covered.

415 Poultry Nutrition
Spring. 1 credit. Prerequisite: Animal Sciences 410 or permission of instructor.
F 11:15. G. F. Combs, Jr.
A practical consideration of principles of nutrition applied to feeding poultry, including use of linear programming techniques in diet formulation.

[419 Animal Cytogenetics (also Toxicology 419)
Fall. 4 credits. Prerequisites: Animal Sciences 221, Biological Sciences 281, or permission of instructor. Not offered 1990–91.
Lec, T R 9:05; disc, T or W 1:25–3:20.
S. E. Bloom.
A study of normal and aberrant chromosomes in animals and man. Lecture topics include chromosome organization, variations in chromosome structure and number, chromosomes in mitosis and meiosis, cytogenetics of abortuses, parthenogenesis, chromosomes in cancer, veterinary and human cytogenetics, genetic engineering, and genetic toxicology. Students investigate topics of their choice for discussions and a research paper.]

[420 Quantitative Animal Genetics
Fall. 3 credits. Not offered 1990–91.
Lecs, T R 11:15; lab, W R or F 2–4:25.
Staff.
A consideration of problems involved in improvement of animals, especially farm animals, through application of the theory of quantitative genetics, with emphasis on selection index.]

[421 Seminar in Animal Genetics
Fall. 1 credit. Prerequisite: Animal Sciences 221 or concurrent registration in Animal Sciences 420. Not offered 1990–91.
T 12:20. Staff.
A discussion of applications of principles of quantitative genetics and animal breeding to specific types of animals such as dairy animals, meat animals, and horses.]

[422 Methods: Quantitative Genetics
Fall. 1 credit. Prerequisite: Animal Sciences 420 or concurrent registration in Animal Sciences 420. Not offered 1990–91.
R 12:20. Staff.
An introduction to methods of research in quantitative genetics and animal breeding, including estimation of heritability, repeatability, and genetic and phenotypic correlations.]

427 Fundamentals of Endocrinology
Fall. 3 credits. Prerequisite: human or veterinary physiology or permission of instructor.
Lecs, M W F 9:05. P. A. Johnson.
Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

430 AI and Embryo Biotechnology
Fall. 2 credits. Prerequisite: a course in reproductive physiology and permission of instructor at preregistration. Fee of $250 includes books and supplies.
Lecs, T R 9:05; labs to be arranged.
R. H. Foote.
Principles and practice of semen collection and evaluation, artificial insemination, freezing of sperm and embryos, embryo collection, evaluation, micromanipulation, and transfer in farm animals and rabbits. Embryo transfer may require surgery.

450 Immunophysiology
Spring. 3 credits. Prerequisites: basic immunology and animal physiology or permission of instructor.
Lecs, M W F 11:15. 2 evening prelims to be arranged. J. A. Marsh.
Emphasis on the development and regulation of the immune system and the physiological parameters affecting or affected by immune function. Major topics include development immunology, immunoregulation, immunological involvement in reproduction and gonadal function, interrelationships between immune and endocrine functioning, and the immunology of aging.

455 Dairy Nutrition and Health
Fall. 3 credits. Prerequisite: Animal Sciences 351 and permission of instructor.
Lecs, T R 11:15; lab, M T 1:25–4:25; F (alternate weeks) 1:25–4:25.
D. M. Galton and staff.
Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

456 Dairy Management Fellowship
Spring. 2 credits. Limited to seniors. Prerequisites: Animal Sciences 351 and 455, and permission of instructor. S-U grades only.
Hours to be arranged. D. M. Galton.
The program is designed for undergraduates who have a sincere interest in dairy farm management. Objectives are to gain further understanding of the integration and application of dairy farm management principles and programs with respect to dairymen's objectives and methodology, to expand the concept of team approach in the development and implementation of management programs, and to gain further understanding of the role of research and industry in agriculture.

486 Immunogenetics (also Biological Sciences 486)
Fall. 3 credits. Limited to seniors (25) and graduate students. Prerequisites: an introductory course in genetics and prior or concurrent enrollment in basic immunology. Offered alternate years.
Lecs, M W F 10:10. R. R. Dietert.
Consideration of the genes and gene families important for immune function. Genetic factors in leukocyte differentiation, antibody diversity, inflammation, antigen recognition, immune response, cell cooperation, and disease resistance will be considered.

[490 Commercial Meat Processing
Spring. 3 credits. Prerequisite: Animal Sciences 290 or permission of instructor. Not offered 1990–91.
Lecs, T R 9:05; lab, T or R 1:25–4:25. Field trip to commercial meat processing plants. D. H. Beermann.
A study of the classification, formulation, and production of commercially available processed meat products. Physical and chemical characteristics of meat and nonmeat ingredients; their functional properties; various methodologies; microbiology; packaging, handling, and storage; and quality assurance are discussed.]

496 Animal Sciences Honors Seminar
Fall. 1 credit. S-U grades only. Students must be accepted into the Animal Sciences Honors Program.
Disc, M 4–5:30. J. A. Marsh.
The course is designed to provide information and guidance for students enrolled in the honors program in animal sciences and expecting to complete an honors thesis. The course will meet for 1-1/2 hours per week for 8 to 10 consecutive weeks, during which time the following topics will be presented and discussed: requirements and expectations of the honors program, formulating hypotheses, the scientific method, experimental design, data handling and manipulation, library usage and literature search techniques, animals in research, ethics in science, and scientific writing.

497 Special Topics in Animal Science
Fall or spring. 1–3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. S-U grades optional.
Staff.
May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

498 Undergraduate Teaching
Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with grade-point averages of at least 2.7.
Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7.
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

600 Research
Fall or spring. Credit to be arranged. S-U grades optional.
Hours to be arranged.
All members of animal sciences program area.

601 Proteins and Amino Acids (also Nutritional Sciences 601)
Fall. 2 credits. Prerequisites: physiology, biochemistry, and nutrition, or permission of instructor. Not offered 1991–92.
Hours to be arranged. R. E. Austic.
A course in amino acid and protein nutrition, with emphasis on the dynamic aspects of protein digestion and amino acid absorption, protein and amino acid metabolism, nutritional interrelationships, and assessment of amino acid availability and amino acid requirements.

604 Vitamins
Fall. 2 credits.
T R 10:10. G. F. Combs, Jr.
A discussion of the chemistry, biochemistry, and physiological functions of the vitamins, with emphasis on nutritional aspects.

605 Forage, Fiber, and the Rumen
Spring. 4 credits. Prerequisites: either general nutrition and biochemistry or permission of instructor. S-U grades optional.
M W F 12:20; disc, W 11:15 or F 1:25.
P. J. Van Soest.
Ruminant nutrition; lower-tract fermentation in monogastrics; nutritional biochemistry of forage plants, fiber, and cellulosic material.

607 Microbiology of the Rumen
Fall. 3 credits. Prerequisites: general biochemistry and microbiology.
Lecs, M W F 10:10. J. B. Russell.
Nutrition, biochemistry, physiology, taxonomy, and ecology of rumen microorganisms. Effects of rumen microbial ecology on ruminant nutrition. Manipulation of rumen fermentations to maximize host-animal performance.

609 Seminar in Poultry Biology
Fall and spring. Limited to graduate students. S-U grades only.
Hours to be arranged. Staff.
A survey of recent literature and research in poultry biology.

610 Seminar
Fall and spring. 1 credit. Required of all graduate students with a major or minor in animal sciences. S-U grades only.
M 11:15. Department faculty.

613 Forage Analysis
Spring. 2 credits. Prerequisite: permission of instructor. S-U grades optional.
Lab, R 2–4. P. J. Van Soest.
Chemical composition and nutritive evaluation of forage plants and related materials. The course includes a term paper summarizing results of independent laboratory study of either materials or methods.

619 Field of Nutrition Seminar
Fall and spring. No credit. No grades given.
M 4:30. Faculty and guest lecturers.
Lectures on current research in nutrition.

620 Seminar in Animal Breeding
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only.
Hours to be arranged.

621 Seminar: Endo/Reprod Biology
Fall and spring. 1 credit. Registration limited to graduate students. Advanced undergraduates welcome to attend. S-U grades only.
W 4:30. W. R. Butler and staff.
Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

630 Bioenergetics/Nutritional Physiology
Spring. 3 credits. Prerequisites: Animal Sciences 410 and biochemistry or physiology, or permission of instructor. S-U grades optional.
Lec, M W F 10:10. A. W. Bell and D. E. Bauman.
An integrated systems approach to the nutritional physiology and energy metabolism of productive animals. Emphasis on extracellular regulation of tissue and organ metabolism of specific nutrients in relation to level and efficiency of milk and meat production. Critical discussion of techniques and approaches to the study of animal bioenergetics.

640 Special Topics in Animal Science
Fall or spring. 1 or more credits. S-U grades optional.
Hours to be arranged. Staff.
Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

[720 Advanced Quantitative Genetics
Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics. S-U grades optional. Offered alternate years. Not offered 1990–91.
Hours to be arranged. R. L. Quaas.
Estimation of genetic and environmental parameters required to design efficient selection programs. Emphasis is given to interpretation of experimental and survey data with unequal subclass numbers, and prediction of genetic progress resulting from alternative selection methods.]

COMMUNICATION

R. D. Colle, chair; N. E. Awa, B. O. Earle, J. Earle, G. Gay, C. J. Glynn, D. A. Grossman, J. E. Hardy, B. Lewenstein, D. G. McDonald, R. E. Ostman, Z. Pan, R. Roe, T. M. Russo, C. Scherer, D. F. Schwartz, M. A. Shapiro, P. Stepp, R. B. Thompson, L. VanBuskirk, W. B. Ward, S. Warland, S. A. White, C. Whittle, J. P. Yarbrough

The middle and last digits of course numbers are used to denote specific areas:

00–09	Speech communication
10–19	Interpersonal communication
20–29	Mass communication
30–39	Visual communication and graphic design
40–49	Electronic media
50–59	Journalistic writing
60–66	Professional writing
67–69	Editing

70–79 Communication planning and strategy (advertising and public relations)

80–89 Research methods and interdisciplinary courses

90–94 Special topics and seminars

95–99 Individualized study

101–109 Rhetorical Scholarship Lab
Fall and spring. Maximum 1 credit per semester; may be repeated up to 6 credits in different labs. Limited to 20 communication majors or students with permission of instructor. S-U grades only.
Lec, hours to be arranged. P. Stepp and staff.
Students research and analyze contemporary issues to identify facts and derive the underlying values. Research will be used to write lines of argument, cases for debate, and speeches for public address, or to analyze pieces of literature to understand the author's intent. Analyses will be used to develop approaches to the oral presentation of the literature.

101 Debate: Affirmative Case

102 Debate: Value Objections

103 Debate: Briefs

104 Public Address: Persuasion

105 Public Address: Rhetorical Criticism

106 Public Address: Informative

107 Oral Interpretation: Prose

108 Oral Interpretation: Poetry

109 Oral Interpretation: Dramatic Duo

116 Theories of Human Communication
Spring or summer. 3 credits. Not open to first-semester freshmen. S-U grades optional.
Spring: lecs, M W 12:20; disc., F 12:20. R. Roe.
Designed to introduce students to the basic areas of study common in communication theory and research. Basic ideas and theories about language, interpersonal communication, small-group communication, nonverbal communication, organizational communication, and the mass media will be covered.

120 Introduction to Mass Media
Fall or summer. 3 credits. S-U grades optional.
Fall: lecs, M W F 12:20. D. McDonald.
History, processes, philosophies, policies, and functions of U.S. communication media. The media are examined individually and collectively in regard to content, economics, production, effects of messages, regulation, and other contemporary issues.

150 Writing for Media
Fall, spring, or summer. 3 credits. Limited to communication majors—freshmen and transfers—fall and spring; open enrollment in summer.
Fall: Lec, T 9:05–11; lab, T 11:15–1:10, R 9:05–11 or R 11:15–1:10. M. Shapiro.
Spring: Lec, T 8–10; lab 1, W 8–10; lab 2, R 8–10. B. Lewenstein.
Basic writing for print and broadcast. A back-to-basics approach to writing for clarity and style, using news and feature writing as a framework. Media form and style are analyzed. Weekly writing assignments, both in and outside of class, are given.

190 Communication Perspectives Seminar
Fall. 1 credit. S-U grades optional. Possible field trip(s).
Lec, F 1:25. B. O. Earle and staff.
Forum to discuss contemporary and future role of communication in society. Presentations by Cornell faculty and staff members, and by professionals in the field. Topics will be selected from areas such as new technology, constitutional and policy issues, career opportunities, professionalism and ethics, societal changes and implications. Open to freshman/transfer students in the Department of Communication.

201 Oral Communication
Fall, spring, or summer. 3 credits. Each section limited to 24 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes.
Disc, M W F 8; M 8 and W F 9:05; M 9:05 and W F 8; W M F 9:05; M 9:05 and W F 10:10; M 9:05 and W F 11:15; M 9:05 and W F 12:20; M W F 10:10; M 10:10 and W F 11:15; M F 11:15 and W 1:25; M F 12:20 and W 1:25; M 12:20 and W F 9:05; M 12:20 and W F 10:10; M W F 1:25; M T W 12:20; T R 9:05 and W 12:20; T R 10:10 and W 12:20; T R 10:10 and W 1:25; T R 11:15 and W 12:20; T R 11:15 and W 1:25; T W R 12:20 and W 1:25; T W R 1:25; M 10:10 and T R 9:05; M T R 10:10. Some section times may be omitted in some semesters. See the summer catalog for summer semester times. R. B. Thompson, D. Fraleigh, R. Roe, T. Russo, P. Stepp, and staff.
Through theory and practice students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

203 Argumentation and Debate
Spring. 3 credits. Prerequisite: Communication 201.
T R 12:20–1:45. P. Stepp.
The student will learn the principles of argumentation and the rules of debate. Classroom debates on the CEDA national topic will provide experience in critical thinking, rapid organization of thoughts, employment of research, and writing and speaking in a logical, persuasive manner.

204 Effective Listening
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman students per section. No students accepted or allowed to drop after the second week of classes.
Lec, M 1:25–2:40; lab, T, W, R, or F 1:25–2:40. Evening prelim: fall, Oct. 18 and Nov. 15; spring, March 7 and Apr. 18. S. Warland.
Lecture and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students' listening skills. Topics include audiology, cultural contexts, intercultural communication, linguistics, therapeutic listening, and critical analysis of information. Students are involved in skill-building exercises and in writing self-analytical papers, as well as attending seminars.

[205 Parliamentary Procedure
Fall. 3 credits. Each section is limited to 40 nonfreshman students. No adds allowed after the second week of classes. Not offered 1990–91.
Lec, T 1:25; sec, T or R 2:30–4:25.
A study of parliamentary procedure, with an emphasis on rules applicable to oral communication activities such as discussion, meetings, and legislative debates. Techniques for effective meetings (including alternatives to formal parliamentary procedure) discussed. Sections emphasize participation in discussions governed by parliamentary law and meeting simulations. Each student will chair meetings. Outside assignments include meeting observations and a paper.]

216 Communicating Interpersonally
Fall and spring. 3 credits. Prerequisite: Communication 116 or permission of instructor. Not open to freshmen. (Communication sophomore majors are given first priority.)
Lecs, M W F 12:20. S. Warland.
The course emphasizes understanding the dynamics affecting interpersonal communication in personal, social, and professional circumstances. It addresses self-awareness, assertiveness, person perception, attraction, and conflict management. Instruction techniques include in-class exercises, assigned reading, class discussion and lecture, plus report of field observation and journal-keeping assignments.

230 Visual Communication
Fall. 3 credits. Limited to nonfreshmen and communication freshmen. Not recommended for design or art majors. Cost of individual project materials, $20-$30.
Lec, T R 9:05; computer lab 1, T 10:10–12:05, lab 2, R 1:25–3:20, lab 3, R 3:35–5:30, lab 4, F 10:10–12:05. C. Scherer.
A basic course in the use and importance of visual communication. Course focuses on objectives, audiences, and methods of visual production. Particular emphasis is placed on the visual communication of scientific and technical information. The laboratory concentrates on the use of computers for production of visual materials. Practical projects are assigned.

232 Art of Publication
Fall and spring. 3 credits. Each lab limited to 30 nonfreshman students. Students missing the first two classes without university excuse are dropped so others may register. Project materials cost $30–$50.
Fall: lec, T R 1:25; lab, T or R 2:30–4:25; spring: lec, M W 1:25; lab, M or W 2:30–4:25. M. Toor.
A basic course designed to explore visual concepts that increase communication effectiveness through the printed word. The importance of selecting and coordinating format, layout, typography, and illustrations is stressed. Lectures, a field trip, in-class laboratory assignments, and outside projects examine opportunities and problems in publication design and production.

234 Photo Communication
Summer only. 2 credits. A lecture course for those with limited experience in photography. Students are expected to supply their own cameras.
Hours to be arranged. Staff.
Basic photography; photojournalism is emphasized during the latter part of the course.

250 Newswriting for Newspapers
Fall or spring. 3 credits. Limited to 25 students. Prerequisite: Comm 150, major in communication, or permission of instructor. Keyboarding ability essential. Students missing first two classes without university excuse will be dropped.
Lec, R 1:25–2:20; lab, R 2:30–4:25, plus out-of-class writing assignments. J. Earle.
Writing and analyzing news stories. A study of the elements that make news, sources of news, interviewing, writing style and structure, press problems, and press-society relations. Concentration on newswriting as it is practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.

272 Principles of Public Relations and Advertising
Spring. 3 credits. Preference given to ALS students. Not open to freshmen.
Lecs, M W F 1:25. Z. Pan.
Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society, the economic system, and organizations. Psychological and sociological principles as formulations for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

301 Business and Professional Speaking
Fall or spring. 3 credits. Prerequisite: Communication 201.
Lec, M 11:15; lab, T 10:10–12:05, 1:25–3:20 or W 11:15–1:10. B. O. Earle.
The study and practice of oral communication skills used in organizations, including speeches, interviews, reports, and discussions. It is expected that students will develop the analytical and presentation skills needed in business and professional careers.

314 Small-Group Communication
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: Communication 116 or permission of instructor.
T R 1:25–3. N. E. Awa.
Exploration of the principles, values, and limitations of group discussion in democratic systems. Principles are put into practice in decision-making and problem-solving groups.

316 Rhetorical Theory
Fall. 3 credits. Limited to 20 communication majors. Prerequisites: Communication 116 and 201 or permission of instructor.
M W F 1:25. R. Thompson.
Considers current views of rhetoric in historical perspective. Shows how assumptions about communication both shape the worldview of the communicator and either aid or hinder the reaching of various communication goals. Treats historical figures briefly; focuses on contemporary thinkers such as Toulmin, Ong, Ehninger, Richards, Kuhn. Second half of course taught in seminar format.

342 Electronic Media
Spring. 3 credits. Limited to 18 communication majors. Prerequisites: Comm 120 and 150.
Lec, T 1:25; lab, R 1:30–3:30. T. Russo.
The techniques of audio and video message design and production. Emphasis on development of pre- and postproduction skills needed for the development of effective audio/video production. Students complete exercises designed to develop specific competencies and work on projects from conception through production.

[344 Radio Writing and Production
Fall. 3 credits. Limited to 30 communication majors. Prerequisite: Communication 342. Not offered 1990–91.
Lec, M W 1:25; lab, W 2:30–4:25. Staff.
Scripting and recording various public information formats for possible use on local and state radio stations. Students create complete broadcasting plans and materials for public and private organizations.]

346 Television Writing and Production
Fall. 3 credits. Limited to 30 communication majors. Prerequisite: Communication 342.
Lec, M 1:25–3:20; lab, evening hours to be arranged. D. McDonald.
Television and video production. Students gain experience in studio and field production. Lectures concentrate on developing a sense of project planning and production aesthetics; lab concentration is on producing full-scale information, documentary, or public affairs programs from development of the idea through research, scripting, planning, and production.

348 Video Communication
Fall or summer. 3 credits. Prerequisites: Communication 116, 230, 342, and permission of instructor.
R 1:25–4:25. S. White.
An overview of video communication applications. Examination of relevant organizational and visual communication theory. Development of basic competency with portable videotape recording, equipment, audio and visual input to video and production, and postproduction planning and editing techniques.

350 Writing for Magazines
Fall or spring. 3 credits. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drops after third week. Extensive out-of-class writing assignments.
Fall: M 1:25–4:25, W. B. Ward; spring: T R 11:15–12:45. J. Earle.
A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

352 Science Writing for the Mass Media
Fall. 3 credits. Not open to freshmen. Limited to 25 students. Prerequisite: one college writing course.
Lecs, M W F 9:05. B. Lewenstein.
How to cover science (including technology and medicine) for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, scientific literacy, risk communication, and the history and social structure of science. Weekly writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

354 Print Media Laboratory
Fall. 3 credits. Limited to junior, senior, and graduate communication majors. Prerequisite: Communication 232, 250, or 350.
R 1:25–4:25. J. E. Hardy and staff.
Writing, editing, and layout principles practiced in publishing the Cornell Countryman. Some additional outside work sessions may be required. Students will use microcomputers.

356 Print Media Laboratory
Spring. 3 credits. Limited to junior, senior, and graduate communication majors. Prerequisite: Communication 232, 250, or 350.
R 1:25–4:25. J. E. Hardy and staff.
A continuation of Communication 354. Students will use microcomputers.

360 Scientific Writing for Public Information
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: any college-level writing course.
Fall: lecs, M W F 9:05 (L. VanBuskirk); T R 9:05 and W 11:15 (J. E. Hardy); T R 10:10 and W 12:20 (J. E. Hardy).
Spring: M W F 9:05 (L. VanBuskirk), T R 10:10 and W 12:20 (J. E. Hardy).
An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis will be emphasized. Not oriented to the mass media.

363 Organizational Writing
Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course.
M W F 11:15 and 12:20. L. VanBuskirk, and staff.
Students write as members of different organizations, in the position of supervisor, subordinate, colleague, and representative of business, government, community, and other organizations. Emphasis on adapting tone to the audience and the purpose of the message. Weekly writing assignments include various kinds of internal and external reports, memoranda, proposals, and letters. Assignments based on case studies.

[365 Writing in the Sciences and Engineering
Spring. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Not offered 1990–91.
M W F 10:10. Staff.
Students write scientific or technical material for colleagues in their own field. The objective is clear, concise writing, with attention to grammatical construction, usage, paragraph development, and organization. Weekly writing assignments include scientific or technical instructions, descriptions of equipment and procedures, definition and explanation of concepts, graphic presentations and discussion of data, abstract and summary, memorandum, research proposal, progress report, and research report.]

368 Editing
Spring. 3 credits. Limited to 25 junior, senior, or graduate students. Prerequisite: Communication 250, 350, 352, 360, or 365.
W F 10:10–11:25. J. E. Hardy.
Students will follow the process that takes a manuscript from final draft to page proof. Emphasis will be on copy editing, proofreading, fitting copy, working with authors, making editorial decisions, and developing skill in critical reading. Appropriate for any student who expects to work with manuscripts or do editorial work.

372 Advanced Advertising
Fall and spring. 3 credits. Prerequisites: Communication 272 and communication or marketing major.
Lecs, M W 2:30–3:20; labs, M W 3:20–4:25. C. Whittle.
A continuation of Communication 272. Examination of the qualitative and quantitative aspects of the mass media and how they are evaluated by advertisers. Function of media strategy in the marketing mix survey of advertising from the viewpoints of consumers. Introduction to research in advertising, with emphasis on identifying and predicting advertising effectiveness. Investigation into the planning, creation, and evaluation of advertisements and advertising campaigns.

375 Communication Planning and Strategy I
Fall. 3 credits. Limited to 35 juniors and seniors. Prerequisite: Communication 272 or permission of instructor.
Lec, T R 10:10–12:05. Z. Pan.
Theories that guide and influence the solutions to public relations and public information problems in agriculture, business education, government, and social welfare organizations. Examination of the process of the formation of public opinion. Discussion of research techniques and communication tools used in communication planning, and fundamentals of developing a communication plan. Case studies and projects.

376 Communication Planning and Strategy II
Spring. 3 credits. Limited to 25 juniors and seniors. Prerequisite: Communication 375 and Communication 382.
Lec and lab, T R 10:10–11:40. C. Glynn.
A continuation of Communication 375. Focus is on the development and implementation of actual communication campaigns. Students work closely with a community organization in designing and implementing a communication program.

380 Independent Honors Research in Social Science
Fall or spring. 1–6 credits. Limited to undergraduates who have met the requirements for the honors program.
N. E. Awa.

382 Survey Research Methods
Fall or spring. 3 credits. Limited to 20 junior, senior, or graduate communication majors; others by permission of instructor. Prerequisite: Communication 116 or 120 or permission of instructor.
Fall: M W 12:20, lab F 12:20–2:15, P. Yarbrough; spring: M W 11:15, lab F 11:15–1:10. R. Ostman.
Analysis of public opinion polls, market research, media audience ratings, readership surveys, and communication impact designs. Development of class research project from research question to final report. Instruction in computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

410 Organizational Communication
Fall. 3 credits. Labs limited to 15 junior, senior, or graduate students. Prerequisite: Communication 116 or equivalent.
Lec, T R 12:20; lab 1, W 1:25–3:20; lab 2, R 2:30–4:20. D. Schwartz.
Study of management in formal organizations with emphasis on communication between supervisor and employee; examination of the structure and function of planned and unplanned organizational communication networks. Case studies analyzed in lab.

416 Psychology of Communication
Fall. 3 credits. Prerequisite: Communication 116 or permission of instructor.
T R 10:10–11:30. N. E. Awa.
An advanced multidisciplinary study of communication theory. Topics include personal interaction, channels of communication, and effectiveness of messages. Study includes intensive analysis of major communication theorists.

418 Persuasion
Spring. 3 credits. Prerequisite: Communication 116 or permission of instructor.
Lecs, M W F 11:15. M. Shapiro.
The course explores the influence of communication in persuasion and attitude change. Topics may include persuasion as it applies to mass communication, advertising, public communication, or interpersonal communication.

[420 Media Industries
Spring, even-numbered years. 3 credits. Limited to communication majors. Prerequisites: Communication 120 and 272. Not offered 1990–91.
T R 1:25–3:20. D. McDonald.
The workings and functions of mass media industries. Emphasis is placed on the structure of media industries, audience research, media economics programming, and the organization of content production. For several projects, students will use microcomputers and work with data supplied by an audience research firm.]

[421 Broadcast Media Laboratory
Fall. 2 credits. Limited to junior and senior communication majors. Prerequisite: Communication 344 or 346. Not offered 1990–91.
Emphasis on production of television and radio programs for various audiences. Course work is done primarily through individual tutorial arrangement.]

[423 Broadcast Media Laboratory
Spring. 2 credits. Not offered 1990–91.
Hours to be arranged.
A continuation of Communication 421.]

428 Communication Law
Fall. 3 credits. Limited to junior, senior, and graduate students.
M W F 11:15. D. A. Grossman.
A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, defamation, copyright, broadcast licensing, access, and other issues of current interest.

439 Interactive Multimedia: Design and Research Issues
Fall. 3 credits. Prerequisite: permission of instructor.
Lec, T 1:25–4:25; lab TBA. Geri Gay.
An overview of interactive multimedia technologies (videodisc, DC-ROM, digital video interactive [DVI], computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will emphasize interactive multimedia design, application, and evaluation.

490.01 Special Topics in Communication
Fall, spring, or summer. 1–3 credits variable. S-U grades optional. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

490.02 Information Technology for Today's World
Fall and spring. 2 credits. Limited to students at sophomore level or above. Prerequisite: Some experience in the use of a microcomputer. Should have some expertise in the use of word processing software.
Fall: Lecs, T R 12:20; lab T 2:30–4:25. M. Ochs. Spring: hours to be arranged.
This class provides students with an in-depth knowledge of and hands-on instruction in the various information technologies central to the use of scholarly information. Topics include the structure of scholarly information; searching of bibliographic, numeric, and full-text databases; use of software to manage information; and use of national/international networks for scholarly communication.

492 Listening and Contemporary Management: Issues and Responsibilities
Fall. 1–2 credits (final paper required for 2 credits). Limited to 24 juniors and seniors.
R 3:35–5. S. Warland.
This seminar examines the role of listening in organizational contexts from a managerial perspective, discussing listening as a vehicle through which managers define and establish goals, engage and motivate workers, and perform other traditional management functions. Application to the newer schools of thought—particularly the symbolic/culture and human resources perspectives—will be emphasized.

496 Internship
Fall, spring, or summer. 1–3 credits. Students must apply to department internship committee no later than the spring pre-course-enrollment period for a fall internship or the fall pre-course-enrollment period for a spring or summer internship. Prerequisites: communication junior or senior, 3.0 average in communication courses, and approval of committee. S-U grades only.
Lec, one hour per week to be arranged. C. Whittle.
Structured, on-the-job learning experience under supervision of professionals in a cooperating organization. Students have a faculty course supervisor, who must be approved by the department internship committee. The faculty course supervisor awards the credit and grade (S-U only). A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting. Minimum of 60 on-the-job hours per credit granted. May be repeated to a maximum of 6 credits.

497 Independent Study
Fall or spring. 1–3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade.
Staff.
Group or individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

498 Communication Teaching Experience
Fall or spring. 1–3 credits; may be repeated to 6 credits. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.5 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade.
Hours to be arranged. Staff.
Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

499 Independent Research
Fall or spring. 1–3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Seniors must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register.
Staff.
Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

610 Organizational Communication
Spring. 3 credits. Open to seniors with permission of instructor.
T R 12:20–2:15. D. Schwartz.
Study of interpersonal communication in organizations. Methods for analyzing communication structure and processes, including communication audits and network analysis.

611 Communication in Organizations
Fall. 3 credits. Prerequisite: Communication 610 or permission of instructor.
M 1:25–4:25. S. White.
Review of theories, research, and practical systems as they relate to human communication effectiveness in organizations. Includes components of interpersonal communication, intragroup and intergroup communication, communication processes involved in organizational goal setting, renewal, and change.

612 Intercultural and Development Communication
Fall. 3 credits.
T 1:25–4:30. N. E. Awa.
A systematic analysis of sociocultural and psycholinguistic obstacles to effective communication between cultures, subcultures, and ethnic and identity groups. Also examined are the subtleties and complexities of nonverbal behavior in cross-cultural transactions. Examples are drawn from ethnolinguistic and cross-cultural studies.

616 Interpersonal Communication
Spring. 3 credits. Limited to graduate students in communication; others by permission of instructor.
M W 10:10–12. N. E. Awa.
A study of recent advances in interpersonal communication and social cognition. Theories and research in relational development. Human understanding of social events in an interpersonal context is explored.

620 Public Opinion and Communication
Fall. 3 credits. Graduate students and advanced undergraduates.
T 1:25–4:25. C. Glynn.
Examination of the concept public opinion: investigation of how it is measured and applied in society. Analysis of relationships between public opinion and communication. Practical applications.

624 Communication in the Developing Nations
Spring. 3 credits. Open to seniors.
Lec, M 1:25–4:25. R. D. Colle.
An examination of existing communication patterns and systems and their contributions to the development process. Attention is given to the interaction between communication systems and national development in primarily agrarian societies.

[626 Impact of Communication Technologies
Spring. 3 credits. Open to seniors. Offered alternate years. Not offered 1990–91.
W F 12:20–2:15. P. Yarbrough.
A study of emerging technologies of communication, such as computer-based information systems and satellites and their potentials for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television.]

[665 Scientific Writing for Scientists
Fall. 3 credits. Prerequisites: research in progress and permission of instructor. Not offered 1990–91.
T R 8:30–9:55. Staff.
Workshop for students with research in progress. Discussion and lectures on writing a journal article, thesis, report, and proposal; on objectives in scientific writing, relation of rhetoric and linguistics to scientific writing, process of publication and reviewing, and preparation of tables and illustrations; and on advanced and special problems in organization, paragraph development, sentence structure, and usage.]

[666 Perspectives on Science Writing
Spring. 3 credits. Open to graduate students and advanced undergraduates (with permission) from all departments. Not offered 1990–91.
M W F 10:10–12:05. B. Lewenstein.
A graduate reading course that surveys the approaches that scholars have used to understand science communication, with special emphasis on scientific information intended for nonscientists. Among the perspectives are history, sociology, journalism, risk communication, agricultural communication, literature, and philosophy. To supplement the primary goals of the course, students may also learn basic techniques of science writing.]

676 Communication Planning and Strategy
Spring. 3 credits. Primarily for graduate students but open to seniors.
T R 10:10–12. C. Scherer.
Seminar in the planning of communication activities for the support of directed social-change programs. Examines communication and social theories, case studies, and planning models. Participants produce a comprehensive communication plan designed to solve a significant (real) communication problem of interest to them. Case studies and discussion focus on communication problems from nutrition and health, rural development programs, marketing, nonformal education programs, and corporate and government public information campaigns.

680 Studies in Communication
Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor.
T 10:10–12. P. Yarbrough.
A review of classical and contemporary research in communication, including key concepts and areas of investigation. An exploration of the scope of the field and the interrelationships of its various branches.

681 Communication Effects and the Individual
Spring. 3 credits. Prerequisite: graduate students in communication; others by permission of instructor.
Lecs, T 2:30–3:20 and R 2:30–4:25.
M. Shapiro.
An introduction to theory and research in communication, focusing on the mental processes of the communicating individual. Discussions and readings will include how individuals process and remember communication information, how communication information is used in decision processes, how motivation influences processing of mass communication information, and how developmental processes influence processing and use of mass communication information.

682 Methods of Communication Research
Fall. 3 credits. Limited to graduate students.
M W 10:10–12. R. E. Ostman.
An analysis of the methods used in communication research. Emphasis is on understanding the rationale for experimental, descriptive (empirical and nonempirical), and historical-critical research methods.

683 Survey Research Methods in Communication
Spring. 3 credits. Prerequisite: Communication 682 or equivalent.
Lec, M W 1:25–3:20. D. McDonald.
Practical experience in survey techniques in communication research. Course topics include design and measurement, data collection, data preparation, data analysis, and interpretation of results. Secondary analyses of survey data are conducted within each topic area.

685 Training and Development: Theory and Practice (also Education 685, International Agriculture 685 and Industrial and Labor Relations 658)
Spring and summer. 4 credits. S-U grades optional. Charge for materials, $45.
F 9:05–12:05. R. Colle, D. Deshler, W. Frank.
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

694 Seminar: Communication Issues
Fall and spring. No credit. S-U grades only.
Alternate F 2:30. S. White and C. Scherer.
A departmental seminar for students and faculty on contemporary issues in communication.

792 Advanced Communication Studies
Fall or spring. 3 credits. Limited to communication graduate students. May not be repeated. Students must use the faculty member's section number to register.
Graduate faculty.
Independent studies and projects are carried out in conjunction with selected undergraduate courses.

794 Seminar in Communication Issues
Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor.
Hours to be arranged.
Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

797 Graduate Independent Study
Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor.
Hours to be arranged.
Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

798 Communication Teaching Laboratory
Fall and spring. 1–3 credits each semester. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register.
Graduate faculty.
Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

799 Graduate Research
Fall, spring, or summer. 1–3 credits. Prerequisite: appropriate communication graduate course work or permission of instructor.
Hours to be arranged.
Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

899 Directed Graduate Study
Fall or spring. 3–6 credits. S-U grades only. Students must use the faculty member's section number to register.
Graduate faculty.

EDUCATION

R. E. Ripple, chair; A. L. Berkey, R. L. Bruce, W. S. Carlsen, J. Confrey, H. R. Cushman, D. Deshler, W. E. Drake, J. A. Dunn, J. R. Egner, G. Gay, J. H. Gould, D. B. Gowin, E. J. Haller, D. E. Hedlund, J. McGonigal, J. Millman, D. H. Monk, J. D. Novak, G. J. Posner, D. E. Schrader, K. A. Strike, H. D. Sutphin, D. J. Trumbull, J. D. Volmink

005 Basic Review Mathematics
Fall. 3 credits (this credit is not counted toward the 120 credits required for the degree). Primarily for entering students.
Fall: M W F 9:05. J. Confrey and J. D. Volmink.
Introduction to concepts necessary for success in Education 115 and basic statistics courses. Topics include problem solving, ratios and proportions, factoring and solving algebraic equations, graphing linear and quadratic equations, and trigonometry. Considerable emphasis is placed on learning to learn mathematics for understanding and on comprehending word problems.

115 Introductory College Mathematics
Fall or spring. 4 credits.
Fall: lecs, M W 11:15 or 12:20; labs, R 8, 10:10, 12:20 or F 10:10, 12:20, 2:30.
Spring: lecs, M W F 9:05; lab: T 9:05, 10:10, 11:15, or 12:20 or R 10:10, 11:15, or 12:20. J. Confrey and J. D. Volmink.
Designed to give students with sound high school mathematics backgrounds a unified treatment of the basic concepts of college algebra, trigonometry, and geometry. Considerable emphasis is placed on the concept of function, graphing, problem solving, and applications. Selected software is used to strengthen and integrate the mathematical topics covered.

120 Education for Empowerment
Spring. 1–3 credits.
T R 2:30–4. J. Novak, D. Deshler, J. Egner.
A modular course, with each module spanning 5 weeks for 1 credit. Common themes running through the modules include human learning, teaching strategies, political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.

210 Psychology of Learning and Memory
Fall. 3 credits. Prerequisite: introductory psychology.
M W F 10:10. J. A. Dunn.
This course deals with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the management of teaching and learning. Practical applications of research findings will be emphasized. One or more experimental projects and the use of microcomputers will be required. Not acceptable as a substitute for Education 311.

[211 Psychology of Individual Differences
Fall. 2–3 credits. S-U option available. Offered alternate years. Not offered 1990–91.
M W F 12:20. J. A. Dunn.
An introductory course focused on basic concepts in the psychology of individual differences applicable to the teaching/learning process. Topics include: intelligence, personality, motivation, cognition, memory, psychological testing, and measurement.]

[212 Psychological Foundations of Education
Fall. 2–3 credits. S-U option available. Offered alternate years. Not offered 1990–91.
M W F 12:20. J. A. Dunn.
A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.]

240 The Art of Teaching
Fall and spring. 3 credits.
Lec. Fall: T 2:30–4:25; spring: T 2:30–4:25 or W 2:30–4:25. Fieldwork to be arranged. J. R. Egner, G. J. Posner, D. J. Tumbull, and staff.
This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves (minimum of two hours a week). Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nonformal situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

247 Instructional Application of Microcomputers and Related Technologies
Fall and spring. 2–3 credits. Not available to students who have completed ABEN 102 or NR 107.
R 2:30–3:45; lab to be arranged. H. D. Sutphin.
This course provides an introduction to instructional applications and strategies for using microcomputers and related technologies in public and private education in the private sector. The course also helps students learn to use technologies to enhance their college studies. Wordprocessing, spreadsheets, databases, hypertext, electronic bibliographical searching, networking, and desktop publishing are covered. Module A (1 credit) is the first seven weeks of the semester, focused on Macintosh technology. Module B (1 credit) is the second seven weeks, focused on IBM-compatible and related technologies. For Module C (1 credit) students propose and complete an approved special project related to the class.

271 Sociology of Education
Fall. 3 credits. S-U grades optional.
T R 10:10–11:30. E. J. Haller
An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, from elementary school to the university, are considered.

[283 Education and Cultural Process in Rural Development
Fall. 4 credits. Not offered 1990–91.
T R 1:25–3:20. Staff.
This course is an introduction to the social and behavioral science side of rural and agricultural development. Students will study human behavior as it occurs in typical interfaces between key groups like peasants and government officers, farmers and extension

agents, rural female and male development workers, academicians and practitioners, administrators/supervisors and field workers, generalists and specialists, rural teachers and parents, merchants and farmers. A problem-solving approach will be used to help students identify factors inhibiting human interaction and to design approaches for dealing with such factors.]

284 Introduction to U.S. Cooperative Extension
Fall. 3 credits.
T 3:35–4:25, R 2:30–4:25. J. H. Gould.
History, programs, policy analysis, organization, and future role of cooperative extension in the United States. The role of the change agent, extension program development process, education techniques, communication skills, and volunteer involvement will be stressed. For students interested in a field of practice that makes use of undergraduate majors in ALS or the College of Human Ecology and for international students interested in an introduction to the U.S. extension experience.

301 Knowing and Learning in Science and Mathematics
Fall. 3 credits. Prerequisite: enrollment in science/mathematics certification program or permission of instructor.
M W F 2:30. D. J. Trumbull.
Students examine both current notions in the history and philosophy of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students to conduct clinical interviews under the direct supervision of program staff. During the course students examine their own understanding of their major as the first step in their preparation as teachers.

302 Observing Science and Math Instruction
Spring. 3 credits. Prerequisite: Education 301 or permission of instructor.
Lec, W 2–4:25. W. S. Carlsen and J. Confrey.
The study of a variety of methods for recording and understanding science and mathematics teaching and learning. By reading and conducting research from a variety of analytic/interpretive paradigms, students will approach the familiar world of the secondary classroom with fresh perspectives. The course will include a final project that involves observing and evaluating a case of teaching. Students enrolled in teacher education programs will be expected to focus on their own teaching for the final project.

[310 Psychology of Instructional System Design
Fall. 2–3 credits. Prerequisite: Education 210 or permission of instructor. Not offered 1990–91.
M W 11:15, hour to be arranged.
J. A. Dunn.
The course reviews the relevance of theories of learning and issues in the study of learning to the technology of instruction. Various examples of instructional systems will be considered. Student projects and laboratory exercises will be required.]

311 Educational Psychology
Fall or spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional in fall; letter grade only in spring.
Fall: M W 11:15, F to be arranged; D. E. Schrader and staff.
[Spring: M W F 10:10. J. A. Dunn. Not offered Spring 1991.]
An introductory survey course. Emphasis is on human learning and the educational process from a psychological point of view. The course is set in a broadly based teaching-learning context appropriate for prospective teachers, youth group leaders, community leaders, and those in the service-helping professions.

312 Learning to Learn
Spring. 3 credits. Prerequisite: one or more courses in psychology or educational psychology
T R 9:05. J. D. Novak.
This course is intended for persons interested in the improvement of their learning strategies and the application of new ideas and methods to improve educational programs. Lectures and discussions are based on assigned readings and the contributions of class members. The major focus of the course is how and why concepts play a central role in human learning. Concept mapping and other strategies for educating will be used. Students will apply principles and methodologies in a project related to their interests.

317 Psychology of Adolescence
Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional.
M W 11:15. F to be arranged.
D. E. Schrader.
A survey of the nature of adolescent development, with emphasis on case analyses of adolescent behavior. Focus is on an examination of the interrelationships among the major aspects of adolescent development, an examination of some of the dominant themes of adolescence, acquaintance with research on adolescent development, and implications for the educational process.

331 Introduction to Agricultural and Extension Education
Fall. 2 credits.
Lec, M 1:25–3:25; lab to be arranged.
W. E. Drake and staff.
The course is intended for persons interested in careers as professional educators in agriculture. Investigates careers as a secondary school or two-year college teacher, cooperative extension agent, or educator in agriculture business and industry. The course emphasizes career information, methodology, and introductory teaching experiences. Class activities include presentations by resource persons currently in teaching and extension careers, field trips, and microteaching experiences.

332 Instructional Methods in Agricultural and Extension Education
Spring. 3 credits.
M 2–4:25 and F 12:20. H. Cushman, W. Drake, J. Gould.
Selection, practice, and evaluation of methods in agricultural and extension education will be stressed. The course will focus on both general teaching strategies and methodology unique to teaching in either schools or extension. Course activities include micro- teaching and/or field experience during arranged times.

335 Youth Organizations
Spring. 3 credits. Prerequisite: introductory psychology or permission of instructor.
Lecs, T R 10:10; lab to be arranged.
J. H. Gould.
The role of selected youth organizations in providing educational experiences for youth. Factors affecting membership, purposes, design, operation, and administration are surveyed, emphasizing the roles an adult volunteer leader may play. The course is designed to give students an in-depth, learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

352 Reading Statistics
Fall or spring. 1 credit. Prerequisite for spring: concurrent registration in Education 353.
Fall: T 12:20; spring: T R 8:30–9. Staff.
An introduction to statistical vocabulary and symbolism frequently used in reporting empirical research in education and other social sciences. Students are taught how to comprehend statistical terminology and results.

353 Introduction to Educational Statistics
Spring. 3 credits. Enrollment limited to 40 students. Prerequisite: Education 352 or concurrent registration, or permission of instructor.
T R 9:05–11. J. Millman.
A study of common univariate and multivariate statistical procedures encountered in educational and psychological inquiry. Meaning of concepts and mastery of course content is emphasized; computational details are not. Microcomputers are used extensively in class to develop understanding of the properties of statistical indices.

370 Issues in Educational Policy
Spring. 3 credits.
T R 10:10–11:30. K. A. Strike.
An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity; student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives.

378 Political Economy of Education
Fall. 3 credits. S-U grades optional. Prerequisites: one introductory level course in either government or economics, or prior permission of instructor.
T 2:30–4:25, R 2:30–3:20. D. H. Monk.
A policy oriented examination of educational systems with an emphasis on political and economic perspectives. Attention will be paid to both external and internal aspects of educational activities. Specific topics will include the changing contributions of education to earnings, school-community relations, power within educational organizations, the impact of technology in the workplace and in classrooms, and the sources and impact of educational costs. A variety of education settings will be examined including higher education and non-formal education.

380 Independent Honors Research in Social Science
Fall or spring. 1–6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program.
Staff.

401 Our Physical Environment
Fall or spring. 3 credits. Prerequisite: permission of instructor. Charge for photo supplies, approximately $7.
T 1:25–4:25. V. N. Rockcastle.
A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding and techniques for teaching. A two-week session on photography and an individual research project are included. Useful for teachers and environmental educators.

411 Introduction to Educational Measurement
Fall. 3 credits.
T 9:05–11, R 9:05–9:55. J. Millman.
Presents practices and theories of the measurement of human knowledge and performance. Students will be expected to acquire the practical skills of planning and constructing tests for a variety of purposes, interpreting and using test results, evaluating commercially available instruments, and the like. Students will also be expected to discuss intelligently a myriad of social, ethical, legal, and technical issues associated with educational testing. One course in statistics or concurrent registration in Education 352 is recommended but is not required.

413 Psychology of Human Interaction
Fall. 3 credits. Enrollment limited. Prerequisite: permission of instructor. Fee, $5.
T R 10:10–12:05. D. E. Hedlund.
Designed to develop skills for, and understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

414 Counseling Psychology
Spring. 4 credits. Limited to 30 students. Prerequisites: introductory psychology, social or personality psychology, and Education 413.
T R 10:10–12:05. D. E. Hedlund.
The processes of counseling are examined from various theoretical perspectives. Typical adult counseling issues are examined, and implications are drawn for counseling strategies with an adult population, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes. Alternative models of service delivery, such as outreach, consultation, and psychoeducation, are emphasized.

420 Field Experience
Fall or spring. 1–4 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade.
Staff.
Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate the field experience.

430 Special Problems in Agricultural Education
Fall, spring, or summer. 1–3 credits. S-U grades optional.
Fall and summer: hours to be arranged; spring: T 8. H. R. Cushman.
An opportunity to study individually selected problems in agricultural education.

432 Teaching Agriculture: Methods, Materials, Practice
Fall. 9 credits. Prerequisites: Education 332 and concurrent registration in Education 430 and 499.
M T W R F 8–3. A. L. Berkey and staff.
Directed participation in teaching agriculture at the secondary school level. Program includes a four-day intensive on-campus period and periodic seminars addressing selected methods and materials in teaching agriculture, combined with a 14-week period in a student teaching center. Includes evaluation of area resources, instructional materials and facilities, planning and executing instruction, directing work experience, and advising youth organizations.

[445 Curriculum Design Workshop
Fall. 3 credits. Education 644 may be taken concurrently. Not offered 1990–91.
T R 10:10–11:30. G. J. Posner.
A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.]

457 Discourse Analysis
Fall. 2 credits. Offered alternate years.
Lec, T R 2:30. W. S. Carlsen.
An introduction to the sociolinguistics of education. In the context of classrooms and schools, we will consider among other issues the relationship between social status and talk, questioning, the negotiation of meanings in lessons, and the theoretical and empirical challenges of recording, transcribing, and analyzing conversations and interviews.

472 Philosophy of Education
Fall. 3 credits.
T 2:30–4:25. K. A. Strike.
A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the theory of knowledge are examined and linked to current educational issues.

473 Contemporary Philosophy of Education
Spring. 3 credits.
M W 11:15, plus additional work to be arranged. D. B. Gowin.
The emphasis in this course is the architectonics of meaning as a guide to philosophizing about education, our topic. We begin with the fact that philosophers disagree, as do experts in all fields. Every discipline exhibits competing philosophical principles. The appeal to facts to settle disagreements fails because some philosophical principle is necessary to give meaning to facts. Philosophy concerns itself with problems we can neither solve nor abandon. Each year the readings in the course will change as we seek to use texts that are the most up-to-date and also the most fundamental in philosophy. Thus, the course may be taken more than once. The curriculum is emergent.

477 Law and Educational Policy
Fall. 3 credits.
M 2:30–4:25. K. A. Strike.
A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational issues and in terms of the consequences of legal decisions for the development and operation of educational institutions.

481 Educating for Community Action
Spring. 3 credits.
T R 11:15–1:10. R. L. Bruce.
The design and execution of educational aspects of community-action and nonformal education programs. Deals with the identification and statement of educational goals, selection of teaching strategies, and evaluation of outcomes.

482 Introduction to Adult Education
Fall. 3 credits. S-U grades optional.
T R 12:20–2:15. D. Deshler.
Focuses on the broad aspects of adult education: scope and history of adult-education programs, philosophy and principles, perspective of the adult learner, media and methods of instruction, and program development. Opportunities are provided for observation of adult-education programs in community organizations and agencies.

483 Comparative Studies in Adult Education
Spring. 3 credits. S-U grades optional.
W 7:30–10:30 p.m. D. Deshler.
Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

492 Contemporary Issues Seminar: Development in Southern Africa (also Agricultural Economics 492)
Spring. 2 credits. Limited to 25 juniors and seniors.
Hours to be arranged. D. Chapman, J. Volmink.
A contemporary issues seminar about economic and social issues in the development of Southern Africa. Natural resources as the basis for trade and manufacturing. Potential for agriculture. Education, health, and public sector development. Economic integration and political conflict. Apartheid as a regional problem. Opportunities and obstacles to regional development. Summer field trip for additional credit is possible.

***492 Contemporary Issues in Psychology of Environmental Education**
Spring. 2 credits. S-U grades optional. Offered even-numbered years.
M W F 12:20. J. A. Dunn.
A survey of theory and research in environmental psychology. Issues arising from environmental education and production efforts will be considered. Topics include: energy conservation, pollution control, recreational use of national parks and wilderness areas, habitat destruction, the psychology of environmental activism, etc. Student projects, reports, and oral presentations will be emphasized.

*Pending approval.

497 Independent Study
Fall or spring. 1–3 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade.
Staff.
A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

498 Undergraduate Teaching
Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with grade-point averages of at least 2.7. S-U grades optional.
Staff.
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7.
Staff.
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

[547 Improvement of College Teaching
Fall, spring, or summer. 2 credits. Not offered 1990–91.
D. B. Gowin.
Concepts of teaching, learning, curriculum, and governance are used to guide practical activities that enhance faculty competence. Recent studies of concept mapping and learning, structure of knowledge, science teaching, adult learning, and evaluation provide a conceptual basis for improving teaching.]

590 Special Topics in Education
Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged.
Staff.
Topics to be announced.

601 Secondary Science and Mathematics Teaching Practicum
Fall or spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics Program.
M T W R F 8–3. D. J. Trumbull and staff.
Supervised student teaching in science or mathematics at the secondary level. Program includes teaching at a local school for ten weeks.

602 Teaching Science/Mathematics: Methods, Materials, Practice
Fall. 9 credits. Prerequisite: concurrent enrollment in Education 601 or permission of instructor.
Lec, M F 9–12 and 1–3, first 5 weeks; last 10 weeks to be arranged. G. J. Posner and staff.
The course begins with five weeks of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the next ten weeks require students to use those theories to develop and evaluate teaching materials and practices. Students will complete an extensive portfolio documenting their work.

603 Teaching Mathematics
Spring. 3 credits.
M 2–4:25. J. Confrey.
Current research in mathematics education will be examined in order to develop a picture of the mathematics classroom that integrates subject matter, student conceptions, affective variables, and issues in the social context of learning mathematics. Special topics will include research on problem solving, women and mathematics, misconceptions, and research on teaching.

606 Seminar in Science and Mathematics Education
Fall. 1 credit. S-U grades only.
R 4:30. W. S. Carlsen and staff.
Explores topics in science and mathematics education. The focus of the seminar changes each year.

609 Educational Ethnography
Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor.
M W 2:30–4. D. J. Trumbull.
The course will study educational ethnography as a form of interpretive research, a perspective that attends to the complex interactions between researcher, researched, and context and accepts the centrality of meaning-making in the conduct of human affairs. Students will examine some of the philosophical debates about research approaches and will discuss research methods as they relate to the aims and assumptions of interpretive research. Students will conduct a joint research project during the course of the semester.

611 Educational Psychology
Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional.
M 12:20–1:10; W 12:20–2:15.
D. E. Schrader.
A basic survey course for graduate students. Emphasis on psychological factors involved in human learning and the educational process. Set in a broad-based conceptual model of any behavioral setting for learning. Appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

613 Theory and Methods for Education
Fall. 3 credits. Prerequisite: Education 311 or 611 or permission of instructor.
T R 9:05. J. D. Novak.
Presents a coherent theory of education combining concepts from philosophy, psychology of learning, curriculum, and instruction. New educational methods, including concept mapping and clinical interviews, will be presented. Students will gain competence by applying concepts and methods in a project related to their interests. Classes include discussion of student-initiated questions and use of videotape to analyze educational techniques.

620 Internship in Education
Fall or spring. 2–6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work.
Staff.
An opportunity for practical experience in educational professions development.

630 Special Problems in Agricultural and Occupational Education
Fall or spring; may also be offered in summer. 1–3 credits. S-U grades optional.
Hours to be arranged. A. L. Berkey and staff.
The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural and occupational education. Designed for experienced teachers.

632 Teaching Agricultural and Occupational Education
Spring. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor.
M 8–10. A. L. Berkey.
The focus of the course is on the selection, use, and evaluation of methods and materials for teaching occupational subjects. Methods for both group and laboratory instruction are covered. Opportunity is provided for students to develop teaching competencies based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

633 Curriculum in Agricultural and Occupational Education
Fall. 3 credits.
T 1:25–3:20; labs to be arranged.
W. E. Drake.
Current situations affecting occupational education curricula are examined. Principles, objectives, and sources of information are developed for planning curricula. Strategies for developing occupational courses are examined. Consideration is given to planning, developing, and managing work experience programs. Participants have an opportunity to observe ongoing programs at the secondary and two-year college levels and to pursue individual interests in curriculum improvement.

643 Structure of Knowledge and Curriculum
Spring. 3 credits. Prerequisite: permission of instructor.
M W 12:20–2:15. D. B. Gowin.
Curriculum studies are the opening door to the four commonplaces of educating: curriculum, teaching, learning, and governance. A theory of educating explains the relations among these educational variables. Practice in concept mapping and Vee diagramming is required to achieve proficiency in curriculum analysis and curriculum construction. A theory and method for the analysis of the structure of knowledge is presented.

644 Curriculum Theory and Analysis
Fall. 3 credits.
T R 2:30–4. G. J. Posner.
An examination of the basic elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course focuses on the assumptions underlying any curriculum. The major task of each student is to choose and conduct an in-depth analysis of a curriculum. This course is the basic graduate course in curriculum.

647 Instructional Technologies: Analysis and Practices
Fall and spring. 2–4 credits. Prerequisite: skills in statistics and research design. Letter grade only.
R 2:30–3:45; lab to be arranged.
H. D. Sutphin.
Current research and literature on instructional computing and related technologies in the public and private sectors will be examined. Students complete a group research project on educational technologies and meet for five seminar sessions to earn 2 credits. The research experience includes design, data collection, input, analysis, and synthesis. Concurrent attendance in ED 247 Modules A and B is required (2 credits); or 247 may be taken as a prerequisite.

650 Methods of Educational Inquiry
Fall. 1 credit.
T 2:30–3:20. D. J. Trumbull.
A survey of approaches to inquiry in the social sciences, including experimental and comparative designs, survey research, case study, simulation, philosophical and historical inquiry, content analysis, and secondary data analysis. The course is intended to broaden the student's views of appropriate methods of disciplined inquiry.

651 Writing a Thesis Proposal
Fall. 1 credit. S-U grades only.
T 3:35. J. Millman.
Procedures for developing and writing a master's or doctoral thesis proposal. Emphasis will be given to identifying a significant topic, conducting and describing a group minire-search study, recognizing weaknesses in illustrative proposals, and clear and concise writing. Students will be provided ample assistance in constructing a brief thesis proposal of their own.

654 Evaluation for Program Management
Spring. 3 credits. S-U grades optional.
M 1:25–4:25. R. L. Bruce.
The course will consist of three modules, each for one hour of credit. (1) Evaluation as a programming function: fitting an evaluation to decision needs; program monitoring; evaluation and information systems. No prerequisite. (2) Evaluation models: comparative examination of various models and their implications for practice. No prerequisite. (3) Practicum in program evaluation: directed practice in the design and conduct of a "live" evaluation. Prerequisite: module 1.

659 Special Topics in Research Methods
Spring. 2–3 credits. Prerequisite: permission of instructor. S-U grades only.
Hours to be arranged. J. Millman.
Consideration of new techniques and current topics in educational research design, measurement, or evaluation of programs, products, and personnel.

661 Administration of Educational Organizations
Fall. 3 credits.
W 3:35–6. E. Haller.
Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of schools as organizations.

664 Educational Finance
Fall. 3 credits. S-U grades optional.
R 3:35–6. D. H. Monk.
An analysis of the distribution and utilization of public and private resources for educational purposes. The discussion will revolve around the issues of equity, efficiency, and freedom of choice. Alternative methods of financing schools will be evaluated, and the perplexing legal and moral issues raised by such questions as "Who pays?" and "Who benefits?" will be discussed. Specific attention will be given to budgeting, accountability, and productivity. An opportunity for individuals to focus on their own areas of interest, such as occupational education, the two-year college, or secondary or higher education.

665 Administrative Decision Making
Spring. 3 credits. S-U grades optional.
W 3:35–6. D. H. Monk.
An introduction to decision making theory and its relevance to the field of educational administration. Specific applications will be made to the study and improvement of productivity within educational systems. A wide variety of educational settings will be considered, including higher education and non-formal education.

673 Seminar in Dewey's Philosophy of Education
Fall. 3 credits. S-U grades optional.
R 3–5. D. B. Gowin.
Dewey's corpus of philosophical works has been given new life by contemporary philosophers (Richard Rorty, Richard Bernstein, James Gouinlock, and Walter Watson). After fifty years or so of inattention, Dewey is now acknowledged as a "philosophic genius" of the twentieth century (along with Wittgenstein and Heidegger). Education and democracy are central to Dewey's thought; this seminar is an exploration of theory, method, and practical educative consequences of Dewey's views. The Dewey Center edition of original works is now available in Cornell libraries.

678 Planning Educational Systems
Spring. 3 credits. S-U grades optional.
T 2:30–4:25. D. H. Monk.
A seminar focused on a comparative analysis of educational planning as it is practiced in both industrialized and developing nations. Topics will include manpower planning, the social demand approach to educational planning, benefit-cost analysis, and incentive models of planning. The political and economic implications of attempts to plan education will be emphasized.

679 Policy Issues in Higher Education
Spring. 3 credits. S-U grades optional.
T 11:15–1:15. J. R. Egner.
Deals with administration of higher educational organizations. Current approaches to planning and analysis of special problems.

680 Foundations of Extension Adult Education
Fall. 3 credits. Limited to 20 students. S-U grades optional.
F 9:05–12:10. D. Deshler.
An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions will be examined through a seminar approach.

681 Designing Extension and Continuing Education Programs
Fall. 3 credits. Prerequisite: permission of instructor.
T 1:25–4. R. L. Bruce.
Designed to help students understand the concepts, principles, and procedures relevant to developing programs and curricula for the continuing education of adults. Emphasis is on such key areas as the nature and role of programming, situation analysis and needs identification, choosing among alternative courses of action, stating program objectives, and program organization.

[683 Administration of Nonformal Education
Fall. 3 credits. Not offered 1990–91.
W 1:25–4. Staff.
An overview of selected theories, principles, and strategies applicable to management of decentralized, professionally staffed, nonformal educational organizations and change agencies. Content includes management functions, managerial leadership, management by objectives, and decision-making strategies. Particular attention is given to leadership of organizations with volunteer staff.]

684 Adult Education Programs: Organization and Direction
Spring. 3 credits.
F 1:25–4:25. H. R. Cushman.
Alternative procedural models for organizing and conducting adult occupational education courses are presented. Guidelines and procedures for implementing the models in secondary and postsecondary school settings are emphasized.

685 Training and Development: Theory and Practice (also Communication 685, International Agriculture 685 and Industrial and Labor Relations 658)
Spring and summer. 4 credits. S-U grades optional. Charge for materials, $45.
F 9:05–12:05. Communication Graduate Center. R. Colle, D. Deshler, W. Frank.
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

690 Research Seminar
Fall and/or spring. No credit.
T 12:20. K. A. Strike.
Presentation of current research in the field of education by graduate students and staff. Opportunities to discuss methodology, findings, and other aspects of research.

[711 Contemporary Issues in Educational Psychology
Spring. 2–3 credits. Not offered 1990–91.
M W 11:15. 1 hour to be arranged.
J. A. Dunn.
This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics will vary from year to year. Students may take the course more than once.]

715 Seminar in Psychology and Education
Fall or spring. Variable credit. Prerequisite: permission of instructor.
W 1:25–3:25. D E. Hedlund.
Selected topics focusing on the interaction of theoretical and research developments in psychology and education.

718 Adult Learning and Development
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years.
Hours to be arranged. R. E. Ripple, R. L. Bruce.
Deals with adult development and learning behavior from points of view of educational psychology, social psychology, and sociology. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

719 Seminar in Educational Psychology
Fall. 1 credit. S-U only.
W 12:20. Staff.
Presentation and discussion of current professional topics in educational psychology. Current research and theoretical controversies in the field will be covered.

730 Seminar in Agricultural and Occupational Education
Spring. 2 credits. S-U grades optional.
R 8–9:55. H. D. Sutphin and staff.
For master's degree candidates who have had teaching experience and doctoral candidates with majors or minors in agricultural and occupational education. Emphasis is on current problems and research. Includes discussion and analysis of student research proposals.

735 Teacher Preparation in Agriculture
Fall. 3 credits. Prerequisite: teaching experience in agriculture.
W 1:25–3:20. A. L. Berkey.
For persons with teaching experience interested in the preparation of occupational teachers. Involvement in the Cornell program of teacher preparation in agriculture is expected.

736 Occupational Education Program: Administration and Supervision
Spring. 3 credits.
T 3:35–6; special sessions to be arranged.
Staff.
Practices and procedures of organizing, administering, and supervising programs of occupational education at the secondary and postsecondary level are stressed. The role of the director in providing leadership in improving instruction, designing programs, and using resources at federal, state, and local levels is considered.

739 Evaluating Programs in Occupational Education
Spring. 3 credits. Offered alternate years.
T 1:25–3:20; labs to be arranged.
W. E. Drake.
This course examines objectives, criteria, and strategies for evaluating programs of occupational education in secondary and postsecondary schools. Evaluation models, case studies, and evaluation as a function of program planning are considered. Participants examine the roles of supervision in evaluation and have an opportunity to develop and apply evaluative instruments. Field trips and resource persons provide opportunities to observe actual evaluation problems and procedures.

745 Seminar in Curriculum Theory and Research
Spring. 3 credits. Prerequisite: Education 644, or permission of instructor.
W 8–11. G. J. Posner.
Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform. Both topics serve to uncover the relation between ideology and research.

750 Conceptual Problems in Educational Inquiry
Fall. 3 credits. S-U grades optional.
R 12:20–2:15. D. B. Gowin.
A constructionist view (as opposed to the conventional foundationalist viewpoint) of creating knowledge and value claims is the starting point of this seminar. We will be concerned with the conceptual principles (both normative and scientific) that guide research such that knowing and valuing are integrated in research. A view of theory-driven programmatic research is presented. We will read recent works in women's way of knowing, in children's clever misconceptions of science and math, alternative ways of knowing peace and war, and Hispanic minorities' view of knowing. Familiarity with master's and doctoral dissertation work of the past fifteen years at Cornell is expected. Copies are available in the libraries.

751 Quantitative Approaches to Qualitative Data Analysis
Spring. 3 credits. Prerequisite: Education 353 or equivalent. Offered alternate years.
Lec, T 10:10, R 10:10–12:05.
W. S. Carlsen.
This course focuses on techniques for analyzing and reporting interpretive research data. Although we will consider some general analytic methods (e.g., constant comparative analysis) and their theoretical foundations, the emphasis in this course will be on categorical, computational, and graphical approaches to constructing meaning from rich interpretive data sets. This course is intended to complement but not replace the study of discipline-specific interpretive approaches like ethnography, historiography, and sociolinguistics.

762 Research in Educational Administration
Spring. 3 credits. Prerequisite: one course in elementary statistics or permission of instructor. S-U grades only.
Hours to be arranged. E. J. Haller.
An analysis and critique of current research in educational administration. Discussion of research priorities and strategies. For graduate students interested in research on problems of educational administration. Students will carry out a small-scale empirical research project.

772 Seminar in Philosophy of Education
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional.
Hours to be arranged. K. A. Strike.
Topics to be announced.

784 Technology-Focused Decision Making: Models for Extension Educators
Fall. 3 credits.
M 12:20–2:15. R. Bruce, J. McGonigal.
The educational and program management decisions involved in the adoption of educational technology in extension, rural development, and nonformal education programs are reviewed, and a variety of decision-making approaches is explored. An overall problem-solving method with case study illustrations is used. Consideration is given to structure and operating style of the educational organization, as well as to the characteristics of the technology under consideration. The course makes use of recent literature and continuously updated files on current developments in technology applications.

800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work.
Staff.

900 Doctoral-Level Thesis Research
Fall or spring. Credit to be arranged. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work
Staff.

ENTOMOLOGY

Q. D. Wheeler, chair; W. L. Brown, Jr., P. L. Davis, G. C. Eickwort, P. P. Feeny, M. P. Hoffmann, W. T. Johnson, J. P. Kramer, J. K. Liebherr, R. A. Morse, B. L. Peckarsky, D. Pimentel, E. M. Raffensperger, R. B. Root, R. T. Roush, D. A. Rutz, J. P. Sanderson, J. G. Scott, E. J. Shields, M. J. Tauber, W. M. Tingey, S. Via, Q. D. Wheeler

Emeritus professors: J. L. Brann, J. E. Dewey, J. G. Franclemont, A. A. Muka, C. E. Palm, R. L. Patton, L. L. Pechuman, W. A. Rawlins, M. Semel, E. H. Smith, R. G. Young

Courses by Subject

Apiculture: 260, 262, 264

Behavior: 662

Ecology: 370, 455, 456, 464, 470, 471, 664, 672

Introductory courses: 200, 212

Medical entomology and pathology: 452, 453, 454, 653

Morphology: 322

Pest management: 241, 342, 443, 444, 472, 640, 677

Physiology and toxicology: 411, 483, 685, 690

Systematics and acarology: 331, 332, 621, 631, 633, 634, 636, 674, 710

200 Cultural Entomology
Fall. 2 credits. S-U grades optional. Intended for students in all colleges.
Lecs, T R 10:10. E. M. Raffensperger.
A presentation of the insects, with attention to their roles in nature and in civilization. Biological, historical, social, economic, and cultural aspects are discussed.

212 Insect Biology
Fall. 4 credits. Prerequisites: Biological Sciences 101–102 (may be taken concurrently) or equivalent.
Lecs, W F 11:15; lab, M T or W 1:25–4:25. J. K. Liebherr.
Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A small collection emphasizing ecological and taxonomic categories is required.

241 Applied Entomology
Spring. 3 credits. Prerequisites: Biological Sciences 101–102 or equivalent.
Lecs, T R 10:10; lab, T W or R 1:25–4:25. E. M. Raffensperger.
A compendium of the insects associated with crops and farm animals. Discussions of insect pest management requirements on farm and in garden, along with descriptions of control methods, materials, and equipment.

260 Introductory Beekeeping
Fall. 2 credits.
Lecs,T R 11:15. R. A. Morse.
Introduces the fundamentals of practical beekeeping, including the life history, physiology, and behavior of honey bees. The classical experiments on the dance language and the role of pheromones are reviewed. Some lectures are devoted to pollination of agricultural crops and the production of honey and beeswax.

262 The Biology of the Honey Bee
Fall. 1 credit. Limited to 10 students.
Prerequisite: permission of instructor.
Labs, afternoons or weekends to be arranged; course will meet in Sept. and Oct. only. R. A. Morse.
A series of laboratories in which students perform some of the classical experiments on honey bee behavior. Various techniques used in bee research are introduced.

264 Practical Beekeeping
Fall. 1 credit. Limited to 20 students.
Prerequisite: Entomology 260 (may be taken concurrently).
Lab, R 2–4:25. R. A. Morse.
This course consists of fourteen laboratory sessions to acquaint students with practical methods of colony management. Laboratories involve actual work with honey bee colonies and equipment. Some of the topics covered are management of bees for apple pollination, honey harvesting and processing, and disease identification and control.

322 Insect Morphology
Fall. 5 credits. Prerequisite: Entomology 212 or 241. Offered alternate years.
Lecs, M W F 9:05; labs, M F 1:25–4:25. G. C. Eickwort.
An introduction to the external and internal anatomy of insects, with emphasis on the comparative and functional aspects. The laboratory is devoted largely to dissection.

331 Introductory Insect Systematics
Spring. 4 credits. Prerequisite: Entomology 212.
Lecs, T R 10:10; labs,T R 1:25–4:25. Q. D. Wheeler.
An introduction to the classification, evolutionary history, and distribution of the insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect evolution. Insect collections are required.

332 Systematics Discussion Group
Spring. 1 credit. Prerequisite: concurrent enrollment in Entomology 331 or permission of instructor. S-U grades only. Offered alternate years.
Disc, hours to be arranged. Q. D. Wheeler.
Readings and discussion on topics in systematics coordinated with the lecture series in Entomology 331.

342 Special Topics in Economic Entomology
Hours to be arranged.
Staff.
Topics to be announced.

370 Pesticides and the Environment (also Toxicology 370)
Fall. 2 credits. Prerequisites: Biological Sciences 101–102 or equivalent. Offered alternate years.
Lecs, T R 9:05. J. G. Scott.
A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits, regulation, politics, and current controversies associated with pesticide use.

[441 Seminar in Insect Pest Management
Spring. 1 credit. Limited to 10 students. Prerequisite: Entomology 241 or 444 or permission of instructor. S-U grades only. Not offered 1990–91.
Hours to be arranged. A. M. Shelton.
Discussion of current topics in pest management, with an emphasis on insect pest management.]

443 Pathology and Entomology of Trees and Shrubs (also Plant Pathology 443)
Fall. 5 credits. Prerequisites: Plant Pathology 301 and Entomology 241 or equivalent. Offered alternate years.
Lecs, M W F 10:10; labs, W F 1:25–4:25. Evening prelims. W. T. Johnson, G. W. Hudler.
For students preparing for careers in horticulture, urban forestry, and pest management. Deals with the nature, diagnosis, assessment, and treatment of diseases and arthropod pests of trees and shrubs. Forest, shade, and ornamental plants are considered.

444 Integrated Pest Management (also Plant Pathology 444)
Fall. 4 credits. Prerequisites: Biological Sciences 261, Entomology 212 or 241, and Plant Pathology 301 or their equivalents or permission of instructor.
Lecs, M W F 9:05; lab, M or W 1:25–4:25. Evening prelims. P. A. Arneson.
Lectures integrate the principles of pest control, ecology, and economics in the management of pest-crop systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

[452 Medical Entomology
Fall. 3 credits. Prerequisites: Entomology 212 or permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, T R 10:10; lab, R 1:25–4:25. Staff.
A survey of arthropods of public health and veterinary importance, with emphasis on transmission dynamics of pathogens, bionomics of vector populations, and current control concepts. Morphology and taxonomy of selected groups are examined in the laboratory, with additional exercises in vector-pathogen relationships and epidemiological techniques.]

[453 Insect Pathology
Spring. 4 credits. Prerequisite: Entomology 212 or 241 or permission of instructor. Recommended: a course in microbiology. Offered alternate years. Not offered 1990–91.
Lecs, M W 10:10; lab, R 1:25–4:25. Staff.
A survey of the diseases of insects caused by viruses, bacteria, fungi, and protozoans and a consideration of the role of microbial diseases in natural and applied insect control. Laboratory investigations center around living insect-pathogen associations and the consequences of these associations for both insect and microbe.]

[454 Insect Pathology Seminar
Spring. 1 credit. Prerequisite: Entomology 453. S-U grades only. Offered alternate years. Not offered 1990–91.
Hours to be arranged. Staff.
Presentations, discussions, and analyses of current topics by the participants. Focus centers on microbial diseases of insects.]

[455 Insect Ecology, Lectures (also Biological Sciences 455)
Fall. 3 credits. Prerequisites: Biological Sciences 261 and Entomology 212 or their equivalents. Offered alternate years. Not offered 1990–91.
Lecs, W F 11:15 and 1 hour of discussion weekly to be arranged. R. B. Root.
Ecological and evolutionary principles are integrated by thorough examination of outstanding investigations. Topics discussed include the factors responsible for the great diversity of insects, adaptive syndromes associated with climate, natural history of arthropod guilds, impact of insects on terrestrial vegetation, population regulation, and the contrast between natural and managed ecosystems.]

456 Stream Ecology
Spring. 3 credits. Recommended: Biological Sciences 261. S-U grades optional. Offered alternate years.
Lecs, T R 11:15; lab, T or R 1:25–4:25 (2 sections). B. L. Peckarsky and C. M. Pringle.
Lecture will address the question—how does flow influence the structure and function of stream ecosystems? Aspects of structure include channel morphometry, physical and chemical gradients, and plant, invertebrate, and fish community structure. Functional analyses include nutrient cycling and downstream transport, trophic dynamics, processes affecting plant and animal colonization and succession, and the impacts of anthropogenic disturbances. Lab: 3–4 class projects using descriptive, behavioral, and experimental techniques in the lab and the field to test hypotheses discussed in lecture.

[464 Microevolution and Macroevolution (also Biological Sciences 464)
Spring. 4 credits. Prerequisite: Biological Sciences 378 or consent of instructor. S-U grades optional with permission of instructor. Offered alternate years. Not offered 1990–91. Limited to 25 students.
Lecs, T R 10:10–11:30; disc, 1 hr/wk to be arranged. A. McCune, S. Via.
An advanced course in evolutionary biology integrating macroevolutionary and microevolutionary approaches. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction in populations and higher taxa, the origins and fate of variation, and causes of major evolutionary transitions. Discussion of these problems will involve data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.]

470 Ecological Genetics (also Biological Sciences 470)
Spring. 4 credits. Prerequisite: Biological Sciences 378 or consent of instructor. S-U grades optional. Offered alternate years.
Lecs, T R 10:10–11:30; disc, 1 hr/wk to be arranged. S. Via.
A study of the relationships between genetic and ecological processes in populations. Topics include consequences of genetic variation in age-structured populations, demographic concepts of fitness, evaluation of methods for measuring genetic variation and natural selection on ecologically important traits, genetics of competitive ability and predator avoidance, genetic and ecological aspects of phenotypic plasticity, character displacement, maintenance of genetic variability, and limits to selection. We will consider how theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations and evaluate experiments designed to test such hypotheses.

[471 Freshwater Invertebrate Biology
Spring. 4 credits. Recommended: Entomology 212. Offered alternate years. Not offered 1990–91.
Lecs, T R 9:05; labs, T R 1:25–4:25. One evening prelim. B. L. Peckarsky.
The lecture explores the morphology, physiology, phylogeny, life histories, behavior, feeding ecology, and evolution of macroscopic freshwater invertebrates with an emphasis on contrasting the attributes of aquatic and terrestrial insects. The laboratory involves field collections and laboratory identification of invertebrates and stresses the use of keys. Students prepare a collection of freshwater invertebrates.]

472 Genetics of Pest Management
Fall. 4 credits. Prerequisite: Biological Sciences 281 or equivalent. S-U grades optional.
Lecs, T R 12:20–1:45; lab to be arranged (3 hours). R. T. Roush.
A detailed survey of the application of genetics to pest management. Includes discussion of host plant resistance, pesticide resistance, insect mass rearing technology, autocidal controls (e.g., sterile males), and the establishment and genetic improvement of biological control agents, with examples from plant pathology, weed science, and entomology.

483 Insect Physiology
Spring. 4 credits. Prerequisite: Entomology 212 or permission of instructor.
Lecs, M W F 11:15; lab, W 1:25–4:25. Staff.
An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. The student will also be introduced to some common methods used in physiological research and to the critical reading of scientific literature.

497 Special Topics for Undergraduates
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work.
Staff.

498 Undergraduate Teaching
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise their work.
Staff.
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

499 Undergraduate Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work.
Staff.

[621 Acarology
Fall. 4 credits. Prerequisites: Entomology 212 and permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, M W 9:05; lab, M 1:25–4:25. G. C. Eickwort.
An introduction to the taxonomy, morphology, and bionomics of mites and ticks, with emphasis on taxa of economic importance. A collection is required.]

[631 Systematics of the Coleoptera
Fall. 4 credits. Prerequisite: Entomology 331. Offered alternate years. Not offered 1990–91.
Lecs, M W 12:20; labs, M W 1:25–4:25. S field trips. Q. D. Wheeler.
A comprehensive review of the comparative morphology, phylogenetic relationships, classification, natural history, and distribution of the Coleoptera, including adult and immature stages. Laboratory practice in identification and methods for collection and study of beetles. A collection is required.]

633 Systematics of the Diptera and Hymenoptera
Spring. 3 credits. Prerequisite: Entomology 331. Offered alternate years.
Lec and two labs, hours to be arranged. W. L. Brown.
Lectures on the classification, evolution, and bionomics of the Diptera and Hymenoptera. Laboratory studies on the literature, characters, and classification of representative genera and species of these orders, based on adult and immature stages.

634 Special Topics in Systematic Entomology
Fall or spring; taught on demand. 2–4 credits. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

636 Seminar in Systematic Entomology
Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only.
Hours to be arranged. Staff.
Discussion of current topics in systematic entomology. Topics to be announced, including current theoretical issues in insect classification, evolution, and biogeography.

640 Pest Management: Quantitative Aspects
Fall. 3 credits. Prerequisites: Entomology 444 and a course in statistics. Recommended: an introductory course in computer science. S-U grades optional. Offered alternate years.
Lecs and disc, T R 10:10–12:15. Staff.
Quantitative aspects of the development of pest and agricultural resource management systems. Systems analysis, modeling and simulation, sampling, quantitative biological research, and economics are covered in lectures. Discussions of philosophical issues and current and classical literature.

653 Advanced Insect Pathology
Fall. 3 credits. Prerequisite: Entomology 453, Microbiology 290, or permission of instructor. S-U grades optional.
Lecs, T R 12:20; lab, R 1:25–4:30. D. W. Roberts.
Detailed presentations on the major diseases of insects caused by viruses, bacteria, fungi, protozoa, and nematodes. Emphasis will be on host-pathogen interactions, including at the cellular level. Also, molecular genetics and epizoological principles will be discussed. Laboratories will include practical aspects (such as bioassays) of working with each group.

662 Insect Behavior Seminar
Spring. 2 credits. Prerequisites: permission of instructors and Entomology 212 and Biological Sciences 221 or equivalents. S-U grades optional. Offered alternate years.
Hours to be arranged. G. C. Eickwort, M. J. Tauber.

[664 Seminar in Insect-Plant Interactions (also Biological Sciences 664)
Spring. 2 credits. Limited to 15 students. Prerequisites: entomology, ecology, evolution, organic chemistry, and written permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
One evening a week, to be arranged. P. P. Feeny.
For graduate students and seniors. Presentations and discussions by students on the evolution of patterns of interaction between plants and insects, emphasizing critical evaluation of concepts and evidence.]

672 Seminar in Aquatic Ecology
Spring. 1 credit. Prerequisites: permission of instructor and either Entomology 456, 471 or Biological Sciences 462, 464. S-U grades optional. Offered alternate years.
Hours to be arranged. B. L. Peckarsky.
Discussion and analysis of current topics in the ecology of streams and lakes, including synthesis of key papers in the literature. Reports on personal research or ideas by students are encouraged.

[674 Principles of Systematics (also Biological Sciences 674)
Spring. 4 credits. Prerequisite: Entomology 331 or introductory systematics course in another field of biological sciences. Offered alternate years. Not offered 1990–91.
Lecs-disc-labs, M W 1:25–4:25. Staff (Q. D. Wheeler, coordinator).
An introduction to modern theory and methods of systematic biology. Lectures, readings, and discussions on theoretical systematics, including species concepts, classification, phylogenetics, and biogeography. Laboratories include various methods of analysis of data (e.g., cladistic hand and computer methods, numerical methods). Part of the grade is based on a final paper.]

[677 Biological Control
Fall. 3 credits. Prerequisites: Entomology 212, Biological Sciences 261, and permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, T R 9:05; lab, T 2–4:25. M. J. Tauber.
Theory and method of biological control of arthropod pests and weeds. Laboratory includes studies with living parasitoids and predators.]

685 Seminar in Insect Physiology
Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor.
Hours to be arranged. Staff.

690 Insect Toxicology and the Molecular Basis of Insecticide Toxicity (also Toxicology 690)
Spring. 4 credits. Prerequisites: general chemistry and organic chemistry. Undergraduate students by permission of instructor. Offered alternate years.
Lecs, M W F 9:05; lab, day to be arranged, 1:25–4:25. J. G. Scott.
The history, metabolism, and mechanism of action of synthetic and naturally occurring insecticides. Mechanisms of insecticide resistance, evaluation of insecticide toxicity, and new approaches to insecticidal compounds with biotechnology will be discussed.

707 Special Topics for Graduate Students
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Not for thesis research.
Staff.

708 Graduate Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Not for thesis research.
Staff.

709 Teaching Entomology
Credit to be arranged.
Staff.
Teaching entomology or for extension training.

710 Curation in Entomology
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades only.
Hours to be arranged. J. K. Liebherr and staff.
The range of curatorial techniques required to operate an institutional insect collection will be investigated by working with staff. Curation of a specific taxon of interest will comprise part of the course of study.

800 Master's-Level Thesis Research
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional.
Staff.

900 Doctoral-Level Thesis Research
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional.
Staff.

Jugatae Seminar
Fall and spring.
M 4–5.
A seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests.

FLORICULTURE AND ORNAMENTAL HORTICULTURE: HORTICULTURAL SCIENCES

G. L. Good, chair; M. I. Adleman, N. L. Bassuk, A. M. Elliot, C. C. Fischer, C. F. Gortzig, J. Gruttadaurio, N. W. Hummel, Jr., T. H. Johnson, R. E. Kozlowski, D. W Krall, R. J. Lambert, R. W. Langhans, A. S. Lieberman, L. J. Mirin, R. G. Mower, K. W. Mudge, J. C. Neal, A. M. Petrovic, D. A. Rakow, R. T. Trancik, P. J. Trowbridge, T. C. Weiler, T. H. Whitlow

Courses by Subject

Commercial floriculture-crop production: 410, 411

Floral design: 205, 210

Freehand drawing and illustration: see the section below, "Freehand Drawing and Scientific Illustration"

Horticultural physiology: 400, 405, 605

Horticultural sales and service businesses: 425

Independent study, research and teaching in floriculture and ornamental horticulture: 495, 496, 497, 498, 499, 500, 700, 800, 900

Introductory courses: 101,102

Landscape architecture (professionally accredited program): see the section below, "Landscape Architecture"

Landscape horticulture: Hort. Sci. 435, Landscape Architecture 140, 205, 220, 310, 312, 475, 521, 522

Nursery-crop production: 420

Plant materials: 230, 300, 301, 335, 430

Postharvest physiology of horticultural crops: 415

Retail floriculture: 205, 210, 425

Seminars in floriculture and ornamental horticulture: 495, 600.

Turfgrass management: 330, 440

101 Introduction to Horticultural Science
Fall. 4 credits.
Lecs, M W F 10:10; lab, W 2–4:25. C. F. Gortzig.
An introduction to horticulture in all of its components: floriculture, landscape horticulture, pomology vegetable crops, and related professional and commercial fields. Emphasis is on the history, geography, and literature of the field; the structure and organization of the component industries, institutions, and professions; and the role of science and technology in the continuing development of horticultural practice. Field trips, including at least one all-day field trip, are taken to horticultural firms, institutions, and historic sites.

205 Floral Design
Fall or spring. 2 credits. Each of the two studios is limited to 22 students. Prerequisite: permission of instructor, with preference given to plant science majors, then to students in education, design, and journalism. Charge to purchase instructional plant materials that the student will keep: $75. Enrolled students who do not attend the first session and fail to notify the secretary in 20 Plant Science Building of their absence will automatically be dropped.
T or R 1:25–4:25. C. C. Fischer.
A study of the established floral design techniques of this country, presenting the principles and the mechanics of the art to prepare the student to design for varying themes and occasions. Other aspects include selection, preparation, and factors affecting keeping-quality of plant materials. Emphasizes the economical use of all supplies.

210 Floral Design: Intermediate
Fall. 2 credits. Prerequisite: Horticultural Sciences 205 or permission of instructor; preference given to students planning a career in retail horticulture. Charge to purchase instructional plant materials that the student will keep: $75.
Studio W 1:25–4:25. C. C. Fischer.
Advanced study of the art of floral design. The students assist in scheduling the design themes and occasions for floral display during the semester. Enrolled students who do not attend the first session and fail to report their absence to the secretary in 20 Plant Science Building will automatically be dropped.

230 Woody Plant Materials
Spring. 4 credits. Fee for lecture-laboratory manual: $25.
Lecs, T R 9:05; lab, T 2–4:25 and W or F 2–4:25. R. G. Mower.
A study of the trees, shrubs, ground covers, and vines used in landscape plantings. Emphasis is on winter identification and values for use as landscape material.

243 Taxonomy of Cultivated Plants (also Biological Sciences 243)
Fall. 4 credits. Prerequisite: One year of introductory biology or written permission of instructor. May not be taken for credit after Biological Sciences 248. Offered alternate years.
Lecs, M W 10:10; labs, M W 2–4:25. M. Luckow.
An introduction to the study of ferns and seed plants with an emphasis on cultivated families and genera. Lectures will cover the principles and methods of systematics, basic rules of nomenclature, and relationships between families, all in the context of cultivated plants. Laboratories will teach sight identification of important plant families and identification of unknowns using analytic keys.

300 Garden and Interior Plants I
Fall. 3 credits. Fee for lecture-laboratory manual: $25.
Lecs, T R 10:10; lab, T 2–4:25. R. G. Mower.
A study of ornamental plants used in garden and interior situations. The first seven weeks cover primarily herbaceous annuals and perennials, with the laboratory devoted to various practical gardening activities. The remainder of the semester covers the major kinds of foliage and flowering plants used in the home and in other interior landscape situations. Emphasis is on identification, use, and general cultural requirements.

301 Garden and Interior Plants II
Spring. 3 credits. Prerequisite: Horticultural Sciences 300 or permission of instructor. Fee for lecture-laboratory manual: $25.
Lecs, M W 11:15; lab, M 2–4:25. R. G. Mower.
A continuation of Horticultural Sciences 300. The first seven weeks are devoted to a further study of interior plants, with emphasis on specialized groups of interior plants such as orchids, cacti and succulents, gesneriads, ferns, palms, and bromeliads. The second seven weeks are devoted to outdoor herbaceous plants, such as tulips, daffodils, crocuses, and irises, as well as other spring-blooming bulbs and perennial plants. Outdoor laboratories emphasize practical gardening activities appropriate to the spring season.

330 Turfgrass Management
Fall. 3 credits. Prerequisite: Soil, Crop, and Atmospheric Sciences 260. Offered alternate years.
Lec, R 11:15–1:10; lab, T 11:15–1:10. A. M. Petrovic.
Study of the scientific principles involved in the management of golf courses, athletic fields, parks, industrial grounds, and sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, and nutrition in the management of turfgrass sites.

335 Woody Plant Materials for Landscape Use
Fall. 3 credits. Limited to 30 students. Primarily for landscape architecture majors. Fee for lecture-laboratory manual, $25.
Lec, M W 9:05; lab, R 1:25–4:25. R. G. Mower.
A study of the trees, shrubs, vines, and ground covers used in landscape plantings in the northeastern United States. Emphasis is on leaf identification and on characteristics that determine the usefulness of each as landscape subjects.

400 Principles of Plant Propagation
Fall. 3 credits. Prerequisites: Biological Sciences 242 and 244 or another course in plant physiology.
Lecs, T R 8; lab, R 1:25–4:25. K. W. Mudge.
Propagation of plants using vegetative techniques including cuttage, graftage, tissue culture, and propagation from seed. Physiological, environmental, and anatomical principles are stressed rather than hands-on techniques. Examples include horticultural, agronomic, and forestry crops.

[405 Physiology of Horticultural Plants
Spring. 4 credits. Prerequisites: Biological Sciences 242 and 244; 341 or permission of instructor. Not offered 1990–91.
Lec, M W F 8; lab to be arranged. Staff.
A study of the physiology of growth and development of horticultural plants in response to their environment.]

[410 Principles of Greenhouse-Crop Production
Spring. 4 credits. Limited to 40 students. Preference given to juniors. Prerequisites: Horticultural Sciences 400 and Biological Sciences 242 and 244 (may be taken concurrently) or permission of instructor. Offered 1992 and alternate years. Cost for half-day field trip and special laboratory supplies: $80. Three-day field trip also required: $75.
Lecs, M W F 8; lab, R 2–4:25. T. C. Weiler.
A study of commercial production of greenhouse crops with emphasis on their culture as influenced by greenhouse environment. Field trips are made to commercial greenhouses.]

411 Greenhouse Production Management
Spring. 4 credits. Primarily for seniors. Prerequisite: an elementary course in horticulture or equivalent. Cost of field trips: $150.
Lecs, T R 10:10–12:05; lab, 3 hours to be scheduled. Two field trips. R. W. Langhans.
Intended to provide the latest information on efficient operation and administration of a commercial greenhouse, outside the sphere of production methods for specific crops. Consideration is given to the industry, centers of production, competition, location, types of structures, heating, ventilation, cooling, fertilizing, watering systems, and business analysis and management.

415 Postharvest Physiology and Storage of Horticultural Crops
Fall. 3 credits. Prerequisite: one horticulture course or permission of instructor.
Lecs, M W 9:05; lab, W 1:30–4. F. W. Liu.
A study of principles of postharvest physiology, handling, and storage of horticultural crops, including fruits, vegetables, flowers, and ornamental crops. Major physiological processes such as transpiration, respiration, compositional changes, ethylene synthesis and action, maturation, ripening, and senescence of the crops are studied. Methods of harvesting and handling, including cleaning, grading, packing, precooling, waxing, sanitation, and transportation, are studied. Methods of storage, including common storage, underground storage, refrigerated storage, controlled atmosphere storage, modified atmosphere storage, and hypobaric storage, are also studied.

420 Principles of Nursery-Crop Production
Fall. 4 credits. Prerequisite: Horticultural Sciences 400.
Lecs, M W F 9:05; lab, M 2–4:25; field trips are included. G. L. Good.
Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project is required. Field trips are made to commercial nurseries.

425 Horticultural Sales and Service Businesses
Spring. 4 credits. Prerequisites: Agricultural Economics 240 and 347 or permission of instructor. Cost of field trips approximately $150.
Lecs, M W F 10:10; lab F 1:25–4:25. C. F. Gortzig.
A study of the application of horticultural, marketing, and management principles and practices in the operation of horticultural sales and service firms, e.g., garden centers, retail florist and nursery stores, wholesale marketing operations, mail-order businesses, mass markets, interior and outdoor landscape-service and related firms. Weekly field trips are taken to commercial operations and one 3–4-day field trip to a metropolitan area is taken.

430 Special Topics in Ornamental Plants
Fall or spring. Credit to be arranged. Primarily for upperclass floriculture and ornamental horticulture majors. Prerequisites: Horticultural Sciences 230, 300, 301, 335, or the equivalent, and permission of instructor.
Hours to be arranged. R. G. Mower.
Topical subjects in plant materials. Independent and group study of important groups of woody and herbaceous plant materials not considered in other courses. The topic is given in the supplementary announcement.

435 Landscape Management
Fall. 4 credits. Prerequisites: Horticultural Sciences 230 or 335, and Biological Sciences 241 or permission of instructor.
Lec, M W F 12:20–1:10; lab T 1:25–4:25. D. A. Rakow.
A study of the practices involved in the planting and maintenance of woody ornamental plants in the landscape. The major emphases will be on planting and post-planting techniques, water and fertilization management, pruning, and general tree care. The lectures will focus on the physiological bases for essential management principles. The focus in the labs will be on hands-on.

440 Turfgrass Management
Fall. 3 credits. Prerequisites: Horticultural Sciences 330 or concurrent registration in Horticultural Sciences 330 and permission of instructor.
Lecs, T R 9:05; lab, R 10:10–12:05. A. M. Petrovic.
Study of the scientific principles involved in the management of golf courses, athletic fields, parks, industrial grounds, and sod production. Emphasis is placed on pest management, irrigation design, and field diagnostic technology.

495 Undergraduate Seminar
Fall or spring. May be taken for one credit per semester. S-U grades only. Graduate students should enroll in Horticultural Sciences 600.
R 12:20. D. W. Krall, D. A. Rakow.
Undergraduate participation in departmental weekly seminar series.

496 Internship in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's adviser in advance of participation in internship programs. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their grade.
Staff.

497 Independent Study in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their grade.

Independent study in horticultural sciences under the direction of one or more staff members.

498 Undergraduate Teaching Experience
Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their teaching experience and assign their grade.
Hours to be arranged.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

499 Undergraduate Research
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their research and assign their grade.
Staff.
Undergraduate research projects in horticultural sciences.

500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1–6 credits. (6 credits maximum toward MPS [Agriculture] degree). S-U grades optional.
Hours to be arranged. Graduate faculty.
A comprehensive project emphasizing the application of floricultural and ornamental horticultural principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Masters of Professional Studies (Agriculture) candidates in the field.

600 Seminar
Fall or spring. Open for credit to graduate students only. Undergraduates should register for Horticultural Sciences 495. S-U grades only. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the student's committee chair.
R 12:20. D. W. Krall and D. A. Rakow.
Graduate student participation in departmental weekly seminar series.

[605 Current Topics in Floricultural and Ornamental Horticultural Physiology
Spring. Variable credit. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged. Staff.
Discussions of modern concepts, research, and commercial problems as reflected in current horticultural literature.]

629 Special Topics in Plant Science Extension (also Plant Breeding 629)
Spring. 2 credits.
F 1:25–4:25. W. D. Pardee.
Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

700 Graduate Teaching Experience
Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in Horticultural Sciences 498. S-U grades optional. Prerequisite: permission of instructor. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their teaching and assign their grade.
Hours to be arranged.
Designed to give graduate students teaching experience through actual involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

800 Thesis Research, Master of Science
Fall or spring. Credit to be arranged. S-U grades only. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their research and assign their grade.
Staff.

900 Thesis Research, Doctor of Philosophy
Fall or spring. Credit to be arranged. S-U grades only. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their research and assign their grade.
Staff.
See also other courses in Horticultural Sciences.

Freehand Drawing and Scientific Illustration

109 Nature Drawing
Fall. 3 credits. Limited to 25 students. S-U grades optional.
M W F 10:10–12:05. R. J. Lambert.
A beginning course with emphasis on the drawing of natural forms: plants, animals, and landscapes. Of particular interest to students in floriculture and ornamental horticulture, landscape architecture, biological sciences, nature education, etc. Outside field notebook assignments.

111 Freehand Drawing
Fall or spring. 3 credits. Each section limited to 25 students. S-U grades optional. Credit may not be received for both Freehand Drawing 109 and 111.
Fall: lec, R 10:10; studios, T 9:05–11, R 1:25–4. Spring: permission of instructor required (registration must specify lecture hour and all studio hours). Lec, T or W 10:10, plus 5 additional studio hours to be scheduled in 2- or 3-hour blocks during M T W R F 9:05–12:20 and T 1:25–4. A. M. Elliot.
Developing accuracy of observation and a personal graphic vocabulary. Freehand perspective and its uses in establishing design and spatial relationships, practice in figure and landscape drawing, form vs. value drawing. Weekly outside sketchbook assignments.

210 Architectural Sketching in Watercolor
Summer. 3 credits. S-U grades optional.
M T W R F 11:30–12:45. R. J. Lambert.
Practice in outdoor architectural sketching, primarily in watercolor, but including pen and ink, pencil, and colored pencil. Studio will develop working sketches into complete renderings. Principles of perspective are taught and applied. For any student who wishes to develop skill in handling watercolor. Outside-of-class sketchbook work required.

211 Freehand Drawing and Illustration
Fall. 2 credits. Prerequisite: Freehand Drawing 111 or equivalent. S-U grades optional.
6 studio hours scheduled in 2- or 3-hour units between 9:05 and 12:05 M T W R F. R. J. Lambert.
Progression to the organization of complete illustrations. Subject matter largely from sketchbooks, still life, and imagination. Composition, perspective, and ways of rendering in different media are considered.

214 Watercolor
Spring. 2 credits. Prerequisite: Freehand Drawing 111 or equivalent. S-U grades optional.
6 studio hours scheduled in 2- or 3-hour units between 9:05 and 12:05 M T W R F. R. J. Lambert.
A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

316 Advanced Drawing
Fall or spring. 2 credits. Prerequisite: Freehand Drawing 211 or permission of instructor. S-U grades optional.
6 hours to be arranged. A. M. Elliot or R. J. Lambert.
For students who want to attain proficiency in a particular type of illustration or technique.

417 Scientific Illustration
Fall. 2 credits. Prerequisite: Freehand Drawing 211 or 316 or equivalent. S-U grades optional for graduate students only.
6 studio hours scheduled between 9:05 and 12:05 M W F. A. M. Elliot.
A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.

Landscape Architecture

142 Introduction to Landscape Architecture
Spring. 4 credits. Limited to approximately 15 students; freshman landscape architecture majors or permission of instructor. Cost of basic drafting equipment and supplies, $200.
Lecs, T R 1:25; studio, T R 2:30–4:25. D. W. Krall.
Fundamentals of landscape design applied to residential and other small-scale site-planning projects. Work in the studio introduces course participant to the design process, design principles, construction materials, planting design, and graphics.

201 Design, Theory, and Composition
Fall. 6 credits. Limited to landscape architecture majors. Cost of basic drafting equipment and supplies, about $200; expenses for field trip, about $200.
Lecs, M W F 1:25; studios, M W F 2:30–4:25. T. H. Johnson.
Basic design principles and processes applied to the design of the outdoor environment. Studio projects focus on the analysis, organization, and form of outdoor space through the use of three-dimensional components including structures, vegetation, and earthform.

202 Design, Composition, and Theory
Spring. 6 credits. Prerequisite: LA 201 with a grade of C or better. Cost of drafting supplies, about $200; expenses for field trip, approximately $200.
Lecs, M W F 1:25; studios, M W F 2:30–4:25. M. I. Adleman.
Site design and planning for parks, housing, and architectural ensembles. Basic theory, historic precedents, and the design process are correlated with garden landscapes, open-space systems, earth form, vegetation, and circulation systems.

301 Site Design and Detailing
Fall. 6 credits. Prerequisite: LA 202 with a grade of C or better. Cost of drafting supplies, about $200; expenses for field trip, about $200.
Lecs, M W F 1:25; studios, M W F 2:30–4:25. D. W. Krall.
Course participants will be engaged in the art and science of site-scaled design. This includes gardens, parks, and residential projects with design and technical solutions.

***302 Site Design and Detailing**
Spring. 6 credits.
Lecs, M W F 1:25; studios, M W F 2:30–4:25. P. J. Trowbridge.
This studio will engage course participants in a wide range of site-scaled projects such as subdivision developments, street improvement projects, and gardens. Projects and associated detailing will build upon knowledge gained in LA 301.

310 Site Engineering for Landscape Architects
Spring. 4 credits. Prerequisite: permission of instructor.
Lecs, M W 9:05; studios, M W 10:10–12:05. M. I. Adleman.
Lectures and studio projects focusing on the development of a working knowledge of site grading, earthwork, storm-water management, site irrigation, site layout, and road alignment.

312 Site Construction
Spring. 4 credits. Prerequisite: permission of instructor.
Lecs, M W 9:05; studios, T R 9:05–11. P. J. Trowbridge.
Construction materials, specifications, cost estimates, and methods used by landscape architects in project implementation. The course includes lectures, studio problems, and development of construction documentation for a selected project.

401 Urban Design and Planning
Fall. 6 credits. Prerequisites: LA 302 with a grade of C or better. Cost of supplies, about $200; basic expenses for field trip, about $200.
Lecs, M W F 1:25; studios, M W F 2:30–4:25. Required field trip. R. T. Trancik.
A sequence of projects introducing students to advanced skills in spatial design, and historic precedent in an urban context.

402 Advanced Project Studio
Spring. 6 credits. Prerequisite: completion of LA 401 or of the Denmark landscape architecture studio with a grade of C or better. Cost of supplies and reproductions, about $200.
Lecs, M W F 1:25; studios, M W F 2:30–4:25. L. Mirin.
A variety of site design and construction projects introduced as an evaluation of each student's professional competency in landscape architecture.

412 Professional Practice
Spring. 1 credit.
Lec. F 11:15. K. Wolf.
Presents the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or other professional situations. Topics discussed include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

480 Principles of Spatial Design and Aesthetics (also City and Regional Planning 481)
Fall. 3 credits.
Lecs, M W 10:10; disc, F 10:10. R. T. Trancik.
Basic principles involved in design theory, interpretation, and methodology as they are applied to shaping the outdoor environment. Students are introduced to spatial design vocabularies for a variety of environmental scales and spatial types.

490 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits; may be repeated for credit. S-U grades optional.
Staff.
Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

491 Design and Plant Establishment
Fall. 3 credits. Prerequisites: FOH 230 or permission of instructor.
Lecs, T R 12:20; studio, R 1:25–4:25. N. Bassuk and P. Trowbridge.
This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the special constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers for a given site, and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design followed by specifications and graphic details will be produced to implement these practices. Techniques for tree preservation and land reclamation/revegetation will also be discussed.

497 Independent Study in Landscape Architecture
Fall or spring. 1–5 credits; may be repeated for credit. S-U grades optional.
Staff.
Work on special topics by individuals or small groups.

***501 Design, Composition, and Theory**
Fall. 6 credits. Limited to graduate students. Cost of drafting supplies about $200. Field trip $200.
L. Mirin.

502 Design, Composition, and Theory
Spring. 6 credits. Limited to graduate students. Cost of drafting supplies, about $200.
Lecs, M W F 1:25; studios, M W F 2:30–4:25. T. Johnson.
The studio will focus on the spatial design of project-scale site development. Students will develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

505 Graphic Communication I
Fall. 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor.
Lecs, T R 9:05; studios, T R 10:10–12:05. T. Johnson.
Basic skills in graphic presentation, including pencil-and-ink drawing and drafting techniques applicable to landscape architecture projects. Freehand drawing, orthographic projection, axonometric projection, and lettering are covered in the course.

506 Graphic Communication II
Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor.
Lecs, T R 9:05; studios, T R 10:10–12:05. Staff.
An advanced graphics studio focusing upon color techniques, perspective sketching, freehand drawing, and analytical diagrams.

***520 Contemporary Issues in Landscape Architecture**
Fall. 2 credits.
L. Mirin.
*Offered through the College of Architecture, Art, and Planning.

***521 History of European Landscape Architecture**
Spring. 3 credits.
L. Mirin.

***522 History of American Landscape Architecture**
Fall. 3 credits.
L. Mirin.

531 Regional Landscape Planning I
Fall. 4 credits. Prerequisite: permission of instructor.
Lecs, T R F 9:05 plus 1 hour disc to be arranged. A. S. Lieberman.
Landscape ecology as a basis for regional landscape planning. Regional landscape planning strategies and methods that have been developed and employed in North America, Europe, Australia, and the Middle East. This course is intended to provide a base for understanding the utilization of landscape ecological knowledge in the planning process. It is presented through a series of lectures, readings, class discussions, exercises, and review of case studies. The course is directed to graduate students in landscape architecture, architecture, city and regional planning, ecology, international studies, international agriculture and rural development, and natural resources.

601 Project Planning and Application
Fall. 6 credits. Limited to graduate students. Cost of supplies, about $200; expenses for field trip, about $200.
Lecs, M W F 1:25; studios, M W F 2:30–4:25. Required field trip. P. J. Trowbridge.
Course participants are engaged in the analysis and design of numerous types of projects at the site scale. Projects include parks, housing projects, and commercial programs.

602 Urban Design and Planning (also City and Regional Planning 555)
Spring. 6 credits. Limited to graduate students. Cost of drafting supplies, about $200.
Lecs, M T R 1:25; studios, M T R 2:30–4:25. R. T. Trancik and staff.
Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. Urban land-use development and public and private implementation of urban-design plans are examined. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

*Offered through the College of Architecture, Art, and Planning

610 Site Engineering for Landscape Architects
Fall. 4 credits.
Lec, M W 9:05; studios M W 10:10–12:05. M. I. Adleman.
Lectures and studio projects focusing on the development of a working knowledge of site grading, earthwork, storm-water management, and road alignment.

612 Site Construction
Spring. 4 credits. Prerequisite: permission of instructor.
Lecs, M W 9:05; studios, T R 9:05–11. P. J. Trowbridge.
Construction materials, specifications, cost estimates, and methods used by landscape architects in project implementation. The course includes lectures, studio problems, and development of construction documentation for a selected project.

690 Independent Study in Landscape Ecology and Regional Landscape Planning
Fall. 1–3 credits. Limited to 7 students. Prerequisite: permission of instructor. S-U grades optional.
Hours to be arranged. A. S. Lieberman.
This course is designed to allow students who have taken LA 531 to engage in advanced readings and research in the human ecosystem science of landscape ecology. Also designed for other students who wish to gain familiarity with the conceptual and practical tools offered by landscape ecology. Open to graduate students in landscape architecture, city and regional planning, ecology, international studies, international agriculture and rural development, and natural resources. The course allows participants to engage in research or study leading to thesis preparation.

701 Natural Systems and Planting Design Studio
Fall. 6 credits. Limited to graduate students. Cost of drafting supplies, about $200; expenses for field trip, about $200.
Lecs, M T R 1:25; studios, M T R 2:30–4:25. Required field trip. M. I. Adleman.
An application of design and planning methods within large physiographic or political units. Course participants will be engaged in the use of soil maps, aerial photographs, remote-sensed images, census data, and techniques for manipulating large, complex data bases. The course focuses specifically on plant communities.

800 Master's Thesis in Landscape Architecture
Fall or spring. 9 credits.
Hours to be arranged. Staff.
Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

FOOD SCIENCE

R. A. Ledford, chair; D. K. Bandler, D. M. Barbano, C. A. Batt, D. H. Beermann, J. Brady, A. K. Datta, D. C. Graham, R. B. Gravani, P. F. Hopper, J. H. Hotchkiss, H. T. Lawless, E. A. Leonard, F.W. Liu, D. D. Miller, N. N. Potter, J. M. Regenstein, S. S. H. Rizvi, J. W. Sherbon, R. R. Zall

100 Introductory Food Science
Fall. 3 credits.
M W F 10:10. N. N. Potter.
A comprehensive introduction to food science and technology—its scope, principles, and practices. Topics are constituent properties; methods of preservation; the major food groups, including their handling and processing; and current problems such as chemical additives and world feeding needs. Interrelationships between chemical and physical properties, processing, nutrition, and food quality are stressed.

101 Topics in Food Science
Fall. 1 credit. Limited to food science majors taking Food Science 100. Prerequisite: Food Science 100. A required companion course to Food Science 100.
Lec and disc, F 11:15. N. N. Potter and staff.
Members of the staff lecture and lead discussion on selected topics.

150 Food Choices and Issues
Spring. 2 credits. S-U grades optional.
Lecs, T R 12:20. R. B. Gravani, D. D. Miller, and staff.
This course provides nonmajors with the knowledge they need to make appropriate food choices. Lectures will emphasize the concepts necessary for selecting nutritious diets and interpreting popular nutrition literature, the impact of food science and technology on food choices, the characteristics of the major food commodity groups, and current issues affecting food quality and safety. The course is designed to provide students with practical and useful information about the foods they eat.

210 Food Analysis
Spring. 3 credits. Prerequisite: Chemistry 104 or 208.
Lecs, M F 12:20; lab, M or F 1:25–4:25. J. W. Sherbon.
Introduces tests used by food analysts for fats, proteins, carbohydrates, and selected minor nutrients. Emphasis is on understanding and use of good analytical techniques, including gravimetric, volumetric, and spectrophotometric methods. A special project for the total analysis of a complex food provides experience in technique selection, work scheduling, and execution.

220 Food Science for Industry
Fall. 2 credits.
Lec and lab, F 12:20–4:25. Field trips. J. W. Sherbon.
The course involves practice in the production of selected food items (including processed meat, baked goods, and confections). Students will investigate some processing factors affecting quality. Half-day (2–3) and longer (1–2) field trips to commercial plants producing these same products are used to illustrate the application of the technologies being studied.

247 International Postharvest Food Systems
Fall. 2 credits. Prerequisite: freshman chemistry. S-U grades optional.
T R 10:10. M. C. Bourne and staff.
An interdisciplinary course designed for all undergraduate and graduate students in ALS that describes postharvest food losses and methods to reduce the loss. Topics include storage and care of unprocessed and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish; biology and control of fungi, insects, and vertebrates in foods; chemical causes of quality loss; simple drying and storage practices; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries.

311 Milk and Frozen Desserts
Fall. 2 credits. Prerequisite: Food Science 322 or permission of instructor. Offered alternate years.
Lec, R 12:20; lab, R 1:25. J. W. Sherbon and D. K. Bandler.
Deals with the principles and practices of processing fluid milk products and frozen desserts. The chemical, microbiological, and technological aspects of processing these dairy products are considered. Emphasis will be upon product quality and recognition of factors affecting it.

312 Technology of Poultry, Fish, and Other Meats
Fall. 3 credits. Prerequisite: organic chemistry.
Lecs, T R 8–9:55. J. M. Regenstein.
Intended to give a unified introduction to the food technology of poultry, seafood. and other meats and to relate the underlying chemistry, biochemistry, and physiology of muscle to these technologies. Social, political, and economic factors will be discussed in terms of their effects on the technology.

321 Food Engineering I
Fall. 4 credits. Prerequisites: physics and Food Science 100.
Lecs, M W F 9:05; lab, T 1:25–4:25. S. S. H. Rizvi.
Intended to give food science students an introduction to the engineering aspects of food processes and equipment. Emphasis on the fundamental concepts of momentum, heat, and mass-transport processes.

322 Unit Operations in Food Processing I
Spring. 3 credits. Prerequisites: Food Science 100 and 321 and Microbiology 290 and 291.
Lecs, T R 10:10; lab, T 1:25–4:25. Staff.
Deals with the principles and practices of concentration, drying, and freezing applied to foods. Current processing methods and their relations to the chemistry, microbiology, and technology of raw materials and final products are discussed.

331 Statistical Quality Control of Food Processing
Spring. 1 credit. Prerequisite: Agricultural Economics 310 or equivalent.
Lab, R 1:25–4:25. G. Houghton.
An introduction to the statistical tools used to control quality in food-processing plants. Topics covered include estimating product variability, estimating shelf life, using control charts, and doing acceptance sampling.

351 Milk Quality
Spring. 1 credit. Prerequisite: Animal Science 350 or equivalent or permission of instructor.
F 12:20. D. K. Bandler.
Focuses on the important aspects of farm sanitation and milk handling as they affect milk flavor and quality. The course is an overview of quality control tests, basic microbiology, cleaning and sanitizing, and special problems in manufacturing and marketing fresh and storable dairy products.

394 Food Microbiology Lectures
Fall. 2 credits. Prerequisites: Microbiology 290 and 291.
M W 12:20. D. C. Graham, C. A. Batt, R. B. Gravani.
The major families of microorganisms of importance in foods are studied systematically, with emphasis on the roles of those organisms in food preservation, food fermentations, and public health.

395 Food Microbiology Laboratory
Fall. 2 credits. Graduate students must have permission of the instructor.
M W 2–4:25. R. A. Ledford.
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbiological testing and control of food products, and practice in isolating and characterizing organisms of importance in foods.

396 Food Sanitation as Related to Public Health and Food Plant Processing
Spring. 2 credits. Prerequisite: Food Science 100.
Lec, T R 9:05. Staff.
Deals with measures essential in producing and processing wholesome and safe foods. Rules and regulations of the Food and Drug Administration, the U.S. Department of Agriculture, and other organizations important to the food industry are covered. Sanitation practices as they relate to plant construction, unit operation, and storage practices are discussed.

400 Senior Seminar in Food Science and Technology
Fall. 1 credit. Limited to seniors.
Lec, M 4:30. R. A. Ledford, D. K. Bandler.
With assistance of faculty members, students complete a study of the literature on topics of current interest in food science and technology. Students make oral and written reports.

[401 Concepts of Product Development
Spring. 2 credits. Prerequisite: Food Science 100 or equivalent. Offered alternate years. Not offered 1990–91.
M W 9:05–9:55. J. H. Hotchkiss.
A discussion of the sequence of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.]

[402 Product Development Laboratory
Spring. 2 credits. Limited to food science majors. Prerequisites: concurrent registration in Food Science 401 and permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
Labs, T R 8–9:55. J. H. Hotchkiss.
Emphasis is on gaining practical experience in the development of new foods.]

403 International Food Science and Development
Spring. 3 credits. Offered alternate years.
Lecs, T R 8:30–9:55. D. C. Graham.
A critical evaluation of humanity's needs for food, especially in the developing world, and of the international food technologies, organizations, and policies necessary to meet such needs. Traditional methods and fermentation food processes of basic foods for specific developing countries are described.

404 Technology of Lipid Foods
Spring. 2 credits. Prerequisite: Biological Sciences 231. Offered alternate years.
Lec, M 12:20; lab, M 1:25–4:25. J. W. Sherbon.
Sources and utilization of food fats and the technologies of extraction and processing will be studied. The functional properties of fats as food ingredients will be covered. Special features of the chemical and physical reactions of fats will be stressed throughout the term.

405 Waste Management and Energy Conservation
Spring. 2 credits. Prerequisite: FS 100 or its equivalent. Offered alternate years.
Lec, T 12:20, lab, T 2–4:25. R. R. Zall.
Field trips, laboratories, and demonstrations. Deals with the principles and practices related to managing, reducing, and reclaiming wastes from food plants and other unit operations important to the food industry. Selected types of methods used to conserve energy will be covered.

[406 Food Processing Fermentations Lectures
Fall. 2 credits. Prerequisite: background in microbiology. Offered alternate years. Not offered 1990–91.
Lecs, T R 11:15. R. A. Ledford.
Principles and practices of lactic acid and alcoholic fermentation processes as they apply to cheeses, cultured dairy foods, meats, vegetables, wines, beers, and related products.]

[408 Food Processing Fermentations Laboratory
Fall. 2 credits. Enrollment limited. Prerequisite: concurrent registration in Food Science 406. Offered alternate years. Not offered 1990–91.
Lab, T 1:25–4:25. Staff.
Laboratory exercises and demonstrations in the making of cheeses and cultured dairy foods and related products. A field trip provides additional experience.]

409 Food Chemistry
Spring. 4 credits. Prerequisite: introductory biochemistry.
Lecs, M W F 9:05; rec, to be announced. J. M. Regenstein, J. P. VanBuren.
Deals with the relationship between the composition and biochemical and physical properties of foods. The effects of chemical and biochemical interactions among the components of foods and of processing on the quality, functional attributes, and nutrient bioavailability are discussed. Reactions (e.g., Maillard Browning, enzymatic, oxidative, hydrolytic, and thermal) are emphasized.

410 Sensory Evaluations of Foods
Fall. 3 credits. Prerequisite: statistics.
Lecs, M W F 10:10. H. T. Lawless.
Deals with the sensory techniques used in evaluating the flavor, color, and texture of foods and the evaluation of consumer acceptance. Includes methods for measuring these qualities, underlying psychological principles, statistical methods for analyzing results, and establishing a full-service sensory evaluation program.

411 Food Mycology
Fall. 3 credits. Prerequisite: Microbiology 290 or 291 or equivalent. Recommended: Microbiology 394. Offered alternate years.
Lecs, T R 11:15; lab, W 1:25–4:25.
D. C. Graham.
To acquaint students with important fungi, from the standpoint of their beneficial as well as their harmful effects in food production, preservation, and spoilage. Laboratories deal with morphology, physiology, culture and isolation, identification of fungi, and isolation and quantification of fungal toxins.

415 Principles of Food Packaging
Fall. 3 credits.
M W F 9:05. J. H. Hotchkiss.
The chemical and physical properties and manufacture of the basic material used to construct packaging are discussed. Specific packages currently used for individual food commodity groups are also presented with emphasis on newer technologies. Economics, design, and regulation of food packaging are briefly presented.

416 Food Packaging Laboratory
Spring. 2 credits. Prerequisite: Food Science 415. Offered alternate years.
Lec, F 8; lab to be arranged.
J. H. Hotchkiss.
A laboratory course designed to introduce several testing methods used to evaluate adequacy of food packaging. Emphases are on physical testing methods of packaging materials and the evaluation of total packages. Students will design and build a new food package.

419 Food Chemistry Laboratory
Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331 and concurrent registration in Food Science 409.
Lab, W 12:20–4:25. D. D. Miller.
Intended to complement Food Science 409 in developing an understanding of the chemistry of food. Laboratory exercises deal with the chemical properties of food components and changes these components undergo in processing and storage. The relationship between the chemical composition of foods and functional, nutritional, and organoleptic properties is stressed.

[420 Nutritional Aspects of Raw and Processed Foods (also Nutritional Sciences 420)
Fall. 3 credits. Prerequisites: organic chemistry and Food Science 100 or Nutritional Sciences 115. S-U grades optional. Not offered 1990–91.
M W F 12:20. D. D. Miller.
An evaluation of factors affecting the nutritional quality of foods and diets. Nutritional quality is defined. Methods and approaches for assessing nutritional quality are presented. Factors that may alter the nutritional quality of foods and food supplies (e.g., agricultural practices, processing, storage, cooking, government regulations, new technologies, fortification) are discussed.]

421 Unit Operations in Food Processing II
Fall. 3 credits. Prerequisite: Food Science 322.
Lecs, T R 10:10; lab, R 1:25–4:25.
S. S. H. Rizvi.
Principles and practices of thermal processing of foods, with emphasis on kinetics of destruction of microorganisms and quality factors. Laboratory measurement of kinetic data, retort processing, and lethality evaluation.

422 Food Engineering II
Spring. 3 credits. Prerequisite: Food Science 421.
Lecs, M W F 10:10. S. S. H. Rizvi, M. R. McLellan.
Application of transport phenomena to food processing unit operations. Engineering aspects of food plant operations and automation, with emphasis on future directions.

[450 Fundamentals of Food Law
Fall. 2 credits. Not offered 1990–91.
Lecs, M 1:25–3:20. P. F. Hopper.
Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis will be on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course also will refer to other regulatory agencies.]

456 Advanced Concepts in Sensory Evaluation
Spring. 2 credits. Prerequisite: Food Science 410.
Lecs, F 1:25–3:25. H. T. Lawless.
Readings and discussions of primary source materials in sensory evaluation, including historical perspectives, psychophysics, perceptual biases, human information processing. Concepts influencing detection of sensory differences, use of rating scales, and characterization of sensory properties will be emphasized.

[496 Extension Methods in Food Science
Fall. 2 credits. Offered in alternate years. Not offered 1990–91.
F 1:25–4:25. D. K. Bandler.
A series of lectures, demonstrations, and practical exercises to improve the basic communication skills of the food scientist. The course will deal specifically with presenting scientific data in oral, visual, and written form.]

497 Special Topics in Food Science
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. S-U grades optional.
Staff.
For the food science student. May include individual tutorial study, a special lecture topic selected by a professor or a group of students, or selected lectures of a course already offered. As topics may be changed, the course may be repeated for credit.

498 Undergraduate Teaching Experience
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. S-U grades only.
Staff.
Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and will regularly discuss objectives with the course instructor.

499 Undergraduate Research in Food Science
Fall or spring. 4 credits maximum. S-U grades optional. Students must attach to their course enrollment materials written permission from the staff member who will supervise the work and assign the grade. Except for students enrolled in the honors program, credit will be limited to 4 credits total.
Hours to be arranged. Staff.
Independent study.

600 Seminar
Fall or spring. 1 credit. Required of all food science graduate students. S-U grades only.
T 4:30.

601 Food Protein Chemistry
Fall. 3 credits. Offered alternate years. Limited to graduate students and to seniors with permission of instructor. Prerequisite: Food Science 409 or equivalent.
Lecs, M W F 9:05. J. M. Regenstein.
The chemistry and physical chemistry of proteins are discussed critically with respect to current methods of characterizing and purifying proteins. Food protein functionality is emphasized.

602 Computers in Food Laboratories
Fall. 3 credits. Prerequisite: introductory physics.
Lec, T 12:20; 2 labs per week, hours to be arranged. G. Houghton.
An introduction to computers as tools for data acquisition, process control, and data analysis in food science. Independently scheduled labs will teach basic analog and digital electronics, computer function and programming, the interfacing of computers with laboratory and industrial equipment, and the use of data analysis software. A background in computers or electronics is not required.

604 Chemistry of Dairy Products
Fall. 2 credits. Limited to 16 students. Prerequisites: organic chemistry, biochemistry, knowledge of dairy-product manufacturing procedures, and permission of instructor. Offered alternate years.
Lecs, F 1:25–3:30. D. M. Barbano.
A detailed study of milk constituents and their properties. Properties of various milk constituents are related to observed physical and chemical changes that occur in dairy products during and after processing. This course will emphasize current research in dairy chemistry.

605 Physical Chemistry of Food Components
Fall. 3 credits. Prerequisite: an undergraduate course in physical chemistry. Offered alternate years.
Lecs, M W F 10:10. J. W. Brady.
This course will cover the physical properties of food molecules. Emphasis will be placed on the molecular basis of structural characteristics; colloidal properties; molecular interactions; foams, gels; and water binding of foods.

606 Instrumental Methods
Fall. 3 credits. Prerequisite: permission of instructor. Offered alternate years.
Lecs, M W 8; lab, M 1:25–3:20, alternate weeks. J. W. Sherbon.
Deals with instrumental methods widely used in research and industry. Includes chromatography, spectroscopy, electrophoresis, and thermal analysis. The stress is on the theoretical and practical aspects of the material presented. After the introduction of a

technique, students will schedule laboratory time at their convenience.

[607 Advanced Food Microbiology
Spring. 2 credits. Prerequisites: food microbiology, genetics (preferred). Offered alternate years. Not offered 1990–91.
M W 11:15. C. A. Batt.
Primary emphasis will be to review new methods for detecting microorganisms and their products by DNA-DNA hybridization, monoclonal antibodies, etc. The theory and application of genetic engineering for improvement of microorganisms used in the food and other industries will be addressed.]

[609 Rheology
Spring. 3 credits. Prerequisites: Food Science 321 and 605 or permission of instructor. Not offered 1990–91.
Lec, M W 11:15; lab, R 1:25–4:25. Staff.
Fundamental concepts of rheology applied to foods, with emphasis on the relations between molecular structure and rheological behavior. The laboratory will cover the main rheological techniques. Examples of rheological behavior of gels, suspensions, emulsions, doughs.]

610 Introductory Chemical and Environmental Toxicology (also Toxicology 610)
Fall. 3 credits. Prerequisites: biochemistry and animal physiology.
Lecs, M W F 11:15. Staff.
Introduction to the concepts and essentials of toxicology. The various biological responses to toxicants and the in vivo and in vitro methods of assessing toxicity, as well as the role of epidemiology, will be discussed. The chemical and biological factors that affect toxicity and specific sources of toxicants, including air pollution, agriculture, industrial processes, foods, naturally occurring toxicants, and social poisons will be presented. Regulation of toxic materials will be introduced.

615 Secondary Plant Metabolites in Foods
Fall. 1 credit. Prerequisite: Biological Sciences 330 or 331. Offered alternate years.
Lec, F 9:05. G. Hrazdina.
Deals with the chemistry and biochemistry of secondary plant metabolites (chlorophyll, lignin, flavonoids, alkaloids, terpenes, carotenoids, steroids, and cyanogenic glycosides) and their importance to food products. Emphasis is on the chemical and biochemical properties of these compounds, their occurrence in edible plants, their reactions, and influence on food products.

[620 Food Carbohydrates (also Nutritional Sciences 620)
Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: Biological Sciences 330 or equivalent. Offered alternate years. Not offered 1990–91.
Lecs, T R 10:10. B. A. Lewis, J. W. Brady.
A consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.]

665 Engineering Properties of Foods (also Agricultural and Biological Engineering 665)
Fall. 2 credits. Prerequisite: course in transport processes or unit operations as applied to foods; or permission of instructor. Offered alternate years.
Lecs, T R 12:20. S. S. H. Rizvi, A. K. Datta.
Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical basis of measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.

800 Research
Fall or spring. Credit to be arranged. Maximum credit, 10/semester. Limited to master's and doctoral candidates with permission of the graduate field member concerned. S-U grades only.

HORTICULTURAL SCIENCES

Department Chairs

Floriculture and Ornamental Horticulture: G. L. Good

Pomology:

Vegetable Crops: E. E. Ewing

Horticultural Sciences courses at Cornell University are taught by the faculties of the three departments listed above and the Department of Horticultural Sciences at the N.Y.S. Agricultural Experiment Station at Geneva. Descriptions of each course appear under the department whose name appears in parentheses after the horticultural sciences course number below (e.g., the description for Horticultural Science 200 appears under Pomology).

Horticultural Sciences Courses

101 (FOH) Introduction to Horticultural Science

102 (VC) General Horticulture

200 (POM) Introductory Pomology

205 (FOH) Floral Design: Introduction

210 (FOH) Floral Design: Intermediate

220 (VC) Vegetable Types and Identification

225 (VC) Commercial Vegetable Crops

230 (FOH) Woody Plant Materials

243 (FOH) (also Biological Sciences 243) Taxonomy of Cultivated Plants

300 (FOH) Garden and Interior Plants I

301 (FOH) Garden and Interior Plants II

[308 (POM) Tropical and Subtropical Fruits]

325 (VC) Practical Aspects of Postharvest Handling of Horticultural Crops

330 (FOH) Turfgrass Management

335 (FOH) Woody Plant Materials for Landscape Use

400 (FOH) Principles of Plant Propagation

[405 (FOH) Physiology of Horticultural Plants]

[410 (FOH) Principles of Florist Crop Production]

411 (FOH) Greenhouse Production Management

415 (FOH, VC, POM) Postharvest Physiology and Storage of Horticultural Crops

420 (FOH) Principles of Nursery Crop Production

425 (FOH) Horticultural Sales and Service Businesses

430 (FOH) Special Topics In Ornamental Plants

435 (FOH) Landscape Management

440 (FOH) Turfgrass Management

442 (POM) Small Fruits

[444 (POM) Viticulture]

445 (POM) Temperate Tree Fruits

[450 (POM) Soil Management and Nutrition of Perennial Crops]

455 (VC) Vegetable Crop Physiology

[460 (VC) Plant-Plant Interactions]

465 (VC) Vegetable Varieties and Their Evaluation

470 (POM) Special Topics in Pomology

495 (FOH, POM, VC) Undergraduate Seminar

496 (FOH, VC) Internship in Horticultural Sciences

497 (FOH, POM, VC) Independent Study in Horticultural Sciences

498 (FOH, VC) Undergraduate Teaching Experience

499 (FOH, POM, VC) Undergraduate Research

500 (FOH, POM, VC) Master of Professional Studies (Agriculture) Project

600 (FOH) Seminar in Floriculture and Ornamental Horticulture

601 (POM) Seminar in Pomology

602 (VC) Seminar in Vegetable Crops

[605 (FOH) Current Topics in Floricultural and Ornamental Horticultural Physiology]

[610 (POM) Growth and Development of Woody Plants]

[615 (VC) Quantitative Methods in Horticultural Research]

[620 (POM) Developing Effective Horticultural Research Programs]

625 (VC) Advanced Postharvest Physiology of Horticultural Crops

629 (FOH, VC) (also Plant Breeding 629) Special Topics in Plant Science Extension

630 (POM) Current Topics in Postharvest Horticulture

700 (FOH, POM, VC) Graduate Teaching Experience

800 (FOH, POM, VC) Thesis Research, Master of Science

900 (FOH, POM, VC) Thesis Research, Doctor of Philosophy

INTERNATIONAL AGRICULTURE

300 Perspectives in International Agriculture and Rural Development
Fall. 2 credits.
F 1:25–3:20. E. C. Erickson and staff.
A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

402 Agriculture in Tropical America
Fall. 2 credits. Prerequisite: upper class or graduate standing.
F 1:25–3:20. H. D. Thurston and staff.
A preparatory course for participation in International Agriculture 602. Physical resources, vegetation, history, crop and animal production, and various social and economic aspects of agriculture in tropical America will be discussed.

403 Traditional Agriculture in Developing Countries
Fall. 1 credit. S-U only.
T 8–8:50. H. D. Thurston and staff.
Today, perhaps over half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course will examine traditional systems from several disciplinary points of view.

599 International Agriculture and Rural Development Project Paper
Fall and spring. 1–6 credits. Limited to M.P.S. candidates in International Agriculture and Rural Development. S-U grades only.
Staff.

600 Seminar: International Agriculture
Fall and spring. No credit. S-U grades only.
Third and fourth W of each month, 4–5.
Staff.
The seminar focuses on developing an understanding of the nature and interrelatedness of agricultural development and the social sciences, plant and animal sciences, foods and nutrition, and natural resources.

602 Agriculture in the Developing Nations
Spring. 3 credits. Prerequisites: International Agriculture 402 and permission of instructors. Cost of field-study trip includes air fare and approximately $450 for lodging, meals, and personal expenses.
T R 2:30–4:25 until midterm only.
W. R. Coffman and staff.
Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff and students. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments dealing with problems in agriculture and livestock production in the context of social and economic conditions.

603 Administration of Agricultural and Rural Development (also Government 692)
Spring. 4 credits.
T 2:30–5:30. E. B. Oyer, N. T. Uphoff, L. W. Zuidema.
An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students trained in agricultural and social sciences who are likely to occupy administrative roles during their professional careers.

650 Special Topics in International Agricultural and Rural Development
Fall and spring. 1–3 credits
Staff.
A seminar on current themes of agricultural and rural development. Specific content varies each semester.

685 Training and Development: Theory and Practice (also Communication 685, Education 685 and Industrial and Labor Relations 658)
Spring and summer. 4 credits. S-U grades optional. Charge for materials $45.
F 9:05–12:05. At Communication Graduate Center. R. Colle, D. Deshler, W. W. Frank.
Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

695 International Nutrition, Agriculture, and Development Policy (also Nutritional Sciences 695)
Spring. 1 credit.
Hours to be arranged. T. Brun.
A course concentrating on the major issues in food and nutrition policies as they relate to agriculture, including Africa's nutritional and agricultural decline, lessons from socialist countries (China and Vietnam), the cash- versus food-crop debate, land reform, Green Revolution, and nutrition impact of agricultural programs. Emphasis will be on agricultural policies leading to growth with equity.

703 Seminar for Special Projects in Agricultural and Rural Development
Spring. 1 credit. Required for graduate students enrolled in the M.P.S. (Agr.) degree program and majoring in international agricultural and rural development; others with permission of the program director. S-U grades only.
M 12:20. L. W. Zuidema.
The seminar provides students with the opportunity to present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

LANDSCAPE ARCHITECTURE

The Landscape Architecture Program at Cornell is sponsored by the College of Agriculture and Life Sciences through the Department of Floriculture and Ornamental Horticulture and the College of Architecture, Art, and Planning. For course descriptions, see the listings under the Department of Floriculture and Ornamental Horticulture.

MICROBIOLOGY

W. C. Ghiorse, chair, M. Cordts, J. D. Helmann, R. P. Mortlock, C. M. Rehkugler, V. J. Stewart, M. L. Tortorello, S. C. Winans, S. H. Zinder

Microbiology is a program of study in the Division of Biological Sciences beginning Fall 1990. Information on the requirements for the program of study in microbiology is available in 200 Stimson Hall.

290 General Microbiology Lectures
Fall, spring, or summer. 3 credits. Prerequisites: Biological Sciences 101–102 and 103–104 and Chemistry 104 or 208, or equivalent. Recommended: concurrent registration in Microbiology 291.
M W F 11:15. M. Cordts and M. L. Tortorello.
A comprehensive overview of the biology of microorganisms, with emphasis on bacteria. The biology of eukaryotic microorganisms and viruses is also discussed. Topics include microbial cell structure and function, physiology and metabolism, genetics, diversity, and ecology. Applied aspects of microbiology are also covered such as biotechnology, immunology, and the role of microorganisms in environmental processes and disease.

291 General Microbiology Laboratory
Fall or spring, 2 credits. Summer, 2 or 3 credits. Prerequisite: Microbiology 290 (may be taken concurrently).
M W 2–4:25 or 7–9:30 p.m. (spring only), or T R 8–10:30,11:15–1:45, or 2–4:25. C. M. Rehkugler.
A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

292 General Microbiology Discussion
Spring. 1 credit. Prerequisite: Microbiology 290 (may be taken concurrently). S-U grades only.
Hours to be arranged. C. M. Rehkugler and E. Seacord.
A series of discussion groups in specialized areas of microbiology to complement Microbiology 290.

300 Seminar in Microbiology (formerly Microbiology 400)
Spring. 1 credit. Limited to undergraduate students specializing in microbiology. Required for microbiology students in their sophomore year. S-U grades only.
W 12:20. Staff.
A series of lecures and seminars designed to present students with laboratory safety training and acquaint them with research projects in microbiology on Cornell campus.

[317 Tissue Culture Techniques and Applications (formerly Microbiology 314)
Fall. 2 credits. Prerequisites: Microbiology 290 and 291 or permission of instructor. Not offered 1990–91.
F 1:25–2:30; lab exercises with follow-up work done independently, F 2:30–4:30. C. M. Rehkugler.
A series of lectures and demonstrations dealing with cell culture methods especially those required to culture cells of animals from different tissue origins. The application of cell culture to the study of bacterial diseases, virus replication, and the production of biologicals is considered.]

398 Environmental Microbiology (also SCAS 398)
Spring. 3 credits. Prerequisites: Microbiology 290 or Biological Sciences 261 or Soil, Crop, and Atmospheric Sciences 260 or permission of instructor. Offered alternate years.
M W F 10:10. M. Alexander and W. C. Ghiorse.
Behavior and function of microorganisms in natural environments and the role of microorganisms in transformation of pollutants.

406 Clinical Microbiology (formerly Microbiology 412–413)
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor.
Hours to be arranged. R. P. Mortlock.
Training and practical experience in clinical microbiology in the hospital laboratory of the Cornell Medical College and New York Hospital in New York City. Emphasis will be upon developing students' capability in the isolation and rapid identification of organisms from various types of clinical specimens. This course is intended to prepare the student for state and federal licensing in various areas of clinical microbiology.

415 Bacterial Diversity Lectures (formerly Microbiology 390/490)
Fall. 3 credits. Prerequisites: Microbiology 290 and 291 and Biological Sciences 330/331. May be taken without Microbiology 417.
M W F 11:15. S. H. Zinder.
A consideration of the physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny and taxonomy, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

416 Microbial Physiology Lectures (formerly Microbiology 480)
Spring. 3 credits. Prerequisites: Microbiology 290 and 291 or equivalent and biochemistry. Micro 415 recommended. S-U grades optional for students not specializing in microbiology.
M W F 11:15. R. P. Mortlock.
The concern is with the physiological functions of microorganisms. Consideration is given to chemical structure, regulation, growth, and the energy metabolism of prokaryotic organisms. Special attention given to those aspects of microbial metabolism and carbohydrate catabolism not normally studied closely in biochemistry courses.

417 Bacterial Diversity Laboratory (formerly Microbiology 391/491)
Fall. 2 credits. Prerequisites: Microbiology 415 (may be taken concurrently) and permission of instructor.
M W 2–4:25. S. H. Zinder.
Intended as a laboratory complementing Microbiology 415. The enrichment, isolation, characterization, and study of bacteria included in Microbiology 415.

418 Microbial Physiology Laboratory (formerly Microbiology 481)
Spring. 3 credits. Limited to 12 students. Prerequisites: Microbiology 416 (may be taken concurrently) and permission of instructor. S-U grades optional.
T R 12:20–4:25. R. P. Mortlock.
The laboratory component of Microbiology 416. Deals with laboratory experiments and techniques used in studying the enzymology and physiological characteristics of microorganisms.

451 Structure and Function of Bacterial Cells (formerly Microbiology 484)
Fall. 3 credits. Prerequisites: Microbiology 290 and biochemistry or permission of instructor. Microbiology 415 recommended. S-U grades optional. Offered alternate years.
M W F 10:10. W. C. Ghiorse.
Morphology, ultrastructure, macromolecular organization and life cycles of bacterial cells are considered with regard to chemical composition and physiological and ecological function of cellular components.

453 Bacterial Cytology Laboratory (formerly Microbiology 485)
Fall. 1 or 2 credits. Enrollment limited. Prerequisites: Microbiology 451 or concurrent enrollment, and permission of instructor. Offered alternate years.
Hours to be arranged. W. C. Ghiorse.
Theory and proper use of light and electron microscopes; cytological and cytochemical techniques for light and electron microscopy that are applicable to the study of bacterial structure and function.

498 Teaching Experience
Fall or spring. 1–3 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent, and written permission of instructor. S-U grades with permission of instructor.
Hours to be arranged. Staff.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching microbiology courses under supervision of departmental faculty. This experience may include leading a discussion group; preparing, assisting, or teaching a microbiology laboratory; or tutoring. Microbiology courses currently offering such experience include 291 and 292. This course cannot be used to fulfill the specialization requirement.

499 Research in Microbiology
Fall or spring. 1–3 credits. Undergraduates must attach to their course enrollment materials written permission of the staff member who will supervise the work and assign the grade. This course cannot be used to fulfill the specialization requirement.
Hours to be arranged. Staff.

652 Molecular Plant-Microbe Interactions (also Biological Sciences 652, section 04)
Spring. 1 credit. Prerequisite: Biological Sciences 653 (section 01).
M W F 10:10 (12 lectures, dates to be announced). S. C. Winans and T. A. LaRue.
Module 8 in Plant Molecular Biology series. Course will focus on the interactions of *Agrobacteria* and *Rhizobia* with plants. Topics on *Agrobacterium*-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis, and use of *Agrobacterium* to produce transgenic plants. Topics on *Rhizobium*-plant interactions include regulation of nitrogenase activity and expression, organization and function of the *sym* plasmid, nodule development, plant genetics involved in plant-microbe interaction.

694 Genetic Aspects of Bacterial Diversity
Spring. 3 credits. Prerequisites: Biological Sciences 485 or equivalent.
M W 2:30–3:45. S. C. Winans.
Selected topics in bacterial diversity, with strong emphasis placed on underlying molecular mechanisms. Topics will include interactions between bacteria and plants and animals, prokaryotic developmental biology, biodegradation of xenobiotics, and synthesis of antibiotics.

695 Bacterial Genetics
Fall. 3 credits. Prerequisites: Biological Sciences 485 and 633 or permission of instructor.
Lec, T R 10:10–11:25. V. J. Stewart.
Current themes in bacterial genetics are considered in detail through examination of the primary literature. Topics include: recombination and genetic exchange; transposons; mutagenesis and DNA repair; and pathway-specific and global regulation of gene expression. Emphasis is on coordinated studies that derive complementary information from both in vivo and in vitro techniques.

[696 Advanced Bacterial Genetics
Offered by special arrangement; see instructor. 2 credits. Prerequisites: Microbiology 291, Biological Sciences 281, and written permission of instructor. Corequisite: Microbiology 695 or Biological Sciences 485. Not offered 1990–91.
Hours to be arranged. V. J. Stewart.
Theory and practice of prokaryotic genetics as applied to Escherichia coli. Topics include: isolating, characterizing, and mapping mutations; using transposons as mutagens and as linked selectable markers; constructing operon and gene fusions; and using selected recombinant DNA methods for gene isolation and analysis.]

795–796 Current Topics in Microbiology (formerly Microbiology 731–736)
Fall, 795; spring, 796. 1/2 or 1 credit for each topic. May be repeated for credit. (Students registering for 1/2 credit should not fill in the credit-hour column on the optical-mark registration form; the computer is programmed to register students automatically for 1/2 credit.) Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only.
Hours to be arranged. Staff.
Lectures and seminars on special topics in microbiology.

797 Graduate Seminar in Microbiology (formerly Microbiology 791)
Fall and spring. 1 credit each semester. All students in the Graduate Field of Microbiology must enroll for at least their first three semesters in residence. Students will be expected to lead discussions on recent primary literature in microbiology. S-U grades only.
Hours to be arranged. Staff.

798 Graduate Research Seminar in Microbiology (formerly Microbiology 792)
Fall and spring. 1 credit each semester. Required of all graduate students in microbiology; a seminar relating to the research activities of those enrolled. Students who have completed the Microbiology 791 series requirement are required to present a seminar concerning their research interests and activities at least once each year. S-U grades only.
Hours to be arranged. Staff.

799 Microbiology Seminar (formerly Microbiology 699)
Fall and spring. Required of all graduate students in the Department of Microbiology and open to all who are interested.
Hours to be arranged. Staff.

NATURAL RESOURCES

J. P. Lassoie, chair; R. A. Baer, B. L. Bedford, H. B. Brumsted, D. J. Decker, T. J. Fahey, T. A. Gavin, J. W. Gillett, J. W. Kelley, B. A. Knuth, M. E. Krasny, C. C. Krueger, R. J. McNeil, R. A. Malecki, A. N. Moen, R. T. Oglesby, M. E. Richmond, C. L. Schofield, C. R. Smith, L. H. Weinstein, B. T. Wilkins, W. D. Youngs

100 Principles of Conservation
Fall. 3 credits. Limited to students specializing in natural resources. Not open to students who have passed Natural Resources 201.
Lecs, M W F 9:05; 1-hr disc to be arranged. R. T. Oglesby.
The nature of natural resources, how they are managed, and their interactions with individuals and societies are considered. Case histories are used to illustrate both principles and practices. Emphasis will be on management of renewable resources based on ecological and cultural perspectives.

107 Microcomputing in Natural Resources Management
Spring. 3 credits. Prerequisite: Natural Resources 100 or concurrent registration in Natural Resources 201 or permission of instructor.

Lec T 10:10; lab T R 2:30–5. R. Oglesby.
Instruction and development of hands-on familiarity with hardware and software will focus on examples taken from problems of resource management. Computing topics covered include word processing, spread sheets, and data base management. Students will learn use of both Macintosh and IBM equipment. This course is not open to those who have taken Education 247/447 or Agricultural and Biological Engineering 102.

201 Environmental Conservation
Spring. 3 credits.

Lecs, M W F 10:10; 1-hr disc to be arranged. T. J. Fahey.
A survey course intended for students in any year and major as an aid to understanding the major environmental problems facing spaceship Earth. A topical approach with representative case histories is taken. Topics include global climate change; population growth and world hunger; energy resources and alternatives; mineral resources and recycling; land use in urban and rural landscapes; air, water, and soil pollution; and endangered species and wildlands.

210 Introductory Field Biology
Fall. 4 credits. Limited to 45 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: Biological Sciences 101 and 102 or equivalent. Cost of field trips, approximately $10.

Lec, W 9:05; labs, M W 1:25–4:25.
2 overnight field trips required.
T. A. Gavin.
Introduction to methods of inventorying and identifying plants and animals. Approximately 150 species of vertebrates and 75 species of woody plants found in New York State are covered. Selected aspects of current ecological thinking, relevant to problems in assessment of the distribution and abundance of organisms, are stressed. The interaction of students with biological events in the field and accurate recording of these events are emphasized.

250 Introduction to Wildlife Biology
Spring, first third of term. 1 credit.

Lecs, M W F 8. T. A. Gavin.
An introduction to biological topics relevant to informed management of wildlife; emphasis will be on the population as the unit of interest. An overview of the history of wildlife management in North America will illustrate the importance of the interaction between biological and nonbiological factors on wildlife. However, this course is about wildlife biology, not wildlife management, which is treated in Natural Resources 308 and 410.

251 Introduction to Fishery Biology
Spring, weeks 6–10. 1 credit.

Lecs, M W F 8. Staff.
Subject areas that form the basis of fishery biology are introduced by staff member working in that particular area. The areas included are limnology, insect biology, biology of fishes, genetics, life history, population biology, environmental impacts, policy, and management.

252 Introduction to Forest Science
Spring, last third of term. 1 credit. Prerequisite: Natural Resources 210 or permission of instructor.

Lecs, M W F 8. Staff.
Appreciation of forests as a natural resource. Introduction to the importance of ecology, tree biology, and environment as bases for forest management and silviculture. Emphasis is on the forests of the northeastern United States.

270 Bird Biology and Conservation
Spring. 2 credits.

Lec, T R 11:15–12:05. C. Smith.
A survey course for majors and nonmajors, focusing on birds and the ways they illustrate general principles of behavior, ecology, management, and conservation at the organism, population, and community levels. Topics covered will emphasize attributes of birds that can be observed directly by the student. Current resource-management issues relevant to birds will be explored in the contexts of agricultural practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, and the economic importance of bird study as an outdoor recreational activity.

271 Bird Biology and Conservation Laboratory
Spring. 1 credit. Concurrent enrollment in Natural Resources 270 required.

At least six Saturday-morning field trips plus three indoor labs. C. Smith.
A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered will include the choice and effective use of field guides, binoculars, and other aids to bird identification; procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying songbird populations. Students are expected to provide their own binoculars for field use.

302 Forest Ecology
Fall. 4 credits. Cost of trip, no more than $20.

Lecs, M W F 11:15; lab, M 12:20–4:25.
1 weekend trip S through M. T. J. Fahey.
Analysis of the distribution, structure, and dynamics of forest ecosystems. All laboratory sessions in the field. One weekend field trip to the Adirondacks or other forest region.

303 Woodlot Management
Fall. 3 credits. Letter grades only.

Lecs, T R 10:10; lab, R 12:20–4:25.
J. W. Kelley.
A practical, field-oriented course emphasizing multiple purpose management of small nonindustrial private forestland in the northeastern United States.

304 Wildlife Ecology
Spring. 3 credits. Prerequisites: general biology and at least one course in computer programming or proficiency.

Lec, M W F 11:15. Labs to be arranged.
A. Moen.
This course focuses on the physiological, behavioral, and population characteristics of wild species, interactions among species, and their relationships with range characteristics and resources. Computer modeling is an integral part of the course.

305 Maple Syrup Production
Spring. 2 credits. Limited to 20 students. Prerequisite: permission of instructor required. Letter grades only.

T 12:20–4:25 (preliminary seminars followed by weekly half-days of fieldwork during the maple season).
J. W. Kelley.
Students work in most phases of the Arnot Forest maple operation and learn modern sap-collecting techniques and quality control in making syrup.

306 Coastal and Oceanic Law and Policy
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $650.

Daily lecs and discs for 1 week.
SML faculty.
Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

308 Natural Resources Management
Fall. 3 credits. Prerequisite: junior standing; introductory ecology or permission of instructor.

M W F 10:10. B. A. Knuth.
Management of natural resources with a focus on fish, wildlife, forest, and water resources. Emphasis is on concepts necessary to formulate and achieve specific management goals and objectives. Topics include an overview of natural resource planning processes and the management cycle; and organismal, environmental, social, and institutional dimensions of management. Focus is on management in the public domain directed toward multiple interests. Students will be assigned one case study issue for the term, on which all written and oral assignments will build.

400 International Environmental Issues
Fall. 4 credits. Limited to 30 students. Prerequisite: junior standing or above.

Lecs, T R 10:10–12:05. R. J. McNeil.
International aspects of the preservation and development of environmental and natural resources. Concepts include development, resource ownership, exploitation, compensation, and preservation. Cultural differences in attitudes and behavior toward environment. Management practices under different cultural, economic, and social systems. Will cover current issues such as acid precipitation; management of migratory whales, fish, and waterfowl; Antarctic development; global climate and energy issues; and preservation of tropical rainforests and endangered species. Lecture and discussion, term paper, and examinations. Priority to: seniors, a few graduate students, others providing best mix of backgrounds, others with special needs, natural resources majors.

401 Environmental and Natural Resources Policies
Fall or spring. 3 or 4 credits. Prerequisites: junior standing and participation in Cornell-in-Washington Program.
Lab to be arranged. R. J. McNeil and staff.
Concepts and principles fundamental to the environmental policy process. Biological and ecological principles central to decision making in the natural resources arena, particularly at the national and international levels. Role of the legal system in the policy process; roles of citizen organizations, lobbyists, bureaucrats, legislators. Case studies, interviews with Washington officials, several short papers, one exam. A fourth credit available requires a more extensive written assignment and an oral presentation.

402 Natural Resources Policy, Planning, and Politics
Spring. 3 credits. Prerequisites: junior standing and permission of instructor.
Lec, January 2-week intersession; one 2-hr. orientation session in Dec. and four 2-hr. seminars in Jan. and Feb.
R. J. McNeil and staff.
An introduction to the environmental policy process and its conceptual framework. Recognition of phenomena identified as natural resources or environmental problems and issues; steps leading to legislation or regulations to solve problems; implementation and evaluation stages; role of the legal system; roles of citizens, lobbyists, government actors. Case studies; presentations by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, oral reports. Several meetings in Ithaca before and after intensive January session in Washington.

406 Conducting Marine and Natural Resource Extension Programs
Spring. 3 credits.
Lec and rec. One weekend field trip.
B. T. Wilkins.
Extension programs stimulate and help citizens use current research knowledge to reach decisions on the management of natural resources. The course provides an overview of the constructs used in this emerging natural resource field, and gives students experience in components important in conducting such efforts.

407 Religion, Ethics, and the Environment
Spring. 3 credits. For juniors, seniors, and graduate students; others by permission only. S-U grades optional.
T R 9:05, 1-hr. disc to be arranged.
R. A. Baer.
A study of how religion (mainly Christianity and Judaism), philosophy, and ethics affect our understanding and treatment of nature. The terms religion, value, knowledge, nature, and the public interest are examined in detail. Particular themes include the structure of modern science, play and work, and human finitude and death. Also, responsibility to future generations, limiting growth and questions of distributive justice, and world population and global hunger.

410 Principles of Wildlife Management
Spring. 3 credits. Prerequisite: introductory biology, Natural Resources 304 (Wildlife Ecology) desirable. Junior, senior, graduate level standing.
M W F 9:05. A. N. Moen.
In-depth analyses of the ecological basis for decision making in wildlife management, computer simulations of management problems and effects of options, and preparation of management information systems.

414 Selected Topics in Wildlife Resource Policy
Spring. 2 credits. Intended for juniors, seniors, and graduate students. Prerequisite: Natural Resources 410 or equivalent or permission of instructor. Cost of field trips, no more than $25.
Time to be arranged. Several field trips usually taken weekdays; one overnight field trip to Albany. H. B. Brumsted.
A seminar devoted to analysis of selected current policy issues in wildlife management. Particular attention is given to citizen roles in policy development.

[417 Wetland Resources
Summer, 1 week at Shoals. 1 credit. Not offered 1990–91.
R. A. Malecki.
For description, see listing under "Courses in Marine Science," in the section on the Division of Biological Sciences.]

[438 Fishery Management
Spring. 3 credits. Not offered 1990–91.
Lecs, T R 8 plus discs. C. C. Krueger.
Introduction to management as an adaptive process that focuses on achievement of goals. Coverage includes sport and commercial fisheries. Topics include setting goals and objectives, regulations, habitat management, population control, stocking, and management of trout, reservoirs, the Great Lakes, and Pacific halibut. Ecological, social, political, and economic aspects of those topics are discussed.]

[440 Fishery Science
Fall. 3 credits. For juniors and seniors majoring in fishery science; others by permission of instructor. Prerequisites: a year of statistics and calculus. Offered alternate years. Not offered 1990–91.
M W F 12:20. W. D. Youngs.
Principles and theories involved in dynamics of fish populations. Methods of obtaining and evaluating statistics of growth, population size, mortality, yield, and production are considered.]

442 Techniques in Fishery Science
Fall. 5 credits. Limited to 15 upperclass and graduate fishery students. Cost of field trips, no more than $30.
T R 1:25–4:25; 1 or more weekend field trips. C. C. Krueger.
Emphasis is on methods of collecting data on attributes of fish populations and their habitat. Topics include passive and active fish-capture methods, tagging and marking, and physical and chemical habitat measurements. Assumptions and limitations inherent in data sets, research planning, and scientific report writing are also discussed. Several field trips provide hands-on experience in data collection on streams and lakes.

493 Research in Policy and Human Studies in Natural Resource Management
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional.
R. A. Baer, H. B. Brumsted, D. J. Decker, B. A. Knuth, R. J. McNeil, B. T. Wilkins.

494 Research in Fishery Science
Fall or spring. Credit to be arranged. S-U grades optional.
Hours to be arranged. J. L. Forney, C. C. Krueger, R. T. Oglesby, C. L. Schofield, W. D. Youngs.

495 Research in Wildlife Science
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional.
H. B. Brumsted, T. A. Gavin, R. A. Malecki, A. N. Moen, M. E. Richmond.

496 Research in Forestry
Fall or spring. Credit to be arranged. S-U grades; letter grade by permission of instructor.
Hours to be arranged. T. J. Fahey, J. P. Lassoie, L. H. Weinstein.

498 Teaching in Natural Resources
Fall and spring. 1–4 credits. Prerequisite: permission of instructor.
Staff.
Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students will gain insights into the organization, preparation, and execution of course plans through application and discussions with instructor.

500 Professional Projects—M.P.S.
Fall and spring. Credit to be arranged. Limited to graduate students working on professional master's projects. S-U grades only.
Staff.

601 Seminar on Selected Topics in Fishery Biology
Fall or spring. 1 credit. S-U grades optional.
Hours to be arranged. Staff.

603 Habitat Ecology
Spring. 1 or 2 credits. Limited to 12 seniors and graduate students majoring in natural resources or biological sciences. Prerequisite: permission of instructor. Cost of field trips, no more than $20.
W 12:20–3. M. E. Richmond.
This course requires an understanding of broad ecological concepts relative to plant-wildlife interactions. The concepts of niche, habitat, and ecotope are addressed from the standpoint of island biogeographic principles, structural and spatial heterogeneity of the vegetation, community productivity, and temporal change. Major landforms and plant-animal communities of the northeastern United States will be discussed and visited during weekend field trips as scheduling permits. Paper required for 2-credit option.

604 Seminar on Selected Topics in Resource Policy and Management
Fall. 2 credits. S-U grades optional.
Hours to be arranged. Staff.
Primarily for graduate students with a major or minor in resource policy and planning and upper level undergraduates with a strong interest in policy analysis. Topics vary with staff involved.

606 Marine Resources Policies
Spring. 2 credits. Prerequisite: at least one related course such as Natural Resources 308, 438; or permission of instructor. S-U grades optional.
W 1:30–3:30. B. T. Wilkins.
A seminar discussing the law and issues concerning current marine policy questions, such as coastal zone management, marine fish regulations, marine mammal protection, and wetland preservation.

[607 Ecotoxicology
Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biochemistry, or toxicology. Not offered 1990–91.
Lecs, M W F 11:15. J. W. Gillett.
Lectures, readings, and special guests focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.]

608 Resource Policy and Administration
Fall. 3 credits. Prerequisite: graduate standing; juniors and seniors with instructor's permission.
T R 2:30–3:45. B. A. Knuth.
An examination, through lectures, readings, and discussions, of policy, decision making, and administration relating to natural resource management in the public domain. Emphasis is on concepts relevant to policy formulation, implementation, and evaluation with specific applications from fisheries, wildlife, forest and water resource management. Topics include natural resource policy makers, bureaucracies and organizational effectiveness, professionalism and ethics, policymaking processes and philosophies, and problem-solving and decision aids including public involvement, mediation, impact and risk assessment, benefit/cost analysis, and group decision processes.

610 Conservation Seminar
Fall and spring. No credit. All graduate students in natural resources are expected to participate.
Hours to be arranged. Staff.

611 Seminar in Environmental Values
Fall. 3 credits. For graduate students, seniors, and juniors. S-U grades optional.
W 1:25–3:50. R. A. Baer.
Moral concerns relative to agriculture and/or the environment. In successive years, the seminar will focus on such topics as (1) natural resources management and the concept of the public interest, (2) land use ethics, (3) formulating natural resource policy in a democratic and pluralistic society, and (4) responsibility to future generations.

612 Wildlife Science Seminar
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades optional.
Hours to be arranged. Wildlife science faculty.
Discussion of individual research or current problems in wildlife science.

615 Seminar in Agroforestry
Spring. 2 credits. Prerequisites: senior or graduate standing and permission of instructor.
Lec, M 7–9 p.m. J. P. Lassoie.
An interdisciplinary course intended to introduce students to the general principles and types of agroforestry systems. Agronomic, forestry, socioeconomic, and institutional factors are considered through the use of case studies. Conceptual and methodological approaches to agroforestry research design and program development are stressed. A presentation during the seminar and a short library research paper are required of all enrolled.

616 Forest Science and Management Seminar
Fall/spring. 1 credit. Permission of instructor.
Staff.
Selected readings and discussions of research and/or current problems in forest science and management.

[698 Current Topics: Environmental Toxicology
Fall. 2 credits. Prerequisites: graduate or senior standing in scientific discipline. Not offered 1990–91.
Lec, 2:30–4:25, day to be announced.
J. W. Gillett.
A student-faculty colloquium on the theories and methodologies of ecological risk assessment of anthropogenic stresses, particularly toxic chemicals. Generic and site-/chemical-specific assessments will be covered with attention to topical problems (e.g., Superfund, oil spills).]

800 Master's Thesis Research
Fall and spring. Credit to be arranged. Limited to graduate students working on master's thesis research. S-U grades only.
Staff.

900 Ph.D. Thesis Research
Fall and spring. Credit to be arranged. Limited to graduate students working on Ph.D. thesis research. S-U grades only.
Staff.

PLANT BREEDING

W. R. Coffman, chair; R. E. Anderson, E. D. Earle, H. L. Everett, C. C. Lowe, H. M. Munger, R. P. Murphy, M. A. Mutschler, W. D. Pardee, O. H. Pearson, R. L. Plaisted, M. E. Smith, M. E. Sorrells, J. C. Steffens, S. D. Tanksley, D. R. Viands, D. H. Wallace, R. W. Zobel

Biometry courses are listed under "Statistics and Biometry."

201 Introduction to Plant Breeding
Spring. 2 credits. Prerequisite: one year of introductory biology.
Lecs, T R 11:15. T. Barker and W. R. Coffman.
The contributions of plant breeding to national and international development. An overview of genetics, breeding methods, systems, and operational procedures for producing commercial crop varieties are considered along with the major breeding objectives.

[225 Plant Genetics
Spring. 4 credits. Prerequisite: one year of introductory biology or permission of instructor. Limited to 50 students. Not offered 1990–91.
Lecs, M W F 9:05; lab, T or W 1:25; lab section assignments at first lecture. Labs start first week. M. A. Mutschler.
An overview of genetic principles as related to plant sciences. Mitosis and meiosis, gamete production, Mendelian inheritance, linkage and mapping, gene interaction, DNA as genetic material, genetic fine structure and gene regulation, gene recombination, extranuclear inheritance, environmental effect on phenotypic expression, gene mutation and chromosomal aberrations, variation in chromosome numbers or structure, tissue culture, and genetic engineering. Students conduct an independent inheritance project with *Brassica campestris*. The course may not be used to fulfill the genetics requirement for students in the Division of Biological Sciences.]

401 Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisites: a course in plant physiology, cell biology, or genetics, or permission of instructor.
Lecs, T R 10:10. E. D. Earle.
Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Methods for plant improvement via manipulations of cultured cells will be discussed. Four or five written assignments and a term paper are required.

402 Plant Tissue Culture Laboratory
Fall. 1 credit. Enrollment limited. Prerequisites: Plant Breeding 401 (may be taken concurrently) and written permission of instructor.
W 1:25–4:25 plus 1 hr. to be arranged, alternate weeks. E. D. Earle.
Laboratory exercises complementing Plant Breeding 401. Techniques for establishing, evaluating, and utilizing plant organ, embryo, callus, cell, protoplast, and anther cultures will be covered. Experiments will use a broad range of plant materials.

496 Internship in Plant Breeding
Fall or spring. Credits variable, may be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades only.
Staff.
On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

497 Special Topics for Undergraduates
Fall or spring. Credits variable, may be repeated to a maximum of 6. Prerequisite: permission of instructor. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U optional.
Staff.

498 Undergraduate Teaching
Fall or spring. Credits variable, may be repeated to a maximum of 6. Prerequisites: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U optional.
Staff.
Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

499 Undergraduate Research
Fall or spring. Credits variable, may be repeated to a maximum of 6. Prerequisite: permission of instructor. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U optional.
Staff.
Undergraduate research projects in plant breeding.

603 Methods of Plant Breeding
Fall. 3 credits. Prerequisites: Biological Sciences 281 or Plant Breeding 225 or equivalent and an introductory course in crop production.
M W F 9:05. M. E. Smith.
Breeding methods, systems, and operational procedures for producing commercial crop varieties are considered in detail. Emphasis is on an integrated, interdisciplinary approach to major breeding objectives, including agronomic characteristics, quality characteristics, and biotic and abiotic tolerances. Inbreeding methods, population genetics, population improvement, and breeding methods for special situations will be covered.

604 Methods of Plant Breeding Laboratory
Fall. 2 credits. Prerequisite: Plant Breeding 603 or equivalent.
T R 1:25–4:15. M. E. Sorrells and R. E. Anderson.
Field trips to plant breeding programs. Discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germ plasm release. Uses of computers in plant breeding research. Organization and presentation of a comprehensive breeding program on a chosen crop.

605 Physiological Genetics of Plant Adaptation and Yield
Spring. 1 credit. Prerequisite: genetics or plant breeding, or permission of instructor. Offered alternate years.
R 10:10. D. H. Wallace.
The physiology and genetics of yield accumulation and of cultivar adaptation are explored. Biological relationships between adaptation and yield are studied. Early and modern literature on breeding for adaptation and yield in any environment are compared.

608 Biochemical Approaches in Plant Breeding
Fall. 3 credits. Prerequisite: Biological Sciences 330, 331, or permission of instructor.
Lecs, M W 10:10; lab, W 7:30–10:30 p.m. J. C. Steffens.
A review of biochemical, spectroscopic, and immunological techniques used in the analysis, selection, and generation of crop plants. Examples from current literature and possible applications of new technologies will be discussed. Laboratory will emphasize biochemical techniques used in plant breeding programs. Students should expect to spend more hours in laboratory than suggested by the formal meeting times.

622 Seminar
Fall or spring. 1 credit. S-U grades only.
T 12:20. Staff and graduate students.

[629 Special Topics in Plant Science Extension
Spring. 2 credits. Not offered 1990–91.
F 1:25–4:25. W. D. Pardee.
Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.]

650 Special Problems in Research and Teaching
Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching.
Staff.

653c Plant Genome Organization
Fall. 1 credit. Prerequisite: Biological Sciences 653a.
Lecs, M W F 10:10–11 (12 lecs), Oct. 1–Oct. 31. S. D. Tanksley.
Module 3 in Plant Molecular Biology series. Molecular structure and evolution of plant nuclear genomes are explored. Topics covered include mechanisms for packaging DNA into chromosomes, molecular structure of telomeres and centromeres, DNA replication and methylation, and molecular biology of plant transposons. Methods for genetic and physical mapping of plant genomes is discussed as well as applications of mapping tools for gene isolation and plant breeding.

716 Perspectives in Plant Breeding Strategies
Spring. 3 credits. S-U grades optional. Prerequisite: Plant Breeding 603.
T 1:25–2:15, R 12:20–2:15. M. E. Sorrells.
Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required. Emphasis is on discussion and evaluation of selected benchmark papers and current literature.

[717 Quantitative Genetics in Plant Breeding
Spring, even years. 3 credits. Prerequisites: Plant Breeding 603 and Statistics 601. S-U grades only. Not offered 1990–91.
T R 8:30–9:55. D. R. Viands, R. L. Plaisted.
Discussion of quantitative genetics to help make decisions for more efficient plant breeding. Specific topics include components of variance (estimated from mating designs), gene pool development, linkage, heritability, phenotypic and genotypic correlation coefficients, and theoretical gain from selection. During one period, plants in the greenhouse will be evaluated to provide data for computing quantitative genetic parameters.]

718 Breeding for Pest Resistance
Spring, alternate years beginning 1991.
3 credits. Prerequisites: BS 281 or PB 225, and PB 603 required. An introductory course in Plant Pathology and/or Entomology also highly recommended.
Lec, T R 10:10–11:30. M. A. Mutschler.
A multidisciplinary examination of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance, and the use of biochemical/physiological/molecular tools in pest resistance.

PLANT PATHOLOGY

W. E. Fry, chair; J. R. Aist, P. A. Arneson, S. V. Beer, G. C. Bergstrom, B. B. Brodie, A. R. Collmer, S. M. Gray, R. K. Horst, G. W. Hudler, H. W. Israel, R. P. Korf, J. W. Lorbeer, R. Loria, M. T. McGrath, M. G. Milgroom, E. B. Nelson, P. F. Palukaitis, W. A. Sinclair, S. A. Slack, H. D. Thurston, O. C. Yoder, M. Zaitlin, T. A. Zitter

201 Magical Mushrooms, Mischievous Molds
Spring. 2 credits. S-U optional.
Lecs, T R 11:15. G. W. Hudler.
A presentation of the fungi and their roles in nature and in shaping past and present civilizations. The historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals will be emphasized.

301 Introductory Plant Pathology
Fall. 4 credits. Prerequisites: Biological Sciences 101–102 and 103–104, or 105–106 or 109–110. Recommended: Biological Sciences 241 or equivalent.
Lecs, T R 11:15; lab, M T W or R 1:25–4:25 and one period weekly, scheduled at the convenience of the student.
W. A. Sinclair.
An introduction to the theory and practice of plant pathology with emphasis in lectures on principles that govern interactions of plants and pathogens and in laboratories on diagnostic criteria, life cycles of pathogens, and epidemiological phenomena and control. Specific aspects considered in detail include fungi, bacteria, nematodes, viruses, and mycoplasmas as plant pathogens; attack and resistance mechanisms; environmental influences; disease forecasting and loss assessment; development of resistant plants; and chemical and biological control.

309 Introductory Mycology
Fall. 3 credits. Prerequisite: a year of biology or equivalent. Concurrent registration in Plant Pathology 319 is recommended.
Lecs, T R 9:05–9:55; labs, R 1:25–4:25.
R. P. Korf.
An introduction to fungi, emphasizing biology, comparative morphology, and taxonomy.

319 Field Mycology
Fall. 1 or 2 credits. Prerequisite: CALS biology students, Plant Pathology 309 or equivalent; others by permission of instructor.
Lab, W 1:25–4:25 and 7:30–9:30 p.m.
R. P. Korf.
Study of mushrooms and other fungi on 7 field excursions followed by 7 evening labs devoted to identification and study of collections under the microscope. Emphasis on ecology, biology, and means of identification. The pore fungi (Polyporaceae) will be emphasized. Students electing 2 credits attend 12 additional labs to prepare special project. There are no lectures; grades will be determined on basis of laboratory final and, for 2 credits, also on special project report.

402 Plant Disease Control
Spring. 3 credits. Prerequisite: Plant Pathology 301 or equivalent.
Lecs, T R 11:15; lab and rec, T W 1:25–4:25. P. A. Arneson.
This course complements Plant Pathology 301 with an in-depth presentation of the principles and practices of plant disease control that builds on students' knowledge of diseases and their causal agents. General principles and concepts, illustrated by specific examples, are presented. Students write a term paper applying those principles to a specific disease-control problem. The laboratories provide practical experience in diagnosis and disease-control techniques.

[411 Plant Disease Diagnosis
Fall. 3 credits. For senior undergraduates specializing in plant pathology or pest management and for graduate students with a major or minor in plant pathology or plant protection. Limited to 20 students. Prerequisites: Plant Pathology 301 or equivalent and permission of instructor.
Lec, M 11:15; lab, M W 1:25–4:25.
G. W. Hudler. Not offered 1990–91.
A method for diagnosis of plant disease is presented with emphasis on contemporary laboratory techniques and effective use of the literature.]

443 Pathology and Entomology of Trees and Shrubs (also Entomology 443)
Fall. 5 credits. Prerequisites: Plant Pathology 301 and Entomology 241 or equivalents.
Lecs, M W F 10:10; labs, T R 1:25–4:25 or W F 1:25–4:25. Evening prelims.
W. T. Johnson, G. W. Hudler.
For students preparing for careers in horticulture, urban forestry, and pest management. Deals with the nature, diagnosis, assessment, and treatment of diseases and anthropod pests of trees and shrubs. Forest, shade, and ornamental plants are considered.

444 Integrated Pest Management (also Entomology 444)
Fall. 4 credits. Prerequisites: Biological Sciences 261, Entomology 212 or 241, and Plant Pathology 301 or their equivalents or permission of instructor.
Lecs, M W F 9:05; lab, M or W 1:25–4:25.
P. A. Arneson.
Lectures integrate the principles of pest control, ecology, and economics in the management of pest crop systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

497 Special Topics
Fall or spring. 1–5 credits. S-U grades optional.
Hours to be arranged. Staff.
An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

498 Teaching Experience
Fall or spring. 1–5 credits. S-U grades optional.
Hours to be arranged. Staff.
Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

499 Undergraduate Research
Fall or spring. 3–5 credits. S-U grades optional.
Hours to be arranged. Staff.
An opportunity for research experience under the direction of a faculty member.

642–661 Special Topics Series
Unless otherwise indicated, the following description applies to courses 642–661. Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only.
Hours to be arranged.
Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

642 Plant Disease Epidemiology
Fall.
T 12:20. M. G. Milgroom.

644 Ecology of Soil-Borne Pathogens
Fall.
M 4. E. B. Nelson.

645 Plant Virology
Fall.
F 12:20. S. M. Gray.

[646 Plant Nematology
Fall and spring. Not offered fall 1990.
W 12:20. B. B. Brodie.]

647 Bacterial Plant Diseases
Spring.
M 11:15. S. V. Beer.

[648 Molecular Plant Pathology
Fall and spring. Not offered fall 1990.
R 12:20. O. C. Yoder.]

[649 Mycology Conferences
Spring. 2 credits. Not offered 1990–91.
Lec, F 10:10; lab, F 1:25. R. P. Korf.
The lower fungi (phycomycetes).]

650 Diseases of Vegetable Crops
Fall.
W 4. J. W. Lorbeer, T. A. Zitter.

651 Diseases of Fruit-Tree Crops
Fall. For graduate students and advanced undergraduates with a particular interest in fruit. Autotutorial slide and tape sets.
Hours to be arranged. P. A. Arneson.
Covers the economic importance, causal agents, symptoms, disease cycle, and control measures for the major diseases of tree fruit in the Northeast.

652 Field Crop Pathology
Spring.
W 8. G. C. Bergstrom.

653 Dendropathology
Spring.
To be arranged. G. W. Hudler, W. A. Sinclair.

654 Diseases of Florist Crops
Spring.
F 12:20. R. K. Horst.

655 Plant Diseases in Tropical Agriculture
Spring
T 12:20. H. D. Thurston.

661 Diagnostic Lab Experience
Summer and fall. 2 credits.
T. A. Zitter.
For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students will work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnostician. Students may choose to work on a wide array of plant material or to concentrate on a particular commodity. Priority will be given to graduate students in plant pathology and plant protection.

681 Plant Pathology Seminar
Fall and spring. 1 credit. Required of all plant pathology majors. S-U grades only.
T 4:30–5:30. Staff.

701 Concepts of Plant Pathology: Organismal Aspects
Spring. 3 credits. For graduate students with majors or minors in plant pathology; others by permission. Prerequisites: Plant Pathology 301 or equivalent and permission of instructor.
Lecs, T R 9; lab-disc, R 2–4:25.
A. R. Collmer.
Concepts in host-pathogen relationships with emphasis on roles of molecules and cells in determining the outcome of an interaction. Genetic, molecular biological, physiological, and cell biological approaches to experimental analysis of exemplary host-pathogen systems will be considered. Historical perspectives and recent research will be reviewed and analyzed. Students prepare and review mock grant proposals.

702 Concepts of Plant Pathology: Population Aspects
Spring. 3 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: Plant Pathology 301 and permission of instructor.
Lec, T R 8; lab, T 2–4:25.
M. G. Milgroom.
Theory and concepts in epidemiology and population biology of plant diseases. Topics include: population dynamics of pathogens in time and space, interactions of pathogen and plant populations, disease in natural communities, and applications of theory and modeling to disease management. The laboratory period will be for discussions and exercises that illustrate concepts introduced in lectures.

705 Phytovirology
Spring. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: Plant Pathology 301 or equivalent. Offered alternate years.
Lec, T R 10:10. M. Zaitlin.
This course considers plant viruses and the diseases they cause. Consideration is given to virus structure and composition, classification, replication, effects on hosts, modes of transmission, and the relationships of these aspects to principles of diagnosis and control.

706 Phytonematology
Fall. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: Plant Pathology 301 or equivalent or permission of instructor.
Lec, R 11:15; lab, R 1:25–4:25. Staff.
Deals with morphology, anatomy, biology, physiology, ecology, detection and identification of plant pathogenic nematodes, evaluation of population data, interactions between nematodes and other plant pathogens, and methods of assessment of pathogenicity and plant damage.

707 Phytobacteriology
Fall. 2 credits. Prerequisites: general microbiology, lectures and laboratory; Introductory Plant Pathology.
Lec, W 9:05; lab, W 1:25–4:25. S. V. Beer.
A consideration of the prokaryotes that cause disease in plants and examples of the diseases they cause. The course emphasizes properties of bacterial pathogens that affect disease, methods for manipulation of the pathogens, and recent developments in phytobacteriology. The current state of knowledge of important phytopathogenic genera including their genetics and mechanisms of pathogenesis will be reviewed. Laboratory practice in isolation, inoculation, identification, genetics, and physiology is included.

709 Phytomycology
Spring. 2 credits. For graduate students with a major or minor in mycology or plant pathology; others by permission. Prerequisites: Plant Pathology 301 and 309 or equivalents, and permission of instructor.
Lec, F 1:25–2:30; lab, 2:30–4:30.
J. W. Lorbeer.
Provides basic information on the biology of plant pathogenic fungi with selected emphasis on the structure, ecology, genetics, life cycles, and disease cycles of representative genera and species.

[735 Advanced Plant Virology
Spring. 3 credits. Prerequisite: permission of instructors. Offered alternate years.
3 lecs, hours to be arranged.
P. Palukaitis, M. Zaitlin. Not offered 1990–91.
Topics in plant virology, with an emphasis placed on student discussion of current literature. Topics included are viral infection process, viral and viroid replication, viral movement, viral genes and their products, cross protection, detection of viruses, and the use of viruses as vectors for introducing genetic material into plants.]

738 Molecular Mechanisms of Pathogenesis
Fall. 2 credits. For graduate students with a special interest in molecular mechanisms of pathogenesis. Prerequisite: permission of instructor.
Hours to be arranged. O. C. Yoder and staff.
This course deals with the molecular properties of both microorganisms and higher plants that control the development of host-parasite relationships. Contemporary molecular hypotheses are related to genetic mechanisms of pathogenesis. Emphasis is placed on a critical evaluation of the data that are used to support each specific hypothesis.

[739 Advanced Mycology
Spring. 4 credits. Prerequisites: Plant Pathology 309 or equivalent, a course in genetics, and permission of instructor. Not offered 1990–91.
Lec, M 10:10; labs, M W 1:25–4:25, and an additional 3-hr. period to be arranged.
R. P. Korf.
A detailed study of the taxonomy, nomenclature, and biology of two major groups of fungi (rusts and fungi imperfecti).]

[756 Advanced Plant Nematology
Fall. 3 credits. For graduate students with a major in plant pathology and special interest in nematology. Prerequisite: permission of instructor. Offered alternate years. Not offered 1990–91.
Hours to be arranged. B. B. Brodie.]

797 Special Topics
Fall or spring. 1–5 credits. S-U grades optional.
Hours to be arranged. Staff.
An opportunity for independent study of a special topic.

799 Graduate Research
Fall or spring. 1–5 credits. S-U grades optional.
Hours to be arranged. Staff.

POMOLOGY: HORTICULTURAL SCIENCES

G. D. Blanpied, L. L. Creasy, A. N. Lakso, F. W. Liu, I. A. Merwin, G. H. Oberly, L. E. Powell, M. P. Pritts, W. C. Stiles

200 Introductory Pomology
Fall. 3 credits. S-U grades only for graduate students.
Lecs, T R 8; lab, T 2–4:25. One half-day field trip required. G. H. Oberly.
A study of the general principles and practices of fruit culture and their relation to the underlying sciences. Included are tree fruits, grapes, and small fruits. Topics covered include propagation, varieties, crop management, and growth and fruiting habits. Practical work is presented in grafting, pruning, site and soil selection, and planting.

[308 Tropical and Subtropical Fruits
Spring. 3 credits. S-U optional. Offered alternate years. Not offered 1990–91.
Lecs, M W 10:10; lab, R 1:30–4. F. W. Liu.
A study of economic fruits of the tropical and subtropical areas. The more important fruits such as citrus, banana, pineapple, coconut, mango, avocado, coffee, and cacao are studied more thoroughly. Numerous other less important fruits are covered briefly with the aid of color slides. Topics discussed include growth habit, climate requirement, cultural methods, handling and marketing, world distribution and trade, etc. The morphology and anatomy of plants and fruits of major species and the quality features of fresh and processed fruit products of many species including exotic ones, are studied in the laboratory.

415 Postharvest Physiology and Storage of Horticultural Crops
Fall. 3 credits. Prerequisite: one horticultural course or permission of instructor.
Lecs, M W 9:05; lab, W 1:30–4. F. W. Liu.
A study of principles of postharvest physiology, handling, and storage of horticultural crops, including fruits, vegetables, flowers, and ornamental crops. Major physiological processes such as transpiration, respiration, compositional changes, ethylene synthesis and action, maturation, ripening, and senescence of the crops are studied. Methods of harvesting and handling, including cleaning, grading, packing, precooling, waxing, sanitation, and transportation, are studied. Methods of storage, including common storage, underground storage, refrigerated storage, controlled atmosphere storage, modified atmosphere storage, and hypobaric storage, are also studied.

442 Small Fruits
Fall. 3 credits. Offered alternate years.
Lecs, M W 8; lab, M 2–4:25. M. P. Pritts.
A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Marketing and economics will be considered, and alternative production practices for both commercial and home gardeners will be discussed.

[444 Viticulture
Fall. 3 credits. Prerequisite: Horticultural Sciences 200 or permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, T R 9:05; lab, R 2–4:25; S field trips in early fall will replace several laboratory meetings. L. L. Creasy.
Grape growing, with emphasis on the viticulture of the Great Lakes region, is presented as a series of interrelated decisions on varieties, sites, vine management, and vine protection. Those decisions are based on ampelography, meteorology, soils, vine and grape anatomy and physiology, as well as protection of the vine and grapes from injuries, primarily from diseases and insects.]

445 Temperate Tree Fruits
Spring. 3 credits. Prerequisite: Horticultural Sciences 200. Offered alternate years.
Lecs, M W 8; lab, M 1:25–4:25. Staff.
A treatment of problems of concern to tree fruit growers, such as site selection, planting and pruning systems, water relations, cold hardiness, fruit growth, maturity, flowering, and protection from pests. Physiological and practical aspects are emphasized.

[450 Soil Management and Nutrition of Perennial Crops
Fall. 3 credits. Prerequisite: Horticultural Sciences 200 or permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, M W 8; lab, M 1:25–4:25.
W. C. Stiles.
Fundamentals of mineral nutrition and soil management for perennial horticultural crops. Mineral nutrition aspects deal with diagnostic techniques, interpretation of tissue and soil analyses, and nutrient requirements for optimizing crop performance. Soil management effects on crop performance, nutrient relationships, and interaction with other components of crop production systems are emphasized.]

470 Special Topics in Pomology
Spring. 3 credits. Open to undergraduates by permission.
Hours to be arranged. Staff.
Selected topics are considered with respect to the current literature, experimental techniques, or applied technologies. Topics change from one year to another and reflect the expertise and research interests of the professors who participate. Topics selected for each term will be announced several months before the term begins.

495 Undergraduate Seminar
Spring. 1 credit (may be taken twice for credit). Prerequisite: a course in pomology. S-U grades only.
Hours to be arranged. Staff.
Seminar topics and speakers selected and arranged by the students on subject areas related to pomology.

497 Independent Study in Pomology
Fall or spring. 1 or more credits: may be repeated for credit. S-U grades optional. Prerequisite: a student must satisfy the faculty member with whom he or she will work that his or her background warrants the choice of project. Undergraduates must attach to their course enrollment materials written permission from the faculty member who will supervise their work and grade their project.
Staff.
Individual or small-group study and special projects in pomology and related areas.

499 Undergraduate Research
Fall or spring. 2 or more credits. Prerequisite: a course in advanced pomology. S-U grades optional. Students must attach to their course enrollment materials written permission from the staff member who will supervise the work and assign the grade.
Staff.

500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1–6 credits. S-U grades optional.
Hours to be arranged. Staff.
A comprehensive project emphasizing the application of pomological principles and practices to professional pomology teaching, extension, and research programs. Required of Master of Professional Studies (Agriculture) candidates in the field.

601 Graduate Seminar
Fall. 1 credit. S-U grades only.
Hours to be arranged. Staff.
Reports by students on current research or literature in experimental pomology or related areas.

[610 Growth and Development of Woody Plants
Spring. 2 credits. Prerequisite: introductory plant physiology. Offered alternate years. Not offered 1990–91.
T R 9:05. L. E. Powell.
An advanced course dealing with physiological, morphological, and biochemical changes during development, beginning with the seed and advancing through the mature reproductive plant. Hormonal control mechanisms are emphasized.]

[620 Developing Effective Horticultural Research Programs
Spring. 2 credits. Undergraduates admitted by permission of instructor. S-U grades optional. Offered alternate years. Not offered 1990–91.
Hours to be arranged. A. N. Lakso.
A course emphasizing the development and management of career-long research programs in horticulture for Ph.D. students. Invited faculty and administrators will lead discussions on topics such as grants, funding, and personnel management. Each student will be required to prepare a term paper and make an oral presentation on a grant proposal related to horticulture.]

630 Current Topics in Postharvest Horticulture
Fall or spring. 1 credit. Prerequisite: permission of instructor.
Hours to be arranged. G. D. Blanpied.
Graduate students and staff report and discuss current topics in postharvest biology and technology of horticultural crops.

700 Teaching Experience
Fall or spring. 1 credit. S-U grades only. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
Designed to acquaint pomology graduate students with the methods and materials involved in teaching. The student participates in the design, delivery, and evaluation of segments of a departmental course.

800 Master's Thesis Research
Fall or spring. Credit to be arranged. S-U grades only.
Hours to be arranged. Staff.

900 Doctoral Thesis Research
Fall or spring. Credit to be arranged. S-U grades only.
Hours to be arranged. Staff.

Related Courses in Another Department

General Horticulture (Horticultural Sciences 102)

Quality of Horticultural Crops During Marketing (Horticultural Sciences 330)

Advanced Postharvest Physiology of Horticultural Crops (Horticultural Sciences 625)

POULTRY AND AVIAN SCIENCES

R. E. Austic, chair; P. W. Aho, R. C. Baker, S. E. Bloom, G. F. Combs, Jr., R. R. Dietert, P. A. Johnson, I. K. Keshavarz, H. G. Ketola, C. C. McCormick, J. A. Marsh, J. M. Regenstein, G. L. Rumsey, C. S. Winstead

The faculty members in the Department of Poultry and Avian Sciences are responsible for courses taught in several areas, including animal sciences, biological sciences, food science, and nutritional sciences. See the particular sections on those subjects for courses.

RURAL SOCIOLOGY

D. L. Poston, chair; D. L. Brown, F. H. Buttel, E. W. Coward, Jr., P. R. Eberts, E. C. Erickson, S. Feldman, J. D. Francis, C. G. Geisler, D. T. Gurak, M. M. Kritz, T. A. Hirschl, T. A. Lyson, P. McMichael, J. M. Stycos, F. W. Young

101 Introduction to Sociology
Fall or spring. 3 credits. (See Sociology 101 as an alternative.) May not be taken after RS 102.
Fall: Lecs, T R 10:10; disc and lab, M 9:05, 10:10, 12:20; R 11:15, 12:20; F 10:10, 12:20. E. C. Erickson and staff.
Spring: Lecs, T R 10:10; disc: M or F 9:05, 10:10, 11:15, 12:20, 1:25, or 2:30. T. A. Lyson.
A survey of major concepts and theories in sociology and an examination of major social forces and institutions shaping modern societies. The major topics include culture and socialization, social stratification and social class, age and gender inequality, economy and society, politics and the state, urbanization and demographic change, social change and international development, the rural-urban transition, and war and peace.

[102 Introduction to Rural Sociology
Spring. 3 credits. May not be taken after RS 101. S-U grades optional. Will not be offered 1990–91.
Lecs, T R 10:10; disc, M or F 9:05, 10:10, 11:15, 12:20, 1:25, or 2:30. T. A. Lyson and D. L. Poston.
This course provides a general introduction to the field of rural sociology. It is organized as a skills course as well as a survey course. The focus will be on giving students fundamental skills with which to decode the social world, including an understanding of the basic philosophical and theoretical underpinnings of the discipline and an exposure to the various types of data and methods sociologists use to describe and explain behavior. Special attention is paid to the agricultural sector and problems of rural development in the United States.]

[104 Proseminar: Issues and Problems in Rural Society
Fall. 1 credit. S-U grades only. Not offered 1990–91.
R 12:20–1:25. Staff.
Introduces students to subject matter of concern to both applied and academic rural sociologists. Focuses on such subjects as migrant workers, agribusiness, rural poverty, rural-to-urban migration, rural development, agricultural research and people, community development, and small farmers in the less-developed nations. These topics are explored through the use of films and group discussion.]

175 Issues in Contemporary American Indian Societies
Spring. 3 credits. S-U grades optional.
W 7 p.m. R. Venables.
American Indian people are confronted with a myriad of special circumstances that impinge upon their everyday lives. The purpose of this course is to present background to these issues and give perspective from an American Indian point of view. Early history and the postcontact period will be reviewed with an emphasis given to developments since 1890. Topics such as land claims, treaties, education, mineral and water rights, social problems, militant organizations, and civil rights will be covered, with guest lecturers and media presentations giving added impact.

201 Population Dynamics (also Sociology 205)
Spring. 3 credits. S-U grades optional. ALS students must register for this course as Rural Sociology 201.
T R 1:25–2:40. J. M. Stycos.
An introduction to population studies, which include the determinants and consequences of population change. The primary focus is on the influences of demographic dynamics on society and the economy, with emphasis on marriage, family formation, mortality, crime and deviance, migration, and marketing behavior.

205 Rural Sociology and International Development
Spring. 3 credits.
M W F 10:10. P. McMichael.
This course is concerned with global food security issues. While our primary focus is on the varying capacities for food production and supply in Third World regions, we shall be taking into consideration the role of metropolitan agencies and the changing role of the U.S. as the world's "breadbasket." We consider food systems comparatively, in terms of differences among world regions and between peasant agricultures and modern "industrial" agricultures. We examine the nature of peasant society and consider how traditional rural systems have responded to their exposure to external forces—such as the expansion of export agriculture, development agencies, local bureaucracies, the current "debt crisis," and technologies such as the Green Revolution. The focus will be on the changing social organization of food systems, and the implications for food security.

206 Gender and Society
Spring. 3 credits.
M W F 11:15. N. Glasgow.
Course will familiarize students with social and behavioral similarities/differences between females and males and the degree that biological, psychoanalytic, social psychological, and sociological perspectives help understand the differences. Objectives will be met through lectures, readings, films, participant observations, and personal experiences. Special attention given to gender role behavior in the U.S. and China.

208 Technology and Society
Fall. 3 credits.
M W F 10:10. C. G. Geisler.
The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or "appropriate" is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.

213 Social Indicators, Data Management, and Analysis
Fall. 3 credits.
Lecs, T R 12:20–1:35. P. R. Eberts.
A survey of definitions of social indicators and general principles of social indicators research will be illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, etc., based on census data, household surveys, and key-informant and other low-cost techniques, will be examined, using personal computers.

[242 American Indian Philosophies I: Power and World Views
Fall. 3 credits. Enrollment limited to 20 students. Not offered 1990–91.
T R 10:10–11:25. Staff.
This course is designed to facilitate an understanding of the world views of American Indians of the past and present. The goal is to provoke edifying discourse that will enable American Indian beliefs concerning the workings of the universe and the relationship of human beings to nature to be understood on their own terms.]

[243 American Indian Philosophies II: Native Voices
Spring. 3 credits. Enrollment limited to 20 students. Not offered 1990–91.
T R 10:10–11:25. Staff.
An exploration of the diverse expressions of philosophy to be found in the words of American Indians. Novels, political treatises, speeches, autobiographies, and other sources reflecting Indian attitudes on a variety of subjects will be examined for beauty and power of expression as well as to identify recurring themes.]

250 Farming as an Occupation
Spring. 1 credit.
R 12:20–1:25. E. C. Erickson.
The occupation of farming will be examined through such topics as how farm and family tasks are coordinated, the most important decisions in farming, how a woman gets established in farming, what determines what can be done in a farm operation, how farm people retire, what constitutes success in farming, and how farming differs from other occupations.

[301 Theories of Society (also Sociology 401)
Fall. 4 credits. Prerequisites: Rural Sociology 101 and 102, or Sociology 101. S-U grades optional. Not offered 1990–91.
T R 3:35–5:20. P. R. Eberts.
A seminar for juniors, seniors, and beginning graduate students, especially in rural sociology and sociology. A survey of major theoretical approaches to the study of society and social institutions, with emphasis on (1) the central concepts of the sociological tradition, (2) major classical theorists (Marx, Durkheim, Weber) and contemporary counterparts, and (3) application of the classical ideas in contemporary research. Applications of theories of society to current research and social problems will be stressed.]

324 Environment and Society
Fall. 3 credits.
M W F 12:20. F. H. Buttel.
Explores various sociological approaches to the study of society and its physical environment and analyzes major contemporary environmental issues from a sociological viewpoint. Among the major topics treated are world population growth, energy and environmental policy, the world food crisis, the limits to growth debate, the impacts of technological and social change in agriculture on environmental quality, global warming, sustainable development, genetic resources conservation, and topical deforestation.

[367 American Indian Tribal Governments
Fall. 3 credits. Not offered 1990–91.
W 7:30–9:55 p. m. Staff.
This course focuses on the structure of contemporary tribal governments and the ways in which those governments approach the issues confronting their constituents. The effects of European contact on traditional political organizations are detailed, as are the present-day relationships of tribal governments to federal and state governments.]

370 Comparative Issues in Social Stratification
Fall. 3 credits. Prerequisite: an introductory social science course.
T R 12:20–1:35. S. Feldman.
This course reviews both classicial and contemporary issues in the social stratification literature. Particular attention is given to two main themes: the changing configuration of the labor market and the contemporary debates on the "under class," the "middle class," and the "new class." Throughout the course attention is drawn to the importance of conceptual clarity, questions of measurement, and the changing salience of popular topics such as new social movements, the role of ideology and consciousness, and the role of gender, race, and ethnicity in assessments of inequality and hierarchy.

380 Independent Honors Research in Social Science
Fall and spring. 1–6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program.
Staff.
Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative, T. Hirschl.

[408 Human Fertility in Developing Nations
Fall. 3–4 credits. S-U grades optional. Not offered 1990–91.
R 3–5. J. M. Stycos.
A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.]

418 Population Policy
Fall. 3 credits. Prerequisite: Rural Sociology 201 or permission of instructor.
T R 2:30–3:45. J. M. Stycos.
The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to reduce fertility.

425 Gender Relations and Social Change
Fall. 3 credits.
W 7:30 p.m. S. Feldman.
This course offers comparative analyses of women's contribution to subsistence, domestic/household, and agricultural production in the context of changing labor market dynamics. The course also examines various forms of wage labor and self-employment as these characterize Third World and advanced industrialized countries. Drawing on feminist and sociological theories and methodological critiques the course emphasizes the configuration of various economic and social sectors and their realignments within a global economy. Changes in women's productive activity are examined as they occur in response to technology transfer, the transformation of the labor process and the labor market, the international division of labor, and changing family relations.

[430 Migration and Population Distribution
Fall. 3 credits. Not offered 1990–91.
T R 8–9:55. D. L. Brown.
This course analyzes the determinants and consequences of internal migration in urban and rural areas of the United States and other industrial nations. Economic and demographic inter-relationships will be emphasized as will implications of changes in population size and composition for labor supply, the demand for goods and services, and infrastructure. Public policy implications of the inter-relationships will be investigated.]

431 Social Demography of Minorities
Spring. 3 credits. S-U option.
T R 12:20–1:35. D. T. Gurak.
Ethnic conflict and accomodation is examined in diverse settings (societies and historical periods). Demographic indicators (such as residential segregation, marital patterns, mortality and fertility differentials, and occupational mobility) of underlying social conditions serve as the principal vehicle for evaluating the status of ethnic relations.

[436 Small Towns in Metropolitan Society: Changing Structures and Quality of Life
Spring. 2 or 3 credits. S-U grades optional. Prerequisite: a social science course. Not offered 1990–91.
T 3:35–5:20. P. R. Eberts.
Examination of recent social dynamics in small towns, including experiences of resurgence in attractiveness and a simultaneous transformation in small town character and quality of life. Analysis of data on personal computers is combined with theoretical explanations in exploring trends. Key analyses focus on causes and effects of new industrial and communication technologies, population migration, business locations, housing, family stresses, human service networks, educational attainment, local politics, and personal well-being, happiness, and satisfaction.]

437 Aging: Issues in the 1990s
Fall. 3 credits. Prerequisite: RS 101 or its equivalent.
M W F 11:15. N. Glasgow.
An analysis of the "graying" of America's and the world's population and responses of the public and private sectors to the demographic revolution. Explores major societal issues relating to aging, including intergenerational equity; age- versus need-based social programs; opportunity structures and resourceful aging. Examines the interplay between basic and applied knowledge in social gerontology.

438 Social Demography
Fall. 3 credits.
T R 11:15–12:30. M. M. Kritz.
A survey of the methods, theories, and problems of contemporary demography. Special attention is directed to the social determinants and consequences of fertility, mortality, and migration. The populations of both developed and developing areas are examined.

439 Social and Demographic Changes in Asia
Spring. 3 credits. Prerequisite: Rural Sociology 201.
W 7:30 p.m. D. L. Poston.
The course will be devoted to demographic and social change in Asia, with special attention to China (PRC & ROC), India, Korea, and Thailand. The course will survey population trends, including fertility, mortality, marriage, migration, and urbanization in Asia, with special attention directed to the above four countries. Demographic and sociological theories and methods will be introduced to understand contemporary studies of demographic change in these four countries in particular and in Asia in general. A basic course in statistics is recommended.

440 The Social Impact of Rapid Resource Development
Spring. 3 credits.
T R 12:20–1:35. C. G. Geisler.
The seminar defines social-impact assessment (SIA), places it in the context of contemporary theories of development, and identifies alternative SIA models. Focus is on the SIA experiences of various groups and constituencies, including indigenous people at home and abroad. Students will learn certain practical research skills needed in doing SIA and will participate in an SIA simulation exercise.

442 American Indian Philosophies: Selected Topics
Spring. 3 credits. S-U grades optional. Prerequisite: Rural Sociology or Anthropology 242 or 243, or Rural Sociology 175, or ALS 100, or permission of instructor.
Lec. T 1:25–4:25. R. Venables.
The course provides an opportunity for students to pursue topics of interest from American Indian Philosophies I and II or other introductory American Indian studies courses in greater depth. The specific topics to be investigated will be selected by the students in consultation with the instructor prior to the beginning of the semester.

[475 Global Patterns of International Migration
Spring. 3 credits. Prerequisite: RS 101 or RS 102 or RS 103. Not offered 1990–91.
M W F 9:05–9:55. M. M. Kritz.
A comparative approach will be taken in looking at international migration patterns in different countries and regions, assessing how migration flows are changing in an increasingly interdependent world. Various types of international migration (e.g. permanent, refugee, labor, illegal, brain drain, etc.) will be looked at from the perspective of both the receiving and sending countries and their policy, economic, and social correlates reviewed.]

490 Society and Survival
Fall. 3 credits. Prerequisite: introductory sociology course or permission of instructor.
T R 2:30–3:45. D. T. Gurak.
Course surveys existing theories, methodological techniques, and research results relating to how social, economic, and cultural structures and processes affect survival chances in diverse societies. A comparative framework is presented and the utility of existing knowledge for policy-related applications in different societies is assessed. Attention is given to the problems associated with imputing causality in morbidity and mortality data.

[492 Contemporary Issues Seminars: Developments in the Pacific Rim
Fall. 1–2 credits. Not offered 1990–91.
T 2:30–3:30. P. McMichael.
Pacific Rim dynamics challenge U.S. supremacy, Western conceptions of modernization, and "Third World" unity. We relate these trends to regional political, economic, and cultural forces, including the Japanese model, the "Newly Industrializing Countries" (e.g., South Korea, Taiwan), the "third tier" countries (e.g., Indonesia, the Philippines), and emerging Chinese markets.]

495 Social and Demographic Change in Sub-Saharan Africa
Fall. 3 credits.
T R 8:40–9:55. M. M. Kritz.
The 47 countries of sub-Saharan Africa are experiencing rapid social change but serious economic problems. This course will examine these trends and consider their implication for demographic change. Both the traditional structures and the modernizing forces shaping sub-Saharan African development will be examined and variations stemming from ethnic and colonial influences assessed. Community, family, and gender systems, education, urbanization, and demographic processes will be reviewed, as well as the role of state policy in affecting population change.

497 Informal Study
Fall or spring. 3 credits (may be repeated for credit). Undergraduates must attach to their course enrollment materials written permission from the faculty member who will supervise the work and assign the grade. S-U grades optional.
Staff.
Informal study may include a reading course, research experience, or public service experience.

603 Classical Sociological Theory
Fall. 4 credits. S-U grades optional. Prerequisites: open to graduate students and undergraduates with permission of instructor.
T R 3:35–5:30. F. H. Buttel.
An overview of the main streams of classical sociological thought, focusing on the work of Marx, Durkheim, and Weber. Emphasis is placed on the concepts, method, and ontological posture of the three major classical sociological theorists, on rival interpretations of their theoretical systems within the contemporary sociological community, and on the implications of classical thought for contemporary development theories.

606 Contemporary Sociological Theories of Development
Fall. 3 credits.
M W F 11:15. F. W. Young.
A survey of theory, empirical studies, and policy prescriptions as applied to communities and regions, especially those in less-developed countries. Social ecology, the Weberian tradition, dependency/political economy, and structural theory are compared.

610 Population and Development: Developed Nations
Fall. 3 credits.
W 1:25–4:25. D. L. Brown.
Investigates interrelationships between demographic, social, and economic changes in developed nations past, present, and future. Particular focus is on relationships between demographic processes (fertility, mortality, internal migration, and immigration) and such issues as national and regional economic growth; labor force and labor market structure and change; income distribution and poverty; design, administration, and finance of social welfare policy; national resource use and availability.

618 Research Design
Fall. 4 credits. Prerequisite: a statistics course.
T R 12:20–2:20. J. D. Francis.
First of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, and problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with an introduction to factor analysis. Students apply principles to development of several common types of scales. Computers will be used extensively.

619 Research Design II
Spring. 4 credits. Prerequisite: an introductory methods course and a statistics course.
T R 1:25–3:30. J. D. Francis.
The second part of the two-semester sequence in introductory graduate methods deals with principles of design, especially nonexperimental designs, with emphasis on an intermediate-level treatment of the following topics: regression, analysis of variance, analysis of covariance, and causal models. Special emphasis is given to use of categorical variables in regression. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.

[640 Community and Changing Property Institutions
Fall. 3 credits. Not offered 1990–91.
W 7:30–10:30. C. C. Geisler.
The seminar acquaints students with the evolution of property rights, beginning in antiquity, and with the close association between changing property forms and community types as recognized by both classical and contemporary sociologists. Readings will cover land-use regulation and property rights, common property issues and the land ethic.]

[641 Politics and Economics of Rural and Regional Development
Fall. 3 credits. Limited to upperclass or graduate students. S-U grades optional. Not offered 1990–91.
M 12:20–2:50. T. A. Lyson.
A survey of social, political, and economic factors in regional development. Theories and case studies from demography, human ecology, social organization, and planning are used to examine the emergence or retardation of regions and their implications for contemporary developing and developed societies.]

[642 Regional Systems and Policy Analysis
Spring. 3 credits. Prerequisites: a social or economic theory course and statistics, or permission of instructor. S-U grades optional. Not offered 1990–91.
Lec, F 2:20–4:30; disc to be arranged.
P. R. Eberts.
A systems analysis of theoretical and research problems arising from localities' changing social organization. Major theories are examined with attention to their compatibility with modern policy analytic techniques. Topics covered center on the interplay of economic, social-class, and political activities in localities.]

[643 Land Reform Old and New
Spring. 3 credits. Not offered 1990–91.
R 2:30–5. C. C. Geisler.
Land reform continues to be a major cornerstone of development planning. Between 1980 and 2000 the number of landless and near-landless in the Third World will approach one billion. Though land reform is a principal source of hope for the landless, its meanings are many and its models are controversial. The seminar acquaints students with land reform in antiquity as well as in contemporary settings (e.g., Japan, the Philippines, Israel, India, Brazil, Mexico, the Soviet Union, and the United States). Perennial issues of equity, efficiency, and sustainability will be discussed in each of these case study areas.]

[645 Agrarian Structure and Rural Transformation
Spring. 3 credits. Not offered 1990–91.
T R 10:10–11:40. S. Feldman.
This advanced seminar examines theories of rural stratification in agricultural and advanced industrial societies, highlighting the classical and contemporary debates surrounding the relationships between agricultural and industrial productive relations. Theories of agrarian change are also examined, and discussion will draw on the role of state policy and practice in shaping agrarian relations.]

[651 Sociology of Agriculture
Fall. 3 credits. Prerequisite: graduate standing. Not offered 1990–91.
M 7:30–10:30 p.m. F. Buttel.
An analysis of the structural transformations of agriculture in advanced industrial countries during the nineteenth and twentieth centuries, particularly in terms of the role of the state and technical change in agricultural development. This course emphasizes the historical roots of the socioeconomic problems of contemporary agriculture and examines the prospects for, and limitations of, various strategies for ameliorating those problems.]

[655 Advanced Techniques of Demographic Analysis
Spring. 3 credits. Prerequisites: RS 481 or CEH 438, graduate standing or permission of instructor. Not offered 1990–91.
T R 11:15–12:30. D. T. Gurak.
An examination of analytical techniques that assumes a basic knowledge of demographic data and research methodology. Life tables, demographic estimates with incomplete data, survey techniques to supplement inadequate vital registration systems, and multivariate procedures are among the topics to be covered.]

660 Social Analysis of Ecological Change
Fall. 3 credits. Prerequisite: graduate standing.
M 7:30 p.m. P. Taylor.
Scientific studies of ecological and social processes together with the analysis of those studies by historians, sociologists, and anthropologists. Topics include cybernetics, systems ecology, the tragedy of the Commons, *Limits to Growth*, ecological degradation, political ecology, global models, conservation biology, and sustainable development.

[675 The Political Economy of Policy and Planning in Third World States
Fall. 3 credits. Not offered 1990–91.
T R 10:10–11:25. S. Feldman.
This course examines the structure and formation of national development priorities in Third World countries in the context of the internationalization and politicization of policy and planning agendas. The course draws on themes in development theory and theories of the state and social organization and is comparative in focus. Major topics considered are the role of international financial institutions and multinational corporations in shaping national policy, national fiscal and administrative crises, forms of colonial and authoritarian regimes, and the state-class relation in shaping policy and planning outcomes.]

[690 Human Ecological Theory
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1990–91.
W 1:25–3:55. D. L. Poston.
This course presents and reviews the theoretical perspective and tradition of human ecology in sociology, beginning with Durkheim, through the Chicago school (McKenzie, Park and Burgess), to the neo-orthodox positions of Hawley, Duncan, Schnore, Gibbs, Martin, and others. Similarities and differences between the ecological paradigm and Marxian theory are presented. Sociological and demographic research incorporating ecological theory is analyzed and reviewed. Employment of ecological approaches in other disciplines (principally anthropology and geography) is discussed. Application of the ecological orientation to social and economic development is presented.]

[706 State, Economy, and Society
Fall. 3 credits. Recommended: one graduate-level course in classical sociological theory. Not offered 1990–91.
W 1:25–4:25. P. McMichael.
Reviews major issues concerning the relations between political and economic institutions, including the political-economic methodologies of the classical sociological theorists, the instrumentalist-structuralist debate on the nature of the state, theories of crisis in advanced capitalism, and the controversies among theorists of unequal exchange, dependency, and imperialism in the world system.]

715 Comparative Research Methods
Fall. 3 credits.
M 12:20–2:50. T. A. Lyson.
This seminar focuses on the comparative method in the social sciences. Topics include cross-national and cross-regional research design and an analysis of the comparative case study approach. Illustrations of the comparative research approach will cover a range of data types and problems.

[718 Multidimensional Measurement and Classification
Fall. 4 credits. Prerequisite: previous course work in scaling and statistics. Not offered 1990–91.
T R 1:25–3:30. J. D. Francis.
An advanced course in measurement and scaling, building from work by Thurstone, Guttman, and Coombs to multidimensional measurements. Topics include philosophy of factor analysis, factor analytic models, factoring design, and comparison with factor analytic models. Cluster analysis, multidimensional scaling, and discriminate analyses are the other major topics discussed. As matrix algebra is an integral part of these procedures, class time is devoted to that topic. Computers are used to analyze fit to models.]

[719 Regression and Path Analysis
Spring. 4 credits. Prerequisites: two courses in statistics and one in methods. Not offered 1990–91.
T R 1:25–3:30. J. D. Francis.
The first part of the course reviews multiple regression theory and procedures, after which extensions of those models to categorical data are discussed. Consideration is given to violations of assumptions and their effects. Then more-advanced regression concepts and estimation techniques are discussed. The middle third of the course deals with logit, probit, and log linear models. The last part deals with recursive and nonrecursive path models. Time-series analysis is the last topic discussed. Computerized laboratories are an integral part of the course.]

721 Ecological Perspectives on Social Change
Spring. 3 credits.
M 12:20–2:50. C. C. Geisler and F. H. Buttel.
Reviews major theoretical traditions in human ecology, ecological anthropology, and environmental sociology and applies these perspectives to a range of public policy and development problems in both developed and developing country settings. Of particular interest will be the contribution of each perspective to the resolution of conflicts arising between agroecosystems and natural ecosystems and the pursuit of sustainable development.

723 Social Movements in Agrarian Society
Spring. 3 credits.
W 1:25–4. F. W. Young.
The seminar moves from a critical review of current explanatory formats (resource-mobilization, political economy, structuralist) to a research practicum focused on eth-noregional movements, illustrating the possibilities of comparative research based on descriptive accounts. Those movements are associated with agricultural and industrial change, as well as shifts in the regional ethnic/class system.

730 Issues in the Sociology of Development
Spring. 3 credits. S-U grades optional. Prerequisite: one graduate course in sociological theory. Offered alternate years.
W 1:25–4:25. P. McMichael.
This seminar examines emerging substantive issues in the sociology of development. The goal is twofold: (1) to analyze contemporary Third World trends (e.g., in development policy, agrarian reform, industrialization, state-building, food security), and world systemic trends influencing Third World development possibilities; and (2) to re-evaluate development theories in the light of current transformations.

[741 Community Development and Local Control
Spring. 3 credits. Not offered 1990–91.
W 1:30–4:30. C. C. Geisler.
Theories of community growth and decline and the current debate over the place of local control in community development in general are considered. Salient themes include the role of neopopulism in community development, changing institutions of property as community development occurs, and changing definitions of community.]

751 Applications of Sociology to Development Programs
Spring. 3 credits.
W F 10:10. E. C. Erickson.
Strategies of change and the measurement of change at national, regional, community, and institutional levels are reviewed. Illustrative topics to be covered are indices of development such as GNP, social welfare, urban hierarchies and evaluation of programs, uses of baseline studies, etc.

754 Sociotechnical Aspects of Irrigation (also Agricultural Economics 754, Agricultural and Biological Engineering 754, and Government 644)
Spring. 2–3 credits. S-U grades optional.
Hours to be arranged. W. Coward, R. Barker, M. Walter, N. Uphoff.
Examines irrigated agriculture and its relation to agricultural development. Emphasis on social processes within irrigation systems and interactions with the social setting, including political and administrative aspects. Provides an opportunity to examine systematically the institutional and organizational policy issues associated with the design and operation of systems of irrigated agriculture in developing countries.

771 Special Seminar
Fall or spring. Credit to be arranged. Limited to graduate students; others by permission of instructor.

791 Teaching Experience
Fall or spring. 1–3 credits. Limited to graduate students. S-U grades only.
Staff.
Participation in the ongoing teaching program of the department.

792 Public Service Experience
Fall or spring. Credit to be arranged. Limited to graduate students. S-U grades optional.
Staff.
Participation in the ongoing public service activities of the department.

871–874 Informal Study
Fall or spring. Credit to be arranged. Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional.

871 Rural Sociology

872 Development Sociology

873 Organization Behavior and Social Action

874 Methods of Sociological Research

881 Research
Fall or spring. Credit to be arranged. Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional.

SOIL, CROP, AND ATMOSPHERIC SCIENCES

R. J. Wagenet, chair; M. Alexander, P. C. Baveye, D. R. Bouldin, R. B. Bryant, J. H. Cherney, S. J. Colucci, W. J. Cox, S. D. DeGloria, J. D. DiTomaso, J. M. Duxbury, G. W. Fick, D. L. Grunes, R. R. Hahn, J. L. Hutson, S. D. Klausner, W. W. Knapp, L. V. Kochian, T. A. LaRue, A. C. Leopold, D. L. Linscott, R. F. Lucey, M. B. McBride, J. Mt. Pleasant, R. L. Obendorf, W. D. Pardee, J. H. Peverly, W. R. Philipson, W. S. Reid, S. J. Riha, T. W. Scott, T. L. Setter, P. L. Steponkus, H. M. van Es, A. Van Wambeke, W. J. Waltman, R. M. Welch, D. S. Wilks, M. W. Wysocki, R. W. Zobel

Courses by Subject

Atmospheric Science: 131, 232, 250, 334, 351, 353, 354, 435, 437, 441–442, 447, 452, 692, 791, 859, 959

Crop Science: 311, 312, 314, 315, 317, 608, 610, 611, 612, 613, 614, 642, 690, 691, 829, 929

Remote Sensing: 461, 660, 662

Soil Science: 260, 321, 362, 363, 364, 372, 373, 398, 385, 465, 471, 473, 483, 663, 666, 667, 669, 675, 681, 693, 771, 774, 889, 989

General Courses

190 Food and Fiber Production: Possibilities and Perils
Spring. 2 credits. Limited to 40 students. S-U grades optional.
Lec, T 9:05–9:55; labs, R 9:05–11 or R 1:25–3:20. T. W. Scott, D. S. Wilks, G. W. Fick.
Crops, climate, and soil are elements of the system that supports civilization. By developing agriculture, people increased their control over crop production. A continual upward trend in population creates the need to explore the limitations of our resources and technology. This course acquaints the student with some important features of crops, climate, soil, and their interactions. The detrimental effects of present agricultural practices on the environment and some proposed solutions will be considered. Laboratory exercises will provide hands-on experience with soil and plant materials, meteorological instruments, and soil resource information systems.

497 Special Topics in Soil, Crop, and Atmospheric Sciences
Fall or spring. 1–6 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the staff member who will supervise the work and assign the grade.
Hours to be arranged. Staff.
The topics in soil science or crop science or atmospheric sciences are arranged at the beginning of the term for individual study or for group discussions.

498 Teaching Experience in Soil Science, Crop Science, and Atmospheric Sciences
Fall or spring. 1–5 credits. S-U grades optional.
Teaching experience in soil science, crop science, or atmospheric sciences is obtained by assisting in the instruction of a departmental course.

499 Undergraduate Research
Fall or spring. Credit to be arranged. Written permission from the staff member who will supervise the work and assign the grade must be attached to course enrollment material.
Hours to be arranged. Staff.
Independent research on current problems selected from any phase of crop science, atmospheric science, or soil science.

Atmospheric Science

131 Basic Principles of Meteorology
Fall. 3 credits. Limited to 75 students.
Lecs, T R 11:15; lab, T W or R 1:25–4:25. M. W. Wysocki.
A simplified treatment of the structure of the atmosphere: heat balance of the earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

[232 Climatology
Spring. 3 credits. Prerequisite: SCAS 131. Offered alternate years. Not offered 1990–91. Will be offered spring 1992.
Lecs M W F 11:15. M. W. Wysocki.
The first part of the course is devoted to the description of world climates in terms of the global distribution of radiation, temperature, pressure, wind, precipitation, and air masses. The second part of the course relates climates and climatic anomalies to planetary, regional, and local circulations.]

250 Meteorological Observations and Instruments
Spring. 3 credits. Prerequisite: SCAS 131.
Lecs, M W 12:20; lab, R 1:25–3:20. M. W. Wysocki.
Methods and principles of meteorological measurements and observations, including surface, free-air, and remote systems. Instrument siting, mounting, and protection. Instrument response characteristics, calibration, and standardization. Recorders and data-logging systems. Laboratory exercises in observation and data analysis. Intended to serve as preparation for Observers Examination. Lab fee, $25.

334 Agricultural Meteorology
Spring. 3 credits. Recommended: a course in physics.
T R 10:10–11:25. D. S. Wilks.
An introductory course in microclimatology. The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground; and the interplay between physical processes of the atmosphere, plant canopies, and soil are examined. Moisture relationships in the atmosphere-soil-plant continuum, the effects of environmental modification, and the bioclimatic requirements of plants.

351 Synoptic Meteorology I
Fall. 3 credits. Prerequisites: SCAS 131 and one year of calculus.
Lecs, T R 9:05; lab, M 1:25–3:20. S. J. Colucci.
An introduction to methods and principles of weather forecasting and analysis, including weather data plotting and analysis, interpretation of radar and satellite imagery and National Meteorological Center forecast guidance products, and description of the structure and behavior of weather systems.

353 Forecasting and Dynamics Lab I
Fall. 2 credits. Prerequisites: SCAS 131 and concurrent registration in SCAS 441.
Lec, T 12:20; lab, F 1:25–3:20. M. W. Wysocki.
Weather briefings by the instructor based upon real-time operational guidance. Computer tutorials in thermodynamics, including sounding diagrams, stability indices, and static energy terms.

354 Forecasting and Dynamics Lab II
Spring. 2 credits. Prerequisites: SCAS 353 and concurrent registration in SCAS 442.
Lec, T 12:20; lab, F 1:25–3:20. M. W. Wysocki.
Weather discussions prepared by students. Computer tutorials in hydrodynamics, including vorticity and divergence computation, geostrophic and thermal wind concepts, and Richardson, Reynolds, and Froude numbers.

435 Statistical Methods in Meteorology
Fall. 3 credits. Prerequisite: an introductory course in statistics (e.g., Statistics 215 or Agricultural Economics 310 and Calculus). Offered alternate years.
T R 10:10–11:25. D. S. Wilks.
Statistical methods used in climatology operational weather forecasting and selected meteorological research applications. Some statistical characteristics of meteorological data, including probability distributions, intercorrelations, and persistence. Operational forecasts derived from multiple regression models, including the MOS system. Forecast verification techniques and scoring rules. Time series analysis, Eofs, and other research topics as time permits.

[437 Agrometeorological Decision Analysis
Fall. 3 credits. Prerequisite: An introductory course in statistics (e.g., Agricultural Economics 310 or Statistics 215). Offered alternate years. Not offered 1990–91.
T R 10:10–11:25. D. S. Wilks.
Application of Statistical Decision Analysis to weather-sensitive agricultural decision problems. Characteristics of categorical and probabilistic weather forecasts, incorporation of forecast information into the decision problem, selection of optimal strategies, forecast value in relation to forecast quality, effects of the decision problem, selection of optimal strategies, forecast value in relation to forecast quality, effects of the decision maker's attitude toward risk, and static vs. dynamic decision-making problems.]

441–442 Theoretical Meteorology I and II
441, fall; 442, spring. 3 credits each semester. Prerequisites: a year each of calculus and physics.
M W F 10:10. W. W. Knapp.
Fall semester topics include thermodynamics of dry air, water vapor, and moist air, and concepts of hydrostatics and stability. Topics considered in the spring term include meteorological coordinate systems, variation of wind and pressure fields in the vertical, winds in the planetary boundary layer, surfaces of discontinuity, mechanisms of pressure change, and vorticity and circulation.

447 Physical Meteorology
Fall. 3 credits. Prerequisites: a year each of calculus and physics. Offered alternate years.
M W F 12:20. W. W. Knapp.
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.

452 Synoptic Meteorology II
Spring. 3 credits. Prerequisites: SCAS 351, 441, and 442.
Lecs, T R 9:05; lab, M 1:25–3:20.
S. J. Colucci.
Application of principles of theoretical meteorology to the diagnosis and prediction of weather systems such as mid-latitude cyclones, anticyclones and fronts, tropical cyclones, thunderstorms and related phenomena, and lake-effect snow squalls.

692 Special Topics in Atmospheric Sciences
Fall or spring. 1–6 credits. S-U grades optional.
Hours to be arranged. Staff.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

791 Meteorology Seminar
Fall or spring. Prerequisite: permission of instructor.
Hours to be announced. Staff.
Subjects such as weather modification, paleoclimatology, and atmospheric pollution.

859 Master's Level Thesis Research in Meteorology
Fall or spring. Credit by arrangement. Limited to students in the graduate field. S-U grades optional.
Hours by arrangement.

959 Doctoral-Level Thesis Research in Meteorology
Fall or spring. Credit by arrangement. Limited to students in the graduate field. S-U grades optional.
Hours by arrangement.

Crop Science

[311 Grain Crops
Fall. 4 credits. Prerequisite: SCAS 260 or Biological Sciences 241. Not offered 1990–91.
Lecs, M W F 10:10; lab, M or T 1:25–4:25. 1 or 2 field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf.
Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, liming and mineral nutrition, weed control, cropping sequences, management systems, and crop improvement are considered. Grain, protein, fiber, and sugar crops are emphasized.]

312 Forage Crops
Spring. 4 credits. Prerequisites: SCAS 260 or Biological Sciences 241 or equivalent. Recommended: Animal Science 212.
Lecs, M W F 11:15; lab, M or T 1:25–4:25. G. W. Fick
The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

[314 Production of Tropical Crops
Spring. 3 credits. Prerequisite: a course in crop production. Not offered 1990–91.
Lecs, M W F 10:10. Staff.
An introduction to the characteristics and culture of the principal food staple crops of the tropics and subtropics and of some of the crops grown for export. Vegetables and fruits are not emphasized.]

315 Weed Science
Fall. 3 credits. Prerequisite: introductory course in biology or botany.
Lecs, T R 9:05; lab, M, T, or W 2–4:25. J. M. DiTomaso.
Principles of weed science are examined. Emphasis is on (a) weed ecology, (b) chemistry of herbicides in relation to effects on the environment and plant growth, and (c) control of weeds in crops. Laboratory covers weed identification and ecology, herbicide selectivity, symptomology, and behavior in soil.

[317 Seed Science and Technology
Fall. 3 credits. Prerequisite: Biological Sciences 241 or equivalent. Offered alternate years. Not offered 1990–91.
Lecs, T R 11:15; lab R 1:25–4:25; 2 all-day field trips will be scheduled during the semester. A. G. Taylor, Geneva Experiment Station (Ithaca contact, R. L. Obendorf).
The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds.]

608 Water Status in Plants and Soils
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years.
Lec, 1 hour to be arranged; lab, R 1:25–4:25 or as arranged. T. L. Setter.
Techniques for field appraisal of the status of water in plants and soil, including methods used in evapotranspiration studies.

610 Physiology of Environmental Stresses
Spring. 3 credits. Prerequisite: Biological Sciences 242 or 341.
Lecs, T R 10:10–11:25. P. L. Steponkus.
A study of the responses of plants to environmental stresses, including chilling, freezing, high temperature, and drought. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

611 Crop Simulation Modeling
Fall. 3 credits. Prerequisite: Biological Sciences 242 or 341. Recommended: computer programming experience. Offered alternate years.
M W F 11:15. G. W. Fick.
A study of existing crop models is followed by development and refinement of programs representing students' work. Emphasis is on quantitative formulation and testing of complex hypotheses related to crop growth. Carbon exchange, transpiration, microclimate, soil water supply, root functions, and dry-matter distribution in growing crops are covered.

612 Seed Physiology
Spring. 3 credits. Prerequisite: plant physiology.
T R 8:30–9:55. R. L. Obendorf.
Morphology, physiology, and biochemistry of cereal, legume, and oil-seed formation, composition, storage, and germination. Emphasis is on the deposition of seed reserves during seed formation, stabilization of reserves during storage, and mobilization of reserves during germination. Topics range from on-farm problems to molecular mechanisms.

613 Physiology and Ecology of Yield
Spring. 3 credits. Prerequisite: plant physiology.
M W F 12:20. T. L. Setter.
A study of the constraints on crop productivity from a physiological perspective. Influence of environment and genetics on the assimilation, translocation, and partitioning of carbon and nitrogen during crop ontogeny. Emphasis on growth processes of vegetative plant organs.

614 Advances in Weed Science
Spring. 3 credits. Prerequisite: SCAS 315 or equivalent. Offered alternate years. Offered 1990–91.
Lec and labs to be arranged.
J. M. DiTomaso.
In-depth examination of the biology and ecology of weed-crop interactions and herbicide behavior in soils and plants. Topics include a detailed understanding of herbicide mode of action, selectivity, resistance, and soil persistence. Important herbicide families will be emphasized, particularly those in current use. Cultural and biological weed control methods, herbicide-stress interactions, groundwater contamination, and public perception of pesticides will also be discussed.

642 Plant Mineral Nutrition (also Biological Sciences 642)
Spring. 3 credits. Prerequisite: Biological Sciences 341 or equivalent.
Lecs, M W F 10:10–11. L. V. Kochian, R. M. Welch.
A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics will include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., salinity). Specific mineral elements will be emphasized to illustrate the above topics.

690 Root-Soil Interactions
Fall or spring. 1–2 credits. S-U grades optional.
Hours to be arranged. R. W. Zobel.
A topic dealing with root-soil interaction will be selected during the first meeting of the term. Students will prepare one or two seminars based on published work on the topic. Possible topics include root genetics, root morphology, conservation tillage, and soil temperature.

691 Special Topics in Crop Science
Fall or spring. 1–6 credits. S-U grades optional.
Hours to be arranged. R. Radulovich.
Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered will depend on staff and student interests.

829 Master's-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement. Limited to students in the graduate field. S-U grades optional.
Hours by arrangement.

929 Doctoral-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement. Limited to students in the graduate field. S-U grades optional. Hours by arrangement.

Remote Sensing

461 Remote Sensing: Environmental Applications (also Civil and Environmental Engineering 461)
Spring. 3 credits. Prerequisite: permission of instructor.
Lecs, T R 10:10; lab, T 2:30–4:25 (a second lab sec will be scheduled if more than 15 students register).
W. R. Philipson.
A survey of how remote sensing is applied in various environmental disciplines. Laboratory emphasis is on using aircraft and satellite imagery for inventorying and monitoring surface features in engineering, planning, agriculture, and natural resource assessments.

660 Remote Sensing Fundamentals (also Civil and Environmental Engineering 610)
Fall. 3 credits. Prerequisite: permission of instructor.
Lecs, T R 10:10; lab, T 2:30–4:25.
W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

662 Seminar in Remote Sensing (also Civil and Environmental Engineering 619)
Spring. 1 credit. S-U grades only.
W 4:30. W. R. Philipson.
Lectures on current developments in assessing earth resources or the environment. Each week a different topic on remote sensing or geographic information systems is presented by specialists from government, industry, Cornell, or other research or academic institutions.

Soil Science

260 Introduction to Soil Science
Spring. 4 credits. Prerequisite: Chemistry 103, 207 or 215. S-U grades optional.
Lecs, M W F 9:05; lab, M T W or R 1:25.
M. B. McBride.
A comprehensive introduction to the field of soil science, with emphasis on scientific principles and their application to solving soil management problems. The laboratory exercises stress quantitative measurement of soil properties.

321 Soil and Water Management
Spring. 2 credits. Prerequisites: SCAS 190 or 260. Concurrent registration in Agricultural and Biological Engineering 321 required. S-U grades optional.
Lec, M W 9:05; disc, M 1:25–4:25.
T. W. Scott, M. F. Walter.
An interdisciplinary course intended to introduce students to the general principles of soil and water interaction and to the effects of human intervention in these processes. Aspects of soil and water management, including hydrology, soil erosion, irrigation, drainage, and water quality are examined. Case studies from both the United States and the tropics are used to illustrate basic principles.

362 Soil Morphology
Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors.
R 1:25–4:25; all-day field trip required.
R. B. Bryant, W. J. Waltman.
The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

363 Intermediate Soil Science: Genesis, Classification, and Physics
Fall. 4 credits. Prerequisite: SCAS 260.
Lecs, M W F 10:10; lab, W 1:25–4:25.
One all-day field trip is required.
R. B. Bryant and P. Baveye.
Factors and processes of soil formation. Principles of field identification, classification, survey, and interpretation. Laboratory exercises and field trips provide practical training in soil morphology and landscape relations. Description and measurement of the status of water in soils. Theory of water, solute, and heat transport. Infiltration, drainage and redistribution. Weekly laboratory exercises illustrate the concepts introduced in class.

364 Intermediate Soil Science: Chemistry and Microbiology
Spring. 3 credits. Prerequisite: SCAS 260.
T R 10:10–11:30. M. McBride and M. Alexander.
The chemical properties and microorganisms of soil and the chemical reactions and transformations occurring in soil.

372 Soil Fertility Management
Fall. 3 credits. Prerequisite: SCAS 260 or permission of instructor.
M W F 9:05. D. R. Bouldin.
An integrated discussion of soil crop yield relationships, with emphasis on the soil as a source of mineral nutrients for crops and the role of fertilizers and manure in crop production.

373 Soil, Water, and Aquatic Plants
Fall. 3 credits. Prerequisites: SCAS 260, Biological Sciences 101–102, and Chemistry 103–104 or equivalents.
T R 11:15, R 1:25–4:25. J. H. Peverly.
The success or failure of soil and water management is manifested in streams, wetlands, lakes, and aquifers. Chemical and biological changes downstream are studied and related to agricultural management techniques upstream. Basic chemical and physiological processes are presented and used to suggest appropriate responses to water management problems.

385 Biogeochemical Cycles, Agriculture, and the Environment
Spring. 2 credits. Prerequisites: Chemistry 103 or 207 and SCAS 260 or equivalent.
Lecs, T R 11:15–12:05. J. M. Duxbury.
The impact of agriculture on aspects of the global biogeochemical cycles of carbon, nitrogen, sulfur, and phosphorus is disucssed and illustrated with current agricultural and environmental issues. Topics include sustainable agriculture, effects of nitrogen fixation, acid rain, global warming, and land disposal of wastes.

398 Environmental Microbiology (also Microbiology 398)
Spring. 3 credits. Prerequisites: Micro 290 or BioSci 261 or SCAS 260 or permission of instructor. Offered alternate years starting spring 1991.
M W F 10:10. M. Alexander and W. C. Ghiorse.
Behavior and function of microorganisms in natural environments and the role of microorganisms in transformation of pollutants.

[465 Soil and Plant Analysis
Spring. 3 credits. Prerequisite: SCAS 260. Not offered 1990–91.
Lec, T R 1:25–2:15; lab, R 2:30–4:20. Staff.
Intensive and systematic study of the theoretical and practical aspects of soil and plant analysis. Analyses of soil and plant samples are carried out with emphasis on analytical problem solving and evaluation of the experimental data. Sampling philosophy and preliminary treatment of samples is covered. A variety of wet chemistry and instrumental methods are employed. Considerable attention is given to correlation of quantities and chemical forms of elements in soils and plants with plant growth and yield.]

471 Geography and Appraisal of Soils of the Tropics
Fall. 3 credits. Prerequisite: SCAS 260 or equivalent. S-U grades optional. No audits accepted.
Lecs, T R 10:10; disc, W 2:30–4:25.
A. Van Wambeke.
The character of principal kinds of soils in the major regions of the tropics. Emphasis is on soil properties as a basis for interpretation of crop management requirements and production potential. Lectures introduce principles whose applications are examined through discussions, problem solving, and independent reading.

473 Ecology of Agricultural Systems (also Biological Sciences 473)
Fall. 3 credits. Limited to 45 students. Prerequisite: Biological Sciences 261 or permission of instructor. S-U grades optional. Offered alternate years.
Lec and disc, T R 2:30–3:45. During the first 6 weeks of class the Thursday meetings may run to 5:00 because of field trips. A. G. Power and T. W. Scott.
Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

483 Environmental Biophysics
Fall. 3 credits. Prerequisite: SCAS 260 or equivalent or permission of instructor.
Lecs, M W F 11:15. S. J. Riha.
Introduction to basic principles of energy and water transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, and water dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

663 Pedology
Spring. 3 credits. Prerequisite: SCAS 361 or permission of instructor. Offered alternate years. Textbook recommended, not required.
T R 10:30–12. R. B. Bryant.
Weathering, reactions, and processes of soil genesis. Principles of soil classification and the rationale and utilization of soil taxonomy. Development and significance of major groups of soils of the world.

666 Advanced Soil Microbiology
Fall. 1 credit. Prerequisite: SCAS 476 or permission of instructor. S-U grades only for graduate students.
T 12:20. M. Alexander.
Discussions of current topics in special areas of soil microbiology. Particular attention is given to biochemical problems in microbial ecology.

667 Advanced Soil Physics
Spring. 3 credits. Prerequisites: One year of college physics and SCAS 483 or permission of instructor. S-U grades optional. Offered alternate years. Offered 1991.
M W F 11:15. P. Baveye.
A detailed study of the hydrostatics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamical and mechanistic (molecular) standpoints. Mechanical and thermodynamical analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.

669 Organic Matter - Soils, Sediments, and Waters
Spring. 2 or 3 (with discussion) credits. Prerequisites: SCAS 260 and Chemistry 357–358 or equivalent.
T R 9:05; disc W 1:25–2:15.
J. M. Duxbury.
A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Interaction with anthropogenic organics and effects of anthropogenic activities on natural organics are considered.

675 Modeling the Soil-Plant-Atmosphere System
Spring. 3 credits. Prerequisite: SCAS 483 or equivalent and Computer Science 100 or equivalent. Offered alternate years.
Lecs, T R 1:25–2:45. J. L. Hutson, S. J. Riha.
Derivation of dynamic simulation models of soil-plant-atmosphere systems and their application. Models will include water, plant nutrients, and pesticide transport and their interaction with soil and plants. Students will develop their own models and apply existing models to environmental and plant production problems.

681 Soil Physics Research Seminar
Fall. 1 credit. Open to graduate students.
To be arranged. P. Baveye.
Discussions of current topics in special areas of soil physics and presentation of research carried out by participants.

693 Special Topics in Soil Science
Fall or spring. 1–6 credits. S-U grades optional.
Hours to be arranged. Staff.
Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

[771 Clay Chemistry
Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Offered alternate years. Not offered 1990–91.
Lecs, M W F 11:15. M. B. McBride.
A detailed examination of the structure and surface chemistry of minerals common to soils. Ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays and oxides will be emphasized.]

[774 Soil Fertility Advanced Course
Spring. 3 credits. Prerequisite: graduate status with a major or minor in agronomy. Offered alternate years. Not offered 1990–91.
T R 8:30–9:55. D. R. Bouldin.
A study of selected topics in soil-crop relationships, with emphasis on concepts of soil fertility, interpretation of experimental data, and soil fertilizer chemistry.]

889 Master's-Level Thesis Research in Soil Science
Fall or spring. Credit by arrangement. Limited to students in the graduate field. S-U grades optional.
Hours by arrangement.

989 Doctoral-Level Thesis Research in Soil Science
Fall or spring. Credit by arrangement. Limited to students in the graduate field. S-U grades optional.
Hours by arrangement.
Courses in "Remote Sensing" are also listed under the Department of Civil and Environmental Engineering in the College of Engineering.

STATISTICS AND BIOMETRY

C. E. McCulloch, chair; N. S. Altman, G. Casella, C. Castillo-Chavez, G. A. Churchill, S. J. Schwager, S. R. Searle

Courses in statistics and biometry are offered by the Department of Plant Breeding and Biometry.

200 Statistics and the World We Live In
Spring. 3 credits.
Lecs, T R 10:10–11:25; disc, T 1:25 or 2:30, or W 1:25 or 2:30, or R 9:05. Staff.
Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

215 Introduction to Statistical Methods
Fall. 3 credits. Prerequisite: Statistics 200 is recommended for students with no prior experience in data collection and interpretation.
Lecs, M W F 11:15; lab, 1 hr. to be arranged. Staff.
Statistical methods are developed and used to analyze data arising from the biological sciences. Topics include point and confidence interval estimation, hypothesis testing, t-tests, correlation, simple linear regression, and possibly analysis of variance and multiple regression. Statistical computing is taught and used throughout the course. Emphasis is on proper use of statistical methodology and interpretation of statistical analyses.

408 Theory of Probability
Fall. 4 credits. Prerequisite: Mathematics 112, 122, or 192, or permission of instructor.
Lecs, M W F 10:10; disc, M 3:35–5. Staff.
An introduction to probability theory: foundations, combinatorics, random variables and their probability distributions, expectations, generating functions, and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

409 Theory of Statistics
Spring. 4 credits. Prerequisite: Statistics 408 or equivalent.
Lecs, M W F 10:10; disc, M 3:35–5. Staff.
The concepts developed in Statistics 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression. Students seeking applied courses in statistical methodology should consider Statistics 601–602.

417 Matrix Algebra
Fall. 3 credits. Prerequisite: precalculus mathematics.
Lecs, M W F 8; disc, M 1:25–3:10.
S. R. Searle.
Definitions, basic operations and arithmetic, determinants, and the inverse matrix. Rank, linear dependence, canonical forms, linear equations, generalized inverses and eigenroots and vectors. Emphasis is on understanding basic ideas and on developing skills for applying matrix algebra.

451 Mathematical Modeling of Populations
Fall. 3 credits. S-U grades optional. Prerequisites: Mathematics 111 and 112, or equivalent. Offered alternate years. Not offered 1991–92.
Lecs, M W F 9:05–9:55.
C. Castillo-Chavez.
This course concentrates in the analysis and simulation of mathematical models, and it will focus in the study of models relevant to population genetics and population biology. Mathematical techniques that are relevant to these areas will be presented. The course will emphasize stochastic and deterministic models. Computer simulations and the use of mathematical packages will be an integral part of this course.

495 Statistical Consulting
Fall. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites: Statistics 409 and 602 and permission of instructor.
Lec, W 1:25–2:15 plus 1 hr. of consulting to be arranged. Staff.
Participation in the Biometrics Unit consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

497 Special Topics
Fall or spring. 1–3 credits. S-U grades optional.
Staff.
Can consist of individual tutorial study or a course of lectures (or both) selected by the faculty. Since topics usually change from year to year, this course may be repeated for credit.

498 Supervised Teaching
Fall or spring. 2 credits. S-U grades only. Limited to statistics and biometry undergraduates.
Staff.
Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

499 Undergraduate Research
Fall or spring. 1–3 credits. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research.
Staff.

600 Statistics Seminar
Fall or spring. 1 credit. S-U grades only.
W 3–4:30. Staff.

601 Statistical Methods I
Fall. 4 credits. Limited to graduate students; others by permission of the instructor.
Lecs, M W F 12:20; lab, M 2:30–4, 7:30–9 p.m., or T 10:10–11:40, 12:20–1:50, 2:30–4. Staff.
Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

602 Statistical Methods II
Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: Statistics 601 or equivalent.
Lecs, M W F 11:15; lab, M 2:30–4:25 or 7:30–9:25 p.m., and T 10:10–12:05 or 12:20–2:15. Staff.
A continuation of Statistics 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the SAS statistical package.

[603 Statistical Methods III
Fall. 3 credits. Prerequisite: Statistics 601 and 602 or permission of instructor. Offered if a sufficient number of students are interested. Offered alternate years. Not offered 1990–91.
Principles of scientific experimentation, experiment design, sample surveys and questionnaire design, statistical aspects of survival analysis, life tables, statistical analyses for clinical trials; categorical data analysis, including logistic regression, loglinear models, combining contingency tables, and application to case control studies; multivariate analysis; and space-time clustering.]

[604 Statistical Methods IV: Applied Design
3 credits. Prerequisites: Statistics and Biometry 601 and 602 or permission of instructor. Offered alternate years. Not offered 1990–91.
Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.]

[605 Applied Regression Analysis
Fall, 1/3 of the term. 1 credit. Prerequisites: Statistics 409 and 602. Offered alternate years. Not offered 1990–91.
A continuation of Statistics 602, with emphasis on data analysis including logistic and nonlinear regression.]

[606 Sampling Biological Populations
Fall. 1/3 of the term. 1 credit. Prerequisite: Statistics 601 or equivalent. Not offered 1990–91.
Standard methods of sample-survey design and estimation are presented, including stratified random sampling, cluster sampling, double sampling, and variable probability sampling. Special emphasis given to methods of particular utility or specifically designed for biological sampling. Examples are taken from forestry, fisheries, and other biological areas.]

[607 Nonparametric and Distribution-Free Statistical Methods
Spring, 1/3 of the term. 1 credit. S-U grades optional. Prerequisite: Statistics 601 or equivalent. Offered alternate years. Not offered 1990–91.
Nonparametric and distribution-free alternatives to normal-theory testing procedures are presented: sign or rank tests for one or two populations; analyses for completely randomized and randomized blocks designs; comparisons among several means; correlation and regression; goodness-of-fit; and tests based on randomization of the data.]

639 Epidemiology Seminar (also Nutritional Sciences 639)
Fall and spring. 1 credit. S-U grades only. Limited to graduate students; others by permission of instructor.
M 12:20. Staff.
This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

[642 Advanced Mathematical Methods in Statistics and Biometry
Spring. 3 credits. S-U grades optional. Prerequisites: Mathematics 411 or 421, or equivalent. Offered alternate years. Not offered 1990–91.
Lecs, T R 12:20–1:50. C. Castillo-Chavez.
This advanced level course will cover classical mathematical methods that are useful in statistics, biometry, and biomathematics, with an introduction to MACSYMA. Topics include: Introduction to MACSYMA, complex numbers and their elementary properties, analytic functions, contour integration, special functions, asymptotic methods, generalized functions, and the Fourier transform. Techniques will be illustrated with examples drawn from statistics, biometry, and biomathematics.]

[651 Mathematical Population Studies and Modeling
Fall. 3 credits. S-U grades optional. Prerequisites: Statistics 408 and 417, or equivalent. Statistics 409 is recommended. Offered alternate years. Not offered 1990–91.
Lecs, T R 12:20–1:50. C. Castillo-Chavez.
Model formulation, parameter estimation, and mathematical analysis of stochastic and deterministic models in population dynamics. Emphasis will be put on the interactions between human demography and sociology (human behavior), and their relationship to disease dynamics of microparasitic and macroparasitic infections. The process of pair formation and dissolution and their impact on demography, sociology, and epidemiology will also be studied.]

662 Mathematical Ecology (also Biological Sciences 662)
Spring. 3 credits. Prerequisites: a year of calculus and a course in probability. Offered alternate years.
Lecs, M W F 12:20. Staff.
Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

697 Special Topics in Statistics and Biometry
Fall, spring, or summer. 1–3 credits. S-U grades optional.
Staff.
Can consist of individual tutorial study or a course of lectures (or both) selected by the faculty. Since topics usually change from year to year, this course may be repeated for credit.

[701 Advanced Biometry
Spring. 3 credits. Prerequisites: Statistics 409 and 602. Limited to graduate students; others by permission of instructor. Not offered 1990–91.
Bioassay methods, including parametric and nonparametric statistical analyses of quantal and graded response to controlled levels of single and multifactor stimuli; directional statistics as applied to animal orientation experiments; compartment models and analyses; enzyme kinetics and pharmacokinetic analysis; and bioavailability.]

717 Linear Models
Fall. 3 credits. S-U grades only. Prerequisites: Statistics 409 or equivalent and Statistics 417 and 602. Offered alternate years.
M W F 11:15. S. R. Searle.
Analysis of variance and estimation procedures for unequal-subclass-numbers data. Cell means models for the 1-way classification, nested classifications, and the 2-way crossed classification, both with and without interactions; introduction to multinormal variables and the distribution of quadratic forms. The general linear model (in matrix and vector form), estimable functions, and testable hypotheses. Overparameterized models, restricted models, multifactor cases, covariables, computing.

[718 Variance Components
Spring. 2 credits. S-U grades only. Prerequisite: Statistics 717. Offered alternate years. Not offered 1990–91.
Several methods of estimating variance components are explained and compared: for balanced data (equal subclass numbers), the analysis of variance method; for unbalanced data (unequal subclass numbers), the three Henderson methods and the methods of maximum likelihood, restricted maximum likelihood, and minimum norm quadratic unbiasedness. Also included: estimation from mixed models, prediction of random variables, the dispersion-mean model, and computer package output for variance component estimation.]

795 Statistical Consulting
Fall. 2 credits. S-U grades only. Limited to graduate students.
Lec, W 1:25 and 1 hr. of consulting to be arranged. Staff.
Participation in the Biometrics Unit consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the service during previous weeks. Since consultations usually change from semester to semester, this course may be repeated for credit.

899 Research
Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.
Research at the M.S. level.

999 Research
Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.
Research at the Ph.D. level.

VEGETABLE CROPS: HORTICULTURAL SCIENCES

E. E. Ewing, chair; R. R. Bellinder, L. A. Ellerbrock, D. E. Halseth, J. R. Hicks, D. J. Lisk, P. M. Ludford, P. L. Minotti, M. A. Mutschler, J. Sieczka, L. D. Topoleski, D. H. Wallace, H. C. Wien, D. A. Wilcox-Lee, D. W. Wolfe

102 General Horticulture
Spring. 4 credits. Each lab limited to 25 students.
Lecs, M W F 10:10; lab, M T W 2–4:25. L. D. Topoleski.
Acquaints the student with applied and basic horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes flower, fruit, and vegetable growing and gardening techniques.

220 Vegetable Types and Identification
Fall. 2 credits.
T 2–4:25. L. D. Topoleski.
Acquaints the student with the vegetable species grown in the Northeast and the pests and disorders encountered in their production. Subjects covered include identification of economically destructive weeds, diseases and insects of vegetables, identification of vegetable and weed seeds, seedlings, nutrient deficiencies, vegetable judging, grading, and grade defects.

225 Vegetable Production
Fall. 4 credits. Field trip fee, no more than $20.
Lecs, M W F 11:15; lab, W 2–4:25; 1 S field trip and 3 field trips (Sept.), W 11:15–6. L. A. Ellerbrock.
Intended for students interested in vegetables from the viewpoint of production, processing, marketing, or the related service industries. Topics included are techniques, problems, and trends in the culture, harvesting, and storage of the major vegetable crops, including potatoes and dry beans. Consideration is given to issues affecting the industry, such as pesticide usage, environmental concerns, and new marketing developments. Field trips to conventional and organic farms and hands-on experience in growing vegetables in the laboratory are included.

325 Practical Aspects of Postharvest Handling of Horticultural Crops
Spring. 3 credits.
Lecs, M W 9:05; lab, T 1:25–3:55. J. R. Hicks.
A study of changes that occur in horticultural crops between harvest and consumer. Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Maturity/quality indices, preharvest treatments, and harvesting/handling practices and storage/transportation requirements of selected horticultural crops are covered. The effect of marketing orders, marketing chains, market requirements, quarantine, and pest eradication procedures is emphasized.

415 Postharvest Physiology and Storage of Horticultural Crops
Fall. 3 credits. Prerequisite: a course in floriculture, pomology, or vegetable crops, or permission of instructor.
Lecs, M W 9:05; lab, W 1:30–4. F. W. Liu.
A study of principles of postharvest physiology, handling, and storage of horticultural crops, including fruits, vegetables, flowers, and ornamental crops. Major physiological processes such as transpiration, respiration, compositional changes, ethylene synthesis and action, maturation, ripening, and senescence of the crops are studied. Methods of harvesting and handling, including cleaning, grading, packing, precooling, waxing, sanitation, and transportation, are studied. Methods of storage, including common storage, underground storage, refrigerated storage, controlled atmosphere storage, modified atmosphere storage, and hypobaric storage, are also studied.

455 Vegetable Crop Physiology
Fall. 5 credits. Prerequisites: Horticultural Sciences 225 and Biological Sciences 242, or equivalents.
Lecs, M W F 10:10; lab, M 2–4:25; disc, R or F 1, 2, or 3. H. C. Wien, P. L. Minotti.
Subjects include mineral nutrition as influenced by fertilization programs and crop sequence, nutrient interactions and induced deficiencies, growth and development, flowering, fruit setting, growth correlation, senescence, sex expression, photoperiodism, vernalization, and environmental factors affecting growth.

[460 Plant-Plant Interactions
Spring. 3 credits. Prerequisite: any crop production course or permission of instructor. Not offered 1990–91.
Lecs, M W 8; disc, to be arranged. Each disc section limited to 6 students. P. L. Minotti.
The manner in which plants interfere or positively interact with other plants is examined with primary emphasis on crop situations rather than natural plant communities. Competitive and chemical interactions are considered between weeds and crops, crops and associate crops, and between individuals in monoculture.]

465 Vegetable Varieties and Their Evaluation
Fall. Weeks 1–7. 2 credits. Prerequisite: Horticultural Sciences 225 or permission of instructor. S-U grades only. Offered alternate years.
Lecs, W F 8; lab, F 1:25–4:25. D. W. Wolfe and H. C. Wien.
Principles of vegetable variety evaluation and selection of techniques in relation to program objectives. Morphology, yield, and quality of selected crops will be studied in the field. The seed industry will be briefly discussed.

495 Undergraduate Seminar
Spring. 1 credit (may be taken twice for credit). Prerequisite: a course in vegetable crops. S-U grades only.
Hours to be arranged. Staff.
Seminar topics and speakers selected and arranged by the students on subject areas related to vegetable crops.

496 Internship in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's adviser in advance of participation in internship programs. Students must attach to their course enrollment materials a "CALS Independent Study, Research, or Teaching" form signed by the staff member who will supervise their internship and assign their grade.
Staff.

497 Independent Study in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must attach to their course enrollment materials a "CALS Independent Study, Research, or Teaching" form signed by the staff member who will supervise their research and assign their grade. Independent study in horticultural sciences under the direction of one or more staff members.

498 Undergraduate Teaching Experience
Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must attach to their course enrollment materials a "CALS Independent Study, Research, or Teaching" form signed by the staff member who will supervise their research and assign their grade.
Hours to be arranged.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural science courses under supervision of departmental faculty. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

499 Undergraduate Research
Fall or spring. 1 or more credits, by arrangement. Written permission from staff member directing the work must be obtained before course enrollment.
Hours to be arranged. Staff.
Special problems may be elected in any line of vegetable work.

500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1–6 credits. S-U grades optional.
Hours to be arranged. Graduate faculty.
A comprehensive project emphasizing the application of horticultural principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Master of Professional Studies (Agriculture) candidates in the field.

602 Seminar in Vegetable Crops
Fall or spring. 1 credit. Required of graduate students majoring or minoring in vegetable crops. Limited to graduate students. S-U grades only.
R 4:30. Staff.

[615 Quantitative Methods in Horticultural Research
Spring. Weeks 1–9. 2 credits. Prerequisite: Statistics 601. Statistics 602 or permission of instructor. S-U grades only. Offered alternate years. Not offered 1990–91.
T R 10:10–12:05. D. W. Wolfe.
Advantages and limitations of conventional experimental designs and analyses of greenhouse and field (including on-farm) experiments. Use and interpretation of plant growth analysis techniques. Discussions will include critical analysis of published data and research in progress.]

625 Advanced Postharvest Physiology of Horticultural Crops
Spring. 3 credits. Prerequisite: Biological Sciences 247 and/or Horticultural Sciences 315 (also Agricultural and Biological Engineering 319). Offered alternate years.
Lecs, T R 10:10. Disc session to be arranged. P. M. Ludford.
Physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts. Topics include morphological and compositional changes during ripening and storage life, some physiological disorders, aspects of hormone action and interactions, and a consideration of control.

629 Special Topics in Plant Science Extension (also Plant Breeding 629)

700 Graduate Teaching Experience
Fall, spring. 1 or more credits by arrangement with instructor.
Hours to be arranged. Staff.
Participation in the teaching program of the department.

800 (801) Thesis Research, Master of Science
Fall or spring. Credit to be arranged. S-U grades only.
Hours to be arranged. Staff.

900 (901) Thesis Research, Doctor of Philosophy
Fall or spring. Credit to be arranged. S-U grades only. Hours to be arranged. Staff.

FACULTY ROSTER

Abawi, George S., Ph.D., Cornell U. Prof., Plant Pathology (Geneva)
Acree, Terry E., Ph.D., Cornell U. Prof., Food Science, and Technology (Geneva)
Adleman, Marvin I., M. L. A., Harvard U. Prof., Floriculture and Ornamental Horticulture
Agnello, Arthur M., Ph.D., North Carolina State U. Asst. Prof., Entomology (Geneva)
Aho, Paul W., Ph.D., Michigan State U. Asst. Prof., Poultry and Avian Sciences
Aist, James R., Ph.D., U. of Wisconsin. Prof., Plant Pathology
Albright, Louis D., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Aldwinckle, Herbert S., Ph.D., U. of London (England). Prof., Plant Pathology (Geneva)
Alexander, Martin, Ph.D., U. of Wisconsin. Liberty Hyde Bailey. Professor of Soil Science, Soil, Crop, and Atmospheric Sciences
Allee, David J., Ph.D., Cornell U. Prof., Agricultural Economics
Altman, Naomi S., Ph.D., Stanford U. Asst. Prof., Plant Breeding and Biometry
Andersen, Robert L., Ph.D., U. of Minnesota. Prof., Horticultural Sciences (Geneva)
Anderson, Bruce L., Ph.D., U. of California at Berkeley. Assoc. Prof., Agricultural Economics
Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Apgar, Barbara J., Ph.D., Cornell U. Asst. Prof., Animal Science
Aplin, Richard D., Ph.D., Cornell U. Prof., Agricultural Economics
Arneson, Phil A., Ph.D., U. of Wisconsin. Assoc. Prof., Plant Pathology
Austic, Richard E., Ph.D., U. of California at Davis. Prof., Poultry and Avian Sciences
Awa, Njoku E., Ph.D., Cornell U. Assoc. Prof., Communication
Baer, Richard A., Ph.D., Harvard U. Prof., Natural Resources
Bandler, David K., M.P.S., Cornell U. Prof., Food Science
Barbano, David M., Ph.D., Cornell U. Assoc. Prof., Food Science
Barker, Randolph, Ph.D., Iowa State U. Prof., Agricultural Economics
Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Agricultural and Biological Engineering
Bassuk, Nina L. Ph.D., U. of London (England). Assoc. Prof., Floriculture and Ornamental Horticulture
Batt, Carl A., Ph.D., Rutgers U. Asst. Prof., Food Science
Bauman, Dale E., Ph.D., U. of Illinois. Prof., Animal Science
Baveye, Philippe C., Ph.D., U. of California at Riverside. Asst. Prof., Soil, Crop, and Atmospheric Sciences
Becker, Robert F., M.S., U. of New Hampshire. Assoc. Prof., Horticultural Sciences (Geneva)
Bedford, Barbara, Ph.D., U. of Wisconsin, Madison. Asst. Prof., Natural Resources
Beer, Steven V., Ph.D., U. of California at Davis. Assoc. Prof., Plant Pathology

COLLEGE OF ARCHITECTURE, ART, AND PLANNING

ADMINISTRATION

William G. McMinn, dean

Roberto Bertoia, Associate Dean

Ellen McCollister, director of external affairs

Cynthia K. Prescott, director of administrative operations

Ray Dalton, Director of Minority Educational Affairs

Donna L. Kuhar, registrar

Elizabeth A. Cutter, admissions coordinator

Margaret Webster, slide curator

FACULTY ADVISERS

Architecture students are assigned faculty advisers for their first year. Upperclass students have one assigned adviser but are encouraged to seek assistance and advice from the most appropriate faculty member or college officer.

Freshmen in the fine arts department are assigned faculty advisers for the first year. Students may then choose advisers in their major area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:

Val K. Warke, chair, Department of Architecture

David B. Lewis, chair, Department of City and Regional Planning

Victor Kord, chair, Department of Art.

DEGREE PROGRAMS

	Degree
Architecture	B.Arch.
	B.F.A.
Fine Arts	B.F.A.
History of Architecture and Urban Development	B.S.
Urban and Regional Studies	B.S.

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the Bachelor of Architecture; four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with the students and faculty in other disciplines.

Early in its development the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over fifty-five, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. In Sibley are the facilities for architecture, and city and regional planning, as well as certain administrative offices, the Slide Library and the Fine Arts Library. The Department of Art is housed in Olive Tjaden Hall. Sculpture and shop facilities are in the Foundry. The Green Dragon, a student lounge, is located in the basement of Sibley Dome. The college has three darkrooms that are available for general use and serve as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available in the slide library.

Through the generosity of the late Lillian P. Heller, the college also owns the home of William H. Miller, the first student to enroll for the study of architecture at Cornell and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library, in Sibley Dome, serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning and landscape architecture. The library, with more than 135,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,900 serials are currently received and maintained.

A slide library in Sibley Dome contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The library now includes approximately 350,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held. Current work of students in the College of Architecture, Art, and Planning is shown in the exhibition areas in Sibley Dome and the gallery in Olive Tjaden Hall.

Rome Program

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the famous Palazzo Massimo in the center of the historical city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in liberal arts, architecture, fine arts, and planning. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work

Exhibitions of student work will be held each semester as part of the yearly schedule of the Olive Tjaden Hall gallery and the John Hartell Gallery. These may display the work of a specific course or exhibit examples of the best recent work done.

Scholastic Standards

Term by term, a candidate for an undergraduate degree in this college is required to pass all courses in which the student is registered and have a weighted average for the term of not less than C (2.0). The record of each student who falls below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

1) Warning means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.

2) Final Warning indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.

3) Required leave of absence: Academic Deficiency The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may apply for readmission after an absence of at least two semesters. Application for readmission is made by letter, addressed to the department chair. The student must submit evidence that his or her time has been well used, and, if employed, must submit a letter from an immediate superior. If a student chooses to register for courses, either extramurally at Cornell or at another institution, he or she should be advised that credit for these courses will not apply toward the degree but will appear on the student's transcript. The grades received for any courses taken while on a required leave of absence will not be counted into the grade point average. Readmission to the college is at the discretion of the Admissions Committee. Application for spring-term readmission must be made by November 15, and application for fall-term readmission must be made by April 15. Refer to the college handbook for further information regarding required leave of absence.

4) Required withdrawal: May Not Reregister, College of Architecture, Art, and Planning The student is dismissed from the college and is permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the next term if performance during that time is deemed to be grossly deficient.

It is necessary to have a cumulative average of at least C– (1.7) for graduation.

ARCHITECTURE

Val K. Warke, chair; M. Dennis, W. Goehner, D. P. Greenberg, R. Hall, G. Hascup, L. F. Hodgden, M. Jarzombek, G. Jullian de la Fuente, A. Kira, M. Kubelik, B. G. MacDougall, A. B. Mackenzie, J. C. Miller, L. Mirin, V. Mulcahy, J. Ochshorn, J. Ostlund, C. F. Otto, A. Ovaska, C. W. Pearman, A. Pendleton, H. W. Richardson, C. Rowe, D. Salmon, M. L. Schack, J. P. Shaw, A. Simitch, J. Wells, M. Woods, J. Zissovici

Professional Degree Program

The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars dealing with theory and method, are the core of the program. Sequences of studies in culture and society, environmental science, structures, and building technology provide a base for the work in design.

In the first three years the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years this base may expand through detailed further studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

Washington Program

Fourth- and fifth-year students in good standing who have completed the requirements of the first three years of the curriculum are eligible for a term of study in Washington, D.C. Outstanding third-year students are admitted to the Washington program only by petition and a review of their design record. Courses offered by the department include design, thesis, special problems in architectural design, a professional seminar, and professional studies. Additional courses are offered by other departments participating in the program. The program provides a period of intensive exposure to the characteristics of urban development within the framework of a design studio. Content concentrates on urban design issues, restraints relative to financing, zoning, development criteria, adaptive reuse, and multiuse developments.

Rome Program

The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, thesis, thesis introduction, history, theory, architectural science, and design communication. In addition, courses are offered by other departments in Italian language, Italian culture, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

Overlap Program

For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year interested students petition the department to substitute Arch 601–602 for Arch 501–502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field secretary for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501–502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including Arch 601–602 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

Curriculum

First Year

Fall Term	*Credits*
101 Design I	6
181 History of Architecture I	3
151 Drawing I	2
Math III Calculus	4
Out-of-college elective	3
	18
Spring Term	
102 Design II	6
182 History of Architecture II	3
152 Drawing II	2
122 Structural Concepts	4
Out-of-college elective (Freshman Seminar suggested)	3
	18

Second Year

Fall Term	*Credits*
201 Design III	6
221 Structural Systems I	3
231 Architectural Elements and Principles	2
261 Site Planning	3
Out-of-college elective	3
	17

Spring Term

202 Design IV	6
222 Structural Systems II	3
232 Design Methods and Programming	2
262 Building Technology, Materials, and Methods	3
College elective	3
	17

Third Year

Fall Term

301 Design V	6
361 Environmental Controls I—Lighting and Acoustics	3
Departmental elective	3
Out-of-college elective	3
Out-of-college elective	3
	18

Spring Term

302 Design VI	6
342 Architecture as a Cultural System	3
362 Environmental Controls II—Mechanical and Passive Solar Systems	3
Departmental elective	3
College or out-of-college elective	3
	18

Fourth Year

Fall Term

401 Design VII	6
461 or 462 Professional Practice	3
Departmental elective	3
College elective	3
Out-of-college elective	3
	18

Spring Term

402 Design VIII	6
Departmental elective	3
Departmental elective	3
College or out-of-college elective	3
Out-of-college elective	3
	18

Fifth Year

Fall Term	*Credits*
501 Design IX or 601 or 603 Overlap Program	6
Departmental elective	3
College or out-of-college elective	3
Out-of-college elective	3
Out-of-college elective	3
	18

Spring Term

502 Design X or 602 or 604 Overlap Program	8
Departmental elective	3
College or out-of-college elective	3
College or out-of-college elective	3
	17

Required Departmental Courses

Terms	*Subject*	*Course Number*	*Credits*
10	design	101–504	62
1	mathematics	Math 111 or approved equivalent	4
3	structures	122, 221, 222	10
4	technology	261, 262, 361, 362	12
2	architectural principles, theories, and methods	231, 232	4
2	history of architecture	181, 182	6
1	architecture, culture and society	342	3
1	professional practice	461 or 462	3
2	drawing	151, 152	4
			108

Electives

Departmental

Terms		*Credits*
3	history of architecture: 300-level	9
1	design communication: design communication, drawing, computer graphics	3
2	principles, theories, and methods	6
1	architectural science	3
		21

College

Terms		*Credits*
2	art: any courses	6

Out-of-College

Terms		*Credits*
1	computer programming	3
1	Freshman Seminar (humanities)	3
1	mathematics, physics, or biological sciences	3
1	humanities	3
		12

Free

Of the electives, 15 credits are to be taken outside the College of Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college.	30
Total credits	177

Transfer Students

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.

Transfer students are responsible for completing that portion of the curriculum that has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the ten-term design sequence. Since this sequence may be accelerated by attending summer terms, seven or eight regular terms and two or three summer terms are typically required.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint the participants with opportunities, issues, and methods in the field of architecture.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, taking 35 of the 70 credits (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

Alternative Programs

Bachelor of Fine Arts

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture. It is not a professional degree.

Bachelor of Science in History of Architecture

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

Admission requirements. Two years of undergraduate study; Arch 181 and 182, or the equivalent; and one 6-credit studio in architecture (or Arch 103, which is available during the fall semester for students with no previous studio work) are required. Students transferring from a B.Arch. program must be in good standing in their design sequence.

Procedure. Students from Cornell may transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective internal transfer students. It is crucial that, before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss procedural matters and program content.

Students who wish to transfer to the program from outside Cornell must apply to the Department of Architecture by March 15. Applications may be considered after this date but are given lower priority. Applications for both internal and external transfer students are available from Elizabeth Cutter, Admissions Office, College of Architecture, Art, and

Planning, Cornell University, 135 East Sibley Hall, Ithaca, New York 14853–6701.

Curriculum. A student entering the program selects an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1) 25 credits of 300-level courses in architectural history: Arch 381, 382, 384, 385, 387, 388, 390, 391

2) 12 credits in 600-level architectural history seminars: Arch 681 through Arch 699; or 8 credits in a 600-level seminar plus Arch 499, offered for honors candidates only

3) One 300-, 400-, or 600-level course in architectural theory

4) 24 credits in electives selected in consultation with the student's adviser

5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students will graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A– in all history of architecture courses taken at the 300 level, and have completed an honors thesis (Arch 499) deemed to be of distinguished quality by the history of architecture faculty.

Dual Degree Options

Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study. Ordinarily this option requires five years of study and assumes the satisfactory fulfillment of requirements in both the B.S. and B.Arch. programs.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, 135 East Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened by approximately one year.

Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels; the term is six to eight weeks in duration.

Undergraduate design sequence courses, including thesis, are offered at first- through fifth-year levels in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to the college for admission to any summer programs.

At the graduate level the summer term is devoted to problems forming part of the student's program of work. The term may carry residence credit equal to that of a normal academic term. Participation in the program cannot be undertaken without the consent of the student's Special Committee.

Architectural Design

Courses in brackets are not offered this year.

A studio fee of $25 is charged each semester for every design course (these fees are subject to change).

Sequence Courses

101 Design I
Fall. 6 credits. Limited to department students.
Studios and lecs, M W F 2–6. Staff.
An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

102 Design II
Spring. 6 credits. Limited to department students. A continuation of Architecture 101.
Studios and lecs, M W F 2–6. Staff.
Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

201–202 Design III and IV
Fall and spring. 6 credits each term. Coregistration in Architecture 231–232 and completion of Architecture 151–152 required. Limited to department students.
Studios and sems, M W F 2–6. Staff.

301–302 Design V and VI
Fall and spring. 6 credits each term. Limited to department students.
Studios and sems, M W F 2–6. Staff.

401–402 Design VII and VIII
Fall and spring. 6 credits each term. Limited to department students.
Studios and sems, M W F 2–6. Staff.
Programs in architectural design, urban design, or architectural technology and environmental science, etc.

501 Design IX
Fall or spring. 6 credits. Limited to department students.
Studios and sems, M W F 2–6. Staff.
Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis is followed by tutorial work with the student's advisory committee.

502 Design X—Thesis
Fall or spring. 8 credits. Prerequisite: Architecture 501. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement.
Studios, M W F 2–6. Staff.

510 Thesis Introduction
Foreign summer programs and Washington program only. 3 credits. Must be taken in conjunction with Architecture 500. Architecture 500 will be considered equivalent to Architecture 501 when taken concurrently with Architecture 510 during a foreign summer program or in Washington.
Lecs and sems. Staff.
Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

601–602 Special Program in Architectural Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

603–604 Special Program in Urban Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

Elective Design Courses

103–104 Elective Design Studio
103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite: permission of instructor.
M W F 2–6. Staff.

303 Special Problems in Architectural Design
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form.
Hours to be arranged. Staff.
Independent study.

200, 300, 400, 500 Elective Design
Fall or spring. 6 credits each term. Open by permission to transfer students who have not been assigned to a sequence course. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level.
M W F 2–6. Staff.

605 Special Problems in Design
Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor.
Hours to be arranged. Staff.
Independent study.

Related Courses and Seminars

611–612 Urban Housing Developments
611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students. Prerequisite: permission of instructor. Not offered every year.
Staff.

613 Transportation
Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year. Not offered 1989–90.
Sem, hours to be arranged. Staff.
The impact of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

614 Low-Cost Housing
Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year.
T 2–4:30. H. W. Richardson.
Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

618–619 Seminar in Urban and Regional Design
618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students. Not offered every year.
Hours to be arranged. Staff and guest lecturers.
A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by the participants and visitors.

Graduate Courses

701–702 Problems in Architectural Design
Fall and spring. 9 credits each term.
Studio and sem, hours to be arranged. Staff.
Basic first-year design course for graduate students whose major concentration is architectural design.

703–704 Problems in Urban Design
Fall and spring. 9 credits each term.
Studio and sem, hours to be arranged. Staff.
Basic first-year design course for graduate students whose major concentration is urban design.

801 Thesis or Research in Architectural Design
Fall or spring. 9 credits.
Hours to be arranged. Staff.
Second-year design course for graduate students whose major concentration is architectural design.

802 Thesis or Research in Urban Design
Fall or spring. 9 credits.
Hours to be arranged. Staff.
Second-year design course for graduate students whose major concentration is regional design.

Structures

122 Structural Concepts
Spring. 4 credits. Prerequisite: Mathematics III or approved equivalent.
Lecs and sems, M W F 9–10:30. Staff.
Fundamental concepts of structural behavior. Statics and strength of materials.

221 Structural Systems I
Fall. 3 credits. Prerequisites: Mathematics III and Architecture 122.
Lecs and sems, T R 9:05–11. Staff.
Structural design concepts and procedures for steel building construction.

222 (322) Structural Systems II
Spring. 3 credits. Prerequisite: Architecture 122.
Lec and sems, M W F 11:15–12:05. Staff.
Structural design concepts and procedures for reinforced concrete building construction.

326 Building Substructure
Spring. 3 credits. Prerequisites: Architecture 222 or concurrent registration and permission of instructor. Not offered every year.
Sem, hours to be arranged. Staff.
The principles of soil mechanics and subsurface exploration. Design of building foundations—footings, piles, and subgrade walls.

Architectural Principles, Theories, and Methods

131 An Introduction to Architecture
Fall or spring. 3 credits. Open to out-of-department students only.
Lecs T R 1:25–2:15. Staff, guest lecturers.
Architecture for non-architects. Intended to familiarize non-architecture students with the profession of architecture through lectures, readings, and films. Examines past and present criteria for excellence in architecture and the notable designs and designers who achieve this. Related fields such as urban design, landscape architecture, structural design, interior design, computer graphics, and professional practice will be included.

231 Architectural Elements and Principles
Fall. 2 credits. Architecture students must register concurrently in Architecture 201.
Studios and lecs, T 1:30–3:25. Staff.
Theory of the order, perception, and function of architectural space. Discourse on the nature of architectural systems and the multiplicity of ways they can be used to solve architectural problems.

232 Design Methods and Programming
Spring. 2 credits. Architecture students must register for this course concurrently with Architecture 202.
Studios and lecs, T 1:30–3:25. Staff.
Basic methods for developing architectural programs. Programming as a conceptual as well as a descriptive task is emphasized. Basic methods of design. Analytic and synthetic skills are stressed.

331 Special Problems in Principles, Theories, and Methods
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form.
Hours to be arranged. Staff.
Independent study.

335 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: Architecture 231–232 or permission of instructor. Not offered every year.
Lecs, T R 4:40–6:30. L. F. Hodgden.

336 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year.
Lecs, T R 4:40–6:30. L. F. Hodgden.
Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier's architecture and urban theories, architectural sequence, facades, the free plan,"DOM-INO" theory.

337 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form.
Hours to be arranged. Staff.
Independent study.

338 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.
Hours to be arranged. V. Warke and visiting faculty.
Topic to be announced before preregistration.

431 Theory of Architecture
Fall. 3 credits. Prerequisite: third-year status. Not offered every year.
Lecs, T R 4:40–6:30. L. F. Hodgden.
Gardening and architecture: urban parks; villas and country houses; and Italian, French, and English landscape gardens. Site planning.

432 Theory of Architecture
Spring. 3 credits. Prerequisite: third-year status. Not offered every year.
Lecs, T R 4:40–6:30. L. F. Hodgden.
The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

435 Architecture and Representation
Fall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of Architecture 231–232. Not offered every year.
Lecs, disc, and reviews, T R 2:30–4:30. V. Warke.
A study of architecture as it functions as a representational art, referring to its past while inferring its present.

635 Critical Theory in Architecture
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.
Sem, hours to be arranged. V. Warke.
An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

637 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit (maximum, 4). Prerequisite: permission of instructor and approved independent study form.
Hours to be arranged. Staff.
Independent study.

638 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.
Hours to be arranged. V. Warke and visiting faculty.
Topic to be announced before preregistration.

639 Principles of Design Process
Fall or spring. 3 credits. Limited to third-year architecture students and above; students in other colleges must have permission of instructor. Not offered every year.
Sems, M W 10:10–12:05. A. Mackenzie.
Analysis of the major theories and techniques of design developed during the past fifteen years, with special emphasis on application to the solution of whole problems in architectural design.

Note: 667–668 Architecture in Its Cultural Context I and II is accepted as a theory course. See the section "Architectural Science and Technology Courses" for description.

Architecture, Culture, and Society

342 Architecture as a Cultural System
Spring. 3 credits. Architecture 445, 446, 447, or 448 can substitute with permission of instructor.
M W F 10:10–11:00. B. MacDougall.
What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is a significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies, the structure of the ideal social order and its refraction in the material world, cosmological models and architectural form, geometries of non-Western traditions, and the relationship between indigenization and culture change.

445 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor.
M W F 10:10–11:00. B. MacDougall.
This course focuses on traditional societies in which beliefs about architectural order are borne out of the mythic and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time and into contemporary theory.

446 Topics in Architecture, Culture, and Society
Fall or spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor.
Hours to be announced. B. MacDougall.

447 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor.
R 2:30–4:30. B. MacDougall.
This course explores the relationship between visionary architecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

448 The Indian Example and the Visual Tradition in Culture
Spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor.
T R 2:30–4:30. B. MacDougall.
This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as an element and the eye as a motif, darshan, the spiritually transforming vision, and the destructive power of vision as revealed in myth and beliefs about "evil eye."

Design Communication

Darkroom fees for all photography courses (these fees are subject to change):

In-college students—$55 per term

Out-of-college students—$55 plus $10 per term course fee

151 Drawing I
Fall. 2 credits.
Studios, T R 2:30–4:25. Staff.
Freehand drawing with emphasis on line and perspective representation of form and space.

152 Drawing II
Spring. 2 credits. Prerequisite: Architecture 151.
Studios, T R 2:30–4:25. Staff.
Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

251 Introductory Photo I (also Art 161)
Fall or spring. 3 credits each term.
Hours to be arranged. Staff.
For description see Art 161.

351 Introductory Photo II (also Art 261)
Spring. 3 credits. Prerequisites: Architecture 251 or Art 161, or permission of instructor.
Hours to be arranged. Staff.
For description see Art 261.

353 Large-Format Architectural Photography
Spring. 3 credits. Prerequisites: Architecture 251 or Art 161 or 261, or permission of instructor. Darkroom fee, $55/$65. Not offered every year.
Lec and studio, hours to be arranged. Staff.
The special uses of large-format view camera photography. Emphasis on the creative use of the view camera in architectural photography.

355 Graphic Design Studio
Fall or spring. 3 credits. Prerequisite: Architecture 151 or 152, or permission of instructor. Not offered every year.
Lec and studio, hours to be arranged. Staff.
Design and preparation of materials for reproduction in print media. Studio in typography, available printing processes, and photomechanical methods of reproduction.

356 Architectural Simulation Techniques
Fall or spring. 3 credits. Prerequisite: Architecture 151 or permission of instructor.
Lec and studio, hours to be arranged. G. Hascup.
Two- and three-dimensional simulation techniques in architecture. Emphasis on simulation of environment, space, materials, and lighting as visual tools for architectural design.

457 Special Project in Photography
Fall or spring. Variable credit (maximum, 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year.
Hours to be arranged. Staff.
Independent study.

458 Special Project in Design Communication
Fall or spring. Variable credit (maximum, 4). Prerequisites: permission of instructor and approved independent study form.
Hours to be arranged. Staff.
Independent study.

Architectural Science and Technology

160 The History of Architectural Technology
Fall or spring. 3 credits. Not for students in the Department of Architecture. Not offered every year.
Staff.
Architectural technology is a seemingly illogical blend of scientific knowledge and empirical experience. Whereas it may seem chaotic to the nonprofessional, it is a product of logic in the widely differing areas of design, structure, installation, production and erection, material use, law, economics, and historical development. The evolution of this interdependence is treated using examples of architectural and civic engineering works and processes.

261 Environmental Controls—Site Planning
Fall. 3 credits.
Lecs, M W 11:15–1:10. J. Ochshorn.
The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

262 Building Technology, Materials, and Methods
Spring. 3 credits.
Lecs, M W F 12:20–1:10. J. Ochshorn.
Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

361 Environmental Controls—Lighting and Acoustics
Fall. 3 credits.
Lecs, M W 9:05–11:00. R. Hall and staff.
Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design. Light, color, and form. Natural lighting possibilities and constraints. Good and bad examples of artificial lighting.

362 Environmental Controls—Mechanical and Passive Solar Systems
Spring. 3 credits.
Lecs, M W F 9:05–11:00. Staff.
Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems and plumbing.

367 Contemporary Italian Culture
Fall or spring. Variable credit (maximum, 3). For students in the Rome program only.
Staff and visiting faculty.
This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

371 Environmental Technology Workshop I
Fall or spring. 2 credits. Not offered every year.
Studio, hours to be arranged. Staff.
The mechanical engineer's task and its relation to the architectural design process. Full-scale and model studies of the role of air movement and temperature in building design. Passive and active solar energy design.

372 Environmental Technology Workshop II
Fall or spring. 2 credits. Prerequisite or corequisite: Architecture 362. Not offered every year.
Studio, hours to be arranged. Staff.
The tasks of the acoustical consultant, the electrical engineer, and the illumination consultant in relation to the architect's work. Acoustical and lighting design studies using full-scale mock-ups and specific building type studies. Cost factors.

374 Computer Graphics (also Computer Science 417)
Spring. 3 credits. Prerequisites: two terms of calculus and Computer Science 211, or equivalent. Not offered every year.
2 lecs, 1 lab. D. P. Greenberg.
Introduction to the principles of interactive computer graphics, including input techniques, display devices, display files, interactive graphic techniques, two- and three-dimensional computer graphics, perspective transformations, hidden line and hidden surface algorithms, and color-picture generation.

375 Practicum in Computer Graphics (also Computer Science 418)
Spring. 2 credits. Prerequisite: Computer Science 211. Recommended: Computer Science 314. Corequisite: Architecture 374. Not offered every year.
1 lab.
Two or three programming assignments dealing with sophisticated interactive vector graphics programs on calligraphic displays and solid-image generation on raster graphics displays.

378 Computers in Architecture Seminar
Fall or spring. 3 credits. Prerequisites: Computer Science 100 or permission of instructor. Not offered every year.
Hours to be arranged. H. Richardson and staff.
Exploration of the use of computers in a variety of ways encompassing architectural practice and education. Use of the computer is not required for this course.

379 Architectural Computer Applications
Fall or spring. 3 credits. Prerequisites: Computer Science 100 or second-year standing. Not offered every year.
Hours to be arranged. R. Hall.
Introduction to the use of the computer as a tool in the architectural design process. Experience with computer applications will be offered.

461 Professional Practice
Fall or spring. 3 credits each term.
T 1:25–4:25. M. Schack and staff.
An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

462 Professional Seminar
Fall or spring. 3 credits. Washington Program only.
M. Schack and staff.
Visits to public and private agencies and architectural firms in Washington and Baltimore. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

477–478 Special Projects in Computer Graphics
477, fall; 478, spring. Variable credit (maximum, 4). Limited to third-year students and above. Prerequisites: Architecture 374 plus concurrent registration in Computer Science 314 or equivalent, and permission of instructor.
Hours to be arranged. D. P. Greenberg and staff.
Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector and color raster displays.

561 Special Problems in Architectural Science
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of science staff instructor and approved independent study form.
Hours to be arranged. Staff.
Topics to be announced. Independent study.

563 Emerging Methods in Energy-Efficient Design
Fall. 3 credits. Prerequisite: Architecture 362. Not offered every year.
Sem, T R 9:05. Staff.
State-of-the-art energy-efficient building design strategies and computational methods to model the thermal performance of buildings, presented through case studies of exemplary designs and application of selected analytical methods to exercises in building design development.

564 Earth-sheltered Architecture
Fall or spring. 3 credits. Not offered every year.
Hours to be arranged. Staff.

571–572 Computer-aided Structural Design
571, fall; 572, spring. 4 credits each term. Limited to fourth-year students and above. Prerequisites: Architecture 374 and Civil and Environmental Engineering 371–372, concurrent registration in Civil and Environmental Engineering 673, and permission of instructor. Not offered every year.
D. P. Greenberg.
Advanced topics involving interactive computer graphics and advanced structural analysis techniques.

573–574 Computer-aided Environmental Design
573, fall; 574, spring. 4 credits each term. Limited to students in their fourth or later year. Prerequisites: Architecture 374 and 362, one year of college physics, and permission of instructor. Not offered every year.
Staff.
Advanced topics involving interactive computer graphics and advanced environmental design techniques. Topics may include acoustics, lighting, and energy analyses.

662 Environmental Control Systems
Fall or spring. 3 credits. Prerequisite: Architecture 362. Not offered every year.
Lec and sem, hours to be arranged. Staff.
The influences of the environment on the design of buildings and urban developments. Lecture and workshop exercises use the wind tunnel and artificial sun.

667–668 Architecture in Its Cultural Context I and II
667, fall; 668, spring. 4 credits each term. Prerequisite: permission of instructor. Not offered every year.
Sem, M W F 10:10. B. MacDougall.
Fall term, theory; spring term, problem solving and method. An examination of the relationship between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.

Graduate Courses

761–762 Architectural Science Laboratory
761, fall; 762, spring. 6 credits each term. Open to architectural science graduate students only.
Hours to be arranged. Staff.
Projects, exercises, and research in the architectural sciences.

763–764 Thesis or Research in Architectural Science
763, fall; 764, spring. Variable credit (maximum, 12). Limited to architectural science graduate students.
Hours to be arranged.
Independent study.

Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take Architecture 181–182 in the first year, and three additional courses from the 380–390 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses, seminars, and special investigations focus on the Western tradition, which constitutes the most immediate setting for contemporary practice. Building cultures from other parts of the world, often more extensive and far older than those of the West, are studied in special offerings as opportunities in faculty resources become available.

Sequence Courses

181 History of Architecture I
Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain.

T R 11:15–1:10. Staff.

The history of the built environment as social and cultural expression in Western civilization from earliest times to the present. In the fall, themes, theories, and ideas in architecture and urban design are considered on the basis of selected instances beginning with the earliest written records.

182 History of Architecture II
Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of Architecture 181.

T R 11:15–1:10. Staff.

The history of the built environment as social and cultural expression in Western civilization from earliest times to the present. In the spring, themes, theories, and ideas are addressed in greater detail for architecture and urban design leading to the present.

Freshman Writing Seminars

190 The Language of Architecture
Fall or spring. 3 credits. Not for students in the Department of Architecture. Not offered every year.

Hours to be arranged. Staff.

The metaphor of language is used to discuss works of architecture both as formal objects and as carriers of meaning when seen in their cultural contexts. Contemporary and historical examples, including local buildings, are examined to develop skills in visual analysis and in "reading the messages" in architectural design.

191 The Literature of Architecture
Fall or spring. 3 credits. Not for students in the Department of Architecture. Not offered every year.

Hours to be arranged. Staff.

The literature of architecture, understood as the testimony of the architects themselves, is drawn on to examine major themes of twentieth-century architecture. Texts are presented according to rhetorical mode within a framework of thematic categories. For example, narrative, descriptive, and polemical readings address the birth of the skyscraper. Three salient themes in modern architecture are explored in the seminar: the impact of technology and revolution, the skyscraper and dwelling as new types for new needs, and the aesthetic of modern architecture.

192 Visions of the City
Fall or spring. 3 credits. Not for students in the Department of Architecture. Freshman Seminar.

Staff.

Visions of the City explores the history and nature of the American city through the works of writers, poets, artists and designers. Three thematic categories provide a framework for class discussion and writing assignments. "The Industrial City" considers the social, political, and physical environment shaped by the forces of industrialization and increasing urban populations in late nineteenth-century America. "The City Beautiful" focuses on journalistic accounts and technical reports by professionals advocating physical planning as a cure for the social and aesthetic problems of the rapidly expanding metropolis. "The Modern City" addresses the disparate elements of the contemporary city, from the sprawl of suburbia to the large urban complexes such as Rockefeller Center, which are "cities within cities." Students will also consider comprehensive city plans proposed by prominent modern architects such as Frank Lloyd Wright and Le Corbusier. Students will be encouraged to draw on their own experiences and impressions of the city and to consider the relevance of historical problems and solutions to contemporary urban situations.

Directed Electives

381 Architecture of the Classical World
Spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

Hours to be announced. M. Jarzombek.

The history of architecture and urban design in ancient Mediterranean civilizations, with emphasis on Greece and Rome. The course considers change and transformation of building types and their elements within the general context of social demands.

382 Architecture of the Middle Ages
Fall. 4 credits. (Credit for this course may be obtained by taking History of Art 332.) Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

M W F 12:20. R. G. Calkins.

A survey of medieval architecture from the Early Christian period to the late Gothic (A.D. 300–1500). Emphasis is given to the development of structural systems, form, function, and meaning of important medieval buildings.

384 The Renaissance
Fall. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor.

T R 9:05–11. M. Jarzombek.

History of European architecture and city planning of the fifteenth and sixteenth centuries. Special consideration is given to building types and to internal changes in architecture and urban design, as well as to external influences such as social, economic, and political factors.

385 The Baroque
3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

M W 11:15–1:10. C. F. Otto.

History, ideas, and theories of architecture and urban design in Europe between 1600 and 1800. Special consideration is given to the contribution and significance of major architects of the time.

386 English Architecture: 1688–1892
Fall. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

Hours to be arranged. C. Rowe and staff.

An investigation of English architecture from the revolution of 1688 to the appearance of the parliamentary Labour party in 1892.

387 The Nineteenth Century
Spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

T R 9:05–11:00. M. Woods.

Examination of the significant individuals and movements in Western architectural theory and practice from the rationalist traditions through art nouveau.

388 The Twentieth Century
Fall. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

M W 11:15–1:10. C. F. Otto.

The history, ideas, and theories of architecture and urban design in Europe and America during the course of the twentieth century, beginning with reform efforts of the 1890s and concluding with work from the 1990s.

390 American Architecture I
Fall. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

T R 9:05–11. M. Woods.

History of American architecture and urbanism from prehistoric times to the Civil War, with emphasis on stylistic trends, practitioners, and social, economic, and aesthetic issues.

391 American Architecture II
Spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

T R 9:05–11. M. Woods.

A continuation of Architecture 390 but may be taken independently. The history of American architecture and urbanism from the Civil War to the 1980s. Special attention is paid to the dominant cultural, technical, and aesthetic determinants of form as manifested in the work of the major architects of the time.

395 Special Topics in Architectural History
Spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

Hours to be announced. M. Jarzombek.

Topic to be announced by preregistration.

396 Special Topics in Architectural History
Spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

Hours to be arranged. M. Kubelik.

Topic to be announced by preregistration.

397 Special Topics in Architectural History
Spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

Hours to be arranged. C. F. Otto.

Topic to be announced by preregistration.

398 Special Topics in Architectural History
Spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.

Hours to be arranged. M. Woods.

Topic to be announced by preregistration.

399 Special Topics in Architectural History
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year.
Hours to be arranged. Staff.
Topic to be announced by preregistration.

Courses in Preservation

583 (543) Measured Drawing (also City and Regional Planning 567)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor.
Hours to be announced. M. A. Tomlan.
Combines study of architectural drawings as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

584 (544) Problems in Contemporary Preservation Practice (also City and Regional Planning 563)
Spring. Variable credit (maximum, 3).
Hours to be announced. M. A. Tomlan.
A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed, presented by staff and guest lecturers.

585 (545) Perspectives on Preservation (also City and Regional Planning 562)
Fall. 3 credits.
Hours to be announced. M. A. Tomlan and visiting lecturers.
Introductory course for preservation planning. The rationale for, and methods of, using existing cultural and aesthetic resources in the planning and design of regions and cities.

586 (546) Documentation for Preservation Planning (also City and Regional Planning 560)]
Fall. 3 credits.
Hours to be announced. M. A. Tomlan and visiting lecturers.
Methods of collecting, recording, processing, and analyzing historical architectural and planning materials.

587 (547) Building Materials Conservation (also City and Regional Planning 564)
Spring. 3 credits. Open to juniors, seniors, and graduate students.
Hours to be announced. M. A. Tomlan.
A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

588 (548) Historic Preservation Planning Workshop: Surveys and Analyses (also City and Regional Planning 561)
Fall or spring. 4 credits.
Hours to be announced. Staff.
Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

Seminars in Architectural History

681 Seminar in the Architecture of the Classical World
Fall or spring. 4 credits. Prerequisites: Architecture 381 or permission of instructor. Not offered every year.
Hours to be arranged. M. Jarzombek.
Issues in Greek and Roman architectural history. Specific topic to be announced.

684 Seminar in the Renaissance
Fall or spring. 4 credits. Prerequisites: Architecture 384 or permission of instructor. Not offered every year.
Hours to be arranged. M. Jarzombek.
Issues in European architecture and city planning of the fifteenth and sixteenth centuries. Specific topic to be announced.

685 Seminar in the Baroque
Fall or spring. 4 credits. Prerequisites: Architecture 385 or permission of instructor. Not offered every year.
Hours to be arranged. C. F. Otto.
Special topics in the history of European architecture and urban design between 1600 and 1800. Specific topic to be announced.

687 Seminar in Nineteenth-Century Architecture
Fall or spring. 4 credits. Prerequisites: Architecture 387 or permission of instructor. Not offered every year.
Hours to be arranged. M. Woods.
Historical topics in European architecture and urbanism in the nineteenth century. Specific topic to be announced.

688 Seminar in Twentieth-Century Architecture
Fall or spring. 4 credits. Prerequisites: Architecture 388 or permission of instructor. Not offered every year.
Hours to be arranged. C. F. Otto.
Special topics in the history of architecture and urban design in Europe and America during the twentieth century. Specific topic to be announced.

690 Seminar in American Architecture
Fall or spring. 4 credits. Prerequisites: Architecture 390–391 or permission of instructor. Not offered every year.
Hours to be arranged. M. Woods.
Historical topics in the architecture of the nineteenth and twentieth centuries in the United States. Specific topic to be announced.

695 Seminar in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Hours to be announced. M. Jarzombek.
Topic to be announced.

696 Seminar in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisites: permission of instructor. Not offered every year.
Hours to be arranged. M. Kubelik.
Topic to be announced.

697 Seminar in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Hours to be arranged. C. F. Otto.
Topic to be announced.

698 Seminar in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Hours to be arranged. M. Woods.
Topic to be announced.

699 Seminar in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Hours to be arranged. Staff.
Topic to be announced.

Independent Study, Thesis, Dissertation

299 Undergraduate Independent Study in the History of Architecture
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements.
Hours to be arranged. Staff.
Independent study for undergraduate students.

499 Undergraduate Thesis in the History of Architecture
Fall or spring. 4 credits. For B.S. honors candidates in history only.
Hours to be arranged. Staff.

799 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
Independent study for graduate students.

899 M.A. Thesis in History of Architecture and Urbanism
Fall or spring. Variable credit.
Hours to be arranged. Staff.
Independent study for the master's degree.

999 Ph.D. Dissertation in History of Architecture and Urbanism
Fall or spring. Variable credit.
Hours to be arranged. Staff.
Independent study for the doctoral degree.

ART

R. Bertoia, Z. Blum, S. Bowman, N. D. Daly, M. Hitchcock, V. G. Kord, J. N. Locey, E. Meyer, E. Mikus, G. Page, B. Perlus, S. Poleskie, J. L. Squier, W. S. Taft, K. WalkingStick, and visiting critics.

Undergraduate Program

The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first three semesters all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience in the last three years. Beginning with the fourth term, students concentrate on painting, sculpture, photography, or printmaking. They may elect additional studio work in any of these subjects during the last two years, with the consent of the instructor, providing the courses are taken in sequence and at the hours scheduled. These courses are designed to promote a knowledge and critical understanding of these arts and to develop the

individual student's talent. All members of the faculty in the Department of Art are active, practicing artists, whose work represents a broad range of expression.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remainder is devoted to a diversified program of academic subjects with a generous provision for electives.

The curriculum in art is an independent program of study within the College of Architecture, Art, and Planning. However, the intimate relationships between the fine arts and training in architecture and city planning is a source of special strength in the Cornell program and affords unusual benefits to the students in these three disciplines.

Although the undergraduate curriculum in art is an excellent background for a career in applied art and offers courses in the use of graphics in modern communications, no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The department discourages accelerated graduation. However, a student may petition for consideration of early graduation by submission of a petition to the faculty before course enrollment in the spring semester of the student's junior year.

A candidate for the B.F.A. degree who also wants to earn a Bachelor of Arts degree from the College of Arts and Sciences can arrange to do so. This decision should be made early in the candidate's career (no later than the third semester), so that he or she can petition to be registered in both colleges simultaneously. Each student is assigned an adviser in the College of Arts and Sciences to provide needed guidance. Those students who are interested primarily in the history rather than in the practice of art should apply for admission to the College of Arts and Sciences with the objective of pursuing a major in the Department of History of Art in that college. Department of Art studio courses may then be taken as electives.

The B.F.A. program is designed so that students may fulfill the degree requirements of 130 credits with a minimum of 65 credits taken in the Department of Art and a minimum of 55 credits taken outside the department. Within these ranges, students may design their own programs subject to the following limitations:

1) Of the minimum of 55 elective credits to be taken outside the Department of Art, 12 credits must be in English, history, or other humanities offered in the College of Arts and Sciences. In the first two years 9 credits in history of art at the 200 level or higher or in architectural history must be completed. An additional 12 credits in art history at the 200 level or higher or in architectural history must be completed in the last two years. Also, 12 of the total 21 required credits must be in introduction to art history courses at the 200 level.

2) Students must also plan their programs to complete 30 credits in courses in one of the following studio areas: painting, sculpture, printmaking, or photography. In the area of photography, students must also complete Art 263 and 264. Students should plan to complete all fourth-year studio concentration courses. Students must also complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition.

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work. No student may study in absentia for more than two terms.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their record. The Rome studio is offered by the Department of Art. Additional courses in art and architectural history, contemporary Italian culture, and Italian language are offered by other departments participating in the program.

Curriculum

Students are expected to take an average course load of 16 credits per semester during their four years. They must complete a minimum of two courses each in painting, sculpture, printmaking, and photography and four in drawing by the end of the third year. All studio courses may be repeated for credit.

First Year

Fall Term	*Credits*
110 Color, Form, and Space	3
121 Introductory Painting	3
141 Introductory Sculpture	3
151 Introductory Drawing	3
Elective	3
Spring Term	
One of the following: 131 Introductory Etching 132 Introductory Graphics 133 Introductory Lithography	3
151 Introductory Drawing	3
161 Introductory Photography	3
Art history elective	3 or 4
Elective	3 or 4

Second Year

Fall Term	*Credits*
Art studio (two courses)	6
Art history elective	3 or 4
Elective(s)	6 or 7
Spring Term	
Art studio (two courses)	6
Art history elective	3 or 4
Elective(s)	6 or 7

Third Year

Fall Term	*Credits*
Art studio (one course minimum)	3–8
Issues of Contemporary Art	3
Electives	5–10
Spring Term	
Art studio (one course minimum)	3–8
Art history elective	3 or 4
Electives	4–10

Fourth Year

Fall Term	*Credits*
Fourth-year studio concentration	6
Art history elective	3 or 4
Electives	5 or 6
Spring Term	
Senior thesis studio concentration	6
Art history elective	3 or 4
Electives	5 or 6

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites and who have permission of the instructor.

Fees are charged for all Department of Art courses. For fine arts majors the fee is $20 each semester. Students from outside the department are charged $10 a course. In addition, there are darkroom fees for all photography courses (these fees are subject to change): for in-college students the fee is $65 each semester, and for out-of-college students the fee is $55 plus $10 per term course fee.

To take advantage of the special opportunities afforded by summer study, the department has developed several summer-only courses. Students wanting to satisfy Cornell degree requirements may petition to have these courses substituted for fall- or spring-term required courses.

Courses in Theory and Criticism

110 Color, Form, and Space
Fall or spring. 3 credits. Fall enrollment limited to B.F.A. candidates.
M 9:30–11. N. Daly.
A study of traditional and contemporary ways of drawing and painting. An analysis of color theory and pictorial space.

311 Issues in Contemporary Art
Fall. 3 credits.
Hours to be arranged. S. Poleskie.
A seminar course in issues of contemporary art, including lectures by visiting artists.

610 Seminar in Art Criticism
Fall or spring. 2 credits; may be repeated for credit. Four terms required for M.F.A. candidates.
Hours to be arranged. Staff.
Historical and modern critical opinions and their relation to problems in the theory of art are studied.

Studio Courses in Painting

121 Introductory Painting
Fall, spring, or summer. 3 credits.
Hours to be arranged. Staff.
An introduction to the problems of artistic expression through the study of pictorial composition; proportion, space, shapes, and color as applied to abstract and representational design.

123 Landscape Painting
Summer. 3 credits.
Class meets outdoors at selected sites in the Ithaca area. A different motif is explored each week. Pen, pencil, and water- or oil-based colors (optional) are the materials employed. Analysis and discussion of the landscape work of Corot, Cézanne, van Gogh, Seurat, and others are included.

124 Painting and Drawing
Variable credit (maximum 5). Summer only.
A special summer abroad course with emphasis on artistic expression and techniques, for students at all levels of skill. Included will be a mixture of painting and drawing assignments, self-initiated projects, and drawing sessions with a live model.

221 Painting II
Fall or spring. 3 credits. Prerequisite: Art 121 or permission of instructor.
Hours to be arranged. Staff.
A continuation of Art 121.

321 Painting III
Fall. 4 credits. Prerequisite: Art 221 or permission of instructor.
Hours to be arranged. Staff.
Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.

322 Painting IV
Spring. 4 credits. Prerequisite: Art 321 or permission of instructor.
Hours to be arranged. Staff
Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.

421 Painting V
Fall. 6 credits. Prerequisite: Art 322 or permission of instructor.
Hours to be arranged. Staff.
Further study of the art of painting through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

422 Senior Thesis in Painting
Fall or spring. 6 credits. Prerequisite: Art 321 or 322 or permission of instructor.
Hours to be arranged. Staff.
Advanced painting project to demonstrate creative ability and technical proficiency.

721–722, 821–822 Graduate Painting
721 and 821, fall; 722 and 822, spring. Credit as assigned. May be repeated for credit. Limited to M.F.A. students in painting.
Staff.
Students are responsible, under staff direction, for planning their own projects and selecting the media in which they are to work. All members of the staff are available for individual consultation.

Studio Courses in Graphic Arts

131 Introductory Intaglio
Fall, spring, or summer. 3 credits.
Hours to be arranged. E. Meyer.
A basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

132 Introductory Graphics
Fall, spring, or summer. 3 credits.
Hours to be arranged. S. Poleskie.
An introduction to the two-dimensional thought process and the language of vision. Students will explore design projects and the use of graphic materials, including collage, pochoir, and screen printing.

133 Introductory Lithography
Fall, spring, or summer. 3 credits.
Hours to be arranged. G. Page.
The theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

231 Intaglio Printing II
Fall or spring. 3 credits. Prerequisite: Art 131 or permission of instructor.
Hours to be arranged. E. Meyer.
Continuation of the study and practice of methods of intaglio printing, with emphasis on techniques and color.

232 Advanced Screen Printing (Book Arts)
Spring. 3 credits. Prerequisite: Art 132 and Art 161 or permission of instructor.
Hours to be arranged. S. Poleskie.
Students will expand their knowledge of screen printing to include photo stencil and printing on diverse materials such as cloth and plastic with the goal of producing a book or a portfolio of prints by the end of the semester.

233 Lithography II
Fall or spring. 3 credits. Prerequisite: Art 133 or permission of instructor.
Hours to be arranged. G. Page.
Continuation of the study and practice of lithographic printing, with emphasis on color.

331 Printmaking III
Fall or spring. 4 credits. Prerequisite: Art 231, 232, or 233 or permission of instructor.
Hours to be arranged. Staff.
Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

332 Printmaking IV
Fall. 4 credits. Prerequisite: Art 331 or permission of instructor.
Hours to be arranged. Staff.
Continuation and expansion of Art 331.

431 Printmaking V
Spring. 6 credits. Prerequisites: Art 332 or permission of instructor.
Hours to be arranged. Staff.
Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

432 Senior Thesis in Printmaking
Fall or spring. 6 credits. Prerequisite: Art 331 or 332 or permission of instructor.
Hours to be arranged. Staff.
Advanced printmaking project to demonstrate creative ability and technical proficiency.

731–732, 831–832 Graduate Printmaking
731 and 831, fall; 732 and 832, spring. Credit as assigned; may be repeated for credit. Limited to M.F.A. candidates in graphic arts. Prerequisite: permission of instructor.
Staff.
Students are responsible, under staff direction, for planning their own projects and selecting the media in which they will work. Members of the staff are available for consultation; discussion sessions of work in progress are held.

Studio Courses in Sculpture

141 Introductory Sculpture
Fall, spring, or summer. 3 credits.
Hours to be arranged. Staff.
A series of studio problems introduce the student to the basic considerations of artistic expression through three-dimensional design, i.e., modeling in Plasteline, building directly in plaster, casting in plaster, and constructing in wood and metal.

241 Sculpture II
Fall or spring. 3 credits. Prerequisites: Art 141 or permission of instructor.
Hours to be arranged. Staff.
Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore the bronze casting process. The sculpture program, which is housed in its own building, contains a fully equipped bronze casting foundry.

341 Sculpture III
Fall. 4 credits. Prerequisite: Art 241 or permission of instructor.
Hours to be arranged. Staff.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

342 Sculpture IV
Spring. 4 credits. Prerequisite: Art 241 or permission of instructor.
Hours to be arranged. Staff.
Continuation and expansion of Art 341.

441 Sculpture V
Fall. 6 credits. Prerequisite: Art 342 or permission of instructor.
Hours to be arranged. Staff.
Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

442 Senior Thesis in Sculpture
Fall or spring. 6 credits. Prerequisite: Art 341 or 342 or permission of instructor.
Hours to be arranged. Staff.
Advanced sculpture project to demonstrate creative ability and technical proficiency.

741–742, 841–842 Graduate Sculpture
741 and 841, fall; 742 and 842, spring. Credit as assigned. May be repeated for credit. Limited to M.F.A. students in sculpture.
Staff.
Students are responsible, under staff direction for planning their own projects and selecting the media in which they are to work. All members of the staff are available for individual consultation. Weekly discussion sessions of works in progress are held.

Studio Courses in Photography

Darkroom fees for all photography courses (these fees are subject to change):

In-college students $55 per term

Out-of-college students—$55 plus $10 per term course fee.

161 Introductory Photography I (also Architecture 251)
Fall, spring, or summer. 3 credits.
Hours to be arranged. Staff.
A basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photography imagery.

167 Photography
Variable credit (maximum 5). Summer only.
A special summer-abroad course with emphasis on both the techniques and aesthetics of black-and-white photography, for students at all levels of skill. Initial photographic assignments will be followed by other projects of the student's own choosing.

168 Black-and-White Photography
Summer. 3 credits. Fee, $60.
Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

169 Color Photography
Summer. 3 credits. Fee, $60.
Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

261 Photography II (also Architecture 351)
Fall, spring, or summer. 3 credits. Prerequisites: Art 161 or Architecture 251, or permission of instructor.
Hours to be arranged. Staff.
A continuation of Introductory Photography I.

263 Color Photography
Fall or spring. 3 credits. Prerequisite: Art 161 or permission of instructor.
Hours to be arranged. Staff.
A studio course in color photographic processes, including color film developing and color printing. Emphasis is on camera skill, color techniques, image content, and creative use of color photography.

264 Photo Processes
Fall or spring. 3 credits. Prerequisite: Art 161 or permission of instructor.
Hours to be arranged. Staff.
A studio course in alternate and nonsilver photographic, processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

265 Studio Photography
Fall or spring. 3 credits. Prerequisite: Art 161 or permission of instructor.
Hours to be arranged. Staff.
A course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

361 Photography III
Fall or summer. 4 credits. A studio course intended for photography majors and other qualified students. Prerequisite: Art 261, 262, or 263 or permission of instructor.
Hours to be arranged. Staff.
Continued study of creative use of photography, with emphasis on specialized individual projects.

362 Photography IV
Spring. 4 credits. A studio course intended for photography majors and other qualified students. Prerequisite: Art 361 or permission of instructor.
Hours to be arranged. Staff.
A continuation of Art 361.

379 Independent Studio
Summer. Credit by arrangement.
Hours by arrangement. Staff.
Students who have the interest and ability to progress beyond the problems of their particular course may register for additional credits. Students plan courses of study or projects that must meet the approval of the instructors they have selected to guide their progress and criticize the results. A course fee may be charged.

461 Photography V
Fall. 6 credits. Prerequisite: Art 361 or permission of instructor.
Hours to be arranged. Staff.
A studio course intended for photography majors and other qualified students.

462 Senior Thesis in Photography
Fall or spring. 6 credits. Prerequisite: Art 461 or permission of instructor.
Hours to be arranged. Staff.
A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

751–752, 851–852 Graduate Photography
751 and 851, fall; 752 and 852, spring. Credit as assigned. May be repeated for credit. Limited to M.F.A. students in photography. Prerequisite: permission of instructor.
Staff.
Students are responsible, under staff direction, for planning their own projects and selecting the media in which they will work. Members of the staff are available for consultation. Discussion sessions of work in progress are held.

Studio Courses in Drawing

151 Introductory Drawing
Fall, spring, or summer. 3 credits.
Hours to be arranged. Staff.
A basic drawing course in the study of form and techniques. Contemporary and historical examples of figure, still life, and landscape drawing are analyzed in discussion.

158 Conceptual Drawing
Summer. 3 credits.
Emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

159 Life and Still-Life Drawing
Summer. 3 credits.
The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

251 Drawing II
Fall or spring. 3 credits. Prerequisites: Art 151 or permission of instructor.
Hours to be arranged. Staff.
A continuation of Art 151 but with a closer analysis of the structure of the figure and a wider exploitation of its purely pictorial qualities.

[351 Drawing III
Fall or spring. 3 credits. Prerequisite: Art 251. Not offered 1990–91.
Staff].

352 Anatomy for Artists
Spring. 3 credits. Prerequisites: Art 151, 159, and 251 or permission of instructor.
Hours to be arranged. S. Taft.
Develops basic understanding of the structure of the human figure as it is relevant to artists through an in-depth study of the skeleton and muscle-tendon system. Focuses on improving understanding and skill in design and observation, as well as gaining an understanding of how the materials may be relevant to making art through the study of works by the masters.

Graduate Thesis

712 Graduate Thesis
Spring. Credit as assigned.
Staff.
For graduate students in their last term in the programs in painting, sculpture, printmaking, and photography.

Special Studio Courses

171 Computer Art
[Fall], spring, or summer. 3 credits.
Hours to be arranged. S. Bowman.
Introduction to the use of the microcomputer, various graphic art programs, and methods for the generation of abstract color images. Emphasis on the computer as a tool for making art.

371 Independent Studio
Fall, spring, or summer. Variable credit (maximum, 5). Students may register for two studios in a semester. May be repeated for credit. Prerequisite: written permission of instructor.
Department staff.

372 Special Topics in Art Studio
Fall, spring, or summer. Variable credit.
Hours to be arranged. Staff.
An exploration of a particular theme or project.

400 Rome Studio
Fall or spring. 6 credits. Prerequisite: permission of instructor.
Staff.
The content for the Rome studio will be determined by the instructor. Emphasis will be divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media will consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor.

471 Independent Studio
Fall, spring, or summer. Variable credit (maximum, 6). Students may register for two studios in a semester. May be repeated for credit. Prerequisite: written permission of instructor.
Department staff.

CITY AND REGIONAL PLANNING

D. B. Lewis, chair; L. Beneria, R. S. Booth, S. Christopherson, P. Clavel, J. Cody, S. Czamanski (emeritus), J. F. Forester, W. W. Goldsmith, W. Isard, B. G. Jones, B. Kelly (emeritus), B. Lewis, P. Olpadwala, K. C. Parsons, J. W. Reps (emeritus), S. Saltzman, S. W. Stein, M. A. Tomlan, R. T. Trancik, T. Vietorisz (visiting), M. Wilder

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies

The four-year Bachelor of Science program in urban and regional studies offers students an opportunity to direct their education toward an understanding of urban and regional problems and solutions. The curriculum acquaints students with the physical, social, political, economic, and environmental forces that confront cities and regions and contribute to their growth and decline. The curriculum draws on strengths in the department and is supplemented by course work in related areas in other departments at Cornell.

The first two years in this program are a general education in the liberal arts and sciences. Writing and quantitative skills are developed, and an exposure is provided to course work in the natural and social sciences, the expressive or design arts, and the humanities. Two introductory courses in urban and regional issues are also taken during the first two years. During the junior and senior years ten specific courses are taken to provide a significant foundation of knowledge in the major. Additional directed electives will permit the student to gain greater depth of knowledge and acquire a broader understanding of topics of individual interest. These courses may be in any related subject, including, for example, housing, urban design, neighborhoods, energy, environmental controls, economic development, architecture, land use, social policy, and international planning.

Basic Requirements for Graduation

1) General education (during the first four terms)

a. Freshman writing seminars: 6 credits

b. Foreign language: qualification in one foreign language

c. An approved course sequence (minimum of 6 credits) in each of the five categories below: 30 credits

1. a. Biological sciences or
   b. Physical sciences
2. a. Social sciences (other than economics) or
   b. History
3. a. Humanities or
   b. Expressive arts or design arts
4. Mathematics
5. Economics

2) Major concentration: 50 to 52 credits

a. Specific course requirements (38 to 40 credits)

CRP 100, The American City

CRP 101, The Global City

CRP 314, Planning, Power, and Decision Making, or Government 311, Urban Politics

CRP 315, The Progressive City

CRP 320, Introduction to Quantitative Methods I

CRP 321, Introduction to Quantitative Methods II

CRP 361, Seminar in American Urban History, or History 332 or 333, The Urbanization of American Society

CRP 400, Introduction to Urban and Regional Theory

CRP 401, Urban Political Economy

CRP 480, Environmental Politics

CRP 481, Principles of Spatial Design and Aesthetics

CRP 482, Urban Land Use Concepts

b. Directed electives (related to urban and regional studies): 12 credits (at least 6 credits to be taken outside CRP)

3) Free electives: 26 to 28 credits

a. 12 credits during first four terms

b. 14 to 16 credits during last four terms

Required courses for graduation: 34

Required Credits: 120

The university requirement of two terms of physical education must be met during the first two terms.

Honors Program

Each year a small number of well-qualified junior-year students will be accepted into the honors program. Each honors student will develop and write a thesis under the guidance of his or her faculty adviser. There will be a seventy-five-page limit on each honors thesis.

Off-Campus Opportunities

Cornell-in-Washington Program. Students in good standing may be eligible to earn degree credits in the Cornell-in-Washington program through course work and an urban-oriented internship in Washington, D.C. Students may work as interns with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, human development and family studies, architectural history, and agricultural economics. All seminars are taught by Cornell faculty members and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. Cornell encourages qualified undergraduates to study abroad in the belief that exposure to foreign cultures is an important component of a good education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. With this in mind, the university is continuing to develop study abroad opportunities. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Mideast, and France should be forthcoming. The department encourages its students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing are eligible to earn degree credits through course work undertaken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options

Linked degree options. Urban and regional studies students have the opportunity to earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. This arrangement shortens that time by about one year. A minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Students apply to the Graduate School, usually in the senior year.

Dual degree option. A student in the Cornell College of Arts and Sciences currently can earn both a B.A. in an arts college major, plus a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. A high school student who has completed graduation requirements at midyear and is taking college courses for the rest of the academic year should apply as a freshman. Prospective candidates who believe that their circumstances are exceptional should consult with the director of admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, New York 14850–2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

It is desirable for prospective transfers to have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Those applicants whose previous course work closely parallels the general education portion of the urban and regional studies curriculum will have relative ease in transfer. However, as there are no specific requirements for transfer, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding urban and regional studies may contact Professor Richard S. Booth, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, New York 14853–6701 (telephone: 607/255–4613).

The Graduate Program in City and Regional Planning

Planning seeks to guide the development of the economic, social, natural, and built environments so that the needs and aspirations of all people may be better satisfied.

The major concentrations of course work in city and regional planning are in the following areas:

Built environment and urban development planning is concerned with physical facilities; the social, economic, and environmental forces that affect their design; and the process of development, plan making and administration.

History and historic preservation planning is a special program of study preparing students for work in history, analysis, and preservation of buildings, urban environments, and neighborhoods, including downtown business areas.

Regional planning and regional science are concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the ways in which resources can best be used.

Local and regional economic development is concerned with understanding and influencing how economic change may be harnessed to the benefit of communities, counteracting plant closings and more general regional decline and stimulating more equitable programs of socioeconomic change and development.

International planning offers a broad range of courses in international economic development, development planning, and political economy.

Quantitative methods and policy analysis courses are offered to prepare planners and researchers for a variety of situations and problems.

Complementing these concentrations, planning theory and political economy courses examine the organizational and planning processes and the political and economic conditions in which planning and international development operate.

Several graduate degrees are offered: the Ph.D.; the Master of Regional Planning (M.R.P.), for a two-year program; the Master of Arts (M.A.) in historic preservation planning, for a two-year program; and, in special cases, the Master of Professional Studies (International Development) [M.P.S.(I.D.)], for the twelve-month international planning program.

Off-Campus Opportunities

Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies

100 The American City
Fall. 3 credits.
Staff.
An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we approach the last decade of the twentieth century. Readings, discussions, and brief papers exploring topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

101 The Global City: People, Production, and Planning in the Third World
Spring. 3 credits.
P. Olpadwala.
A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

108 FWS: Environment and Society: The Delicate Balance
Fall. 3 credits.
J. Cody.
This freshman writing seminar addresses the delicate balance that must be maintained between societal needs and demands and environmental quality. It uses several important texts that examine and challenge society's widespread and deep-rooted tendencies to ignore the social, economic, and environmental consequences of degrading the natural environment. Students work extensively on improving writing skills.

109.01 Freshman Writing Seminar
Fall or spring. 3 credits.
Hours to be arranged. Staff.
Topic to be announced.

109.02 FWS: In Search of American Cities
Spring. 3 credits.
Staff.
An unusual course structure is used to give students broad exposure to ongoing changes in the social, political, economic, and physical character of U.S. cities. Each week students will "visit" a different city by way of readings, oral presentations, discussions, and brief papers that touch on major aspects of the city's economic, social, and political history; the city's physical character and regional context; and recent planning or policy issues.

218 Economics of Gender
Spring. 3 credits.
L. Beneria.
The emphasis in this course will be on the economic aspects of women and work: What are the consequences of women's concentration in reproductive work? What economic role does domestic work play within the larger economy? What are the consequences of occupational segregation by gender? Why is the wage gap between men and women not disappearing? What is the role of discrimination? What is the condition of women in other countries? Throughout the course we will examine different analytical frameworks and distinguish between different feminist perspectives dealing with those questions.

314 Planning, Power, and Decision Making
Fall 3 credits.
J. Forester.
This seminar examines various bases of political and professional power. We ask, What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups?

315 The Progressive City
Spring. 3 credits.
P. Clavel.
A review of attempts to incorporate the interest of working-class and poor constituencies through majority control of local governments. Topics to be covered include the role of the city in class formation; historical perspectives on urban political administration; contemporary populist, socialist, and progressive urban governments; and the search for an economic basis for progressive reforms.

320 Introduction to Quantitative Methods I
Fall. 3 credits.
B. Lewis.
An introduction to the role and use of quantitative methods in the study of urban and regional issues. Emphasis will be on statistical, mathematical, and computer methods for the formulation, analysis, and testing of hypotheses and models of social, economic, and physical phenomena of cities and regions. The first semester will cover applicable methods in probability, descriptive statistics, estimation, hypothesis testing, and regression.

321 Introduction to Quantitative Methods II
Spring. 3 credits.
S. Saltzman.
A continuation of City and Regional Planning 320. The second semester will focus on regression and other methods commonly used to analyze urban and regional phenomena, including techniques for decision analysis, linear programming, and cost-benefit analysis and simulation, among others. Strengths and weaknesses of those methods will also be considered.

361 Seminar in American Urban History (also CRP 662)
Spring. 3 credits. Prerequisite: permission of instructor.
K. C. Parsons.
Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

[382 Urban Housing: Sheltered vs. Unsheltered Society (also CRP 582)
Fall. 4 credits. Not offered 1990–91.
M. Wilder.
Homelessness is the latest in a continuing list of terms to describe unmet housing needs. To understand how and why such needs persist, even in good economic times, one must examine the nature of interactions between housing policies and housing market forces. This course examines the complex interaction of public and private actions in the development and redevelopment of urban housing. More specifically, the course seeks to investigate the many ways in which private and public policy decisions determine which groups in society will have access to housing. This course is appropriate for students with an interest in urban housing and a background in any of the following areas: urban economics, urban sociology, anthropology, history, or geography. The course will consist of lectures, a wide variety of readings, and guest speakers. Students will be evaluated on the basis of class discussions, two exams, a 15–20 page paper, and an oral presentation.]

[387 Urbanization and the Environment
Fall. 4 credits. Offered alternate years. Not offered 1990–91.
R. S. Booth.
This seminar explores a series of issues related to the impacts of urbanization on the natural environment. Examples of these issues include: waste management, water supply, transportation, energy generation, and maintenance of open spaces. The seminar will include discussion sessions and a series of field trips. Students will prepare short reports, work on a team project, and make class presentations.]

400 Introduction to Urban and Regional Theory
Fall. 4 credits. Open to juniors and seniors.
B. G. Jones.
Introductory review of theories dealing with the spatial distribution of population and economic activity, drawn from various social science disciplines such as geography, economics, and sociology. Review of recent research dealing with such topics as population distribution, migration, location of industry and economic activity, and the spatial organization of urban and regional social systems.

401 Seminar in Urban Political Economy
Spring. 4 credits. Prerequisites: Upper division standing for URS students, CRP 400; for other students, permission of the instructor.
W. W. Goldsmith.
The world economy, the global city, and social change. Population, technology, and work in industrial and developing countries. Race, ethnicity, and nationality. Profits, subsistence, and poverty. Students may read and direct discussions on outstanding texts, write book reviews, and complete a research paper comparing one issue in two cities.

[404 Urban Economics (also CRP 604)
Fall. 4 credits. Prerequisite: basic economics.
Staff. Not offered 1990–91.
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.]

[413 Planning and Political Economy I
Fall. 4 credits. Not offered 1990–91.
Staff.
This course deals with Marx's methodological approach and his elaboration in volume one of Capital. Topics will cover Marx's method, the labor theory of value, the labor process and surplus value, absolute and relative surplus value, the general law of capital accumulation, and the transition from feudalism to capitalism. Basic texts will be supplemented with readings and discussion about current urban problems.]

[414 Planning and Political Economy II
Spring. 4 credits. Prerequisites: students must have read volume one of Capital and be generally familiar with Marx's approach. Not offered 1990–91.
Staff.
Introduction to volumes two and three of Marx's Capital and his Theories of Surplus Value. Discussion of selected topics among the circulation of capital, productive and unproductive labor, reproduction schemes, accumulation, the transformation of surplus value into profits, the transformation of value into prices of production, the tendency of the rate of profit to fall, and crises. Emphasis on interpretation of current urban problems.]

415 Gender Issues in Planning and Architecture
Spring. 3 or 4 credits.
S. Christopherson.
In this course we will examine the role of gender in relation to urban policy, regional planning, and architecture. The course has two major objectives: (1) to provide a theoretical and empirical context for understanding how gender influences the form and allocation of space and (2) to explore concrete ways to address and ameliorate gender inequalities in the practice of planning and architecture.

417 Industrial Restructuring: Implications for State and Local Policy (also CRP 517)
Fall. 4 credits.
S. Christopherson.
A basic introduction to new issues arising from the way in which national and international economic shifts are affecting diverse United States localities. The course will focus on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific application to New York and other Northeast locations.

421 Introduction to Computers in Planning (also CRP 522)
Fall. 4 credits.
Staff.
Students learn how to use microcomputers and software packages in the planning and problem-solving processes. Included are word processing, spreadsheets, mapping, and other types of packages that are useful for other classes and for professional work in the field. (WordPerfect, Lotus 1-2-3, dBase and MacGIS are examples of packages that have been taught in previous years.)

442 Social and Political Studies of Science (also Sociology 355)
Spring. 3 credits.
Staff.
A view of science less as an autonomous activity than as a social and political institution. We will discuss such issues as secrecy in science, ethical and value disputes, and the limits to scientific inquiry in the context of the changing relations between science and the public.

[452 Urban Policy, Planning, and Design in Practice
4 credits. Fall or spring. Cornell-in-Washington course. Not offered 1990–91.
Hours to be arranged. K. C. Parsons.
Study and discussion of selected policy-issue areas and programs in city and regional planning and urban design. The historical context of ideas and issues will be covered in addition to critical reviews of specific programs such as equal access to housing, central city revitalization, neighborhood planning, urban aesthetics, transportation policy, etc. Field trips to selected projects in Washington and Baltimore.]

461 Methods of Archival Research
Fall. 3 credits.
K. C. Parsons.
Examination of methods of using archival materials including documents in the Cornell archives and regional history collection, for research in the history of architecture, historic preservation, and history of urban development.

462 The American Planning Tradition (also Architecture 393)
Spring. 4 credits.
J. Cody.
A systematic review of American city planning history beginning with the earliest colonial settlements and ending with the era of the New Deal. An introductory lecture course requiring no previous exposure to planning or architecture. A prerequisite for students intending to take advanced seminars or independent studies in planning history.

480 Environmental Politics
Spring. 3 credits.
R. S. Booth.
Examines the politics of public decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

481 Principles of Spatial Design and Aesthetics (also Landscape Architecture 220)
Fall. 3 credits.
R. T. Trancik.
A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

482 Urban Land Use Concepts.
Spring. 3 credits.
Staff.
Explorations of the use of land in urban areas, with an emphasis on the experience of North American cities. The course reviews use types, use characteristics, and use relationships in terms of conflicting social and economic demands. Concepts of organizing urban space in the past and present are reviewed. Physical planning and aesthetic issues are also discussed.

490 Student-Faculty Research
Fall or spring. 1–4 credits. Limited to undergraduate students in the Urban and Regional Studies Program. S-U grades only.
Hours to be arranged. Staff.
Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

492 Honors Thesis Research
Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty.
Hours to be arranged. Staff.
Each selected student works with his or her thesis adviser.

493 Honors Thesis Writing
Fall or spring. 4 credits. Prerequisite: Completion of CRP 492.
Hours to be arranged. Staff.
Each selected student works with his or her thesis adviser.

495 Special Topics
Fall or spring. 3 credits. Hours to be arranged.
Staff.

Graduate Courses and Seminars

Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 499. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

500 Urban and Regional Theory
Spring. 4 credits. Prerequisite: intermediate-level economics or sociology, or CRP 400.
W. W. Goldsmith.
A review of attempts by the various social sciences to understand the contemporary city and its problems, particularly as seen by planners. Material is drawn from urban and regional economics, human ecology, urban sociology, psychology, anthropology, and geography in order to explain the location, size, form, and functioning of cities. Traditional and contemporary critical theory is examined as it applies to physical, social, and economic problems of the modern city. Major texts will be read, criticized, and discussed in seminars.

501 Introduction to Economics and Political Economy
Fall. 2 or 4 credits.
T. Vietorisz/W. W. Goldsmith.
This course introduces students to the fundamentals of economics from the user's point of view. The course compares two major schools of thought that take a conflicting approach to political-economic problems of society: the mainstream school of traditional economics and the Marxian school of political economy. Concrete planning problems, with which the course illustrates theoretical points, appear in a very different light from these two perspectives. The course provides bases for independent judgment in assessing conflicting interpretations likely to be encountered in students' professional careers.

511 Concepts and Issues in Planning Practice
Fall. 4 credits.
P. Clavel.
A seminar for graduate students and others interested in an in-depth introduction to the main ideas and concepts that underlie the practice of city and regional planning. Weekly discussions will focus on selected articles and books. Interrelations between national, state, and local practices and policies, and developments in methodology, organization, and the political environment, will be explored.

[512 Introduction to Planning Theory
Spring. 4 credits. Not offered 1990–91.
J. Forester.
Planning is a form of social intervention. It parallels and complements other important decision-making institutions such as voting, interest-group bargaining, and market exchange. This course provides cases and analysis describing examples of alternative forms of planning and the various arguments used to justify planning: market failure, democratic participation, advocacy, and expert judgment. Political, organizational, and practical-ethical aspects of planning practice are explored. The course covers the work of Dyckman, Piven, Krumholz, Marcuse, Lindblom, Friedmann, March, and others.]

515 Gender Issues in Planning and Architecture (also CRP 415)
Spring. 3 or 4 credits. Offered alternate years.
S. Christopherson.
In this course we will examine the role of gender in relation to urban policy, regional planning, and architecture. The course has two major objectives: (1) to provide a theoretical and empirical context for understanding how gender influences the form and allocation of space and (2) to explore concrete ways to address and ameliorate gender inequalities in the practice of planning and architecture.

517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)
Fall. 4 credits.
S. Christopherson.
A basic introduction to new issues arising from the ways in which national and international economic shifts are affecting diverse United States localities. The course will focus on intraindustry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific application to New York and other locations in the Northeast.

520 Statistical and Mathematical Concepts for Planning
Fall. 4 credits.
S. Saltzman.
An introduction to statistical and mathematical concepts and methods of importance in planning policy analysis. Topics will include matrix algebra, probability, sampling, estimation, and regression as well as the use of a microcomputer statistical package.

521 Mathematical Foundation for Planning Analysis.
Spring. 1 credit. S-U only. Meets for two hours, once each week, for approximately half the semester.
Staff.
Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

522 Introduction to Computers in Planning (also CRP 421)
Fall. 4 credits.
Staff.
Students learn how to use microcomputers and software packages in the planning and problem-solving processes. Included are word processing, spreadsheets, mapping, and other types of packages that are useful for other classes and for professional work in the field. (WordPerfect, Lotus 1-2-3, dBase, and MacGIS are examples of packages that have been taught in previous years.)

541 The Politics of Technical Decisions I (also Government 628 and Sociology 515)
Fall. 4 credits. Cosponsored by the Program on Science, Technology, and Society.
Staff.
Political aspects of decision making in technical areas. Drawing from recent risk disputes, we will examine the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system. Alternatives to current decision-making procedures are explored.

542 The Politics of Technical Decisions II (also Government 629)
Spring. 4 credits. Prerequisite: CRP 541 or permission of instructors. Cosponsored by the Program on Science, Technology, and Society.
Hours to be arranged. Staff.
A continuation of City and Regional Planning 541, focusing on political aspects of decision making in technical areas. Drawing from recent risk disputes, we will examine the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system.

[545 Introduction to Public Policy Analysis and Management
Fall or spring. 3 credits. Not offered 1990–91.
S. Saltzman or staff.
Introduction to systematic methods and processes for analyzing issues and problems of public policy and management. Roles of economic analysis and of analytic techniques in public sector decision making will be reviewed and their respective strengths and weaknesses evaluated. Applications to a variety of public sector problem areas will be explored.]

546 Conflict Resolution in the Public Sector
Fall. 3 credits.
J. Forester.
This course will explore the theories and techniques of conflict resolution as they apply to community, environmental, and local land use disputes. We consider principles and strategies of negotiation, mediation, and facilitation. Style, power, and representation are of central concern.

550 Built Environment
Fall. 3 credits.
S. Christopherson.
This course is intended to introduce graduate-level students to the study of the built environment. This course will include: 1) theoretical approaches to the study of the built environment; 2) an introductory survey of the literature on built environment "elements," such as streets, grids, houses; 3) consideration of methods used to understand how people affect and are affected by their immediate environment; and 4) special topics, particularly, historic landscapes and historic preservation. This course will emphasize examples from the United States but some international comparisons will be drawn.

551 Environmental Law
Fall. 3 credits.
R. Booth.
An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act and the Clean Air Act; federal environmental regulations and the important judicial decisions that have been handed down under federal environmental statutes and regulations. Discussion of environmental topics from a policy management perspective.

552 Urban Land-Use Planning I
Fall. 3 credits.
S. Stein.
Surveys, analyses, and plan-making techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

553 Urban Land-Use Planning II
Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.
K. C. Parsons.
In-depth consideration of special issues in urban land-use planning, such as industrial districts, large-scale integrated development, Planned Unit Development, public and institutional facilities, open space, land banking, central business districts, neighborhoods, energy impacts, transportation impacts, and others.

[554 Introduction to Planning Design
Fall. 3 credits. Not offered 1990–91.
Staff.
Lectures, seminars, readings, and design exercises explore basic concepts and issues related to urban planning, urban design, site planning, and environmental awareness. Emphasis is on professional practice. Intended for students without design backgrounds, but others may enroll.]

555 Urban Systems Studio (also Landscape Architecture 602)
Spring. 6 credits. Prerequisite: permission of instructor.
R. T. Trancik.
Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. This is a specially arranged collaborative studio with the Landscape Architecture Program.

556 Built-Environment Education Workshop
Spring. 4 credits.
Fieldwork hours to be arranged. Staff.
Interdisciplinary teams of students from planning, architecture, landscape architecture, historic preservation, and other environmental design disciplines work in classrooms with schoolchildren and teachers to deepen their understanding of the built environment and to encourage their participation in the shaping of their own environment. Work in local schools is emphasized.

[557 Small-Town Community Design Workshop
Fall or spring. 2 or 4 credits. Not offered 1990–91.
Fieldwork hours to be arranged. S. Stein.
An in-depth approach to specific problems facing the small town or small city. Various aspects of planning, historic preservation, landscape architecture, and design, including "Main Street" revitalization, street scape planning, storefront rehabilitation, signage, and comprehensive planning, are explored in a workshop setting. Working with real clients in nearby communities.]

[558 City and Regional Planning Workshop
Fall or spring. 4 credits. S-U only. Fieldwork hours to be arranged. Not offered 1990–91.
S. Stein.
Students will work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues, with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.]

560 Documentation for Preservation (also Architecture 586)
Fall. 3 credits.
M. A. Tomlan.
Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

561 Historic Preservation Planning Workshop: Surveys and Analyses (also Architecture 588)
Fall or spring. 4 credits.
Staff.
Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

562 Perspectives on Preservation (also Architecture 585)
Fall. 3 credits.
M. A. Tomlan.
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

563 Problems in Contemporary Preservation Practice (also Architecture 584)
Spring. Variable credit.
M. A. Tomlan.
A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

564 Building Materials Conservation (also Architecture 587)
Spring. 3 credits. Open to juniors, seniors, and graduate students.
M. A. Tomlan.
A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

565 Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit.
M. A. Tomlan.
Work on applied problems in history and preservation planning in a field or laboratory setting or both.

567 Measured Drawing (also Architecture 583)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor.
J. Cody.
Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

[568 Introduction to American Decorative Arts and Historic Interiors
Spring. 3 credits. Not offered 1990–91.
Staff.
An introductory survey of the design and evolution of the style of domestic furnishings and related utilitarian objects made in or imported for use in America from 1670 to 1900. Categories to be covered include furniture, glass, ceramics, metals, prints, and textiles. Objects of national significance as well as common items created in relative abundance outside the major urban style centers will be covered.]

574 Legal Aspects of International Planning
Fall. 3 credits.
R. Booth.
Legal systems vary substantially around the world. Planners operate within the parameters established by the legal system of the nation in which they are working. This course allows each student to examine the legal structure of a particular nation (chosen by the student) and to explore how that country's legal system shapes/controls decisions regarding the use, management, and development of land resources. The course emphasizes written and oral presentations.

[582 Urban Housing: Sheltered vs. Unsheltered Society (also CRP 382)
Fall. 4 credits. Not offered 1990–91.
M. Wilder.
Homelessness is the latest in a continuing list of terms to describe unmet housing needs. To understand how and why such needs persist, even in good economic times, one must examine the nature of interactions between housing policies and housing market forces. This course examines the complex interaction of public and private actions in the development and redevelopment of urban housing. More specifically, the course seeks to investigate the many ways in which private and public policy decisions determine which groups in society will have access to housing. This course is appropriate for students with an interest in urban housing and a background in any of the following areas: urban economics, urban sociology, anthropology, history, or geography. The course will consist of lectures, a wide variety of readings, and guest speakers. Students will be evaluated on the basis of class discussions, two exams, a 15–20 page paper, and an oral presentation.]

[604 Urban Economics (also CRP 404)
Fall. 4 credits. Prerequisite: basic economics. Not offered 1990–91.
Staff.
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.]

609 Special Topics in Urban and Regional Theory
Fall or spring. 1–4 credits.
Hours to be announced. Staff.

[613 Political Economy of Women and Work I
Fall. 3 credits.
L. Beneria.
This course deals with the question of how to understand and analyze the economic condition of women. Starting with general issues about the "question of origins," reproduction, and production, it then deals with different approaches to the analysis of women's work in the household and in the labor market. The empirical material will mostly concentrate on the United States, with some glances at other industrialized countries and the international economy.]

614 Political Economy of Women and Work II
Spring. 3 credits.
W 7–10 p.m. L. Beneria.
Continuation of CRP 613. Focusing mostly on Third World countries, this course deals with the impact of economic development on women. In particular it deals with how changing economic structures affect household organization, labor-market dynamics, the division of labor, and women's condition in different societies. Topics include the analysis of current international development, such as the commoditization of life, globalization of production, the crisis of development, population growth, and foreign debt.

615 The Politics of Planning
Fall. 4 credits.
P. Clavel.
This graduate-level seminar explores the relationship between the persons who do planning and the community, political, and social movement context for planning. A range of political models is addressed, and literature in politics, sociology, and organizational theory is part of the coverage. Methodology of field research is part of the course, and students will be encouraged to design research that puts them in touch with actual cases, persons, and recent local histories.

619 Special Topics in Planning Theory and Politics
Fall or spring. 1–4 credits.
Hours to be arranged. Staff.

620 Planning Analysis
Spring. 4 credits.
B. G. Jones.
A survey of commonly used techniques for analyzing various aspects of subnational socioeconomic systems. Emphasizes planning applications.

[621 Planning Research Methods
Fall. 3 credits. S-U grades only. Not offered 1990–91.
S. Christopherson.
For master's degree students, to write thesis project proposals. Four parts: theory, formulation of research questions and working hypothesis, guide to methods and techniques in social science research, and the role of the expert. The final proposal must also be approved by the thesis adviser.]

622 Information Systems and Microcomputers for Planning and Policy Analysis
Spring. 3 credits. Prerequisite: CRP 522 or equivalent, or permission of instructor.
S. Saltzman.
An introduction to the design and use of computer-based information systems for planning and policy analysis. The focus of the course will be on the design and use of database systems for organizing, storing, retrieving, and analyzing information using microcomputers and, secondarily, mainframe computers. Applications of information systems in public and not-for-profit institutions will be reviewed. Students will be expected to complete a term project on a microcomputer using an appropriate programming language.

629 Special Topics in Quantitative Methods and Analysis
Fall or spring. 1–4 credits.
Hours to be arranged. Staff.

[630 Local Economic Development Policy—Seminar
Spring. 4 credits. Not offered 1990–91.
M. Wilder.
The politics and administration of economic development programs. Theory case studies and policy issues treating the evolution of local development efforts in the transition from the high-growth post-World War II economy to contemporary and classic situations of regional decline.]

631 Local Economic Policy—Field Workshop
Fall. 4 credits.
P. Clavel.
A group policy analysis exercise in an upstate New York city. Students do a combination of data analysis; interviews with labor, business, and public leaders; and problem papers addressed to current issues presented by a client group. Individual work is synthesized into a comprehensive report at the end of the semester.

639 Special Topics in Regional Development Planning
Fall or spring. 1–4 credits.
Hours to be arranged. Staff.

642 Critical Theory and the Foundation of Planning Analysis
Spring. 1–4 credits.
J. Forester.
Problems of social action are studied in the traditions following Marx, Weber, and Durkheim. Analyses of reproduction and resistance, normative order and power, meaning systems, and organizational action provide the bases for a consideration of Habermas's synthetic critical communications theory of society. Implications for planning practice, education, and research are drawn.

649 Special Topics in Social-Policy Planning
Fall or spring. 1–4 credits.
Hours to be arranged. Staff.

652 The Urban Development Process
Fall. 2 credits. Enrollment limited.
K. C. Parsons.
Examination of the goals, strategies, methods, and achievements of major participants in the urban land and building market: landowners, speculators, real estate brokers, developers, bankers, lawyers, nonprofit builders, and government agencies. Primarily visiting speakers.

653 Legal Aspects of Land-Use Planning
Offered alternate spring semesters. 3 credits.
R. S. Booth.
Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

[654 Real Estate Development I: Analysis and Critique
Fall. 4 credits. Not offered 1990–91. Limited to 20 students with permission of instructor. Prerequisite: Hotel Administration 300 or equivalent or permission of instructor.
Staff.
The course will investigate many aspects of real estate development. Areas covered will include acquisition, finance, valuation, construction, design and marketing, and the interplay of those variables.]

[655 Real Estate Development II: Advanced Analysis and Critique
Spring. 4 credits. Limited to 20 students with permission of instructor. Prerequisite: CRP 654 or equivalent. Not offered 1990–91.
Staff.
A continuation of City and Regional Planning 654.]

[656 Land Resources Protection Law
Fall. 3 credits. Not offered 1990–91.
R. S. Booth.
Examines legal issues raised by government efforts to protect critical land resources such as tidal wetlands, flood plains, forests and agricultural lands, and large resource areas such as the coastal zone. Students will use a broad selection of legal materials and learn to use the basic resources of a law library.]

659 Special Topics in Urban Development Planning
Fall or spring. 1–4 credits.
Hours to be arranged. Staff.

[660 Seminar in the History of American City Planning (also Architecture 693)
Fall. 3 credits. Prerequisite: CRP 462 or permission of instructor. Not offered 1990–91.
Staff.
A research seminar in which each student selects a topic for oral presentation followed by the completion of a research paper. Early sessions examine the scope of planning history, its relations to other disciplines, sources of written and graphic materials, and the uses of historical evidence in interpreting urban planning and development.]

661 Historic Preservation Planning Workshop: Plans and Programs
Fall or spring. 1–4 credits. Prerequisite: CRP 561.
Staff.
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

662 Seminar in American Urban History (also CRP 361)
Spring. 3 credits. Prerequisite: permission of instructor.
K. C. Parsons.
Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, urban reform movement, and intellectual and social responses to the city.

[663 Historic Preservation Law
Spring. 3 credits. Offered alternate years.
R. S. Booth.
Law of historic district and landmark designation, tools for preservation (such as police power, taxation, eminent domain), and recent developments in state and federal historic preservation mandates.]

664 Economics and Financing of Neighborhood Conservation and Preservation
Fall. 3 credits.
B. G. Jones.
The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

[665 Preservation Planning and Urban Change
Fall. 3 credits. Not offered 1990–91.
Staff.
An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.]

669 Special Topics in History and Preservation
Fall or spring. 1–4 credits.
Hours to be arranged. Staff.

670 Regional Planning and Development in Developing Nations
Fall. 4 credits. Prerequisite: second-year graduate standing.
W. W. Goldsmith.
Extensive case studies of development planning are analyzed. Focus is on a Marxist critique of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

671 Seminar in International Planning
Spring. 1 credit. S-U grades only.
P. Olpadwala.
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

673 Economics of Regional Development
Spring. 2 or 4 credits.
T. Vietorisz.
This course deals with the historical process of regional and metropolitan development, emphasizing Third World problems. While its basic approach is mode-of-production analysis, it also critically surveys location, comparative advantage, and feedback system theories. Development is interpreted as the penetration of the capitalist mode of production into precapitalist societies. Its features are analyzed both in terms of the historical stages of expanding capitalism (mercantile phase, imperialism, multinationals) and in terms of the pre-existing (feudal, Asiatic) precapitalist mode of production. Regional and urban development planning problems are discussed in the light of the contradictions of the above process, as well as in the context of newly emerging Third World socialist countries.

679 Special Topics in Planning and Developing Regions
Fall or spring. 1–4 credits.

[687 Urbanization and the Environment
Fall. 4 credits. Offered alternate years. Not offered 1990–91.
R. S. Booth.
This seminar explores a series of issues related to the impacts of urbanization on the natural environment. Examples of these issues include: waste management, water supply, transportation, energy generation, and maintenance of open spaces. The seminar will include discussion sessions and a series of field trips. Students will prepare short reports, work on a team project, and make class presentations.]

689 Special Topics in Environmental Planning
Fall or spring. Variable credit.
Hours to be arranged. Staff.

699 Special Topics in Regional Science
Fall. Variable credit.
Staff.

711 Planning and Organization Theory
Spring. 4 credits.
P. Clavel.
Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussion characterize the course.

719 Special Topics in Planning Theory and Politics
Fall or spring. Variable credit.
Staff.

720 Quantitative Techniques for Policy Analysis and Program Management
Fall. 4 credits.
B. Lewis.
Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

730 Methods of Regional Science and Planning I
Spring. 4 credits. Prerequisite: CRP 520 and CRP 620 or equivalent.
B. Lewis.
An introduction to some of the major methods and models used in regional science and planning. This is the first semester of a two-semester sequence (see CRP 731). Both courses will cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation will be considered. The fall semester will emphasize statistical and econometric methods.

[731 Methods of Regional Science and Planning II
Spring. 3 credits. Prerequisite: CRP 730 or equivalent.
S. Saltzman.
A continuation fo CRP 730. The spring semester will provide an introduction to deterministic methods and models such as input/output, social accounting matrices, and optimization models.]

[732 Regional Industrial Development
Fall. 4 credits. Prerequisites: basic economics and elementary calculus. Not offered 1990–1991.
Staff.
The course focuses on issues of industrial, as distinct from agricultural, development. Material includes theory of production, elements of growth theory, interindustry relations and formation of industrial complexes, locational attractiveness, and interregional flows of goods, services, and factors of production.]

[746 Informal Seminar in Planning Theory: Philosophy, Ethics, and Values in Planning
Fall or spring. Variable credit. Not offered 1990–91.
J. Forester.
An informal seminar to discuss problems of values, ethics, and alternative philosophical positions that are inherent in various planning proposals or perspectives.]

[772 Advanced Topics on International Development and Women
Spring. 4 credits. Offered alternate years.
L. Beneria.
A seminar to explore theoretical and empirical issues of interest to M.A. and Ph.D. students working on topics related to gender and international development. The focus will be on a few narrow topics such as the effect of the foreign debt crisis on women, the informal sector and women's work, and gender aspects in demographic change, to be explored in depth in preparation for research and thesis writing. Students will be encouraged to explore and exchange ideas, and to provide mutual support and criticism.]

773 Seminar in Project Planning in Developing Countries
Spring. 4 credits.
D. Lewis.
An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

[774 Science, Technology, and Development
Fall. 3 credits. Offered alternate years. Not offered 1990–91.
P. Olpadwala.
The place and role of science and technology as a factor in socioeconomic growth is examined with special reference to developing regions. The social underpinnings and linkages of science and technology are studied and their role explored as a nonneutral and dynamic social force that primarily serves the ends of particular groups in societies. Current issues such as technological development, technology transfer, and appropriateness of technology are discussed in this context, with attention given to both rural and industrial development. Third World science and technology policy-planning options are considered throughout the course.]

775 Transnational Corporations and Developing Regions
Fall. 3 credits. Offered alternate years.
P. Olpadwala.
Transnational corporations are studied in the context of socioeconomic development. Contending theories of the international firm are examined as a starting point for evaluating contradictory claims and counter claims of proponents and detractors of transnational corporations. Advantages and disadvantages for developing regions are considered and Third World planning and policy options discussed on an ongoing basis.

776 Seminar in Urban Policy and Planning in Developing Counties
Spring. 3 credits.
K. C. Parsons.
The national urban development policy and planning efforts of selected developing countries are examined in the context of urbanization theory and national spatial planning. Recent descriptive and critical literature is explored. Topics include secondary cities policies, national and urban transportation planning, city planning, sites and services project planning, housing, land policy, and urban development control systems.

777 Theories of Development and Underdevelopment
Spring. 3 credits.
P. Olpadwala.
Various theories attempting to analyze and explain the phenomena of underdevelopment are examined. Although a range of thought and approaches is considered, the accent is on aspects of political economy revolving around concepts of class and exploitation. Topics include the transition to capitalism; dependent and uneven development; various issues of growth and fluctuation under contemporary capitalism, including crises; rural and industrial development in less-developed countries; and planning for development.

790 Professional Planning Colloquium I
Fall. 1 credit.
Staff.
Visiting lecturers treat problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester's end.

792 Master's Thesis, Project, or Research Paper
Fall or spring. 1–10 credits.
Hours to be arranged. Staff.

794 Planning Internships
Fall, spring, or summer. 1–12 credits.
Hours to be arranged. Staff.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

795 Master's Thesis in Preservation Planning
Fall or spring. 1–6 credits.
Hours to be arranged. Staff.

796 Colloqui Journal Publication Workshop
Fall or spring. 2 credits. S-U grades only.
P. Clavel, J. Forester.
Individual and group projects culminating in the production of a professional journal.

800 Advanced Seminar in Urban and Regional Theory I
Fall. 3 credits. Prerequisite: CRP 500.
B. G. Jones.
The theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intraregional and intraurban distribution of population and economic activity are reviewed.

801 Advanced Seminar in Urban and Regional Theory II
Spring. 3 credits. Prerequisite: CRP 800.
B. G. Jones.
A continuation of City and Regional Planning 800, concentrating on recent developments.

810 Advanced Planning Theory
Fall. 3 credits. Prerequisite: CRP 500 or 710.
B. G. Jones.
A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

830 Seminar in Regional Sciences, Planning, and Policy Analysis (run jointly with Economics 505: Interdependent Decision Making)
Fall or spring. 4 credits.
S. Saltzman.
This seminar will provide an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered will vary each year. Empirical and analytical research will be emphasized. Students will be expected to prepare and present a research paper during the semester on some aspect of the topics under review.

890 Planning Research Seminar I
Fall or spring. 2 credits.
Staff.
Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

892 Doctoral Dissertation
Fall or spring. 1–2 credits.
Hours to be arranged. Staff.

LANDSCAPE ARCHITECTURE

The Landscape Architecture Program at Cornell is jointly sponsored by the College of Agriculture and Life Sciences (in association with the Department of Floriculture and Ornamental Horticulture) and the College of Architecture, Art, and Planning.

The Program

Program faculty: M. I. Adleman, T. H. Johnson, D. W. Krall, A. S. Lieberman, L. Mirin, R. T. Trancik, P. J. Trowbridge.

The Landscape Architecture Program offers three professional degree alternatives: a two-year graduate curriculum directed to those who have undergraduate degrees in landscape architecture or architecture, a three-year graduate curriculum directed to those who have undergraduate degrees in other fields, and a four-year undergraduate curriculum. Graduate studies in landscape architecture are administered through the Graduate School and lead to a Master of Landscape Architecture degree. Undergraduate studies in landscape architecture are administered through the College of Agriculture and Life Sciences and lead to a Bachelor of Science degree.

Course Information

***142 Introduction to Landscape Architecture**
Spring. 4 credits.
D. W. Krall.

***201 Design, Theory, and Composition**
Fall. 6 credits.
T. H. Johnson.

***202 Design, Composition, and Theory**
Spring. 6 credits.
M. I. Adelman.

***301 Site Design and Detailing**
Fall. 6 credits.
D. W. Krall.

***302 Site Design and Detailing**
Spring. 6 credits.
D. W. Krall.

***310 Site Engineering**
Fall. 4 credits.
M. I. Adleman.

***312 Site Construction**
Spring. 4 credits.
P. J. Towbridge.

***401 Urban Design and Planning**
Fall. 6 credits.
R. T. Trancik.

***402 Advanced Project Design**
Spring. 6 credits.
Staff.

***412 Professional Practice**
Spring. 1 credit.
K. Wolf.

***480 Principles of Spatial Design and Aesthetics**
Fall. 3 credits.
R. T. Trancik.

490 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits; may be repeated for credit. S-U grades optional.
Staff.
Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

***491 Design and Plant Establishment**
Fall. 2 credits.
P. J. Trowbridge.

497 Independent Study in Landscape Architecture
Fall or spring. 1–5 credits; may be repeated for credit. S-U grades optional.
Staff.
Work on special topics by individuals or small groups.

501 Theory and Application Studio
Fall. 6 credits. Lab fee, $20; cost of basic drafting equipment and supplies, about $200.
Lecs, M W F 1:25; studios, M W F 2:30–4:25. L. Mirin.
Introduction to basic concepts of site analysis and physical design of landscape. Exercises and projects explore the relationship between natural features, functional demands, professional traditions, and the creation of spatial form.

***502 Theory and Application Studio**
Spring. 6 credits.
D. W. Krall.

***505 Graphic Communication I**
Fall. 3 credits.
T. H. Johnson.

520 Contemporary Issues in Landscape Architecture
Fall. 2 credits. S-U grades only.
Lec, F 11:15–1:10. L. Mirin.
Presentations on topics that are current and significant to the environmental design and planning fields. Issues are discussed from a landscape architecture point of view by practitioners and researchers representing a range of professions.

521 History of European Landscape Architecture
Fall. 3 credits.
Lecs,T R 11:15–1:10; discs to be arranged. L. Mirin.
A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which environments such as gardens, streets, plazas, parks, and new towns reflect in their built form a range of response to demands of culture, economics, technology, security, the law, and ecology.

522 History of American Landscape Architecture
Spring. 3 credits.
Lecs, T R 11:15–1:10; discs to be arranged. L. Mirin.
Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

***531 Regional Landscape Planning I**
Fall. 4 credits.
A. S. Lieberman.

***601 Project Planning and Application Studio**
Fall. 6 credits.
P. J. Trowbridge.

***602 Urban Systems Studio (also CRP 555)**
Spring. 6 credits.
R. T. Trancik and staff.

***610 Site Engineering for Landscape Architects**
Fall. 4 credits.
M. I. Adleman.

***612 Site Construction**
Spring. 4 credits.
P. J. Trowbridge.

621 Summer Internship Seminar
Fall. 2 credits. S-U grades only.
Hours to be arranged. L. Mirin.
Presentation and discussion of projects developed during summer internships.

***634 Landscape Architectural Research**
Spring. 3 credits.
T. H. Johnson.

650 Fieldwork or Workshop in Landscape Architecture
Fall or spring. 1–5 credits; may be repeated for credit. S-U grades optional.
L. Mirin.
Work on applied problems in landscape architecture in a field or studio setting or both.

***690 Independent Study in Landscape Ecology and Regional Landscape Planning**
Fall. 1–3 credits.
A. S. Lieberman.

***701 Natural Systems and Planting Design Studio**
Fall. 6 credits.
A. I. Adelman.

800 Master's Thesis in Landscape Architecture
Fall or spring. 9 credits.
Hours to be arranged. Staff.
Independent research under faculty guidance, leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in the final semester of residency.

---

*Offered through the College of Agriculture and Life Sciences.

COLLEGE OF ARTS AND SCIENCES

PROGRAM OF STUDY

Introduction

The College of Arts and Sciences at Cornell is a traditional liberal arts college. It is composed of those departments that teach and study the humanities, the basic sciences, mathematics, the social sciences, and the expressive arts. It is also a college within a university, and this wider community provides strength and diversity not available in an isolated undergraduate institution. Students may draw upon the knowledge and facilities of the other undergraduate colleges at Cornell to supplement their studies. Finally, the college is a graduate school and research center attracting faculty whose writing and research require first-rate academic facilities and whose participation in undergraduate teaching brings to their students the most current ideas in modern scholarship. It is this abundant variety that gives the college its distinctive character.

The richness of the curriculum is extraordinary; there is no course that all students must take, and there are several hundred from which they may choose. By choosing courses each semester, students design their own education. They strike a balance between developing known interests and exploring new subjects. They sharpen their verbal and quantitative skills. They also come to understand more thoroughly our common Western tradition and learn something about the non-Western world and its peoples. An education in the liberal arts means honing one's critical capacities, learning more about oneself in nature and culture, and gaining real experience of views of the world radically unlike one's own. All this is highly individual, and the college relies on each student and faculty adviser to select sensible, challenging, and appropriate courses.

Yet the faculty believes that each student's education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in the natural sciences, in the social sciences, and in those achievements of intellect and imagination that are the focus of the humanities and the expressive arts. In addition to these general areas of knowledge, students study foreign languages, acquire effective writing skills, and concentrate on one particular field to develop, as fully as possible, the powers of imaginative and critical thinking. To accomplish these objectives, the college has certain requirements for graduation.

Summary of Basic College Requirements for Graduation

1) Freshman writing seminars: Two.
2) Foreign language: Up to four courses to obtain qualification in two languages or proficiency in one.
3) Distribution: Four approved sequences of two full-semester courses.
4) Major
5) Electives: Four or five courses (or 15 credits) in courses not used to fulfill other requirements and not in the major field.
6) Residence: Eight full-time semesters, unless a student can successfully complete the other requirements in fewer than eight semesters, maintain a B average, and is allowed to accelerate graduation.
7) Minimum number of courses: Thirty-four courses. A 2-credit course counts as half a course; a 6-credit language course counts as one and one-half courses.
8) Credits: A total of 120 credits, of which 100 must be taken in the College of Arts and Sciences.
9) Physical education: Completion of the university requirement. Please note that physical education credit does not count toward graduation or toward the 12-credit minimum required for good standing each semester. See p. 11.
10) Application to graduate.

Freshman Writing Seminars

See "John S. Knight Writing Program," p. 311.

Language Requirement

The faculty considers competence in a foreign language essential for an educated person. Studying another language helps students understand language itself, our fundamental intellectual tool, and opens another culture for exploration. The sooner the student acquires competence, the more useful it will be. Hence work toward the foreign language requirement should be undertaken in the freshman and sophomore years.

The following departments teach foreign languages or literature or both in the College of Arts and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

The language requirement may be satisfied in one of two ways:

1) by attaining *proficiency* in one language or
2) by attaining *qualification* in two languages.

Proficiency

Proficiency is attained by passing a 200-level course (or Chinese or Japanese 161) or by equivalent achievement, to be determined by examination; see below under "Advanced Standing Credit."

Qualification

Qualification may be attained in any of the following four ways.

1) Three years of high school study in any one language gives qualification in that language. Note, however, that this route to qualification does not guarantee entrance into a 200-level course. The student who wants to continue in this language must be placed by examination.
2) Passing the requisite course: 102, 123, or 134 in languages taught by the Department of Modern Languages and Linguistics; Chinese 112–114 or Japanese 160, Japanese 141–142–241; Near Eastern Studies 102 or 122 in Hebrew, 112 in elementary classical Arabic, 214 in Egyptian Arabic, or 138 in Turkish; Classics 103 or 104 in Greek; Classics 106 or 107 or 108 in Latin; Classics 112 in modern Greek; 132 in Sanskrit; AS&RC 134 in Swahili.
3) A score of 560 or better on the College Placement Test (CPT).
4) Placement in a 200-level course by special examination (in cases where no CPT is available).

A student may submit a 560 CPT score at the end of a course numbered 122, thus attaining *qualification* without taking 123. This procedure is optional: the student with a score of 560 or better may want to take 123 to be better prepared for the 200-level courses.

Note: Completion of 131–132 language course sequences does not constitute qualification.

Speakers of languages other than English may be awarded credit for their bilingual ability. Their English achievement is measured by the Test of English as a Foreign Language (TOEFL), a requirement for matriculation. Their performance in one other language learned outside the academic environment is measured by examination, and evidence of abilities in reading and writing, as well as speaking, is required. A maximum of 6 advanced placement credits is granted to students who demonstrate *proficiency* equivalent to course work at the 200 level or above at Cornell. Students may not earn credit both for proficiency in their native language and for studying English as a second language at Cornell.

Language Course Placement and Credit

Students who have had two or more years of high school study in a language may not enroll in any course in that language without being placed by examination. Nor may transfer students register without examination, even though they may have been given credit for language work elsewhere.

The type of examination depends upon the language course and the level of achievement:

1) French, German, Italian, Russian, and Spanish courses: the standardized College Placement Test. Entering students who have not taken the CPT in high school and who want to continue their language study must take the CPT at Cornell during orientation week. Students may retake this examination at Cornell if they have studied the language a year or more since last taking the test. To do this, students register with the Academic and Career Counseling services, 203 Barnes Hall, and pay a fee.

2) Latin (all courses except 105 and 107): departmental examination.
3) Greek (all courses except 101,104, and 111): departmental examination.
4) Arabic: departmental examination.
5) Hebrew: departmental examination.
6) Other languages: special examinations; Turkish: department examination; see the professor in charge.
7) High achievement (students with a CPT score of 650 or better in French, German, Hebrew, Italian, Russian, and Spanish): the Cornell Advanced Standing Examination (CASE).

An entering or continuing student with high achievement scores should take the Cornell Advanced Standing Examination (CASE); even if the student does not want to do any further work in the language, the CASE may provide proficiency status for the language requirement, and it may provide up to 6 advanced standing credits. Students who do not have high achievement scores are eligible for the courses listed in the charts below, depending on their CPT scores. For other languages, or for special problems, students should see the professor in charge.

French

CPT Reading Score	*Language Courses*	*Literature Courses*
Below 450	121 or 122	
450–559	123	
560–649	203	200
		201
		211
650 and above AP 4 or 5 in language	Apply for the Cornell Advanced Standing Examination (CASE)	

German

CPT Reading Score	*Language Courses*	*Literature Courses*
Below 450	121	
450–559	123	
560–649	203	201
650 and above AP 4 or 5 in language	Apply for the Cornell Advanced Standing Examination (CASE)	

Italian

CPT Reading Score	*Language Courses*	*Literature Courses*
Below 450	121	
405–559	123	
560–649	203	201
650 and above	Apply for the Cornell Advanced Standing Examination (CASE)	

Russian

CPT Reading Score	*Language Courses*	*Literature Courses*
Below 450	101	
	121	
450–559	102	
	123	
560–649	203	201
650 and above	Apply for the Cornell Advanced Standing Examination (CASE)	

Spanish

CPT Reading Score	*Language Courses*	*Literature Courses*
Below 450	121	
450–559	123	
560–649	203	201
	211	
650 and above AP 4 or 5 in language	Apply for the Cornell Advanced Standing Examination (CASE)	

Arabic

Placement by departmental examination.

Hebrew

AP 4 or 5 in language, 3 credits. Department determines placement.

Turkish

Placement by departmental examination.

Advanced Standing Credit

Advanced standing credit may be entered on a student's record as follows: Credit may be granted for high school work for the equivalent of language courses numbered 203, 204. The amount of credit is based on performance on one or more of the following examinations:

a) CPT Advanced Placement Examination. *French, Spanish, and German:* A score of 4 or 5 yields 3 credits on the French, Spanish, or German language examinations and literature examinations. *Hebrew:* Up to 6 credits may be granted, depending on the student's score on the departmental examination. *Latin:* Students should consult the Department of Classics, 120 Goldwin Smith Hall. They must take the department's own placement examination during orientation week. A student who is permitted to register in a 300-level course on the basis of this examination will be given 6 advanced standing credits. *Greek and Modern Greek:* For information concerning advanced placement, student should consult the Department of Classics, 120 Goldwin Smith Hall.
b) Cornell Advanced Standing Examination (CASE). To be eligible for this examination the student must have achieved a score of 650 on the CPT. For details on registration, see "Language Course Placement and Credit," above. The maximum amount of credit is 6 credits.
c) Special examinations are given for languages where no CPT exists.

Distribution Requirement

The purposes of the distribution requirement are to acquaint students with a broad range of subject matter in the liberal arts and to provide them with the opportunity to explore new areas.

Accomplishing these purposes is part of the task of freshmen and sophomores. Although completion of the requirements may be spread over the eight semesters, successful introductory course work can be followed up with advanced courses only if undertaken early. For purposes of distribution, subjects are divided into four groups. Each of the first three groups has two subdivisions.

Group 1
a. Physical sciences
b. Biological sciences

Group 2
a. Social sciences
b. History

Group 3
a. Humanities
b. Expressive arts

Group 4
a. Mathematics and computer science
b. One of the subdivisions not used in fulfillment of groups 1, 2, or 3.

In each of groups 1, 2, and 3, students must take a sequence of two courses (6 or more credits) approved by the department in one subject chosen from either subdivision. For group 4, students are strongly urged to take two courses in mathematics or one in mathematics and Computer Science 100. Those who choose not to satisfy the group 4 requirement with mathematics must choose two courses in one subject from an unused subdivision in group 1, 2, or 3. For example, a student who fulfills group 1 with biology, group 2 with psychology, and group 3 with theatre arts could then complete group 4 with a sequence of two courses from the list below in the physical sciences, history, or the humanities.

Courses fulfilling the distribution requirement must be taken in the College of Arts and Sciences and may be taken for S-U grades. Students may petition to take Architecture 181–182, History of Architecture I and II, in the Department of Architecture of the College of Architecture, Art, and Planning, to fulfill the requirement in expressive arts.

Advanced Placement Credit

AP credit is meant to place students into the appropriate level of study and to give them credit for their advanced standing. AP credit counts towards the 120 credits and thirty-four course units required for graduation. The use of AP credit to satisfy distribution requirements is different for each group.

Freshman Writing Seminars. Students who score 5 on the AP exam in English are exempt from one writing seminar and are awarded three credits. A score of 4 will give three credits but no exemption from a seminar. These students, as well as those who score 700 or better on the College Placement Test in literature or composition, are eligible to enroll, space permitting, in the following freshman writing seminars: English 270, 271, 272.

Science. Beginning with the class of 1990, AP credit may be used to fulfill *half* the distribution requirement in science. Students who place out of two semesters of introductory science may satisfy the distribution requirement with one non-introductory course in that science or with an introductory sequence of two semesters in another science.

Social sciences or history. AP credit may not be used to satisfy this requirement.

Humanities or expressive arts. AP credit may not be used to satisfy this requirement.

Mathematics. AP credit may be used to fulfill the requirement in mathematics.

Here is a complete list of the courses that fulfill distribution requirements.

Group 1: Physical or Biological Sciences

a. Physical Sciences

Astronomy: 101 or 211, plus 102 or 212; or Astronomy 102 or 212, plus Astronomy 332. Astronomy 103–104, identical to Astronomy 101–102 except for the omission of the laboratories, cannot be used to satisfy the distribution requirement for students in the College of Arts and Sciences.

Chemistry: 103, 207, 211, or 215 followed by 104, 203, 208, 216, or 222.

Geological Sciences: 101, 103, or 111; plus 102, 104, or 202.

Physics: Any two sequential courses such as 101–102, 207–208, or 112–213, or any combination of the first term of one sequence and the second term of another. The requirement is also met by any two general education courses from the group 200–206 or by a combination of 101, 112, or 207 with one from the group 200–206.

b. Biological Sciences

A two-semester introductory biology sequence selected from Biological Sciences 109–110, or 105-106, or 101/103 plus 102/104. Biological Sciences 107–108, offered during the eight-week Cornell Summer Session for 8 credits, satisfies the distribution requirement. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) satisfies half the distribution requirement in the biological sciences. The remainder of the distribution requirement may be satisfied by an upper-level course (200+) offered by the Division of Biological Sciences (*other than Bio. Sci. 200, 202, 205, 206, 208, 209, 301, or 367*); Anthropology 101; or Chemistry 222.

Group 2: Social Sciences or History

a. Social Sciences

Africana Studies: Any two of 171, 172, 190, 191, 208, 231, 280, 290, 301, 302, 344, 345, 346, 351, 352, 400, 410, 420, 451, 460, 481, 484, 485, 495, 550, 551, 571.

Anthropology: Anthropology 102 and any course (for 3 or 4 credits) in the Department of Anthropology.

Archaeology: Archaeology 100 and any one of the following: Archaeology 201, 203, 308, 317, 358, 361, 402, 404, 493, 494, 496, or Anthropology 203, 216, 352, 354, 355, 356, 358, 359, 361, 402, 404, 435, 456, 493, 494, 496, 656, 663, 664, 666, 667.

Asian Studies: Any two courses in Asian anthropology, economics, government, linguistics, or sociology given by the Department of Asian Studies or listed there under the areas of China, Japan, South Asia, and Southeast Asia, excluding only Freshman Writing Seminars and courses given outside the College of Arts and Sciences. A reasonable sequence is formed by taking any two courses in the same area, or by taking AS 211, 212, 215, or 218, followed by a social science course in that area. Alternative sequences will, under special circumstances, be considered but require the permission of the director of undergraduate studies.

Economics: 101–102, 203–204, or a combination of one of these courses and any course for which it is a prerequisite if the course is taught by a member of the Department of Economics.

Government: Any two of 111, 131, 161, 181; or any one of these courses followed by a 300-level course in the same area.

Linguistics: 101 and (1) any other course in linguistics or (2) any other course offered by the Department of Modern Languages and Linguistics for which this introductory linguistics course is a prerequisite.

Near Eastern Studies: Any two NES archaeology courses at the 200 or 300 level that form a reasonable sequence or combination. NES 197 or 198 plus an NES archaeology course will also satisfy the social sciences requirement.

Psychology: Any two courses in psychology with the exception of Psychology 123, 307, 322, 324, 326, 332, 350, 361, 396, 422, 425, 429, 471, 472, 473, 475, 476, 479, 491, 492.

Sociology: Any two of 101, 103, 104, 106, or 101, followed by any course at the 200 level or above in sociology.

Women's Studies: (a) Any two of 208, 218, 238, 244, 277, 297, 305, 321, 353, 363, 366, 406, 408, 425, 428, 450, 468, 480; or (b) any one of 210, 365, 454, plus one course from list a. (Appropriate courses in women's studies taken previously may be approved by the program.)

City and Regional Planning: 100 and 101.

b. History

Africana Studies: Any two of 203, 204, 205, 283, 344, 350, 360, 361, 370, 381, 405, 460, 471, 475, 482, 483, 490, 510.

Asian Studies: Any two courses in Asian history given by the Department of History and listed under the Department of Asian Studies under the areas of China, Japan, South Asia, and Southeast Asia, excluding only freshman writing seminars and courses given outside the College of Arts and Sciences. A reasonable sequence is formed by taking any two courses in the same area, or by taking AS 211, 212, 215, or 218 followed by a history course in that area.

History: Any two courses in the Department of History.

History of Science and Technology: Any two of the following courses: History 281, 282, 286, 287, 288, 380, 447, 448, 482; also Engineering 250 and 292.

Near Eastern Studies: Any two NES history courses at the 200 or 300 level that form a reasonable sequence or combination. NES 197 or NES 198 plus an NES history course will also satisfy the history requirement.

Women's Studies: Any two of 227, 238, 273, 307, 336, 357, 426. (Appropriate courses taken previously may be approved by the program.)

Group 3: Humanities or Expressive Arts

a. Humanities

Africana Studies: Any two of 202, 211, 219, 422, 425, 431, 432, 450, 455, 525.

Archaeology: Archaeology 100 and any of the following: Archaeology 221, 233, 250, 267, 275, 308, 356, 358, 360, 362, 402, 403, 406, 413, 423; Classics 219, 220, 221, 232, 233, 237, 239, 250, 309, 319, 320, 321, 322, 323, 325, 326, 327, 329, 330, 350, 356, 358, 360, 423, 431, 432, 434, 435, 450, 629, 630; Near Eastern Studies 243, 261, 263, 264, 267, 361, 362, 364, 365, 366, 367, 461, 463, 601; English 401, 406, 413, 601, 603.

Asian Studies: Any two courses in Asian art, literature, or religion given by the Department of Asian Studies or listed there under the areas of China, Japan, South Asia, and Southeast Asia, excluding only freshman writing seminars and courses given outside the College of Arts and Sciences. A reasonable sequence is formed by any two courses in the same area, or by taking AS 211, 212, 215, or 218, either using two of these courses as a sequence or by following one with a course in the humanities in that area.

Classics: (a) any two courses in Greek beginning with 201 or in Latin beginning with 205 that form a reasonable sequence, or (b) any two of the following: Classics 206, 211, 212, 217, 218, 219, 220, 221, 222, 223, 224, 225, 232, 233, 235, 236, 237, 238, 239, 245, 250, 300, 309, 319, 320, 321, 322, 323, 326, 327, 329, 330, 331, 333, 336, 337, 339, 340, 346, 350, 356, 363, 366, 368, 382, 390, 391, 423, 434, 435, 480, 496.

Comparative Literature: Any two comparative literature courses at the 200 level or above, including 150; 400-level courses with permission of the instructor or the director of undergraduate studies.

English: Any two courses in English at the 200 level or above. If students have used English courses to satisfy the expressive arts requirement, they should not take courses numbered in the 80s (e.g., 281, 382) to satisfy the humanities requirement.

French Literature: Any two courses from 200, 201, 202, 222, or 300-level literature courses.

German Literature: Any two courses at the 200 level or above.

Italian Literature: Any two literature courses at the 200 level or above.

Near Eastern Studies: Any two NES civilization or literature courses at the 200 or 300 level that form a reasonable sequence or combination, including Hebrew 201–202, Intermediate Arabic 211–212, Advanced Arabic 311–312, Intermediate Modern Hebrew 201–202, Advanced Modern Hebrew 301–302, and Intermediate Turkish 283–284. NES 197 or 198 plus an NES civilization or literature course will also satisfy the humanities requirement.

Philosophy: Any two courses with the following exceptions: (1) Philosophy 100, if used to satisfy the freshman writing seminar requirement; (2) a combination of two courses in logic, such as 131, 231, 331, 431, 432, 436.

Russian Literature: Any two courses at the 200 level or above except 329, 330.

Spanish Literature: Two of 201, 315, 316, 318, or any other 300-level literature courses.

Women's Studies: (a) Any two of 248, 251, 264, 348, 349, 363, 365, 366, 390, 402, 404, 445, 456, 460, 474, 475, 476, 481; or (b) any one of 210, 365, 493, plus one course from list a. (Appropriate courses in women's studies taken previously may be approved by the program.)

b. Expressive Arts

Africana Studies: Any two of 209, 285, 303, 425, 430.

Anthropology: Any two of 450, 451, 452, 453, or 455.

Archaeology: Archaeology 100 and any one of the following: Archaeology 423; History of Art 220, 221, 223, 230, 320, 321, 322, 323, 325, 326, 327, 328, 329, 330, 332, 401, 402, 423, 427, 431, 432, 434, 531, 595.

English: Any two of the courses at the 200 level or above that are numbered in the 80s (e.g., 281, 382).

History of Art: Any two courses at the 200 level or above, or Archaeology 100 and one of the History of Art courses listed under Archaeology.

Music: 6 credits in music, except freshman writing seminars. A maximum of 4 credits in Music 321–322 and a maximum of 3 credits in Music 331 through 338 and 441 through 450 may be used to satisfy this requirement.

Theatre Arts: Any two of the 3- or 4-credit courses at the 200 level or above

Group 4: Mathematics or an Unused Subdivision

a. Mathematics and Computer Science

Any 6 credits in mathematics except 104 and not including more than one course from 105 or 403. Computer Science 100, 211, or 212 may be used for three of these credits. The mathematics distribution requirement is also satisfied by a score of 3 or higher on the CEEB calculus BC examination. Mathematics 109 and Education 005 and 115 (College of Agriculture and Life Sciences) *do not count toward satisfying the requirement.*

b. An Unused Subdivision

A sequence of courses in any one of the subdivisions in groups 1–3 that has not been used to fill that group's requirement.

The Major

In their last two years, students devote roughly one-half their time to acquiring depth and competence in a major subject. The choice of major is not intended to define a student's education or to lead to a lifetime's occupation, although it may do so. By majoring, students focus the full extent of their imaginative and intellectual capacities on something they care about, and sharpen their minds in the process.

Sophomores must be accepted by departments as majors before registering for courses for the junior year. Most departments and programs specify certain prerequisites for admission to the major; students should consult the departmental listings on the following pages. A department may refuse to accept into the major any student whose performance does not meet departmental standards. To seek admission into a major, students take a copy of their transcript to an appointment with the director of undergraduate studies in their prospective major department.

Available majors. Majors are offered by each of the departments. There are also majors in Africana studies, American studies, archaeology, biology and society, dance, German area studies, Russian and Soviet studies, and social relations.

Some students want to pursue an interest that cannot be met within an established major. They may plan, with the help of their faculty adviser, an independent major that includes courses from several departments. See "Independent Major Program," below, under "Special Academic Options."

Students are responsible for completing their majors according to the regulations of their departments. Courses that fulfill major requirements may not be taken for S-U grades.

Electives

Of the thirty-four courses and 120 credits required for graduation, almost one-third are free electives. How students use these electives frequently makes the difference between an ordinary and a truly interesting curriculum. Students must complete four or five courses or at least 15 credits in courses that are offered outside the major field and are not used to fill another requirement. Students may group electives to form a concentration within one discipline or to cover a topic across several disciplines. Some choose to explore a variety of subjects. Electives taken in other divisions of the university may be used to gain practical training or specialized knowledge. Some students develop a concentration in one particular department or subject outside arts and sciences.

Residence

Earning a Bachelor of Arts degree from the College of Arts and Sciences normally takes eight semesters of full-time study. Even if the minimum requirements can be met in fewer semesters, the college expects that students will study full-time for eight semesters to take maximum advantage of the resources of the university and obtain a rich liberal arts education. A full semester in an approved program of study abroad, a fieldwork program, the SEA Semester, or Cornell-in-Washington, all of which the college encourages, is considered a semester of residence at Cornell.

Students occasionally enter with advanced placement credit from other institutions (this does not include advanced placement credit from the CPT program, for which regular Cornell credit is granted), take leaves and complete courses at other institutions, or take summer courses at other institutions. The college will accept up to 20 credits from other institutions as part of the out-of-college electives if the appropriate departments at Cornell approve. (This excepts, of course, approved study abroad and in absentia programs, for which up to 30 credits will be accepted, and credits earned by transfer students at their first university.) However, credits earned at other institutions do not replace any of the eight semesters of residence and may not normally be substituted for the final two semesters. Nor may students leave the college after three or three and a half years and complete their degrees with credits earned at other institutions or through the Cornell extramural division and summer session. Students are not allowed to be part-time students during their eight regular semesters unless they meet the criteria described in the section "Part-Time Study and Pro Rata Tuition" or present convincing academic or medical reasons for part-time study. Semesters as part-time students in the extramural division do not count as semesters of residence.

Acceleration. Less than 10 percent of the students in the college graduate in fewer than eight semesters. All accelerants are required to spend a minimum of *six* regular (i.e., full-time spring or fall) semesters at Cornell University, except external transfers, who are required to spend a minimum of *four* regular semesters at Cornell. All accelerants are required to be students in Cornell's College of Arts and Sciences for at least *two* regular semesters.

1. Through May, 1991, accelerants must meet either condition *a* or *b* or *c*. After May 1991, they must meet either condition *a* or *b*.
   a. To complete the degree in *seven* semesters, students must have finished *sixty* credits by the end of the *third* semester. To complete the degree in *six* semesters, students must have finished *sixty* credits by the end of the *second* semester. Students must have completed the prerequisites for admission to the major in time to spend *four* semesters in the major.
   b. To complete the degree in fewer than eight semesters, students must have passed 48 credits in Cornell courses numbered "300" and above. Courses taken at Cornell University, Cornell-in-Washington, the SEA semester, a fieldwork program, or an approved program of study abroad are considered Cornell courses, although all courses not taught in Ithaca in the College of Arts and Sciences are subject to review.
   c. To complete the degree in fewer than eight semesters, students must have at least a B average by the time they graduate.
2. All accelerants are required to complete 100 credits at C or above.
3. No students may use credits earned while on required leave of absence to reduce their terms of residence.
4. No accelerants may finish the degree with credits earned in summer or winter session, through part-time study (unless they meet the guidelines for part-time study in the catalogue), or at another institution. That is, they may not exit through any program other than a regular, full-time Cornell Semester.

Students planning to accelerate should present petitions by the beginning of the junior year to the Office of Records and Scheduling, M46 Goldwin Smith Hall.

Ninth term. Students may spend a ninth term in residence. They should discuss their program with the assistant dean for seniors and must notify the college in writing of their intention. Students receiving financial aid should discuss funding with an adviser in the Office of Financial Aid.

Minimum Number of Courses and Credits

Students must complete at least thirty-four courses to graduate, that is, four courses during each of six semesters and five courses during each of two semesters. A 3- or 4-credit course counts as one course; a 2-credit course counts as one-half course. Single-credit courses do not count as part of the thirty-four except in certain cases when they form a part of a series (certain offerings in biology, music, and theatre arts for instance) and two in the same series can be aggregated to count as one-half course. A 6-credit language course counts as 1 1/2 courses, while the summer Falcon Programs in Asian languages count as 10 credits and 2 1/2 courses each. Biology 364, for 6 credits, and most other 5- or 6-credit courses count as one course.

Students must also complete 120 credits, 100 of which must be from courses taken in the College of Arts and Sciences, to earn the Bachelor of Arts degree. Credits earned from advanced placement examinations, courses approved for study abroad, and courses taken in certain off-campus residential programs may be counted towards the 100 credits required within the college and also toward the required thirty-four courses. Credits earned in other colleges at Cornell, or in any subject at U.S. institutions other than Cornell, do not count as part of the 100. The only exception is for courses (usually no more than three) that a department accepts from other colleges at Cornell as fulfulling major requirements.

Application to Graduate

In the first semester of their senior year, students must complete an application to graduate so that the college can check each student's plan for fulfilling college requirements. This process is intended to help seniors identify problems early enough in the final year so that they may make any necessary changes in course selection to satisfy requirements. *Meeting graduation requirements is the student's responsibility;* problems that are discovered, even late in the final term, must be resolved before the degree can be granted. Seniors will receive applications and instructions with their preregistration materials for the final semester.

Attendance at graduation ceremonies. There are three degree dates in the year: May, August, and January. Students who plan to graduate in August or January are expected to attend the graduation ceremonies *in the following May.*

Courses, Credit, and College Requirements

A course may not be used to fulfill more than one college requirement, with the following exceptions.

1) A course may be used to fulfill a distribution requirement, and also a major requirement, provided that the major adviser agrees.
2) A one-semester course in foreign literature that is acceptable for achieving proficiency in that language may also be used as a partial fulfillment of the distribution requirement in the humanities.
3) Students whose native language is not English and who take English 211–212, may fulfill both the freshman writing seminar requirement and the appropriate distribution requirement by taking two freshman writing seminars offered in English, history, history of art, classics, philosophy, romance studies, Russian literature, German literature, or comparative literature.
4) Courses used to fulfill college requirements (but not major requirements) may be taken for S-U grades.

Repeating courses. Students may repeat courses. If the instructor certifies that the course content has been changed, credit will be granted a second time. If the content has not changed, both grades will appear on the transcript and will be included in any average that is calculated, but credit will be counted toward the degree only once. Students who plan to repeat a course should submit a petition to the Office of Records and Scheduling, M46 Goldwin Smith Hall.

Attendance in classes is a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Academic Advising Center will notify instructors when requested to do so, but students must arrange for making up examinations or other work with their instructors. When students will be absent because of religious holidays, they must discuss arrangements for making up their work with their instructors. Students who must miss an examination should be sure to contact the professor in advance. Alternative arrangements are at the discretion of the instructor.

Transferring credit. The college evaluates credit received from either another school or college at Cornell University or another accredited institution of collegiate rank to determine the number of credits and courses the student may apply toward the Bachelor of Arts degree. Tentative credit evaluations are normally provided to external transfers at the time of the notification of their admission. No more than 20 credits in courses not commonly given by the College of Arts and Sciences may be applied toward the degree.

Transfer students must successfully complete at least 60 credits and sixteen courses at Cornell; they must be in residence for four regular semesters. Summer session does not count toward the residence requirement. Advanced placement credit awarded by other colleges, either at Cornell or elsewhere, will be re-evaluated by the college and may not be accepted.

Advanced placement credit. See p. 6.

Summer session credit. A student may earn credit toward the degree by completing courses in Cornell's summer session or by petitioning to take courses at other colleges. Students should consult their advisers regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. The college Office of Records and Scheduling, M46 Goldwin Smith Hall, can supply forms and information. Credit earned in summer courses other than those at Cornell will not count toward the 100 credits required in the college except for summer programs abroad if sponsored by Cornell Abroad, for which from 3 to 8 credits may be earned and counted as in-college credit. Transcripts from other institutions should be sent to the Office of Records and Scheduling, M46 Goldwin Smith Hall.

Entering students who want to receive credit toward the degree for courses completed in a summer session at Cornell or elsewhere should have transcripts sent to the Office of Records and Scheduling, M46 Goldwin Smith Hall, during the summer before matriculation. Credits completed in Cornell summer sessions will be given automatically.

Summer session at Cornell or elsewhere does not count toward the eight-semester residence requirement.

Non-credit courses. The college does not grant credit toward the degree for every course offered by the university. Courses in remedial or developmental reading (for instance, Human Ecology 100) and supplemental science and mathematics courses offered by the Learning Skills Center, carry credits that are counted toward good standing in a given semester but not toward graduation. Physical education, typing, shorthand, and military training courses are among those for which credit is not given. Faculty legislation strictly prohibits granting credit toward the degree for service as an undergraduate teaching assistant.

Auditing. The college encourages its students to take advantage of its rich curriculum by sitting in on courses that interest them but do not fit into their schedules for credit. As long as the instructor agrees, students are welcome to visit courses. Small seminars and language courses are sometimes not open to visitors. Audited courses do not, of course, appear on the student's schedule or transcript.

Physical Education

See "University Requirements for Graduation," p. 11. The college does not count physical education credit toward the 120 credits required for graduation, nor does physical education credit count toward the twelve credits required for good standing each semester.

SPECIAL ACADEMIC OPTIONS

Degree Program

The following programs allow students to work toward more than one degree or to alter the regular college requirements or departmental requirements for the major.

Independent Major Program

The Independent Major Program allows students to design their own interdisciplinary majors if they want to pursue an interest that cannot be met within an established major. Proposals for an independent major must be supported by a faculty adviser and are assessed by a board of faculty members. Board members consider whether the plan is equivalent in coherence, breadth, and depth to a departmental major, whether it is well suited to the student's academic preparation, and whether it provides a liberal education. Independent majors substitute for established majors, but students must still satisfy all the other requirements for the baccalaureate degree. Students should contact the director of the Independent Major Program, Academic Advising Center, 55 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are listed on the calendar supplement for the College of Arts and Sciences.

College Scholar Program

The College Scholar Program frees no more than forty students in each freshman class from the usual college requirements for a degree and allows them to design their own academic programs. It is meant to serve students whose interests and talents do not easily fit into the usual departmental majors, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their adviser, a well-designed program of studies. College Scholars do not all design the same kind of program: Some, for instance, pursue diverse interests, while others integrate a variety of courses with a common theme.

College Scholars must complete 120 credits of course work (100 in the college), 34 courses, and, unless they receive special permission from the program to accelerate, eight full terms of undergraduate study. They must complete the physical education requirement. All College Scholars must complete a senior project. They are not required to complete or fulfill the distribution requirements, although members of the College Scholar Advisory Board believe that the spirit of the requirement is a good one.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday in April of the freshman year. Students should contact the Academic Advising Center, 55 Goldwin Smith Hall, for further information.

Double Majors

A student may complete a double major by fulfilling the major requirements in any two departments of the college. No special permission or procedure is required. Students need, however, to become accepted into both majors and be assigned an adviser in each department. Both majors will be posted on the official transcript.

Dual Degree Programs with Other Colleges

Especially ambitious and diligent students may earn both a Bachelor of Arts degree from the College of Arts and Sciences and (1) a Bachelor of Science degree from the College of Engineering or (2) a Bachelor of Fine Arts degree from the Department of Art in the College of Architecture, Art, and Planning or (3) a Bachelor of Science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning or (4) a Bachelor of Science degree in architectural history from the College of Architecture, Art, and Planning. Dual Degree Programs ordinarily take five years to complete. Students enter one of these colleges as freshmen and begin the dual degree program with the second college in the second or, in some cases, the third year. For further information students should contact assistant dean Rosenberg, Academic Advising Center, 55 Goldwin Smith Hall.

Double Registration with Professional Schools

Double registration in the College of Arts and Sciences and with the Cornell Law School and Cornell Medical College is possible. A few exceptionally well prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms.

Students interested in the joint program with the Law School should see the assistant dean for the senior class, Academic Advising Center, 55 Goldwin Smith Hall.

Students registering in the college and in the Cornell Medical College receive the Bachelor of Arts degree after the first year of medical studies and the Doctor of Medicine degree after the remaining three years of medical college are completed. Interested students should contact Jane Crawford, health careers coordinator, 203 Barnes Hall.

Double-registered students must, of course, complete all requirements for the B.A. degree, including 100 credits in College of Arts and Sciences courses.

Special-Interest Options

The following options do not alter the college's requirements but enable students to pursue special interests within the usual program. Independent course work is involved in independent study and in the Undergraduate Research Program; premedical and prelaw counseling help students make appropriate use of the regular curriculum.

Independent Study

Independent study affords students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the course, must approve the student's program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study. Consult the Office of Records and Scheduling, M46 Goldwin Smith Hall, for information. In one semester students may earn up to 6 credits with one instructor or up to 8 credits with more than one instructor.

Undergraduate Research Program

The Undergraduate Research Program enables students to gain firsthand experience in scholarly research by participating in a faculty member's research project. Participation is recognized by course credit, since the program emphasizes what students will learn rather than what they will contribute to the project. However, students sometimes make contributions of a very high order and publish the results of their work.

Besides learning research methods that are appropriate to the discipline, students gain awareness of their own research interests and abilities, self-discipline, new insight into the subject matter, and the pleasure of working as scholar-apprentices with professors and other students who share a common interest.

Students interested in this program should see assistant dean Williams, Academic Advising Center, 55 Goldwin Smith Hall.

Language Study

More than forty languages are taught in the College of Arts and Sciences; some of them are available only at Cornell. A full range of language, literature, and cultural courses are available in most of the major ancient and modern languages through the joint efforts of the Department of Modern Languages and Linguistics and the departments that specialize in literary and cultural study: the Africana Studies and Research Center and the departments of Asian Studies, Classics, German Literature, Near Eastern Studies, Romance Studies, and Russian Literature. Semi-intensive courses afford students the option of accelerating the development of language skills.

FALCON Program (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese, Japanese, or Indonesian exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities here to pursue rapid and thorough beginning studies on campus with the objective of studying abroad later—in China, Japan, or Southeast Asia.

Language House Program (136 Goldwin Smith Hall)

Beatrice B. Szekely, academic administrator

A complement to classroom cultural and linguistic instruction, the Language House Program combines residential and academic opportunities for developing and practicing conversational skills in French, Spanish, German, and Mandarin Chinese. It provides preparation for students who plan to study abroad and serves as a place for returning students to share their cultural experiences while further increasing their language skills.

Prelaw Study

Law schools neither require nor prefer any particular program of study; they do seek students with sound training in the liberal arts. It is important that students plan a program in which they are interested and do well. Beyond that, students are advised to take courses that will develop the powers of precise, analytical thinking and proficiency in writing and speaking.

The college offers a concentration in law and society. Students should work towards completion of this concentration because they are interested, not because they believe it will convince law schools of their interest.

The adviser for students in the College of Arts and Sciences who are applying to law school is assistant dean Buettner, Academic Advising Center, 55 Goldwin Smith Hall.

Premedical Study

The breadth and depth afforded by a liberal arts education are invaluable for people who plan medical careers, whether they intend to practice or go into medical research. Such training has a profound effect on the doctor's usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses. Students who are interested in medical careers are urged to visit the Health Careers Office, 203 Barnes Hall.

The adviser for students in the College of Arts and Sciences who are planning careers in medicine is assistant dean Turner, Academic Advising Center, 55 Goldwin Smith Hall.

Off-Campus Programs

Many students find it important to their majors or to their overall academic programs to study abroad for one or two semesters. When it makes academic sense, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed.

Study Abroad

In 1989–90, 234 students in the college studied abroad. Cornell has established affiliations with several universities and programs in Africa, Australia, Belgium, Britain, China, Denmark, Egypt, Indonesia, Israel, and Sweden, as well as its own programs in France, Germany, Italy, Japan, Spain, and Switzerland. Students have studied in those countries and in others all over the world. Before planning a program for study abroad, students should consult assistant dean Rosenberg, in the Academic Advising Center, 55 Goldwin Smith Hall, who will help them find the program most appropriate to their academic goals.

A request to study abroad must have the support of the faculty adviser, and the college. A maximum of 30 credits for a year or 15 credits for a semester may be earned abroad. These credits may count as part of the 100 credits required within the College of Arts and Sciences. On returning, students must seek approval of the courses completed abroad from the appropriate departments. Normally, transfer students entering as juniors will not be allowed to study away from Cornell.

Students studying abroad must be in good academic standing the semester prior to departure. No more than two semesters abroad are allowed.

Seniors who wish to study abroad during their *final semester* must petition the college for permission to do so, but such permission is only rarely granted.

Summer Residential Programs in Archaeology

During the summer months students may participate in a Cornell-sponsored archaeological project. In recent years the program has organized archaeological projects in New York State, Central America, South America, and the Mediterranean region. Students should contact the Archaeology Program for information about the sites available this summer.

Marine Science

Shoals Marine Laboratory is a seasonal field station designed to introduce undergraduates to the marine sciences. The laboratory is located on Appledore Island, six miles off the Maine and New Hampshire coasts. Students should contact the Division of Biological Sciences for further information.

Cornell-in-Washington

The Cornell-in-Washington program enables a limited number of advanced students to study questions of public policy and to do supervised research during a term of residence in the capital. Students choose among several seminars. They become familiar with the various sources of information and develop research techniques. The program also offers a unique internship program. Students who want to serve an internship in a federal agency or congressional office take part in a public-policy seminar. They define and carry out individual research projects that explore the connections between abstract policy issues and the day-to-day activities of the office. Potential internships are arranged through, and approved by, the Cornell-in-Washington program. Students are admitted to the Cornell-in-Washington program by the Department of Government. For further information, see p. 21 or inquire at 134 McGraw Hall.

Fieldwork

Sometimes it is appropriate for students to include fieldwork as part of their major. A three-member faculty committee helps the student plan the project, arranges for ongoing supervision, and evaluates the project at the end of the term. Fieldwork almost always involves writing a long paper or several short ones, as well as practical experience. All proposals for fieldwork must be presented in advance to the Academic Records Committee for approval. A maximum of 15 credits in fieldwork may be earned. For further information students should contact assistant dean Unsworth, Academic Advising Center, 55 Goldwin Smith Hall.

ADVISING

The following advisers and offices provide information on college procedures and regulations, academic advising, or counseling.

Faculty Advisers

Faculty advisers help students design programs of study and advise students about ways to achieve their academic goals. Faculty members volunteer to act as advisers to new students in the college; advisers and advisees meet during orientation week to plan the student's program. Students are encouraged to see their advisers again early in the term, before it is too late to drop courses and before signing into courses for the following term, to discuss their academic program and to become better acquainted. Academic difficulties may frequently be solved or avoided if students and advisers recognize problems early.

Students who would like to petition for an exception to college rules should discuss the matter with their advisers.

Advisers may also help students with study or personal problems or direct them to other offices on campus where help is available.

Student Advisers

Each new student is also assigned a student adviser who can provide information about the college's requirements, courses and instructors and about life at Cornell.

Major Advisers

After acceptance into a major program, students are assigned a major adviser, a faculty member in the major department, with whom they make many of their most important decisions at Cornell. The adviser eventually certifies the completion of the major. The major adviser should be consulted by the student about all academic plans, including honors, study abroad, acceleration, and graduate study. The adviser's support is especially important if a student petitions for an exception to the requirements for the degree.

Academic Advising Center

The Academic Advising Center, 55 Goldwin Smith Hall, serves as a resource for faculty and student advisers and for students themselves and their parents. The assistant deans (one for each class, one for minority students, and two for special programs) are available there to help students define their academic and career goals and to help with special academic options such as study abroad, undergraduate research, fieldwork, and exceptions to college rules.

REGISTRATION AND COURSE SCHEDULING

Registration with the University

All students must register with the university at the beginning of each semester. Students may register if they are academically eligible and have satisfied the payment of their tuition. Registration materials are available at a time and place announced each term by the Office of the University Registrar.

Enrollment in Courses in the College of Arts and Sciences

Students must enroll in courses through the Office of Records and Scheduling in the college, M46 Goldwin Smith Hall.

New Students

The Academic Advising Center conducts briefings during orientation week for incoming freshmen and transfer students about procedures for scheduling courses.

Continuing Students

Continuing students are expected to select and schedule courses in advance during the previous term. Students who fail to sign into courses during the designated period must wait until the beginning of the semester and may have difficulty securing places in the courses they desire. Students may schedule up to five courses during the pre–course enrollment (pre-registration) period. Information and materials will be available in the Records and Scheduling Office, M46 Goldwin Smith Hall. Before signing into courses, students should make appointments with their faculty advisers to plan their programs. Pre–course enrollment (pre-registration) is the best time to discuss long-range goals with faculty advisers. Students who do not have majors must submit an academic plan, approved by their faculty adviser, with their proposed schedule. Student advisers will also assist students. All students are welcome to discuss programs and plans with an assistant dean in the Academic Advising Center, 55 Goldwin Smith Hall.

The Records and Scheduling Office issues a supplement to *Courses of Study* showing last-minute changes in courses; the supplements of other divisions of the university are also available for reference in the Office of Records and Scheduling. Continuing students receive their course schedules at university registration. In the fall they also receive a copy of their transcript and a record of their progress toward the degree, which shows the courses taken, grades received, graduation requirements fulfilled, and academic actions. These are not official transcripts, but they reflect the official record and should be corrected in the Records and Scheduling Office if they are incorrect.

Limits on Courses and Credits

Students must take four courses during each of six semesters, five courses in each of two semesters, and average fifteen credits each semester in order to graduate in eight terms. At a minimum, students must carry twelve credits per semester; if for compelling personal or academic reasons students need to carry fewer than twelve credits, they should consult their faculty adviser and the assistant dean of their class. Permission is by petition only. Completion of fewer than twelve credits without permission results in unsatisfactory academic standing. First-term freshmen may not register for more than eighteen credits; other students may register for more than eighteen credits a term only if their previous term's average was a B or higher. No more than twenty-two credits may be taken in a regular semester without permission of the Committee on Academic Records.

Any student who is not officially enrolled in a schedule of courses by the end of the third week of classes may be withdrawn from the college.

Forgery on Forms

Forging signatures or credentials on college forms is an academic offense; sometimes it constitutes academic fraud. In all cases of forgery on academic forms, the effect of the forged documents shall be negated. Students may then petition properly to do whatever they attempted to do improperly. Such incidents will be recorded in the Academic Integrity Hearing Board confidential file for forgeries. If a student forges more than once or if the forgery would advance the student's academic standing unfairly or fraudulently or if, for any other reason, the situation requires some other response in addition to the uniform penalty, the Academic Integrity Hearing Board might make a different recommendation, such as a notation on the student's transcript, suspension, or dismissal.

Special Registration Options

Adding and Dropping Courses

After advance course enrollment, students may not add or drop courses until the new term begins. All program changes must be approved by the department and also by the faculty adviser (for juniors and seniors only). During the first three weeks of the semester, course changes may be made without fees. Add/drop forms are availalble in the Records and Scheduling Office, M46 Goldwin Smith Hall.

After the third week of classes courses may be added, and after the eighth week courses may be dropped, *only* by petition. Students may withdraw from courses between the ninth and twelfth weeks of the term *only* if (1) the instructor certifies the student has worked hard to master the material and has completed assigned work and taken exams, (2) the instructor approves, and (3) no issue of academic integrity is at stake. Students who want to withdraw from a course after the eighth week of the term must meet with an assistant dean and submit a petition by the end of the twelfth week of the semester. The records of students whose course loads drop below 12 credits will be reviewed at the end of the semester.

Courses dropped after the eighth week will be noted on the transcript by a "W" where the grade would normally appear. No petitions to withdraw from courses may be submitted after the end of the twelfth week in the term. Deadlines for short courses will be adjusted according to the length of the courses. After the midpoint of a short course, students who wish to add or drop the course must petition to do so.

For each course change approved after the third week there is a $10 fee.

Leaves of Absence

Taking time off from college to think about goals and progress, to gain additional experiences or funds, or just to take a break from studying is sometimes useful to students. Those in good standing who take a leave by the end of the eighth week of the semester are welcome to register in the college the following semester. Five years is the maximum length of time a student may be on leave and return without special permission. Leaves of absence are of four types.

1) *Personal leaves* impose no conditions concerning the right to reenter the college except for the five-year limit. Readmission is automatic if a written request is made one month before the beginning of the term in which the student wishes to return.
2) *Medical leaves* are granted by the college only on recommendation by a physician from Gannett Health Center. Such leaves are granted for an unspecified length of time (up to five years) with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. In some cases students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review at the time of the leave and on return.
3) *Conditional leaves* may be granted if the student is not in good standing or, in unusual circumstances, after the eighth week of the term. Normally students may not return from conditional leaves for at least two terms or until specific and individual conditions, such as completing outstanding work, have been met.
4) *Required leaves:* The Academic Records Committee may require a leave of absence if a student is in academic difficulty. See the section "Academic Actions."

Any student who wishes to take a leave of absence should consult an assistant dean in the Academic Advising Center. On readmission, the student's graduation date will be recalculated according to the number of terms completed, the number of acceptable credits earned toward the degree, and the requirements for graduation. *Students who take courses elsewhere while on leave, may petition to have credits accepted as part of the 20 out-of-college credits allowed toward the 120 credits needed for graduation. Approval depends on the judgment of the relevant departments and acceptable grades.* Credits earned on leave do not count toward the eight semesters of residence unless a student petitions successfully to accelerate. See the section "Residence."

Withdrawals

A withdrawal is a voluntary severance of connection with the university. If a student wants to withdraw after registering for the term, the withdrawal must be requested before the end of the eighth week of classes to avoid grades of "W" on the transcript. A notation of "W" *will* appear on the transcript for any course dropped after the eighth week. On withdrawal it is assumed that the student will not want to reregister in the college. Students who seek readmission after withdrawing from the college write an appeal to the Committee on Academic Records. If a student fails to register for a term and does not request a leave, the student will be withdrawn from the college for failure to register.

Transferring within Cornell (Internal Transfer)

Internal transfer from one college or school at Cornell into another is attractive for many students whose intellectual interests change. Students who want to transfer should discuss their eligibility with a counselor at the new school or college.

In some cases students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases they may be referred to the Division of Unclassified Students. During the term immediately preceding transfer into the College of Arts and Sciences, students should complete at least 12 credits of courses in the College of Arts and Sciences with superior grades and without any grades of *Incomplete*, any S-U grades (unless only S-U grades are offered for that particular course), or any grades below C. Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student's entire record at Cornell and the high school record, not just the work of one semester. Interested students should see assistant dean Unsworth, in the Academic Advising Center, 55 Goldwin Smith Hall.

Part-Time Study

The college ordinarily expects its students to be full-time students. Except in the case of Ithaca residents who are twenty-three years of age or older, part-time attendance is permitted only in unusual circumstances.

In certain circumstances seniors who are completing their final term in the college may be allowed to register in the Division of Extramural Study for fewer than 12 credits. Tuition is charged per credit. The guidelines for granting this permission are adhered to strictly.

Guidelines for part-time study:

1) A student who has completed all degree requirements by the end of the seventh term, and could have received permission to accelerate, may receive permission to study part-time during the eighth term.
2) A student who has completed all degree requirements in seven terms but is majoring in a department that requires candidates for honors to complete the thesis in the eighth term may be permitted to register for fewer than 12 credits.

3) A student who has received permission to accelerate, but who has been forced to drop a course (for reasons beyond his or her control) and has not been able to complete the course work on schedule, may be able to complete the requirements as a part-time student.

4) A student who is pursuing honors work and must complete extensive research away from the campus, which precludes registering for additional courses, may be allowed to register for fewer than 12 credits.

ACADEMIC STANDING

Students are in good standing for the term if they successfully complete at least 12 credits by the end of the term and receive no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make satisfactory progress toward satisfying requirements for the degree. They are expected to earn grades of C (not C–) or better in at least 100 of the total credits for the degree.

Honors

Dean's List

Inclusion on the Dean's List for academic excellence is an honor bestowed by the dean of the college. The criteria are subject to change from semester to semester and are available in the Office of Records and Scheduling, M46 Goldwin Smith Hall.

Bachelor of Arts with Honors

Almost all departments offer honors programs for students who have demonstrated exceptional ability in the major and who seek an opportunity to explore branches of their subject not represented in the regular curriculum or to gain experience in original research. The honors programs are described by individual departments in the following sections. The degree of Bachelor of Arts with honors will be conferred upon students who, in addition to having completed the requirements for the degree of Bachelor of Arts, have satisfactorily completed the honors program in their major and have been recommended for the degree by their major department, the Independent Major Program, or the College Scholar Program. *Concentrations, however, do not offer honors programs.*

Bachelor of Arts with Distinction

The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who, in addition to having completed the requirements for the degree of Bachelor of Arts, have:

1) completed at least 60 credits while registered in regular sessions at Cornell;

2) ranked in the upper 30 percent of their class at the end of their seventh semester, or next-to-last semester for transfers and accelerants;

3) received a grade below C– in no more than one course;

4) received no failing grade;

5) maintained good standing in each of their last four terms; and

6) have no *Incompletes* remaining on their records.

Failure to Maintain Good Standing

Students are not in good standing if they complete fewer than 12 credits, except for second-semester seniors who need fewer credits and courses to graduate; if they have more than one D, or one D in a schedule with only three courses, or any F or U grades; if they have not made satisfactory overall progress in grades or credits (whether due to failures or *Incompletes)* or in the requirements of the college or the major. Such students will be considered for academic action by the Committee on Academic Records or one of the deans of the college.

Academic Actions

Warning. Any student who fails to maintain good standing will at least be warned. The warning may be given by an assistant dean in the college or by the faculty's Committee on Academic Records. A warning is posted on a student's unofficial college transcript but is not reported to the university registrar and does not appear on official transcripts.

Required leave of absence. A student in serious academic difficulty may be required by the Committee on Academic Records to take a leave of absence, normally for a full year. Usually, but not necessarily, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must submit a plan for completing the degree. In some cases the students will be required to furnish evidence that they are ready to return before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee exceptionally strong evidence of their readiness to return. "Required Leave of Absence" is posted on the student's unofficial college transcript; the university registrar is notified, and "Leave of Absence" and the date will appear on the student's official transcript.

May not reregister. The Committee on Academic Records may dismiss a student from the college because of a highly unsatisfactory record for one term or for failure to make satisfactory overall progress in grades, credits, or the requirements of the major. This action expels the student permanently from the college. "May Not Reregister" is posted on the student's unofficial college transcript, the university registrar is notified, and "May Not Reregister in the College of Arts and Sciences" and the date will appear on the official transcript.

Students being reviewed for academic action are urged to present evidence that will help explain their poor academic performance. Students may appeal a decision or action of the committee if they have new relevant information to present.

GRADES

Letter Grades

See Grading Guidelines.

S-U Grades

The S-U option allows students to explore unfamiliar subject areas without being under pressure to receive high grades. It is not meant to reduce the amount of work a student completes in a course or the amount of effort a student devotes to a course. Students may elect during the first three weeks of the term to receive a grade of S (satisfactory) or U (unsatisfactory) instead of one of the letter grades (A+ through F), provided that the instructor is willing to assign such grades. **Students may not elect the S-U option after the third week of the term.** A grade of S is equivalent to a grade of C– or higher; a grade of U, which is equivalent to any grade below C–, is a *failing* grade equal to an F. S means the student receives the credit specified for the course. U means no credit is given. A few courses in the college are graded exclusively S-U; in that case, the final grade appears on the transcript as SX or UX.

Courses that will count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. Students may elect the S-U option in courses used to satisfy the distribution and language requirements, provided that such courses do not also count toward major requirements or serve as prerequisites for admission to the major. Students are advised to use the S-U option sparingly if they intend to apply to graduate school or for transfer to another college. There is no limit on the number of courses each term for which students may elect the S-U grade, but within the 120 credits required for the degree, a minimum of 80 credits must be in courses for which a letter grade was received.

With special permission students may change from S-U to a letter grade within the first five weeks of the term, although a $10 fee is charged after the third week.

Grades of Incomplete

A grade of incomplete signifies that a course was not completed before the end of the term for reasons beyond the student's control that are acceptable to the instructor. Students must have substantial equity in the course; that is, they must be able to complete the remaining work without further registration and must have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor will state what work must be completed, when it must be completed, and the grade earned if the work is not completed by that date. Unless the instructor stipulates otherwise, students will be allowed one term plus one summer to make up the work. When a final grade is reported, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formerly an incomplete.

Once a grade of incomplete is assigned, the college does not change it unless and until the faculty member submits a change of grade form or gives written permission to "freeze" it as an incomplete.

Students must consult the instructors to resolve any incompletes before graduation.

R Grades

R designates two-semester or year-long courses. The R is recorded on the student's transcript at the end of the first term. The grade recorded at the end of the second term shows the student's level of performance in the course for the entire year. The total credits that will be earned for the whole course are listed each term.

Grade Reports

Grade reports for the fall term are included in spring-term registration materials; grade reports for the spring term are mailed to students at their home addresses.

The college does not compute class rank.

CALENDAR SUPPLEMENT

All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

	Fall	*Spring*
First deadline for submitting independent major requests. Go to Academic Advising Center, 55 Goldwin Smith Hall, for further information.	Sept. 24	Feb. 25
Last day for adding courses without petition.	Sept. 21	Feb. 8
Last day for dropping courses without $10 fee.	Sept. 21	Feb. 8
Last day for changing grade option (S-U).	Sept. 21	Feb. 8
Second deadline for submitting independent major requests. Go to Academic Advising Center, 55 Goldwin Smith Hall, for further information.	Nov. 26	April 1
Last day for requesting leave of absence or withdrawal for the current term.	Oct. 26	March 15
Last day for dropping courses without petition.	Oct. 26	March 15
Deadline for applying to study abroad.	See assistant dean Rosenberg, Academic Advising Center	
Pre–course enrollment (pre-registration) for the following term (tentative).	Oct. 24–Nov. 7	March 27–April 10
Last day to petition to drop a course.	Nov. 16	April 16
Deadline for applying to the College Scholar Program.		April 24
Deadline for requesting internal transfer to the College of Arts and Sciences for the following term.	Dec. 1	May 1

ADMINISTRATION

Geoffrey V. Chester, dean – 255–4146

Philip Lewis, associate dean – 255–4147

Don Randel, associate dean – 255–4147

Lynne S. Abel, associate dean – 255–3386

Glenn C. Altschuler, associate dean, director of academic advising and dean for freshmen – 255–5004

Thak Chaloemtiarana, associate dean and director of admissions – 255–7061

Bonnie Buettner, assistant dean for seniors – 255–5004

Beatrice G. Rosenberg, assistant dean, academic advising (including: study abroad, dual degree programs, fellowships and scholarships) – 255–5004

Janice Turner, assistant dean, minority affairs and premedical adviser – 255–5004

Margaret C. Unsworth, assistant dean, sophomores and juniors – 255–5004

Marilyn Williams, assistant dean, undergraduate research and academic integrity – 255–5004

Patricia Dougherty, college registrar – 255–5051

Michele T. Crane, associate registrar – 255–5246

Courses and Departments

SPECIAL PROGRAMS AND AREAS OF CONCENTRATION

The college offers a number of special and interdisciplinary programs that are described following the departmental program descriptions. Students may devise an independent major with the aid of any of these programs or develop an informal minor field. (Informal minors are not listed on the student's official record.)

GENERAL EDUCATION COURSES

The introductory and advanced courses offered by departments in their respective disciplines and fields comprise the bulk of the curriculum in the College of Arts and Sciences. Most of these courses are accessible to almost all students who are interested in them. However, the faculty of the college also offers general education courses, including interdisciplinary courses for a broad audience, courses that provide insight into a particular discipline for students who are not specializing in that field, and courses for advanced students who consider a discipline in terms of its history, its presuppositions, or its relation to other branches of knowledge. The following courses have been identified by the various departments of the College of Arts and Sciences as particularly appropriate, by that definition, for general education. For full course descriptions consult the departments' sections of the catalog.

American Studies

Some professors in English and history with an interest in American studies regularly teach courses that emphasize the interconnections of literary and historical materials. Some courses focus on these interconnections with a nonspecialist audience in mind; others aim at an upper-level audience to put literature and history in a comparative perspective with respect to a common subject. These purposes may suit not only American studies, English, or history majors, but the general-education interests of nonmajors. Members of the American Studies Committee can be consulted about the pertinence of their courses to general education.

Archaeology

Several members of the Archaeology Program offer general education courses suitable for nonmajors. These are listed under the departments that offer archaeology courses, such as the departments of Anthropology, Classics, History of Art, and Near Eastern Studies. The Archaeology Program itself also offers:

203 Early People: The Archaeological and Fossil Record (also Anthropology 203)
Fall. 3 credits.
T R 11:40–12:55. T. P. Volman.

Asian American Studies

110 Introduction to Asian American Studies
See Special Programs and Interdisciplinary Studies.

Asian Studies

211 Introduction to Japan
Fall. 3 credits.
M W 11:15; disc., see course roster.
N. Sakai.

212 Introduction to China
Spring. 3 credits (4 credits with a special project; consult instructor for information).
T R 1:25 plus disc, R 2:30 (3 sections), or F 10:10 (2 sections), 11:15, or 1:25 (1 section). E. M. Gunn.

215 Introduction to South Asian Civilizations
Fall. 3 credits (4 credits with a special project; consult instructor for information).
M W F 11:15. C. Minkowski.

218 Introduction to Korea
Spring. 3 credits.
T R 1:25. Sections to be arranged.
D. McCann.

Astronomy

[490 Senior Seminar—Critical Thinking
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged. C. Sagan.]

Classics

211 The Greek Experience
Fall. 3 credits.
M W F 11:15. F. Ahl.

212 The Roman Experience
Spring. 3 credits.
M W F 1:25. D. Mankin.

217 Initiation to Greek Culture
Fall. 4 credits.
M W F 10:10, plus 1 hr. to be arranged.
P. Mitsis, P. Pucci.

218 Initiation to Roman Culture
Spring. 4 credits.
M W F 10:10, plus 1 hr. to be arranged.
F. Ahl, J. Whitehead.

[219 Mediterranean Archaeology (also Near Eastern Studies 267)
Fall. 3 credits. Not offered 1990–91.
M W F 12:20. J. Coleman.]

220 Introduction to Art History: The Art of the Classical World (also History of Art 220)
Spring. 3 credits.
M W F 10:10. A. Ramage.

221 Minoan-Mycenaean Art and Archaeology (also Archaeology 221 and History of Art 221)
Fall. 3 credits.
M W F 10:10. P. I. Kuniholm.

223 The Comic Theater
Spring. 3 credits.
M W F 12:20. J. Rusten.

[225 Hellenistic and Roman Philosophy
4 credits. Not offered 1990–91.
P. Mitsis.]

235 Modern Greek Poetry and Politics (also Comparative Literature 235 and Government 335)
Fall. 3 credits.
T R 1:25–2:40. G. Holst-Warhaft.

236 Greek Mythology (also Comparative Literature 236)
Fall. 3 credits.
T R 11:40–12:55. D. Mankin.

[237 Greek Religion and Mystery Cults
Spring. 3 credits. Not offered 1990–91.
T R 11:40–12:55. K. Clinton.]

[238 The Ancient Epic
Spring. 3 credits. Not offered 1990–91.]

239 Greek and Roman Mystery Cults and Early Christianity
Spring. 3 credits.
To be announced. K. Clinton.

[250 Etruscan Art and Archaeology
Fall. 3 credits. Not offered 1990–91.
J. Whitehead.]

[300 Greek and Roman Drama (also Comparative Literature 300)
4 credits. Not offered 1990–91.]

[337 Ancient Philosophy of Science
Spring. 4 credits. Not offered 1990–91.]

[339 Ancient Wit (also Comparative Literature 339)
Fall. 4 credits. Not offered 1990–91.
F. Ahl.]

[363 Representations of Women in Ancient Greece and Rome (also Women's Studies 363)
Fall. 4 credits. Not offered 1990–91.
M W 2:30–3:45. L. S. Abel, J. Ginsburg.]

480 Roman Society and Politics under the Julio-Claudians
Spring. 4 credits.
W 2:30–4:30. J. Ginsburg.

English

See, in the department's listing, "Courses Primarily for Nonmajors."

Geological Sciences

101 Introductory Geological Sciences
Fall, spring. 3 credits.
2 lecs, 1 lab, field trips, evening exams in the fall term. Fall, W. B. Travers; spring, J. M. Bird.
This course teaches observation and understanding of the earth, including oceans, continents, coasts, rivers, valleys, glaciated regions, earthquakes, volcanoes, and mountains; theories of plate tectonics; the origin, discovery, and development of mineral and water resources. The lab teaches use of topographic and geologic maps and recognition of minerals and rocks and includes field trips to Cascadilla Gorge, Fall Creek, and Enfield Glen.

102 Evolution of the Earth and Life
Spring. 3 credits. Geological Sciences 101 recommended.
2 lecs, 1 lab, field trips, weekly quizzes, no midterm. J. L. Cisne.
The story of the earth and life in terms of evolutionary processes and the global economy and material. The planet as a by-product of stars' evolution. Plate tectonics, continental drift, and their implications for life, fossil fuels, and climate. The greenhouse effect and its few-billion-year history. Evolution of life; human ancestry; dinosaurs. Lab: Examining the rocks and fossils that tell the story. Field trips to fossil-collecting sites and to Taughannock Gorge.

103 Geology in the Field
Fall. 3 credits. Limited to 35 students.
1 lec, 1 field trip or lab, 1 rec.
A. L. Bloom.
The subject matter of Geol 101, Introductory Geological Sciences, taught as much as possible by field trips in the campus and vicinity on foot and by bus. Weekly field trips until November introduce most of the major topics of the course, supplemented by lectures, recitations, and labs later in the term.

104 Introduction to Oceanography
Spring. 3 credits.
2 lecs, 1 lab. W. M. White.
The oceans remain one of the last frontiers for man, yet they affect our lives in many subtle ways. This course presents a survey of what is known of the physics, chemistry, geology, and biology of the oceans and is intended for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics; geology and biology of mid-ocean ridges; biological and geological controls on the chemistry of seawater; ocean currents and circulation; the oceans and climate, including El Niño, the greenhouse effect, and the Ice Ages; ecology of open ocean, ocean bottom, and near-shore communities; coastal processes; marine pollution and waste disposal; mineral and biological resources of the sea; Law of the Sea. Presented at the level of *Scientific American*.

111 To Know the Earth
Fall. 3 credits.
2 lecs, 1 lab, and field trips. J. E. Oliver.
A course to acquaint the non-scientist with the earth. Geology as an intellectual challenge, a provider of resources, an environment, a danger, a base for culture, and a science among sciences. The story behind landscapes, mountains, earthquakes, volcanoes, oceans, gold, petroleum, and icecaps. The record of the past, the context of the present, the forecast for the future.

202 Environmental Geology
Spring. 3 credits.
2 lecs, 1 rec, lab or field trip. D. E. Karig.
In-depth introduction to geologic processes that affect or are affected by human society, including stream behavior and floods, earthquakes, land stability and mass-wasting, and volcanic hazards. This material provides an application of geology to engineering, natural resources, and land-use planning. Local examples are discussed and visited on short field trips. The course can be taken as an introduction to geology, but also serves as a continuation to Geol 101.

German Studies

283 Contemporary European Society and Politics (also History 283 and Government 343)
Fall. 4 credits.
T R 2:55–4:10. J. Pontusson, G. Waite, J. Weiss.

320 Postwar German Novel
Spring. 4 credits. Taught in English.
T R 10:10–11:25. I. Ezergailis.

346 German Women Writers in Translation (also Women's Studies 346)
Spring. 4 credits.
T R 1:25–2:40. B. Martin.

History of Art

All 200-level courses and some 300-level courses. See department listing.

Psychology

326 Evolution of Behavior
Fall. 4 credits.
T R 2:55–4:10. R. Johnston.

418 Psychology of Music
Spring. 3 or 4 credits.
T R 1:25–2:40. C. Krumhansl.

Russian Literature

[207 Readings from Russian Culture
Fall. 4 credits. Not offered 1990–91.
M W F 9:05. G. Shapiro.]

[329 Eastern Europe Today: Economics, Government, Culture (also Economics 329 and Government 326)
Fall. 4 credits. Not offered 1990–91.
T R 2:55–4:10. G. Gibian, M. Rush, G. Staller.]

[350 Education and the Western Literary Tradition (also Comparative Literature 350 and College Scholar 350)
Spring. 4 credits. Not offered 1990–91.
M W F 10:10. P. Carden.]

367 The Russian Novel
Fall. 4 credits.
T R 2:55–4:10. G. Gibian.

[373 Chekhov
Fall. 4 credits. Not offered 1990–91.
T R 11:40–12:55. S. Senderovich.]

Sociology

101 Introduction to Sociology
Fall or spring. 3 credits.
M W 11:15–12:05 plus one section. Fall, S. Caldwell; spring, M. Hannan.
With a focus on public issues that might in any semester include collective violence, markets and organizations, and social policies aimed at lowering the rate of poverty, this course provides an introduction to theory and research in sociology and demonstrates how the insights and methods of sociological analysis can be brought to bear in understanding major issues of public life. The goal is to convey a sense of the interrelations between the formulation of theories about social behavior and the collection and analysis of data in order to evaluate those theories. Instead of simply describing research, this course provides "hands-on" experience in analyzing sociological problems. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

104 Class, Race and Ethnicity
Spring. 3 credits.
T R 10:10–11:25. S. Olzak.
What is the relationship between race and social class? To what extent does discrimination produce barriers to achievement and attainment for African Americans, Hispanics, Asians, and other immigrants in American society? Why are some groups more likely to be the target of ethnic and racial hostility than others? This course uses sociological analyses to answer these questions about the nature of race, ethnicity, and social class in our society and others. This course is designed as an introduction to the sociology of inequality and is primarily for freshmen and sophomores.

106 Family and Work
Fall. 3 credits.
T 10:10–11:25, plus one section to be arranged. L. Smith-Lovin.
The events of the past 30 years have profoundly transformed arrangements governing love, work, and their routinization in households and employment. In this course, students will look at data from census and time use studies showing what has changed and what has remained relatively stable. Sociological theories that explain these trends will be examined. Students will have the opportunity to test their own ideas with analyses of data from a national survey. The impact of sociological ideas for public issues like child care, welfare policy, sex discrimination statutes, and comparable worth will be discussed. This course is primarily for freshmen and sophomores.

202 Writing in the Social Sciences (also Writing 202)
Fall or spring. 3 credits. Limited to 17 students each section. Prerequisite: one social sciences course.
Fall: T R 11:40–12:55; Spring: T R 10:10–11:25. K. Hjortshoj.
This course helps students write and read with more confidence and skill, especially in the social sciences. The course investigates the ways in which social scientists use language. How and why does their writing vary? How do their theories, objectives, methods, and audiences affect their writing? We will address these questions through discussion and writing about works by social scientists in various fields. Both discussion and writing will aim to strengthen the composition skills that are important in academic work: analysis, comparison, and summary of texts; description and argument; handling of evidence, references, and quotations; and strategies for revision. Instruction will include frequent individual conferences on finished essays and work in progress. Students will write, and often revise, eight to ten papers—about 30 pages of finished work.

310 Sociology of War and Peace
Fall. 4 credits. Prerequisite: a course in sociology or government.
T R 1:25–2:40. R. M. Williams, Jr.
Every human group, community, or society presents many examples of altruism, helping, cooperation, agreement, and social harmony. Each grouping or society also manifests numerous examples of competition, rivalry, opposition, disagreement, conflict, and violence. Both conflict and cooperation are permanent and common aspects of the human condition. Collective conflicts, especially wars and revolutions, are frequent and dramatic events. But "peace" and "war" are equally active social processes, not passive happenings. This course describes various commonly accepted but erroneous notions of the causes and consequences of war and deterrence. It deals with the major theories concerning the sources of war in international and intranational social systems. The last half of the course analyzes the modes, techniques, and outcomes of efforts to restrict, regulate, and resolve international conflicts.

335 Industrial and Post-Industrial Society
Spring. 4 credits. Open to juniors and seniors in any department. No prerequisites.
T R 1:25–2:40. D. Weakliem.
Service and information based industries are steadily growing in all modern societies. Many people claim that this development fundamentally changes social structure, social conflict, politics, and culture. Others say that post-industrial society is just a continuation of industrial society. This course will explore issues concerning post-industrial society: for example, are traditional social categories such as class or religion giving way to new divisions? It will explore theories of post-industrial society and allow students to test them with data on recent changes in social conditions.

[365 Comparative Perspectives on Socialist Societies and Economies
Fall. 3 credits. Open to juniors and seniors in any department. No prerequisites. Not offered 1990–91.
W 2:30–4:25. V. Nee.
This course focuses on analyzing the relationship between state, economy, and society in socialist societies. Particular attention is given to the tensions between planning and market, equality and equity, center and locality, bureaucratic domination and individual choice, and ideology and dissent. What are the problems in state-socialist societies and what are the dynamics and limits of reform movements? What are the areas of difference and convergence in the patterns of state, market, and household relations in capitalist and socialist societies? Readings will draw primarily on case studies of the Chinese, Eastern European, and Soviet experiences.]

AKKADIAN

See Department of Near Eastern Studies.

AMERICAN STUDIES

J. Porte (260 Goldwin Smith Hall, 255-8349), chair and director of undergraduate studies; S. Blumin, H. L. Gates, M. Kammen, D. McCall, R. L. Moore, R. Polenberg, S. Samuels, F. Somkin, S. C. Strout (Emeritus)

The Major

The major in American studies, appropriate for a wide variety of future vocations, is basically a program of coordinated study in the history and literature of the United States. It is not a "double major." The prerequisites are minimal: one course in European, British, or American history at the 100 or 200 level and one course in British or American literature at the 200 level. The major itself is structured and demanding, and students who expect to become American studies majors should apply to the chair to arrange for a major adviser.

In consultation with their advisers, American studies majors elect 32 credits (or eight courses) of work in the history and literature of all three large periods into which an account of the nation's development can be divided, defined for the purposes of the program as colonial, nineteenth century, and twentieth century. To gain both depth and breadth, they select as an area of concentration either a single period (or the connections between two of the periods) and take either 16 credits in one period and 8 credits in each of the other two, or 12 credits in each of the two periods whose connections constitute the focus of the study and 8 credits in the third. In addition, they take one of the adviser-approved interdisciplinary seminars at the 400 or 600 level. When the subject matter is appropriate, such a seminar may count toward the satisfaction of the period requirements. Students may divide the work between history and literature in whatever proportion serves their interests, provided that they take no more than two-thirds of their courses in any one department.

Beyond the basic requirements in American history and American literature, 12 credits above the elementary level are required in allied subjects. Eight credits of work are in the history or literature, or both, of another related culture; and 4 credits are in American thought, society, or culture studies from the perspective of another discipline such as anthropology, economics, government, history of art, or sociology. (This last 4-credit requirement may be satisfied outside the college.)

Courses in American history that will satisfy the 32-credit requirement described in the second paragraph are offered by the Department of History; those in American literature are offered by the Department of English, the Department of Theatre Arts, and the Africana Studies and Research Center. Occasionally a course that fits an individual student's program may be offered elsewhere. Substitution will depend on the adviser's approval. Advisers determine what courses count for the interdisciplinary seminar.

Honors. Candidates for honors must maintain an average of B+ in courses pertinent to the major. To be eligible for a degree with honors in American studies, a student must in the

senior year either write an honors essay for American Studies 493, Honors Essay Tutorial, or submit to the American Studies Committee three term papers written for courses in the major and take an oral examination in the declared area of special interest.

465 Proseminar in American Studies (also English 465)
Spring. 4 credits.
W 1:25–3:35. J. Porte and members of the American Studies Program.
Selected topics in American history, literature, the arts, and politics. Recommended for American Studies majors.

493 Honors Essay Tutorial
Fall or spring. Up to 4 credits each semester.
See J. Porte for appropriate advisers.

ANTHROPOLOGY

A. T. Kirsch, chair; R. Ascher, J. Fajans, C. J. Greenhouse, D. J. Greenwood, J. S. Henderson, D. H. Holmberg, B. J. Isbell, B. Lambert, T. F. Lynch, K. S. March, C. Morris, P. S. Sangren, J. T. Siegel, M. F. Small, R. J. Smith

Anthropology is unique in that it takes humanity in its broadest sense as its subject matter. It is a discipline that stresses the world's cultural diversity by means of a comparative perspective. This means that anthropologists are interested in cultural differences in and among modern societies as well as cultural change over time. As we look ahead to the 21st century, anthropology prepares students to think globally about humankind as thinkers, actors, builders, and as living organisms in a complex and fragile ecosystem.

The three branches of anthropology are archaeology, biological anthropology, and sociocultural anthropology. Archaeologists collect and interpret the record of the past to extend our understanding of human history and social change. That record tells the story not only of "ancient" societies, but also of the rise of civilizations that were the direct forebears of the contemporary nations that we know today. Archaeology also tells the story of human origins, the invention of farming and settled life, the rise of complex social institutions and technologies, and the worldviews of the past, among other themes. Biological anthropologists consider human experience from the perspective of questions of evolution, anatomy, genetics, cognition, nutrition, disease, medicine, ecology, and primate studies, offering multiple approaches to the question of human beings' "humanness." Some essential human attributes (complex thinking and communication, social organization, among other things) are shared with other higher primates. Sociocultural anthropology, like archaeology, looks at the worlds humans make for themselves. Sociocultural anthropologists examine the diversity of behaviors, relationships, economies, political and legal orders, worldviews, logics, languages, symbols, myths, and religions—among the many other means human beings invent to create and reproduce social life around the world. Sociocultural anthropologists collect data primarily through ethnographic fieldwork, that is, months or years participating and observing in the societies they study.

Together, the three branches of the discipline offer an integrated approach to the immense diversity of human experience. Through its subject matter, theories, and methods, anthropology also offers students a chance to integrate the three divisions of the university: the humanities, social sciences, and natural sciences. Each branch of anthropology involves these three subject areas in different ways. For purposes of distribution requirements in the College of Arts and Sciences, courses in anthropology count toward the social science requirement.

The major is designed to offer students opportunities to study all three branches of anthropology, through courses on particular topics (e.g., agriculture, religion, or economics), on world areas, and on theoretical problems. The requirements for majors are outlined below. Within the major, students may design their own specialties in consultation with a faculty adviser. Specialties may be developed through any combination of 300- and 400-level courses in the department, independent study, courses in related fields, and honors work.

The Distribution Requirement

The social science requirement is met by completing Anthropology 102 and any full course (3 or 4 credits) in categories III, IV, V, and VI from the listings below, or any two courses in those categories.

Students who qualify for advanced placement in biology (a score of 4 or 5) may satisfy the biological science distribution requirement by taking Anthropology 101.

The expressive arts requirement is met by completing any two of Anthropology 450, 451, 452, 453, or 455.

The Major

1) Applicants for the major in anthropology must complete Anthropology 101 and 102. Preferably, these courses will be taken in the freshman or sophomore years.

2) Students who major in anthropology:

a) Take Anthropology 300, preferably no later than their sophomore year.

b) Take Anthropology 420, preferably in the fall term of their senior year.

c) Take at least one course at the 200 level or above in each of categories III, IV, V, and VI from the listing below.

d) Develop one or more areas of specialization within the discipline in consultation with his or her faculty adviser. Examples of such specializations include sociocultural anthropology, anthropological archaelogy, theory and history, and biological anthropology.

e) Take a total of 32 credits of course work, in addition to Anthropology 300 and above the 100 level. Up to 8 credits of course work in cognate disciplines related to the student's specialization may be accepted for the major with the permission of the faculty adviser.

f) When appropriate, special provisions for meeting major requirements may be arranged with the faculty adviser's approval.

Honors. Anthropology majors interested in the honors program should consult the director of undergraduate studies before the beginning of their senior year and apply for admission to the program. Candidates for the degree of Bachelor of Arts with honors in anthropology must complete a thesis in the final term of the senior year. Students may enroll in Anthropology 491 or 492, Honors Thesis, after obtaining the consent of the Honors Committee. The decision to award honors and in what degree is based on the quality of the thesis and the student's overall record.

Facilities

The anthropology laboratory contains a small statistical and reference library as well as basic drafting and photographic equipment. In addition, the department has a collection of archaeological and ethnological materials used in teaching and research.

Special Programs

Specialized individual study programs are offered in Anthropology 497–498, Topics in Anthropology, open to a limited number of juniors and seniors who have obtained consent of the instructor. Undergraduates should also note that most 600-level courses are open to them if consent of the instructor is obtained.

The Department of Anthropology holds colloquia throughout the academic year. Faculty members from Cornell and other universities participate in discussions of current research and problems in anthropology. Students are encouraged to attend.

Anthropology majors have also established an anthropology club, which sponsors educational and social events in conjunction with graduate students and faculty in the department.

I. Introductory Courses (Including Freshman Writing Seminars)

Note: For additional freshman writing seminars in anthropology, see "Freshman Writing Seminars" and the John S. Knight Writing Program's special brochure.

101 Introduction to Anthropology: Biological Perspectives on the Evolution of Humankind
Fall. 3 credits.
M W 12:20 plus disc, F 9:05, 11:15, or 12:20. M. F. Small.
The evolution of humankind is explored through the fossil record, studies of the biological differences among current human populations, and a comparison with our closest relatives, the primates. This course investigates the roots of human biology and behavior with an evolutionary framework.

102 Introduction to Anthropology: The Comparison of Cultures
Spring. 3 credits.
M W 12:20 plus disc, F 11:15, 12:20, or 2:30. D. H. Holmberg.
An introduction to cultural anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of small-scale tribal societies to those of state societies. Throughout the course we attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural patterns as they are expressed in social, economic, and ritual practices. In this encounter the principles of anthropology, as a comparative enterprise that poses distinct cultural systems in relief, will be developed. Fiction, films, and exercises supplement the formal anthropological materials.

121 Encounters with Other Cultures
Spring. 3 credits. Freshman writing seminar.
M W F 2:30. B. Lambert.
The main texts are novels and biographies that show how indigenous cultures have adapted to change and yet retained their identity and books by anthropologists that tell of their experiences as participants in other societies and as interpreters of other cultures (including American subcultures). There is an exploration of cultural symbolism through fantasy. Students discuss and write about ways of playing the outsider's role and about changes in the traveler's own outlook.

II. Courses Intended Primarily for Majors

300 The Discipline of Anthropology
Fall. 4 credits. Limited to, and required of, anthropology majors, who must take this course in their sophomore year or no later than the fall term of the junior year.
T R 1:25–2:40. A. T. Kirsch with the anthropology faculty.
The course is an overview of the field of anthropology; it provides a systematic treatment of the discipline, the concepts that are used, the persistent questions that are asked, the specializations within the field, and the shared goals and differing viewpoints. The course is intended to help majors plan their course work.

420 Development of Anthropological Thought
Spring. 4 credits.
T R 10:10–11:25. A. T. Kirsch.
An examination of the history and development of anthropological theory and practice. The course will focus on the differences and continuities among the various national and historical approaches that have come to be regarded as the schools of anthropology.

491 Honors Thesis
Fall. 4 credits. Prerequisite: consent of the Honors Committee. Intended for majors graduating in mid year.
Hours to be arranged. Staff.
Independent work under the close guidance of a faculty member selected by the student.

492 Honors Thesis
Spring. 4 credits. Prerequisite: consent of the Honors Committee.
Hours to be arranged. Staff.
Independent work under the close guidance of a faculty member selected by the student.

495 Social Relations Seminar (also Sociology 497)
Spring. 4 credits. Limited to seniors majoring in social relations.
R 2:30–4:30. A. T. Kirsch.

497–498 Topics in Anthropology
497, fall; 498, spring. Credit to be arranged.
Hours to be arranged. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

III. Archaeological Courses

See also courses listed under Archaeology.

203 Early People: The Archaeological and Fossil Record (also Archaeology 203)
Fall. 3 credits.
T R 11:40–12:55. T. P. Volman.
A survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of scientific disciplines are highlighted, as are the discoveries, personalities, and controversies that have enlivened the study of human evolution for more than a century. Critical evaluation of evidence and interpretations will be stressed. Demonstrations and films supplement the lectures.

[216 Ancient Societies
Fall. 3 credits (4 by arrangement with instructor). Not offered 1990–91.]

[352 Interpretation of the Archaeological Record
Fall. 4 credits. Not offered 1990–91.]

354 The Peopling of America
Fall. 4 credits.
T R 8:40–9:55. T. F. Lynch.
Prehistoric discovery of the New World, beginning with American Indian origins in Asia and ending with the largely unrecorded European medieval contact with North America. Major topics include crossing the Bering land bridge, big-game hunting and extinctions, postglacial adaptations to changing environments, diversified subsistence in the eastern woodlands, agricultural civilizations of the Midwest and Southwest, and Eskimo and Norse exploration and settlement across the Arctic and North Atlantic.

355 Archaeology of Mexico and Central America
Spring. 4 credits.
T R 1:25–2:40. J. S. Henderson.
A survey of the cultural history of ancient Mexico and Central America, emphasizing Aztec and Maya civilizations. The use of ethnographic and historical information to enrich archaeological interpretation is a general theme. Specific topics include the emergence of settled farming life, the rise of civilization and the state, and the development of mechanisms that linked the many societies in the region into a single sphere of interaction.

356 The Archaeology of South America
Spring. 4 credits.
T R 8:40–9:55. T. F. Lynch.
Origins and development of South American peoples, subsistence systems, cultures, and civilizations, with special attention to Peru, Bolivia, Chile, and Ecuador. Major topics include the question of the first inhabitants, the domestication of plants and animals, the rise of temple-based religions and great art styles, regional interaction, and the formation of militaristic polities and the Inca state.

[358 Archaeological Research Methods (also Archaeology 358)
Spring. 4 credits. Not offered 1990–91.]

[361 Field Archaeology in South America (also Archaeology 361)
Spring. 10 credits. Not offered 1990–91.]

402 Archaeological Research Design (also Archaeology 402)
Fall. 4 credits. Prerequisite: permission of instructor.
W 2:30–4:25. J. S. Henderson, T. P. Volman.
Archaeological practice demands careful definition of research objectives and appropriate strategies before excavation or other fieldwork begins. Critical information lies in the arrangement and associations of objects and structures; this context should be a basic concern of any field investigation, particularly when it is destroyed by excavation. The course relies on case studies to illustrate how surveys, excavations, and analytical techniques must be tailored to solving specific problems.

[404 Approaches to Archaeology (also Archaeology 404)
Fall. 4 credits. Not offered 1990–91.]

435 Investigation of Andean Institutions: Archaeological Strategies
Fall. 4 credits.
Hours to be arranged. C. Morris.
The role of archaeology in the study of major questions regarding native Andean societies. Topics of current interest will be approached by selecting specific written sources that are archaeologically pertinent. Ways will be explored of using archaeological Andean data to test and extend the written material. Past archaeological contributions to the understanding of Andean institutions will also be examined.

493 Seminar in Archaeology: The Aztecs (also Archaeology 493)
Fall. 4 credits.
R 1:25–3:20. J. S. Henderson.
Examines the Aztec empire as it was at the time of the European conquest of Mexico and examines the astonishingly rapid transformation of Aztec society from foraging bands into imperial city-dwellers. Theoretical emphasis is on integrating historical and archaeological data to reconstruct ancient societies.

494 Seminar in Archaeology: The State (also Archaeology 494)
Spring. 4 credits.
R 2:55–4:50. J. S. Henderson.
Examines the nature of complex societies and the ways that key institutions and organizational features of states and chiefdoms—kingship, chiefs, polity boundaries, economic spheres, markets, redistribution, palaces, stratification, ranking, occupational specialization—are reflected in the archaeological record.

[496 Public Archaeology (also Archaeology 496)
Spring. 4 credits. Not offered 1990–91.]

IV. Biological and Ecological Anthropology

[208 Gender, Race, and Medical "Science" (also Africana Studies 208 and Women's Studies 208)
Fall. 3 credits. Not offered 1990–91.]

[214 Humankind: The Biological Background
Spring. 3 credits (4 by arrangement with instructor). Not offered 1990–91.]

275 Human Biology and Evolution (also Biological Sciences 275 and Biology and Society 275)
Fall. 3 or 4 credits (4 credits with discussion). S-U grades optional, with permission of instructor.
M W F 10:10, optional disc, day and time to be arranged. K. A. R. Kennedy, J. D. Haas.
An introduction to the biology of *Homo sapiens* through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology. These topics and others are the focus of the optional one-hour weekly discussions.

[371 Human Paleontology (also Biological Sciences 371)
Fall. 4 credits. Not offered 1990–91.]

390 Primate Behavior and Ecology
Spring. 4 credits. Prerequisite: Anthropology 101 or permission of instructor. Limited to 25 students.
M W F 10:10. M. F. Small.
The course will investigate all aspects of nonhuman primate life. Based on the fundamentals of evolutionary theory, group and inter-individual behaviors will be presented. In addition, an understanding of group structure and breeding systems will be reached through an evaluation of ecological constraints imposed on primates in different habitats. Subjects include: primate taxonomy, diet and foraging, predation, cooperation and competition, social ontogeny, kinship, and mating strategies.

474 Laboratory and Field Methods in Human Biology (also Biological Sciences 474)
Spring. 4 credits. Prerequisite: one year of introductory biology or Anthropology 101 or permission of instructor. Offered alternate years.
Lecs, T R 10:10–12:05; additional lab hours to be arranged. Independent research project required.
K. A. R. Kennedy.
Practical exercises and demonstrations of modern approaches to the methodology of physical anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal and living subjects, paleopathology, skeletal maturation, and relevant field techniques for the archaeologist and forensic anthropologist. This course includes dissection of a profused nonhuman primate.

490 Primates and Evolution
Spring. 4 credits. Prerequisite: Anthropology 390 or permission of instructor. Limited to 10 students.
M 7:30–9:30 p.m. M. F. Small.
This seminar will focus on one current controversy in primatology. Through readings and discussion the issues will be subject to critical evaluation. Current topics might include: social intelligence, primates as predators and prey, primate conversation, sexual selection theory, reproductive success, dominance, etc.

V. Sociocultural Anthropology

205 Ethnographic Films
Fall or spring. 2 credits.
W 7:30–9:25 p.m. Staff.
Human cultural and social variability is explored through a series of ethnographic films, and readings and lectures relating to these films. The films are chosen to show peoples living in a variety of ecological situations and at different levels of social complexity in various parts of the world (i.e., Africa, Asia, Australia, the Americas). Readings and lectures will use the concepts and theories of cultural anthropology to interpret the significance of the different modes of life shown in the films.

211 Nature and Culture
Spring. 3 credits (4 by arrangement with instructor).
M W F 9:05. Staff.
Cultural anthropology, because it encompasses the comparative study of man in society, provides a unique vantage on the nature of man. One of the focal questions of the discipline is the relationship between the physical/biological and symbolic/moral worlds in which we live. This inquiry places anthropology squarely at the center of social theory, since all social theories and political ideologies are founded on premises regarding human nature. Through study of a variety of issues and debates (e.g., "sociobiology," the origin and meaning of the incest tabu), this course examines a variety of past and current attempts to explain the relationships between nature and culture in human life.

[212 Social Anthropology
Fall. 3 credits (4 by arrangement with instructor). Not offered 1990–91.]

[305 Emotion, Cognition, and Culture (also Women's Studies 305)
Fall. 4 credits. Not offered 1990–91.]

[306 Ethnographic Description
Spring. 4 credits. Not offered 1990–91.]

313 Anthropology of the City
Spring. 4 credits.
T R 10:10–11:25. R. J. Smith.
An examination of the sociocultural structure and process in urban settings, with emphasis on the role of rural migrants, the relationship of urbanism to political and economic development, the role of voluntary associations, and the adjustment of family and kinship groups to urban life. Asian, African, and Latin American urban centers are emphasized.

[314 Applied Anthropology
Fall. 4 credits. Not offered 1990–91.]

321 Sex and Gender in Cross-Cultural Perspective (also Women's Studies 321)
Fall. 4 credits.
M F 12:20 plus disc, W 9:05, 10:10, 11:15, 12:20, 1:25, 2:15. K. S. March.
An introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. The course examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definition around the world.

[322 Magic, Myth, Science, and Religion
Spring. 4 credits. Not offered 1990–91.]

323 Kinship and Social Organization
Spring. 4 credits.
M W F 11:15. B. Lambert.
The course begins with a discussion of the evidence for the prehistory of the family. It then examines forms of the family, descent groups, and marriage systems and the role that age and gender play in social structures. The last part is devoted to a history of the British and American family and its fate in utopian communes.

[326 Economic Anthropology
Fall. 4 credits. Not offered 1990–91.]

[328 Law and Culture
Spring. 4 credits. Not offered 1990–91.]

[329 Power and Culture
Spring. 4 credits. Not offered 1990–91.]

406 The Culture of Lives (also Women's Studies 406)
Spring. 4 credits.
R 1:25–3:20. K. S. March.
This seminar will look at persons, lives, cultures, and methods in anthropological life history materials. Throughout the seminar we will attend to the evolution of interest in, forms of, and uses for life history materials in anthropology, with special attention to differences in men's and women's lives and life (re)presentations.

408 Gender Symbolism (also Women's Studies 408)
Spring. 4 credits.
T 12:20–2:15. K. S. March
This seminar explores the propositions that gender is (1) not a collage of cultural universals, but nevertheless is elemental to the construction of culture, and (2) is not simply or transparently about the sexes, but still is integral to the construction of self and society. We will look at various cultures of gender, the processes and concomitants of their formation, and the place of the people who live and believe in them. In particular we will try to look beyond Western constructions of mutually exclusive, hierarchically related, and universally applied gender.

412 Contemporary Anthropological Theory
Fall. 4 credits.
M W F 11:15. B. Lambert.
A survey of the assumptions anthropologists make concerning the nature of society and culture, and the explanations they have proposed for social behavior, values, belief systems, and ritual. Problems of social continuity and change will be addressed by way of theories of process, conflict, and transaction. Problems of cross-cultural understanding will be explored through interpretative and structural studies of symbolism, ritual, mythology, concepts of the person, and cultural logic. Examples will be drawn from Western and non-Western societies, past and present.

[414 Anthropology and History
Spring. 4 credits. Not offered 1990–91.]

424 Myth, Ritual, and Sign
Fall. 4 credits.
T R 10:10–11:25. J. T. Siegel.
We will treat myth, ritual, and sign in their theoretical and practical dimensions, looking at them in the views of various social theorists and as described by ethnographers.

426 Ideology and Social Reproduction
Spring. 4 credits.
M 7:30–9:30 p.m. P. S. Sangren.
What is the logic of the process that links culture and social institutions? Why do all cultural systems (including "science") embody an element of logical circularity or delusion? How do theories of society, economy, and nature relate to values, authority, power, and legitimacy? Anthropology's comparative perspective on these questions is the focus of this course. Students will read and evaluate analyses of both familiar and exotic societies that focus on the dialectical relationship between ideas and institutions. The course will maintain a critical perspective toward contending theoretical positions (e.g., structuralist, Marxist, deconstructive) and encourage attention to the ideological dimensions of critical theory itself.

[427 The Anthropology of Everyday Life
Fall. 4 credits. Not offered 1990–91.]

428 Spirit Possession, Shamanism, Curing, and Witchcraft (also Women's Studies 428)
Spring. 4 credits. Prerequisite: background in anthropology or women's studies. Enrollment limited.
T 8:40–10:40. D. H. Holmberg.
An anthropological consideration of witchcrafts, shamanism, curing, and cults of spirit possession with special attention to the play of gender. Classic anthropological accounts of non-Western societies will be considered along with ethnographic and historical accounts of Western societies. The course also addresses general problems in the study of women and gender and the anthropology of myth, ritual, and symbolism.

[434 Anthropology and Colonialism
Spring. 4 credits. Not offered 1990–91.]

[450 Seminar on Ethnographic Film (also Theatre Arts 450)
Spring. 4 credits. Not offered 1990–91.]

[451 Anthropological Boundaries
Fall. 4 credits. Not offered 1990–91.]

[452 Portraits, Profiles, and Life Histories
Spring. 4 credits. Not offered 1990–91.]

453 Visual Anthropology
Fall. 4 credits. Enrollment limited by appropriate space for showing work. S-U grades only.
T 10:10–12:35. R. Ascher.
The expression of ideas about the human condition through original drawings, graphics, paintings, photographs, cinema, sculpture, and video that take the person as subject. Writing can be combined with visual expression, as, for example, in concrete poetry or photographic essays. Projects must conform to two general guidelines: (1) the student must have prior knowledge of the medium chosen or concurrent course work in it, and (2) the project must be one that can be developed throughout the course and benefit from its particular setting. In the first half, the creative work of others is studied. For example, we read Spiegelman's MAUS and view films made by both anthropologists and the people whom they visit. The second half is devoted to hour-long progress reports and discussions of the work of people in the course.

[455 Theatre of Anthropology
Spring. 4 credits. Not offered 1990–91.]

[480 Toward an Anthropology of the Female Body (also Women's Studies 480)
Spring. 4 credits. Not offered 1990–91.]

VI. Area Courses

230 Cultures of Native North America
Fall. 4 credits.
M W F 2:30. B. Lambert.
A survey of the principal Eskimo and American Indian culture areas north of Mexico. Selected cultures will be examined to bring out distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

[331 The United States
Spring. 4 credits. Not offered 1990–91.]

[333 Ethnology of the Andean Region
Spring. 4 credits. Not offered 1990–91.]

[335 Peoples and Cultures of Mainland Southeast Asia
Fall. 4 credits. Not offered 1990–91.]

[336 Peoples and Cultures of the Pacific
Fall. 4 credits. Not offered 1990–91.]

339 Peoples and Cultures of the Himalayas
Fall. 4 credits.
M W F 3:35. K. S. March.
A comprehensive exploration of the peoples and cultures of the Himalayas. Ethnographic materials draw on the lifeways of populations living in the Himalayan regions of Bhutan, India, Nepal, and Tibet. Some of the cultural issues to be examined through these sources include images of the Himalayas in the West, forms of social life, ethnic diversity, political and economic history, and religious complexity.

[342 Cultures and Societies of India, Nepal, and Sri Lanka
Fall. 4 credits. Not offered 1990–91.]

[343 Religion, Family, and Community in China
Fall. 4 credits. Not offered 1990–91.]

345 Japanese Society
Fall. 4 credits.
T R 10:10–11:25. R. J. Smith.
A survey of the social structure of Japan and a discussion of trends in urban and rural life during the past century. Topics to be emphasized include the family, ancestor worship, community and social organization, and urbanism and modernization.

[433 Andean Thought and Culture
Spring. 4 credits. Not offered 1990–91.]

[443 Religion and Ritual in Chinese Society
Fall. 4 credits. Not offered 1990–91.]

[456 Mesoamerican Religion, Science, and History
Fall. 4 credits. Not offered 1990–91.]

477 Ethnology of Island Southeast Asia
Spring. 4 credits.
T R 10:10–11:25. J. T. Siegel.
Peoples and cultures of Indonesia and the Philippines will be discussed, focusing on politics in its linguistic dimensions, as well as economic and cultural processes.

VII. Graduate Seminars

600-level courses are open to undergraduates who have fulfilled the prerequisites or by consent of the instructor.

601–602 The Teaching of Anthropology
601, fall; 602, spring. 2 credits. Enrollment limited. Letter grade only.
Hours to be arranged. D. H. Holmberg, M. F. Small.
This seminar is designed for graduate teaching assistants in Anthropology 101 and 102. The pedagogical goals and techniques for labs and sections are discussed at length. The fall term class is taught in conjunction with Anthropology 101 and is directed toward teaching of biological anthropology. The spring term class is taught in conjunction with Anthropology 102 and is directed toward issues in the teaching of sociocultural anthropology.

Southeast Asia Seminar: Burma (Asian Studies 601)

Southeast Asia Seminar: Philippines (Asian Studies 602)

[603 Production, Exchange and Value
Fall. 4 credits. Not offered 1990–91.]

Contemporary Sociological Theories of Development (Rural Sociology 606)

607–608 Special Problems in Anthropology
607, fall; 608, spring. Credit to be arranged.
Hours to be arranged. Staff.

610 Language of Myth (also Classics 610 and Comparative Literature 615)
Spring. 4 credits.
T 1:25–4:25. J. T. Siegel, P. Pucci.
An analysis of the theories on language leading to Levi-Strauss and Derrida. Myth and the notion of "the father."

[612 History of Anthropological Thought
Spring. 4 credits. Not offered 1990–91.]

Methods of Assessing Physical Growth in Children (Nutritional Sciences 612)

614 Reading Ethnography
Spring. 4 credits.
R 1:30–3:30. D. H. Holmberg.
This seminar concentrates on reading representative ethnographic texts, particularly those by anthropologists who have played focal roles in the development of anthropological theory. On the one hand, the course is designed for students to read systematically some of the "classics" of ethnography and on the other to raise questions about ethnography as a discipline and the close and necessary relation of ethnography to theory in anthropology.

[616 The Cultural Production of the Person
Spring. Not offered 1990–91.]

[619 Anthropological Approaches to the Study of Buddhisms in Asia
Fall. 4 credits. Not offered 1990–91.]

[623 Himalayan Issues, Problems, and Prospects
Spring. Credit to be arranged. Not offered 1990–91.]

[626 Problems in Economic Anthropology
Fall. 4 credits. Not offered 1990–91.]

[627 The Anthropology of Law (also Law 702)
Fall. 4 credits. Not offered 1990–91.]

628 Political Anthropology
Fall. 4 credits.
W 2:30–4:30. J. T. Siegel.
A comparison of political rhetoric in the Indonesian Old and New Orders. The bearing of such phenomena as newspapers, magazines, television, and various types of theater, music, and fiction, on the shaping of accommodation or opposition to the political order will be examined. A reading knowledge of Indonesian is required.

Anthropometry and Body Composition (Nutritional Sciences 630)

[631 Kingship and Cultural Identity in Mesoamerica: Interpretive and Comparative Issues
Fall. 4 credits. Not offered 1990–91.]

[632 Andean Symbolism
Spring. 4 credits. Not offered 1990–91.]

633 Andean Research
Fall or spring. 4 credits.
Hours to be arranged. B. J. Isbell, C. Morris.

634–635 Southeast Asia: Readings in Special Problems
634, fall; 635, spring. Credit to be arranged.
Hours to be arranged. Staff.

[636 Cognition and Classification
Fall. 4 credits. Not offered 1990–91.]

640–641 South Asia: Readings in Special Problems
640, fall; 641, spring. Credits to be arranged.
Hours to be arranged. D. H. Holmberg, K. S. March.
Selected readings in society, religion, and culture in South Asia.

645 Japanese Ethnology
Spring. 4 credits.
Hours to be arranged. R. J. Smith.
This seminar is designed for advanced students who plan to conduct social science research in Japan. It deals with questions of historical continuity the relationship of the individual to society, and the nature of contemporary Japanese social organizations. A reading knowledge of Japanese is strongly recommended.

[651 Anthropological Boundaries: Seminar on Film
Spring. 4 credits. Not offered 1990–91.]

653 Myth onto Film (also Theatre Arts 653)
Fall and spring. 4 credits. Open to undergraduates and graduate students with permission of instructor. Enrollment limited by available studio space and equipment. Prerequisite: some knowledge of one of the following: anthropology, filmmaking, mythology, graphics, drawing, or painting.
T 2–4:25. R. Ascher.
In myths, whales fly, pebbles throw themselves across streams, and trees are transformed into women. Toward the end of visualizing myths—in particular the myths of other people—we explore the possibilities of animated film. The technique used is cameraless animation; that is, we draw and paint, frame by frame, directly onto movie film. The intellectual problem is to visualize the myths of others so that they are comprehensible to us but are not thought to be of us. Reading includes introductory works on both myth and animation and there is background reading on the particular myth that is committed to film.

[656 Maya History
Fall. 4 credits. Not offered 1990–91.]

663 Hunters, Gatherers, and the Origins Of American Agriculture
Spring. 4 credits. Prerequisite: Anthropology 356. Open to qualified undergraduates.
W 12:20–2:15. T. F. Lynch.
The transition from hunting and gathering to agricultural subsistence, with particular attention to demographic, ecological, and coevolutionary factors. Topics to be emphasized are the history of thought on agricultural origins, archaeological evidence bearing on these theories, contrasts and conflicts between Western and non-Western systems, and the effects of agricultural instability and environmental degradation, particularly in the Americas.

664 Problems in Archaeology: "Early Man" in America
Fall. 4 credits. Open to qualified undergraduates. Prerequisite: Anthropology 354.
W 12:20–2:15. T. F. Lynch.
The peopling of the Western Hemisphere will be considered in historical perspective, as it has been dealt with by archaeologists, geologists, and paleoecologists. Emphasis will be on contextual analysis and environmental adaptations, as well as chronology, with topics drawn from both North and South American archaeology.

673 Human Evolution: Concepts, History and Theory (also Biological Sciences 673)
Fall. 3 credits. Prerequisite: one year of introductory biology, Anthropology 101, or permission of instructor. Offered alternate years.
Sem, W 7:30–9:30 p.m.; additional hours to be arranged. K. A. R. Kennedy.
The historical background of present-day concepts of man's evolutionary variations and adaptations in space and time is surveyed. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.

Design and Data Analysis in Development Research (Rural Sociology 715)

Social Movements in Agrarian Society (Rural Sociology 723)

ARABIC AND ARAMAIC

See Department of Near Eastern Studies.

ARCHAEOLOGY

A. L. Bloom (geological sciences), R. G. Calkins (history of art), K. M. Clinton (Classics), J. E. Coleman (Classics), R. T. Farrell (English), J. S. Henderson (anthropology), P. I. Kuniholm (history of art), T. F. Lynch (anthropology), D. I. Owen (Near Eastern Studies), A. Ramage (history of art), B. S. Strauss (history), T. P. Volman (archaeology; director of undergraduate studies), J. Whitehead (Classics)

Archaeology is an interdisciplinary field at Cornell, which is one of the few universities in the United States to offer a separate archaeology major. Program faculty members, affiliated with several departments, coordinate course offerings and help students identify opportunities for fieldwork, graduate study, and professional positions.

The Major

The basic introductory course for both majors and nonmajors is Archaeology 100. This course covers the broadest range of archaeology in terms of area and time and deals with method as well as results. Those with a fairly serious interest, particularly prospective majors, are encouraged to take the optional one-hour section, Archaeology 101, which provides practical experience with archaeological materials. Archaeology 402, which considers research design, and Archaeology 404, which examines interpretive frameworks, are especially recommended for majors.

Since the major draws on the teaching and research interests of faculty from many departments in order to present a broad view of the archaeological process, a student interested in the archaeology major should discuss his or her course of study with a participating faculty member as early as possible. In some areas of specialization, intensive language training should be coordinated with other studies as early as the freshman year.

As prerequisite to the major a student must complete Archaeology 100. Once admitted to the major, the student must take an additional 36 credits in courses from the archaeology list, chosen in consultation with the major adviser. These courses should provide exposure to a broad range of archaeologically known cultures and the methods of revealing and interpreting them. They must be distributed as follows:

1) At least two courses from each of the categories below (totaling at least 30 credits, including 16 at the 300 level or above):

   Theory and Interdisciplinary Approaches (B)

   Old World Archaeology (C)

   New World Archaeology (D)

2) At least two related courses (list available in Archaeology Program office)

Honors. Honors in archaeology is awarded on the basis of the quality of an honors essay and the student's overall academic record. Prospective honors students should have a 3.5 gradepoint in the major and a 3.0 gradepoint overall. They should consult with the director of undergraduate studies before the beginning of the senior year. The honors essay is normally prepared in consultation with a faculty adviser during the senior year; students may enroll in Archaeology 481, fall; 482, spring for this purpose.

Fieldwork. Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her adviser. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a limited number of students to work at excavations sponsored by Cornell and other approved institutions.

The Concentration

Students in Cornell schools and colleges other than Arts and Sciences may elect a concentration in archaeology. To concentrate in archaeology, the student must complete Archaeology 100 with a grade of C or better and at least four advanced courses in archaeology, distributed among the three groups stipulated in (1) in the description of the major above. Concentrators are eligible for Hirsch Scholarships in support of fieldwork.

Freshman Writing Seminars

For course descriptions, see the freshman writing seminar brochure.

A. Introductory Courses and Independent Study Courses

100 Introduction to Archaeology
Spring. 3 credits.
M W F 1:25. 2 evening prelims.
T. P. Volman.
A broad introduction to archaeology—the study of material remains to answer questions about the human past. The history, methods, and interpretive frameworks of archaeology are presented, followed by a survey of the archaeological record from human origins, through the development of food production, to the rise and spread of civilizations. Guest lectures by members of the Cornell Archaeology Program are an integral part of the course.

101 Introduction to Archaeology, Section
Spring. 1 credit. Limited to 35 students.
Optional section to be taken concurrently with Archaeology 100. Prospective archaeology majors are encouraged to participate in this section, although it is open to all interested students.
R 11:40. T. P. Volman.
A series of practical and special topics. The section includes analysis of archaeological materials, demonstrations, and visits to campus facilities.

300 Individual Study in Archaeology and Related Fields
Fall or spring. Credit to be arranged. Prerequisite: Archaeology 100 or permission of instructor.
Hours to be arranged. Staff.
Students pursue topics of particular interest with the guidance of a faculty member.

481–482 Honors Thesis
481, fall; 482, spring. 4 credits. Prerequisite: admission to Honors Program.
Hours to be arranged. Staff.
The student, under faculty direction, will prepare a senior thesis.

600 Special Topics in Archaeology
Fall and spring. 4 (V) credits.
Hours to be arranged. Staff.
Students pursue advanced topics of particular interest under the guidance of a faculty member(s).

681–682 Master's Thesis
681, fall; 682, spring. 4 (V) credits. Limited to students admitted to Master's Program in Archaeology.
Students, working individually with faculty member(s), prepare a Master's Thesis in Archaeology.

B. Theory and Interdisciplinary Approaches

203 Early People: The Archaeological and Fossil Record (also Anthropology 203)
Fall. 3 credits.
T R 11:40. T. P. Volman.
A survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of disciplines are highlighted, as are the discoveries, personalities, and controversies that have enlivened the study of human evolution for more than a century. Critical evaluation of evidence and interpretations will be stressed. Demonstrations and films supplement the lectures.

285 Art, Isotopes, and Analysis (also MSE 285, Engineering 185, Physics 200, English 285, and Art 372)
Spring. 3 credits.
J. W. Mayer.
The course will be based primarily on the analysis of paintings and rare books and the physical concepts underlying modern and analytical techniques. Each week a work of art will be described to include the historical and technical aspects of its creation and its modern analysis. Visual, infrared, and x-ray examination provide insight into the physical properties. Pigments are identified by the radiation emitted in electronic geographical origin of a particular pigment as well as by a dating method. The same analytical techniques are also discussed from the viewpoint of archaeological investigations.

308 Dendrochronology of the Aegean (also History of Art 309 and Classics 309)
Fall or spring. 4 credits. Limited to 10 students. Prerequisites: Archaeology 100 or Classics 220, and permission of instructor.
M 12:20 plus 2 labs. P. I. Kuniholm.
Participation in a research project of dating modern and ancient tree-ring samples from the Aegean and Mediterranean. Supervised reading and laboratory work. A possibility exists for summer fieldwork in Greece or Turkey.

[317 Stone Age Archaeology
Fall. 4 credits. Not offered 1990–91.
T. P. Volman.
A survey of current approaches to the archaeological record of Stone Age peoples, from the earliest sites to those of recent times. Case studies are used to illustrate the nature of archaeological occurrences, excavation procedures, and analytical methods. Multidisciplinary efforts to expand our knowledge of prehistoric lifeways and behaviors are a major concern of the course.]

[356 Practical Archaeology (also Classics 356)
Spring. 4 credits. Prerequisite: one course in archaeology. Not offered 1990–91.
J. Coleman.]

[358 Archaeological Research Methods (also Anthropology 358)
Not offered 1990–91.]

402 Archaeological Research Design (also Anthropology 402)
Fall. 4 credits. Prerequisite: permission of instructor.
W 2:30–4:25. J. S. Henderson, T. P. Volman.
Archaeological practice demands careful definition of research objectives and appropriate strategies before excavation or other fieldwork begins. Critical information lies in the arrangement and associations of objects and structures; this context should be a basic concern of any field investigation, particularly when it is destroyed by excavation. The course relies on case studies to illustrate how surveys, excavations, and analytical techniques must be tailored to solving specific problems. A seminar especially recommended for undergraduate majors and graduate archaeologists but open to anyone with a serious interest in archaeology.

[404 Approaches to Archaeology (also Anthropology 404)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
J. S. Henderson, T. P. Volman.
An exploration of the concepts that have shaped modern archaeology. The course briefly examines the history of theoretical orientations in archaeology, then considers the variety of perspectives and interpretive frameworks that guide present-day investigations. Case studies illustrate the implications of the nature of the archaeological record for reconstructing subsistence and economic systems, trade, social and political organization, demography, and ideology. An undergraduate seminar especially recommended for undergraduate majors and graduate archaeologists but open to anyone with a serious interest in archaeology.]

493 Seminar in Archaeology: The Aztecs (also Anthropology 493)
Fall. 4 credits.
R 1:25–3:20. J. S. Henderson.
Examines the Aztec empire as it was at the time of the European conquest of Mexico and examines the astonishingly rapid transformation of Aztec society from foraging bands into imperial city-dwellers. Theoretical emphasis is on integrating historical and archaeological data to reconstruct ancient societies.

494 Seminar in Archaeology: The State (also Anthropology 494)
Spring. 4 credits.
R 2:55–4:50. J. S. Henderson.
Examines the nature of complex societies and the ways that key institutions and organizational features of states and chiefdoms—kingship, chiefs, polity boundaries, economic spheres, markets, redistribution, palaces, stratification, ranking, occupational specialization—are reflected in the archaeological record.

[496 Public Archaeology (also Anthropology 496)
4 credits. Not offered 1990–91.]

Investigations of Andean Institutions: Archaeological Strategy (Anthropology 435)
Fall. 4 credits.
C. Morris.

Hunters, Gatherers, and the Origins of American Agriculture (Anthropology 663)
Spring. 4 credits. Prerequisite: Anthropology 356. Open to qualified undergraduates.
W 12:20–2:15. T. F. Lynch.
The transition from hunting and gathering to agricultural subsistence, with particular attention to demographic, ecological, and coevolutionary factors. Topics to be emphasized are the history of thought on agricultural origins, archaeological evidence bearing on these theories, contrasts and conflicts between Western and non-Western systems, and the effects of agricultural instability and environmental degradation, particularly in the Americas.

Problems in Archaeology: "Early Man" in America (Anthropology 664)
Fall. 4 credits. Prerequisite: Anthropology 354. Open to qualified undergraduates.
W 12:20–2:15. T. F. Lynch.
The peopling of the Western Hemisphere will be considered in historical perspective, as it has been dealt with by archaeologists, geologists, and paleoecologists. Emphasis will be on contextual analysis and environmental adaptations, as well as chronology, with topics drawn from both North and South American archaeology.

Geomorphology (Geological Sciences 441)
Fall. 3 credits. Prerequisites: Geological Sciences 102 or 201, or permission of instructor.
2 Lecs, 1 lab. A. L. Bloom.
Systematic analysis of landforms constructed by tectonic and volcanic processes and their subsequent progressive destruction by climate-controlled erosional processes.

[Glacial and Quaternary Geology (Geological Sciences 442)
Spring. 3 credits. Prerequisite: Geological Sciences 441 or permission of instructor. Offered alternate years. Not offered 1990–91.
A. L. Bloom.]

[Methodology Seminar II (History of Art 595)
Spring. 4 credits. Not offered 1990–91.
R. G. Calkins.]

C. Old World Archaeology

Initiation to Roman Culture: Roman and Anti-Rome (Classics 218)
Spring. 4 credits.
M W F 10:10; plus one hour to be arranged. J. Whitehead, F. Ahl.
In this course two professors, an archaeologist and a literary critic, give an overview of the Roman Empire, and of modern attitudes to it, by discussing selected places, themes, and works of art and literature. We start with visual images, the amphitheater, for example, and consider not only their importance as cultural and artistic statements, but how they come to symbolize in literature and religious controversy the magnificence and decadence of Roman power. Similarly, we examine the poetry and official monuments (Trajan's column and the great triumphal arches). Other topics include Roman attitudes to non-Romans, daily life and domestic art as seen in the ruins of Pompeii and Herculaneum, and the literature and art of political and religious dissent.

221 Minoan-Mycenaean Art and Archaeology (also History of Art 221 and Classics 221)
Fall. 3 credits. Students may not obtain credit for both this course and Classics 319.
M W F 10:10. P. I. Kuniholm.
The birth of civilization in Greece and the Aegean Islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia.

[233 Archaeology in Action II (also Classics 233)
Spring. 3 credits. Prerequisites: Archaeology 100 or Classics 220, and permission of instructor. Not offered 1990–91.
P. I. Kuniholm.]

Greek and Roman Mystery Cults and Early Christianity (Classics 239)
Spring. 3 credits. Prerequisite: Classics 237 or permission of instructor.
K. Clinton.
A study of the controversial question of religious continuity between paganism and early Christianity. After a brief survey of Classical mystery cults and Hellenistic religion, the course will focus on such Hellenistic cults as the mystery cults of Isis, Bacchus, and Attis and the Great Mother and on the distinctive features that contributed to their success. Discussion of Christian liturgy and beliefs both in the East and the West to determine what Christianity owed to its pagan predecessors and to isolate the factors that contributed to its triumph over the "rival" pagan cults of late antiquity.

[250 Etruscan Art and Archaeology (also Classics 250 and History of Art 223)
Fall. 3 credits. Not offered 1990–91.
J. Whitehead.]

[Seminar in Classical Greek Archaeology: Graduate (Classics 630)
Fall. 4 credits. Not offered 1990–91.]

[Ancient Greece from Homer to Alexander the Great (History 265)
Fall. 4 credits. Open to freshmen. Not offered 1990–91.
B. Strauss.]

Ancient Rome from Republic to Holy City (History 268)
Spring. 4 credits.
T R 10:10–11:25. B. Strauss.

Introduction to Art History: The Art of the Classical World (History of Art 220 and Classics 220)
Spring. 3 credits.
M W F 10:10. A. Ramage.
The sculpture, vase painting, and architecture of the ancient Greeks, from the Geometric period through the Hellenistic, and the art of the Romans from the early republic to the late empire.

Introduction to Art History: Monuments of Medieval Art (History of Art 230)
Spring. 3 credits.
M W F 12:20. R. G. Calkins.
An introduction to the approaches to art history through a study of selected works of art from the Middle Ages: architecture, sculpture, painting, manuscript illumination, metal work, and ivory.

Arts of the Roman Empire (Classics 350 and History of Art 322)
Fall. 4 credits. Prerequisite: History of Art 220 or permission of instructor.
T R 10:10–11:25. J. Whitehead.
The visual arts in the service of the first world state. The course starts with the Etruscan and Republican period but concentrates on monuments of the Imperial era in Italy and the provinces until the time of Constantine.

[Greek Vase Painting (History of Art 325 and Classics 325)
Spring. 4 credits. Prerequisite: previous enrollment in a History of Art or Classics course or permission of instructor. Not offered 1990–91.
A. Ramage.]

[Greek and Roman Coins (History of Art 327 and Classics 327)
Fall. 4 credits. Prerequisite: History of Art 220 or permission of instructor. Not offered 1990–91.
A. Ramage.]

[Architecture of the Middle Ages (History of Art 332 and Architecture 382)
Fall. 4 credits. Not offered 1990–91.
R. G. Calkins.]

[Seminar in Greek Sculpture (History of Art 431 and Classics 431)
Not offered 1990–91.]

[432 Sardis and the Cities of Asia Minor (History of Art 432 and Classics 432)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
A. Ramage.]

[Problems in Medieval Art and Architecture (History of Art 531)
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
R. G. Calkins.]

The History and Archaeology of Ancient Israel to 450 B.C.E. (Near Eastern Studies 243)
Spring. 4 credits. Recommended for students planning to participate in Near Eastern Studies 364, Introduction to Field Archaeology in Israel.
T R 11:40–12:55. D. I. Owen.
A detailed survey of the history and archaeology of the land of Canaan from the traditional origins of the Israelite tribes in the early second millennium/middle Bronze Age (ca. 2000 B.C.E.) through the Babylonian exile to the arrival of Ezra and Nehemia (ca. 450 B.C.E.). Lectures on, and discussions of, Biblical and Near Eastern literary sources relating to the history of ancient Israel, as well as an analysis of the archaeological evidence, will form the basis of the course.

[Agriculture and Society in the Ancient Near East (Near Eastern Studies 264)
3 credits. Spring. Not offered 1990–91.
D. I. Owen.]

[267 Mediterranean Archaeology (also Near Eastern Studies 267 and Classics 219)
Fall. 3 credits. Not offered 1990–91.
D. I. Owen.]

[362 History and Archaeology of Ebla (also Near Eastern Studies 362)
Fall. 4 credits. Not offered 1990–91.
D. I. Owen.]

[History and Archaeology of Ancient Egypt (Near Eastern Studies 367)
4 credits. Fall. Not offered 1990–91.
D. I. Owen.]

Fall. 4 credits. Not offered 1990–91.]

D. New World Archaeology

[361 Field Archaeology in South America (also Anthropology 361)
Spring. 10 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged (off campus in Chile). T. F. Lynch.]

The Peopling of America (Anthropology 354)
Fall. 4 credits.
T R 8:40–9:55. T. F. Lynch.
Prehistoric discovery of the New World, beginning with American Indian origins in Asia and ending with the largely unrecorded European medieval contact with North America. Major topics include crossing the Bering land bridge, big-game hunting and extinctions, postglacial adaptations to changing environments, diversified subsistence in the eastern woodlands, agricultural civilizations of the Midwest and Southwest, and Eskimo and Norse exploration and settlement across the Arctic and North Atlantic.

Ancient Mexico and Central America (Anthropology 355)
Spring. 4 credits.
T R 1:25–2:40. J. S. Henderson.
A survey of the cultural history of ancient Mexico and Central America, emphasizing Aztec and Maya civilizations. The use of ethnographic and historical information to enrich archaeological interpretation is a general theme. Specific topics include the emergence of settled farming life, the rise of civilization and the state, and the development of mechanisms that linked the many societies in the region into a single sphere of interaction.

The Archaeology of South America (Anthropology 356)
Spring. 4 credits.
T R 8:40–9:55. T. F. Lynch.
Origins and development of South American peoples, subsistence systems, cultures, and civilizations, with special attention to Peru, Bolivia, Chile, and Ecuador. Major topics include the question of the first inhabitants, domestication of plants and animals, the rise of temple-based religions and great art styles, regional interaction, and the formation of militaristic polities and the Inca state.

[Mesoamerican Religion, Science, and History (Anthropology 456)
Fall. 4 credits. Not offered 1990–91.
J. S. Henderson.]

[Kingship and Culture Identity in Mesoamerica: Interpretive and Comparative Issues (Anthropology 631)
Fall. 4 credits. Not offered 1990–91.
J. S. Henderson.]

[Maya History (Anthropology 656)
Fall. 4 credits. Not offered 1990–91.
J. S. Henderson.]

ASIAN STUDIES

E. M. Gunn, chair and director of undergraduate studies (388 Rockefeller Hall, 255-5095); S. Akiba, B. R. Anderson, J. Badgley, A. Bailey, R. Barker, M. G. Bernal, K. Brazell, T. Chaloemtiarana, M. C. Chou, S. Cochran, R. D. Colle, E. W. Coward, Jr., B. de Bary, G. Diffloth, E. C. Erickson, S. Feldman, G. Fields, J. W. Gair, M. D. Glock, D. Gold, M. Hatch, D. Holmberg, J. Huang, K. K. Huynh, J. Jasanoff, M. Katzenstein, K. A. R. Kennedy, A. T. Kirsch, J. V. Koschmann, L. C. Lee, T. Lyons, D. R. McCann, J. McRae, B. G. MacDougall, K. March, T. L. Mei, G. M. Messing, C. Minkowski, S. Mohanty, V. Nee, S. J. O'Connor, T. J. Pempel, C. A. Peterson, J. R. Piggot, T. Poleman, D. Poston, N. Sakai, P. S. Sangren, C. L. Shih, T. Shiraishi, V. Shue, J. T. Siegel, R. J. Smith, J. M. Swanberg-Law, K. Taylor, N. Uphoff, J. Wheatley, C. White, J. Whitman, J. U. Wolff, D. Wyatt, M. W. Young, A. Yee

The Department of Asian Studies encompasses the geographical areas of East Asia, South Asia, and Southeast Asia and offers courses in most of the disciplines of the social sciences and the humanities. Asian studies courses through the 400 level (AS is the prefix) are taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments; others fulfill the humanities distribution requirement. Courses listed under Asian Studies offered through other departments may fulfill distribution requirements in history, social sciences, and arts.

The Major

The applicant for admission to the major in Asian studies must have completed at least one area studies course selected from among those listed under the Department of Asian Studies and must receive permission for admission to the major from the director of undergraduate studies. The student must have received a minimum grade of C in this course and in all other courses counted toward the major.

A student majoring in Asian studies is required to complete two courses at the 200 level (a minimum of 6 credits with a grade of C or better) in one of the Asian languages offered at Cornell. The major consists of at least 30 additional credits (which may include up to 6 credits of further language study) selected by the student in consultation with his or her adviser from among the courses listed under the Department of Asian Studies and numbered 250 and above. Majors in Asian studies normally specialize in the language and culture of one country and often choose an additional major in a traditional discipline.

Concentration in South Asia Studies

A candidate for the Bachelor of Arts or Science degree at Cornell may take a concentration in South Asia Studies by completing at least 18 credits of course work, including Asian Studies 215 (Introduction to South Asia) and four courses or seminars at the intermediate or advanced levels, two of which may be South Asian language courses.

Students taking a concentration in South Asian studies are considered members of the South Asia Program and will have an adviser from the program faculty. (This adviser will be for the student's concentration and is not a substitute for a student's academic adviser in his or her major.)

One South Asian graduate course may be taken for the concentration with consent of both the instructor and the adviser. The same applies for one South Asia-related research paper on a South Asian subject. Additional courses may be added if offered with comparable South Asia content.

Concentration in Southeast Asia Studies

A candidate for the Bachelor of Arts or Bachelor of Science degree at Cornell may take a concentration in Southeast Asia studies by completing 15 credits of course work, including a history course and three courses or seminars at the intermediate or advanced level, two of which may be Southeast Asian language courses. Students taking a concentration in Southeast Asia studies are members of the Southeast Asia Program and are assigned an adviser from the program faculty. Such students are encouraged to commence work on a Southeast Asian language and to take advantage of summer intensive language training.

Distribution Requirement for Nonmajors

Humanities: any two courses in Asian art, literature, or religion given by the Department of Asian Studies or listed there under the areas of China, Japan, South Asia, and Southeast Asia, excluding only freshman writing seminars and courses given outside the College of Arts and Sciences. A reasonable sequence is formed by taking any two courses in the same area or by taking AS 211, 212, 215, or 218, either using two of these courses as a sequence or by following one with a course in the humanities in that area.

Social Sciences: any two courses in Asian anthropology, economics, government, linguistics, or sociology given by the Department of Asian Studies or listed there under the areas of China, Japan, South Asia, and Southeast Asia, excluding only freshman writing seminars and courses given outside the College of Arts and Sciences. A reasonable sequence is formed by taking any two courses in the same area or by taking AS 211, 212, 215, or 218, followed by a social science course in that area.

History: any two courses in Asian history given by the Department of History and listed under the Department of Asian Studies under the areas of China, Japan, South Asia, and Southeast Asia, excluding only freshman writing seminars and courses given outside the College of Arts and Sciences. A reasonable sequence is formed by taking any two courses in the same area or by taking AS 211, 212, 215, or 218, followed by a history course in that area.

Honors. To be eligible for honors in Asian studies, a student must have a cumulative grade average of A- in all Asian Studies area courses, exclusive of language study only, and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second term of their junior year. The application must include an outline of the proposed project and the endorsement of a faculty adviser. During the first term of the senior year the student does research for the essay in conjunction with an appropriate Asian studies course or Asian Studies 401. Students of China and Japan must also complete Asian Studies 611 or 612, respectively. By the end of the first term the student must present a detailed outline of the honors essay and have it approved by the faculty sponsor and the director of undergraduate studies. The student is then eligible for Asian Studies 402, the honors course, which entails writing the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student's area of concentration.

Intensive Language Program (FALCON)

For those students desiring to accelerate their acquisition of Chinese, Japanese, or Indonesian, Cornell offers a full-time intensive language program, the Full-Year Asian Language Concentration (FALCON). FALCON students spend six hours a day, five days a week, for periods of up to a full year studying only the language and thus are able to complete as many as twelve hundred hours of supervised classroom and laboratory work in one year. For further information, students should contact the FALCON Program Office, Department of Modern Languages and Linguistics, 203 Morrill Hall (telephone: 607/255-6457).

Study Abroad

Cornell is a member of the Inter-University Centers for Chinese Language Study in Taipei and for Japanese Language Study in Yokohama and a member of the Council on International Educational Exchange offering study in China. These centers offer intensive training in both spoken and written forms of the languages. The Kyoto Center for Japanese Studies (KCJS) is an undergraduate program for students who want to spend a year in Japan studying both language and culture.

Cornell is a class-A member of the American Institute of Indian Studies, which offers fellowships in India for intensive language study in Hindi, Bengali, and Tamil. Cornell also offers study abroad opportunities in South Asian studies at the School of Oriental and African Studies at the University of London. For further details, contact the South Asia Program office, 170 Uris Hall (telephone: 607/255-8493).

Other opportunities include a junior year abroad at IKIP-Malang, in Indonesia, or at the School of Oriental and African Studies, University of London. Many other options for study in Asia exist. Undergraduates should consult the Cornell Abroad Program; graduate students should inquire at the East Asia Program, the South Asia Program, or the Southeast Asia Program offices.

Freshman Writing Seminars

103 Revolutions and Social Values in Modern Chinese Literature

Fall. 3 credits.
M W F 1:25–2:15 (sec. 1) or T R 1:25–2:40 (sec 2). E. M. Gunn.

Noting the revolutions, rebellions, civil wars, and foreign incursions that have plagued China over the past century, a scholar of Asian studies once asked, "Is there a 'modern' Chinese literature?" This course is designed to probe into the twentieth-century literary scene, rich in its variety of experience, its power of description, and its intensity of emotion. We will trace themes through the dramatic turns of events and try to ascertain what has remained constant in the modern era as well as what has changed in the literature with the changes in political life. Preference will be given to the study of short fiction, but poetry, novel, and essay are also forms that we will consult as artifacts of revolutions and social values in modern Chinese literature.

[104 Three Ways of Thought
Not offered 1990–91.]

108 Reality Criteria in Contemporary Vietnam

Fall. 3 credits.
T R 10:10–11:25. K. Taylor.

This course will offer participants an opportunity to develop their writing skills while reading and responding to literary texts written by Vietnamese and by Americans that claim to represent something about the reality of modern Vietnam. Students will be encouraged to establish criteria for determining what is "real" and what is not in twentieth-century Vietnam while learning to write focused, analytical prose.

110 Ghosts, Demons, and Evil in Japan
Fall. 3 credits.
T R 8:40–9:55. J. M. (Swanberg) Law.
This course is an exploration of the interrelated Japanese conceptions of the sacred, the supernatural, the dead, the occult, and the problem of evil. Through a reading of "fantastic" literature narrative genres from different periods in Japanese history, we will focus on how the religious traditions in Japan have formulated an understanding of the interrelationship between the worlds of the living and the dead and between the realms of the sacred and human beings. Readings will include Buddhist "moral" narratives, miracle and ghost tales, and modern short stories. We will also see two Japanese films. Students will develop both nonfictional and creative writing skills.

General Education Courses

211 Introduction to Japan
Fall. 3 credits.
M W 11:15; disc, see roster. N. Sakai.
An interdisciplinary introduction to Japanese society and its history especially designed for students not majoring in Asian Studies. The first part of the course focuses on the historical changes in Japanese society from the eighth century down to the nineteenth century; the second part analyzes modern society from a variety of perspectives. It also addresses the question of how Japan is represented in the U.S. mass media. Guest lecturers from five or six different fields offer their opinions on Japanese history, culture, and politics.

212 Introduction to China
Spring. 3 credits (4 credits with a special project; consult instructor for information).
T R 1:25; disc, R 2:30 (3 sections), F 10:10 (2 sections), F 11:15 (2 sections), or F 1:25 (1 section). E. M. Gunn.
An interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian studies.

215 Introduction to South Asian Civilization
Fall. 3 credits (4 credits with a special project; consult instructor for information).
M W F 11:15. C. Minkowski.
An interdisciplinary introduction to the culture and history shared by India and other states of South Asia. Designed for students not majoring in Asian Studies. Guest lecturers will provide the perspective of their disciplines to the general themes of the course: cultural diversity and the role of tradition in contemporary life.

218 Introduction to Korea
Spring. 3 credits. Weekly lecture and discussion meetings. Course enrollment limited to 25.
T R 1:25, sections to be arranged. D. McCann.
A multidisciplinary introduction to Korean history and culture, including language, literature, art, and music. The course begins with an overview of Korean history from the Three Kingdoms Period to the Presidential Election of 1987. The course then focuses on major events in Korean history: The March 1, 1919 Independence Movement, the Korean War, the 1960 Student Revolution, the 1980 Kuangju Massacre, or others. Visiting lecturers will speak about Korea from a variety of disciplinary viewpoints, including linguistics, sociology, anthropology, political science, and law.

Asia—Literature and Religion Courses

The following courses are taught entirely in English and are open to any Cornell student.

250 Introduction to Asian Religions
Fall. 3 credits.
M W 10:10, sections to be arranged. J. McRae.
A survey of the major religious traditions of India, China, and Japan, focusing on Vedic ritual and Brahmanical Hinduism; Indian, Chinese, and Japanese Buddhism; the native Chinese traditions of Confucianism and Taoism; and Shinto, Confucianism, and the new religions in Japan. Emphasis will be on the great traditions of these cultures, with frequent reference to the differing realms of popular religions.

313 The Japanese Film
Spring. 4 credits.
Screenings, M W 4:30; lec, T 2:30; sec F 11:15, 12:20, or 1:25. J. M. (Swanberg) Law.
After an introduction to methods of film analysis, the course presents a sequence of ten films by noted Japanese directors. The aim of the course is twofold: to enhance appreciation of film as an art form and to use the formal analysis of films to yield insights into Japanese society and culture. Particular attention is given to areas in which Japanese film, influenced by traditional arts and aesthetic principles, has resisted Hollywood editing codes.

351 The Religious Traditions of India
Spring. 4 credits.
M W F 3:35–4:25. D. Gold.
A study of the relationships between the main currents of Indian religion. The course will first focus on the Hindu tradition and its holistic worldview within the context of the caste system. It will then describe the rise of Jainism and Theravada and Mahayana Buddhism, as well as Hindu and Buddhist Tantrism, as religious phenomena reflecting the emergence of individualism.

[357 Chinese Religions
Fall. 4 credits. Not offered 1990–91.]

358 Buddhism in China
Fall. 4 credits.
T R 10:10–11:25. J. McRae.
Buddhism was a mature tradition when it came to China, a society of great sophistication and antiquity, and in their remarkable religious and cultural encounter both Buddhism and China were transformed. We will consider Buddhism's introduction and acceptance, the social impact of its monastic system and moral ideals, the literary and artistic contributions of its scriptures and sculpture, the effloressence of its doctrine and various schools, and its role in Chinese history.

359 Japanese Buddhism
Spring. 4 credits.
T R 10:10–11:25. J. M. (Swanberg) Law.
A historical and phenomenological approach to the Japanese religious traditions with an emphasis on a system of interaction, in order to attempt to establish the form of the major forces that have shaped Japanese culture.

373 Twentieth-Century Chinese Literature
Spring. 4 credits.
M W F 2:30. A. Bailey.
A survey of the principal works in English translation, the course introduces fiction, drama, essays, and poetry of China beginning with the Republican era and continuing up to the present in the People's Republic and Taiwan, with attention to social and political issues and literary theory.

374 Chinese Narrative Literature
Fall. 4 credits.
T R 1:25–2:40. A. Bailey.
Selected works in classical Chinese fiction are read in translation. Major novels, such as *The Dream of the Red Chamber* and *Water Margin*, are emphasized.

375 Japanese Poetry and Poetic Prose
Spring. 4 credits. Alternates with Asian Studies 377.
M W 2:30–4. K. Brazell.
An introduction (in English translation) to the great poets of premodern Japan. This course will cover court poetry, linked verse, haiku, poetic memoirs, travel diaries, and poem tales written between the eighth and eighteenth centuries.

[376 Modern Japanese Literature: From Meiji through the Pacific War
Fall. 4 credits. Not offered 1990–91.
B. de Bary.]

[377 Japanese Narrative Literature
Spring. 4 credits. Not offered 1990–91.]

378 The Postwar and the Postmodern in Japanese Literature
Fall. 4 credits. Alternates with Asian Studies 375.
T R 10:10–11:25. B. de Bary.
The course will examine narrative, poetry, and drama produced in Japan from 1945 to the present, with special attention to the transition from "postwar" to "postmodernity" as organizing categories of literary discourse. Topics will include the early postwar debate on subjectivity and the I-novel, the writers of Hiroshima and Nagasaki, the critique of "the modern" in avant-garde movements such as the Red and Black Tent theaters, popular literature (cartoons, "light" literature) and the emergence of Japan as a high-level consumer society in the 1980s, literature and sexual politics, and science fiction as cultural criticism.

380 Vietnamese Literature in Translation
Spring. 4 credits.
T R 10:10–11:25. K. Taylor.
This is a survey of Vietnamese literature in translation from the tenth century to the present. Attention will be given to different ways of reading this literature. Format will be primarily readings and discussion with some lecture-style presentations.

385 Cultural History of Viet Nam
Fall. 4 credits.
T R 2:55–4:10. K. Taylor.
This course will focus on the cultural and intellectual history of Viet Nam and its relationship to economy and society, government and politics, diplomacy and warfare, literature and religion/ideology from prehistoric times to the present. Both the traditional cultural heritage and the contemporary twentieth-century experience will be given serious attention. This course will fulfill a humanities distribution requirement.

[388 Asian-American Literature
Spring. 3 credits. Not offered 1990–91.]

[390 Comparative Sanskrit Myth and Epic (also Classics 390)
Spring. 4 credits. Not offered 1990–91.]

391 Classical Indian Narrative (also Classics 391)
Spring. 4 credits.
T R 1:25. C. Minkowski.
Readings in translation from the principal story literature of ancient India. Sources will include the Vedas, the Jatakas, the Sanskrit epics, the Kathasaritsagara, the Pancatantra and related collections. Attention will be given to comparisons with early Greek narrative and to the diffusion of Indic narrative through the world's literatures.

393 Images of Humanity in Medieval China (also History 393)
Fall. 4 credits.
M 2:30–3:20, W 2:30–4:25. C. Peterson and J. McRae.
The middle period in China's history, essentially the T'ang and Sung dynasties, feature some of the highest achievements of Chinese civilization. These centuries (the seventh through the thirteenth) are distinguished by the exceptionally high levels of literature, art, religious and secular thought, and proto-scientific development, as well as by fundamental changes in state, society, and the economy. This seminar will explore the China of this age by examining the lives of several representative figures—a politician, a poet, a Buddhist monk, a Taoist priest, an emperor, an empress, a "detective," and others. The aim will be to reconstruct the inner and outer worlds of men and women perhaps not so far removed from ourselves in their basic motivations and daily concerns.

[400 The Japanese Noh Theater and Modern Dramatists (also Comparative Literature 400)
4 credits. Fall. Not offered 1990–91.
K. Brazell.]

410 Chinese Performing Arts
Fall. 4 credits.
Hours to be arranged. E. M. Gunn.
The course will survey drama, music theater, and film in twentieth-century China. Some material will require knowledge of Chinese.

421 Religious Reflections on the Human Body
Fall. 4 credits.
T R 1:25–2:40. J. M. (Swanberg) Law.
One undeniable and inescapable fact of human life is that it is experienced in a body. How this fact is understood to define the parameters of religious experience and expression will be the topic of this course. While the format will be comparative, the majority of cases will be drawn from East Asian, primarily Japanese, sources. We will explore how such aspects of the human body as ecstasy, gender, sexual passion, illness, the dialectic of the physical and the spiritual, and corporeal ascetic discipline reveal models of religious reflection on this fact of human experience. Further, we will study how these models become represented in visual art, narrative, and ritual practice.

[440 Meditation Schools of East Asian Buddhism
Spring. Not offered 1990–91.
J. McRae.]

[454 Women, Revolution, and Socialism (also Women's Studies 454)
Spring. 4 credits. Not offered 1990–91.
C. White.]

[460 Indian Meditation Texts
Spring. 4 credits. Not offered 1990–91.
D. Gold.]

496 Tokugawa Literature and Thought
Fall. 4 credits.
N. Sakai.
An introduction (in English translation) to literary, theatrical, and intellectual works of the Tokugawa period (1600–1868). We will examine the characteristics of early Tokugawa literary and theatrical works and see how different they are from the literary works of the later Tokugawa period. We will also read the philosophical and philological works on the classics by writers such as Ogyu Sorai and Motoori Norinaga to understand the ways contemporary Japanese intellectuals understood cultural activities and literature during the Tokugawa period.

Note: For complete descriptions of courses numbered 600 or above, consult the graduate faculty representative.

601 Southeast Asia Seminar: Burma
Fall. 4 credits.
W 3–5. Staff.

602 Southeast Asia Seminar: Philippines
Spring. 4 credits.
Hours to be arranged. B. R. Anderson.

[604 Southeast Asia Seminar
Not offered 1990–91.]

[607–608 The Plural Society Revisited (also Government 653)
Fall. 4 credits. 607 may be taken independently for credit; 607 is a prerequisite for 608. Not offered 1990–91.]

611 Chinese Bibliography and Methodology
Spring. 1 credit. Prerequisite: permission of instructor. Required of honors students and M.A. candidates.
F 1:25. M. C. Chou.

612 Japanese Bibliography and Methodology
Spring. 1 credit. Prerequisite: permission of instructor. Required of honors students and M.A. candidates.
F 2:30. S. Akiba.

[621 South Asia Seminar
Fall. Not offered 1990–91.]

[622 Seminar on South Asia: State Policy and State Practice: Views of the Subcontinent.
Spring. Not offered 1990–91.]

[650 Seminar on Asian Religions
2–4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Fall, J. M. (Swanberg) Law; spring, J. McRae.]

676 Southeast Asia Research Training Seminar
Contact the Southeast Asia Program, 120 Uris Hall, 255-2378, for more information.

701–702 Seminar in East Asian Literature
701, fall; 702, spring. 1–4 credits.
Hours to be arranged. Staff.

703–704 Directed Research
For additional courses on Asian religion, see "Related Courses" in the China and Japan area courses listing.

Asia—General Courses

401 Asian Studies Honors Course
Fall. 4 credits. Intended for seniors who have been admitted to the honors program.
Staff.
Supervised reading and research on the problem selected for honors work.

402 Asian Studies Honors: Senior Essay
Fall or spring. 4 credits. Prerequisite: admission to the honors program.
The student, under faculty direction, prepares an honors essay.

403–404 Asian Studies Supervised Reading
Fall, spring, or both. Credit to be arranged. Prerequisite: permission of instructor. Open to majors and other qualified students. Intensive reading under the direction of a member of the staff.

703–704 Directed Research
703, fall or spring; 704, fall or spring. Credit to be arranged.
Staff.

Literature in Chinese

213–214 Introduction to Classical Chinese
213, fall; 214, spring. 3 credits each term. Prerequisite: qualification in Chinese or permission of instructor. May be taken concurrently with Chinese 101–102, 201–202, 301–302.
M W F 12:20. Tsu-Lin Mei, fall.

314 Classical Narrative Texts
Spring. 4 credits. Prerequisite: Chinese 214.
A. Bailey.

420 T'ang and Sung Poetry
Fall. 4 credits. Prerequisite: permission of instructor.
Hours to be arranged. T. L. Mei.
Readings in the original Chinese, together with secondary works by Chinese and Western critics.

421–422 Directed Study
Fall or spring. 2–4 credits each term. Prerequisite: permission of instructor.
Staff.

[424 Readings in Literary Criticism
Fall or spring. 4 credits. Prerequisite: permission of instructor.
Not offered 1990–91.]

[427 Approaches to Jin ping mei
Fall. 4 credits. Not offered 1990–91.
A. Yee.]

[428 Approaches to Hung lou meng
Spring. 4 credits. Not offered 1990–91.
A. Yee.]

435 Chinese Buddhist Texts
Spring. 4 credits.
W 2:30–4:30. J. McRae.
Open to students with background in either Chinese or Japanese, this course will focus on the terminology, syntax, and religious doctrines of Buddhist texts in classical Chinese.

Note: For complete descriptions of courses numbered 600 or above, consult the appropriate instructor.

[603 Seminar in Chinese Fiction and Drama
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.]

[605 Seminar in Chinese Fiction and Drama
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
E. M. Gunn.]

[609 Seminar in Chinese Folk Literature
Fall or spring, according to demand. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Staff.]

[610 Chinese Cultural Criticism
Fall. 4 credits. Not offered 1990–91.
E. M. Gunn.]

621–622 Advanced Directed Reading: Chinese Historical Syntax
Spring. 2–4 credits. Prerequisite: permission of instructor.
T. L. Mei.

Literature in Japanese

406 Introduction to Classical Japanese
Fall. 4 credits. Prerequisite: permission of instructor.
Hours to be arranged. K. Brazell.

421–422 Directed Readings
421, fall; 422, spring; credits to be arranged. Prerequisite: for Japanese 421, Japanese 402 or equivalent; for Japanese 422, Japanese 421 or equivalent.
Hours to be arranged. Staff.
Note: For complete descriptions of courses numbered 600 or above, consult the appropriate instructor.

[611 Seminar in Classical Japanese Literature
Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1990–91.
K. Brazell.]

[612 Seminar in Medieval Japanese Literature
Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1990–91.
K. Brazell.]

613 Seminar in Tokugawa Culture and Thought: Otherness, Text, and Body
Spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years.
N. Sakai.
The seminar will examine the cultural and intellectual transformations that took place during the Tokugawa period (1600–1868). The historical materials of the period will be read in such a way as to disclose the inseparable links between ideology, cultural formation, and politics. Topics to be discussed include the transformation of Confucian discourse in the late seventeenth and early eighteenth century, the emergence of extensive language studies in the eighteenth century, changes in the modes of literary production, the articulation of cultural identity in historicist discourse, and the politicality of the poetics. Instead of seeking to trace the genealogy of ideas and the network of influences, we will try to find the conditions and rules according to which certain objects of knowing such as the notion of habit or linguistic community were constituted and how the formation of new knowledge opened up a different set of political strategies.

614 Seminar in Modern Japanese Literature
Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years.
N. Sakai.
Time and time again, one encounters the theme of death in modern Japanese literature. The course will examine literary discourse in which death as an aesthetic phenomenon is presented or discussed in relation to the Emperor system and the modern nation state. We will analyze the relationships among the modern idea of literature, the aestheticization of national community and the identification with the community through death. Readings will include critical essays by Rene Girard, Kobayashi Hideo, Phillippe Lacoue-Labarthe, Yasuda Yojuro, Jean-Luc Nancy, and Jacques Derrida as well as novelistic works by Natsume Soseki, Oe Kenzaburo, Kojuma Nobuo, John Okada, and Mishima Yukio.

621 Advanced Readings in Pre-Modern Japanese Narrative Literature
Fall or spring. 4 credits. Prerequisite: permission of instructor. Offered alternate years.
K. Brazell.

Graduate-Level Reading Courses

622 Advanced Readings in Pre-Modern Japanese Poetry
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Offered alternate years.
K. Brazell.

623 Advanced Readings in Pre-Modern Drama
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Offered alternate years.
K. Brazell.

624 Advanced Readings in Modern Literature
Fall. 4 credits. Prerequisite: permission of instructor. Offered alternate years.
T 10:30–12. B. de Bary.

Literature in Sanskrit

Sanskrit 251, see DMLL.

[467–468 Reading in Sanskrit Literature: The Vedas
Fall. 3 credits. Not offered 1990–91.
C. Minkowski.
Readings in translation; readings in the original Vedic. Both courses must be taken as a sequence: 467, fall; 468, spring.]

Literature in Vietnamese

470 Vietnamese Literature: Cultural and Intellectual History
T R 2:55–4:10. K. Taylor.
A study of texts, in Vietnamese translation from the original Chinese, related to Ly-Tran civilization (eleventh–fourteenth centuries): compilations of tales (Viet dien u linh tap and Linh nam chich quai), annals (Viet su luoc and Dai Viet su ky toan thu) and encyclopedia (An Nam chi Luoc), and poems and inscriptions compiled in Tho van Ly-Tran. This course will entail discussion of Vietnamese Taoism, Vietnamese Buddhism, Vietnamese Confucianism, and intellectual and literary developments related to Sino-Vietnamese relations, dynastic institutionalization, and cultural formation.

Advanced Vietnamese (Vietnamese 301–302)

Directed Individual Study (Vietnamese 401–402)

ASTRONOMY

Y. Terzian, chair (512 Space Sciences Building, 255-4935); M. P. Haynes, director of undergraduate studies (530 Space Sciences Building 255-0610); S. V. W. Beckwith, J. A. Burns, D. B. Campbell, D. F. Chernoff, J. M. Cordes, M. M. Davis, P. J. Gierasch, R. Giovanelli, T. Hagfors, T. L. Herter, J. R. Houck, P. D. Nicholson, C. E. Sagan, E. E. Salpeter, S. L. Shapiro, S. W. Squyres, S. A. Teukolsky, J. F. Veverka, I. M. Wasserman. Emeritus T. Gold, M. O. Harwit

Cornell's astronomy faculty, research staff, and graduate students are active in diverse areas of modern astronomy ranging from theoretical astrophysics and general relativity to radio and radar astronomy, infrared and optical astronomy, and the exploration of the solar system. Cornell operates two local optical observatories, the world's largest radio telescope at Arecibo, Puerto Rico, and with two other institutions, the 200-inch optical telescope at Mt. Palomar in California.

The department offers a number of courses to satisfy a general interest in astronomy. These courses have few or no prerequisites and are not intended for the training of professional astronomers. The 100-level courses are designed primarily for nonscience majors. The alternative introductory sequence Astronomy 211–212 is geared toward sophomore physical science and engineering majors and requires coregistration in beginning calculus. Astronomy 332 is designed for nonmajors as an introduction to astrophysics and requires at least one year of calculus and college physics as prerequisites. The other courses numbered below 400 have no college prerequisites at all.

Courses numbered above 400 are intended for students who have had two to three years of college physics and at least two years of college mathematics. Astronomy 440, Independent Study, permits students to engage in individual research projects under the guidance of a faculty member.

Interested students are encouraged to become members of the undergraduate Cornell Astronomy Club. The club has access to the Fuertes Observatory on campus and conducts regular observing and astrophotography sessions. All students are invited to visit the Space Sciences Building, see the exhibits on display there, and consult a faculty member about career plans or choice of courses.

The Major

The purpose of the major in astronomy is to provide in-depth knowledge and education about the nature of the universe. Similar to other disciplines in the sciences, astronomy relies heavily on preparation in physics and mathematics. Consequently, many courses in these fields are included as prerequisites. In preparation for the major, a student would normally elect the introductory physics sequence Physics 112–213–214 or 116–217–218 plus Physics 315 and 318 and the complementary pathway in mathematics, Mathematics 111–122–221–222 or 191–192–293–294 (or equivalent). The sophomore seminar Astronomy 233 "Topics in Astronomy and Astrophysics" will provide an introduction to current research in astronomy and astrophysics for prospective majors, but is not required of students who elect to major in astronomy after the sophomore year. Students are also urged to acquire computer literacy. Acceptance to the major will first be considered after completion of three semesters of introductory physics and mathematics and in general will require a GPA of 3.20 in physics and mathematics courses.

The major requirements stress the importance of building a strong preparation in physical science. The following upper level courses are normally required:

Physics 324, 326, 341, and 443
Mathematics 421 and 422 (or equivalent)
Astronomy 410, 431, and 432.

Students are encouraged to supplement the above courses with any astronomy, physics, or other appropriate courses at or above the 400 level. Advanced seniors can enroll in astronomy graduate courses with the consent of the instructor. Students are also encouraged to work with faculty members on independent study projects (Astronomy 440).

Honors. A student may be granted honors in astronomy upon the recommendation of the Astronomy Advisers Committee of the astronomy faculty.

Double majors. A double major in astronomy and another subject is possible in many circumstances. However, the set of courses used to fulfill the requirements for each major must be completely independent.

Concentration. Students majoring in other fields but interested in astronomy are encouraged to supplement their major with a concentration in astronomy, an option that is somewhat less intensive than a major. Normally Astronomy 431 and 432 are required for a concentration.

Distribution Requirement

The distribution requirement in physical sciences is met by A101 or A211, plus A102 or A212; or A102 or A212, plus A332. A103 and A104, identical to A101–102 except for the omission of the laboratories, cannot be used to satisfy the distribution requirement for students in the College of Arts and Sciences.

Courses

101 The Nature of the Universe
Fall. 4 credits. No prerequisites. Labs and discussions limited to 20 students each.
Lecs, M W F 11:15; labs, every other week: M T or W 2:30–5 or M T W or R 7:30–10 p.m.; disc, one hour every week: M or W 1:25, 2:30, 3:35, or 7:30 p.m., or T or R 2:30, 3:35, or 7:30 p.m. Y. Terzian; labs, P. D. Nicholson.
The physical nature of existence. An examination of the universe and our place in it and the possible existence of life and intelligence elsewhere in the cosmos. The nature of stars, galaxies, and quasi-stellar sources. The birth, evolution, and death of stars and the formation of the chemical elements, including discussions of supernovae, pulsars, neutron stars, and black holes. The physical state and composition of the interstellar material and its influence on the evolution of our galaxy. An introduction to the special and general theories of relativity. The nature of time. Modern theories of cosmology and the structure and evolution of the universe.

102 Our Solar System
Spring. 4 credits. No prerequisites. Limited to 330 students (combined total with Astronomy 104: 430 students). Labs and discussions limited to 20 students each.
Lecs, M W F 11:15; labs every other week: M T or W 2:30–5 or M T W or R 7:30–10 p.m.; disc, one hour every week: M or W 1:25, 2:30, 3:35, or 7:30 p.m. or T or R 2:30, 3:35, or 7:30 p.m. J. F. Veverka; labs, P. D. Nicholson.
The evolution of our understanding of the formation and structure of the solar system will be discussed. Modern theories of the solar system will be compared with the results of the space program. The chemical basis of life and current ideas about the spontaneous appearance of life will be considered along with searches for life beyond the earth, both inside and outside the solar system.

103 The Nature of the Universe
Fall. 3 credits.
Identical to Astronomy 101 except for omission of the laboratory (see description above). This course does not satisfy the distribution requirement in physical sciences for students in the College of Arts and Sciences.

104 Our Solar System
Spring. 3 credits. Limited to 100 students (combined total with Astronomy 102: 430 students).
Identical to Astronomy 102 except for omission of the laboratory (see description above). This course does not satisfy the distribution requirement in physical sciences for students in the College of Arts and Sciences.

105 An Introduction to the Universe
Summer. 3 credits.
M–F 11:30–12:45; evening labs to be arranged. Staff.
How do we measure the size of our galaxy and the size of the universe? Is the universe round or flat? How are the stars born, why do they shine, and how do they die? What are the chemical elements, and how were they formed in stars? What are quasars, pulsars, and black holes? How was the solar system formed? What are the environments of other planets like? What is the basic structure of Earth and the other planets? Will man catastrophically alter the earth? Does life exist elsewhere in the universe? How can we find out? Each student has an opportunity to make observations with small telescopes.

106 Essential Ideas in Relativity and Cosmology
Summer. 3 credits. Prerequisites: high school algebra and trigonometry.
M–F 10–11:15. Staff.
Einstein's theories of special and general relativity, which brought about a fundamental change in our conceptual understanding of space and time, will be studied. Correspondence to, and conflicts with, common sense will be pointed out. Applications to various areas will be studied: in special relativity—space travel, equivalence of mass and energy, nuclear fission and fusion, and thermonuclear processes in the sun; in general relativity—motion of light and particles in curved space-time, cosmological models, and the question of whether the universe is open or closed.

107 Freshman Writing Seminar: The Universe of Modern Science
Fall and spring. 3 credits. Limited to 17 students. Students may enroll by Freshman Writing Seminar ballot only.
T R 1:25–2:40. C. Hovis.
Focusing on the development of the current scientific picture of the evolution of the universe, this course will survey the foundations and history of modern cosmology and elementary-particle physics. By preparing comparative, critical, and expository essays related to assigned readings from the works of scientists, historians, and philosophers, students will learn to write clearly and accurately about modern science, to identify problems and gaps existing in its views, and to think critically about how and why the constituent theories of our contemporary picture of cosmic evolution have emerged as the best explanations available in light of the evidence.

201 Our Home in the Universe
Spring. 3 credits. Prerequisite: some background in science.
T R 2:55–4:10. C. Sagan.
A comparison of the Earth with the other worlds of our solar system, with an emphasis on the nature and fragility of planetary environments. Topics to be discussed include the origin and evolution of life, species extinctions, the history of climate change, evolution of the atmosphere of the Earth and other planets, ecology and biological interdependence, and threats to the current global environment—including ozone layer depletion, greenhouse warming, and nuclear winter. Possible solutions to these problems, including their economic and social costs and their ethical implications, will be considered. The course will attempt to develop skills in writing and in elementary physics and chemistry.

211 Astronomy: Stars, Galaxies, and Cosmology
Spring. 4 credits. Intended for engineering and physical sciences freshmen. Prerequisite: introductory calculus or coregistration in Mathematics 111 or 191.
Lecs, M W F 10:10; rec, one hour each week to be arranged; plus some evening observing periods. I. Wasserman.
The formation and evolution of stars. Supernovae, pulsars, quasars, and black holes. The interstellar medium. The structure and evolution of galaxies. Cosmology.

212 The Solar System: Planets, Satellites, and Rings
Fall. 4 credits. Intended for engineering and physical sciences freshmen. Prerequisite: introductory calculus or coregistration in Mathematics 111 or 191.
Lecs, M W F 11:15; rec, one hour each week to be arranged; possible evening observing labs to be arranged. S. Squyres.
The origin of the solar system; celestial mechanics; tidal evolution; the physics and chemistry of planetary surfaces, atmospheres, and satellites; interiors; planetary rings; asteroids, comets, and meteorites; the search for other planetary systems.

233 Topics in Astronomy and Astrophysics
Fall. 2 credits. Prerequisites: Physics 112 and 213, Mathematics 112 and 221, or permission of instructor.
T R 1:25–2:15. M. Haynes.
A seminar course on advanced topics in astronomy and astrophysics designed for prospective astronomy majors. Content will vary from year to year, but will include topics from the fields of planetary, galactic, and extragalactic research.

[321 Life in the Universe
Spring. 4 credits. Not offered 1990–91.]

332 Elements of Astrophysics
Spring. 4 credits. Prerequisites: calculus and Physics 213. Physics 214 strongly recommended.
Lec M W F 11:15. P. Nicholson, J. Burns.
An introduction to astronomy, with emphasis on the application of physics to the study of the universe. Physical laws of radiation. Distance, size, mass, and age of stars, galaxies, and the universe; stellar evolution and nucleosynthesis. Supernovae, pulsars, and black holes. Galaxies and quasars. Introduction to cosmology. Intended for students interested in astronomy, physics, and engineering.

410 Experimental Astronomy
Fall. 4 credits. Prerequisites: Physics 214 (or 310 or 360), Physics 325 (or co-registration) or permission of instructor. Limited to 10 students.
Hours to be arranged. S. Beckwith, J. Cordes, T. Herter.
Topics in experimental concepts in astrophysics. Major experiments will involve techniques in telescope operation, astronomical photography, CCD (charge-coupled-device) imaging,

optical photometry, optical spectroscopy, and radio astronomy. Most of the experiments involve use of the 24-inch Hartung-Boothroyd Observatory. The radio astronomy experiments employ a radio telescope mounted on top of the Space Sciences Building. The laboratory covers the fundamentals of using astronomical instrumentation and performing data analysis applied to celestial phenomena, such as normal stars, neutron stars, and planetary nebulae.

431 Introduction to Astrophysics and Space Sciences I
Fall. 4 credits. Prerequisites: mathematics above the 200 level and physics above the 300 level; concurrent registration in Physics 341 and 443 is helpful.
T R 10:10–11:25. P. Gierasch.
A systematic development of modern astrophysical concepts for physical science majors. Atomic and electromagnetic processes in space. Introduction to star formation, stellar structure, stellar atmospheres, and the interstellar medium. At the level of Astrophysical Concepts, by Harwit.

432 Introduction to Astrophysics and Space Sciences II
Spring. 4 credits. Prerequisite: Astronomy 431 or permission of instructor.
M W F 10:10. D. Chernoff.
Astrophysics is discussed in the context of cosmology. Cosmological subjects covered include the expansion of the universe, metrics, Friedmann equations, dark matter, cosmological tests, the early universe, formation of galaxies, and cosmological production of the elements. Astrophysical subjects drawn on include special relativity, radiative transfer, electromagnetism, quantum mechanics, gravitational physics, and nuclear physics. At the level of *Astrophysical Concepts*, by Harwit.

[433 The Sun
Fall. 4 credits. Not offered 1990–91.]

[434 The Evolution of Planets
Fall. 4 credits. Not offered 1990–91.]

440 Independent Study in Astronomy
Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Recommended: familiarity with the topics covered in Astronomy 332, 431, or 434.
Hours to be arranged. Staff.
Individuals work on selected topics. A program of study is devised by the student and instructor. Students need to fill out an independent study form, have it signed by the instructor, and register in the department office, 510 Space Sciences Building.

[490 Senior Seminar—Critical Thinking
Spring. 3 credits. Not offered 1990–91.]

509 General Relativity (also Physics 553)
Fall. 4 credits. Prerequisite: knowledge of special relativity at the level of, for example, *Classical Mechanics*, by Goldstein.
T R 1:25–2:40. S. L. Shapiro.
A systematic introduction to Einstein's theory, with emphasis on modern coordinate-free methods of computation. Topics include review of special relativity, modern differential geometry, foundations of general relativity, laws of physics in the presence of a gravitational field, and experimental tests of gravitational theories. At the level of *Gravitation*, by Misner, Thorne, and Wheeler.

510 Applications of General Relativity (also Physics 544)
Spring. 4 credits. Prerequisite: Astronomy 509.
T R 1:25–2:40. S. L. Shapiro.
A continuation of Astronomy 509 with emphasis on applications to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves, and cosmology.

[511 Physics of Black Holes, White Dwarfs, and Neutron Stars (also Physics 525)
Fall. 4 credits. Not offered 1990–91.]

516 Galactic Structure and Stellar Dynamics
Fall. 4 credits.
W R 10:10–11:25. D. Chernoff, I. Wasserman.
The kinematics and distribution of stars in the solar neighborhood. The dynamical structure, composition, and evolution of our galaxy. Characteristics and classifications of galaxies, galaxy groups, globular clusters, and clusters of galaxies. Theory of N-body systems, stellar encounters, collisional and violent relaxation, and stellar evaporation rates. Dynamical evolution of star clusters and associations. Theory of spiral structure. Binary and rotating star systems.

[520 Radio Astronomy
Fall. 4 credits. Not offered 1990–91.]

[521 Radio Astrophysics
Spring. 4 credits. Not offered 1990–91.]

523 Signal Processing and Data Analysis in Astronomy
Fall. 4 credits. Prerequisites: mathematical background equivalent to undergraduate physical science curriculum and familiarity with FORTRAN programming.
M W 1:25–2:40. J. Cordes.
Topics will include Fourier analysis of discrete and continuous time series, spectral analysis, parameter estimation, probability theory, and stochastic processes image formation from coherence functions. The orientation will be toward applications in observational astronomy and astrophysics. Discussion of applications such as interferometry, image processing, scintillation theory, planetary radar, and pulsar studies. Course work will include application on the IBM 370.

525 Techniques of Optical and Infrared Astronomy
Fall. 4 credits.
M W F 9:05–9:55. T. L. Herter.
Optical and infrared telescopes, their auxiliary instrumentation; solid state panoramic detectors; observing procedures and data analysis will be presented. The techniques of UV and X-ray astronomy will be discussed. Intended for students with a thorough understanding of undergraduate physics.

526 Infrared and Optical Astrophysics
Spring. 4 credits.
Hours to be arranged. S. Beckwith.
Most of the course will be devoted to results and interpretation of recent observations, including the findings of the Infrared Astronomical Satellite. Modern techniques and their limitations will be briefly discussed.

[555 Theory of the Interstellar Medium (also Physics 665)
Spring. 4 credits. Not offered 1990–91.]

[560 Theory of Stellar Structure and Evolution (also Physics 667)
Fall. 4 credits. Not offered 1990–91.]

[570 Physics of the Planets
Spring. 4 credits. Not offered 1990–91.]

571 Mechanics of the Solar System (also Theoretical and Applied Mechanics 673)
Spring. 3 credits. Prerequisite: an undergraduate course in dynamics.
Hours to be arranged. J. Burns, P. D. Nicholson.
Gravitational potentials, planetary gravity fields. Free and forced rotations. Chandler wobble, polar wander, damping of nutation. Equilibrium tidal theory, tidal heating. Orbital evolution of natural satellites, resonances, spin-orbit coupling. Cassini states. Long-term variations in planetary orbits. Dust dynamics. Dynamics of ring systems. Physics of interiors, seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.

[575 Atmospheric and Ionospheric Physics (also Electrical Engineering 585)
Fall. 3 credits. Not offered 1990–91.]

[576 Solar Terrestrial Physics (also Electrical Engineering 586)
Spring. 3 credits. Not offered 1990–91.]

[579 Celestial Mechanics (also Theoretical and Applied Mechanics 673)
Spring. 3 credits. Not offered 1990–91.]

590 Galaxies and the Universe
Spring. 4 credits.
Hours to be arranged. M. P. Haynes.
The universe, its constituents, its large-scale structure, and its history in the light of the major thrusts of extragalactic research. The morphology, photometry, dynamics, and kinematics of galaxies and their subsystems. Determination of masses, mass-to-light ratios, and the "missing mass." Activity in Seyferts, radio galaxies, and quasars. Binaries, groups, clusters, and superclusters. The extragalactic distance scale. Galaxy formation and evolution. Confrontation of cosmological theories with observational results.

[599 Cosmology
Fall. 4 credits. Not offered 1990–91.]

[620 Seminar: Advanced Radio Astronomy
Fall. 2 credits. Not offered 1990–91.]

[621 Seminar: Planetary Radar Astronomy
Spring. 3 credits. Not offered 1990–91.]

640 Advanced Study and Research
Fall or spring. Credit to be arranged.
Hours to be arranged. Staff.
Guided reading and seminars on topics not currently covered in regular courses. Students need to register in the department office, 510 Space Sciences Building.

[660 Cosmic Electrodynamics (also Applied and Engineering Physics 608)
Spring. 2 credits. Not offered 1990–91.]

671 Seminar: The Planet Venus
Spring. 3 credits. Prerequisite: permission of instructors.
Hours to be arranged. D. Campbell, S. Squyres.
Course will review our current understanding of the plant with emphasis on the planet's surface and any information that can be derived about its interior. Results from the Magellan radar mapper mission to the planet will be discussed.

[673 Seminar: Planetary Atmospheres
Fall. 2 credits. Not offered 1990–91.]

[680 Seminar: Cosmic Rays and High-Energy Electromagnetic Radiation
Spring. 2 credits. Not offered 1990–91.]

[690 Seminar: Computational Astrophysics (also Physics 681)
Spring. 3 credits. Prerequisites: working knowledge of FORTRAN. Only those students who have completed the fundamental graduate physics courses should consider attending. Not offered 1990–91.]

699 Seminar: Solid State Astrophysics (also Physics 681)
Fall. 2 credits.
Hours to be arranged. E. Salpeter.
An informal seminar, meeting once a week, for advanced graduate students in astronomy or physics. Topics: Physics of Interstellar Dust Grains; Equations of State at High Density.

BIOLOGICAL SCIENCES

P. J. Bruns, director (169 Biotechnology Building, 255-5042); H. T. Stinson, associate director and director of undergraduate studies (200 Stimson Hall, 255-5233); R. M. Sparrow, Biology Center coordinator (Biology Center, 216–222 Stimson Hall, 255-3358); M. L. Cox, executive staff assistant (200 Stimson Hall, 255-6859)

Biology is a popular subject at many universities for a variety of reasons: It is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine and environmental sciences; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The program of study in biology at Cornell is offered by the Division of Biological Sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services in the division's office for academic affairs and the Behrman Biology Center are available to students from either college.

The biology major is designed to enable students to acquire necessary scientific foundations, to study in a specific area of biology, and to obtain breadth by studying different aspects of modern biology. Programs of study include animal physiology and anatomy; biochemistry; botany; cell biology; ecology, systematics, and evolution; general biology; genetics and development; microbiology; and neurobiology and behavior. A special program of study is available for qualified students with an interest in nutrition. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Stimson Hall, 255-3717) for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on the Division of Biological Sciences.

BURMESE AND CEBUANO (BISAYAN).

See Modern Languages and Linguistics.

CHEMISTRY

J. C. Clardy, chair and director of undergraduate studies (124 Baker Laboratory, 255-4174); H. D. Abruna, A. C. Albrecht, B. A. Baird, T. P. Begley, J. M. Burlitch, B. K. Carpenter, D. B. Collum, F. J. DiSalvo, G. S. Ezra, R. C. Fay, J. M. J. Frechet, J. H. Freed, B. Ganem, R. Hoffmann, P. L. Houston, A. Kuki, R. Loring, F. W. McLafferty, J. E. McMurry, J. Meinwald, G. H. Morrison, L. A. Philips, R. F. Porter, H. A. Scheraga, D. A. Usher, B. Widom, J. R. Wiesenfeld, C. F. Wilcox, P. T. Wolczanski, D. B. Zax

The chemistry department offers a full range of courses in physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry. In addition to their teaching interests, chemistry faculty members have active research programs. The link between teaching and research is a vital one in a continuously evolving scientific subject; it ensures that students will be provided with the most advanced information and perspectives, and affords opportunities for students to participate in research.

The Major

The chemistry major at Cornell provides a great deal of flexibility and prepares students for a large variety of career options. In recent years, chemistry majors have gone on to graduate study in chemistry, medicine, law, and business management, as well as directly into positions with chemical, pharmaceutical, and other industrial companies. A major in chemistry can also provide the basis for significant work in related areas such as molecular biology, chemical physics, geochemistry, chemical engineering, materials science, solid state physics, and secondary education. The required courses for the major can be completed in three years, leaving the senior year open for advanced and independent work under the supervision of a professor.

The courses are arranged as a progression, with some (including mathematics and physics) prerequisite to those that are more advanced. During the first year, a student should normally register for general chemistry (preferably Chemistry 215–216 although Chemistry 207–208 is also acceptable), mathematics, a freshman writing seminar course, a foreign language if necessary, or physics. Chemistry 215–216 is aimed at those students with good preparation and a strong interest in chemistry. Students who do not know if their preparation is adequate should consult the instructor. In the second year the student should complete calculus and take physics and organic chemistry (Chemistry 359–360 is preferred to Chemistry 357–358).

The second-year laboratory courses include 300, Quantitative Chemistry, if needed, and 301, Experimental Chemistry I. Chemistry 389–390, Physical Chemistry I and II, and Chemistry 302–303, Experimental Chemistry II and III, should be completed in the third year. Chemistry 410 should be completed in the third or fourth year. Advanced work in chemistry and related subjects can be pursued in the fourth year and in the earlier years as well. The opportunity for independent research is also available. All students with questions about the major are encouraged to consult the chair of the Department of Chemistry or the chair's representative. Entering students who are exceptionally well prepared in chemistry may receive advanced placement credit for Chemistry 207.

Prerequisites for admission to a major in chemistry are (1) Chemistry 215–216 or 207–208 plus 300, (2) Physics 207, and (3) Mathematics 111 or 191. Students are not encouraged to undertake a major in chemistry unless they have passed those prerequisite courses at a good level of proficiency. Knowledge of simple computer programming is essential. This may be achieved either by self-study (a syllabus is available) or by taking courses such as Computer Science 100. The minimum additional courses that must be completed for a major in chemistry are listed below.

1) Chemistry 301, 302, 303, 359, 360 (or, if necessary, 357–358 may be substituted), 389, 390, and 410
2) Mathematics 112 plus 213; or 122 plus 221, 222; or 192 plus 293, 294
3) Physics 208

Potential majors electing to take Mathematics 213 are strongly urged to do so in their sophomore year to avoid scheduling conflicts with Chemistry 389 in their junior year.

The sequence described above is a basic program in chemistry that students can extend substantially in whatever direction suits their own needs and interests. Those going on to do graduate work in chemistry should recognize that these requirements are minimal and should supplement their programs, where possible, with further courses such as Chemistry 405, 605, 606, 666, and 681. Even students not planning graduate work in chemistry should consider advanced work in physics and mathematics, courses in the biological sciences, and advanced work in chemistry as possible extensions of the basic program.

Honors. The honors program in chemistry offers superior students an opportunity to study independently in seminars and to gain additional experience by engaging in research during the senior year. It is particularly recommended to those who plan graduate work in chemistry. Prospective candidates should complete the introductory organic chemistry and physical chemistry sequences by the end of the junior year. However, failure to have completed those courses in the junior year does not in itself disqualify a student from the honors program. Completion of the program at a high level of performance leads to the degree of Bachelor of Arts with honors in chemistry. Students will be admitted to the program by invitation of the department. Selection will be based on a superior cumulative average, including chemistry grades, and good performance in a prior research program.

Prospective candidates should discuss their plans with advisers by March 1 of their junior year. Participants are notified by early January of their senior year. To be awarded honors, candidates must show outstanding performance in at least 8 credits of undergraduate research such as is offered in Chemistry 421, 433, 461, or 477. In addition, superior performance, including the writing of a thesis, in the honors seminar (Chemistry 498) is expected.

The Alternate Major

The alternate major is a flexible program that provides core coverage of chemistry around which students can design a program to meet their own career goals. Requirements consist of a core program along with four additional courses chosen by the student. The additional courses, one of which must be in chemistry at the 300 level or above, should represent a cohesive plan and must be approved by a departmental committee.

The Core Program

1) Chemistry 215–216 (or 207–208 plus 300), 253, 251, 287, 289, and 410 (Chem 357–358 or 359–360 can be substituted for Chem 253, or Chem 389–390 can be substituted for Chem 287, thereby fulfilling the requirement for an additional chemistry course)
2) Mathematics 111, 112; or 111, 122; or 191, 192
3) Physics 207–208

Additional Courses

Possible plans for the remaining three courses might include programs in Biochemistry; Biology; Physics; Computer Science; Polymers; Materials Science; Science, Technology, and Society; History and Philosophy of Science and Technology; Business and Management; Economics; Education; and others.

Premedical students and those interested in pursuing double majors might find the alternate major particularly attractive. The course requirements for admission to the alternate major are the same as those for the standard major.

Program for Science Teachers

Chemistry majors who wish to become teachers will be interested to know that Cornell University offers a certification program for teachers of secondary (grades 7–12) science. Interested students apply to the program during their sophomore or junior years. If accepted, students integrate some course work in Education with the rest of their undergraduate studies. All chemistry majors who enter this program will remain in the College of Arts and Sciences to complete the major.

After earning the bachelor's degree, certification students enter the Graduate Field of Education to complete a fifth year of study at Cornell. Following this fifth year, students are eligible for a master's degree from Cornell and a teaching certificate from New York State. Financial support is available for qualified applicants. Additional information is available from Susan Blish, 106 Kennedy Hall, 255-9255 or Prof. Deborah Trumbull, 426 Kennedy Hall, 255-3108.

Laboratory Course Regulations

Students registered for laboratory courses who do not appear at the first meeting of the laboratory will forfeit their registration in that course.

Students and members of the teaching staff are required to wear safety goggles and lab aprons in all chemistry laboratories. Students are reminded to take their goggles and lab aprons to the first laboratory session. Those who fail to cooperate with the safety program will be asked to leave the laboratories.

Students are required to pay for glassware and any other items broken or missing from their laboratory desks at the close of each semester. Students who fail to inventory their desks at the appointed time in the presence of their instructor are charged a $10 fee in addition to charges for any breakage.

Courses

Preliminary examinations for all courses may be given in the evening.

103–104 Introduction to Chemistry

103, fall or summer; 4 credits. 104, spring or summer; 3 credits. Enrollment limited. Prerequisite for Chemistry 104: Chemistry 103. Recommended for students who have not had high school chemistry and for those needing a less mathematical course than Chemistry 207–208.

Lecs, M W 11:15; lab, T or R 8–11, or F 10:10–1:10, or M W or F 1:25–4:25. Prelims: 7:30–9 p.m., Oct. 4, Nov. 13, Feb. 28, April 11. Fall: B. Widom; spring: D. A. Usher.

An introduction to chemistry, with emphasis on the important principles and facts of inorganic and organic chemistry.

203 The World of Chemistry

Spring. 3 credits. This course plus Chemistry 103 or 207 or 211 satisfies the College of Arts and Sciences physical science distribution requirement.

Lecs and discs: M W F 12:20. D. Harpp.

This course will detail the historical, practical, and simple chemical aspects of such topics as food, food additives, vitamins, the diet cancer question, and drugs (including over-the-counter, prescription, and street drugs). In addition, the influence of the media on important science issues will be described along with science publishing, including aspects of fraud. Finally, plastics, water and air pollution, acid rain, cosmetics, the principles of combustion, biotechnology, and the chemistry of crime detection will be presented. Extensive use will be made of demonstrations and visual aids.

207–208 General Chemistry

207, fall or summer; 208, spring or summer. 4 credits each term. Enrollment limited. Recommended for those students who will take further courses in chemistry. Prerequisite for Chemistry 207: high school chemistry. Prerequisite for Chemistry 208: Chemistry 207 or 103–104.

Lecs: fall, T R 10:10 or 12:20; spring, T R 9:05 or 10:10. Lab: fall, T R 8–12 or M T W R or F 12:20–4:25; spring, M T W R or F 12:20–4:25. Prelims: 7:30–9 p.m., Sept. 25, Oct. 25, Nov. 27, Feb. 26, April 9. Fall: J. E. McMurry; spring: R. Hoffmann.

The important chemical principles and facts are covered, with considerable attention given to the quantitative aspects and to the techniques important for further work in chemistry. Second-term laboratory includes a systematic study of qualitative analysis.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall.

211 Chemistry for the Applied Sciences

Fall or spring. 4 credits. Recommended for those students who intend to take only one term of chemistry. Enrollment limited. Prerequisite: high school chemistry or permission of instructor. Corequisite: a calculus course at the level of Mathematics 111 or 191.

Lecs: fall, M W F 12:20; spring, M W F 10:10. Lab: fall, M T W R F 1:25–4:25; spring, M T W R F 1:25–4:25. Prelims: 7:30–9 p.m., Sept. 25, Oct. 25, Nov. 27, Feb. 14, March 12, April 18. Fall: F. J. DiSalvo; spring: B. Widom.

The important chemical principles and facts are covered with the objective of understanding the role of chemistry in other fields. Emphasis is on topics such as solid-state materials, periodic trends, and specific classes of compounds, such as polymers.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall.

215–216 General and Inorganic Chemistry

215, fall; 216, spring. Fall, 4 credits; spring, 5 credits. Recommended for students who intend to specialize in chemistry or in closely related fields. Enrollment limited. Prerequisites: good performance in high school chemistry and physics and in mathematics SAT. Corequisite: a calculus course at the level of Mathematics 111 or 191 for students who have not taken high school calculus. Prerequisite for Chemistry 216: Chemistry 215.

Fall: lecs, M W F 12:20; lab, M T W R or F 1:25–4:25. Spring: lecs, M W F 12:20; two labs, M W 1:25–4:25, T R 10:10–1:10 or T R 1:25–4:25. Prelims: 7:30–9 p.m., Oct. 2, Oct. 25, Nov. 20, Feb. 14, March 12, April 18. Fall: P. L. Houston; spring: T. Beebe.

An intensive systematic study of the laws and concepts of chemistry, with considerable emphasis on quantitative aspects. Second term includes systematics of inorganic chemistry. Laboratory work covers both qualitative and quantitative analysis.

[222 Molecular Messengers in Nature
Spring. 3 credits. Prerequisite: one year of high school chemistry, Chemistry 103 or 207, or permission of instructor. Not offered 1990–91.
Lecs, M W 11:15: disc, F 11:15.
J. Meinwald.
Organisms communicate with one another in nature chiefly by means of chemical signals. We will examine this intriguing mode of communication as it applies to a wide variety of species ranging from bacteria to insects and mammals, including humans. Essential concepts of organic chemistry and biology will be introduced and illustrated. Each student will be expected to prepare a term paper, and there will be an opportunity for oral presentation of some of these papers for class discussion.]

251 Introduction to Experimental Organic Chemistry
Fall or summer. 2 credits. Recommended for non-chemistry majors. Enrollment limited. Prerequisites: Chemistry 208 and coregistration in Chemistry 253 or 357; or Chemistry 104 and 253 with a grade of C or better. Students who have taken Chemistry 104 must complete Chemistry 253 before taking Chemistry 251.
Lec, M or F 8:00 (all students attend first lecture); lab, M T W R or F 1:25–4:25, or T or R 8–11. Prelims: 7:30–9 p.m., Oct. 11, Nov. 15. T. Frey.
Introduction to the synthesis, separation, and handling of materials, including applications of many types of chromatography, simple and fractional distillation, crystallization, extraction, and others.

252 Elementary Experimental Organic Chemistry
Spring or summer. 2 credits. Recommended for non-chemistry majors. Prerequisite: Chemistry 251.
Lec, M 8:00; lab, M T W or R 1:25–4:25. Prelims: 8 a.m., March 4, April 15. T. Frey.
A continuation of Chemistry 251.

253 Elementary Organic Chemistry
Fall or summer. 4 credits. Primarily for students in the premedical and biological curricula. Prerequisite: Chemistry 104 with grade of C or better or Chemistry 208 or 216.
Lecs, M W F S 10:10. Prelims: 7:30–9 p.m., Sept. 27, Oct. 25, Nov. 13. D. A. Usher.
The occurrence and properties of organic molecules and the mechanisms of organic reactions, including a brief introduction to the organic chemistry of biological systems.

Note: Because of duplication of material, students are not permitted to earn both 4 credits for Chemistry 253 and 3 credits for Chemistry 357. In special situations (consult instructor for details), students should take Chemistry 255 for 2 credits after having earned 3 credits for Chemistry 357. Students may earn 6 credits by taking Chemistry 251–253 or 8 credits by taking Chemistry 253–301 or 253, 251, and 252.

255 Elementary Organic Chemistry
Fall or summer. 2 credits.
Same course as Chemistry 253, but to be taken for reduced credit by students already having 3 credits for Chemistry 357.

287–288 Introductory Physical Chemistry
287, fall; 288, spring. 3 credits each term. Prerequisites: Chemistry 208 or 216 and Mathematics 111–112, or permission of instructor. Prerequisite for Chemistry 288: Chemistry 287.
Lecs, M W F 9:05; rec, M or W 1:25, T 9:05. Prelims: 7:30–9 p.m., Oct. 2, Nov. 6, Dec. 4. 288.1, Feb. 14, March 12, April 18; 288.2, Feb. 14, March 28, April 25. Fall: R. Loring; spring: B. A. Baird, to be announced.
A systematic treatment of the fundamental principles of physical chemistry. In the spring there will be two lectures; lecture 02 will be oriented to the application of physical chemistry to biological systems. Chemistry 287 satisfies the minimum requirement for physical chemistry in the alternate chemistry major.

289–290 Introductory Physical Chemistry Laboratory
289, fall; 290, spring. 2 credits each term. Prerequisite for Chemistry 290: Chemistry 289. Corequisite: registration in Chemistry 287–288.
Lec R 8 a.m.; lab, M T W R 1:25–4:25. Prelims: 8 a.m., fall: H. A. Scheraga; spring: T. McCarrick.
Quantitative and qualitative methods basic to the experimental study of physical chemistry.

300 Quantitative Chemistry
Fall. 2 credits. Prerequisite: Chemistry 208 or advanced placement in chemistry.
Lec, F 12:20; lab, M T W R 12:20–4:25 or R 8–12. Lab includes one-hour rec. Prelims: 12:20, Oct. 12, Nov. 30. G. H. Morrison.
Gravimetric, volumetric, spectrophotometric, and potentiometric methods are emphasized. Lectures and problem sets stress the relationship between theory and applications.

301 Experimental Chemistry I
Spring. 4 credits. Prerequisites: Chemistry 216 or 300, and 253 or 357 or 359. Concurrent registration in Chemistry 253 is not recommended.
Lecs, M W F 8; 2 labs, M W 1:25–4:25 or T R 8–11 or 1:25–4:25. Prelims: 8 a.m., Feb. 27, April 3. T. P. Begley.
An introduction to the techniques of synthetic chemistry. A representative selection of the most important classes of organic reactions will be explored in the laboratory. The theoretical basis for these reactions and for the separation techniques used will be discussed in the lectures.

302 Experimental Chemistry II
Fall. 4 credits. Enrollment limited; preference given to chemistry majors. Prerequisite: Chemistry 301.
Lecs, M W F 9:05; 2 labs, M W 1:25–4:25, or T R 1:25–4:25. C. F. Wilcox.
Instrumental methods of analysis, including optical spectroscopy, atomic absorption, NMR, mass spectrometry, gas chromatography, IR/GC/MS, and electrochemical methods.

303 Experimental Chemistry III
Spring. 4 credits. Each lab limited to 24 students. Prerequisites: Chemistry 302, 389, 390; coregistration in the latter is permissible.
Lecs, M W F 9:05; 2 labs, M W 1:25–4:25 or T R 1:25–4:25. A. Kuki.
An introduction to measurement strategies in physical chemistry as applied to kinetics, spectroscopy, the dynamics of photo-excited states, and the dielectric properties of matter. The principles and assembly of electronic, optic, computer, and vacuum line equipment will be studied. A familiarity with computer programming is assumed.

357–358 Introductory Organic Chemistry
357, fall; 358, spring. 3 credits each term. Prerequisite for Chemistry 357: Chemistry 208 or 216 or advanced placement; recommended: concurrent registration in Chemistry 251 or 300. Prerequisite for Chemistry 358: Chemistry 357; recommended: concurrent registration in Chemistry 252 or 301.
Lecs, M W F 9:05; optional rec may be offered. Prelims: 7:30–9 p.m., Sept. 27, Oct. 25, Nov. 13, Feb. 14, March 14, April 18. Fall: D. Collum; spring: B. Ganem.
A systematic study of the more important classes of carbon compounds—reactions of their functional groups, methods of synthesis, relations, and uses.

Note: Because of duplication of material, students are not permitted to earn both 4 credits for Chemistry 253 and 3 credits for Chemistry 357. In special situations (consult instructor for details), students should take Chemistry 255 for 2 credits after having earned 3 credits for Chemistry 357. Students will not be permitted to take Chemistry 358 after completing Chemistry 253.

359–360 Organic Chemistry I and II
359, fall; 360, spring. 4 credits each term. Recommended for students who intend to specialize in chemistry or closely related fields. Enrollment limited. Prerequisites: Chemistry 216 with a grade of B or better, Chemistry 208 with a grade of A or better, or permission of instructor. Prerequisite for Chemistry 360: Chemistry 359. Recommended: coregistration in Chemistry 300–301–302.
Lecs, M W F 9:05; makeup lec, W 7:30 p.m. Prelims: 9:05 a.m., Sept. 26, Oct. 26, Nov. 28, Feb. 22, April 5. Fall: B. K. Carpenter; spring: J. M. J. Frechet.
A rigorous and systematic study of organic and organometallic compounds, their structures, the mechanisms of their reactions, and the ways they are synthesized in nature and in the laboratory.

389–390 Physical Chemistry I and II
389, fall; 390, spring. 4 credits each term. Prerequisites: Mathematics 213 or, ideally, 221–222; Physics 208; Chemistry 208 or 216 or permission of instructor. Prerequisite for Chemistry 390: Chemistry 389.
Lecs, M W F 10:10; makeup lec, W 7:30 p.m. Prelims: 7:30–9 p.m., Oct. 4, Nov. 8, Dec. 4, Feb. 19, March 28, April 25. Fall: A. C. Albrecht; spring: L. A. Philips.
The principles of physical chemistry are studied from the standpoint of the laws of thermodynamics, kinetic theory, statistical mechanics, and quantum chemistry.

405 Techniques of Modern Synthetic Chemistry
Spring. 3 or 6 credits. Enrollment limited. Prerequisites: Chemistry 302 *and* permission of instructor. Selection of students will be based on grades in Chemistry 301 and 302. To receive three credits, students must perform a minimum of three two-week experiments. Six credits will be given for three additional experiments. Completion of five exercises in elementary glass-blowing will count as one experiment.
Lab time required: 16 hours each week, including at least two 4-hour sessions in one section (M W 1:25). First meeting will be at 1:30 on first class day of semester. Lec, first week only, at times to be arranged. J. M. Burlitch.
The syntheses of complex organic, organometallic, and inorganic molecules are carried out with emphasis on the following techniques: vacuum line, high pressure, high-temperature solid state, inert atmosphere, nonaqueous solvents, radioactive labeling, sol-gel, photochemical and electrochemical methods, solid phase peptide synthesis, and polymer synthesis. Elementary glassblowing.

410 Inorganic Chemistry
Spring. 4 credits. Prerequisites: Chemistry 358 or 360, and 389.
Lecs, M W F 11:15. B. K. Carpenter.
A systematic study of the synthesis, structure, and reactivity of inorganic and organometallic compounds.

421 Introduction to Inorganic Research
Fall or spring. 2–4 credits. Prerequisites: Chemistry 303 and 389–390, or Chemistry 287–288, and Chemistry 289–290 with an average of B– or better, or permission of instructor. Selected faculty.
Research in inorganic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

433 Introduction to Analytical Research
Fall or spring. 2–4 credits. Prerequisites: Chemistry 303 and 390 with an average of B– or better or permission of instructor. Selected faculty.
Research in analytical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

461 Introduction to Organic Research
Fall or spring. 2–4 credits. Prerequisites: Chemistry 302 and 358 or 360 with a grade of B– or better or permission of instructor. Selected faculty.
Research in organic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

477 Introduction to Physical Chemistry Research
Fall or spring. 2–4 credits. Prerequisite: Chemistry 390 with an average of B– or better or permission of instructor. Selected faculty.
Research in physical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

498 Honors Seminar
Spring. No credit. Admission by departmental invitation. Additional prerequisites or corequisites: outstanding performance in either (1) two coherent 4-credit units of research in a course such as Chemistry 421, 433, 461, or 477; or (2) one 4-credit unit in a course such as Chemistry 421, 433, 461, or 477 and summer research equivalent to at least 4 credits in the same subject.
W 2:30–4. G. H. Morrison.
Informal presentations and discussions of selected topics in which all students participate. Individual research is on advanced problems in chemistry or a related subject under the guidance of a faculty member, culminating in a written report.

600–601 General Chemistry Colloquium
600, fall; 601, spring. No credit. Required of all graduate students except those majoring in organic or bioorganic chemistry. Juniors and seniors are encouraged to attend.
R 4. Instructor to be announced.
A series of talks representative of all fields of current research interest in chemistry other than organic chemistry, given by distinguished visitors and faculty members.

605 Advanced Inorganic Chemistry I: Symmetry, Structure, and Reactivity
Fall. 4 credits. Prerequisite: Chemistry 389–390 or equivalent or permission of instructor.
Lecs, M W F 11:15. J. M. Burlitch.
Group theory applications: hybrid orbitals, molecular orbitals, molecular vibrations, and ligand field theory; at the level of Cotton's *Chemical Applications of Group Theory.* Selected topics in structure, bonding, and reactivity of inorganic compounds with emphasis on main group elements; at the level of *Chemistry of the Elements,* by Greenwood and Earnshaw.

606 Advanced Inorganic Chemistry II: Synthesis, Structure, and Reactivity of Inorganic and Organotransition Metal Compounds
Fall. 4 credits.
Lecs, M W F 10:10. P. T. Wolczanski.
Synthesis, structure, and reactivity of coordination compounds and organometallic complexes. Emphasis on bonding models, structure, and reactivity, including the elucidation of mechanisms. Readings at the level of Purcell and Kotz's *Inorganic Chemistry,* and Collman, Hegedus, Finke, and Norton's *Principles and Applications of Organotransition Metal Chemistry.*

607 Advanced Inorganic Chemistry III: Solid-State Chemistry
Spring. 4 credits. Prerequisite: Chemistry 605 or permission of instructor.
Lecs, M W F 12:20. F. J. DiSalvo.
The third of a three-term sequence. Interdisciplinary approach to solids. Topics include solid-state structure and X-ray diffraction, synthesis methods, defects in solids, phase diagrams, electronic structure, and chemical and physical properties of solids. Text: *Solid State Chemistry and Its Applications,* by West. Readings from inorganic chemistry and solid-state physics texts.

[622 Chemical Communication (also Biological Sciences 623)
Fall. 3 credits. Limited to 30 students. Prerequisites: Chemistry 358 or 360 and Biological Sciences 102. Intended primarily for research-oriented students. Offered alternate years. Not offered 1990–91.
Lecs, M W F 1:25. J. Meinwald, T. Eisner.
The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Communication involving insects is emphasized. Specific topics are treated, with varying emphasis on chemical, biochemical, neurobiological, ecological, and evolutionary principles.]

625 Advanced Analytical Chemistry I
Fall. 4 credits. Prerequisite: Chemistry 288 or 390 or equivalent.
Lecs, M W F 8; problem sessions, T 7:30 p.m. C. F. Wilcox, F. W. McLafferty.
The application of molecular spectroscopy to chemical problems. Topics in infrared, NMR, and mass spectroscopy are discussed.

[627 Advanced Analytical Chemistry II
Spring. 3 credits. Primarily for graduate students. Prerequisite: Chemistry 288 or 390 or equivalent. Not offered 1990–91.
Lecs, T R 10:10; problem sessions and exams, T 7:30 p.m. F. W. McLafferty.
Modern analytical methods for molecular characterizations, including electron, Mossbauer, and Fourier spectroscopy; mass spectrometry; methods applicable to macromolecules; information theory.]

[628 Advanced Analytical Chemistry III
Spring. 3 credits. Primarily for graduate students. Prerequisite: Chemistry 288 or 390 or equivalent. Not offered 1990–91.
Lecs, T R 10:10. G. H. Morrison.
Modern trace, micro, and surface methods of analysis, including atomic spectrometry, solid mass spectrometry, activation analysis, microscopes, microprobes, and electron spectroscopy.]

[629 Electrochemistry
Fall. 3 credits. Primarily for graduate students and upperclass undergraduates. Prerequisite: Chemistry 390 or equivalent (Mathematics 213 helpful). Not offered 1990–91.
Lecs, T R 8:40–9:55. H. D. Abruna.
Fundamentals and applications of electrochemistry. Topics will include the fundamentals of electrode kinetics, electron transfer theory, the electrical double layer, and diffusion. A wide range of techniques and their application as well as instrumental aspects will be covered.]

650–651 Organic and Organometallic Chemistry Seminar
650, fall; 651, spring. No credit. Required of all graduate students majoring in organic or bioorganic chemistry. Juniors and seniors are encouraged to attend.
M 4. T. Begley.
A series of talks representative of all fields of current research interest in organic and organometallic chemistry, given by research associates, faculty members, and distinguished visitors.

665 Advanced Organic Chemistry
Fall. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisites: Chemistry 253 or 358 or 360, and 390 or equivalents or permission of instructor.
Lecs, M W F 12:20. B. Ganem.
A survey of reaction mechanisms and reactive intermediates in organic chemistry.

666 Synthetic Organic Chemistry
Spring. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisite: Chemistry 665 or permission of instructor.
Lecs, T R 8–9:30. D. Collum
Modern techniques of synthesis; applications of organic reaction mechanisms to the problems encountered in rational multistep synthesis, with particular emphasis on modern developments in synthesis design.

[668 Chemical Aspects of Biological Processes
Fall. 4 credits. Prerequisite: Chemistry 358 or 360 or equivalent. Not offered 1990–91.
Lecs, T R 8:30–10. T. P. Begley.
A representative selection of the most important classes of enzyme-catalyzed reactions will be examined from a mechanistic perspective. Topics discussed will include the chemical basis of enzymatic catalysis, techniques for the elucidation of enzyme mechanism, cofactor chemistry, the biosynthesis of penicillin, chlorophyll, methane, terpenes, amino acids, and the biodegradation of lignin and a variety of pollutants. The application of chemical principles to understanding biological processes will be emphasized.]

671 Synthetic Polymer Chemistry (also Materials Science and Engineering 671 and Chemical Engineering 675)
Fall. 4 credits. Prerequisite: Chemistry 359–360 or equivalent or permission of instructor; recommended: Materials Science and Engineering 620.
Lecs, T R 8:30–10. J. M. J. Frechet.
Modern concepts in synthetic polymer chemistry. The application of organic synthesis to the development of new polymers and copolymers and the control of their architecture. Chain and step-growth polymerizations, reactions of polymers, block and graft copolymers. A broad spectrum of applications from recent literature will also be discussed.

[672 Kinetics and Regulation of Enzyme Systems
Fall. 4 credits. Primarily for graduate students in Chemistry and Biochemistry. Prerequisite: Chemistry 390, Biological Sciences 331, or equivalents or permission of instructor. Not offered 1990–91.
Lecs, M W F 9:05, and occasionally W 7 p.m. B. A. Baird.
Protein structure and dynamics; thermodynamics and kinetics of ligand binding; steady state and transient enzyme kinetics; enzyme catalysis and regulation; role of plasma membrane receptors in regulating cellular activities.]

[677 Chemistry of Nucleic Acids
Spring. 4 credits. Primarily for graduate students. Prerequisites: Chemistry 358 or 360, and 390 or equivalents. S-U grades only. Not offered 1990–91.
Lecs, M W 10–11:10. D. A. Usher.
Properties, synthesis, reactions, and biochemical reactions of nucleic acids.]

678 Thermodynamics
Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 288 or 390 or equivalents.
Lecs, T R 8:30–9:55. P. L. Houston.
Principles of equilibrium thermodynamics. Thermodynamic functions; First and Second Laws; gases and condensed phases; solutions; phase equilibrium; chemical equilibrium; surface thermodynamics; electrolytes; statistical thermodynamics and the Third Law.

681 Physical Chemistry III
Fall. 4 credits. Prerequisites: Chemistry 288 or 390; Mathematics 213 and Physics 208; or equivalents.
Lecs, M W F 10:10. R. F. Porter.
An introduction to the principles of quantum theory and statistical mechanics, atomic and molecular spectra, and elementary valence theory. At the level of *Quantum Chemistry*, by Levine.

686 Physical Chemistry of Proteins
Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 288 or 390 or equivalents. S-U grades. Letter grades for undergraduates. Offered alternate years.
Lecs, M W F 8, and occasionally W 7:30 p.m. H. A. Scheraga.
Chemical constitution, molecular weight, and structural basis of proteins; thermodynamic, hydrodynamic, optical, spectroscopic, and electrical properties; protein and enzyme reactions; statistical mechanics of helix-coil transition in biopolymers; conformation of biopolymers; protein folding.

700 Baker Lectures
Fall, on dates to be announced. No credit. Distinguished scientists who have made significant contributions to chemistry present lectures for periods varying from a few weeks to a full term. This year's lecturer: R. Noyori, Na Goya Univ., Japan.

701–702 Introductory Graduate Seminar in Analytical, Inorganic, and Physical Chemistry
701, fall; 702, spring. No credit. Required of all first-year graduate students majoring in analytical, inorganic, physical, theoretical, and biophysical chemistry.
Hours to be arranged. H. D. Abruña.

[716 Selected Topics in Advanced Inorganic Chemistry: Transition Metal Oxides (also Materials Science and Engineering 716)
Fall. 3 credits. Prerequisite: some elementary knowledge of chemistry and bonding. Not offered 1990–91.
Lecs, M W F 9:05.
This course will cover a range of properties of transition metal oxides. It will include a survey of their structure and synthesis and their defect and surface chemistry. Bonding and physical and materials properties, especially those relating to electronic structure, will be emphasized, i.e., optical and magnetic properties, metal-insulator transitions, and superconductivity. The course will have a strong interdisciplinary flavor and should be of interest to solid-state and surface chemists, physicists, and materials scientists at the graduate-student and postdoctoral level.]

745 Physical Polymer Science I (also Chemical Engineering 745)
Fall. 3 credits. Prerequisite: a graduate-level thermodynamics statistical course.
Lecs, to be arranged. C. Cohen.
Thermodynamic properties of dilute, semidilute, and concentrated solutions from both classical and scaling approaches. Characterization techniques of dilute solutions: osmometry, light scattering, viscometry, and sedimentation. Rubber elasticity; mechanical and thermodynamic properties of gels. Polymer melts: equations of state and glass transition phenomenon.

[746 Physical Polymer Science II (also Chemical Engineering 746)
Fall. 3 credits. Prerequisite: a graduate level thermodynamics statistical course. Not offered 1990–91.
Lecs, T R 10–11:15. C. Cohen
Rheology and processing. Applications and limitations of various rheometers. Linear viscoelasticity; non-linear continuum models; kinetic theory of polymeric liquids. Pressurization, pumping, and the modelling of processing machines. Injection and compression molding; mold filling, simulations, structure, and orientation.]

[762 Special Topics in Organic Chemistry
Spring. 3 credits. Not offered 1990–91.
Lecs, M W F 9:05.
Topics vary.]

765 Physical Organic Chemistry I
Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 665 or permission of instructor.
Lecs, M W F 10:10. C. F. Wilcox.
Emphasis is on applications of reaction kinetics and isotope effects to gain an understanding of reaction mechanisms.

[766 Physical Organic Chemistry II
Spring. 3 credits. Primarily for graduate students. Prerequisite: Chemistry 765 or permission of instructor. Not offered 1990–91.
Quantitative aspects of organic chemistry.]

[774 Chemistry of Natural Products
Fall. 3 credits. Primarily for graduate students. Prerequisites: Chemistry 665–666. Not offered 1990–91.
Lecs, T R 12:20.
Particular attention is devoted to methods of structure determination and synthesis as applied to selected terpenes, steroids, alkaloids, and antibiotics.]

780 Principles of Chemical Kinetics
Fall. 4 credits. Prerequisite: Chemistry 681 or permission of instructor.
Lecs, M W F 9:05. B. A. Baird.
Principles and theories of chemical kinetics; special topics such as fast reactions in liquids, enzymatic reactions, energy transfer, and molecular beams.

[782 Special Topics in Biophysical and Bioorganic Chemistry
Spring. 3 credits. Not offered 1990–91.
Lecs, T R 11:15.
Topics vary from year to year.]

[789 X-ray Crystallography
Spring; offered only when sufficient registration warrants. 4 credits. Prerequisite: Chemistry 288 or 390 or permission of instructor. Not offered 1990–91.
M W F 10:10. G. VanDuyne.
A beginning course in the application of X-ray crystallography to structural chemistry. Topics include symmetry properties of crystals, diffraction of X-rays by crystals, interpretation of diffraction data, and refinement of structures. The chemical information available from a diffraction experiment is stressed, and theoretical aspects are illustrated by conducting an actual structure determination as a classroom exercise. At the level of Ladd and Palmer's *Structure Determination by X-ray Crystallography*.]

791 Spectroscopy
Fall. 4 credits. Prerequisite: Chemistry 793.
Lecs, M W F 10:10. L. A. Philips.
The course will explore the interaction of light with matter. We will start with the quantum mechanical foundations of spectroscopy and follow with a detailed treatment of a variety of different spectroscopies, including the study of rotation, rotation and vibration, and electronic spectra for simple molecules as well as polyatomics. As time and interest allow, we will cover special topics such as magnetic resonance, non-linear, and molecular beam spectroscopies.

792 Molecular Collision Theory
Spring. 3 credits.
Lecs, T R 10:10–11:25. G. S. Ezra.
The concepts and methods of scattering theory are described with particular emphasis on applications to problems of chemical interest. At the level of Child's *Molecular Collision Theory* and Taylor's *Scattering Theory.*

793 Quantum Mechanics I
Fall. 4 credits. Prerequisites: Chemistry 681, coregistration in Mathematics 421, and Physics 431 or equivalents or permission of instructor.
Lecs, M W F 11:15. G. S. Ezra.
Schrodinger's equation, wave packets, uncertainty principle, WKB theory, matrix mechanics, orbital and spin angular momentum, exclusion principle, perturbation theory, variational principle, Born-Oppenheimer approximation. At the level of Cohen-Tannoudji's *Quantum Mechanics.*

794 Quantum Mechanics II
Spring. 4 credits. Prerequisites: Chemistry 793 or equivalent and coregistration in Physics 432 and Mathematics 422, or permission of instructor.
Lecs, M W F 9:05. A. C. Albrecht.
Electronic structure of atoms and molecules. Quantum chemical calculations. Group theory. Time-dependent phenomona in quantum mechanics and light/matter interaction. Spectroscopies. At the level of Weissbluth's *Atoms and Molecules* and Sakurai's *Modern Quantum Mechanics.*

796 Statistical Mechanics
Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 793 or equivalent.
Lecs, T R 8:30–9:55. R. Loring.
Microstates, ensembles, partition functions, and fluctuations. Quantum statistics. Thermodynamic properties of ideal gases and crystals. Chemical equilibrium. Dense gases. Structure of classical liquids. Phase transitions and critical phenomena. Introduction to nonequilibrium statistical mechanics: density matrix and response theory, transport processes, Brownian motion. At the level of *Statistical Mechanics*, by McQuarrie.

[798 Selected Topics in Physical Chemistry
Spring. 3 credits. Prerequisite: Chemistry 793 or equivalent; Chemistry 794 recommended but not essential. Not offered 1990–91.
Lecs, T R 10:10–11:25. R. Hoffmann.
Topics vary.]

CLASSICS

A. Nussbaum, chair (on leave 1990–91); L. S. Abel, F. M. Ahl (graduate faculty representative), K. Clinton, J. E. Coleman (on leave 1990–91), G. Davis, J. C. DeFilippo, J. R. Ginsburg, I. Hohendahl, G. M. Kirkwood (emeritus), H. Kolias, P. I. Kuniholm, D. Mankin (director of undergraduate studies), G. M. Messing (emeritus), C. Minkowski, P. T. Mitsis, H. Pelliccia, P. Pucci (acting chair), J. S. Rusten, D. Shanzer, J. Whitehead

Erich S. Gruen, Townsend Lecturer

Cornell University has long recognized the importance of studying the civilizations of ancient Greece and Rome. Particularly in an age of increasing specialization, study of the Classics is widely viewed as an excellent means of acquiring a liberal education; at Cornell, we are deeply interested in the continuing humanistic values contained in the literature of the ancient world and in gaining a fuller understanding of these important cultures and their imprint upon subsequent ages.

The Department of Classics at Cornell is one of the oldest and largest in the country. With eighteen faculty members, together with professors of related interests in the departments of History, Philosophy, Comparative Literature, History of Art, Architecture, Modern Languages and Linguistics, and Near Eastern Studies and in the Archaeology and Medieval Studies programs, the range of instruction available is very large, including not only the traditional study of language, literature, and ancient history, but also newer developments in the field, such as comparative study of Mediterranean civilizations and modern literary theory.

Although Classics, like other areas of humanistic study, does not aim at providing specific preprofessional training, over the years Classics majors from Cornell have gone on to a wide variety of careers: in law, teaching, medicine, diplomacy, management, educational administration, government, and many others.

The department offers courses in Bronze Age and Classical archaeology and is active in field archaeology in Classical lands. It recently sponsored an archaeological excavation at Alambra, in Cyprus, which served as a field training school for Cornell undergraduate and graduate students, and plans are under way for further excavation projects. On campus there are also collections of ancient artifacts, reproductions of ancient sculpture, and one of the few laboratories in the world to concentrate on the tree-ring dating of ancient monuments from Greece, Cyprus, and Turkey. The archaeology courses may be used to satisfy some of the requirements for the Intercollegiate Program in Archaeology or for the major in Classical civilization. They require no knowledge of either Greek or Latin. Similarly, the department offers a variety of courses and seminars in English on such subjects as Greek mythology, Greek and Roman mystery religions, early Christianity, and Roman law, as well as ancient epic, tragedy, history, and philosophy. For those whose interest in things Greek and Roman extends no further than a desire to understand the English language a little better, the department offers one course in the Greek and Latin elements that make up a huge proportion of the vocabulary of Modern English, and another that deals more specifically with the Greek and Latin ingredients of bioscientific vocabulary. Programs in Greek and Latin at the elementary level are also offered, of course; and for the more ambitious there are courses involving reading, in the original, of Greek and Latin authors from Homer to St. Augustine and Bede and, periodically, the Latin works of Dante, Petrarch, and Milton. The department makes every attempt to adapt its program to the needs of each student. If there is a Classical writer you would like to study, the department will do its best to help you do so whether you are a major in the department or not.

Majors

The Department of Classics offers majors in Classics, Greek, Latin, and Classical Civilization.

Classics

Those who major in Classics must complete 24 credits in advanced Greek or Latin (numbered 201 or above) and 15 credits in related subjects selected in consultation with the adviser.

Classical Civilization

Those who major in Classical Civilization must complete (a) qualification in Latin and Greek or proficiency in either; (b) 24 credits selected from the courses listed under Classical civilization, Classical archaeology, Latin, and Greek; and (c) 15 credits in related subjects (courses in the humanities selected in consultation with the adviser).

Greek

Those who major in Greek must complete 24 credits of advanced courses in Greek and 15 credits in related subjects (including Latin).

Latin

Requirements for the major in Latin parallel those of the major in Greek.

Honors. Candidates for the degree of Bachelor of Arts with honors in Classics, Greek, Latin, or Classical civilization must fulfill the requirements of the appropriate major study as given above and must also successfully complete the special honors courses 370, 471, and 472. Credit for honors courses may be included in the credits required for the major study. Students who wish to become candidates for honors, who have a cumulative average of B+ or better, and who have demonstrated superior performance in Classical courses (Greek, Latin, and Classical Civilization), submit an outline of their proposed honors work to the honors committee during the first month of their fifth semester. The chair will appoint a committee of three faculty members for each candidate, and the committee will be responsible for evaluating the candidate's proposal and subsequently supervising his or her work. At the completion of the honors thesis, which must demonstrate knowledge of the main bibliographical sources, give promise of scholarly talent, and show creativity, the committee will determine the level of honors to be awarded.

Study Abroad

Cornell participates in the Intercollegiate Center for Classical Studies in Rome, which offers courses in Latin, Greek, ancient history, art, archaeology, and Italian. Cornell is a member institution of the American School of Classical Studies at Athens, whose Summer Program is open to graduate students and qualified undergraduates. The American Academy in Rome, of which Cornell is also a member institution, offers full-year and summer programs for qualified graduate students. For graduate students the Department of Classics offers a few travel grants each year from the Townsend Memorial Fund. Detailed information on these programs is available in the Department of Classics Office, 120 Goldwin Smith Hall.

Summer Support for Language Study

The Beatrice R. Kanders Memorial Scholarship and a certain amount of aid made possible by gifts from the Constantinos C. Polychronis Foundation are normally available to students who want to enroll in Intensive Latin or Greek in the Cornell summer session. These six-week courses are designed to enable students to enter second-year Latin or Greek the following fall. Applications are due to the chair of the Department of Classics by April 12.

Placement in Latin

Placement of first-year students in Latin courses is determined by an examination given by the Department of Classics during orientation week or, if necessary, in the second half of the fall term.

Freshman Writing Seminars

These courses are offered as freshman writing seminars and as freshman electives but may not be used to satisfy the humanities distribution requirement. Consult John S. Knight Writing Seminar Program brochures and the summer session catalog for times, instructors, and descriptions.

109 The Art of Argument: An Introduction to Rhetoric (also English 109)
Summer. 3 credits.

113 Word Power: Greek and Latin Elements in the English Language
Summer. 3 credits.

114 Word Power for the Biological Sciences
Summer. 3 credits.

120 Latin Literature
Fall or spring. 3 credits.

121 Classical Archaeology
Fall or spring. 3 credits.

123 Comedy
Summer. 3 credits.

125 Tragedy
Fall. 3 credits.

126 The Trojan War
Fall. 3 credits.

150 Greek and Roman Myths
Fall or spring. 3 credits.

Classical Civilization

100 Word Power: Greek and Latin Elements in the English Language
Fall. 3 credits.
M W F 10:10. I. Hohendahl.
This course gives the student with no knowledge of Classical languages an understanding of how the Greek and Latin elements that make up over half our English vocabulary operate in both literary and scientific English usage. Attention is paid to how words acquire their meaning and to enlarging each student's working knowledge of vocabulary and grammar.

102 Word Power for the Biological Sciences
Summer. 3 credits. H. Roisman.
A study of the Greek and Latin word elements that combine to form most of the specialized terms in the biological sciences. The student who learns the meanings of those elements and the rules of word formation usually can recognize the basic meaning of any unfamiliar word in that field. The class also gives attention to misformations and words still in use that reflect outmoded scientific theories.

200 Classical Civilization
Summer. 3 credits.
F. Ahl.
Readings in translation from the *Iliad*, the *Odyssey*, the *Aeneid*, and Greek and Roman drama, oratory, and history. An encounter with the texts that have shaped our humanistic tradition.

211 The Greek Experience
Fall. 3 credits.
M W F 11:15. F. Ahl.
An introduction to the literature and thought of ancient Greece. Topics will include epic and lyric poetry, tragedy and comedy, and historical, political, philosophical, and scientific writings. Some attention will also be given to the daily life of ordinary citizens, supplemented by slides of ancient art and architecture.

212 The Roman Experience
Spring. 3 credits.
M W F 1:25. D. Mankin.
An introduction to the civilization of the Romans as expressed in their literature, art, and social and political institutions. This course will examine not only the intellectual life of the Romans but what it meant for men and women of all social classes to live in the Roman world. Selected readings in translation of works of literature, history, and philosophy, supplemented by slides and other visual materials.

215 Conquerors and Conquered: The Case of the Romans, Jews, and Greeks
Summer. 3 credits.
J. Roisman.
Romans, Jews, and Greeks: How did they first come into contact (and conflict) with each other? How did they view each other? What were their values, beliefs, and ambitions? Were they too different to allow peaceful coexistence? The course takes us from Alexander the Great to Masada, exploring the written accounts of their contacts and even their role in the creation of a new religion.

217–218 Initiation to Greek and Roman Cultures
Limited to 18 students. These courses are intended especially for freshmen (a few exceptionally motivated sophomores or upperclass students may be accepted) and may be taken independently of one another. Apply in writing to the chair, Department of Classics, 120 Goldwin Smith Hall.
Knowledge of Greek or Latin is not necessary, since all texts are in translation. What is necessary is the willingness to participate in three one-hour seminars each week and also a supplementary one-hour (occasionally two-hour) session, during which the class will participate in workshops with specially invited guests.

217 Initiation to Greek Culture
Fall. 4 credits.
M W F 10:10, plus one hour to be arranged.
P. Mitsis, P. Pucci.
This year's course will focus on Greek tragic drama and its relation to the Greek sophistic enlightenment. It will involve the analysis of individual tragedies as well as a close reading of some seminal criticism by thinkers such as Aristotle, Hegel, Nietzsche, and Derrida. We also will survey some selected modern productions of Greek tragedy on film and discuss problems that arise in the performance of Greek tragedy.

218 Initiation to Roman Culture: Rome and Anti-Rome
Spring. 4 credits.
M W F 10:10, plus one hour to be arranged. F. Ahl, J. Whitehead.
In this course two professors, an archaeologist and a literary critic, give an overview of the Roman Empire and of modern attitudes toward it, by discussing selected places, themes, and works of art and literature. We start with visual images, the amphitheater, for example, and consider not only their importance as cultural and artistic statements but how they come to symbolize in literature and religious controversy the magnificence and decadence of Roman power. Similarly, we examine the poetry and official monuments (Trajan's column and the great triumphal arches). Other topics include Roman attitudes to non-Romans, daily life and domestic art as seen in the ruins of Pompeii and Herculaneum, and the literature and art of political and religious dissent.

223 The Comic Theater (also Comparative Literature 223)
Spring. 3 credits. Students may not obtain credit for both this course and Classics 123.
M W F 12:20. J. Rusten.
The origins of comic drama in ancient Greece and Rome, and its subsequent incarnations especially in the Italian renaissance (*Commedia erudita* and *Commedia dell'arte*), Elizabethan England, seventeenth-century France, the English Restoration, and Hollywood in the thirties and forties. Chief topics will be: the growth of the comic theatrical tradition and conventions; techniques and themes of comic plots (trickster, parody, farce, caricature); and the role of comedy in society. All readings in English.

[224 Greek Philosophy
Fall. 3 credits. Not offered 1990–91.
An introduction to the pre-Socratic philosophers and Plato.]

[225 Hellenistic and Roman Philosophy
Spring. 4 credits. Not offered 1990–91.
P. Mitsis.
An introduction to late Greek and Roman philosophy, including Epicureans, Stoics, and Skeptics. Topics include philosophy of language and epistemology, materialism, personal identity, free will and necessity, and ethical naturalism.]

235 Modern Greek Poetry and Politics (also Comparative Literature 235 and Government 335)
Fall. 3 credits.
T R 1:25–2:40. G. Holst-Warhaft.
The history of modern Greece has been marked by a series of political crises that have resulted in deep divisions in society. Greek poetry has reflected these crises and divisions, and in this course the poetry of nineteenth- and twentieth-century Greece will be interpreted in its historical and political context. The course will concentrate on four periods in which there has been a particularly strong interaction. The continuity of ancient Greek myths in modern Greek poetry will also be explored. Students taking this course as Government 335 for 4 credits must write an additional paper on a political topic.

236 Greek Mythology (also Comparative Literature 236)
Fall or summer. 3 credits.
Fall: T R 11:40–12:55. D. Mankin.
A survey of the Greek myths, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

[237 Greek Religion and Mystery Cults
Spring. 3 credits. Not offered 1990–91.
T R 11:40–12:55. K. Clinton.
Greek religion constitutes one of the essential features of ancient Greek civilization and distinguishes it from later Western civilization. Since religion permeates Greek culture, including the major art forms (epic poetry, tragedy, comedy, architecture, painting, and sculpture), the course will investigate the interaction of religion with these forms—an investigation that is fruitful both for the understanding of Greek religion and the forms themselves, some of which, like tragedy, originated in cult. A representative variety of cults and their history will be studied with special emphasis on mystery cults, such as the Eleusinian mysteries of Demeter and Persephone, the Kabiroi, the Great Gods of Samothrace, and Bacchic rites.]

[238 The Ancient Epic
Spring. 3 credits. Not offered 1990–91.
A reading of the Homeric epics and Vergil's Aeneid in translation.]

239 Greek and Roman Mystery Cults and Early Christianity
Spring. 3 credits. Prerequisite: Classics 237 or permission of instructor.
Hours to be arranged. K. Clinton.
A study of the controversial question of religious continuity between paganism and early Christianity. After a brief survey of Classical mystery cults and Hellenistic religion, the course will focus on such Hellenistic cults as the mystery cults of Isis, Bacchus, and Attis and the Great Mother and on the distinctive features that contributed to their success. Discussion of Christian liturgy and beliefs both in the East and the West to determine what Christianity owed to its pagan predecessors and to isolate the factors that contributed to its triumph over the "rival" pagan cults of late antiquity.

245 Greek and Roman Historians
Fall. 3 credits.
M W F 9:05. J. Ginsburg.
Study of historical writing in antiquity through selected readings in translation from the Greek and Roman historians. Among topics to be examined are the historian's task as understood by the ancients; the method, narrative technique, and accuracy of the Greek and Roman historians; and their attitudes toward the events that they relate.

[300 Greek and Roman Drama (also Comparative Literature 300)
Spring. 4 credits. Not offered 1990–91.
The tragedies of Aeschylus, Sophocles, and Euripides, read in translation. The main emphasis will be on the form of the dramas and on their meaning in the fifth century B. C. and today.]

[333 Latin Foundations of Western Literature (also Comparative Literature 333)
Spring. 4 credits. Not offered 1990–91.]

[336 Foundations of Western Thought (also Comparative Literature 336)
Fall. 4 credits. Not offered 1990–91.
P. Mitsis.]

[337 Ancient Philosophy of Science
Spring. 4 credits. Not offered 1990–91.]

[339 Ancient Wit: An Introduction to the Theory and Form of Comic and Satiric Writing in Greece and Rome (also Comparative Literature 339)
Fall. 4 credits. Not offered 1990–91.
F. Ahl.
The aim is not only to provide an introduction to the comedy, satire, and other humorous writing in Greek and Roman literature, but to discuss the ancient works in light of modern theories of comedy and laughter. Discussion of the nature of laughter itself in light of both ancient and modern scholarship on the subject, from Plato's *Philebus* to Freud's *Wit and Its Relations to the Unconscious* and Koestler's *The Act of Creation.* Examination of select works and passages of Homer, Euripides, Aristophanes, Hierocles, Lucian, Plautus, Nonnus, Horace, Martial, Juvenal, and Petronius.]

340 Ancient Greek Constitutions (also Government 360)
Spring. 4 credits. Prerequisite: one of the following: survey of Greek history, a course in Greek civilization, a course in political theory or comparative politics, or permission of instructor.
T R 8:40–9:55. L. Abel.
The Greek work politeia means "constitution," but not a single written document. It means the form of political life within a state. This course will survey briefly the variety of forms of political life in ancient Greece from the time of Homer to the Classical fourth-century Athenian democracy. The majority of time will be devoted to the history, functioning, and assessment of the Athenian democracy and Athenian law. The second major topic will be the constitution of Sparta and its role as the alternative to democracy. As each constitution is studied, the role of women and ideas of justice within the state will be considered. Required readings will be in translation.

[363 Representations of Women in Ancient Greece and Rome (also Women's Studies 363)
Fall. 4 credits. Not offered 1990–91.
M W 2:30–3:45. L. S. Abel, J. Ginsburg.
Classical authors created and left behind powerful images of women and of what women ought and ought not to be. These writers also provide fleeting insights into the real lives of women in antiquity. In this course, we will examine the ancient evidence in order to trace the origin of some Western attitudes about women and to analyze the assumptions that underlie the representations of women in ancient Greece and Rome. How are these images constructed and how do they work? How can we use the ancient evidence to assess the real lives and social roles of women in antiquity?]

[382 Greeks, Romans, and Victorians (also Society for the Humanities 382)
4 credits. Not offered 1990–91.
F. Ahl.
Modern popular and scholarly views of Greek and Latin literature were shaped in the Victorian years of the nineteenth century, between the years of Republican and Marxist revolution. This course explores some of the ways in which nineteenth-century social and intellectual upheavals, and changes in scholarly techniques and approaches, may have affected how English and Irish writers presented Greco-Roman antiquity and, especially, how they began to discard an idealized past based on a Roman model for one based on a Greek model. The focus will be on poets and dramatists (and a few artists and novelists) rather than on philosophers and scientists. The varied influences of Vergil and Homer, Seneca and Sophocles, Plautus and Aristophanes, Horace, and Greek lyric poetry will be discussed in selected works of writers such as Thomas More, Shelley, Byron, Swinburne, Arnold, Tennyson, W. S. Gilbert, Oscar Wilde, Samuel Butler, and others, including important artists such as Aubrey Beardsley.]

[390 Comparative Sanskrit Myth and Epic (also Asian Studies 390)
Spring. 4 credits. Not offered 1990–91.
T R 1:25–2:40. C. Minkowski.
Readings in translation from the two Sanskrit epics, the *Mahabharata* and the *Ramayana*, and from the main cycles of the *Puranas*, the Sanskrit mythological literature. Special attention will be given to parallels and comparisons with Greek myth and epic, especially Homer and Hesiod. Classics 236 or 238 would be useful as background, but not presupposed.]

391 Classical Indian Narrative (also Asian Studies 391)
Spring. 4 credits.
T R 1:25–2:40. C. Minkowski.
Readings in translation from the principal story literature of ancient India. Sources will include the Vedas, the Buddhist Jatakas, the Sanskrit epics, the *Kathasaritsagara*, the *Pancatantra*, and related collections. Attention will be given to comparisons with early Greek narrative, and to the diffusion of Indian narrative through the world's literatures.

465–466 Independent Study in Classical Civilization, Undergraduate Level
465, fall; 466, spring. Up to 4 credits.
Hours to be arranged. Staff.

480 Roman Society and Politics under the Julio-Claudians
Spring. 4 credits. Prerequisite: Classics 212, History 268, or permission of instructor.
W 2:30–4:30. J. Ginsburg.
An undergraduate seminar examining several of the important social and political changes in Roman society under Augustus and his successors, the Julio-Claudians. Topics to be investigated include Augustus's consolidation of power through political and social revolution, the Augustan attempt to regulate family life and social relations by legislation, the relation of the emperor Tiberius with the members of the old ruling class, the growth of the imperial bureaucracy and the new opportunities for social mobility, the political opposition to Claudius and Nero, Nero's cultural and provincial policy, and the manipulation of the imperial cult. All readings will be in English.

496 Undergraduate Seminar in Classical Civilization: Origins of the Hellenistic World: Alexander the Great and His Legacy (also History 496 and Classics 602)
Spring. 4 credits. Prerequisite: some background in ancient history or permission of instructor.
R 1:25–4.25. E. Gruen.
This course will explore the sweeping changes (political, institutional, religious, and cultural) set in motion by Alexander's invasion of the Persian empire and the fierce contests over his heritage. The seminar requires active participation in the weekly discussions, two oral reports, and one research paper.

602 Graduate Seminar in Classical Civilization: Origins of the Hellenistic World: Alexander the Great and His Legacy (also Classics 496 and History 496)
Spring. 4 credits. Prerequisite: permission of instructor.
R 1:25–4:25. E. Gruen.
For description, see Classics 496.

610 Language of Myth (also Anthropology 610 and Comparative Literature 615)
Spring. 4 credits.
T 1:25–4:25. P. Pucci, J. Siegel.
An analysis of the theories on language leading to Levi-Strauss and Derrida. Myths and the notion of "the father."

[668 Medieval Education and the Classical Tradition
Fall. 4 credits. Not offered 1990–91.
Hours to be arranged. W. Wetherbee.
An introduction to the institutions by which literary culture was shaped and transmitted in the medieval period. Starting from a review of the legacy of the schools of late antiquity, we will look at the evolving curricula of the medieval schools; ways in which classical and religious texts were read and glossed; the development of new literary forms in the schools; and the role of the classical traditions in shaping social ideology and defining a program for vernacular literature. Some knowledge of Latin will be very useful.]

[681 Patristic Seminar: Graduate
Fall or spring. 4 credits. Not offered 1990–91.]

711–712 Independent Study for Graduate Students in Classical Civilization
711, fall; 712, spring. Up to 4 credits.
Hours to be arranged. Staff.

Greek

101 Greek for Beginners
Fall. 4 credits.
M T W F 9:05. D. Shanzer.
Introduction to Attic Greek. Designed to enable the student to read the ancient authors as soon as possible.

103 Attic Greek
Spring. 4 credits. Prerequisite: 101 or equivalent.
M T W F 12:20. H. Pelliccia.
A continuation of Classics 101.

104 Intensive Greek
Summer. 6 credits.
An intensive introduction to the fundamentals of ancient Greek grammar. Prepares students in one term for 200-level Greek.

111–112 Modern Greek
111, fall; 112, spring. 3 credits each term. Fall: M W F 12:20.
H. Kolias.

201 Attic Authors
Fall. 3 credits. Prerequisite: Classics 103 or 104 or equivalent.
M W F 1:25. K. Clinton.
Selected readings from Greek prose writers.

202 The New Testament (also Near Eastern Studies 220)
Spring. 3 credits. Prerequisite: at least one year of ancient Greek (Classics 101–103) or permission of instructor.
M W F 9:05. J. Rusten.
Selections in Greek from all four gospels and the letters of Paul, with special attention to Luke, Acts, and Corinthians I–II.

206 Herodotus
Spring. 3 credits. Prerequisite: Classics 103 or 104 or equivalent.
M W F 11:15. H. Pelliccia.
Selected readings from Herodotus' *Histories.*

[209 Greek Composition
Fall. 3 credits. Prerequisite: Classics 203 or 204 or equivalent. Not offered 1990–91.]

[210 Greek Composition
Spring. 3 credits. Prerequisite: Classics 209 or equivalent. Not offered 1990–91.]

213 Intermediate Modern Greek
Fall. 3 credits. Prerequisite: Classics 112 or placement by departmental examination.
M W F 2:30. H. Kolias.
This course, designed for students who have completed introductory modern Greek or have a reading knowledge of the language, will review modern Greek grammar and give attention to developing facility in conversational and written expression, usually in connection with assigned readings in modern Greek prose and poetry. Audio- and videocassettes will be used from time to time to introduce contemporary Greek life and culture.

214 Readings in Modern Greek Literature
Spring. 3 credits. Prerequisite: Classics 213 or permission of instructor.
M W F 2:30. H. Kolias.

[301 Greek Historians
Fall. 4 credits. Prerequisite: Classics 203 or 204 or equivalent. Not offered 1990–91.]

[302 Greek Tragedy
Fall. 4 credits. Prerequisite: Classics 203 or equivalent. Not offered 1990–91.]

[303 Readings in Greek Rhetoric
Fall. 4 credits. Not offered 1990–91.]

[305 Attic Comedy
Fall. 4 credits. Prerequisite: Classics 203 or 204 or equivalent. Not offered 1990–91.]

[306 Greek Lyric Poetry
Fall. 4 credits. Prerequisite: Classics 203 or 204 or equivalent. Not offered 1990–91.
A survey of selected "lyric" poems from Archaic to Hellenistic times.]

[307 Plato
Fall. 4 credits. Prerequisite: Classics 203 or 204 or equivalent. Not offered 1990–91.]

[308 New Testament Greek
Fall. 4 credits. Prerequisite: at least three terms of college-level Greek or permission of instructor. Not offered 1990–91.
Selected readings from the Gospels and other New Testament writings will aim at giving students the ability to translate Koine Greek with relative ease.]

310 Greek Undergraduate Seminar: Sophocles' *Oedipus*
Spring. 4 credits. Prerequisite: two 200-level courses in Greek or permission of instructor.
T R 10:10–11:25. F. Ahl.

[311 Greek Philosophical Texts (also Philosophy 411)
Fall or spring. Up to 4 credits. Prerequisites: knowledge of Greek and permission of instructor. Not offered 1990–91.
Hours to be arranged. T. H. Irwin.
Reading of Greek philosophical texts in the original.]

313 Greek Epic
Fall. 4 credits. Prerequisite: Classics 206 or equivalent.
M W F 12:20. K. Clinton.
Reading in Homer's *Iliad.* Homer's literary technique will be emphasized, and there will be discussion of the archaeological background of Homeric epic.

401–402 Independent Study in Greek, Undergraduate Level
401, fall; 402, spring. Up to 4 credits.
Hours to be arranged. Staff.

417 Advanced Readings in Greek Literature: Aeschylus
Fall. 4 credits. For advanced undergraduates and graduate students. Prerequisite: two terms of 300-level Greek or permission of instructor.
T R 11:40–12:55. H. Pelliccia.

418 Advanced Readings in Greek: Homer
Spring. 4 credits. For advanced undergraduates and graduate students. Prerequisite: two terms of 300-level Greek or permission of instructor.
T R 8:40–9:55. P. Pucci.

419 Advanced Greek Composition
Fall. 3 credits. Prerequisite: Classics 209–210 or equivalent.
T R 10:10–11:25. J. Rusten.

[442 Greek Philosophy
Fall or spring. 4 credits. Not offered 1990–91.]

[605–606 Graduate Survey of Greek Literature
605, fall; 606, spring. 4 credits each term. Prerequisite: linguistic proficiency to be determined by instructor. Not offered 1990–91; next offered 1991–92.
M W F 11:15.
A survey of Greek literature in two semesters. Classics 605: Greek literature from Homer to the mid-fifth century. Classics 606: Greek literature from the late fifth century to the Empire.]

671 Graduate Seminar in Greek: Ritual and Tragedy
Fall. 4 credits.
W 1:25–4:25. P. Pucci.

672 Graduate Seminar in Greek: Plato
Spring. 4 credits.
W 1:25–4:25. P. Mitsis.

701–702 Independent Study for Graduate Students in Greek
701, fall; 702, spring. Up to 4 credits.
Hours to be arranged. Staff.

Latin

105 Latin for Beginners
Fall. 4 credits.
M T W F 9:05, L. B. Sellers; M T W F 11:15, R. Morello; M T W F 12:20, I. Hohendahl; M T W F 1:25, J. DeFilippo.
An introductory course in the essentials of Latin, designed for rapid progress toward reading the principal Latin writers.

106 Elementary Latin
Spring. 4 credits.
M T W F 10:10, M. Kwintner; M T W F 11:15, P. Wilson; M T W F 12:20, K. Clinton.
A continuation of Classics 105, using readings from various authors.

107 Intensive Latin
Spring or summer. 6 credits.
Spring: M W F 9:05 and T R 8:40–9:55. I. Hohendahl.
Prepares students in one term for 200-level Latin.

205 Intermediate Latin
Fall or summer. Prerequisite: Classics 106, 107, or 108 or placement by departmental examination.
Fall: M W F 11:15, J. DeFilippo; M W F 1:25, H. Pelliccia.
Readings in Latin prose.

[207 Catullus
Spring. 3 credits. Prerequisite: Classics 106, 107, or 108 or one term of 200-level Latin. Not offered 1990–91.
M W F 11:15.]

208 Roman Drama
Spring. 3 credits. Prerequisite: Classics 106, 107, or 108 or one term of 200-level Latin.
M W F 9:05. D. Shanzer.

216 Vergil
Spring. 3 credits. Prerequisite: Classics 106, 107, or 108 or one term of 200-level Latin.
M W F 1:25. J. Ginsburg.

241 Latin Composition
Fall. 3 credits. Prerequisite: Classics 106, 107, or 108 or equivalent.
M W F 2:30. J. Ginsburg.

[242 Latin Composition
Spring. 3 credits. Prerequisite: Classics 241 or equivalent. Not offered 1990–91.]

312 Latin Undergraduate Seminar: The Fall of the Roman Republic (also Classics 411)
Fall. 4 credits. Prerequisite: two terms of 200-level Latin or permission of instructor.
M W F 10:10. F. Ahl.
Selections from Cicero (letters and speeches), Caesar's *Civil Wars*, and Suetonius's *Life of Caesar* illustrating the characters and issues of the Roman Civil Wars between 49 and 44 B.C.

[314 The Augustan Age
Fall. 4 credits. Prerequisite: two terms of 200-level Latin or permission of instructor. Not offered 1990–91.

[315 Roman Satire
Spring. 4 credits. Prerequisite: two terms of 200-level Latin or permission of instructor. Not offered 1990–91.]

[316 Roman Philosophical Writers
Spring. 4 credits. Prerequisite: two terms of 200-level Latin. Not offered 1990–91.]

[317 Roman Historiography
Fall. 4 credits. Prerequisite: one term of 300-level Latin or permission of instructor. Not offered 1990–91.
J. Ginsburg.
Reading of three "conspiracy narratives" from the works of Sallust, Livy, and Tacitus. Class discussion will focus both on historical questions (such as the causes of discontent that gave rise to these episodes in Roman history and why the Romans defined these events as conspiracies) and on the narrative techniques used by Roman historians to impose an interpretation on their material.]

318 Roman Elegy: Tibullus, Propertius, Ovid
Spring. 4 credits. Prerequisite: two terms of 200-level Latin.
M W F 9:05. G. Davis.

[366 Late Latin: Epic after Vergil
Fall. 4 credits. Not offered 1990–91.
T R 10:10–11:25. F. Ahl.
Selections from Ovid, Lucan, Statius, Silius, and Prudentius to illustrate the development and refinement of Latin epic during the Roman Empire.]

[368 Medieval Latin Literature
Fall. 4 credits. Prerequisite: two terms of 200-level Latin or permission of instructor. Not offered 1990–91.]

411 Advanced Readings in Latin Literature (also Classics 312)
Fall. 4 credits. Prerequisite: two terms of 300-level Latin or permission of instructor.
M W F 10:10. F. Ahl.
For description, see Classics 312.

412 Advanced Readings in Latin Literature
Spring. 4 credits. For advanced undergraduates and graduate students. Prerequisite: two terms of 300-level Latin or permission of instructor.
T R 11:40–12:55. D. Shanzer.

[441 Advanced Latin Composition
Spring. 3 credits. For undergraduates who have completed Latin 241–242 and for graduate students. Not offered 1990–91.]

451–452 Independent Study in Latin, Undergraduate Level
451, fall; 452, spring. Up to 4 credits.
Hours to be arranged. Staff.

468 Augustine's *Confessions*
Fall. 4 credits. Prerequisite: two terms of 200-level Latin or permission of instructor.
M 2:30–4:30. D. Shanzer.
This course, intended for advanced undergraduates and for graduate students, will consist of a close reading and interpretation of all 13 books of Augustine's *Confessions* in Latin. Augustine will be studied in his historical context. Attention will be devoted to his early career as student and rhetorician, and the process of his conversion from Manichaeism to philosphy, and thence to Christianity. The *Confessions* is a work of multiple literary layers: the class will concern itself with its rhetorical structure, what it owes to the Bible and Christian prayer, what it owes to various pagan literary traditions, such as soliloquy, philosophical autobiography, and epic. Since the books 12 and 13 of the *Confessions* are a commentary on Genesis, some work on the Christian exegetical tradition is anticipated as well as discussion of the famous problem of literary unity in the *Confessions*. Students with backgrounds other than in Classics are most welcome. There will be one term paper, one longer report, and various short oral presentations.

625–626 Graduate Survey of Latin Literature
625, fall; 626, spring. 4 credits each term. Prerequisite: linguistic proficiency to be determined by instructor.
M W F 11:15. D. Mankin.
A survey of Latin literature in two semesters. Classics 625: Roman Satire. [Classics 626: not offered 1990–91.]

751–752 Independent Study for Graduate Students in Latin
751, fall; 752, spring. Up to 4 credits.
Hours to be arranged. Staff.

Classical Art and Archaeology

[219 Mediterranean Archaeology (also Near Eastern Studies 267)
Fall. 3 credits. Not offered 1990–91.
M W F 12:20. J. Coleman.
An examination of the archaeological bases of ancient Mediterranean civilization with special focus on contacts and interrelationships in the Bronze Age (ca. 3500-1100 B.C.). Topics include the Neolithic of Anatolia, Greece, and the Near East; the rise of civilization in Egypt; the Bronze Age states of Syro-Palestine (Ebla, Ugarit, Byblos, etc.); Cyprus, copper, and the Alasia question; the Hittites and Bronze Age Anatolia; the early Bronze Age in Greece; Minoans, Mycenaeans, and their eastern and western contacts; the Bronze Age in the western Mediterranean; and ancient ships and trade in the late Bronze Age.]

220 Introduction to Art History: The Art of the Classical World (also History of Art 220)
Spring. 3 credits.
M W F 10:10. A. Ramage.
The sculpture, vase painting, and architecture of the ancient Greeks, from the Geometric period through the Hellenistic, and the art of the Romans from the early republic to the late empire.

221 Minoan-Mycenaean Art and Archaeology (also Archaeology 221 and History of Art 221)
Fall. 3 credits. Students may not obtain credit for both this course and Classics 319.
M W F 10:10. P. I. Kuniholm.
The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia.

[233 Archaeology in Action II (also Archaeology 233)
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
M 2:30; two labs to be arranged.
P. I. Kuniholm.
Objects from the Classical, Hellenistic, and Roman periods are "dug" out of Cornell basements, identified, cleaned, restored, catalogued, and photographed and are considered in their appropriate historic, artistic, and cultural contexts.]

[250 Etruscan Art and Archaeology (also Archaeology 250 and History of Art 223)
Fall. 3 credits. Not offered 1990–91.
J. Whitehead.
An examination of Etruscan culture for both its uniqueness and its diversity. The first part of the course will trace the history and the art of the Etruscans, beginning with questions of their origins and ending with their assimilation into the Roman state. Developments in artistic style run parallel to those in Greek art and illuminate the unique Etruscan character. The second half will focus on the individual cities and how strongly they differed from one another in their art, customs, practices, and relationship to Rome.]

309 Dendrochronology of the Aegean (also Archaeology 308 and History of Art 309)
Fall or spring. 4 credits. Limited to 10 students. Prerequisite: permission of instructor.
M 12:20; two labs to be arranged.
P. I. Kuniholm.
Participation in a research project of dating modern and ancient tree-ring samples from the Aegean and Mediterranean. Supervised reading and laboratory work. A possibility exists for summer fieldwork in Greece or Turkey.

[319 Minoan-Mycenaean Archaeology
Spring. 4 credits. Prerequisite: participants are expected already to have completed some course work in Mediterranean or Classical archaeology (e.g., Classics 219/Near Eastern Studies 267, Classics/History of Art 220). Students may not obtain credit for both this course and Archaeology/Classics/History of Art 221. Not offered 1990–91.
T R 10:10–11:25. J. Coleman.
The art and archaeology of Greece and the Aegean in the Bronze Age (ca. 3500–1100 B.C.). Detailed treatment is given to the Minoan and Mycenaean civilizations of the middle and late Bronze Age. Other topics include the Neolithic "background" of Aegean civilization, the early Bronze Age in Greece, Crete, and the Cycladic islands; the volcanic eruption of Thera; and Aegean interconnections with Cyprus and the Near East and, in particular, the evidence for Mycenaean shipping, trade, and immigration from 1400–1100 B.C. Two papers will be presented in class, and these will subsequently be handed in and graded.]

[320 Arts and Monuments of Athens (also History of Art 320)
Spring. 4 credits. Prerequisite: Classics 220 or permission of instructor. Not offered 1990–91.
M W F 1:25. J. Coleman.
Recent developments in the archaeology of Athens from the Geometric period to late antiquity. Topics will include consideration of the nature of Athenian society and an assessment of the influence of Athens on the rest of the Greek world and beyond.]

[321 Archaeology of Cyprus (also History of Art 321)
Spring. 4 credits. Prerequisite: Classics 220 or permission of instructor. Not offered 1990–91.
Study of Cyprus from its first settlement in the Neolithic period until the end of the ancient world. Special emphasis on the Bronze Age, the acme of Cypriot culture, and the neighboring civilizations. Lectures and oral reports by students.]

[322 Greeks and Their Neighbors (also History of Art 328)
Fall. 4 credits. Prerequisite: Classics 220 or 221, or permission of instructor. Not offered 1990–91.
T R 1:25–2:40. J. Coleman.
A study of the archaeological and other evidence for the interaction between Greek civilization and the eastern and western Mediterranean from the thirteenth to the fourth centuries B.C.E. The course will focus on Greek relationships with Phoenicia and the rest of the Levant, Cyprus, Anatolia, and the Etruscans in the post-Bronze Age period.]

[323 Painting in the Greek and Roman World (also History of Art 323)
Spring. 4 credits. Not offered 1990–91.
M W F 2:30. A. Ramage.
Vase painting, wall painting, and mosaics from the ancient Mediterranean world will be studied in conjunction with the testimony of Greek and Roman sources. An attempt will be made to grasp the concerns and achievements of the Classical painters.]

[325 Greek Vase Painting (also History of Art 325)
Spring. 4 credits. Prerequisite: previous enrollment in a History of Art or Classics course or permission of instructor. Not offered 1990–91.
M W F 10:10. A. Ramage.
A stylistic and iconographical approach to an art in which the Greeks excelled. The course will be arranged chronologically, from the early (eleventh century B.C.), anonymous beginnings to the "personal" hands of identifiable masters of the fifth and fourth centuries B.C. Styles other than Attic will be stressed.]

[326 Art and Archaeology of Archaic Greece (also History of Art 326)
Fall. 4 credits. Not offered 1990–91.
A study of the formative period of Classical Greek civilization, based primarily on the evidence of art and archaeology. Attention is concentrated on the beginnings and early developments of architecture, sculpture, and painting.]

[327 Greek and Roman Coins (also History of Art 327)
Fall. 4 credits. Prerequisite: History of Art 220 or Classics 220 or permission of instructor. Not offered 1990–91.
M W F 11:15. A. Ramage.
The varied issues of Greek cities and the Roman state are examined. Coins are considered as art objects as well as economic and historical documents. The changes in design, value, and metals from the origins of coinage to the late Roman period are studied. Lectures, student presentations, and work with actual examples.]

[328 Greek Architecture (also History of Art 324)
Fall. 4 credits. Prerequisite: Classics 220 or permission of instructor. Not offered 1990–91.]

[329 Greek Sculpture (also History of Art 329)
Spring. 4 credits. Not offered 1990–91.
This course will examine ancient Greek sculpture, both three-dimensional and two-dimensional, from the Archaic period to the Hellenistic. We will study various aspects of the works: technological advances in handling materials, the changing ideology of the sculptors, regionality of styles, and taste of individual patrons. Sculptures of marble and bronze will be considered, and comparisons with other ancient civilizations that influenced the Greek will be undertaken.]

[330 Art in Pompeii: Origins and Echoes (also History of Art 330)
Spring. 4 credits. Not offered 1990–91.]

350 Arts of the Roman Empire (also History of Art 322)
Fall. 4 credits. Prerequisite: Classics 220 or permission of instructor.
T R 10:10–11:25. J. Whitehead.
The visual arts in the service of the first world state. The course starts with the Etruscan and Republican period but concentrates on monuments of the Imperial era in Italy and the provinces until the time of Constantine.

[356 Practical Archaeology (also Archaeology 356)
Spring. 4 credits. Prerequisite: one course in archaeology. Not offered 1990–91.
M W F 11:15, plus workroom sessions to be arranged. J. Coleman.
The fundamentals of archaeological fieldwork, including techniques of excavation and recording. Hands-on experience with cataloging of ancient objects in the Herbert F. Johnson Museum of Art and the collection of the Department of Classics. No previous fieldwork required. Especially recommended for those planning to participate in summer field programs such as the Cornell project at Halai and East Lokris in Greece.]

360 Field Archaeology in Greece (also Archaeology 360)
Summer. 6 credits.
J. Coleman.
A six-week archaeological field training program in conjunction with the Cornell Halai and East Lokris Project. For information and application forms, contact Professor John E. Coleman, Department of Classics, 120 Goldwin Smith Hall.

361 Summer Program in Etruscan Archaeology at La Piana near Siena, Italy (also Archaeology 361)
Summer. Non-credit or 3 credits.
J. Whitehead.
A five-week program that offers a field school in excavation techniques, handling of artifacts, and archaeological recording. For information and application forms, contact Professor Jane Whitehead, Department of Classics, 120 Goldwin Smith Hall.

[423 Ceramics (also Archaeology 423 and History of Art 423)
Fall. 4 credits. Prerequisite: Classics 220 or History of Art 220 or permission of instructor. Not offered 1990–91.
T 2:30–4:30. A. Ramage.
Greek and Roman pottery specimens from several Near Eastern and Mediterranean sites will be studied to provide direct experience in one of the basic prerequisites of archaeological excavation— the identification and dating of pottery types. A report, delivered in class, will concern ancient ceramic materials or particular types and periods. Practical experience in making and decorating pottery will be encouraged.]

[431 Greek Sculpture (also History of Art 431)
Fall. 4 credits. Not offered 1990–91.]

[432 Sardis and the Cities of Asia Minor (also Archaeology 432 and History of Art 432)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
T 2:30–4:30. A. Ramage.
The growth and interaction of the Greek and Roman cities and their art will be studied using the finds and conclusions from the Cornell-Harvard excavations at Sardis as a focal point. The magnificent works of art and architecture will be set beside domestic remains and objects of daily life. We shall examine local themes in the context of the history, the topography, and the larger political and economic scene in Asia Minor. We shall concentrate on the Golden age of Lydia and Ionian Greece.]

[434 The Rise of Classical Greece (also Archaeology 434 and History of Art 434)
Spring. 4 credits. Prerequisite: Classics 220 or 221, History of Art 220 or 221, or permission of instructor. Not offered 1990–91.
T R 2:55–4:25. P. I. Kuniholm.
The art and archaeology of the Greek dark ages. Topics include site reports, pottery, metalworking, the introduction of the alphabet, the beginnings of coinage, and links with Anatolia and the Near East.]

[435 Seminar on Roman Art: Social Stratification in Roman Art (also History of Art 427)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
M 2:30–4:30. J. Whitehead.
The course begins with a chronological overview of Roman art and with concepts of romanitas: underlying all this diversity is there an essence that can be considered purely Roman? The rest of the course will explore the dichotomies, the contrasting ideals and ideologies as expressed in the art of the different segments of society: artisan and aristocrat, freedmen and emperor, provincial and urbanite, foreign and domestic, rich and nouveau riche. It seeks to define the degree to which artistic taste is bound to social class.]

475–476 Independent Study in Classical Archaeology, Undergraduate Level
475, fall; 476, spring. Up to 4 credits.
Hours to be arranged. Staff.

[629 Graduate Seminar in Bronze Age Archaeology
Fall. 4 credits. Not offered 1990–91.
T 1:25–4:25. J. Coleman.
Cyprus and its interconnections with the Aegean and the Near East in the middle and late Bronze Ages. Special focus on the problems of trade between Cyprus and the Aegean in the late Bronze Age.]

[630 Graduate Seminar in Classical Greek Archaeology
Fall. 4 credits. Not offered 1990–91.
M 1:25–4:25. J. Coleman.
The rise of Greek civilization in the seventh and sixth centuries B. C. is exemplified in art, architecture, and daily life. Focus on the evidence for the formation of the Greek polis, such as religious and military architecture, density of settlement, and interrelations between towns, cities, and regions.]

721–722 Independent Study for Graduate Students in Classical Archaeology
721, fall; 722, spring. Up to 4 credits.
Hours to be arranged. Staff.

Greek and Latin Linguistics

[421 Greek Comparative Grammar (also Linguistics 609)
Fall. 4 credits. Prerequisite: thorough familiarity with the morphology of classical Greek. Not offered 1990–91.
A. Nussbaum.
The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.]

[422 Latin Comparative Grammar (also Linguistics 610)
Fall or spring. 4 credits. Prerequisite: thorough familiarity with the morphology of classical Latin. Not offered 1990–91.
A. Nussbaum.
The prehistory and evolution of the sounds and forms of Classical Latin as reconstructed by comparison with the other Indo-European languages.]

[424 Italic Dialects (also Linguistics 612)
Fall. 4 credits. Not offered 1990–91.
T R 11:40–12:55. A. Nussbaum.
The phonology and morphology of Faliscan, Oscan, and Umbrian studied through the reading of epigraphical texts. Attention to the relationships of these languages to Latin and the question of Proto-Italic.]

[425 Greek Dialects (also Linguistics 611)
Fall. 4 credits. Not offered 1990–91.
M W F 9:05. A. Nussbaum.
A survey of the dialects of ancient Greek through the reading and analysis of representative epigraphical and literary texts.]

[426 Archaic Latin (also Linguistics 614)
Spring. 4 credits. Prerequisite: reading knowledge of Latin. Not offered 1990–91.
Hours to be arranged. A. Nussbaum.
Reading of epigraphic and literary preclassical texts with special attention to archaic and dialectal features. The position of Latin among the Indo-European languages of ancient Italy, the rudiments of Latin historical grammar, and aspects of the development of the literary language.]

[427 Homeric Philology (also Linguistics 613)
Spring. 4 credits. Prerequisite: ability to read Homeric Greek. Not offered 1990–91.
Hours to be arranged. A. Nussbaum.
The language of the Homeric epics: dialect background, archaisms, epicisms, modernizations. The notion of a Kunstsprache: its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.]

[429 Mycenaean Greek (also Linguistics 615)
Fall or spring. 4 credits. Prerequisite: thorough familiarity with the morphology of Classical Greek. Not offered 1990–91.
A. Nussbaum.
An introduction to the epigraphy, language, and content of the Linear B tablets with special attention to their implications for Greek historical grammar and dialectology.]

Sanskrit

[131–132 Elementary Sanskrit (also Sanskrit 131–132)
131, fall; 132, spring. 3 credits each term. Not offered 1990–91; next offered 1991–92.
M W F 2:30. C. Minkowski.

251–252 Intermediate Sanskrit (also Sanskrit 251–252)
251, fall; 252, spring. 3 credits each term. Prerequisite: Classics 132 or equivalent.
Hours to be arranged. C. Minkowski.
Readings from the literature of Classical Sanskrit. Fall: selections from the two Sanskrit epics, the *Mahabharata* and the *Ramayana*. Spring: more selections from the epics, and from either Sanskrit story literature or from Sanskrit dramas.

Also see Classics 390 and Classics 391 (Classical Civilization listings).

Honors Courses

370 Honors Course
Spring. 4 credits. To be taken in the junior year.
A program of reading and conferences centered on an author or topic chosen in accordance with the special interests of the student and instructor.

471 Honors Course
Fall. 4 credits. To be taken in the senior year. A continuation of Classics 370, with change of author or topic.

472 Honors Course: Senior Essay
Spring. 4 credits. For students who have successfully completed Classics 471. Topics must be approved by the student's honors committee at the end of the first term of the senior year.

COMPARATIVE LITERATURE

G. Davis, chair (139 Goldwin Smith Hall, 255-4155); W. Cohen, graduate faculty representative (343 Goldwin Smith Hall, 255-6279); W. Kennedy, director of undergraduate studies (163 Goldwin Smith Hall, 255-6795); C. Arroyo, A. Caputi, C. Carmichael, D. Castillo, J. Culler, G. Davis, G. Gibian, D. Grossvogel, P. Hohendahl, W. Holdheim (Emeritus), J. Monroe, E. Rosenberg, L. Waugh

Also cooperating: D. Bathrick, P. Carden, M. Hays, C. Kaske, D. Mankin, J. Ngate, L. Olschner, J. Piedra, J. Rusten, G. Waite

The Department of Comparative Literature provides a broad range of courses in European as well as non-European literatures. Courses variously stress significant authors, themes, problems, styles, genres, historical periods, and theoretical perspectives. The departmental offerings reflect current interdisciplinary approaches to literary study, hermeneutics, rhetorical analysis, semiotics, deconstruction, Marxism, reception aesthetics, feminism, formalism, and psychoanalysis.

The Major

The major enables students to develop an integrated knowledge of Western literature, to strengthen their reading and writing abilities, and to prepare for careers demanding analytical, interpretive, and evaluative skills. Prospective majors should consult with the director of undergraduate studies. After declaring a major, a student chooses an adviser from the department's faculty. The requirements for the major are designed to allow each student to follow a course of study that combines intellectual rigor with the pursuit of personal interests. The specific contours of such a program are worked out in consultation with the student's adviser.

Requirements for the Major

1) Five courses in Comparative Literature at the 200 level and above, including the core course listed below. A student may include up to two literature courses from other departments.

2) One core course in Comparative Literature (for 1990–91 the core courses are Comparative Literature 494 [fall] and Comparative Literature 401 [spring]), to be taken by all majors either in the spring term of their junior year or the fall term of their senior year. Students may enroll in both core courses.

3) Five courses in literature or other areas of the humanities at the 200 or higher level, to be taken in one or more foreign literature departments. Texts must be read in the original language. A student may offer one language course (conversation, composition, etc.).

4) A senior essay (Comparative Literature 493) of roughly fifty pages, to be written during the senior year under the direction of the student's adviser.

The department also encourages:

1) a program that includes broad historical coverage (e.g., Comparative Literature 201–202: Great Books, Comparative Literature 210: Ancients and Moderns); intensive study of a single genre, (e.g., Comparative Literature 320: Introduction to Caribbean Poetry, Comparative Literature 353: European Drama, 1600-1900, Comparative Literature 363–364: The European Novel); analysis of problems in literary theory (e.g., Comparative Literature 302: Literature and Theory, Comparative Literature 381: Marxist Cultural Theory, and Comparative Literature 402: Theories of Rhetoric)

2) a second foreign language, especially for students interested in graduate work in literature.

Honors

A student who completes the requirements for the major is eligible for the degree of Bachelor of Arts with honors in comparative literature. The department bases its decision on the student's achieving grades of at least B+ in the senior essay and in course work for the major, and on overall academic performance at Cornell.

Freshman Writing Seminars

Most 100-level courses may be used toward satisfying the freshman writing seminar requirements. A full description of the freshman writing seminar program may be found on p. 22.

Courses

150 Introduction to Cultural Studies (also Society for the Humanities 150)
Fall. 4 credits. Does not satisfy the freshman writing seminar requirement, but will satisfy the distribution requirement.
T R 10:10–11:25. W. Cohen.
An introduction not to culture but to the study of it. This course outlines an emergent field of inquiry concerned with the ultimately political character of meanings, values, subjectivity, and symbolization. Topics include cultural theory, mass culture/popular culture, cultures of resistance, and cultural imperialism. Examples are drawn primarily from the 1960s and their legacy. Emphasis is on responses to the Vietnam War: news coverage, documentaries, scholarship, memoirs and letters, architecture, fiction, poetry, theatre, comics, tv series, and especially popular music (Beatles, Dylan, Arlo Guthrie, Country Joe, etc.) and Hollywood films (e.g., *Apocalypse Now, Coming Home, Deer Hunter, Full Metal Jacket, Platoon, Born on the Fourth of July*—if available—and perhaps one Rambo movie).

201–202 Great Books
201, fall; 202, spring; summer, TBA. 4 credits. Comparative Literature 201 and 202 may be taken independently of each other.
Fall: M W F 11:15–12:05, W. J. Kennedy.
Spring: M W F 11:15–12:05. J. Monroe.
A reading each semester of seminal texts that represent and have shaped Western culture and hence form an essential part of the student's intellectual equipment. By analyzing, interpreting, and evaluating, students will develop critical reading abilities. 201: selections from the Bible, Homer, Dante, Rabelais, Shakespeare, and others. 202: selections from Moliere, Goethe, Blake, Flaubert, Baudelaire, Kafka, Woolf, Conrad, Eliot, Garcia-Marquez and others.

[210 Ancients and Moderns
Spring. 4 credits. Not offered 1990–91.
M W F 12:20. W. J. Kennedy.
Key texts from the Bible, Greek civilization, and Roman antiquity have had an astonishing impact on Western culture in modern times. This course compares and contrasts a selection of important themes from those texts. They will be drawn from the Bible and Nietzsche, Aeschylus and Dostoevsky, and Homer and Joyce.]

223 The Comic Theater (also Classics 223)
Spring. 3 credits. Students may not obtain credit for both this course and Classics 123.
M W F. 12:20–1:10. J. Rusten.
The origins of comic drama in ancient Greece and Rome and its subsequent incarnations especially in the Italian renaissance (*commedia erudita* and *commedia dell'arte*), Elizabethan England, seventeenth-century France, the English Restoration, and Hollywood in the thirties and forties. Chief topics will be the growth of the comic theatrical tradition and conventions; techniques and themes of comic plots (trickster, parody, farce, caricature); and the role of comedy in society. All readings in English.

235 Modern Greek Poetry and Politics (also Classics 235, 3 credits, and Government 335, 4 credits)
Fall. 3 credits.
T R 1:25–2:40. G. Holst-Warhaft.
The history of modern Greece has been marked by a series of political crises that have resulted in deep divisions in society. Greek poetry has reflected these crises and divisions; the poetry of nineteenth- and twentieth-century Greece will thus be interpreted in its historical and political context. It will concentrate on four periods in which the interaction has been particularly strong. The continuity of ancient Greek myths in modern Greek poetry will also be explored. Students taking this course as Government 335 for 4 credits must write an additional paper on a political topic.

236 Greek Mythology (also Classics 236)
Fall. 3 credits.
T R 11:40–12:55. D. Mankin.
A survey of the Greek myths, with emphasis on the reconstruction of the content and significance of the myths in preliterate Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

302 Literature and Theory (also English 302/702)
Fall. 4 credits.
M W 10:10; F sections, to be arranged. J. Culler.
A study of issues in contemporary theoretical debates, with attention to structuralism, deconstruction, historicism, psychoanalysis, and feminism. Readings by R. Barthes, J. Derrida, M. Foucault, B. Johnson, J. Rose, and others. No previous knowledge of literary theory is assumed.

[320 Introduction to Caribbean Poetry
Spring. 4 credits. Not offered 1990–91.
M W F 10:10–11. G. Davis.
The primary aim of this course is to introduce major authors and themes in Caribbean poetry against the background of the historical and cultural interactions between Europeans and people of African descent in the New World. Select masterworks of four contemporary poets will be the main focus of our detailed readings: Derek Walcott, Edward Brathwaite, Aime Cesaire, and Nicholas Guillen. Topics to be explored in conjunction with the literary texts will include the relation of "creole" to metropolitan languages, the problem of cultural identity, colonizer/colonized relations, the amalgamation of European and African cultural traditions, and the quest for an "authentic" Caribbean voice. Wherever relevant to the understanding of the literary texts, examples of oral, popular culture (e.g., calypso and reggae lyrics) will receive appropriate consideration. In addition to the poetry, the class will study a small selection of West Indian novels and films that provide a concrete sense of place and social context (e.g., Jamaica Kincaid's Annie John; Jean Rhys' Wide Sargasso Sea; Eugene Palcy's film Sugar-Cane Alley).]

324 Selected Problems of Law and Religion
Fall. 4 credits. Limited to 20 juniors and seniors. A Common Learning course.
T R 8:40–9:55, C. M. Carmichael.
The experience of past generations in wrestling with issues of perennial concern and how their efforts might enhance our contemporary understanding of them. Perspectives from biblical, Jewish, Greek, and Roman antiquity and from American legal and religious history will be brought to bear on such topics as abortion, bribery, civil disobedience, contraception, death, divorce, drunkenness, individual and communal responsibility, informal marriage, limitations on self-sacrifice, rebirth, resisting or appeasing an oppressor, suicide, and unwanted salvation.

326 Christianity and Judaism
Spring. 4 credits. Not open to freshmen.
T R 10:10–11:25. C. M. Carmichael.
A study of the New Testament as a product of first-century Palestinian and Hellenistic Judaism. Other text (also in translation): Passover Haggadah.

328 Literature of the Old Testament
Fall. 4 credits. Not open to freshmen.
T R 11:40–12:55. C. M. Carmichael.
Analysis of selected material in translation.

354 Modern Drama (also Theatre Arts 327)
Spring. 4 credits.
M W 11:15–12:05. M. Hays.
Readings in European drama from Ibsen to the present.

362 The Culture of the Later Renaissance (also History 364)
Spring. 4 credits.
T R 10:10–11; disc. R and F to be arranged. W. Kennedy, C. Kaske.
Members of various departments will lecture on Luther, Michelangelo, Montaigne, Edmund Spenser, Monteverdi, Cervantes, Copernicus, and Galileo. Guest lecturers will include R. Harris-Warrick, music; Peter Dear, history; and C. Arroyo, romance studies. Lectures and discussion will undertake close reading of texts, literary and visual, and will introduce different methods of interpretation and of historical analysis. Written requirements: two short papers and a final examination.

363–364 The European Novel
363, fall; 364, spring. 4 credits. Comparative Literature 363 and 364 may be taken independently of each other.
Fall: T R 10:10–11:25. G. Gibian. Spring: T R 11:40–12:55. E. Rosenberg.
Close reading of some fifteen texts which essentially chart the course of the European novel. (The syllabus will follow generally but not strictly chronological lines, though the texts each term will be read in chronological order.) 363: Cervantes to Joyce. 364: Tolstoy to Mann. The novelists to be studied include Voltaire, Goethe, Stendhal, Balzac, Dickens, Flaubert, Dostoevsky, George Eliot, Hardy, Gide, and Kafka; readings include *Don Quixote, The Red and the Black, Madame Bovary, Crime and Punishment, Great Expectations, Middlemarch, The Mayor of Casterbridge, Portrait of the Artist as a Young Man, Death in Venice,* and *The Counterfeiters.* Analysis of novelistic subgenres: picaresque fiction, moral fable, fantasy, philosophical novel, *récit,* detective story, *Bildungsroman.* All texts to be read in English; students who command the pertinent foreign languages may, of course, read the books in the original. Two or three papers, no final exam.

[372 Selections from Contemporary World Literature
Spring. 4 credits. Limited to 15 students. Core course for majors. Not offered 1990–91.
T R 11:40–12:55. J. Monroe.
Readings of celebrated texts by contemporary authors with attention to the local and global contexts of their literary production and reception. The course will include works in various genres by such authors as Christa Wolf, Marguerite Duras, Gunter Grass, Gabriel Garcia Marquez, Salman Rushdie, Raul Zurita, Milan Kundera, Wole Soyinka, and Toni Morrison.]

394 Transatlantic Renaissance (also Spanish Literature 394)
Spring. 4 credits.
M W F 2:30–3:20. J. Piedra.
For description, see Spanish Literature 394.

403 History of Literary Theory (also Comparative Literature 603)
Spring. 4 credits. Core course for majors.
M 2:30–4:25. W. J. Kennedy.
A survey of European literary theory since Aristotle. Emphasis on major texts and on the main contours of the history of literary theory. Some consideration of literary criticism as ideology, in relation to literature, philosophy, and social history. Readings from Longinus, Nietzsche, the Russian formalists, Barthes, and others.

404 History into Fiction: Nazis and the Literary Imagination (also English 404 and NES 404)
Fall. 4 credits.
T R 11:40–12:55. E. Rosenberg.
The twelve years of Hitler's rule remain the most critical, "longest" years of the century. We shall read some seven or eight texts by Anglophone and Continental novelists (and a few playwrights) that explore salient features of the regime: Hitler's rise to power (e.g., Mann's "Mario and the Magician," Hughes's *Fox in the Attic*); civilian life in Naxi Germany (e.g., Isherwood's *Berlin Stories,* Brecht's *Private Life of the Master Race,* Grass's *Dog Years*); World War II (Böll's fiction); the Occupation (Sartre's *Flies* or Camus's *Plague,* Nabokov's "Aleppo"); the American brand (Lewis's *It Can't Happen Here,* Faulkner's "Percy Grimm"); the persecution of the European Jews (Sartre's "Childhood of a Leader," selections from Julian Barnes's novel *History of the World,* Jakov Lind's *Soul of Wood*). Historical commentary; uses of documentary materials. Brief ancillary selections by Adorno, Arendt, Sartre. Two short papers; no exam.

410 Semiotics and Language (also French Romance 400 and Linguistics 400)
Spring. 4 credits. Prerequisite: some background in an area relevant to semiotics: e.g., linguistics, philosophy, psychology, anthropology, or literature; or permission of instructor.
Hours to be announced. L. Waugh.
An introduction to the study of semiotics in general and to particular semiotic theories (e.g., those of Saussure, Peirce, Jakobson) and to language as a semiotic system. The particular topics to be discussed will depend on the interest of the students.

416 Literary Translation in the West (also German Studies 416 and Romance Studies 416)
Spring. 4 credits. Prerequisite: good reading knowledge of German or French; any other language(s) desirable.
T R 1:25–2:40. L. M. Olschner.
For description, see German Studies 416.

417 Fascism and Mass Culture (also German Studies 417, Society for the Humanities 417, and Theatre Arts 417)
Fall. 4 credits. Taught in English for advanced undergraduate and graduate students.
W 3:35–5:30. D. Bathrick.
For description, see German Studies 417.

419–420 Independent Study
419, fall; 420, spring. Variable credit. Comparative Literature 419 and 420 may be taken independently of each other.
Hours to be arranged. Staff.

[421 Old Testament Seminar
Fall. 4 credits. Not offered 1990–91.
C. M. Carmichael.
Identification and discussion of problems in selected material from the Pentateuch.]

426 New Testament Seminar
Spring. 4 credits. Limited to 20 students.
T 2:30–4:25. C. M. Carmichael.
Identification and discussion of problems in the New Testament.

[429 Readings in the New Testament (Near Eastern Studies 429)
Spring. 4 credits. Limited to 25 students. Not offered 1990–91.
M W F 1:25. J. P. Bishop.
Close readings of representative texts from the New Testament in modern scholarly editions, with the help of appropriate commentary, introductory and specialized. The focus for 1990 will be on Acts and Paul. All readings will be in English, but repeated reference to the Greek original will be made. Graduate students and undergraduates from other colleges who are interested in the material should not feel inhibited from enrolling. The approach will be primarily exegetical; that is, we will try to find out what the texts say and what they mean by what they say. Thus we can hope to stay open to scholarly and religious issues alike.]

439 Oral and Written Traditions in Africa (also French Literature 439 and Society for the Humanities 439)
Fall. 4 credits.
M 2:30–4:25. J. Ngate.
Organized around but not limited to two major African epics, *Soundjata* and *Chaka*, this course will enable us to investigate the nature, the validity, and the implications of many Francophone African writers' claims to being modern versions of the *griots* of the oral tradition. Reading knowledge of French recommended.

440 African Cityscapes: Urbanization and its Literary Representations (also Society for the Humanities 440 and French Literature 440)
Spring. 4 credits.
T 2:30–4:25. J. Ngate.
The course will seek to make sense of the evolving fate of the city in African literature in French: from being presented almost exclusively as a deathtrap for the colonized, the city has now become that ambiguous space in which it is increasingly difficult to say what it means to be African. Reading knowledge of French recommended.

450 Renaissance Poetry (also Comparative Literature 650)
Fall. 4 credits.
M 2:30–4:25. W. J. Kennedy.
A reading and discussion of key texts in lyric poetry from Italian, French, English, and other European literatures of the Renaissance. Topic for 1990: Petrarchan love poetry by women and homosexual poets. Texts by Stampa, Michelangelo, Labé, and Shakespeare.

[451 Renaissance Epic (also Comparative Literature 651)
Spring. 4 credits. Not offered 1990–91.
R 2:30–4:25. W. J. Kennedy.
A reading and discussion of key texts in narrative epic and chivalric romance from Italian, French, English, and other European literatures of the Renaissance. Topic for 1991: Ariosto, Rabelais, and Spenser.]

460 Rhetorical Conventions and European Lyric
Fall. 4 credits.
R 2:30–4:25. G. Davis.
This course will focus on a few major rhetorical strategies that have been central to the discourse of European lyric. On the assumption that these strategies may reflect universal principles of rhetoric, the class will analyze and compare lyric poetry from diverse cultural traditions (including anglophone and francophone post-colonial literatures) and historical periods (ranging from Classical Antiquity to the present). Our explorations of rhetoric across national and cultural boundaries will attend to conventions (especially recurrent *topoi*) as well as to purely formal modes of organization. Examples of seminal devices we will study are the "priamel," the "recusatio" (generic disavowal), and "hymnal style." Our discussion will take account of pertinent aspects of rhetorical theory—from Aristotle's *Rhetoric* to modern linguistics (especially speech act theory and pragmatics). Proficiency in at least one foreign language is required.

482 Latin American Women Writers (also Spanish Literature 492 and Women's Studies 481)
Spring. 4 credits. Taught in English.
T R 10:10–11:25. D. Castillo.
This course will provide a sampler of novels and short stories by and about Latin American women. We will look at the question of self-construction and issues such as the social and political concerns involved in a specifically Latin American feminine identity. All works will be read in translation (romance studies students should read originals of the two works from the Spanish.) Authors may include writers like Luiza Valenzuela (Argentina) and Rigoberta Menchú (Guatemala), Helena Parente Cunha and Clarice Lispector (Brazil), Helena Maria Viramontes and the Anzaldúa/Moraga anthology *This Bridge Called My Back* (U.S.A.), and Simone Schwarz-Bart (Guadalupe).

490 From Literary Criticism to Marxist Theory: The Early Georg Lukács (also German Studies 490 and Government 470)
Fall. 4 credits. The course is designed for advanced undergraduates and graduate students.
R 1:25–3:20. P. U. Hohendahl.
The writings of the late Lukács have occasionally obscured the importance of the young Lukács for the project of Western Marxism and critical theory. The seminar will reexamine the beginnings of neo-Marxist theory as it emerges out the integration of neo-romantic cultural criticism and contemporary social theory (Simmel, Weber). The analysis will focus on Lukács's seminal texts, especially on *Soul and Form*, *Theory of the Novel*, and *History and Class Consciousness*.

491 Mass Culture Revisited: From Popular Literature to the Culture Industry (also German Studies 491 and Society for the Humanities 491)
Fall. 4 credits. For advanced undergraduates and graduate students; taught in English. Reading knowledge of German required.
T 1:25–3:20. P. U. Hohendahl.
The purpose of this seminar is twofold: it is designed to engage in a critical dialogue with older and recent theoretical writings on mass culture (Adorno, Bausinger, C. Bürger, Howe, Huyssen, Jameson, L. Levine, MacDonald, Schenda); also, it is intended to investigate the emergence of modern mass culture in Germany. Historically, the course will focus on the period between 1830 and 1900 by tracing the transition from traditional forms of popular literature to its recasting after the industrial revolution. Special attention will be given to the relationship between established high culture and popular culture through an analysis of canon formation on the one hand and an examination of the critical and pedagogical discourse on popular literature on the other. Readings will be taken from the works of popular novelists, such as Marlitt, Courths-Mahler, Karl May, and Ganghofer. The discussion of their texts will include structural as well as contextual problems (literacy, reading public, book market).

493 Senior Essay
Fall and spring. 8 credits.
TBA. Staff.
Hours to be arranged individually in consultation with the Director of Undergraduate Studies. Approximately fifty pages to be written over the course of two semesters in the student's senior year under the direction of the student's adviser. Credit for the first semester will be awarded upon completion of the second semester.

494 Contemporary Fiction
Fall. 4 credits. Limited to 15 students. Core course for majors.
W 1:25–3:20. W. Cohen.
A survey of the period since the end of World War Two, focusing on the global impact and transformations of an originally European form. Emphasis on the power relations among various languages, nations, social systems, and continents in the modern world system. Discussion of race and empire, as well as of gender and class. Viewing of a few films; reading in history, criticism, literary theory, and social theory. Primary texts, in the following order: Nabokov, *Lolita*; Duras, *Hiroshima, Mon Amour*; Abe Kobo, *The Woman in the Dunes*; Achebe, *Things Fall Apart*; García-Márquez, *One Hundred Years of Solitude*; El Saadawi, *God Dies by the Nile*; Rushdie, *Midnight's Children*; Kundera, *The Unbearable Lightness of Being*; Wang Anyi, *Bao Town*. One oral presentation, one five-page paper, and one ten to fifteen-page paper.

497 Heidegger on Language, Art, and Poetry (also Romance Studies 497)
Fall. 4 credits.
T 2:30–4:25. C. Arroyo.
A study of "Language;" "The Origin of the Work of Art;" "What Are Poets For;" "Being, Dwelling, Thinking;" "The Question Concerning Technology;" and the "Letter on Humanism."

[498 Language Poetry (also English 468)
Spring. 4 credits. Core course for majors. Not offered 1990–91.
W 1:25–3:20. J. Monroe.
The emergence in the United States in the 1970s and 1980s of "Language Poetry" or "Language Writing" as a challenge to more familiar modes of contemporary poetry raises fundamental questions about what poetry has been, is, and should be and about the relationship between poetry, audience, and social transformation. Focusing on texts by Charles Bernstein, Bob Perelman, Ron Silliman, Rosemarie Waldrop, and others associated with the Language Poetry movement, we will explore the movement's acknowledged indebtedness to such precursors as Gertrude Stein, Louis Zukovsky, and Robert Creeley and to philosophical and theoretical writings by such figures as Ferdinand de Saussure, Valentin Voloshinov, and Ludwig Wittgenstein. Considering as well Language Poetry's critical reception over the past several years, we will attempt to arrive at an understanding of the movement's significance for theories of the avant-garde and the conditions of postmodern culture.]

603 History of Literary Theory (also Comparative Literature 403)
Spring. 4 credits.
M 2:30–4:25. W. J. Kennedy.
For description, see Comparative Literature 403.

615 Language of Myth (also Anthropology 610 and Classics 610)
Spring. 4 credits.
T 1:25–4:25. P. Pucci, J. Siegel.
An analysis of the theories on Language leading to Levi-Strauss and Derrida. Myths and the notion of "the father."

619–620 Independent Study
619, fall; 620, spring. Variable credit. Comparative Literature 619 and 620 may be taken independently of each other.
Hours to be arranged. Staff.

635 Russian Literary Criticism of the Twentieth Century (also Russian Literature 635)
Fall. 4 credits.
W 3:35–5:35. P. Carden.
For description, see Russian Literature 635.

650 Renaissance Poetry (also Comparative Literature 450)
Fall. 4 credits.
M 2:30–4:25. W. J. Kennedy.
For description, see Comparative Literature 450.

[651 Renaissance Epic (also Comparative Literature 451)
Spring. 4 credits. Not offered 1990–91.
R 2:30–4:25. W. J. Kennedy.
For description, see Comparative Literature 451.]

660 Visual Ideology (also German Studies 660)
Spring. 4 credits.
R 3:35–5:30. G. Waite.
For description, see German Studies 660.

680 Baudelaire and the Lyric
Spring. 4 credits.
T 10:10–12. J. Culler.
Study of the modern lyric, with special reference to *Les Fleurs du Mal* and to conceptions of the lyric implicit in interpretations by such critics as Benjamin, Jauss, de Man, and Riffaterre. Emphasis will fall on questions of gender and intertextuality, including the relations of Baudelaire's poems to other poetic and non-literary discourses. Reading knowledge of French required.

COMPUTER SCIENCE

G. Bilardi, K. Birman, B. Bloom, T. Coleman, R. L. Constable, B. Donald, D. Gries, J. Hartmanis, J. E. Hopcroft, D. Howe, D. Huttenlocher, D. Kozen, K. Marzullo, K. Pingali, G. Salton, F. B. Schneider, A. Segre, D. Subramanian, R. Teitelbaum, S. Toueg, C. Van Loan, S. Vavasis, V. Vazirani

The Department of Computer Science is in both the College of Arts and Sciences and the College of Engineering. A student in either college can major in computer science. The following describes the College of Arts and Sciences major.

The Major

The major has three components: a core (a minimum of 42 credits), a group of electives in computer science and related fields (a minimum of 10 credits), and a concentration outside computer science (a minimum of 14 credits). The core focuses on the central topics within computer science: the logical design of programs, data structures, and algorithms. The remaining components of the major—the related electives and the outside concentration—provide a flexible extension to the core program. In consultation with their advisers, students are expected to choose electives and an outside concentration that best suit their graduate and career plans.

Students interested in pursuing an advanced degree in theoretical computer science should concentrate in mathematics. Students preparing for advanced work in scientific computation should take Computer Science 621 (instead of Computer Science 222) and Computer Science 622 (as a related elective) and concentrate in some branch of applied mathematics. Qualified students are encouraged to concurrently major in mathematics.

Admission

The prerequisites for admission to the major are:

1) Completion of Computer Science 100–211–(or 212)–280 (or equivalent)
2) Completion of Mathematics 111–122–221 or Mathematics 191–192–293
3) A 2.75 grade-point average in all computer science and mathematics courses
4) Acceptance by the department's admissions committee

After admission, students are expected to maintain at least a 2.75 grade-point average in their major courses. Any grade below C– in a core course or related elective is not acceptable.

Core

The core consists of the following courses:

1) Calculus and linear algebra: Mathematics 111–122–221–222 or 191–192–293–294
2) Programming and systems: Computer Science 100, 211 (or 212), 314 and 410
3) Theory of computation: Computer Science 280, 381 (or 481), and 482. (One of the following may be substituted for Computer Science 280: Mathematics 332, 432, 434, or 481.)
4) Numerical analysis: Computer Science 222 or 421

Related Electives

The related electives requirement consists of three courses. One must be a computer science course or course/laboratory combination numbered above 400 that includes a substantial programming project, for example, Computer Science 412, 414/415, 417/418, 432/433 or 472/473; the other two are to be selected from the following:

Electrical engineering courses numbered 230 or higher

Operations research courses numbered 260 or higher

Mathematics courses numbered 411 or higher

Computer Science courses numbered 400 or above (except Computer Science 415, 418, 433, 600, 601, and seminar courses)

Students are expected to select related electives that complement their concentration.

Concentration

This component encourages the student to study some discipline outside of computer science in reasonable depth. The concentration consists of an approved sequence of four courses (at least 14 credits) numbered 200 or higher in some field related to the theoretical or practical aspects of computing. A list of approved concentrations is available in the Computer Science Undergraduate Office, 303 Upson Hall. Students may also design their own concentrations, subject to the approval of their adviser.

Other Requirements

Computer science majors must also satisfy the College of Arts and Sciences and university requirements. In particular, the spirit of the 15-credit electives requirement will be strictly followed. This requirement helps ensure breadth of education, and consequently no computer- or mathematics-related course can be used toward its fulfillment. In general, no courses may be used to fulfill more than one requirement. There are two exceptions: first, appropriate core courses may be used to satisfy the group IV distribution requirement, and second, in the case of a double major, the same course may be applied to both majors.

Probability and statistics courses. Computer science majors are encouraged to include at least one course in the field of probability and statistics in their program of study. Although there is no formal department of statistics at Cornell, the Department of Mathematics and the School of Operations Research and Industrial Engineering offer a wide range of probability and statistics courses suitable for computer science majors, including the following introductory two-course sequences:

Math 471, Basic Probability

Math 472, Statistics

OR&IE 260, Introductory Engineering Probability

OR&IE 370, Introduction to Statistical Theory with Engineering Applications

A less rigorous but satisfactory one-semester introduction to probability and statistics is given in either of:

Math 370, Elementary Statistics

OR&IE 270, Basic Engineering Statistics

Honors. A student may be granted honors in computer science on the recommendation of the Computer Science Academic Affairs Committee. The committee guidelines will generally be the following:

1) An overall grade-point average of not less than 3.25
2) A grade-point average for all computer science courses of not less than 3.5
3) Satisfactory completion of at least two computer science courses numbered above 600 or satisfactory completion of a significant special investigation (Computer Science 490).

Courses

For complete course descriptions, see the computer science listing in the College of Engineering section.

100 Introduction to Computer Programming (also Engineering 100)
Fall, spring, or summer. 4 credits. Students who plan to take both Computer Science 101 or 102 and 100 must take 101 or 102 first.
2 lecs, 1 rec (optional). 3 evening exams.

101 The Computer Age
Fall or summer. 3 credits. Credit is granted for both Computer Science 100 and 101 only if 101 is taken first.
2 lecs, 1 rec. 1 evening exam.

102 Introduction to Microcomputer Applications (also Agricultural Engineering 102)
Fall. 3 credits. Each lab section limited to 16 students. May be taken only for out-of-college credit by students in the College of Arts and Sciences. Not open to students in the College of Engineering or to students who have taken any prior computer courses at Cornell. Students in statutory colleges must enroll in Agricultural Engineering 102.
2 lecs, 1 lab. 2 evening exams.

107 An Introduction to SCHEME
Spring. 1 credit. Prerequisite: Introductory course in PASCAL, or equivalent programming experience.
1 lec.

172 An Introduction to Artifical Intelligence
Spring. 4 credits. Prerequisites: Computer Science 100 or 101; and precalculus level math.
3 lecs, 2 evening exams.

211 Computers and Programming (also Engineering 211)
Fall, spring, or summer. 3 credits. Prerequisite: Computer Science 100 or equivalent programming experience. Credit will not be granted for both Computer Science 211 and Computer Science 212.
2 lecs, 1 rec. 2 evening exams.

212 Modes of Algorithmic Expression
Fall. 4 credits. Prerequisite: Computer Science 100 or equivalent programming experience. Credit will not be granted for both Computer Science 211 and Computer Science 212.
2 lecs, 2 recs. 2 evening exams.

222 Introduction to Scientific Computation (also, Engineering 222)
Spring. 3 credits. Prerequisites: Computer Science 100 and Mathematics 112, 122, or 192.
2 lecs, 1 rec. 2 evening exams.

280 Discrete Structures
Fall or spring. 4 credits. Prerequisite: Computer Science 211 or 212 or permission of instructor.
3 lecs.

314 Introduction to Computer Systems and Organization
Fall, spring, or summer. 4 credits. Prerequisite: Computer Science 211 or 212 or equivalent.
2 lecs, 1 sec. 2 evening exams.

381 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: Computer Science 280 or permission of instructor.
3 lecs.

400 The Science of Programming
Spring. 4 credits. Prerequisite: Computer Science 280 or equivalent.
3 lecs.

405 Science and the Computer
Fall. 4 credits. Prerequisites: Juniors and seniors only, some scientific computing experience recommended. Not offered every year.
2 lecs, 2 evening exams.

410 Data Structures
Fall or spring or summer. 4 credits. Prerequisite: Computer Science 280 or permission of instructor.
2 lecs. 2 evening exams.

411 Programming Languages and Logics
Spring. 4 credits. Enrollment limited. Prerequisites: Computer Science 410 or permission of instructor. Not offered every year.
2 lecs.

412 Introduction to Compilers and Translators
Spring. 4 credits. Prerequisites: Computer Science 314, 381, and 481. Not offered every year.
3 lecs.

414 Systems Programming and Operating Systems
Fall. 3 credits. Prerequisite: Computer Science 314 or permission of instructor.
2 lecs. 2 evening exams.

415 Practicum in Operating Systems
Fall. 2 credits. Prerequisite: Computer Science 410. Corequisite: Computer Science 414.
1 lec.

417 Computer Graphics (also Architecture 374)
Fall. 3 credits. Prerequisite: Computer Science 211 or 212. Not offered every year.
2 lecs. 1 lab.

418 Practicum in Computer Graphics (also Architecture 375)
Fall. 2 credits. Prerequisite: Computer Science 211 or 212. Recommended: Computer Science 314. Corequisite: Computer Science 417. Not offered every year.
1 lab.

421 Numerical Solution of Algebraic Equations
Fall. 4 credits. Prerequisites: Mathematics 294 or 222, one additional mathematics course numbered 300 or higher, and knowledge of FORTRAN at the Computer Science 222 level.
3 lecs.

432 Introduction to Database Systems
Spring. 3 credits. Prerequisites: Computer Science 211 or 212 and Computer Science 410, or permission of instructor. Recommended: Computer Science 314.
2 lecs. 1 rec.

433 Practicum in Database Systems
Spring. 2 credits. Corequisite: Computer Science 432.
1 lab.

472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisite: Computer Science 410. Open to juniors, seniors, and graduate students.
2 lecs, 1 sec.

473 Practicum in Artificial Intelligence
Spring. 2 credits. Prerequisites: Computer Science 107 or 212, Computer Science 280 and 410. Corequisite: Computer Science 472.
1 lab.

481 Introduction to Theory of Computing
Spring. 4 credits. Prerequisite: Computer Science 280 or permission of instructor. Credit will not be granted for both Computer Science 381 and Computer Science 481.
3 lecs.
A faster-moving and deeper version of Computer Science 381. Corrective transfers between Computer Science 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.

482 Introduction to Analysis of Algorithms
Spring. 4 credits. Prerequisites: Computer Science 410 and Computer Science 381 or 481, or permission of instructor.
3 lecs.

486 Applied Logic (also Mathematics 486)
Spring. 4 credits. Prerequisites: Mathematics 222 or 294, Computer Science 100, and an additional course in mathematics or theoretical computer science.
2 lecs, 1 lab to be arranged.

490 Independent Reading and Research
Fall or spring. 1–4 credits.

600 Computer Science and Programming
Fall. 1 credit. Prerequisite: graduate standing in computer science or permission of instructor.
1 lec.

601 Introduction to Programming Logics
Spring. 1 credit. Prerequisite: graduate standing in computer science or permission of instructor.
1 lec.

611 Advanced Programming Languages
Fall. 4 credits. Prerequisites: Computer Science 410, and 381 or 481, or permission of instructor.
3 lecs.

612 Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: Computer Science 314, 410, and 412, or permission of instructor.
3 lecs.

613 Concurrent Programming
Spring. 4 credits. Prerequisites: Computer Science 414 and 600 or permission of instructor.
3 lecs.

614 Advanced Systems
Spring. 4 credits. Prerequisite: Computer Science 414 or permission of instructor.
2 lecs.

[615 Machine Organization
Spring. 4 credits. Prerequisite: Computer Science 314 or permission of instructor. Not offered every year.]

616 RISC Microprocessor Design
Spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
2 lecs.

621 Matrix Computations
Fall. 4 credits. Prerequisites: Mathematics 411 and 431 or permission of instructor.
3 lecs.

622 Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: Computer Science 621.
3 lecs.

632 Database Systems
Fall. 4 credits. Prerequisites: Computer Science 410 and Computer Science 432 or permission of instructor.
2 lecs.

635 Automatic Text Processing and Information Retrieval
Spring. 4 credits. Prerequisite: Computer Science 410 or equivalent or permission of instructor.
2 lecs.

643 Design and Analysis of Computer Networks
Fall. 4 credits. Prerequisite: Computer Science 414 or permission of instructor. Not offered every year.
2 lecs.

655 Mathematical Foundations for Computer Modeling and Simulation (also Mathematics 655)
Fall. 4 credits. Prerequisites: Mathematics 431 and 432, or the equivalent in both content and level of mathematical sophistication or permission of instructor. Not offered every year.
3 lecs.

661 Robotics
Fall. 4 credits. Prerequisites: Computer Science 482 and permission of instructor. Not offered every year.
3 lecs.

662 Robotics Laboratory
Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. Not offered every year.
1 lab.

664 Machine Vision
Spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms, knowledge of differential equations, and differential and transformational geometry are helpful.
3 lecs.

671 Introduction to Automated Reasoning
Fall. 4 credits. Prerequisites: Computer Science 611 and 681 and Mathematics 581. Not offered every year.
3 lecs.

672 Artificial Intelligence Programming
Spring. 4 credits. Prerequisite: Computer Science 472 or permission of instructor.
3 lecs.

681 Analysis of Algorithms
Fall. 4 credits. Prerequisite: Computer Science 381 or 481, or permission of instructor.
3 lecs.

682 Theory of Computing
Spring. 4 credits. Prerequisite: Computer Science 381 or 481, or permission of instructor.
3 lecs.

709 Computer Science Graduate Seminar
Fall or spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.

711 Topics in Programming Languages and Systems
Spring. 4 credits. Prerequisites: Computer Science 381 or 481 and Computer Science 611, or permission of instructor. Not offered every year.
2 lecs.

712 Topics in Programming Languages and Systems
Spring. 4 credits. Prerequisite: Computer Science 612 or permission of instructor. Not offered every year.
2 lecs.

713 Seminar in Systems and Methodology
Fall or spring. 4 credits. Prerequisites: Computer Science 414 and an advanced systems course such as CS613, 614, 632, or 643, or permission of instructor. Not offered every year.
2 lecs.

714 Distributed Computing
Spring. 4 credits. Prerequisites: Computer Science 414 and an advanced systems course (e.g., Computer Science 613, 614, 632, or 643) or permission of instructor. Not offered every year.
2 lecs.

715 Seminar in Programming Refinement Logics
Fall or spring. 4 credits. Prerequisite: permission of instructor.

717 Topics in Parallel Architectures
Fall. 4 credits. Prerequisite: Computer Science 612 or permission of instructor. Not offered every year.
2 lecs.

719 Seminar in Programming Languages
Fall or spring. 4 credits. Prerequisite: Computer Science 611 or permission of instructor. S-U grades only.

721 Topics in Numerical Analysis
Fall. 4 credits. Prerequisite: Computer Science 621 or 622, or permission of instructor. Not offered every year.
2 lecs.

722 Topics in Numerical Analysis
Spring. 4 credits. Prerequisite: Computer Science 621 or 622 or permission of instructor. Not offered every year.
2 lecs.

729 Seminar in Numerical Analysis
Fall or spring. 1–4 credits (to be arranged). Prerequisite: permission of instructor. S-U grades only.

[733 Selected Topics in Information Processing
Not offered every year.
2 lecs.]

734 Seminar in File Processing
Fall. Credit to be arranged. Prerequisite: Computer Science 733 or permission of instructor. Not offered every year.

739 Seminar in Text Processing and Information Retrieval
Fall or spring. Credit to be arranged. Prerequisite: Computer Science 635 or permission of instructor. S-U grades only.

[743 Topics in Fault-Tolerant Distributed Computing
Prerequisite: Computer Science 614, 643, or 714. Not offered every year.
1 lec.]

747 Seminar in Program Logic and Semantics
4 credits. Prerequisite: permission of instructor. S-U grades only. Not offered every year.

749 Seminar in Systems Modeling and Analysis
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

771 Topics in Artificial Intelligence
4 credits. Prerequisite: permission of instructor. Not offered every year.

772 Seminar in Advanced Robotics
4 credits. Prerequisite: permission of instructor. Not offered every year.

774 Proseminar in Cognitive Studies II (also Cognitive Studies 774 and Linguistics 774)
Spring. 4 credits. Prerequisite: permission of instructor.

779 Seminar in Machine Learning
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades only.

781 Topics in Analysis of Algorithms and Theory of Computing
Fall. 4 credits. Prerequisites: Computer Science 681 and 682 or permission of instructor. S-U grades only. Not offered every year.
2 lecs.

782 Topics in Analysis of Algorithms and Theory of Computing
Spring. 4 credits. Prerequisites: Computer Science 681 and 682 or permission of instructor. S-U grades only. Not offered every year.
2 lecs.

ECONOMICS

D. Easley, chair; R. Masson, graduate field representative; U. Possen, director of undergraduate studies; L. Blume, K. Burdett, T. E. Davis, R. Ehrenberg, G. Fields, E. Fisher, R. Frank, G. Hay, M. Kelly, N. Kiefer, P. Legros, T. Lyons, P. D. McClelland, M. Majumdar, J. Mitchell, T. Mitra, J. Park, R. E. Schuler, K. Shell, B. Smith, G. J. Staller, E. Thorbecke, J. Vanek, H. Y. Wan, Jr., J. Wissink. Emeritus: F. Golay, W. Isard, A. Kahn, P. O'Leary, S. Tsiang

The study of economics provides an understanding of the way economies operate and an insight into public issues. The department offers a broad range of undergraduate courses in such fields as money and banking international and comparative economics; econometrics; theory; history; growth and development; and the organization, performance, and control of industry.

Social Science Distribution Requirement

The microeconomics distribution requirement can be fulfilled with any of the following:

Economics 101, Economics 201, or Economics 203.

The macroeconomics distribution requirement can be satisfied with any of the following:

Economics 102, Economics 202, or Economics 204.

The Major

Students who wish to major in economics must have completed Economics 101 or Economics 203 and Economics 102 or Economics 204 or equivalent courses, and Mathematics 111, or its equivalent. A grade below a C will not be accepted for any of the above. Economics 203 satisfies both the introductory micro (Economics 101) and the intermediate micro (Economics 313) requirement. Similarly Economics 204 satisfies both the introductory macro (Economics 102) and intermediate macro (Economics 314) requirement.

Prospective majors should apply at the department office.

The requirements for the major beyond the introductory courses and Math 111 are: (1) Economics 313 or Economics 203, (2) Economics 314 or Economics 204, (3) Economics 319 or Economics 321, and (4) 20 credits of other economics courses listed by the Department of Economics, except that Economics 399 will not count toward the 20-credit requirement. With the permission of the major adviser, one or (in exceptional cases) two economics courses offered outside the College of Arts and Sciences may be applied to fulfill this requirement. Only courses in which a student receives a grade of C– or better will be counted towards satisfying the major requirements.

An honors program is currently being offered. Students should consult the director of undergraduate studies before May of their junior year for more information.

Students planning graduate work in economics or business are strongly encouraged to prepare themselves well in mathematics and econometrics. These students are strongly encouraged to enroll in Economics 319–320 rather than Economics 321.

Courses

101 Introductory Microeconomics
Fall, spring, or summer. 3 credits. Economics 101 is not a prerequisite for 102.
Lecs and disc.
Explanation and evaluation of how the price system operates in determining what goods are produced, how goods are produced, and who receives income, and how the price system is modified and influenced by private organizations and government policy.

102 Introductory Macroeconomics
Fall, spring, or summer. 3 credits. Economics 101 is not a prerequisite for 102.
Lecs and disc.
Analysis of aggregate economic activity in relation to the level, stability, and growth of national income. Topics discussed may include the determination and effects of unemployment, inflation, balance of payments, deficits, and economic development, and how these may be influenced by monetary, fiscal, and other policies.

105 Principles of Accounting
Summer only. 3 credits.
The principles of accounting essential to an understanding of cost control. Cost accounting: analysis and interpretation of financial statements.

201 Introduction to the American Economy
Fall. 3 credits. Prerequisites: not open to freshmen or to students who have taken any prior economics courses at Cornell.
This course is intended for students who do not plan to take advanced courses in economics. The sequence Economics 201–202 covers the same topics as are taught in Economics 101–102. The course is designed to teach the basic knowledge of economics needed to understand how economic systems function, but it will emphasize analysis of current issues. The meetings of the class are arranged by topic and will be taught by senior faculty members who specialize in the particular topics.

202 Introduction to the World Economy
Spring. 3 credits. Prerequisites: not open to freshmen or to students who have taken any prior economics courses at Cornell.
This course is intended for students who do not plan to take advanced courses in economics. A continuation of Economics 201 with a focus on international issues.

203 Microeconomics
Fall. 4 credits. Prerequisite: calculus.
Intended for students with strong analytical skills who have not taken Economics 101, 102, 201, or 202. Can be used to replace both Economics 101 and 313. This course covers the topics taught in Economics 101 and 313.
An introduction to the theory of consumer and producer behavior and to the functioning of the price system.

204 Macroeconomics
Spring. 4 credits. Prerequisite: calculus.
Intended for students with strong analytical skills who have not taken Economics 101, 102, 201, or 202. Can be used to replace both Economics 102 and 314. This course covers the topics taught in Economics 102 and 314.
An introduction to the theory of national income determination, unemployment, growth, and inflation.

205 Managerial Accounting for Planning and Control
Summer only. 3 credits. Prerequisite: a course in accounting or equivalent experience or permission of instructor.
An extension of Economics 105. Considers the accounting process primarily from a managerial rather than a financial point of view. The basics of accounting systems and financial statements are reviewed and extended to provide a basis for comparing financial and managerial perspectives. Manufacturing cost systems, operational budgeting, standard costing, and short-term managerial decision making.

301 Economics of Market Failure
Fall. 4 credits. Prerequisites: Economics 101–102.
The course will review briefly the welfare properties of the perfectly competitive market model and will then consider a range of situations in which these properties are modified and where there may be a case for some form of government intervention. The cases to be considered will include (a) the presence of externalities, pollution, and the economics of the environment; (b) the provision of public goods, the free-rider problem; (c) uncertainty and imperfect information, an analysis in the context of labor and insurance markets, and the market for medical care; (d) the regulation of natural monopoly and public utility pricing; (e) the failure of the market to achieve desired redistributional objectives; (f) direct and indirect taxation as instruments of redistribution.

302 The Impact and Control of Technological Change (also Government 302 and City and Regional Planning 440)
Spring. 4 credits.
Examines social, environmental, and economic implications of technological change in the United States in the context of possible policies and strategies of control. Several specific cases will be considered in detail, followed by a broader investigation of the problems of a modern technological society. Alternative political-economic solutions will be explored.

303 Positive and Normative Theories of Income Distribution
Spring. 4 credits. Enrollment limited. Prerequisite: permission of instructor. Cannot be applied to the major.
After examining the distinction between the terms positive and normative as used in economics, this course will explore three main questions: (1) Why is income distributed the way it is? (2) How should income be distributed? (3) What is the relationship between 1 and 2? Particular emphasis will be given to those theories of income distribution, both positive and normative, that tend to dominate discussion of these topics in America.

304 Economics and the Law
Fall. 4 credits. Prerequisite: Economics 101 is required; Economics 311 or 313 or their equivalent is recommended.
An examination, through the lens of economic analysis, of legal principles drawn from a variety of legal fields, including contracts, property, torts, and procedure. No legal training is required.

306 Economics of Defense Spending
Spring. 4 credits. Prerequisites: Economics 101–102.
The economic aspects of defense spending are analyzed. Emphasis is on the procurement of weapons systems. Topics covered include an overview of the defense budget, special characteristics of the defense market, the structure of the defense industry, and the economic behavior of defense firms.

308 Economic Analysis of Government (also Civil and Environmental Engineering 322)
Spring. 4 credits. Prerequisites: calculus plus Economics 313 or equivalent or Civil and Environmental Engineering 321.
Analysis of economic bases for government intervention in a market economy. Topics include public goods, cost-benefit analysis, public finance, environment regulation and risk management, and macroeconomic topics.

311 Intermediate Microeconomic Theory
Summer only. 4 credits. Prerequisites: Economics 101–102 or permission of instructor.
The pricing processes in a private enterprise economy are analyzed under varying competitive conditions, and their role in the allocation of resources and the functional distribution of national income is considered.

312 Intermediate Macroeconomic Theory
Summer only. 4 credits. Prerequisites: Economics 101–102 or permission of instructor.
The theory of national income determination and economic growth in alternative models of the national economy is introduced. The interaction and relation of aspects of these models of empirical aggregate economic analysis is examined.

313 Intermediate Microeconomic Theory
Fall, spring, or summer. 4 credits. Prerequisites: Economics 101–102 and calculus.
For description see Economics 311.

314 Intermediate Macroeconomic Theory
Fall, spring, or summer. 4 credits. Prerequisites: Economics 101–102 and calculus.
For description see Economics 312.

315 History of Economic Analysis
Fall. 4 credits. Prerequisites: Economics 101–102 or permission of instructor.
Early writings in economics and their relationship to current economic analysis and policy issues, for example, ancient and medieval philosophers on justice in exchange; mercantilist arguments for trade protection; early theories about the effect of monetary expansion (D. Hume); the role of the entrepreneur (Cantillon); and general competitive equilibrium (the Physiocrats). The most recent reading assignment in this course is Adam Smith's Wealth of Nations but the emphasis is on the relationship between the precursors of Adam Smith and his Wealth of Nations to modern economics analysis and current efforts to answer some of the questions raised in the early writing on economics.

317 Intermediate Mathematical Economics I
Fall. 4 credits.
Introduction of calculus and matrix algebra; problems of maximization of a function of several variables. Economic examples are used to illustrate and teach the mathematical concepts.

318 Intermediate Mathematical Economics II
Spring. 4 credits.
Advanced techniques of optimization and application to economic theory.

319 Introduction to Statistics and Probability
Fall or summer. 4 credits. Prerequisites: Economics 101–102 and calculus (Mathematics 111 or equivalent).
This course provides an introduction to statistical inference and to principles of probability. It includes descriptive statistics, principles of probability, discrete and continuous distributions, and hypothesis testing (of sample means, proportions, variance). Regression analysis and correlation are introduced.

320 Introduction to Econometrics
Spring or summer. 4 credits. Prerequisites: Economics 101–102, 319, or equivalent.
Introduction to the theory and application of econometric techniques. How econometric models are formulated, estimated, used to test hypotheses, and used to forecast; understanding economists' results in studies using regression model, multiple regression model, and introduction to simultaneous equation models.

321 Applied Econometrics
Fall or spring. 4 credits. Prerequisites: Economics 101–102 and calculus.
This course provides an introduction to statistical methods and principles of probability. Topics to be covered include analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, correlation and time series analysis. Applications from economics are used to illustrate the methods covered in the course.

323 American Economic History
Fall. 4 credits.
Problems in American economic history from the first settlements to early industrialization are surveyed.

324 American Economic History
Spring. 4 credits. Prerequisites: Economics 101–102 or permission of instructor.
A survey of problems in American economic history from the Civil War to World War I.

325 Economic History of Latin America
Spring. 4 credits. Open to upperclass students with some background in economics or history, or with permission of instructor.

326 History of American Enterprise
Spring. 4 credits. Prerequisites: Economics 101–102 or equivalents.
History of the changing structure of American business from 1800 to the present, with major emphasis upon developments after the Civil War. The focus of the course will be the changing structure of challenges (for example, the rise of unions, development of a national capital market, changing role of government) and the various responses of business organizations and entrepreneurs to those challenges.

329 Eastern Europe Today: Economics, Government, Culture (also Government 326 and Russian 329)
Fall. 4 credits.
Economics majors cannot use this course to fulfill major requirements. Introductory interdisciplinary survey of Poland, Hungary, Czechoslovakia, and Yugoslavia since World War II, with emphasis on contemporary development. The goals of the course are to examine differences (the variety of backgrounds) among East European countries, the common elements (for example, political relations with the USSR), domestic situations, the economy, and culture.

330 The Soviet Union: Politics, Economics, and Culture (also Government 330 and Russian 330)
Spring. 4 credits.
Economics majors cannot use this course to fulfill major requirements. Interdisciplinary survey of the USSR since the Revolution, with emphasis on contemporary developments.

331 Money and Credit
Fall. 4 credits. Prerequisites: Economics 101–102.
A systematic treatment of the determinants of the money supply and the volume of credit. Economic analysis of credit markets and financial institutions in the United States.

333 Theory and Practice of Asset Markets
Spring. 4 credits. Prerequisites: Economics 311 or 313, and 312 or 314, or their equivalents.
The theory and decision making in the presence of uncertainty and the practical aspects of particular asset markets are examined.

335 Public Finance: The Microeconomics of Government
Fall. 4 credits. Prerequisites: Economics 101–102 and 313, or their equivalent, and one semester of calculus, or permission of instructor.
The role of government in a free market economy is analyzed. Topics covered include public goods, market failures, allocation mechanisms, optimal taxation, effects of taxation, and benefit-cost analysis. Current topics of an applied nature will vary from term to term.

336 Public Finance: Resource Allocation and Fiscal Policy
Spring. 4 credits. Prerequisites: Economics 101–102, 313 or their equivalent and one semester of calculus, or permission of instructor.
A continuation of Economics 335 covering macroeconomics and special topics. Subjects covered include the federal debt, the budget, and government regulation and transfers, as well as problems like local public goods, the hierarchy of governmental structure, plus a variety of applied problems.

338 Macroeconomic Policy
Fall or spring. 4 credits. Prerequisite: Economics 312 or 314 or equivalent.
The use of fiscal and monetary policies for achieving full employment, price-level stability, and appropriate economic growth are studied.

341 Labor Economics
Fall. 4 credits. Prerequisites: Economics 101–102.

342 Economic Analysis of the University
Spring. 4 credits. Prerequisite: ILR 240 or Economics 311 or 313 or their equivalent.
This course seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can be usefully applied to analyze resource allocation decisions at universities. Among the topics covered are financial aid, tuition, and admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies.

347 Economics of Evaluation
4 credits.
An introduction to the methodologies used by economists to evaluate the impacts of social-action programs and legislation. General evaluation methodology, cost-benefit analysis, and econometrics are discussed. Case studies are considered to illustrate the uses of these techniques, to acquaint the student with major current government programs and legislation, and to estimate these programs' economic impacts. Throughout, the primary analytic framework used by the instructor is microeconomics.

351 Industrial Organization
Fall. 4 credits. Prerequisite: Economics 101 is required; 311 or 313 or their equivalent is recommended.
A study of markets that differ from the ideal of perfect competition (e.g., monopoly and oligopoly) and the efforts of our legal system through the antitrust laws to deal with the kinds of problems that arise in such markets. Specific topics covered include mergers, price fixing, price discrimination, predatory pricing, and vertical restraints such as resale price maintenance.

352 Advanced Topics in Industrial Organization
Spring. 4 credits. Prerequisites: Economics 101 and 351 and some knowledge of calculus. Recommended strongly: Economics 311, or equivalent.
This course is an extension of 351 and will emphasize (a) more-advanced topics in the theory of industrial organization with special attention to recent developments in the literature; and (b) empirical analysis of numerous issues relating to the structure of markets and their performance.

354 Economics of Regulation
Fall or spring. 4 credits. Prerequisite: Economics 313 or equivalent or Civil and Environmental Engineering 321.
Explores technological bases for government intervention in the private market economy, which include decreasing cost industries (natural monopolies) and technical externalities (pollution and risk). The economic implications of regulating electric, gas, and communications and transportation utilities, including pricing, service quality, efficiency incentives, and long-range planning issues, are examined in detail. Topics on environmental protection and societal risk management are also explored.

355 Departures from Rational Choice
Fall. 4 credits. Prerequisites: Economics 313 and 314, or their equivalents.
This course examines behaviors that appear inconsistent with the traditional theory of rational choice. These behaviors fall under two broad categories: (1) irrational behavior with regret, and (2) irrational behavior without regret. The first category includes, but is not limited to, behaviors that result from cognitive errors. Once people are made aware of these errors, they typically express a desire to modify their behavior in the directions called for by rational choice theory. The second category represents a deeper challenge to the traditional model. It consists of behaviors that people generally express no desire to modify despite their inconsistency with rational choice theory.

357 Economics of Imperfect Information
Spring. 4 credits. Prerequisites: Economics 101–102 and calculus.
This course covers a variety of topics in the economics of uncertainty, including basic decision theory, search theory, risk insurance, and equilibrium price dispersion.

358 Current Economic Issues
Fall or spring. 3 or 4 credits. (A research paper will be required if the 4-credit option is chosen.) Prerequisites: Economics 101–102.
The emphasis will be on the application of simple microeconomics and industrial organization concepts to the formulation of public policy in the present and recent past. Among the topics likely to be covered will be policies relating to energy, communications, and transportation; the financing and delivery of medical care, public utility, and other kinds of regulation; and the economics of inflation.

361 International Trade Theory and Policy
Fall. 4 credits. Prerequisites: Economics 101–102, 314, and calculus.
This course surveys the sources of comparative advantage. It studies commerical policy and analyzes the welfare economics of trade between countries. Some attention is paid to the institutional aspects of the world trading system.

362 International Monetary Theory and Policy
Spring. 4 credits. Prerequisites: Economics 101–102, 314, and calculus.
This course surveys the determination of exchange rates and theories of balance of payments adjustments. It also explores open economy macroeconomics, and it analyzes some of the institutional details of foreign exchange markets, balance of payments accounting, and the international monetary system.

363 International Economics
Fall. 4 credits. Prerequisite: Economics 101–102 or equivalent.
This course surveys international economics in one semester. First, it surveys the sources of comparative advantage, and it analyzes commercial policy and the institutional aspects of the world trading system. Second, it discusses exchange rates, and it studies theories of balance of payments adjustments. This course is intended primarily for government majors who are comfortable with a less technical approach to international economics.

365 Japanese Economy
Summer only. 4 credits. Prerequisites: Economics 101–102 or a course in Far Eastern history or Far Eastern politics.
The history and the present structure of the Japanese economy, concentrating on its two periods of "miraculous" growth and development and on contemporary Japanese-American economic relations.

366 The Economy of the Soviet Union
Fall. 4 credits. Prerequisites: Economics 101–102.
A survey of the Soviet economic system and Soviet economic development since 1917. Both institutional and theoretical aspects will be considered. Emphasis will be on current developments, including East-West economic competition, economic relations with the Eastern Bloc and with Western Europe, and foreign trade.

367 Comparative Economic Systems: Soviet Union and Europe
Fall. 4 credits. Prerequisites: Economics 313–314, or equivalents, or permission of instructor.
Discussion of approaches to comparison of economic systems. Consideration of abstract models (market economy, central planning, decentralized socialist market) as well as national economies (France and Sweden, Yugoslavia, and Soviet Union). Possibility of convergence of economic systems is explored.

368 Comparative Economics: United States, Europe, and the Soviet Union
Spring or summer. 4 credits. Prerequisites: Economics 101–102.
Intended for students who are not majoring in economics. European and Soviet economies after the Second World War are surveyed. The European countries studied include France and Sweden in the West, and Yugoslavia plus another country in the East. A descriptive and institutional approach is used.

369 The Economy of China
Fall. 4 credits. Prerequisites: Economics 101–102 or permission of instructor.
Examines the development of the Chinese economy and the evolution of China's economic system since 1949.

370 Issues in Poverty and Development
Fall or spring. 4 credits.
The course will introduce current issues and controversies in the field of development economics. Questions to be discussed will include: What are the obstacles to development according to the different schools of thought? Which countries have made significant progress in the last three decades and why? What are the policies that have been pursued, and how successful have they been? The required readings will be supplemented with outside speakers and film presentations.

371 Economic Development
Fall. 4 credits. Prerequisites: Economics 313 or equivalent.
Study of the problem of sustaining accelerated economic growth in less-developed countries. Trade-offs between growth, welfare, and equity; the legacy of colonialism; relevance of history and economic theory; problems of capital formation, economic planning and international specialization; and the interaction of industrialization, agricultural development, and population change are emphasized.

372 Applied Economic Development
Fall or spring. 4 credits. Prerequisite: Economics 311, 313, or equivalent.

373 International Specialization and Economic Development
Fall or spring. 4 credits. Prerequisites: Economics 101–102 or permission of instructor.
The assessment of the gains and risks and the appropriate role for specialization and trade in economic development; management of the external disequilibrium attending serious efforts to accelerate economic development; and the processes, institution, and opportunities for innovation in transferring income from the relatively developed countries to those less developed.

374 National and International Food Economics (also Nutritional Sciences 457)
Spring. 3 credits. Prerequisites: a college course in economics and junior standing or permission of instructor.
Examination of individual components essential for an understanding of the U.S. and world food economies. Analysis of the world food economy. Review and analysis of (a) the major economic factors determining the demand for food, the composition of food consumption, and nutritional intake; and (b) the major economic factors affecting food production and supply. Examination and evaluation of the effectiveness of various food policies and programs in altering food consumption patterns. Principles of nutritional planning in developing countries within the context of the process of economic and social development.

378 Economics, Population, and Development
Fall or spring. 4 credits.
The economic aspects of population and the interaction between population change and economic change are introduced. Particular attention is paid to economic views of fertility, mortality, and migration, and to the impact of population growth on economic growth, development, modernization, resources, and the environment.

381 Economics of Participation and Workers' Management
Spring. 4 credits. Prerequisites: Economics 101–102 or permission of instructor.
The theory of labor-management economies is developed systematically, and literature on that and related subjects surveyed. Theories of the participatory firm, industry, and general equilibrium are covered together with a microeconomic theory and analysis of special dimensions of the system. Efficient decision-making processes within the firm are also studied. Illustrative references to Yugoslavia and other real instances of labor participation are made throughout.

382 The Practice and Implementation of Self-Management
Fall. 4 credits.
A broad introduction to the subject of workers' self-management intended for both economists and non-economists. It contains no technical tools nor does it require prior professional knowledge: thus there are no prerequisites. The course objective is to answer 5 broad questions: (1) What is self-management? (2) Where and in what form does it occur? (3) What is its history? (4) How does it work? and (5) How is a cooperative enterprise/economy started/operated?

383 Marxist Political Economy
Summer only. 4 credits. Prerequisites: Economics 101–102 or permission of instructor.
An intensive introduction to Marxist political economy. Close reading of selected original writings of Marx and Engels. An investigation and analysis of the historical development and current theory and method of Marxist political economy. Applications of that analysis, and current debates over issues such as crisis theory and Marxist-feminist analysis.

399 Readings in Economics
Fall or spring. Variable credit.
Independent study.

416 Intertemporal Economics
Fall. 4 credits. Prerequisites: Economics 313 or equivalent, and calculus.
This course is intended for advanced economics majors who are especially interested in economic theory. Topics to be covered: (a) review of the one good Ramsey model of optimal savings and accumulation; conditions for intertemporal efficiency in production; comparative dynamics and sensitivity analysis; (b) some earlier models of capital accumulation; the roles of present value and internal rate of return in guiding investment decisions; (c) growth, exhaustible resources; pollution and conservation: discussion of the trade-offs facing a society.

419 Economic Decisions under Uncertainty
Fall. 4 credits. Prerequisites: Economics 319 and calculus.
This course provides an introduction to the theory of decision making under uncertainty with emphasis on economic applications of the theory.

445 Topics in Microeconomic Analysis—Markets and Planning
Fall or spring. 4 credits. Prerequisites: Economics 311, 313, or equivalent and one term of calculus.
This is a course of economic theory designed for upperclass undergraduates. Course contents may vary from year to year. Issues that may be examined include (1) How can economic activities be efficiently organized through the market mechanism? Why is the presence of many traders essential to efficiency? (2) What can be done if the indivisibility in production processes becomes an important hindrance to competitive pricing? (3) How can economic planning be decentralized efficiently? This course serves two purposes: (1) to introduce concepts that are novel to undergraduates and relevant to public policy but require only a modicum of analytic tooling up, and (2) to illustrate the deductive approach of modern economic analysis—how to define concepts unambiguously, how to form propositions in clear-cut fashion, and how to follow up logical implications sequentially to the conclusion.

446 Topics in Macroeconomic Analysis—Is Keynesianism Dead?
Fall or spring. 4 credits. Prerequisites: Economics 312, 314, or equivalent and one term of calculus.
The coverage of this course may vary from term to term. Presently the content of the course deals with the range of criticisms against Keynesian theory by the New Classical Economics, alias the Equilibrium School, alias the Rational Expectations School. Despite the fact that almost all intermediate macroeconomic textbooks are Keynesian in perspective, clearly Keynesian economics is currently at bay. We shall review critically, critiques to Keynesian theory.

448 Deficits, Debt and the Monetary System
Fall or spring. 4 credits. Prerequisites: Economics 313 and 314 or their equivalent.
History has witnessed many instances of fast growth of public debt—mostly the result of wars and depressions in the past, but also of peace-time deficits in recent times. Economic analysis has devoted a growing body of theoretical literature to examining the effects and the eventual outcomes of processes of debt accumulation: the variety of the results matches that of historical experiences.

The purpose of the course is to survey the relevant strands of theory, old and new, trying however to keep in touch with reality and history. The sustainability of debt growth is an elusive notion that will be critically examined with reference to alternative models and "regimes." Debt growth establishes an important intertemporal link between deficits and inflation that will be considered by studying the notion and the role of seigniorage. The policy problems posed by debt growth will be examined from three perspectives: means and ends of debt management; stabilization plans; the coexistence of high and low debt countries under an exchange rate agreement such as the European Monetary System.

473 Economics of Export-led Development
Fall or spring. 4 credits. Prerequisites: Economics 313, 314, or their equivalent.
This course will examine the phenomenon of export-led development from both the theoretical and empirical points of view. Concentration will be on experiences within the West Pacific Rim.

481 Economic Effects of Participation and Labor-Managed Systems
Fall or spring. 4 credits. Prerequisites: Economics 381 and 382.
This course applies microeconomic theory to analyzing the performance of firms in which employees either participate in the decision-making process or make all the important decisions. If a specialist in the area is lacking, Prof. Vanek may give the course as a seminar where primarily grad students will discuss topics in the literature selected through consensus of the participants.

482 Practical Aspects of Business Management of Worker Enterprises
Fall or spring. 4 credits. Prerequisite: should be taken concurrently with or following Economics 382/582, or by permission of instructor.
This course is designed to further and deepen undergraduate and graduate students' knowledge of workers' self-management democratic enterprises. It will be based primarily on dialogue and participants' own presentations of their research in relevant areas such as cooperative business law, finance, accounting, or internal work organization. The instructor will act primarily as a coordinator and resource person. Whenever possible an attempt is made to form and incorporate a self-managing cooperative enterprise. Students who have taken all three courses, Economics 381/681, 382/682, and 482, both graduate and undergraduate, are welcome to participate as teacher-student interns. They may receive additional independent study credit for this work.

483 The Technological and Product Base of Worker Enterprises, with Special Emphasis on Ecology and Solar Energy Applications
Fall or spring. 4 credits. Prerequisite: may be taken concurrently with or following Economics 382/582, or with permission of instructor. This course is designed to deepen undergraduate and graduate students' knowledge of workers' self-management and cooperation, through learning about and construction of simple energy-related technologies, to be produced in workers' enterprises. Size of the class is limited by technical, space, and instruction resources. Some of the technologies may serve as a basis for projects to be undertaken in Economics 482.

499 Honors Program
Fall and spring. 8 credits.
Consult the Director of Undergraduate Studies for details. Interested students should apply to the program in the spring semester of their junior year.

Graduate Courses and Seminars

504 Economics and the Law
Fall. 4 credits.
For description see Economics 304.

509 Microeconomic Theory I
Fall. 4 credits.
Topics in consumer and producer theory.

510 Microeconomic Theory II
Spring. 4 credits.
Topics in consumer and producer theory, equilibrium models and their application, externalities and public goods, intertemporal choice, simple dynamic models and resource depletion, choice under uncertainty.

513 Macroeconomic Theory: Static Income Determination
Fall. 4 credits.

514 Macroeconomic Theory: Dynamic Models, Growth, and Inflation
Spring. 4 credits.

516 Applied Price Theory
Spring. 4 credits.
The course emphasizes the applications of the principles of price theory to a variety of problems taken from concrete, practical settings.

517 Intermediate Mathematical Economics I
Fall. 4 credits.

518 Intermediate Mathematical Economics II
Spring. 4 credits.

519 Econometrics I
Fall. 4 credits. Prerequisites: Economics 319–320 or permission of instructor.
This course gives the probabilistic and statistical background for meaningful application of econometric techniques. Topics to be covered are (1) probability theory: probability spaces, random variables, distributions, moments, transformations, conditional distributions, distribution theory and the multivariate normal distribution, convergence concepts, laws of large numbers, central limit theorems, Monte Carlo simulation; (2) statistics: sample statistics, sufficiency, exponential families of distributions. Further topics in statistics will be considered in Economics 520.

520 Econometrics II
Spring. 4 credits. Prerequisite: Economics 519.
This course is a continuation of Economics 519 (Econometrics I) covering (1) statistics: estimation theory, least squares methods, method of maximum likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing and (2) econometrics: the general linear model, generalized least squares, specification tests, instrumental variables, dynamic regression models, linear simultaneous equation models, nonlinear models, and applications.

523 American Economic History
Fall. 4 credits.
For description see Economics 323.

524 American Economic History
Spring. 4 credits.
For description see Economics 324.

525 Economic History of Latin America
Spring. 4 credits.
For description see Economics 325.

535 Public Finance: Resource Allocation and Fiscal Policy
Fall. 4 credits.
For description see Economics 335.

536 Public Finance: Resource Allocation and Fiscal Policy
Spring. 4 credits.
For description see Economics 336.

548 Deficits, Debt and the Monetary System
Fall or spring. 4 credits.
For description see Economics 448.

551 Industrial Organization
Fall. 4 credits.
For description see Economics 351.

552 Public Regulation of Business
Spring. 4 credits.
For description see Economics 352.

554 Economics of Regulation
Fall or spring. 4 credits.
For description see Economics 354.

555 Politics and Markets
Fall. 4 credits.
For description see Economics 355.

557 Economics of Imperfect Information
Spring. 4 credits. Prerequisites: Economics 509 and statistics.
The purpose of the course is to consider some major topics in the economics of uncertain information. Although the precise topics considered will vary from year to year, subjects such as markets with asymmetric information, signalling theory, sequential choice theory, and search theory will be discussed.

561 International Trade Theory and Policy
Fall. 4 credits.
For description see Economics 361.

562 International Monetary Theory and Policy
Spring. 4 credits.
For description see Economics 362.

565 Economic Problems of Latin America
Spring. 4 credits.

567 Comparative Economic Systems: Soviet Union and Europe
Fall. 4 credits.
For description see Economics 367.

569 The Economy of China
Fall. 4 credits.
For description see Economics 369.

571 Economic Development
Fall. 4 credits.
For description see Economics 371.

572 Applied Economic Development
Fall or spring. 4 credits.
For description see Economics 372.

573 International Specialization and Economic Development
Fall or spring. 4 credits.
For description see Economics 373.

578 Economics, Population, and Development
Fall or spring. 4 credits.
For description see Economics 378.

581 Economics of Participation and Worker Management
Spring. 4 credits.
For description see Economics 381.

582 The Practice and Implementation of Self-Management
Fall. 4 credits.
For description see Economics 382

599 Readings in Economics
Fall or spring. Variable credit.
Independent study.

603 Seminar in Peace Science
Fall. 4 credits.
Among topics to be covered at an advanced level are game theory, coalition theory, bargaining and negotiation processes, cooperative procedures, microbehavior models, macrosocial processes, and general systems analysis.

605 Advanced Social Theory for Peace Scientists
Spring. 4 credits. Prerequisites: Economics 505 and knowledge of microeconomic theory. Study of diverse social science hypotheses and theories as they relate to, and can be synthesized within, multiregional, multinational, and generally multigroup conflict and cooperative frameworks. Particular attention will be given to developments stemming from microeconomics and general systems theory. Dynamic analyses will be emphasized.

610 Stochastic Economics: Concepts and Techniques
Spring. 4 credits. Prerequisites: Economics 509, 510, 513, 514, 519, and 520.
This course will review a number of techniques that have been useful in developing stochastic models of economic behavior. Among these are (a) discrete-time Markov processes, (b) dynamic programming under uncertainty, and (c) continuous-time diffusion processes. Examples of economic models will be drawn from recent literature on optimal capital accumulation and optimal savings and portfolio selection problems; permanent income hypothesis; dynamic models of price adjustment, etc. Advanced graduate students contemplating work in economic theory and econometric theory will be able to get some exposure to current research.

611 Advanced Microeconomic Theory
Fall. 4 credits.

612 Advanced Macroeconomic Theory
Fall. 4 credits.

617 Mathematical Economics
Spring. 4 credits.

618 Mathematical Economics
Fall. 4 credits.

619 Advanced Topics in Econometrics I
Fall. 4 credits. Prerequisites: Economics 519–520 or permission of instructor.
Advanced topics in econometrics, such as asymptotic estimation and test theory, robust estimation, Bayesian inference, advanced topics in time-series analysis, errors in variable and latent variable models, qualitative and limited dependent variables, aggregation, panel data, and duration models.

620 Advanced Topics in Econometrics II
Spring. 4 credits. Prerequisites: Economics 519–520 or permission of instructor.
For description see Economics 619.

623 American Economic History
Fall or spring. 4 credits.

624 American Economic History
Fall or spring. 4 credits.

626 Methods in Economic History
Fall or spring. 4 credits.

631 Monetary Theory and Policy
Fall. 4 credits.

632 Monetary Theory and Policy
Spring. 4 credits.

635 Public Finance: Resource Allocation and Fiscal Policy
Fall. 4 credits.

636 Public Finance: Resource Allocation and Fiscal Policy
Spring. 4 credits.

637 Location Theory and Regional Analysis
Fall. 4 credits. Prerequisites: Economics 509 and 517 and Econometrics.
Economic principles influencing the location of economic activity, its spatial equilibrium structure, and dynamic forces. Topics include spatial pricing policies, price competition, and relocation by firms; residential location patterns; patterns of regional growth and decline; and patterns of urbanization.

638 Public Finance: Local Government and Urban Structure
Fall or spring. 4 credits.
An integration of urban economics and location theory with local public goods and state and local public finance topics. Both equilibrium models and dynamic analyses are explored.

641 Seminar in Labor Economics
Fall. 4 credits.

642 Seminar in Labor Economics
Spring. 4 credits.

644 The Labor Market and Public Policy: A Comparative View
Fall or spring. 4 credits.

647 Economics of Evaluation (also Industrial and Labor Relations 647)
Spring. 4 credits.
For description see Industrial and Labor Relations 647.

648 Issues in Latin America
Fall or spring. 4 credits.

651 Industrial Organization and Regulation
Fall. 4 credits.

652 Industrial Organization and Regulation
Spring. 4 credits.

653 Public Policy Issues for Industrial Organizations
Spring. 4 credits. Prerequisites: Economics 509, 510, and 651.
The course takes an in-depth view of the interaction between the government and business. Methods of business control, including antitrust, price regulation, entry regulation, and safety regulation. Emphasis will be not only on the economic effects on business, but on the economics of selecting and evolving the method of control.

655 Rivalry and Cooperation
Fall. 4 credits. Prerequisites: Economics Graduate Core or instructor's permission.
In standard models, economic interaction is impersonal. Agents respond to price signals and measure their own welfare not in relative but in absolute terms; and cooperative behavior emerges only when it coincides with narrow self-interest. This course will explore the details of rivalry and cooperation in an effort to synthesize broader views of economic interaction. Topics will include the effect of concerns about relative income on wage rates, consumption, savings, and regulation; the effect of concerns about fairness on prices and wages; the conditions that foster trust and cooperation; and the role of positional competition in the distribution of economic rewards.

661 International Economics: Pure Theory and Policy
Fall. 4 credits.

662 Seminar in International Economics
Spring. 4 credits. Prerequisites: Economics 661, acquaintance with conventional trade analysis, or permission of instructor.
The course will cover advanced topics in international economics normally covered in International Economics 661.

664 International Economics: Balance of Payments and International Finance
Fall or spring. 4 credits.

670 Economic Demography and Development
Fall or spring. 4 credits.

671 Economics of Development
Spring. 4 credits.

672 Economics of Development
Fall. 4 credits. Prerequisites: first-year graduate economic theory and econometrics.
Analytical approaches to the economic problems of developing nations. Topics to be covered include: some old and new directions in development economics thinking, the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

673 Economic Development
Fall or spring. 4 credits. Prerequisites: Economics 509 and 520.
The course is concerned with theoretical and applied works that seek to explain economic development, or lack thereof, in countries at low-income levels. Specific topics vary each semester.

674 Economic Systems
Spring. 4 credits.

675 Comparative Economic Organization and Institutions
Fall. 4 credits. Prerequisites: Economics 314 and 351–352 or equivalent.
This course addresses problems of coordination, management, finance, and organizational structure in firms and, to some extent, economies. It covers topics such as coordination mechanisms for production activity, problems arising in the control of subordinate agents' behavior, decision making within firms, internal firm organization, financial institutions and loan contracts, and the market for firm control. Course material draws from literature on mechanism design and from the fields of industrial organization, finance, and comparative systems.

678 Economic Growth in Southeast Asia
Fall or spring. 4 credits.

679 Theory of Quantitative Economic Policy
Fall or spring. 4 credits.

681 Economics of Participation and Self-Management
Fall. 4 credits. Prerequisites: Economics 101–102, or permission of instructor.
For description see Economics 381. Economics 681 is given on a more advanced graduate level.

682 Seminar on Economics of Participation and Labor-managed Systems
Fall. 4 credits.

684 Seminars in Advanced Economics
Fall and spring. 4 credits.

ENGLISH

W. Wetherbee, chair; D. Fried, director of undergraduate studies (255–3492); M. Jacobus, graduate faculty representative (255–6800); E. Rosenberg, director of honors program; B. B. Adams, A. R. Slatoff, H. Spillers, G. Teskey, S. Vaughn. Emeriti: M. H. Abrams, S. Elledge, R. Elias, E. G. Fogel, M. A. Radzinowicz, W. J. Slatoff, S. C. Strout

The Department of English offers a wide range of courses in English, American, and Anglophone literature as well as in creative writing, expository writing, and film. Literature courses focus variously on the close reading of texts, the study of particular authors and genres, questions of critical theory and method, and the relationship of literary works to their historical periods and to other disciplines. The department seeks not only to foster analytical reading and lucid writing but also, through the study of literary texts, to teach students to think about the nature and value of human experience.

Students who major in English develop their own programs of study in consultation with their advisers. Some focus on a particular historical period or literary genre. Others pursue special interests in such areas as women's literature, Afro-American literature, or creative writing.

The Major

Any student considering a major in English should meet with the department's director of undergraduate studies to discuss the major and be assigned a major adviser. Copies of a brochure containing suggestions for English majors and prospective English majors are available in the department office, 250 Goldwin Smith Hall.

The Department of English recommends that its students ready themselves for the major by taking at least one preparatory course. Freshmen interested in majoring in English are encouraged to take one of the following freshman seminars: The Reading of Fiction (English 270), The Reading of Poetry (English 271), or Introduction to Drama (English 272). First-term freshmen with a score of 700 or above on the CEEB College Placement Tests in English composition or literature or 4 or 5 on the CEEB Advanced Placement Examination in English may enroll in English 270, 271, 272 as space permits (all students who have taken one freshman seminar are permitted to enroll in these courses as space permits).

English 201 and 202, a survey of major British writers, though not required for the major, are strongly recommended for majors and prospective majors, since they afford an overview of the history of English literature, providing an introduction to periods, authors, and genres that allows students to make a more informed choice of advanced courses.

In addition, The American Literary Tradition (English 275), Close Reading (English 204), and Creative Writing (English 280 or 281) are especially suitable in preparation for the major.

Requirements

Each English major must complete with passing letter grades at least 36 credits in courses approved for the major. Students may count up to four courses for the major from the category entitled "200–level Courses Approved for the Major." All English courses numbered 300 or above count toward the major. Of the 36 credits required for the major, 12 (three courses) must be taken in literature before 1800. (Courses taken for the English major may also be used to satisfy the arts college humanities distribution requirement or, in the case of creative writing courses, the expressive arts distribution requirement.)

English majors also are required to complete six credits of foreign language study (preferably in literature) in courses for which qualification is a prerequisite. Advanced placement credit does not fulfill this requirement, nor does the study of foreign literature in translation. Majors are urged to complete this requirement by the end of their sophomore year, and those who enter Cornell without sufficient preparation should begin their language study at once.

Students may count toward the English major a maximum of 12 credits in literature and creative writing courses at the 300 level or above given by such departments and programs as Comparative Literature, Theatre Arts, foreign languages, the Africana Studies and Research Center, and the Society for the Humanities. Double majors may count toward these 12 credits any courses, 300 level or above, taken in their other major if such courses are approved by their English department adviser as relevant to the study of literature.

Honors. Prospective candidates for the degree of Bachelor of Arts with honors in English should read the handout "English Department Honors Program," available in the English office. These students should discuss their qualifications with the chair of the Honors Committee during the spring term of their sophomore year, when they will be admitted provisionally to the program. During their junior year, honors candidates must take one honors seminar (English 491 or 492), which will reflect a dominant area of interest, address methods of scholarly research, and require the composition of a long end-of-term essay. Honors students are strongly encouraged to take an additional 400–level course in the field in which they plan to concentrate. On the basis of their performance, students will be officially admitted to the program at the end of the junior year. Seniors in honors enroll in a year-long tutorial (English 493 and 494) in which they work closely with a faculty member especially qualified to supervise the topic of the candidate's choosing; the year's work culminates in the writing of a scholarly honors thesis. (All seniors in the program are expected to attend informal sessions in which they discuss their work-in-progress.) More information about the program may be found in the department's brochure for honors candidates.

Courses for Nonmajors

For students not majoring in English, the department makes available a variety of courses at all levels. Some courses at the 200 level are open to qualified freshmen, and all of them are open to sophomores. Courses at the 300 level are open to juniors and seniors and to underclass students with permission of the instructor. The suitability of courses at the 400 level for nonmajors will vary from topic to topic, and permission of the instructor is required.

Freshman Seminars

As part of the Freshman Writing Seminar Program, the Department of English offers many one-semester courses concerned with various forms of writing (narrative, biographical, expository), with the study of specific areas in English and American literature, and with the relation of literature to culture. Students may elect any two of these courses during their first year to satisfy the Freshman Seminar requirement. Descriptions of Freshman Writing Seminar offerings may be found in the Freshman Seminar Program listings, available from college registrars in August for the fall term and in November for the spring term.

Especially well-qualified students who are considering a major in English are encouraged to enroll in English 270, 271, or 272.

Students who have scored 4 or 5 on the Princeton exam or 700 or better on the English Composition or CEEB test are eligible to enroll in the fall semester (space permitting) in any one of these courses. English 270, 271, and 272 will be open to all freshmen in the spring semester who have satisfactorily completed one freshman seminar. Registration is handled by the Freshman Writing Seminar Program during freshman registration.

270 The Reading of Fiction
Fall, spring, each summer. 3 credits. Each section limited to 17 students. Freshman Seminar. Recommended for prospective majors in English.
Forms of modern fiction, with emphasis on the short story and novella. Critical study of works by English, American, and Continental writers from 1880 to the present.

271 The Reading of Poetry
Fall, spring. 3 credits. Each section limited to 17 students. Freshman Seminar. Recommended for prospective majors in English. Designed to sharpen the student's ability to understand and respond to poetry, readings in the major periods, modes, and genres of poetry written in English.

272 Introduction to Drama
Fall, spring. 3 credits. Each section limited to 17 students. Freshman Seminar. Recommended for prospective majors in English. Selected works by such playwrights as Sophocles, Shakespeare, Ibsen, and Brecht introduce the chief idioms and styles of drama. The course work will consist of discussions and papers and may include a special project related to the plays being produced by the Department of Theatre Arts.

Courses for Sophomores

Although courses numbered in the 200s are primarily for sophomores, some of them are open to qualified freshmen and to upperclass students. Students may count up to four 200–level courses toward the major from

"Courses Approved for the Major" listed below, as well as all courses numbered 300 or above.

Courses Recommended for Prospective Majors

275 The American Literary Tradition
Fall, spring. 3 credits. Recommended for prospective majors in American studies. This is *not* a Freshman Seminar.
Fall: M W F 1:25–2:15. R. Gilbert.
Spring: M W F 12:20–1:10. J. Bishop.
A sequence of prominent texts from the early nineteenth through the late twentieth century, chosen to exhibit what has been accomplished in fiction, long or short, autobiography, and poetry by some American writers, male and female, black and white. A representative syllabus might include such names as Hawthorne, Whitman, Douglass, Melville, Alcott, James, Hemingway, Salinger, and Morrison.

280–281 Creative Writing
Fall, spring, summer, and winter session. 3 credits. Limited to 18 students each section. Please note the following registration procedure for Creative Writing 280–281: (Fall and spring) enrollment is by ballot only. Students interested in Creative Writing must come to the Grand Course Exchange to fill out a ballot. No pre-registration for 280–281 will be accepted. Further details will be available in registration packets and at the Grand Course Exchange.
Recommended for prospective English majors. An introductory course in the theory and practice of writing narrative prose, poetry, and allied forms. English 280 is not a prerequisite for English 281.

Courses Primarily For Nonmajors

205–206 Readings in English and American Literature
206, fall; 205, spring. 3 credits each term. Open to all undergraduates. English 205 is not a prerequisite for 206.
206: Fall, M W F 10:10–11:00. S. Parrish.
206. Covers literature since the mid-nineteenth century. Novels by such authors as Emily Bronte, Conrad, Hardy, Hemingway, Faulkner, Vonnegut, and others; poems by Browning, Housman, and Frost; plays by Shaw; and one or two contemporary writers such as Arthur Miller. Two lectures and one discussion section each week. Two short papers, two prelims, no final examination.
205: Spring, M W F 11:15–12:05. R. Farrell.
205. An introduction to some of the major texts from the beginning of the literature through the eighteenth century. The first weeks will be devoted to *Beowulf* and two selections from Chaucer's *Canterbury Tales* as samples of early yet readily understood literature. Readings from other authors include Shakespeare, Jonson, Marlowe, Donne, Pope, Swift, and Johnson.

[208 Forms of Poetry
3 credits. Not offered 1990–91.]

[210 Medieval Romance: The Voyage to the Otherworld
3 credits. Not offered 1990–91.]

227 Shakespeare
Fall, spring, summer. 3 credits. Each section limited to 25 students.
Fall: Section 1: T R 10:10–11:25, R. Parker; Section 2: T R 10:10–11:25, D. Eddy. Spring: M W F 1:25–2:15. C. Levy.
A critical study of representative plays from the principal periods of Shakespeare's career.

263 Forms of Hollywood Comedy: The 1930s and 1940s
Fall. 3 credits. Enrollment limited to 20 students.
T R 11:40–12:55. L. Bogel.
This seminar will focus on American film comedies in their relation to the historical moments that produced them and to the Hollywood production system. We will discuss comedy's social functions, its structures, its visual styles. The 1930s brought the end of silent slapstick or vaudeville comedies that relied heavily on physical humor, though artists like Charlie Chaplin (in *Modern Times*) continued these older traditions, while the Marx brothers transformed them into sound films like *A Day at the Races* and *Duck Soup*. With screwball comedy, a strong verbal and domestic tradition emerged in the 1930s. We will consider such films as *It Happened One Night, My Man Godfrey, Bringing Up Baby, His Girl Friday*, and *The Philadelphia Story*, for the ways they negotiated issues of class and gender, as well as for the ways they participated in Hollywood's star system. We will concentrate as well on satiric comedies by Preston Sturges (*Sullivan's Travels* and *The Lady Eve*) and Ernest Lubitsch (*Ninotchka* and *To Be or Not to Be*). There will be regularly scheduled, required screenings and video viewings of about fifteen films, outside class meeting hours. Students enrolling for the course will have to be free to attend these screenings, on alternate Mondays at 4:00 p.m. and Thursdays at 6:30 p.m. Students can anticipate writing viewing exercises for most films and three essays. Lab fee.

283 Writing for Readers—Reading for Writers (also Writing 283)
Spring. 3 credits. Limited to 17 students. Prerequisite: permission of the instructor.
T R 10:10–11:25. J. Martin.
This course will develop students' writing abilities by teaching them to become skilled readers of their own work as well as that of others. By studying our own preconceptions about writing and through readings on language and rhetoric, we will work to develop a critical vocabulary for evaluating writing, focusing on such issues as the role of audience, patterns of organization, the varieties of language, and the recognition and manipulation of styles. The class will focus on how writers can respond to the work of others through informed evaluations and criticisms and on how writers can learn from the evaluations of their readers. In considering how a reader can help direct and influence subsequent drafts of an essay, the writer learns to strengthen writing skills by rewriting in response to the reader's critical evaluation. In classes, in editing groups, and in written responses, students will evaluate their own work and that of others to develop effective writing and revising strategies. Students will write and revise at least eight essays during the semester. Qualified students may have the opportunity to continue the practice of reading and responding by becoming tutors in the Writing Workshop's Walk-In Service.

285 Art, Isotopes, and Analysis (also MS&E 285)
Spring. 3 credits.
M W F 11:15–12:05. D. Eddy.
The analysis of paintings and rare books and the physical concepts underlying modern analytical techniques. Each week a work of art will be discussed, focusing on the historical and technical aspects of its creation and modern analysis of it. Visual, infra-red, and x-ray examinations provide insight into the physical properties. Pigments are identified by the radiation emitted in electronic transitions. The ratio of isotopes can be used to identify the geographical origin of a particular pigment as well as being used as a dating method. Examples will be given of authentification and conservation.

286 Writing in the Humanities (also Writing 201)
Fall or spring. 3 credits. Limited to 17 students. Registrants must have completed freshman writing requirements. S-U grades with permission of instructor. Carries distribution credit as English 286.
Fall: T R 11:40–12:55. S. Davis.
Spring: T R 11:40–12:55. S. Davis.
Writing 201/English 286 helps students strengthen reading and writing skills valuable in all disciplines and particularly appropriate to the humanities. It also encourages them to reflect on what they do when they interpret and write about works of literature, philosophy, and visual art. Just what happens when we "read" such works—and what do we mean when we claim to understand them? What audience do our interpretations address, and how can we convey them in writing that is engaging and forceful? How are conflicts of interpretation resolved? How do historical knowledge and theory affect our interpretations? What kinds of knowledge and self-awareness does study in the humanities yield?

Works studied in the course challenge our understanding by their strangeness or their uncanny familiarity. They show Western reason in conflict with its real or supposed opposites—alien humanity, artistic inspiration, illusion, madness, the divine, and the will to power. Readings/viewings may include paintings by da Vinci and Velasquez; novels by Nabokov, Conrad, and Achebe; parables by Maxine Hong Kingston, Kafka, and Jesus; Plato's *Gorgias* or *Phaedrus*; Nietzsche's *Birth of Tragedy*; and Euripides' *The Bacchae*.

Students in the course write (and often rewrite) 40 pages of papers and confer frequently with the instructor.

288–289 Expository Writing
288, fall; 289, spring. 3 credits each term. Each section limited to 16 students.
Hours to be arranged. N. Kaplan and staff.
This course offers guidance and an audience for undergraduates who wish to gain skill in a variety of forms of expository writing. Students write personal, argumentative, and investigative essays on topics related to their interests, reading examples of published work in these forms and frequently reviewing each other's writing in large or small group meetings. A substantial amount of new writing or a revision of an earlier essay will be expected each week. Since the class is the primary audience for student writing, regular attendance and participation are required. Instructors and students hold regular individual conferences.

200–Level Courses Approved for the Major

Students may take up to four of the following 200–level courses for credit toward the English major.

201–202 The English Literary Tradition
Fall and spring. 4 credits. Open to all undergraduates. English 201 is not a prerequisite for 202.

201: Fall. M W F 11:15–12:05. B. Correll.
Interpretation of major works ranging from Beowulf through Milton. Surveys Old English poetry, Chaucer, medieval romances, Spenser, Shakespeare, Renaissance lyric poetry, and Milton.

202: Spring. M W F 11:15–12:05. P. Sawyer, F. Bogel.
Includes Dryden, Swift, Pope, Johnson, Blake, the major Romantic and Victorian poets, and Yeats. The course will be conducted by a combination of lectures and seminars.

204 Close Reading: An Intensive Introduction
Spring. 4 credits. Limited to 20 students per section.
Section 1: T R 11:40–12:55. F. Bogel.
Section 2: M W F 9:05–9:55. J. Bishop.
This course is designed to introduce students to the ways language operates in written texts and to the various acts we perform when we read those texts. Its aim is to prepare students for advanced work in literary studies and for a more imaginative relation to their entire verbal environment.

The course will explore poems, plays, stories, and nonfictional prose, along with a variety of everyday writings: advertisements, billboards, political slogans, bumper stickers, sweatshirts, and more.

We will explore such questions as: How do literary critics interpret texts, and how do their interpretations differ from other kinds of reading? Is literary criticism appropriate to all sorts of text, or just those designated as "literature"? Can the same text be literature at some times but not at others? Do readers create or discover the meanings of texts, and how can we distinguish between legitimate and illegitimate—or convincing and unconvincing—interpretations?

Writing assignments will be exploratory, focusing on details of the language of texts and taking forms other than that of the standard critical essay. Class will be conducted as a discussion.

[247 Major Nineteenth-Century Women Novelists
4 credits. Not offered 1990–91.]

[251 Twentieth-Century Women Novelists
4 credits. Not offered 1990–91.]

253 The Modern Novel
Fall. 4 credits.
M W F 12:20–1:10. S. P. Mohanty.
A survey of the modern novel, with some attention to its social and cultural context. We shall read novels and shorter fiction by such writers as Arnold Bennett, Conrad, Joyce, and Woolf, as well as more contemporary works by Toni Morrison and Salman Rushdie.

255 African Literature
Fall. 4 credits.
T R 10:10–11:25. B. Jeyifo.
An introduction to major African writers and literary traditions. Authors studied may include Achebe, Soyinka, Clark, Armah, Ngugi, and Amercheta.

262 Asian American Literature
Spring. 3 credits.
T R 1:25–2:40. Staff.
This course explores the diverse worlds of past and present Asian America through critical reading of selected works by Asian American writers. Emphasis is on helping students locate and develop their own points of view with regard to America as a pluralistic society with a diverse and evolving literary heritage. Topics covered include the oral tradition; the creative process for Asian American writers; incarceration and resistance; generation, gender, and community; and diversity and evolution. Students will keep a reading journal with entries focusing on connections among what is read, class discussion, and perceptions of life.

264 Ethnic Literature: Bridges and Boundaries
Spring. 4 credits.
T R 1:25–2:40. H. Mullen.
The American language that, William Carlos Williams noted, came "from the mouths of Polish mothers" has also been shaped by the oral and written traditions of Native Americans, Afro-Americans, Chicanos, and Asian Americans whose literary production will be examined in this course. Works by writers in these traditions will be studied as sites marking the emergence of a contemporary American language and literature capable of representing the diverse and particular realities of a multicultural nation. This course will focus especially on how each ethnic tradition uses the contested territories of geography, language, and gender in texts that both refer to and imaginatively construct communities and traditions based on collective experience. Discussion will focus on how each text makes connections and distinctions between individuals as well as within and among communities bound together by shared linguistic, geographical, and cultural traditions.

[265 The Afro-American Folk Tradition in American Literature (also Africana Studies 265)
3 credits. Not offered 1990–91.]

268 The Culture of the 1960s
Spring. 4 credits.
M W F 1:25–2:15, P. Sawyer.
The 1960s survive today as a quasi-mythical period and as an ongoing debate. Was it a time of dangerous experimentation with drugs, sex, and alternative "lifestyles" on the part of a pampered generation that gradually learned to straighten up and join the mainstream? Or was it a time of revolutionary hopefulness, when the Civil Rights movement and the Vietnam War stimulated a passionate critique of the racist and imperialist structures of American society? The course addresses these and other questions about that turbulent decade through a reading of novels, poems, plays, films, journalism, and historical works. Throughout, we will be attentive to ways the 1960s have been converted into nostalgia and otherwise revised by the media. Texts will be drawn from *Catch-22, The Autobiography of Malcolm X, The Port Huron Statement, The Feminine Mystique, The Armies of the Night*; poetry by Sylvia Plath and Robert Lowell; the art of Andy Warhol; the songs of Bob Dylan; and films such as *Dr. Strangelove, Hearts and Minds*, and *The Big Chill*.

290 Literature and Value
Spring. 4 credits.
T R 2:55–4:10. J. McConkey.
Each week a different member of the faculty discusses a poem, group of poems, story, play, or novel that is of particular importance to him or her, perhaps as a work that contributed to the person's decision to devote a lifetime to the study of literature or to the writing of fiction or verse, perhaps as a work that has affinity with present-day concerns. In following meetings that week, class members will discuss in detail the same or related works. Students will be encouraged to explore, in their papers for the course as well as in their discussions, the relationships between specific texts and their own experience, attitudes, and values.

Courses for Sophomores, Juniors, and Seniors

Courses at the 300 level are open to juniors and seniors and to others with the permission of the instructor. There are no specific prerequisites except as noted for English 382–383 and 384–385.

302 Literature and Theory (also English 702 and Comparative Literature 702)
Fall. 4 credits.
M W 10:10–11:00 and discussion section on Friday (time to be arranged). J. Culler.
Study of issues in contemporary theoretical debates, with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings by Barthes, Derrida, Foucault, B. Johnson, J. Rose, and others. No previous knowledge of literary theory is assumed.

[310 Old English Literature in Translation
4 credits. Not offered 1990–91.]

319 Chaucer
Fall. 4 credits.
M W F 11:15–12:05. R. Farrell.
The course will center on a close reading of the major stories from the *Canterbury Tales*, *Troilus and Criseyde*, and some of the minor works. Students will be given ample opportunity to learn Chaucer's language, so that all dimensions of the poems will be available to them. Prior knowledge of Middle English is neither expected nor required; course participants will be encouraged to follow up their own interests in class reports and papers.

[320 The Sixteenth Century—Tudor Culture
4 credits. Not offered 1990–91.]

[321 Spenser and Malory
4 credits. Not offered 1990–91.]

[322 The Seventeenth Century
4 credits. Not offered 1990–91.]

325 The Culture of the Later Renaissance (also Comparative Literature 362, and History 364)
Spring. 4 credits.
T R 10:10–11:00. C. Kaske.
Members of various departments will lecture on Luther, Michelangelo, Montaigne, Edmund Spenser, Monteverdi, Cervantes, Copernicus, and Galileo. Guest lecturers will include R. Harris-Warrick, music; Peter Dear, history; and C. Arroyo, romance studies. Lectures and

discussion will introduce different methods of interpretation and of historical analysis. Written requirements: two short papers and a final examination.

327 Shakespeare
Fall. 4 credits.
M W F 9:05–9:55. B. Adams.
An introduction to the works of Shakespeare based on a selection of major plays and sonnets designed to illustrate the range of his artistic achievement. Plays to be examined include *Romeo and Juliet, Hamlet, Othello, King Lear, Macbeth, As You Like It, The Taming of the Shrew, The Merchant of Venice, Richard II, Richard III, The Winter's Tale,* and *The Tempest.* Regularly scheduled showings of videotape productions of plays treated in lectures.

[329 Milton
4 credits. Not offered 1990–91.]

330 Restoration and Eighteenth-Century Literature
Fall. 4 credits.
T R 11:40–12:55. F. Bogel.
This course will explore the canonical writers of the age through an examination of the first major era of English imperialism, juxtaposing texts by Dryden, Behn, Defoe, Swift, and others with contemporary documents and comments on trade, exploration, and colonialism in Africa and the New World. The main theme of the course will include a definition of the structure and function of imperialist ideology; its connection with matters of literary form including the decline of drama, the development of the novel, and the rise of the novel of sentiment; its relevance to issues of racism and abolitionism; and its relation to the representation of women.

333 The Eighteenth-Century English Novel
Spring. 4 credits.
M W F 1:25–2:15. N. Saccamano.
The rise of the English novel. We will place the emergence of the novel as a dominant literary genre in the context of other intellectual and cultural developments in eighteenth-century England and will discuss what the novel's changing form can tell us about the nature of fiction and the problems of representation. Novels by Defoe, Richardson, Fielding, Smollett, Sterne.

336 American Drama and Theatre (also Theatre Arts 336)
Spring. 4 credits. Limited to 15.
T R 1:25–2:40. E. Gainor.
Major dramatists of the contemporary American theatre.

340 The English Romantic Period
Fall. 4 credits.
M W F 11:15–12:05. S. Parrish.
Readings in the major poets—Blake, Wordsworth, Coleridge, Byron, Shelley, and Keats—along with a few related letters and critical essays. By the end of the readings we will try to arrive at an understanding of what we call the "romantic revolution."

[345 The Victorian Period
4 credits. Not offered 1990–91.]

348 The Female Literary Tradition: Wollstonecraft to Woolf (also Women's Studies 348)
Spring. 4 credits.
T R 1:25–2:40. M. Jacobus.
A course designed to survey and investigate the nature of a British "female literary tradition" from the late eighteenth century to the early twentieth century, read in the light of the rich and varied feminist criticism it has attracted (questions: what might constitute a female literary tradition? How is it transmitted? forgotten? recovered? defined as "female" in the first place?). Starting with late eighteenth-century women novelists such as Inchbald, Burney, and Radcliffe, we will move by way of Wollstonecraft's writing to Austen, Edgeworth, and Mary Shelley. Mid–nineteenth-century authors will include writing by the Brontes, Gaskell, Barrett Browning, and George Eliot, as well as sensation novelists such as Braddon and Wood. We will look at some of the "new women" authors of the 1890s (Egerton, Schreiner) before turning to early twentieth-century novelists including Woolf, Radcliffe Hall, and H.D. The dual emphasis will be on an atypical or non-canonical selection of authors and texts where possible, and on feminist literary criticism; a valuable (although not essential) prerequisite might be a 200- or 300-level course in major women novelists of the period covered, such as Austen, the Brontes, or Eliot, or in feminist literary theory.

350 The Early Twentieth Century (to 1930)
Fall. 4 credits.
T R 10:10–11:25. D. Schwarz.
Critical study of major works by Hardy, Conrad, Lawrence, Joyce, Woolf, Eliot, Yeats, Hopkins, Wilde, and others. While the emphasis will be on close reading of individual works, some attempt will be made to place the authors and works within the context of literary and intellectual history. The course will seek to define the development of literary modernism (mostly but not exclusively in England), and relate literary modernism to other intellectual developments, including those in painting and sculpture.

[351 Modern Literature since 1914
4 credits. Not offered 1990–91.]

[353 Post-Colonial Literature
4 credits. Not offered 1990–91.]

356 Postmodernist Fiction
Spring. 4 credits.
T R 10:10–11:25. M. Hite.
Experimental fiction written in the post-1960 period, ranging from the encyclopedic (Pynchon's *V,* Lessing's *The Golden Notebook,* Rushdie's *The Satanic Verses*) to the gnomic (short stories by Barth, Barthelme, and Coover), and taking in along the way Atwood's *Lady Oracle,* Nabokov's *Pale Fire,* and Russ's *The Female Man.* The class will be particularly concerned with ways in which these fictions address the conventions of realism and modernism, with the strategies of reading that they elicit—or seem to elicit—and with questions of canonicity and gender.

361 Early American Literature
Fall. 4 credits.
T R 1:25–2:40. J. Porte.
American writing from the 1630s to the 1830s, including prose and poetry of the Puritans, Edwards, Franklin, Crevecoeur, Brockden Brown, Irving, Bryant, and Cooper and the early work of Poe, Hawthorne, and Emerson.

362 The American Renaissance
Spring. 4 credits.
M W F 11:15–12:05. J. Porte.
The major literary achievements of Emerson, Thoreau, Hawthorne, Melville, Whitman, and Dickinson. Other texts, and especially works of women and Afro-American authors, will be read in relation to the dominant texts of the American Renaissance.

[363 The Age of Realism and Naturalism
4 credits. Not offered 1990–91.]

[364 American Literature between the Wars
4 credits. Not offered 1990–91.]

365 American Literature since 1945
Fall. 4 credits.
M W F 2:30–3:20. L. Herrin.
This course will alternate with English 364, which surveys American literature between the two world wars. Most of the writers we will study still live and write and change. Consequently, the verdict will not be in. Fiction writers will most likely include Bellow, Nabokov, Barth, Ellison, Wright Morris, John Hawkes, Toni Morrison, and Donald Barthelme. From an anthology of contemporary American poetry we will read Robert Lowell, A. R. Ammons, Sylvia Plath, Gary Snyder, Theodore Roethke, and others. If we have time we will look at the personally engaged journalism of Norman Mailer and Joan Didion. Writers will be chosen who will give us as keen and varied and provocative a view of ourselves as possible.

366 The Nineteenth-Century American Novel (formerly The Earlier American Novel)
Fall. 4 credits.
M W F 1:25–2:15. D. McCall.
Hawthorne, Melville, James, and Mark Twain.

367 The Modern American Novel
Spring. 4 Credits.
M W F 10:10–11:00. D. Fried.
Close study of selected novels and some short stories, 1920–1945. Focus will be on such writers as Wharton, Cather, Fitzgerald, Hemingway, and Hurston, with some attention to the detective fiction of Chandler and Cain, and to the material culture of the period, including photography, movies, urban design, and the New York World's Fair of 1939/40.

[368 The Contemporary American Novel
4 credits. Not offered 1990–91.]

370 The Nineteenth-Century English Novel
Fall. 4 credits.
M W F 1:25–2:15. H. Shaw.
A study of representative works by major English novelists from Austen to Hardy. The course will view these works from a number of different perspectives, focusing on the individual texts as well as on the question of what is involved in reading them (or any other novels). The reading list will include Austen, *Pride and Prejudice,* Thackeray, *Vanity Fair,* Bronte, *Wuthering Heights,* Dickens, *Bleak House,* Eliot, *Middlemarch,* and Hardy, *Jude the Obscure.*

[371 American Poetry from Emerson to Stevens
4 credits. Not offered 1990–91.]

372 English Drama
Spring. 4 credits.
T R 10:10–11:25. S. McMillin.
Major events in the English theater from the Middle Ages to the beginning of the twentieth century. Plays by the Wakefield master, Marlowe, Shakespeare, Jonson, Dryden, Wycherley, Congreve, Sheridan, Shelley, Shaw, and others. Dramatic texts, theatrical conventions, social conditions, and their interrelationships.

376 Afro-American Literature
Spring. 4 credits.
M W F 12:20–1:10. Staff.
A study of representative works of Afro-American writers. The course will cover the broadest range of periods, genres, and styles.

Creative and Expository Writing.

381 Reading as Writing
Fall. 4 credits. Limited to 15 students by permission of the instructor on the basis of writing samples (prose) submitted in advance, preferably during preregistration.
T R 1:25–2:40. L. Fakundiny.
A course in writing about texts from a range of genres including, but not necessarily limited to, the epic, the satire, the novel; for English majors or nonmajors who have enjoyed and done well in such courses as English 270–272, 286, 288–289, 388–389 (as well as courses in English, American, and other literatures), and who have an interest in the processes by which our solitary experiences as readers evolve into written commentary accessible to the understanding and judgment of others. The course emphasizes close reading as the initial stage of an interpretive continuum that culminates in essays about individual texts. Students should be prepared to read a small group of works attentively and repeatedly, to present their readings to the class both orally and in writing and, by means of these activities, to develop a portfolio of well-crafted prose for final submission at the end of term.

382–383 Narrative Writing
Fall, 382; spring, 383. 4 credits each term. Each section limited to 15 students. Students are encouraged to take English 280–281 previously. Prerequisite: permission of instructor, normally on the basis of a manuscript.
382 Fall: M W 2:30–3:20, S. Vaughn; M W 1:25–2:15, M. McCoy; M W 11:15–12:05, D. McCall; plus conferences to be arranged. 383 Spring: M W 11:15–12:05, M. McCoy; M W 12:20–1:10, L. Herrin; T R 1:25–2:15, E. Rosenberg.
The writing of fiction; study of models; analysis of students' work.

384–385 Verse Writing
Fall or summer, 384; spring, 385. 4 credits each term. Each section limited to 15 students. Prerequisites: English 280 and 281 and permission of instructor.
384 Fall: T 1:25–3:20, A. Ammons; W 2:30–4:25, R. Morgan; 385 Spring: T 1:25–3:20, R. Morgan; W 2:30–4:25, K. McClane.
The writing of poetry; study of models; analysis of students' poems; personal conferences.

[387 Autobiography: Theory and Practice
4 credits. Not offered 1990–91.]

388–389 The Art of the Essay
Fall, 388; spring or summer, 389. 4 credits each term. Limited to 15 students. Prerequisite: permission of instructor.
388 Fall: M W 2:30–3:20 (and conferences to be arranged). C. Levy.
Interested students should submit a writing sample to Professor Levy before the beginning of the term.

For both English majors and nonmajors who have done well in freshman writing seminars, or in such courses as English 288–289 or 286, and who desire intensive practice in writing essays. Particular, but not exclusive, emphasis on expository techniques of analysis and persuasion.

389 Spring: T R 2:55–4:10. L. Fakundiny.
Interested students should submit a writing sample to Professor Fakundiny before the beginning of the term.

For both English majors and nonmajors who have done distinguished work in freshman seminars and in such courses as English 286 or 288/289 or 280/281 and who desire intensive practice in writing the personal essay.

Courses For Advanced Undergraduates

Enrollment in courses at the 400 level is limited by prerequisite or permission of the instructor.

402 Video Verité: Televised Reality, Docudrama, and the Response of Multi-Cultural Video (also Society for the Humanities 402)
Fall. 4 credits.
T 2:30–4:25. T. Murray.
The course will study different forms of documenting everyday life on television and video. How do we draw the line between fiction and reality in the broadcast news, the television docudrama, and the video documentary? In analyzing the narrative and psychoanalytical conventions of video dramatized news, we will give special consideration to video by multi-cultural artists who probe the relation of video documentation to the representation of cultural difference (race, nationality, sexuality, and class). How do multi-cultural artists profit from mixing media that have served as the technological tools of colonializing systems of representation? And how does multi-cultural experimentation with film and video contribute to the theoretical understanding of the media?

404 History into Fiction: Nazis and the Literary Imagination (also Comparative Literature 404 and Near Eastern Studies 404)
Fall. 4 credits.
T R 11:40–12:55. E. Rosenberg.
The twelve years of Hitler's rule remain the most critical, "longest" years of the century. We shall read some seven or eight texts by Anglophone and Continental novelists (and a few playwrights) that explore salient features of the regime: Hitler's rise to power (e.g., Mann's "Mario and the Magician," Hughes's *Fox in the Attic*); civilian life in Nazi Germany (e.g., Isherwood's *Berlin Stories*, Brecht's *Private Life of the Master Race*, Grass's *Dog Years*); World War II (Böll's fiction); the Occupation (Sartre's *Flies* or Camus's *Plague*, Nabokov's "Aleppo"); the American brand (Lewis's *It Can't Happen Here*, Faulkner's "Percy Grimm"); the persecution of European Jews (Sartre's "Childhood of a Leader," selections from Julian Barnes's novel *History of the World*, Jakov Lind's *Soul of Wood*). Historical commentary; uses of documentary materials. Brief ancillary selections by Adorno, Arendt, Sartre. Two short papers; no exam.

405 The Politics of Contemporary Criticism
Fall. 4 credits.
M W F 2:30–3:20. S. P. Mohanty.
Limited to 15 students. Open only to undergraduates. Prerequisite: permission of instructor. Background in literary studies will be expected, but no training in critical theory will be presumed.

An introduction to some of the major issues in contemporary criticism through an examination of the relationship between two influential movements in critical theory—hermeneutics and deconstruction. Adherents of both movements seem to agree about the fundamental opposition between their respective approaches and conclusions. We shall try to understand the issues at stake in this opposition, exploring such questions as: what is a (literary) text? What is interpretation and what are its limits? What political issues underlie particular critical strategies and methodological choices? We shall negotiate between the competing claims of each position and focus on the implications of answers to such questions in actual critical analysis. Primary readings from some of the chief exponents of the two movements, particularly Paul Ricoeur, Hans-Georg Gadamer, and Jacques Derrida. Additional readings, from a variety of critical and philosophical traditions, including such authors as Rorty, Eagleton, Felman, Foucault, and Jameson.

[406 Archaeology of Early Christian England and Ireland
4 credits. Not offered 1990–91.]

409 Images of Fetishism, Narratives of Curiosity (also Society for the Humanities 409)
Fall. 3 credits.
R 10:10–12:00. L. Mulvey.
The seminar will take the question of fetishism as its point of departure, considering the concept as a symptom both of the language of the unconscious and of the circulation of commodities. Using images and narratives from popular culture, the seminar will also place the processes of displacement and denial associated with fetishism in juxtaposition with narrative mechanisms activated by enigma and curiosity.

410 Contemporary Film Theory (also Society for the Humanities 411)
Fall. 3 credits.
T 11:15–1:10. C. Penley.
This course will survey the major figures and ideas that have shaped contemporary film theory: Christian Metz's semiotics of the cinema, Raymond Bellour and Thierry Kuntzel's textual analyses of film, Jean-Louis Baudry's "Apparatus" theories, Stephen Heath's work on narrative and ideology, and Laura Mulvey's feminist and psychoanalytic approach to describing spectatorship. In addition the course will cover the most important revisions and refutations of those theories by feminists, Marxists, neo-formalists, deconstructionists, cognitive theorists, cultural studies and popular culture scholars, and so on. Attention will also be given to the social and institutional forces that have shaped this relatively new and volatile discipline.

411 Introduction to Old English (also English 611)
Fall. 4 credits.
M W F 12:20–1:10. R. Farrell.
The aim of the course is to teach students to read Old English as accurately and fluently as possible. While the primary emphasis is on acquiring a reading knowledge of the language, we will also be concerned with the linguistic and literary problems presented by the texts we cover.

412 *Beowulf* (also English 612)
Spring. 4 credits.
M W F 12:20–1:10. R. Farrell. Prerequisite: English 411 or equivalent knowledge of Old English.
A close reading of *Beowulf.* Attention will be given to relevant linguistic and literary problems.

414 Modernity, Femininity, Consumerism (also Society for the Humanities 414)
Spring. 3 credits.
M 12:20–2:15. R. Bowlby.
The tradition of literary modernity is generally seen as opposed to consumerism, whether considered as an exclusive focus on materials and monetary values, or (rather differently) as a feminine capitulation of the lures of a homogeneous mass culture. This course will question the implications and the validity of that dichotomy by looking in detail at representations of the woman, the artist, the consumer culture in literary, theoretical, and popular texts by authors such as Baudelaire, Barthes, Benjamin, Freud, Friedan, Nabokov, Wilde, and Woolf.

[415 The English Language (also English 615)
4 credits. Not offered 1990–91.]

419 Bodies, Technologies, Mass Culture (also Society for the Humanities 419)
Fall. 4 credits.
M 12:20–2:15. M. Seltzer.
The seminar proposes an interdisciplinary investigation of the relays between forms of cultural and technological production in America between 1870 and 1930. Turn-of-the-century American culture has been described alternatively as naturalist, as the culture of consumption, and as machine culture. What binds together these apparently alternative descriptions is the "discovery" that bodies and persons are things that can be made. This course will investigate the consequences—social, representations, and theoretical—of such a discovery. The focus will be on the representation of bodies and technologies in the discourse (written and visual) of the period. Some of the questions we will consider are these: How are the sieve-like categories of the body and the machine and of the natural and the cultural reconceived in this period? What are the literary, social, and formal consequences of such a reconception? How are the life process and the machine process rewritten in this period and how do literary and visual practices register such a rewriting? What do the bodies and machines of machine culture look like and what appeals and anxieties do these representations generate?

420 Spenser and Milton
Fall. 4 credits.
T R 10:10–11:25. C. Kaske.
Spenser's *Muiopotmos, Fowre Hymnes, Shepheardes Calender* "July," "October," and "November;" *Faerie Queene* I and III entire and selections from II and IV; *Letter to Raleigh, Mutabilitie Cantos.* Milton's *Lycidas*; references to the writing of *Paradise Lost*; selections from the *Divorce Tracts* and *Areopagitica*; and, finally, a reading of almost all of Paradise Lost. Lecture and informal discussion. One 8–10 page paper on each author and one final exam consisting of a choice from a wide range to topics comparing the two authors. Some themes of the course will be: the moral and aesthetic value of physical combat; the genres epic and pastoral and the world-views they entail; the construction of gender; the grand style; and the interweaving of egalitarian and hierarchical paradigms.

[422 *The Faerie Queene*
4 credits. Not offered 1990–91.]

423 Seventeenth-Century Lyric
Spring. 4 credits.
M W 2:30–4:25. B. Correll.
A study of representative seventeenth-century English poets, both major and minor, male and female, secular and religious. In addition to giving attention to formal aspects of the poetry, we will consider questions of historical contextualization and notions of the self and of the poetic role. As we shall see in our readings, these seventeenth-century poets are both products and producers of their culture. We will also study the critical reception of seventeenth-century poetry and its place in contemporary English studies.

[424 Lyric Sequences
4 credits. Not offered 1990–91.]

427 Studies in Shakespeare
Fall. 4 credits.
M W F 10:10–11. C. Levy.
A study of themes and patterns in Shakespeare's later history plays (*Richard II,* Parts I and II, *Henry IV,* and *Henry V*) in the perspective afforded particularly by Castiglione's *Book of the Courtier,* Elyot's *The Governour, A Mirror for Magistrates,* and Sidney's *The Countesse of Pembrokes Arcadia.* Among topics to be explored are growth, responsibility, play, order, and community.

Spring. 4 credits.
T R 2:55–4:10. S. McMillin.
A reading of major plays from the later fifteen-nineties to the end of Shakespeare's career, including *As You Like It, Hamlet, Henry V, King Lear, Antony and Cleopatra, Measure for Measure,* and *The Winter's Tale.* Particular attention to the theory of theatre and the acting implied by these texts.

[428 Elizabethan and Jacobean Drama
4 credits. Not offered 1990–91.]

437 Fictions of Apartheid and Modes of Liberalism
Spring. 4 credits.
T R 2:55–4:10. B. Jeyifo.
This course involves a study of selected works of four major contemporary white South African authors: Athol Fugard, Nadine Gordiner, Andre Povink, and J. M. Goetzee. The genres include drama, fiction, the essay. Issues examined include modernity and Apartheid, constructions and deconstructions of racialized identity, ideological interpellations of subjectivity by juridical and cultural texts, revolutionary optimism and philosophical pessimism.

[438 Inventing Human Nature: Passion and Experience in the Seventeenth and Eighteenth Centuries
4 credits. Not offered 1990–91.]

440 English Romanticism after the Revolution
Spring. 4 Credits.
T R 11:40–12:55. R. Parker.
A selection of verse and prose writings, including one or two novels and plays, from the later Romantic period, with emphasis on works by Keats, Mary Shelley, Percy Shelley, Byron, Hazlitt, DeQuincey, Austen, and Scott. Though the focus will be primarily on such works, readings and discussion will also involve developing critical and cultural traditions in the wake of the French Revolution, with special attention to the ways British writers and critics imagine and commemorate the Revolution and the Napoleonic aftermath.

443 Caricature, Comedy, and Social Criticism
Fall. 4 credits.
T R 1:25–2:40. S. Siegel.
This seminar, which will focus on selected plays and prose of Wilde, Synge, and Shaw, will consider Irish Celtic responses to Anglo-Saxon ethnocentricity and views of race. We will conduct our discussions against the background of the politics of Anglo-Irish social relations during the mid- and late-nineteenth century. Texts and visual representations will be drawn from, among others, Mill, Marx, Darwin, Lubbock, Mueller, Clodd, Lang, Frazer, as well as the periodical literature. Literary texts will include *Lady Windermere's Fan* and *The Importance of Being Earnest, Playboy of the Western World, John Bull's Other Island, Pygmalion,* and the tales of Handy Andy.

450 The History of the Book
Fall. 4 credits. Limited to 20 students.
Prerequisite: permission of instructor.
T 1:25–3:20. D. Eddy.
A study of the physical aspect of books printed during the last six centuries. Included are papermaking, typography and printing, bookbinding, and the history of book illustrations; the transmission of texts and bibliographical descriptions of hand-printed and modern trade books. Above all, this is the study of the book as a work of art.

[451 The Long Poem in America
4 credits. Not offered 1990–91.]

452 Doris Lessing and Thomas Pynchon
Spring. 4 credits.
T R 11:40–12:55. M. Hite.
At first glance, these two writers might appear to have little in common beyond their status as major figures in contemporary fiction. They belong to—and identify themselves with—different generations (Lessing was born in 1910, Pynchon in 1937) and different nationalities (Lessing is an English colonial, Pynchon an American). They manifestly appeal to very different kinds of reader, at least in part because they became writers by very different routes (Lessing is largely self-taught through her own reading and political involvements, whereas Pynchon is a Cornell alumnus whose first declared major was Engineering Physics). And of course Lessing is female whereas Pynchon is male. But the similarities are worth pursuing. Both have been pioneers in the development of the encyclopedic narrative in the postmodern period, and both have used encyclopedism as a vehicle for far-reaching structural and stylistic experimentation. Both have strong and evolving political concerns that have made them controversial throughout their writing careers. And both are visionaries, notoriously "difficult" because of the scope and courage of their imaginative enterprises.

This class will take on the most ambitious of the novels: Lessing's *The Golden Notebook* and *The Four-Gated City*, Pynchon's *V.*, *Gravity's Rainbow*, and *Vineland*. Additional readings include a play and several short stories by Lessing and several short stories by Pynchon. Seminar format, with student presentations, a number of in-class writings, and two major papers.

[453 Public Aesthetics: Art, Video, and Spectacle in the Age of Technology
4 credits. Common Learning. T. Murray. Not offered 1990–91.]

[454 Slave Narratives and the Production of Black Literature
4 credits. Not offered 1990–91.]

455 Literature of 1890s
Spring. 4 credits.
T R 2:55–4:10. S. Parrish.
The last decade of the century, the so-called mauve decade, embraces the end of the esthetic movement, the end of Victorian England, and the beginnings of modernism. To sample its rich variety, readings in Wilde, Housman, Hopkins, some of the "decadent" poets of the Rymers Club, and minor novelists like Gissing and George Moore will be ranged alongside some major voices like Conrad, Shaw, Hardy, and the early Yeats.

456 Edith Wharton, Willa Cather, and Eudora Welty (also Women's Studies 456)
Fall. 4 credits.
T R 1:25–2:40. J. Blackall.
A representative selection of the best fiction of three distinguished American women writers with particular regard for their representation of women in relation to environment, for their characteristic themes and materials, and for their practice of the craft of fiction. Readings: Wharton, *The House of Mirth*, *Summer*, *The Age of Innocence*, and selected short stories; *Cather*, *O Pioneers!*, *A Lost Lady*, *The Professor's House*, and selected short stories; and Welty, *The Robber Bridegroom*, *The Golden Apples*, *The Optimist's Daughter*, and selected short stories. Discussion format with three essays.

[462 Dickinson and Thoreau
4 credits. Not offered 1990–91.]

[463 Memory, Nostalgia, and Repetition in Modern Poetry and Poetics
4 credits. Not offered 1990–91.]

[464 Black Women Writers
4 credits. Not offered 1990–91.]

465 Proseminar in American Studies (also American Studies 465)
Spring. 4 credits.
W 1:25–3:20. J. Porte and members of the American Studies Program.
Selected topics in American history, literature, the arts, and politics. Recommended for American Studies majors.

466 Wallace Stevens, T. S. Eliot, and the Making of the High Modern Tradition
Spring. 4 credits.
T R 10:10–11:25. D. Schwarz.
A close reading of two major twentieth-century poets in the context of literary and cultural modernism, including developments in the visual arts, such as cubism. Although more time will be spent on Stevens than Eliot, major works of both figures will be discussed in detail. We shall discuss how Eliot, an expatriate and neoclassicist, contributed to the making of the modern poetic. We shall then turn to Stevens who will be examined as an American figure, as a high modernist, and as an heir to the Romantic tradition.

[467 Afro-American Literature—1960s
4 credits. Not offered 1990–91.]

468 Language Poetry (also Comparative Literature 498)
Spring. 4 credits.
W 1:30–3:20. J. Monroe.
The emergence in the United States in the 1970s and 1980s of "Language Poetry" or "Language Writing" as a challenge to more familiar modes of contemporary poetry raises fundamental questions about what poetry has been, is, and should be and about the relationship between poetry, audience, and social transformation. Focusing on texts by Charles Bernstein, Bob Perelman, Ron Silliman, Rosmarie Waldrop, and others associated with the Language Poetry movement, we will explore the movement's acknowledged indebtedness to such precursors as Gertrude Stein, Louis Zukofsky, and Robert Creeley and to philosophical and theoretical writings by such figures as Ferdinand de Saussure, Valentin Voloshinov, and Ludwig Wittgenstein. Considering as well Language Poetry's critical reception over the past several years, we will attempt to arrive at an understanding of the movement's significance for theories of the avant-garde and the conditions of postmodern culture.

469 William Faulkner
Spring. 4 credits.
T R 1:25–2:40. H. Spillers.
This course will examine selected writings of William Faulkner, beginning with some of the early novels (*The Sound and the Fury*, *Light in August*, *Absalom, Absalom!*) and concluding with A Fable. We will consider Faulkner's impact as a maker of myth and as one of the leading figures of a literary discourse that creates a modernist sensibility in American letters. As a southern writer, Faulkner is traditionally confined to the character study of exotic types, but his systemic fictional exploration of "violence and the sacred" provides a powerful clue to the larger issue of a national identity. Faulkner in his own terms, dared to imagine "culture" as a problem for fiction. This course will attempt to consider the outcome.

470 Studies in the Novel: Joyce's *Ulysses*
Fall. 4 credits. Limited to 15.
T R 2:55–4:10. D. Schwarz.
A thorough episode-by-episode study of the art and meaning of Joyce's *Ulysses*. We shall place Ulysses in the context of Joyce's canon, Irish culture, and literary modernism, including painting and sculpture. We shall explore the relationship between *Ulysses* and other experiments in modernism and show how it redefines the concepts of epic, hero, and reader. We shall discuss how *Ulysses* raises major issues in literary study and tests various critical and scholarly approaches. Such a self-conscious inquiry into theories and methods should prepare students to confront other complex texts.

472 Irish Culture
Spring. 4 credits. Limited to 15.
T R 1:25–2:40. P. Marcus.
Intensive study of a small number of major poems by Yeats, usually one or two per week. The texts will be seen in the context of Yeats's Irish and occult interests. Some attention will be given also to the plays and *A Vision*.

[475 Feminist Literary Criticism
4 credits. Not offered 1990–91.]

[477 Children's Literature
4 credits. Not offered 1990–91.]

480–481 Seminar in Writing
Fall and spring. 4 credits. Each section limited to 15 students. Students are encouraged to take English 280–281 and either 382–383 or 384–385 previously. Prerequisite: permission of instructor, normally on the basis of a manuscript.
480 Fall: T 2:30–4:30. M. McCoy; M W 12:20–1:10. A. Lurie. 481 Spring: W 2:30–4:25. R. Morgan; M W 11:15–12:05. D. McCall.
Intended for those writers who have already gained a basic mastery of technique. Students normally enroll for both terms and should be capable of a major project—a collection of stories or poems, a group of personal essays, or perhaps a novel—to be completed by the end of the second semester. Seminars are used for discussion of the students' manuscripts and published works that individual members have found of exceptional value.

491 Honors Seminar I
Fall. 4 credits. Prerequisite: permission of Director of the Honors Program.
Section 1. Renaissance Texts: Power and Identity
M W 2:30–3:45. B. Correll.
The course will deal with a lively body of Renaissance cultural texts from English and Continental authors, some of whom are well known and others who should be better known. Our concern will be with changing relations of power in early modern Western society, the question of the relationship between literature and political life, the theme of self-fashioning and masculine subject formation in which a discourse on women figures prominently. We will also investigate the critical and scholarly treatments of these cultural issues.
Section 2. Hawthorne and his Contemporaries
T R 2:55–4:10. S. Samuels.
An intensive study of Hawthorne's major works, especially in terms of their response to the contemporary background of utopias, nationalism, and abolition. We will read *The Scarlet Letter, The House of the Seven Gables, The Blithedale Romance*, and a number of Hawthorne short stories. And we will also read selected works by Hawthorne's contemporaries, such as Margaret Fuller, Catherine Sedgwick, and Lydia Maria Child.

492 Honors Seminar II
Spring. 4 credits. Prerequisite: permission of Director of the Honors Program.
Section 1. Sex and Gender and the Power of Words: Novels of Charlotte Bronte
T R 1:25–2:40. C. Chase.
An introduction to the close reading of fiction and literary criticism and theory. How does the first person narrative voice in *Jane Eyre* reflect and create what it is to be a woman—and a person—in the nineteenth century, and since? In this seminar we will read intensively the fiction of Charlotte Bronte and critical and theoretical writing that will help us to grasp the ways in which her fiction constructs connections between subjectivity and feminity and masculinity. We will also read, for comparative purposes, Mary Shelley's *Frankenstein* or George Eliot's *Adam Bede*, with their quite different approaches to the question of how being human relates to being of a particular sex. The aim of the seminar will be to read a few works thoroughly and to explore the effectiveness of different interpretive procedures and critical arguments. Requirements will include frequent short writing assignments providing the basis for class discussions, early in the course, and a final paper which may be written by two students working together.
Section 2. Mayhem, Myth and Modernism. Limited to 15.
T R 2:55–4:10. P. Marcus.
Vision and form in major texts from the period between the world wars. An exploration of the search for values in a troubled era and of concomitant formal experiments. The syllabus will include Lawrence, *Women in Love*; Joyce, *Ulysses* (selections); Pound, *Hugh Selwyn Mauberley* and *The Cantos;* Eliot, *The Waste Land* and *Four Quartets*; Woolf, *Mrs. Dalloway* and *To the Lighthouse*; Hemingway, *The Sun Also Rises*; and Yeats, *The Tower* and *Last Poems*. Some attention will be given to parallel developments in the visual arts and to the work of Frazer in anthropology and Jung in psychology.

493 Honors Essay Tutorial I
Fall or spring. 4 credits. Prerequisites: senior standing and permission of Director of the Honors Program.
Staff.

494 Honors Essay Tutorial II
Fall or spring. 4 credits. Prerequisites: English 493 and permission of Director of the Honors Program.
Staff.

495 Independent Study
Fall or spring. 2–4 credits.

Courses Primarily for Graduate Students

Permission of the instructor is a prerequisite for admission to courses numbered in the 600s. These are intended primarily for graduate students, although qualified undergraduates are sometimes admitted. Undergraduates seeking admission to a 600-level course should consult the instructor. The list of courses given below is illustrative only; a definitive list, together with course descriptions and class meeting times, is published in a separate department brochure before course enrollment each term.

Graduate English Courses 1990–91

Fall.

600 Colloquium for Entering Students

611 Introduction to Old English (also 411)
R. Farrell.

619 Chaucer
W. Wetherbee.

627 Shakespeare
S. McMillin.

632 Reading Swift's Poetry
F. Bogel.

642 Romantic Poetry
M. Jacobus.

645 Nineteenth-Century Prose
P. Sawyer.

663 American Fiction 1870–1915
J. Porte.

664 Post-war American Poetry
R. Gilbert.

683 Comparative African and African-American Twentieth-Century Critical Theory
B. Jeyifo.

685 Slave Narrative and Production of Afro-American Literature
H. Mullen.

702 Literature and Theory (also English 302)
J. Culler.

759 Virginia Woolf
M. Hite.

780.1 MFA Seminar: Poetry
P. Janowitz.

780.2 MFA Seminar: Fiction
S. Vaughn.

785 Reading of Fiction
Spring.
A. Lurie.

612 *Beowulf* (also English 412)
R. Farrell.

614 Medieval Drama
B. Adams.

630 Aesthetics in the Eighteenth Century
N. Saccamano.

644 Theatre, Revolution, Romanticism
R. Parker.

649 Victorian Twilight: The Eighteen-Nineties
S. Parrish.

659 Regional Fiction by Women Writers
J. Blackall.

670 Joyce's *Ulysses*
D. Schwarz.

672 The English Realist Novel
H. Shaw.

679 Topics in American Poetry
D. Fried.

710 Readings in Old English
T. Hill.

781.1 MFA Seminar: Poetry
A. Ammons.

781.2 MFA Seminar: Fiction
D. McCall.

FILM

See listings under Department of Theatre Arts.

FRENCH LANGUAGE AND LINGUISTICS

See Department of Modern Languages and Linguistics.

FRENCH LITERATURE

See Department of Romance Studies.

FRESHMAN WRITING SEMINARS

For information about the requirements for freshman writing seminars and descriptions of seminar offerings, see p. 311 and consult the John S. Knight Writing Program brochure, available from college registrars in August for the fall term and in November for the spring term.

GEOLOGICAL SCIENCES

D. L. Turcotte, chair; A. L. Bloom, director of undergraduate studies; R. Allmendinger, M. Barazangi, W. A. Bassett, J. M. Bird, L. D. Brown, L. M. Cathles, J. L. Cisne, B. L. Isacks, T. E. Jordan, D. E. Karig, S. Kaufman, R. W. Kay, J. E. Oliver, F. H. T. Rhodes, W. B. Travers, W. M. White

As an intercollege unit, the Department of Geological Sciences has degree programs in both the College of Arts and Sciences and the College of Engineering.

Within the past few years, studies of the earth have become increasingly important. The need for increased understanding of plate tectonics, limited energy and mineral reserves, awareness of natural hazards such as earthquakes and volcanic eruptions, and an increasing concern for our environment encourage studies of the earth by geologists. Consequently, interest in geology courses has greatly increased.

There are eighteen faculty members, including Cornell's president, in the department, and twenty-five undergraduate majors. A variety of courses provides our students with a broad and solid foundation. The department is particularly strong in geophysics, petrology and geochemistry, structural geology, and tectonics.

Students study the deeper parts of the earth's crust using many techniques but concentrating on seismic methods. High-pressure, high-temperature mineralogy research uses the diamond anvil and Cornell's synchrotron as research tools. Undergraduates have served as field assistants for faculty and graduate students who work in Greenland, British Columbia, the Aleutian Islands, Scotland, Barbados, the South Pacific, South America, and various parts of the continental United States. Undergraduates are encouraged to participate in research activities, sometimes as paid assistants.

Students who major in geological sciences are encouraged to take courses appropriate to their interests in the other sciences and mathematics. To develop skills in observing the natural earth, geology majors attend a summer field camp, usually during the summer following their junior year.

The Major

The prerequisites for admission to a major in geological sciences in the College of Arts and Sciences are two two-semester sequences, Mathematics 191–192 and Physics 112–113, or their equivalents, and an additional semester course in chemistry or biological sciences, such as Chemistry 207. Geological Sciences 101,103, 111, or 201 followed by 102, 104, or 202 are recommended, but a student with a strong foundation in mathematics and science may be accepted as a major without completion of an introductory sequence.

Majors take Geological Sciences 210 and 214, the five core courses in geological sciences, a summer field geology course, 6 credits of additional course work from geological sciences courses numbered 300, 400, or 600, plus an additional course in mathematics, computer science, physics, chemistry, or biology at an intermediate or advanced level.

Core Courses

326 Structural Geology

355 Mineralogy

356 Petrology and Geochemistry

375 Sedimentology and Stratigraphy

388 Geophysics and Geotectonics

Prospective majors should consult one of the following departmental major advisers—W. A. Bassett, A. L. Bloom, L. M. Cathles, J. L. Cisne, or B. L. Isacks—as early as possible for advice in planning a program. Students majoring in geological sciences may attend the departmental seminars and take advantage of cruises, field trips, and conferences offered through the Department of Geological Sciences.

Courses offered at the 100 and 200 level are open to all students. Certain 300-level courses in geology may be of particular interest to students of chemistry, biology, ecology, and physics. Students are encouraged to inquire about courses that interest them at the department office in Snee Hall.

Honors. An honors program is offered by the Department of Geological Sciences for superior students. Candidates for honors must maintain an overall 3.0 grade-point average and a cumulative average of 3.5 in the major and complete an honors thesis (Geological Sciences 490). Students interested in applying should contact the director of undergraduate studies during the second semester of the junior year.

Courses

For course descriptions, see the Geological Sciences listing in the College of Engineering.

101 Introductory Geological Sciences
Fall, spring, or summer. 3 credits.
2 lecs, 1 lab, field trips, evening exams.
Fall: W. B. Travers; spring: J. M. Bird.
This course teaches observation and understanding of the earth, including oceans, continents, coasts, rivers, valleys, and glaciated regions; earthquakes, volcanoes, and mountains; theories of plate tectonics; the origin, discovery, and development of mineral and water resources. The lab teaches use of topographic and geologic maps and recognition of minerals and rocks and includes field trips to Cascadilla Gorge, Fall Creek, and Enfield Glen.

102 Evolution of the Earth and Life

103 Geology in the Field

104 Introduction to Oceanography

107 Frontiers of Geology I

108 Frontiers of Geology II

111 To Know the Earth

201 Introduction to the Physics and Chemistry of the Earth

202 Environmental Geology

210 Introduction to Field Methods in Geological Sciences

212 Special Field Trip

213 Marine and Coastal Geology

214 Western Adirondack Field Course

326 Structural Geology

355 Mineralogy

356 Petrology and Geochemistry

375 Sedimentology and Stratigraphy

388 Geophysics and Geotectonics

401 Field Geology

412 Experiments and Techniques in Earth Sciences

424 Petroleum Geology

431 The Earth's Crust: Structure, Composition, and Evolution

432 Digital Processing and Analysis of Geophysical Data

433 Exploration Seismology I: Data Acquisition and Processing

434 Exploration Seismology II: Analysis and Interpretation

441 Geomorphology

442 Glacial and Quaternary Geology

445 Geohydrology

452 X-Ray Diffraction Techniques

453 Modern Petrology

454 Advanced Mineralogy

456 Geochemistry

474 Modern Depositional Systems

476 Sedimentary Basins: Tectonics and Mechanics

478 Advanced Stratigraphy

479 Paleobiology

487 Geophysical Prospecting

489 Earthquakes and Tectonics

490 Senior Thesis

491–492 Undergraduate Research

500 Design Project in Geohydrology

501 Geohydrology Design Project Seminar

502 Case Histories in Ground Water Analysis

621 Marine Tectonics

622 Advanced Structural Geology I

624 Advanced Structural Geology II

625 Tectonic History of Western North America from Craton to Terranes

628 Geology of Orogenic Belts

635 Advanced Geophysics I

637 Advanced Geophysics II

655 Isotope Geochemistry

681 Geotectonics

687 Seismology

695 Computer Methods in Geological Sciences

700–799 Seminars and Special Work

721 Tectonic and Stratigraphic Evolution of Sedimentary Basins

722 Advanced Topics in Structural Geology

725 Rock and Sediment Deformation

731 Plate Tectonics and Geology

741 Advanced Geomorphology Topics

751 Petrology and Geochemistry

753 Mineralogy and Crystallography, X-Ray Diffraction, Microscopy, High-Pressure/Temperature Experiments

755 Advanced Topics in Petrology and Tectonics

757 Current Research in Petrology

762 Advanced Topics in Petroleum Exploration

771 Advanced Topics in Sedimentology and Stratigraphy

773 Paleobiology

780 Seismic Record Reading

781 Geophysics, Exploration Seismology

783 Advanced Topics in Seismology and Tectonics

785 Exploration Seismology, Gravity, Magnetics

788 Geophysics, Seismology, and Geotectonics

789 Research on Seismic-Reflection Profiling of the Continental Crust

793 Andes Seminar

796 Geochemistry of the Solid Earth

797 Fluid-Rock Interactions

799 Contemporary Issues in Groundwater Hydrology

GERMAN STUDIES

A. Groos, chair; G. Waite, director of undergraduate studies; D. Bathrick,

B. Buettner, H. Deinert, I. Ezergailis, S. L. Gilman, P. U. Hohendahl, C. A. Martin, P. M. Mitchell, L. M. Olschner

The Department of German Studies offers courses in German, Medieval German, Yiddish, and Old Icelandic area studies. Major areas of specialization cover the period from the early Middle Ages to the twentieth century. While the emphasis remains on literature, the department teaches film, theater, the political culture of the two Germanys, women's studies, music, intellectual history, and Jewish studies. Courses are designed with the general student population in mind; courses taught in German demand knowledge of the German language. The department often cosponsors courses with the departments of Comparative Literature, History, History of Art, Government, Music, Near Eastern Studies, and Theatre Arts, as well as with the Medieval Studies and Women's Studies programs and in the history of science. For further information about majors and courses, see Modern Languages and Linguistics.

The Major

Students majoring in German are encouraged to design their programs in a manner that will allow for diversity in their courses of study. It should enable them to become acquainted with an adequate selection of major works, authors, and movements of German literature and to develop their skill in literary analysis. Students majoring in German will normally proceed through German 201, 202, 203, 204. Students who, because of previous training, are qualified to enroll in 300– or 400–level courses will be permitted to do so. For details, students may consult the director of undergraduate studies, G. Waite, in the Department of German Studies, or W. Harbert, in the Department of Modern Languages and Linguistics. Students majoring in German are expected to complete successfully a minimum of six 300- and 400-level courses in addition to German 303–304. Some 200-level courses offered by this department (such as German Studies 211 and 283) and related departments will count toward the major as well; please consult your adviser. These courses should be a representative selection of subjects in German literature, Germanic linguistics, or both. The attention of students majoring in German is called to the courses offered by departments and programs such as Comparative Literature, History, History of Art, Government, Music, Society for the Humanities, Theatre Arts, and Women's Studies, many of which complement the course offerings in German.

Students majoring in German are expected to become competent in the German language. This competence is normally demonstrated by the successful completion of German 304. Placement of German majors who have done no work in German at Cornell will be determined by the level of preparation they have obtained elsewhere. For information, students should consult the director of undergraduate studies, G. Waite, or W. Harbert.

The German Area Studies Major

The German area studies major is intended for students who are interested in subject matter related to German-speaking countries but not necessarily or not exclusively in German literature or linguistics. Students will select appropriate courses offered in history, government, economics, music, theater arts, or other suitable subjects. Minimum course requirements for the German area studies major are the same as for the German major. These students will select a committee of two or more faculty members to help them design a program and supervise their progress. One committee member must be from the German faculty of either the Department of Modern Languages and Linguistics or the Department of German Studies. The other member(s) should represent the student's main area of interest.

The student majoring in German area studies is expected to become competent in the German language. Such competence is normally demonstrated by successful completion of German 304. A minimum of six area courses above the 200-level is required for the major.

Advanced Standing. Students coming to Cornell with advanced standing in German and/or another subject often find it possible to complete two majors. Recent double majors have combined history, psychology, chemistry, biology, or physics with German literature or German area studies. Students in Agriculture and Engineering have entered dual degree programs.

Honors. The honors program in German is open to superior students who want to work independently in an area of their own choice. Students are free to select any faculty member of the Field of Germanic Studies (in the case of area studies majors, the appropriate member of their committee) to assist them in designing their honors program, to supervise their work, and to help them select a suitable topic for an honors essay. The independent study courses, German 451 and 452, may form part of the program.

Study Abroad

Cornell has a formal agreement with the University of Hamburg enabling its undergraduates to take courses in any field offered by the German university. The program offers a challenging course of study and the experience of total immersion in German life and culture. Participants in this program attend a required 3-credit orientation course in September, which is designed to help them adjust to the academic and social life of Germany. Special field trips are organized as part of the orientation session. Beginning in mid-October, students enroll as fully matriculated students at the University of Hamburg.

Cornell maintains a center in Hamburg with appropriate support staff. The resident director is a faculty member from Cornell, who teaches a special seminar each semester, provides academic advice, and helps ensure the quality of the courses. The center, which includes a classroom, a small library, and word-processing facilities, is used by students for the orientation session, special seminars, tutorials, lectures, and informal gatherings.

Applicants are expected to have attained at least proficiency in German prior to departure. Students are strongly encouraged to study abroad for the entire year rather than for one semester. For further information, students should contact the director of undergraduate studies and the director of Cornell Abroad.

Freshman Writing Seminar Requirement

The following courses will satisfy the freshman writing seminar requirement: German 109, 151, 175, 211, and 312. For details students should consult the instructors.

Fees. Depending on the course, a small fee may be charged for photocopied texts for course work.

Literature

Freshman Writing Seminars

107 Images of the Individual and Society
Fall. 3 credits.
T R 2:55–4:10. A. Terhune.
This course will examine several texts of the nineteenth and twentieth centuries, exploring their various treatments of the individual and society, and discussing such issues as sanity and madness, and private ethics and public mores. We will be reading short fiction, drama, and other prose works by authors such as Büchner, Nietzsche, and Dürrenmatt. We will closely examine the role style plays in each of the texts we read, as well as looking at our own writing and thinking skills and styles.

109 Fairy Tales and the Literary Imagination
Fall or spring. 3 credits.
M W F 9:05–9:55, 10:10–11, 11:15–12:05, or T R 8:40–9:55. I. Ezergailis and staff.
Starting with the fairy-tale collection of the Brothers Grimm, we will trace the reverberation of fairy-tale elements in German literature, primarily from the nineteenth century. Preoccupation with the writing process—especially in the German romantic tradition—will be fruitful for the development of writing skills.

151 Kafka, Hesse, Brecht, and Mann
Fall or spring. 3 credits.
Lec, M 10:10–11; secs, W F 10:10–11 or T R 10:10–11. H. Deinert and staff.
This course will be based on complete works (in English translation) by four representative German authors of the first half of the century. Although dealing with works of great popular appeal (*Demian, Siddhartha, Death in Venice, The Metamorphosis, Mother Courage, Galileo,* and others), the emphasis of the course will be on improving writing skills. We will meet once a week for a combined lecture. In addition, there will be regular conferences between students and their instructors to discuss the papers.

175 Cinema and Society
Fall or spring. 4 credits. No knowledge of German required; all films dubbed or with subtitles. Students must view each film twice; group screenings on Monday evenings, 7:30–9:30 pm, although individual viewing times can be arranged. No more than eight films viewed per term.
T R 10:10–11:25 or 11:40–12:55. G. Waite and staff.
What are movies, how do they function in society, and how might we interpret them? This seminar has three basic and interrelated aims: 1) to provide students with the tools necessary to view all movies analytically and critically; 2) to sharpen students' abilities to articulate their ideas about what they see, and 3) to introduce the German cinema as an exciting, complex, influential cultural and social practice. We place special emphasis on recent movies, but in the context of historical development from the earliest silent flicks up to the present. Since we also compare the German cinema to Hollywood and independent production in the United States, films screened have included *The Cabinet of Dr. Caligari, Girls in Uniform, M, Comradeship, The Marriage of Maria Braun, The Lost Honor of Katharina Blum, Stroszek, The American Friend, Germany in Autumn, Paris, Texas, Psycho, Night of the Living Dead,* and *Easy Rider.*

Courses Offered in German

201 Introduction to German Literature I: Prose
Fall or spring. 3 credits. Prerequisite: qualification in German or permission of instructor. Taught in German. Fulfills both the language proficiency requirement and, followed by German 202 or another German literature course at the 200 level or above, the humanities distribution requirement.
Fall: M W F 12:20–1:10 or T R 10:10–11:25; spring: M W F 9:05–9:55. L. M. Olschner and staff.
An intermediate course designed to improve reading, writing, speaking, and listening skills in German. Emphasis is placed on developing reading competency, tools of literary analysis, and expansion of vocabulary. Grammar review included. The complexities of inner and outer reality as expressed in selected prose works of Bachmann, Brecht, Kafka, Mann, Dürrenmatt, Aichinger and others.

202 Introduction to German Literature II: Drama
Fall or spring. 3 credits. Prerequisite: German 201 or permission of instructor. Taught in German. Fulfills both the language proficiency requirement and, together with German 201 or another German literature course at the 200 level or above, the humanities distribution requirement.
Fall: M W F 12:20–1:10; spring: M W F 12:20–1:10 or T R 10:10–11:25. L. M. Olschner and staff.
An intermediate course designed to improve reading, writing, speaking, and listening skills in German. Emphasis is placed on developing reading competency, tools of literary analysis, and expansion of vocabulary. Self-confrontation and social conflict in the plays of major Austrian, Swiss, and German dramatists, including Duerrenmatt, Brecht, Frisch, Hofmannsthal, Goethe, and Schiller.

211 Intensive Workshop in Germanic Studies for Freshmen I
Fall. 6 credits. Intended for entering freshmen with extensive training in the German language (CPT achievement score of 650 or comparable evidence; please consult instructor). Taught in German. Satisfies the language and distribution requirements *or* the freshman writing seminar requirement.
T R 1:25–3:20. H. Deinert.
Not intended as a survey but rather as a rigorous seminar designed to familiarize students with literary forms and the tools of critical analysis. The course will provide an intensive introduction to the study of German literature through the discussion of exemplary prose works, dramas, and poems from the eighteenth and nineteenth centuries.

307 Modern Germany
Spring. 4 credits. Prerequisite: German 202 or equivalent. Taught in German.
T R 10:10–11:25. L. M. Olschner.
Introduction to the history of postwar Germany, the development of the two Germanys, and their societies. The emphasis is on cultural and social institutions such as mass media, educational systems, and political parties. Further topics include women, reunification, the student movement, and terrorism. We will also follow the rapid changes taking place in Germany today in light of the recent past. Texts are complemented by films and music.

312 Intensive Workshop in Germanic Studies for Freshmen II
Spring. 4 credits. May be used to satisfy the freshman writing seminar requirement. Taught in German.
T R 1:25–3. H. Deinert.
Designed primarily as a sequel to German 211. Emphasis is on German literature since 1900 (T. Mann, Hesse, Kafka, Brecht, Dürrenmatt, Peter Weiss, Plenzdorf, Rilke, Benn, Celan). Supplementary reading from contemporary philosophy, psychology, sociology, and political theory.

[337 The German *Novelle*
Fall. 4 credits. Prerequisite: German 201–202 or permission of instructor. Taught in German. Not offered 1990–91.
M W F 9:05–9:55. B. Buettner.
An investigation of the development of the German *Novelle* as a major literary genre during the nineteenth and twentieth centuries. We will discuss the *Novelle* as a genre in relation to the changing literary and cultural context. Readings will include works by Goethe, Kleist, Tieck, Gotthelf, Hofmannsthal, Mann, and Grass.]

[353 Kleist
Spring. 4 credits. Prerequisite: German 201–202 or permission of instructor. Taught in German. Not offered 1990–91.
W 1:25–3:20. H. Deinert.
Reading and analysis of selected dramas, novellas, and essays.]

354 Schiller
Spring. 4 credits. Prerequisite: German 201–202 or permission of instructor. Taught in German.
W 1:25–3:20. H. Deinert.
A discussion of Schiller's dramas, selected poetry, and philosophical and aesthetic writing against the political and intellectual background of eighteenth-century Europe.

[355 The Age of Goethe
Not offered 1990–91.]

[356 Goethe's *Faust*
Spring. 4 credits. Prerequisite: German 201–202 or permission of instructor. In addition to the regularly scheduled class time, there will be take home assignments and individual conferences. Not offered 1990–91.
W 1:25–3:20. G. Waite.
A close reading of Goethe's *Faust,* Parts I and II, with an introduction to representative criticism and literary theory, both during the Age of Classicism and subsequently.]

[357 Major Works of Goethe
Spring. 4 credits. Prerequisite: German 201–202 or permission of instructor. Taught in German. Not offered 1990–91.
W 1:25–3:20. H. Deinert.
Götz, Tasso, Iphigenie, Werther, Faust, Wahlverwandtschaften, Novelle, selections from critical writings, and poetry.]

[358 Romanticism
Fall. 4 credits. Prerequisite: German 201–202 or permission of instructor. Taught in German. Not offered 1990–91.
M W F 10:10–11. G. Waite.
A systematic survey of texts of early German romanticism. We will focus primarily on a close reading of exemplary works but do so always with attention to the larger ideological, historical, and social contexts from which European literature of the late eighteenth and early nineteenth centuries emerged.]

[359 Heine and Büchner
Spring. 4 credits. Prerequisite: German 201–202 or permission of instructor. Taught in German. Not offered 1990–91.
T R 10:10–11:25. G. Waite.
This course will introduce major themes and problems of early to mid–nineteenth-century German literature by way of a close, in-depth analysis of these two exemplary writers. Our special concern will be to discuss different modes of response by literature to the most pressing political and social issues of its day.]

[360 Naturalism and Feminism
Not offered 1990–91.]

[362 Modern German Literature II: Twentieth-Century Prose
Not offered 1990–91.]

[363 Contemporary Literature
Not offered 1990–91.]

[364 German Lyric Poetry of the Nineteenth Century
Fall. 4 credits. Prerequisite: German 201–202 or permission of instructor. Taught in German. Not offered 1990–91.
T R 1:25–2:40. L. M. Olschner.
This course will cover the period from the mid-1790s to the mid-1890s and interpret major texts from the mature Goethe to the young Hofmannsthal. Readings and discussions will illuminate the development of individual poets in their time, the transformation of poetic speech, and the history of forms. Questions of poetics, forms, reception, canon, and influence; the problem of epoch designation; and the role of poetry and the poet in society will complement the analyses. In the context of the romantic identification of music and poetry we will hear musical settings of representative poetic texts (Lieder by Müller/Schubert, Heine/Schumann, Mörike/Wolf, and Rückert/Mahler).]

[365 German Poetry of the Twentieth Century
Fall. 4 credits. Prerequisite: German 201–202 or permission of instructor. Not offered 1990–91.
M W F 10:10–11. L. M. Olschner.
The course will focus on exemplary lyric texts by Rilke, Trakl, Benn, Brecht, and Celan, and include others by poets such as Lasker-Schüler, N. Sachs, and Bachmann, whose work helps define or question contexts of tradition, discontinuity, modernism, poetic canon, and hermeticism. In examining German Symbolism and Expressionism and their continuing traces, political and willfully non-political poetry, exile and Holocaust writing, and the late reception of Hölderlin, we shall attempt to understand the progression, digression, and regression of poetic language, the reactions of poets to historical pressures, and the problems of influence and originality, of formulating poetics, and of determining period or movement.]

367 From Thomas Mann to Christa Wolf
Fall. 4 credits. Prerequisite: German 201–202 or permission of instructor. Taught in German.
T R 11:40–12:55. D. Bathrick.
Students in this course will interpret and analyze selected texts from twentieth-century German literature. The works will be studied within the historical context in which they emerged and will cover the period from 1900 to the present. Authors to be treated include Franz Kafka, Thomas Mann, Hermann Hesse, Bertolt Brecht, Marieluise Fleisser, Paul Celan, Heinrich Böll, Günter Grass, Peter Handke, Ingeborg Bachmann, Christa Wolf, Ulrich Plenzdorf, Volker Braun, and others.

398 German Women Writers
Fall. 4 credits. Prerequisite: German 201–202 or permission of instructor. Taught in German.
T R 10:10–11:25. I. Ezergailis.
We'll read, closely, some contemporary German-language women novelists, including Christa Wolf, Irmtraud Morgner, Ingeborg Bachmann, and selected German women's poetry.

Courses in English Translation

283 Contemporary European Society and Culture (also Goverment 343 and History 283)
Fall. 3 credits.
T R 2:55–4:10. G. Waite, J. Pontusson, J. Weiss.
The crisis of communist regimes in Eastern Europe has brought an end to the postwar division of Europe. At the same time, the European community is emerging as a major economic and political power in the world. This course explores these dramatic new developments against the background of an interdisciplinary and comparative investigation of postwar European politics, society, and culture. Topics include generational change, class structure, economic and social policy, new social movements, family and community life, film, and cultural criticism.

[285 Contemporary European Society and Politics (also History 285 and Government 285)
Fall. 4 credits. Not offered 1990–91.
T R 2:30–3:45. S. L. Gilman, J. Pontusson.
This course is designed for students with an interest in, or experience of, various European countries, who wish to increase their knowledge of Western Europe. There are no formal prerequisites. This course provides a general introduction to modern European society and politics. Focusing on Britain and the countries of northern Europe, we will explore the meaning of current events and issues from a historical perspective. Topics will include the legacy of colonialism, class culture and the role of organized labor, immigrant workers and ethnic minorities, problems of national identities; new social movements (e.g., the "Greens" in West Germany), and European perceptions of the United States. The course will pursue these themes and others through films, newspaper articles, and literature as well as critical writings.]

[314 Nietzsche, the Man and the Artist
Spring. 4 credits. Not offered 1990–91.
T R 2:55–4:10. S. L. Gilman.
An intensive reading of selections from Nietzsche's poetry, letters, and philosophical writings: *The Birth of Tragedy, The Gay Science, Thus Spake Zarathustra, Beyond Good and Evil, Ecce Homo.* His work will be read in the intellectual context of his time and will be interpreted both as a reflection of his intellectual development and as a manifestation of his literary genius. In discussing the literary aspect of his work, close attention will be paid to Nietzsche's poetics.]

320 Postwar German Novel
Spring. 4 credits.
T R 10:10–11:25. I. Ezergailis.
A reading, in English translation, of such post-1945 German novelists as Grass, Böll, Johnson, and Christa Wolf. This course is recommended for the concentration in modern European studies.

[322 Medicine and Civilization (also Biology and Society 322 and HPST 322)
Spring. 4 credits. Not offered 1990–91.
T R 1:25–2:40. S. L. Gilman.
What is sickness? What is health? Who is the physician? Is a physical illness different from mental illness? Where is medicine practiced? Is being a patient or a doctor different from culture to culture and from age to age? This course will introduce the undergraduate student to the historical and cultural context of medicine. Our sources will range from the texts of ancient Greek medicine to contemporary films and novels dealing with medicine. We will examine the historical and social context of mental illness as well as physical illness from the standpoint of patient, physician, and "society." All of the primary readings are available in English.]

[327 Health and Disease (also Biology and Society 327 and Psychology 387)
Fall. 3 credits. Not offered 1990–91.
M 1:25–3:20. S. L. Gilman and others.
Everyone knows what health and disease are or do they? This Common Learning course on health and disease will explore some of the cultural, psychological, philosophical, anthropological, medical, economic, and political dimensions of these concepts to show how various models of disease function in contexts from business to engineering, from the military to the medical profession. The course will be divided into two segments: the first will examine the general implications of concepts of health and illness; the second will study these general principles as reflected in the definition, treatment, and mythmaking surrounding one specific disease: schizophrenia. The course will draw on specialists from throughout the university.]

[338 Nineteenth-Century Drama
Fall. 4 credits. Prerequisite: German 201–202 or permission of instructor. Not offered 1990–91.
M W F 12:20–1:10. I. Ezergailis.
We will read, in German and with close attention, a selection of plays spanning the century. The list of authors includes Franz Grillparzer, Friedrich Hebbel, Georg Büchner, and ends with Gerhart Hauptmann.]

346 German Women Writers in Translation (also Women's Studies 346)
Spring. 4 credits.
T R 1:25–2:40. C. A. Martin.
The course will involve careful readings of the work of specific authors, (authors to change each semester); feminist discussions of the concept of "Women's Writing"; and attention to the socio-cultural and historical contexts in which the texts under discussion were written. In spring 1991 we will include twentieth-century German and German-Jewish writers and postwar West-German writers.

[347 Reading Freud: Race, Gender, and Psychoanalysis (also Comparative Literature 347, English 347, HPST 347, and Psychology 389)
Fall. 3 credits. Lecture and discussion. In English. Not offered 1990–91.
F 1:25–3:20. S. L. Gilman.
This course will read a series of texts from the formative works of Sigmund Freud (beginning with the *Studies in Hysteria* and concluding with Freud's reading of the Schreber autobiography). These readings will be placed within the tension existing at the turn of the century between the concepts of the biology of race and the biology of gender. Close attention will be paid to the cultural, scientific, as well as polemical literature on the ideas of race and gender from the biological writings of the late nineteenth century. The course will also provide an introduction to the basic concepts of Freudian psychoanalytic theory.]

[348 Women in Medieval Literature (also Comparative Literature 349 and Women's Studies 349)
Spring. 4 credits. Not offered 1990–91.
M W F 9:05–9:55. B. Buettner.
A study of women and their roles in the social order as portrayed in the literature of the Middle Ages. Readings will illustrate the range of attitudes toward women from asceticism and antifeminism to their idealization in courtly love lyric and romance. We will examine woman's putative influence in literature, both positive and negative, and on man and society, and the debates over woman's "proper" attitude and role. Works in English translation will include a play by Hroswitha of Gandersheim, the *Nibelungenlied*, *Willehalm*, selected Mariological and mystical poems, courtly love lyric, *Parzival*, and *Tristan and Isolde*.]

[349 Anti-Semitism in Germany and the Jewish Response (also Near Eastern Studies 349)
Fall. 3 credits. Reading knowledge of German helpful, though the basic texts will be read in English. Not offered 1990–91.
M 1:25–3:20. S. L. Gilman.
An overview of the history of German anti-Semitism from Luther to Hitler. Readings from political, theological, and literary texts ranging from the Church Fathers (as background to a reading of Luther) to the anti-Semitic literary novels of the nineteenth century to

Mein Kampf. Parallel texts will be examined to judge the Jewish intellectual and literary response to evolving forms of German anti-Semitism.]

[350 Yiddish Literature in English Translation
Not offered 1990–91.]

[354 Modern Drama (also Theatre Arts 327 and Comparative Literature 354)
Fall. 4 credits. Not offered 1990–91.
T R 12:10–1:25. D. Bathrick.
Readings in European drama from Ibsen to the present.]

[366 Broch and Musil
Fall. 4 credits. There will be an additional discussion section for students who can read the original German. Not offered 1990–91.
M W F 12:20–1:15. I. Ezergailis.
We will read, in English translation, selected prose of two important and challenging authors whose works span the disintegration of the Austro-Hungarian empire and the forming of new configurations in politics, culture, and art. Along with their penetrating cultural critiques, they are also known for radical experimentation with form and genre.]

[374/674 Opera (also Music 274/674 and Italian 374)
Fall. 4 credits. Prerequisite: Music 252 or proficiency in German or Italian. Not offered 1990–91.
M W 11:15–12:05. D. Rosen.
A study of major works of the German and Italian repertory between 1780 and 1920. Among the issues to be considered will be source-libretto and words-music relationships, reception, and criticism. Works to be studied will include operas by Mozart, Verdi, Wagner, Puccini, and Strauss.]

[381 Marxist Cultural Theory (also Comparative Literature 381)
Fall. 4 credits. Not offered 1990–91.
T R 12:20–1:35. W. Cohen, P. U. Hohendahl.
A historical survey of leading European Marxist thinkers, offering a critical perspective on culture, particularly in relation to ideology. Mainly a close reading of selected texts, but with consideration of historical contexts as well. Some emphasis on aesthetics and especially literary theory. Readings from Marx, Engels, Lukács, Gramsci, Brecht, Benjamin, Horkheimer, Adorno, Marcuse, Sartre, Althusser, and Williams.]

[396 German Film (also Comparative Literature 396 and Theatre Arts 396)
Fall. 4 credits. Requirements: participation in class discussion, one paper, midterm, and final. Not offered 1990–91.
T R 11:40–12:55; screening, T 4:30.
D. Bathrick.
The goal of the course is to explore the form and context of German film in relation to the cultural and sociopolitical context of which it is a part. Accordingly, the material discussed will be divided into three major periods: Weimar film, 1918–1933; Nazi film 1933–1945; Postwar film, 1945–present. Readings and lectures will be devoted to formal and cultural developments in the history of German film as well as intrepretive analysis of selected individual films. In both lectures and discussions, particular emphasis will be placed on helping students develop an appropriate method for viewing and analyzing films.]

[399 Forms of Opposition: German Women Writers on the Nazi Period (also Comparative Literature 399 and Women's Studies 399)
Not offered 1990–91.]

[419 Thomas and Heinrich Mann
Fall. 4 credits. Not offered 1990–91.
M W F 12:20–1:15. I. Ezergailis.
We will read, in translation, a group of texts by Thomas and Heinrich Mann (including *Buddenbrooks*, *Doctor Faustus*, *Henri VI*) and consider them as autonomous works and as witnesses to the dynamic of a brothers' strife that illuminates not only a model of psychological tensions but highly significant cultural and political configurations of a decisive time in German history. This is indeed "a brotherhood in which German history was mirrored . . . in all its agony." Essayistic and publicistic texts of both brothers will also be analyzed along with some of their correspondence. We will also read some background material to provide the needed social, political, and intellectual context. This course is recommended for the concentration in modern European studies.]

[438/648 East and West German Drama: Post-1945 (also Theatre Arts 438/648)
Fall. 4 credits. Not offered 1990–91.
W 1:25–3:20. D. Bathrick.
This course will cover the major historical and textual developments in German theater from the end of World War II to the present. Leading dramatists from West and East Germany, Switzerland, and Austria (Brecht, Frisch, Dürrenmatt, Weiss, Hochhuth, Müller, Braun, Kroetz, Handke, and others) will be treated in light of the political events and aesthetic-dramaturgical traditions from which they emerge and with which they are taking issue.]

[444/644 The Holocaust Survivor as Author (also Near Eastern Studies 444)
Spring. 3 credits. Reading knowledge of German helpful; however two of the major novels are available in English. Not offered 1990–91.
M 1:25–3:20. S. L. Gilman.
The topic will be the novels of the German-American writer Edgar Hilsenrath. Hilsenrath has written three major novels, including the best-selling, *The Nazi and the Barber*, on the topic of the Holocaust. His work is unique in that it uses black humor and satire to represent the world of the Holocaust. The seminar will cover the general literature on the writing of the Holocaust and look at the problems of Hilsenrath's work in the light of contemporary criticism (Langer, Des Pres, Steiner).]

Course in Latvian

[376 Contemporary Soviet Latvian Literature
Fall. 4 credits. Prerequisite: permission of instructor. Taught in Latvian. Not offered 1990–91.
M W F 12:20–1:15. I. Ezergailis.
Analysis of the verse and prose of such world-caliber Soviet authors as Vacietis, Belsevica, Ziedonis, Peters, and Ezera. We will also examine the social and political climate surrounding their work by reading current newspapers as well as literary and theoretical periodicals.]

Graduate and Advanced Undergraduate Courses

405 Introduction to Medieval German Literature I
Fall. 4 credits. Prerequisite: reading knowledge of German.
M W F 9:05–9:55. A. Groos.
The course will emphasize learning Middle High German in a literary context, using the *Nibelungenlied* and a romance of Hartmann von Aue.

406 Introduction to Medieval German Literature II
Spring. 4 credits. Prerequisite: German 405 or equivalent.
M W F 9:05–9:55. A. Groos.
The course will survey the Classical period, emphasizing Wolfram von Eschenbach's *Parzival*, Gottfried von Strassburg's *Tristan und Isolde*, and major poets of the *Minnesang*, especially Walther von der Vogelweide.

412 History and Society in the Postwar Short Story and Radio Play
Fall. 4 credits. Prerequisite: 201–202 or permission of instructor. Taught in German.
M W F 11:15–12:05. L. M. Olschner.
We will study themes and responses of two popular postwar genres to historical and societal tensions and literary developments from 1945 to the present. Readings by major authors from both Germanys, Austria, and Switzerland will include Böll, Bachmann, Eich, Dürrenmatt, Wolf, and Plenzdorf. We will listen to recordings of some of the radio plays.

416 Literary Translation in the West (also Comparative Literature 416)
Spring. 4 credits. Prerequisite: good reading knowledge of German or French; any other language(s) desirable.
T R 1:25–2:40. L. M. Olschner.
A primary goal of this course is the exploration of the scope and limitations of translation and of the ambiguous area where the translated text seems to depart from its own nature and

become "original" writing. The course will be divided into three parts. The first is historical and theoretical with emphasis on, though not confined to, the German tradition; readings from Dryden, Humboldt, Benjamin, Buber, Steiner, and Derrida, among others, will define our context. The second part is analytical and will attend to the interpretation of translations in prose, poetry, and drama, especially those by writers themselves; among the authors we will read are Shakespeare, Hölderlin, Rimbaud, Mandelstam, Beckett, Joyce, and Valéry. The third part is a practical and experimental exercise of translating texts, to be chosen by our group, into the languages the course participants know best; the emphasis is on critical translation, and students will explicate their translations as a reflection on the translation process.

417 Fascism and Mass Culture (also Comparative Literature 417, Society for the Humanities 417, and Theatre Arts 417)
Fall. 4 credits. Taught in English. For advanced undergraduate and graduate students.
W 3:35–5:30. D. Bathrick.
In this course we will study the role and evolution of mass culture in the Third Reich between 1933 and 1945. In so doing, we will seek to demonstrate *why* and *how* the Nazis were able to use forms of aesthetic representation and mass media communication to establish and maintain political control during this period. Three things will be emphasized: (1) A comparative approach that will explore the similarities and differences in the developments of mass-mediated culture during the 1930s within liberal/capitalist, communist/Stalinist and fascist societies. (2) A focus upon the "aestheticizing of politics" (Walter Benjamin) by the Nazis as the key to understanding their appropriation of mass culture as a mode of domination. (3) Finally, as a main part of the course, a study of individual cultural documents of mass culture. This will include careful interpretive analysis of films (*Jud Süss, Triumph of the Will, Baron Münchhausen*), literature (popular novels, utopian novels, poetry, etc.) theater (the Nazi use of the classics such as Shakespeare, Goethe, Schiller; Nazi plays), and art (a study of Nazi painters: Arno Brekker, etc.).

451–452 Independent Study
451, fall; 452, spring. 1–4 credits each term. Prerequisite: permission of instructor.
Hours to be arranged. Staff.

490 From Literary Criticism to Marxist Theory: The Early Georg Lukács (also Comparative Literature 490 and Government 470)
Fall. 4 credits. For advanced undergraduates and graduate students.
R 1:25–3:20. P. U. Hohendahl.
The writings of the late Lukács have occasionally obscured the importance of the young Lukács for the project of Western Marxism and Critical Theory. The seminar will reexamine the beginnings of neo-Marxist theory as it emerges out of the integration of neo-romantic cultural criticism and contemporary social theory (Simmel, Weber). The analysis will focus on Lukács' seminal texts, especially on *Soul and Form, Theory of the Novel,* and *History and Class Consciousness.*

491 Mass Culture Revisited: From Popular Literature to the Culture Industry (also Comparative Literature 491 and Society for the Humanities 491)
Fall. 4 credits. For advanced undergraduates and graduate students; taught in English. Reading knowledge of German required.
T 1:25–3:20. P. U. Hohendahl.
The purpose of this seminar is twofold: it is designed to engage in a critical dialogue with older and recent theoretical writings on mass culture (Adorno, Bausinger, C. Bürger, Howe, Huyssen, Jameson, L. Levine, MacDonald, Schenda); also, it is intended to investigate the emergence of modern mass culture in Germany. Historically, the course will focus on the period between 1830 and 1900 by tracing the transition from traditional forms of popular literature to its recasting after the industrial revolution. Special attention will be given to the relationship between established high culture and popular culture through an analysis of canon formation on the one hand and an examination of the critical and pedagogical discourse on popular literature on the other. Readings will be taken from the works of popular novelists, such as Marlitt, Courths-Mahler, Karl May, and Ganghofer. The discussion of their texts will include structural as well as contextual problems (literacy, reading public, book market).

[495 The Aesthetic Theory of the Frankfurt School (also Comparative Literature 495)
Spring. 4 credits. Not offered 1990–91.
R 1:25–3:20. P. U. Hohendahl.
This course is designed as an introduction to the history of the Frankfurt School and the essential concepts of critical theory. The emphasis will be placed on the theory of culture and its application to the understanding of literature and aesthetics. The reading material will be taken from the works of Max Horkheimer, Theodor W. Adorno, Walter Benjamin, and Jürgen Habermas.]

[497/697 The Hermeneutic Tradition (also Comparative Literature 497/697)
Fall. 4 credits. Not offered 1990–91.
W 2:30–4:25. Staff.
Hermeneutics is not so much a particular philosophy as an abiding yet developing tradition of reflexivity. The course will place this approach into a historical perspective, tracing it back to antiquity (St. Augustine), then following its development from eighteenth-century rationalism via romantic hermeneutics (Schleiermacher, E. A. Poe) and the contribution of the Historical School (Droysen) to *Geisteswissenschaften* (Dilthey). Finally, there will be a discussion of various twentieth-century trends (Bultmann, Ricoeur, Gadamer) reflecting the influence of Heideggerian phenomenology.]

Seminars

Note: For complete descriptions of courses numbered 600 or above consult the appropriate instructor.

[605 Introduction to Modern German Literary Theory with an Emphasis on Contemporary Criticism (also Comparative Literature 605)
Fall. 4 credits. Not offered 1990–91.
R 2:30–4:25. P. U. Hohendahl.
The seminar will offer a survey of German criticism from 1900 to the present. Emphasis will be placed on the period from 1945 to the present. The aim of the course is to familiarize incoming graduate students with the main currents of German criticism. Readings will be taken from Heidegger, Staiger, Käte Hamburger, Szondi, Adorno, Jauss, and others.]

[611 Seminar in Old Icelandic Literature I (also English 602)
Not offered 1990–91.]

[612 Seminar in Old Icelandic Literature II (also English 612)
Not offered 1990–91.]

[623 Seminar in Medieval German Literature I (also Medieval Studies 601)
Fall. 4 credits. Not offered 1990–91.
W 1:25–3:20. A. Groos.
Topic: *Minnesang.*]

[624 Seminar in Medieval German Literature II
Spring. 4 credits. Not offered 1990–91.
T 1:25–3:20. A. Groos.
Topic: *Parzival.*]

[625 The Northern Renaissance and Reformation
Spring. 4 credits. Not offered 1990–91.
M 1:25–3:20. S. L. Gilman.
Topic: disease and society in fifteenth- and sixteenth-century Germany. The course will center on the function of metaphors of disease in writers such as Erasmus, Luther, and Hutten and the relationship between these metaphors and the social perception of illness, especially the syphilis epidemics of the late fifteenth and early sixteenth centuries. Readings in German and Latin of major texts in intellectual and medical history.]

626 Nuremberg
Spring. 4 credits.
M 1:25–3:20. A. Groos.
An introduction to Nuremberg, in the late fifteenth and sixteenth centuries, with emphasis on its significance as an urban cultural center. Topics include the city's development and social structure, printing, the Reformation, *Meistersang,* and major cultural figures such as Albrecht Dürer, Hans Sachs, Willibald and Caritas Pirkheimer. The last part of the course will deal with the modern reception of "Nuremberg" by Goethe, the Romantics, Lortzing, and Wagner.

[627 Baroque
Fall. 4 credits. Not offered 1990–91.
R 1:25–3:20. P. U. Hohendahl.
The seminar will focus on the development of German literature from 1620 to 1700 with an emphasis on its critical and historical assessment. The readings will stress the special nature of the Baroque period, i.e., its political and social structure, as well as its major religious and aesthetic tendencies, as a transition from feudalism to the early absolutism. The discussion will highlight the role of the poet, the function of literature, and the composition of the audience. All major genres (poetry, drama, novel) will be examined. Among the authors to be read will be Fleming, Grimmelshausen, Gryphius, Hofmannswaldau, Opitz, and Zigler.]

[629 The Enlightenment
Fall. 4 credits. Not offered 1990–91.
R 1:25–3:20. P. U. Hohendahl.
The seminar will focus on eighteenth-century German literature and philosophy from 1730 to 1790. Emphasis will be placed on the concept of *Aufklärung* and its meaning for the development of German thought. The discussions will stress major areas of critical inquiry, such as religion, philosophy, and literature. Readings will be taken from authors like Forster, Gellert, Gottsched, Kant, Lessing, and Wieland. The critical literature will include the writings of Adorno, Foucault, Habermas, Horkheimer, and Koselleck.]

630 Classicism and Idealism
Spring. 4 credits. Texts in German, discussion in English.
W 3:35–5:30. G. Waite.
A purpose of this seminar is to introduce some of the major poetic and philosophical texts generally considered to be in the canon of "Classicism" (roughly 1786–1832), while at the same time giving reasons to call the notion of a canon into question. We will consider especially the two great principles of the period: Goethe's *symbol* and Hegel's *dialectic*, and how they come together in the problem of *tragedy*. We will also submit these principles to their subsequent critique by such writers as Adorno, Benjamin, Dick, Foucault, Gadamer, Gramsci, Hyppolite, Kittler, Kojeve, Lenin, Lukács, Mao, and M. Rosen.

[632 Faust
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
M 1:25–3:20. G. Waite.
An intensive analysis of parts I and II. Our task will be to combine techniques of close reading and attention to textual nuance with a concern for the history of the reception and appropriation of the text, including contemporary theory (e.g., hermeneutics, deconstruction, semiotics, feminism, and historical materialism).]

[633 Hölderlin (also Comparative Literature 633)
Spring. 4 credits. Conducted primarily in English, most texts in German; good reading knowledge of French useful, not required. Not offered 1990–91.
R 3:35–5:30. G. Waite.
We will read Hölderlin's major writings and some representative secondary scholarship.]

[635 Backgrounds of German Realism
Not offered 1990–91.]

[636 Seminar on Richard Wagner (also Music 678)
Not offered 1990–91.]

[637 Freud and the *Fin de Siècle*
Fall. 4 credits. Reading knowledge of German necessary. Not offered 1990–91.
M 2:30–4:25. S. L. Gilman and C. A. Martin.
A survey of major late nineteenth- and early twentieth-century works reflecting the adoption of the biological mode as a central metaphor in German thought. Central to the course will be Freud's early work (*Studies in Hysteria*, *Interpretation of Dreams*, *Three Essays*). Other writers to be read include Nietzsche, Haeckel, Andreas-Salomé, Wedekind, Hauptmann, Schnitzler, and Lombroso.]

[638 Nineteenth-Century Poetry
Not offered 1990–91.]

[639 German Poetry of the Twentieth Century
Spring. 4 credits. Not offered 1990–91.
R 3:35–5:30. L. M. Olschner.
The seminar will focus on the readings of exemplary poetic and theoretical texts. George, Hofmannsthal, and especially Rilke will provide the foundation on which aspects of tradition, modernism, avant-gardism, and hermeticism can be defined and differentiated. Expressionism, Dada, Surrealism, traditional and recent nature poetry, political poetry from the right and left, Holocaust poetry, poetry of *Innerlichkeit*, and concrete poetry are the areas of primary interest.]

[641 The Modern German Novel
Not offered 1990–91.]

[642 Bertolt Brecht in Context (also Comparative Literature 679 and Theatre Arts 679)
Spring. 4 credits. Requirements: seminar paper that will form the basis for an oral presentation for class discussion. Not offered 1990–91.
M 2:30–4:25. D. Bathrick.
Brecht's theory and dramatic praxis will be examined in the light of a two-fold context: (1) the relation of selected plays and writings to the historical contingencies of the Weimar and exile periods in which they emerged; (2) in later periods: an analysis of the reception and various readings of these same works by later writers and critical publics in West Germany, East Germany, and the United States as a way of understanding the changing nature of aesthetic values in the postwar period. Special attention will be given to the importance of Marxism for Brecht's art, as well as to the author's role as a representative of the cultural avant-garde.]

[643 Mann and Myth
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
M 1:25–3:20. I. Ezergailis.
An examination of Thomas Mann's use of mythical (including biblical) sources and traditions, centering on a reading of the Joseph-tetralogy and the correspondence between Mann and Karl Kerény.]

[644 The Holocaust Survivor as Author (also Near Eastern Studies 444)
For description, see German Studies 444. Not offered 1990–91.]

[645 West German Literature, 1945–1970
Spring. 4 credits. Open to advanced undergraduates with permission of instructor. Taught in German. Not offered 1990–91.
W 1:25–3:20. L. M. Olschner.
The seminar will emphasize source texts of all genres and analyze the cultural and political background leading to the production of texts that may be read as mimetic echos or critical reactions to the emergence of postwar West Germany. The twenty-year history of the *Gruppe 47* will provide the central frame of reference. The dubiousness or validity of terms such as *Nullpunkt*, *Kahlschlag*, and *Trümmerliteratur*; the function, significance, and history of literary magazines in the late forties and fifties, attitudes and presuppositions of literary critics; the problem of *Vergangenheitsbewältigung*; and the role of literature in the public sphere are background areas that will add to an understanding of primary texts. Within this context the positions of Benn and E. Jünger will be examined, and paradigmatic texts by Böll, Grass, Johnson, Weiss, Enzensberger, and others will be interpreted in close readings.]

[646 East German Novel of the Seventies and Eighties
Fall. 4 credits. Not offered 1990–91.
T 3:35–5:30. D. Bathrick.
The course will explore the thematic and formal developments of the novel in the GDR since the publication of Christa Wolf's *Nachdenken über Christa T.* (1968) in the light of radically changing cultural and political norms (women, dissent, Jewish question, "subjectivity," socialist realism, etc.) in the society as a whole.]

[647 Paul Celan in Tradition and Context
Spring. 4 credits. Open to qualified undergraduates with permission of instructor. Not offered 1990–91.
W 3:35–5:30. L. M. Olschner.
Paul Celan, now widely recognized as one of the most important European poets in this century, has complex origins: belonging to the Ashkenazim in Rumania, who spoke German at home, Celan never lived in a German-speaking environment after moving to Paris in 1948. Having lost his parents in a concentration camp, he lived the fractured existence of writing in the language of the murderers. The seminar examines Celan's cultural background in Czernovitz and his indebtedness to romanticism, symbolism, and Surrealism; the context of the Cabala and the Holocaust; intertextual connections with Hölderlin, Rilke, and Mandelstam, as well as dialogues with Heidegger, Benn, and N. Sachs; his translations from seven languages; and poetics and the reception of his poetry, especially in the conservative climate of the Federal Republic of Germany.]

[648 East and West German Drama: Post–1945 (also Theatre Arts 438/648)
For description, see German Studies 438. Not offered 1990–91.]

[649 Contemporary German Women Writers
Not offered 1990–91.]

[650 Culture in the Weimar Period (also Theatre Arts 650)
Spring. 4 credits. Not offered 1990–91.
T 3:35–5:30. D. Bathrick.
This survey course will treat major developments in the area of German culture (literature, cinema, painting) between 1900 and 1933. Individual representative texts will be studied and discussed in their relation to the cultural, political, and social contexts out of which they emerge. Lectures and discussions will focus both on detailed interpretation of individual works as well as on the general historical background and developments of the period.]

660 Visual Ideology (also Comparative Literature 660 and Theatre Arts 660)
Spring. 4 credits.
R 3:35–5:30. G. Waite.
Some of the most powerful approaches to visual practices have come from outside or from the peripheries of the institution of art history and criticism. This seminar will analyze the interactions between academically sanctioned disciplines (such as iconography and connoisseurship) and innovations coming from philosophy, psychoanalysis, historiography, sociology, literary theory, mass media criticism, feminism, and Marxism. We will try especially to develop: (1) a general theory of "visual ideology" (the gender, social, racial, and class determinations on the production, consumption, and appropriation of visual artifacts under modern and postmodern conditions); and (2) a specific practice of the "dialectical image" to articulate these determinations. Readings taken from Althusser, Barthes, Bataille, Baxandall, J. Berger, Benjamin, Brecht, Burgin, De Laurentis, Derrida, Eisenstein, Foucault, Freud, Fried, C. Ginzburg, D. Harvey, Heartfield, Irigary, Kristeva, Lacan, Maravall, Marin, Merleau-Ponty, Modleski, Panofsky, Pasolini, M. Raphael, Sontag, Warburg, P. Weiss. Examples will be drawn primarily from the history of oil painting, but also (according to the interests of the class) from architecture, city planning, photography, film, and other mass media.

664 Late Nineteenth Century: *Fin de Siècle*
Fall. 4 credits.
W 1:25–3:20. C. A. Martin.
The seminar/anchor course will focus on late–nineteenth-century literary, cultural, and social texts, with emphasis on the period between 1880 and 1910. Course will pay particular attention to the meanings and effects of "Naturalism," as well as to the literary-cultural production and debates over "the social question," "the Jewish question," and "the woman question." Readings will be taken from authors such as Nietzsche, Freud, Hauptmann, Ibsen, Salomé, Rilke, Dohm, Wedekind, Schnitzler, Haeckel, and von Reventlow. Critical literature will include writings of a range of contemporary critics.

[665 The Search for German Cultural Identity, 1850–1920
Spring. 4 credits. Not offered 1990–91.
T 3:35–5:30. P. U. Hohendahl.
The seminar will concentrate on the period between the Revolution of 1848 and World War I, emphasizing the discourse on German national identity. The texts will be drawn from various areas, including history, music criticism, philosophy, and literature. Authors to be considered are Heine, Wagner, Nietzsche, and Thomas and Heinrich Mann.]

[674 Opera (also Music 274/674 and Italian 374)
Not offered 1990–91.
For description, see German Studies 374.]

[676 New German Cinema (also Theatre Arts 676)
Spring. 4 credits. Not offered 1990–91.
T R 11:40–12:55; screening, T 4:30.
D. Bathrick.
The course will examine in depth major films and filmmakers who are considered a part of the German new wave cinema (Fassbinder, Schlöndorff, Von Trotta, Kluge, Sander, Herzog, Wenders, etc.). Of special interest will be the differing impact of these films in the contexts of West Germany, Europe, and the United States.]

[677 Mozart (also Music 677)
Fall. 4 credits. Not offered 1990–91.
T 1:25–4. N. Zaslaw.]

[678 Theory and Practice of Modern Drama (also Theatre Arts 678)
Spring. 4 credits. Not offered 1990–91.
W 3:35–5:30. D. Bathrick.
The course will explore different theories of modern drama (Szondi, Brecht, Artaud, etc.) and discuss these on the basis of a number of representative works of modern drama. The point will be to trace the interchange between theory formation and dramatic practice.]

[679 Bertolt Brecht in Context (also Comparative Literature 679 and Theatre Arts 679)
Spring. 4 credits. Requirements: seminar paper that will form the basis for an oral presentation for class discussion. Not offered 1990–91.
M 2:30–4:25. D. Bathrick.
Brecht's theory and dramatic praxis will be examined in the light of a two-fold context: (1) the relation of selected plays and writings to the historical contingencies of the Weimar and exile periods in which they emerged; (2) in later periods: an analysis of the reception and various readings of these same works by later writers and critical publics in West Germany, East Germany, and the United States as a way of understanding the changing nature of aesthetic values in the postwar period. Special attention will be given to the importance of Marxism for Brecht's art, as well as to the author's role as a representative of the cultural avant-garde.]

[684 Heidegger: A Reading of *Being and Time*
Not offered 1990–91.]

[685 Gramsci and Cultural Politics (also Comparative Literature 685 and Government 675)
Spring. 4 credits. Not offered 1990–91.
W 1:25–3:20. G. Waite.
The modern transnational-capitalist state rules not only by domination and coercion but by the "noncoercive coercion" of cultural hegemony. What is the proper role of intellectuals (and who and what is an intellectual?) in cultural politics? How do "leftist" cultural critics, theorists, and artists living under late capitalism relate as individuals and collectively to nascent socialist countries? What is the relationship of intellectuals to political parties? We will deal with the political and cultural writings of Antonio Gramsci—whether Gramsci is best understood as a "Western Marxist" or as an extension of Leninist "orthodoxy"—and with the response of critics, artists, and cultural practices to Gramsci's challenge: the neorealist film *La Terra trema*, Griffith's drama *Occupations*, the paintings of Cremonini, Fowles's novel *Daniel Martin*, Pasolini's poem cycle "Ashes for Gramsci," the mass-media analyses of Parenti (*Inventing Reality*) and Kukarkin (*The Passing Age*), the political philosophy of Laclau and Mouffe (*Hegemony and the Socialist Strategy*), the theory and practice of "low-intensity conflict" as developed by the CIA and the NSC, and the cultural theories of Williams (*Marxism and Literature*) and Said (*The World, the Text, and the Critic*).]

[688 Theodor W. Adorno: Mass Culture and the Avant-Garde (also Comparative Literature 688 and Theatre Arts 688)
Fall. 4 credits. Not offered 1990–91.
T 1:25–3:20. P. U. Hohendahl.
In this country Adorno is primarily known for his philosophical writings and his music criticism. His literary criticism and his contributions to aesthetic theory, on the other hand, remain to be discovered. The seminar will explore Adorno's importance for contemporary criticism; it will focus on Adorno's theory of art as well as his literary and music criticism, especially those parts concerned with the avant-garde and its role in the age of modern mass culture. The readings will be taken from Adorno's essays as well as *Minima Moralia, Dialectic of Enlightenment, Philosophy of Modern Music, Prisms*, and *Aesthetic Theory*.]

[689 Art and Truth: The Aesthetic Theory of Theodor W. Adorno (also Comparative Literature 689)
Spring. 4 credits. Not offered 1990–91.
T 1:25–3:20. P. U. Hohendahl.
The seminar will focus on the aesthetic writings of Adorno, beginning with relevant chapters from *Dialectic of Enlightenment*, as well as selected essays on European literature and music. The emphasis then will be placed on Adorno's major posthumous work, *Aesthetic Theory* (1970). The aim is a close reading of Adorno's theory in the context of the Kantian and Hegelian tradition.]

[690 German Feminist Criticism and Theory (also Women's Studies 690)
Spring. 4 credits. Open to qualified undergraduates with permission of instructor. Reading knowledge of German required. Not offered 1990–91.
W 1:25–3:20. C. A. Martin.
This course is designed to explore developments in feminist literary theory with particular attention to the field of German literature. We will consider competing critical strategies and their political implications by working through different readings of specific literary texts and by raising questions about the implications for feminism of competing critical strategies in the general field of literary theory; the tension in feminist *Germanistik* between critical attention to the "male canon" and the construction of a female literary tradition; the impact of French and American feminist work in the field of German; the impact and treatment of the Nazi period; the effects of the East-West divide on development in both Germanys; the impact on feminist literature and criticism of Third World women in Germany; and approaches in West and East Germany to imperialism and racism.]

[694 Seminar in Literary Theory: Aesthetics of Reception and Reader Response Theory (also Comparative Literature 694)
Fall. 4 credits. Not offered 1990–91.
T 1:25–3:20. P. U. Hohendahl.
The interest in the reception of literature and reader response has become a major focus for the development of literary theory since 1970. The seminar will concentrate on the emergence of the aesthetics of reception in both West and East Germany during the late seventies and early eighties. These approaches will be compared with the emerging reader response theory in the United States. The reading material will be taken from the writings of Jauss, Iser, Naumann, Weimann, Stanley Fish, and Norman Holland.]

[695 Brecht and Artaud (also Comparative Literature 695 and Theatre Arts 695)
Fall. 4 credits. Not offered 1990–91.
W 12:20–2:15. D. Bathrick.
This course will explore in depth the writings and practices of two major 20th-century theatrical artists, Bertolt Brecht and Antonin Artaud, to (a) map out differences and similarities between the two as representatives of avant-garde theatre; (b) situate their respective work in the political and cultural contexts out of which they emerged; and (c) explore their impact upon succeeding movements and artists of modern drama and cinema. A central focus of the course will be to explore the differing and changing notions of "avant-garde theatre" as demonstrated in the work and reception of Brecht and Artaud. The face-off between the two will serve methodologically both to delineate and to interrogate critically what have become two discrete "models" of avant-garde theatre as well as to consider ways in which these two models have been and could be synthesized.]

[697 The Hermeneutic Tradition (also Comparative Literature 497/697)
Not offered 1990–91.
For description, see German Studies 497.]

[699 German Film Theory (also Comparative Literature 699 and Theatre Arts 699)
Spring. 4 credits. Not offered 1990–91.
R 1:25–3:20. D. Bathrick.
This course will examine critically the writings of major German film theorists from the Weimar period to the present. Works by Bela Balazs, Rudolf Arnhelm, Siegfried Kracauer, Walter Benjamin, Theodor Adorno, Max Horkheimer, Alexander Kluge, H. J. Syberberg, Gertrud Koch, Thomas Elsaesser, and others will be read and discussed in light of the following considerations: What are the aesthetic and philosophical premises underlying these theories? What are the cultural and political contexts out of which these ideas emerge and how are these theories addressing these contexts? How do these theories relate to the work coming out of other national traditions at the same time or to current debates in feminist, formalist, post-modern, or post-structuralist film theory? There will be film showings.]

753-754 Tutorial in German Literature
Fall and spring. 1–4 credits per term.
Prerequisite: permission of instructor.
Hours to be arranged. Staff.

GOVERNMENT

V. Shue, chair; B. R. O'G. Anderson, M. G. Bernal, S. Buck-Morss, W. J. Dannhauser, A. T. Dotson, M. J. Esman, B. Ginsberg, M. Goldfield, J. Goldgeier, S. I. Jackson, M. Katzenstein, P. Katzenstein, E. W. Kelley, E. G. Kenworthy, I. Kramnick, R. N. Lebow, T. J. Lowi, W. Mebane, T. J. Pempel, J. Pontusson, J. Rabkin, T. Risse-Kappen, M. Rush, L. Scheinman, M. Shefter, S. G. Tarrow, S. Telhami, N. T. Uphoff, J. Waldron

Government is what Cornell calls a department that elsewhere might be termed political science. The focus of this discipline is power applied to public purposes. Some faculty concentrate on purposes, some on applications. Some engage in the close reading of great texts of political philosophy, while others analyze the behavior of power-wielders and publics in this and other societies. Government is divided into four subfields: U. S. politics, comparative politics (other nations), political theory (philosophy), and international relations (transactions between nations).

To accommodate new courses or course changes, a supplementary announcement is prepared by the department. Before enrolling in courses or registering each term, students are requested to consult the current supplement listing courses in government, available in 125 McGraw Hall.

The Major

To be **admitted** to the major, a student must have already received a passing grade in at least three government department courses and received a grade of B or better in at least two such courses.

To **complete** a major in government, a student must (1) pass at least two of the introductory courses and an additional course in one of the remaining government subfields (American Government, Comparative Government, Political Theory, International Relations); (2) accumulate an additional 24 credits of government coursework at the 300-level or above; (3) successfully complete at least one seminar-style course in government (which may be applied toward the 24 credits); (4) accumulate at least 16 credits in related fields, again at the 300 level or above. All courses used to fulfill a government major must be passed with a letter grade. Majors are urged to complete the introductory course requirement early.

Seminars are those courses numbered 400, 490, and 500, plus whatever additional courses the director of undergraduate studies may designate. To be admitted to a seminar, students apply during the course scheduling period held the previous semester. Related fields normally include courses offered by these departments: Anthropology, Economics, History, Psychology, and Sociology. Majors should discuss their selection of related courses with their advisers. When approved by an adviser or by the director of undergraduate studies, courses from still other departments may be used to fulfill this requirement.

Cornell-in-Washington Program. Government majors may apply to the Cornell-in-Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

European Studies Concentration. Government majors may elect to group some of their required and optional courses in the area of European studies, drawing from a wide variety of courses in relevant departments. Students are invited to consult Professors P. Katzenstein, Scheinman, and Tarrow for advice on course selection and foreign study programs.

International Relations Concentration. See the description under "Special Programs and Interdisciplinary Studies."

Honors. Each fall a small number of seniors enter the honors program. To apply, junior majors submit applications in May. Along with a fuller description of the honors program, application forms are available in 125 McGraw Hall. The three courses comprising the honors sequence (honors courses) are described below.

Introductory Courses

Students registering for introductory courses should register for the lecture only. Sections will be assigned during the first week of class. Introductory courses are also offered during summer session.

111 The Government of the United States
Spring and summer. 3 credits.
B. Ginsberg, T. J. Lowi.
An introduction to government through the American experience. Concentration on analysis of the institutions of government and politics as mechanisms of social control.

131 Introduction to Comparative Government and Politics
Fall and summer. 3 credits.
M. J. Esman.
A survey of the institutions, processes, and major problems of politics and government in contemporary states. The structures and ideologies of different regimes, the relationships of individuals and groups to the state, the shaping and implementation of public policy, the regulation of political conflict, and the adaptation of political systems to changing conditions. Particular attention is paid to the government and politics in Great Britain, France, the Soviet Union, China, Nigeria, and Mexico.

161 Introduction to Political Theory
Spring and summer. 3 credits.
W. J. Dannhauser.
A survey of the development of Western political theory from Plato to the present. Readings from the works of the major theorists. An examination of the relevance of their ideas to contemporary politics.

181 Introduction to International Relations
Fall and summer. 3 credits.
P. Katzenstein.
An introduction to the basic concepts and practice of international politics.

Freshman Writing Seminars

100 Freshman Seminars
Fall, spring, or summer. 3 credits. Seminars will be offered in fall, spring, and summer terms. Consult the listings for the Freshman Seminar Program in the section "Special Programs and Interdisciplinary Studies," the supplement issued by the department, and the Freshman Seminar booklet for course descriptions and instructors.

Major Seminars

400 Major Seminars
Fall or spring. 4 credits.
These seminars, emphasizing important controversies in the discipline, cap the majors' experience. Thus preference in admission is given majors over nonmajors and seniors over juniors. Topics and instructors change each semester. To apply, students should pick up a form in 125 McGraw Hall during the course selection period the semester before the seminar is given. The following courses are open to sophomores, juniors, and seniors without prerequisites unless otherwise indicated.

American Government and Institutions

Government 111 is recommended.

306 Sex Discrimination: Law and Social Policy (also Women's Studies 372 and Sociology 372)
Fall. 4 credits.
C. Bohmer.
This course will cover the current legal and social trends in the area of sex discrimination. The relationship between feminist consciousness and organization and developments in gender-related constitutional law and legislation will be examined. Focusing on such topics as education, employment, gay rights, and reproductive control, the course will analyze the relationship between legal change and sociopolitical change as it affects equal rights.

308 Class, Race, and Interest Groups in U.S. Politics
Fall. 4 credits.
M. Goldfield.
The American polity is often characterized as a democracy, sometimes as a representative democracy, sometimes as a pluralist democracy. While most people recognize the existence of a great deal of corruption, unequal benefits, special advantages to the wealthy, and even the political exclusion of the "poor" and "minorities," these phenomena are usually viewed as aberrations or imperfections that do not fundamentally define either the distribution of power or the democractic functioning of the political process. In this course we will entertain the proposition that issues of class and race are central to the shaping of politics in this country. While the course will spend some time examining the dominant paradigms in U.S. politics, the bulk of our attention will be devoted to more critical readings.

[309 Interpretations of American Politics
Not offered 1990–91.]

310 Power and Poverty in America
Fall. 4 credits.
E. W. Kelley.
America, despite egalitarian democratic rights, remains a stratified society conspicuous for great disparities in the allocation of income and wealth. The purpose of this class is to investigate these disparities, both empirically and normatively, and to assess the impact of government upon them. Topics for discussion will include: What do we mean by distributional inequality and by the demand for greater egalitarianism? What is the extent of inequality and of poverty in America today? How does one establish minimum standards for distributional justice? Is the United States currently on the road toward achieving that minimum standard? What is the array of federal welfare programs presently available and what is their effect? How does one understand the role of the welfare state under advanced capitalism and what different forms has it assumed in different countries? How do we explain its particular American manifestation? What reforms are currently on the political agenda? Can we imagine a society somewhat like that in America achieving a very different distributional result?

311 Urban Politics
Spring. 4 credits.
M. Shefter.
The interaction between urban problems and the politics of city government has resulted in important public policy issues in the United States. This course provides an introduction to the politics of metropolitan areas; analysis of the central institutions and processes of urban government such as mayors, city councils, elections, and the criminal justice system; and specific public policy problem areas such as race relations, education, housing, law enforcement, and civil disorder.

[312 Urban Affairs Laboratory
4 credits. Not offered 1990–91.]

313 The Nature, Functions, and Limits of Law
Spring. 4 credits.
K. Clermont.
A general education course for students at the sophomore and higher levels. Law is presented not as a body of rules but as a set of varied techniques for resolving conflicts and dealing with social problems. The roles of courts, legislatures, and administrative agencies in the legal process is analyzed, considering also the constitutional limits on their power and practical limits on their effectiveness. Readings consist mainly of judicial and administrative decisions, statutes and rules, and commentaries on the legal process.

316 The American Presidency
Spring. 4 credits.
A. Dotson.
Analysis of the politics of the presidency and the executive branch with emphasis on executive-legislative relations, executive branch policymaking, and the problems of the modern presidency.

317 Campaigns and Elections
Fall. 4 credits. Prerequisite: Government 111 or permission of the instructor.
W. Mebane.
This course examines popular campaigns and elections, focusing primarily on the United States. Topics covered include the effects of election-related manipulations on the economy and vice versa; why members of the U.S. House of Representatives running for reelection almost never lose; how individuals decide whether to vote and, if so, for whom; and why political parties play such minor roles in American electoral campaigns. Among the required assignments is a paper, based on original primary research, in which the results of the 1990 U.S. House and Senate elections are explained.

318 The American Congress
Fall. 4 credits.
M. Shefter.
The role of Congress in the American political system. Topics to be discussed: the political setting within which Congress operates, the structure of Congress, the salient features of the legislative process, and recent congressional behavior in a number of policy areas.

320 Public Opinion and Public Choice
Spring. 4 credits. Prerequisite: Government 111 or permission of the instructor.
W. Mebane.
This course develops the apparent paradox that a government the people control will only rarely be a government that does what the people want. Through a variety of theoretical lenses, but especially that provided by the formal theory of social choice, we examine several of the most important institutions through which people control government in the United States, including elections, legislatures, and bureaucracy. A contrast is systematically developed between the paradoxes evident in how such institutions actually operate and the notions of democratic consensus expressed by the theory of public opinion. A completed paper based on original case study research is among the course assignments.

[323 The "Fourth" Branch
4 credits. Not offered 1990–91.]

[327 Civil Liberties in the United States
4 credits. Not offered 1990–91.]

328 Constitutional Politics: The United States Supreme Court
Fall and summer. 4 credits.
J. Rabkin.
The course investigates the role of the Supreme Court in American politics and government. It traces the historical development of constitutional doctrine and the institutional role the court has played in American politics.

[329 Race, Gender, and Politics
4 credits. Not offered 1990–91.]

353 Feminism, the State, and Public Policy (also Women's Studies 353)
Spring. 4 credits.
M. Katzenstein.
The course examines the aims and strategies of the feminist movement in the United States and the response of both society and the state to feminist claims. It is thus a course about political protest and the capacity of American political institutions to promote and shape as well as to counter social change. In examining the law and public policy on such issues as job discrimination, wife battery, rape, abortion, etc., the course explores the contradictions between, and the congruence of, the dual ideals of individual choice and group equality.

[403 Cleavages and Conflicts in Contemporary American Politics
4 credits. Not offered 1990–91.]

405 Government and the Economy
Spring. 4 credits.
E. W. Kelley.
What would Adam Smith and Karl Marx consider the causes of such problems as stagflation, an unfavorable balance of trade, the threat of protectionism, the growth of massive public and private sector bureaucracies, and excessive government regulation? What suggestions would they make about remedies? How can we evaluate both their suggestions and their evidence? Is representative democracy itself part of the problem? Can Woodrow Wilson, Thomas Jefferson, or Grant McConnell help us understand the effects of legislative behavior on economic transactions? This course will use selected works of Smith, Marx, Durkheim, Wilson, and more recent authors such as Mancur Olson, Bendix, and McConnell. Substantive focus will be on classical political economy; the development of the state; the rise of professions, guilds, and labor unions; regulation and the increased delegation of public authority to private groups. Methodological focus will be on the ways of evaluating both discursive and quantitative evidence for the factual and causal claims of the authors read.

[406 Politics of Education
4 credits. Not offered 1990–91.]

[407 Law, Science, and Public Values
Spring. 4 credits. Not offered 1990–91.]

[411 Political and Economic Power in Cities
4 credits. Not offered 1990–91.]

413/613 Politics and Economics in Local Areas
Spring. 4 credits.
W. Mebane.
"All politics is local politics," some say. This course gives sustained attention to that proposition. We examine the dependencies that exist in the United States between political outcomes and local economies. Fiscal federalism, the consequences local taxing and spending have for economic growth, the pork barrel, and the effects local economic conditions have on elections are among the topics considered. Theoretical suggestions from economics and regional science are reviewed, along with research from political science. Students are also introduced to a number of recently organized data collections that offer chances for new, systematic research in this area.

414/614 The Administrative State
Fall. 4 credits.
J. Rabkin.
This course will examine the problem of how—or whether—legitimate governmental authority can be distinguished from arbitrary coercion in a modern era of pervasive regulation. It will consider, in turn, several different theoretical approaches to this problem as illustrated in the works of modern legal and social theorists, in some landmark cases in the history of American administrative law, and in a representative sampling of modern cases. But the course will also look at several case studies of the regulatory process in today's world, suggesting the difficulties of applying—or putting much reliance on—these accepted approaches in actual practice.

418/618 Labor in American Politics
Spring. 4 credits.
M. Goldfield.
This seminar will examine a series of questions about the "exceptional" character of American politics. We will first examine various theories about why the United States, in contrast to other economically developed capitalist countries, has no strong working class political party. The emphasis will be on distinguishing a series of plausible hypotheses whose validity can be evaluated. We will then attempt to test these hypotheses by a study of the development of U.S. industrial unions. Our goal will be an adequate explanation of why U.S. labor and American politics are "different."

420/620 American Political Development
Fall. 4 credits.
M. Goldfield.
This course will examine a number of theories of how American politics has developed its distinctive aspects. The first half of the course will be devoted to examining five theories of American political development: 1) Pluralist views (e.g., Hartz) on the distinctive liberal values in U.S. society; 2) state-centered theories that stress the importance of the development of the administrative capacities of the federal government; 3) critical election theories that emphasize the importance of electoral realignments; 4) theories that point to the changes in structure or regimes of capital accumulation; 5) analyses that argue for the centrality of political exclusion and divisions by class, race, and gender. The second half of the course will attempt to evaluate the applicability of these theories to American politics by looking at distinctive features of the period from the New Deal to the present.

[423 Labor and the New Deal
4 credits. Not offered 1990–91.]

[424 Political Change in the United States
4 credits. Not offered 1990–91.]

428–429 Government and Public Policy: An Introduction to Analysis and Criticism
428, fall; 429, spring. 4 credits each term.
Open to undergraduates. 428 and consent of instructor are required for 429.
T. J. Lowi.
Government 428 concentrates on history and criticism of U.S. policies and the politics associated with them. Particular attention is given to the origins and character of the regulatory state and the welfare state. Government 429 is an opportunity to pursue further the research begun in 428.

Comparative Government

Government 131 is recommended.

[326 Eastern Europe Today: Economics, Government, Culture (also Russian Literature 329 and Economics 329)
4 credits. Not offered 1990–91.]

[330 The Soviet Union: Politics, Economics, and Culture (also Russian Literature 330 and Economics 330)
Spring. 4 credits. Not offered 1990–91.]

[331 Beyond the Year 2000
4 credits. Not offered 1990–91.]

333 Government and Politics of the Soviet Union
Spring. 4 credits.
L. Bruszt.
The politics of the top leaders, the institutions through which they operate, and the impact of their policies on the Soviet people. Emphasis is also on phases in the development of the Soviet system and on the ways in which the Soviet Union served as the prototype for all subsequent Communist states.

[334 Business and Labor in Politics
Fall. 4 credits. Not offered 1990–91.]

335 Modern Greek Poetry and Politics (also Comparative Literature 235 and Classics 235)
Fall. 4 credits.
G. Holst-Warhaft.
The history of modern Greece has been marked by a series of political crises that have resulted in deep divisions within society. Greek poetry has reflected these crises and divisions, and in this course the poetry of 19th- and 20th-century Greece will be interpreted in its historical and political context. The course will concentrate on four periods in which there has been a particularly strong interaction. The continuity of ancient Greek myths in modern Greek poetry will also be explored. Students taking this course as Government 335 for 4 credits must write an additional paper on a political topic.

[336 The Ethnic Dimension in Politics
4 credits. Not offered 1990–91.]

337 Marxism, Communism, and Revolution
Spring. 4 credits.
S. Tarrow.
From Marx to Gorbachev, from mid-nineteenth century to the present, and from Western Europe to Asia, Marxism and communism spread rapidly across the globe. For some, Marxism was a beacon of hope and liberation; for others, communism was the evil empire. At one time, communist revolutionaries seemed poised to spread the doctrine of Marxism through violent revolution. This apparent threat created a bipolar world and transformed American foreign policy. More recently, communism has fallen on hard times. Intellectuals, political leaders, and ordinary people in communist countries reject the doctrine of Marxism that once inspired them and now challenge the communist elites who run their countries. What is the theory of Marxism and how did it give rise to such contradictions? How does it relate to the practice of communism today? Can the current turbulence in Eastern and Central Europe be considered a revolution against communism? This course will analyze the appearance of Marxism in Western Europe in the mid-nineteenth century, the meteoric rise and diffusion of communist parties and regimes in the first half of our century, and the fate of Marxism and communism today. Students are encouraged to precede this course by taking Government 131 or 376, or Philosophy 319.

[338/638 European Political Development
4 credits. Not offered 1990–91.]

[340 Latin American Politics
4 credits. Not offered 1990–91.]

[341 Society and Politics in Central Europe
4 credits. Not offered 1990–91.]

343 Contemporary European Society and Politics (also History 283 and German Literature 283)
Fall. 4 credits.
J. Pontusson.
The crisis of communist regimes in Eastern Europe has brought an end to the postwar division of Europe. At the same time, the European Community is emerging as a major economic and political power in the world. This course explores these dramatic new developments against the background of an interdisciplinary and comparative investigation of postwar European politics, society, and culture. Topics include generational change, class structure, economic and social policy, new social movements, family and community life, film, and cultural criticism.

[344 Government and Politics of Southeast Asia
4 credits. Not offered 1990–91.]

[345 Contemporary European Society and Politics (also German Literature 285 and History 285)
4 credits. Not offered 1990–91.]

346 Politics of Contemporary Japan
Fall. 4 credits.
T. J. Pempel.
The focus will be on the political, social, and economic delimiters of policymaking in postwar Japan, with some particular attention given to ideological conflict, political parties and elections, the bureaucracy, the consumer movement, student protest, defense policy, and economic penetration of Southeast Asia.

347 Government and Politics of China
Fall. 4 credits. No prerequisites.
Jia Quingguo.
An introduction to the main currents in China's domestic politics over the last fifty years. Topics include Maoist philosophy; the Communist Party's revolutionary rise to power; peasants, communes, and village politics; ultra-left socialist idealism and mass mobilization; intra-bureaucratic politics; the conditions for military and industrial modernization; and the recent turn toward "market socialism."

[348 Politics of Industrial Societies
4 credits. Not offered 1990–91.]

[349 Political Role of the Military
4 credits. Not offered 1990–91.]

[350 Comparative Revolutions
4 credits. Not offered 1990–91.]

351 India: Social and Economic Change in a Democratic Polity
Spring. 4 credits.
M. Katzenstein.
This course explores the social, economic, and political forces that have shaped India's development since independence. It considers why democratic political institutions in India have proved so resilient and what effect these institutions have on the economic and social policies that are pursued. The importance of international as well as domestic forces in shaping India's economic and political choices is also assessed.

352 Topics in the Middle East: Islam and the State in the Middle East (also Near Eastern Studies 397)
Spring. 4 credits.
M. Winter.
The seminar aims to survey and analyze the problematic relationship between Islam and the modern nation-state in the Middle East, against the historical background of the region. The first part of the course will address the pervasive patterns of this relationship. The second part will be devoted to case studies of the various countries in the Middle East: the Arabs and the Palestinian Arabs, Turkey and Iran.

[354 America in the World Economy
4 credits. Not offered 1990–91.]

[355 Contemporary Revolutions
4 credits. Not offered 1990–91.]

356 Elites and Society: The Political Economy of Power
Spring. 4 credits.
N. T. Uphoff.
For students who have an interest in the nature and uses of power in politics. Consideration of how power has been treated by earlier political thinkers and by contemporary social scientists. Propositions will be formulated and critiqued about the distribution and consequences of power in America, in other industrialized societies, and in the Third World, and their implications for the making of public policy. A game simulation, Third World Power Play, is undertaken at the end of the course.

[357 Political Development in Western Europe
4 credits. Not offered 1990–91.]

358 Modern History of the Middle East: Changing Politics, Society, and Ideas (also Near Eastern Studies 294)
Fall. 4 credits.
M. Winter.
This introductory course is designed to acquaint students with the main political, social, and cultural trends that have shaped the modern and contemporary history of the Middle East. While discussing developments in the region during the nineteenth and twentieth centuries, the lectures will focus on such themes as modernization, nationalism, Islamic response, and Arab politics in the global and regional contexts. The course does not presuppose the knowledge of Middle Eastern languages.

359 Soviet Foreign Policy
Spring. 4 credits.
J. Goldgeier.
This course will examine the development of Soviet foreign policy from the Bolshevik Revolution to the present. We will study the influence of culture and history, the effect of changes in the domestic and international systems, and the role of individual leaders in shaping foreign policy. We will be chiefly concerned with understanding how the Soviet Union over time has tried both to change the international system and adapt to it.

[365 Social Movements and Politics in Industrial Societies
4 credits. Not offered 1990–91.]

[430 The Politics of Productivity: Germany and Japan
4 credits. Not offered 1990–91.]

431 Political Economy of Japan
Spring. 4 credits.
T. J. Pempel.
This course will focus on the intersection of politics and economics in Japan. It will concentrate on postwar Japan, but will introduce the political economy of Japanese modernization and industrialization during the late nineteenth and early twentieth centuries as background. Included as principal topics will be the political economy of Japanese industrial policy, trade, finance and marketing, as well as more micro-level policies that involve worker management relations, the Japanese firm, technology development, R&D, and women in the workforce. The key concern throughout will be to examine the political causes and consequences of the Japanese economy, with an eye toward situating Japan comparatively as well as isolating certain elements of its uniqueness. Both domestic and international dimensions will be considered.

[432 Labor and Politics
4 credits. Not offered 1990–91.]

433 Liberal Democratic State Structures
Fall. 4 credits.
W. Garst.
This course will analyze the emergence of liberal democratic institutions. It will focus on two topics: the conditions that promoted and constrained liberal democratic political development in Europe up to World War II and the recent democratic revolutions in Eastern Europe.

[434 State and Economy in Advanced Capitalism
4 credits. Not offered 1990–91.]

[435 Collective Action and Politics in Modern Europe (also History 435)
4 credits. Not offered 1990–91.]

[439 Formation of European Nation-States
4 credits. Not offered 1990–91.]

[443/643 Socialism and the Market in China
4 credits. Not offered 1990–91.]

[446 Comparative Communism
4 credits. Not offered 1990–91.]

449 State Institutions and Social Coalitions
Fall. 4 credits.
T. J. Pempel.
This seminar will focus on macro-historical analysis of states currently considered "advanced industrial democracies." Central to the seminar will be an examination of the formation of different social coalitions, and the ways in which these coalitions have been shaped by and, in turn, have shaped, political institutions. Thus one concern will be the evolution of different types of states—liberal, fascist, corporatist, social welfare, and the like. The seminar will also explore broad policy choices and directions that result from such interactions—guns vs. butter, internationalist vs. domestic economics, public vs. private responsibilities, etc. Finally, it will consider ways in which different regimes respond differently to common international stimuli such as war, recession, territorial aggrandizement, and trade.

450 U.S. Foreign Policy and Latin America
Fall. 4 credits.
R. Rabkin.
Policy toward Latin America is a controversial political issue in the United States. This course will examine policy debates in such areas as national security, political economy, and human rights, along with newer issues such as immigration and drug trafficking. The course will discuss the historical context of U.S. policies toward Latin America, as well as the impact of various influences, such as public opinion, partisan competition, and organized interest groups on the U.S. policymaking process.

[453 The Fabrication of Ancient Greece, 1780–1880
4 credits. Not offered 1990–91.]

[454 The Herodotean Moment: The Uses and Abuses of "Western Civilization" (also History 454)
4 credits. Prerequisite: permission of instructor. Not offered 1990–91.]

[457 Comparative Public Law: Legal Controls on Government in Europe and America
4 credits. Not offered 1990–91.]

[459 Politics in Contemporary Europe: The Politics of the Left
4 credits. Not offered 1990–91.]

[460 Peasant Politics
4 credits. Not offered 1990–91.]

Political Theory

Government 161 is recommended.

360 Ancient Greek Constitutions (also Classics 340)
Spring. 4 credits. Prerequisite: one of the following: survey of Greek history, a course in Greek civilization, a course in political theory or comparative politics, or permission of instructor.
L. Abel.
The Greek word politeia means constitution, but not a single written document. It means the form of political life within a state. This course will survey briefly the variety of forms of political life in ancient Greece from the time of Homer to the classical fourth-century Athenian democracy. The majority of time will be devoted to the history, functioning, and assessment of the Athenian democracy and Athenian law. The second major topic will be the constitutions of Sparta and its role as the oligarchic alternative to democracy. As each constitution is studied, the role of women and ideas of justice within the state will be considered. Required readings will be in translation.

361 Modern Ideologies: Liberalism and Its Critics
Fall. 4 credits.
I. Kramnick.
Since the rise of capitalism, one political ideology has been dominant in the Western world—liberalism. However, its hegemony has been questioned by a series of critics: democracy, socialism, anarchism, conservatism, Freudianism, and feminism. This course will study the tensions between liberalism and these critics and speculate on the possible survival or extinction of this venerable and very American ideology.

[362 Directions in Feminist Theory (also Women's Studies 365)
4 credits. Not offered 1990–91.]

[363 Classics in Political Thought
4 credits. Not offered 1990–91.]

366 Lesbian Writing and Theory (also Women's Studies 366)
Spring. 4 credits.
C. A. Martin.
This course will begin by investigating the histories and implications of the categories in the course title. Though the focus will change from year to year, there will be a strong emphasis on "lesbian writing" and theory since the late 1960s. We will consider the relations between lesbian and gay male writing and theory as well as theory and writing that addresses itself explicitly to the intersections of race, gender, sexuality, and class. Writers, critics, and theorists will include, but not be limited to Audre Lorde, Esther Newton, Mab Segrest, Barbara Smith, Cherrie Moraga, Adrienne Rich, Gloria Anzaldua, Alison Bechdel, Teresa de Lauretis, Judith Butler, Diana Tuss, Martha Vicinus, Michel Foucault, Allan Bérubé, and Martin Duberman.

[375 American Political Thought
4 credits. Not offered 1990–91.]

376 Marx
Fall. 4 credits.
S. Buck-Morss.
The meaning and contemporary relevance of the central concepts of Marxist theory: dialectics, class, ideology, history, social revolution, the state, the family, imperialism, modes of production, the "iron laws" of capitalism, and the communist goal. Readings in the original texts.

[379 Freud
4 credits. Not offered 1990–91.]

465 Philosophy of Social Science
Spring 4 credits.
M. Goldfield.
Our investigations in this course will focus on several general questions: Is the scientific study of society (and politics) possible and, if so, in what ways, and, if not, how can one legitimately study it? The first part of the course will examine general philosophers of science, including Hempel, Kuhn, Lakatos, and Miller. The majority of the course will examine issues specific to social science, including historical explanation, functional explanation, rational choice, and theories of interpretation.

[466 The Repressed Feminine in the Writings of Marx (also Women's Studies 466)
4 credits. Not offered 1990–91.]

[468 The Theory and Politics of Liberal Feminism (also Women's Studies 468)
4 credits. Not offered 1990–91.]

469 Limiting War (also Philosophy 369)
Fall. 4 credits.
H. Shue.
Modern states employ or threaten violence not only through conventional war but in various other forms including "low-intensity warfare," chemical and biological warfare, terrorism, and nuclear deterrence. This course critically examines the best arguments about limiting or prohibiting various contemporary means and methods of fighting one's enemies, arguments with conclusions ranging from pacifism to "realism." Have traditional doctrines about just war been overtaken by 20th-century events and technologies, or is it still possible to provide a reasonable justification for limiting war? If so, how? Special emphasis is given to moral issues about nuclear weapons. Readings include the U.S. Catholic Bishops' Pastoral Letter on Nuclear Deterrence, Just and Unjust Wars, by Walzer, and Nuclear Deterrence, Morality and Realism, by Finnis, Boyle, and Grisez.

470 From Literary Criticism to Marxist Theory: The Early Georg Lukacs (also German Studies 490 and Comparative Literature 490)
Fall. 4 credits.
P. U. Hohendahl.
The writings of the late Lukacs have occasionally obscured the importance of the young Lukacs for the project of Western Marxism and Critical Theory. The seminar will reexamine the beginnings of neo-marxist theory as it emerges out of the integration of neo-romantic cultural criticism and contemporary social theory (Simmel, Weber). The analysis will focus on Lukacs' seminar texts, especially on *Soul and Form*, *Theory of the Novel*, and *History and Class Consciousness*. The course is designed for advanced undergraduates and graduate students.

International Relations

Government 181 is recommended.

381 The Politics of Defense Spending
Spring. 4 credits.
J. Reppy.
An analysis of U.S. military programs and budgets in the post-World War II period. Topics covered will include an overview of the defense budget process, special characteristics of the defense market, behavior of defense firms, and domestic factors shaping the arms race. There will be occasional guest lectures by visitors to the Peace Studies Program.

[382 Integration in the World System
4 credits. Not offered 1990–91.]

[383 Theories of International Relations
4 credits. Not offered 1990–91.]

[384 War and Peace in the Nuclear Age (also Physics 206)
4 credits. Not offered 1990–91.]

385 Contemporary American Foreign Policy
Spring. 4 credits.
S. Telhami.
In this course, we will examine the evolution of American foreign policy since World War II. In part I of the course, we will study the theoretical literature linking international and domestic variables to American foreign policy. In part II, we will explore several cases of American foreign policy, in an attempt to test the utility of the various theoretical approaches. The cases selected pertain primarily to Soviet-American relations and to American responses to social and political change in the Third World.

[386 Structure and Process in the Global Political Economy
Spring. 4 credits. Not offered 1990–91.]

[387 The United States and Asia
4 credits. Not offered 1990–91.]

388 Modern Anglo-German Political Development
Fall. 4 credits.
W. Garst.
The purpose of this course is to provide a broad comparative introduction to the political development of modern Germany and Great Britain. In particular, we will address the following questions: What accounts for the greater fragility of democratic institutions in Germany prior to 1945? Why has right-wing free market ideology found greater acceptance in Britain during the 1980s? And how will German national identity change in the wake of the recent upheaval in East Germany?

389 International Law
Fall. 4 credits.
L. Scheinman.
Characteristics of international law: its theoretical foundations, principles, processes, and relation to international politics. Emphasis on law-in-action. Attention to both traditional problems (intervention, coercion, and the scope and limits of adjudication) and contemporary trends and processes (arms control, outer space, exploitation of seabed resources, the individual in international law, and cooperative patterns of socioeconomic relations at the global and regional level). Content may vary according to international events.

[390 Principles of Strategy
4 credits. Not offered 1990–91.]

[391 U.S. National Security Policy
4 credits. Not offered 1990–91.]

[392 International Relations of the Middle East
4 credits. Not offered 1990–91.]

393 War and Peace in Greece and Rome (also History 266)
Fall. 4 credits.
R. N. Lebow, B. Strauss.
A study of war and peace in the ancient Mediterranean world in light of modern theories of international relations. The course will test the validity of modern theories against ancient models and will ask what the ancient experience can contribute to modern theory and practice. Case studies include the Peloponnesian War, the second Punic War, Alexander's conquests, and the defense of the Roman Empire.

394 The International System
Spring. 4 credits.
W. Garst.
This course will explore the historical development of the international system. We will begin with the ancient Greek interstate system, then examine the emergence of the balance of power, sovereignty, and diplomatic institutions in early modern Europe, and finish by comparing Anglo-American hegemony in the world economy. Along the way, we will consider the relevance of selected "great works" of political philosophy for these topics.

[395 NATO in Crisis? Domestic Politics and Foreign Policies in Western Europe
4 credits. Not offered 1990–91.]

474 Empires and Imperialism in World Politics
Spring. 4 credits.
W. Garst.
The purpose of this course is to consider various theoretical explanations of the interrelated phenomena of empires and imperialism in different historical contexts. Particular topics examined will include various ancient empires, European imperialism between the sixteenth and twentieth centuries, and the rise and decay of the post-World War II Soviet Empire.

[478 Accumulation on a World Scale
4 credits. Not offered 1990–91.]

479/679 *Dependencia* and the State
Spring. 4 credits.
S. Jackson.
In this course we will examine closely a sampling of the principal theoretical and empirical works that seek to explain the constraints on and possibilities for state action in dependent societies, focusing particularly on those factors arising directly from the location of countries in the global system, including the role of multinational corporations, the World Bank, and military aid.

[480 Foreign Economic Policies of Advanced Industrial States
4 credits. Not offered 1990–91.]

[481 Foreign Policy of the U.S.S.R.
Spring. 4 credits. Not offered 1990–91.]

[482 Build Up to Build Down? The U.S.–Soviet Arms Race and Arms Control
4 credits. Not offered 1990–91.]

483 The Military and New Technology
Fall. 4 credits.
J. Reppy
In conventional wisdom, military organizations are seen paradoxically both as inflexible institutions and as proponents and consumers of rapid technological change. In this seminar we will examine changes over time in the attitude of the military toward new technology and analyze competing explanations for these changes. Readings will include Michael Howard, *War and European History*; John Ellis, *The Social History of the Machine Gun*; and Donald MacKenzie, *Inventing Accuracy: An Historical Sociology of Nuclear Missile Guidance.*

[484 Defense Strategy
4 credits. Not offered 1990–91.]

485 International Political Economy
Fall. 4 credits.
P. Katzenstein.
This course focuses on the political forces shaping the international economy. It analyzes distinct issues (such as trade investment, energy, and technology transfer) from the perspective of a variety of different theoretical approaches.

[486 International Security: Soviet Security Policy
4 credits. Not offered 1990–91.]

487 Chinese Foreign Policy
Fall. 4 credits.
Jia Quingguo.
This course offers a comprehensive review of the Chinese foreign policy: its historical and cultural background, its evolution to date, China's relations with major states and regions, and major factors that have shaped China's foreign policy. It attempts to give students both a general picture of this policy and some in-depth analysis of the complicated and subtle process of its formulation and development.

[488 Comparative Capitalism
4 credits. Not offered 1990–91.]

[489 International Law and Regime Development
4 credits. Not offered 1990–91.]

[491 Superpower Security and Third World Conflicts
4 credits. Not offered 1990–91.]

Honors Courses

Each April a limited number of junior majors are admitted to the honors program, their work to begin the following fall. Application forms and a full description of the program may be obtained in 125 McGraw Hall.

490 Honors Seminar: Research Methods
Fall. 4 credits. Limited to students admitted to the honors program.
E. W. Kelley.

494 Honors Thesis Clarification and Research
Fall. 4 credits. Limited to students who have successfully completed Government 490 or 500 or who are taking 490 concurrently.
Staff.
Each student works individually with a faculty member. The student initiates the tutorial by interesting a faculty member in his or her likely thesis project and by submitting to the director of undergraduate studies a form outlining the general area the thesis will treat and bearing the faculty tutor's signature. This form is due the third week of classes. The tutorial culminates in a ten-to-fifteen-page paper setting forth the central questions to be addressed by the thesis, the state of existing knowledge regarding those questions, and why they matter.

495 Honors Thesis: Research and Writing
Spring. 4 credits. Limited to students who have successfully completed Government 494.
Staff.
Students continue the work of the preceding semester typically with the same faculty tutor. Research on the thesis is completed and writing begun. The tutorial culminates in a thesis of some sixty to eighty pages. The grade for the tutorial is determined by the faculty tutor, while the degree of honors (if any) awarded the thesis is decided by a committee of faculty members established for that purpose.

Supervised Study

Except under very unusual circumstances, supervised study, Government 499, is open only to government majors doing superior work in the major. The application form may be obtained in 125 McGraw Hall and must be approved by the director of undergraduate studies for credit to be granted. There is no limit established for the total number of credits a government major may take in Government 499 while at Cornell, but he or she may count no more than 4 credits toward fulfillment of the major. Students who want to continue taking the course for more than one semester must select a new theme or subject each semester, and applicants must present a well-defined program of study that cannot be satisfied by taking regular courses. Credit can be given only for work that results in a satisfactory amount of writing. Emphasis is on the capacity to subject a body of related readings to analysis and criticism. Permission of the instructor is required.

499 Readings Fall or spring.
1–4 credits.
Staff.

Graduate Seminars

Qualified undergraduates are encouraged to apply for seminars listed with 600 course numbers but may only register with the permission of the instructor. Students may consult the supplement that lists graduate courses, available in the department office.

Field Seminars

601 Scope and Methods of Political Analysis
Fall. 4 credits.
S. Jackson.
This seminar offers an overview of the main problem areas and theoretical orientations in the four subfields of contemporary political analysis: political theory, American politics, comparative politics, and international relations. Selected topics, including questions of research design, are treated through a reading of the best contemporary literature. The broad issues of the philosophy of social science or specific techniques of analysis may also be addressed.

[602 Field Seminar in Political Methodology
4 credits. Not offered 1990–91.]

603 Field Seminar in American Politics
Fall. 4 credits.
T. J. Lowi.
The basic issues and institutions of American government and the various subfields of American politics are introduced. The focus is on substantive information and theoretical analysis and problems of teaching and research.

[604 Field Seminar in Public Policy
4 credits. Not offered 1990–91.]

605 Field Seminar in Comparative Politics
Spring. 4 credits.
T. J. Pempel.
An introduction to selected theoretical problems in the study of comparative politics and to their application in empirical analysis. Basic problems are social class and politics, authority and legitimacy, participation and mobilization, economic development and democracy, authoritarian and totalitarian politics, corporatism and pluralism, and nation building and political integration.

606 Field Seminar in International Relations
Fall. 4 credits.
R. N. Lebow.
A general survey of the literature and propositions of the international relations field. Criteria are developed for judging theoretical propositions and are applied to the major findings. Participants will be expected to do extensive reading in the literature as well as research.

607 Field Seminar in Political Thought
Fall. 4 credits.
I. Kramnick.
An introduction to political theory through a reading of selected classics in political thought from Plato to Marx.

American Government and Institutions

613/413 Politics and Economics in Local Areas
Spring. 4 credits.
W. Mebane.
For course description, see American Government and Institutions.

614/414 The Administrative State
Fall. 4 credits.
J. Rabkin.
For course description, see American Government and Institutions.

618/418 Labor in American Politics
Spring. 4 credits.
M. Goldfield.
For course description, see American Government and Institutions.

620/420 American Political Development
Fall. 4 Credits.
M. Goldfield.
For course description, see American Government and Institutions.

624 Political Change in the United States
Spring. 4 credits.
M. Shefter.
This seminar analyzes the sources and consequences of major realignments in American politics.

625 Models for Research on Politics
Fall. 4 Credits.
W. Mebane.
This practically oriented course examines a number of relationships between model specification and nonexperimental empirical research design. Issues given sustained attention include level-of-analysis problems, problems of dynamics and cross-sections, problems of measurement, and problems of sampling and other case selections. The course is intended for advanced graduate students wrestling with or expecting to wrestle with empirical research proposals. Basic familiarity with research design is assumed, but neither statistical nor mathematical sophistication is required. Students who wish to work at a technically advanced level will not be discouraged from doing so, however.

Public Policy

628 Politics of Technical Decisions I (also Sociology 515, City and Regional Planning 541, Management NBA 686, and Biology and Society 415)
Fall. 4 credits.
P. Edwards.
Political aspects of decision making in technical areas. Drawing from recent risk disputes, we will examine the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system.

[629 Politics of Technical Decisions II (also Sociology 516, City and Regional Planning 542, and Management NBA 687)
4 credits. Prerequisite: Government 628 or permission of instructor. Not offered 1990–91.]

Comparative Government

[632 Politics and Society in France, Italy, and Britain
4 credits. Not offered 1990–91.]

[636 Political Development of the European Welfare State
4 credits. Not offered 1990–91.]

[637 Peasantry, State, and Revolutionary Socialism
4 credits. Not offered 1990–91.]

[639 Politics of the Soviet Union
4 credits. Not offered 1990–91.]

642 The Future of European Security
Spring. 4 credits.
J. Goldgeier.
The processes of change on the European continent are a lens through which we can reexamine many of our concepts about the nature of international relations, drawing both on history and theory as our guide. What lessons can we draw about the pitfalls that may be encountered by studying past attempts at cooperation such as the Concert of Europe and the League of Nations? What do international relations theories about balance-of-power, regimes, and supranational integration, tell us about the requirements for continued stability on the continent? We will examine a number of issues including the role of the superpowers, the nature of alliances, problems of internal stability, arms control, German unification, environmental problems, and the process of European integration.

[643/443 Socialism and the Market in China
4 credits. Not offered 1990–91.]

644 Sociotechnical Aspects of Irrigation (also Agricultural Economics 754, Agricultural Engineering 754, and Rural Sociology 754)
Spring. 2–3 credits.
N. Uphoff, M. Walter, R. Barker, and W. Coward.
Examines irrigated agriculture and its relation to agricultural development. Emphasis on social processes within irrigation systems and interactions with the social setting, including political and administrative aspects. Provides an opportunity to examine systematically the institutional and organizational policy issues associated with the design and operation of systems of irrigated agriculture in developing countries.

[645 Chinese Politics
4 credits. Not offered 1990–91.]

[647 Political Anthropology: Southeast Asia
4 credits. Not offered 1990–91.]

648 Political Economy of Change: Rural Development in the Third World
Fall. 4 credits.
N. T. Uphoff.
The seminar analyzes strategies for economic, social, and political change, using an approach that integrates economic, social, and political factors into a common framework dealing with policy choices and political action. Attention focuses particularly on developing local capacities for initiative and implementation with broader participation from rural communities.

[649 State Institutions and Social Coalitions
4 credits. Not offered 1990–91.]

[651 Agrarian Change in South Asia: Politics, Society, and Culture
4 credits. Not offered 1990–91.]

652 Southeast Asia Seminar: Philippines (also Asian Studies 601)
Spring. 4 credits.
B. Anderson.
A broad range of problems are dealt with. The focus this term is on the Philippines.

[653 The Plural Society Revisited (also Asian Studies 607)
4 credits. Not offered 1990–91.]

655 Latin American Politics
Fall. 4 credits.
E. Kenworthy.
An overview of major issues in the study of contemporary Latin American politics, including recent writing on dependency, authoritarian rule, transitions to democracy, class and the state.

656 Comparative Political Economy
Fall. 4 credits.
J. Pontusson.
This seminar seeks to specify the issues and analytical premises of comparative political economy as a subfield of political science. It explores the theoretical debates among political scientists doing political economy as well as the relationship of this literature to institutional economics and Marxist political economy. The readings deal primarily with advanced capitalist countries, and special emphasis is placed on Western Europe.

[658 Indonesia
4 credits. Not offered 1990–91.]

659 Politics in Western Europe: Transitions to Democracy
Fall. 4 credits.
S. Tarrow.
This course will deal with regularities and differences in the causes, processes, conflicts, and outcomes of some nineteenth- and twentieth-century cases of successful and unsuccessful transitions to democracy. Nineteenth-century cases include the gradual transitions to democracy of Britain and the rapid one of France (in 1871). Twentieth-century cases include Scandinavia early in the century; Italy in 1945; other southern European cases in the 1970s; and Poland and/or Hungary in the later 1980s. Students will use the comparative methods to analyze the causes, processes, conflicts, and outcomes of several transitions (or failed transitions) to democracy in Europe or elsewhere, applying the theoretical perspectives and methodologies examined in the course to their cases.

660 Social Movements, Collective Action, and Reform
Spring. 4 credits.
S. Tarrow.
This is a research seminar on the relationships among politics, organized social movements, and periods of mass mobilization like those that swept through Western Europe and the U.S. in the 1960s and in Eastern and Central Europe today. The course begins with a theoretical introduction to major approaches to social movements and collective action, concentrating on the factors that induce masses of people to adopt disruptive forms of collective action. It moves from there to a historical section focusing on cycles of protest in the recent and not-so-recent past. It continues with case materials that illustrate a series of theoretical problems in the study of movements and collective action—particularly that of the relations between protest and reform. Students will write term papers on particular cycles of protest and reform.

692 The Administration of Agricultural and Rural Development
Spring. 4 credits.
N. T. Uphoff, E. Oyer.
The political, bureaucratic, economic, and technical environments of administration for agricultural and rural development; the various functions involved in administration (personnel management, planning, budgeting, economic analysis, information systems); several major tasks (research, extension services, and infrastructure development); and specific problems of integrating activities, interfacing with rural populations, and utilizing external assistance. Intended primarily for persons who expect to have some future responsibilities in agricultural or rural development administration and Third World countries.

Political Theory

661 The Political Theory of the American Founding
Fall. 4 credits.
I. Kramnick.
This seminar will look at political thought in the American founding generation. It will investigate the ideology of the American revolution as well as the debates over the Constitution. Readings will include John Adams, Tom Paine, Thomas Jefferson, James Madison, *The Federalist Papers*, anti-Federalist Tracts, and Alexander Hamilton. Efforts will be made to place the political thought of the founding period in its broader European context as well as to trace its impact on nineteenth- and twentieth-century American political thought.

[665 American Political Thought
4 credits. Not offered 1990–91.]

[666 Modern Political Philosophy
4 credits. Not offered 1990–91.]

669 Modern Social Theory I
Fall. 4 credits.
S. Buck-Morss.
Readings vary, but topics are drawn from the traditions of Marx, Weber, Durkheim, the Frankfurt School, and Freud. They include political economy, the transformation to "modernity," ideology as the legitimation of power, and social institutions as social constraints. The methods of critical theory, structuralism, poststructuralism, and feminism will be considered.

670 Modern Social Theory II
Spring. 4 credits.
S. Buck-Morss.
Issues raised by neo-Marxism, critical theory, poststructuralism, and feminism.

678 Classics in Political Thought: Nietzsche
Fall. 4 credits.
W. J. Dannhauser.
An attempt to articulate Nietzsche's political philosophy by way of an examination of his two most political works, *Beyond Good and Evil* and *On the Genealogy of Morals.*

International Relations

679/479 Dependencia and the State
Spring. 4 credits.
S. Jackson.
For course description, see International Relations.

680 International Security
Spring. 4 credits.
R. N. Lebow.
The superpowers have possessed nuclear weapons for almost forty years. Even so, there is no consensus about the political utility of these weapons. Some students of strategy argue that nuclear deterrence is the principal reason why World War III has not broken out. Others insist that the competition to acquire ever more sophisticated weapons and with it, the growing insecurity of both superpowers, is likely to be the primary cause of World War III. Opinion also differs about the diverse causes of strategic competition, the definition and meaning of the nuclear balance, the value of nuclear deterrence as a means of protecting third parties, and the relationship between different force structures, strategies, targeting doctrines, and deterrence. We will take up these and other questions in the course of a review of the history of the nuclear arms race and of the most important theoretical literature written about it.

682 International Relations of the Middle East (also Near Eastern Studies 682)
Spring. 4 credits.
T 1:25–3.20. S. Telhami.
The focus of this seminar will be the contemporary international relations of the Middle East, with special attention paid to patterns of relations among states of the Middle East, and to the international and domestic variables that could account for these patterns. In part I of the seminar, we will study a) the ways in which superpower competition and changing objectives affect the relations of states in the Middle East; b) the extent to which a change in the distribution of political, military, and economic power in the Middle East alter politics in the region; and, c) the impact of domestic variable on the foreign policies of states in the Middle East. In part II, we will examine three major international crises in the Middle East: the Arab-Israeli conflict; the Iran-Iraq conflict; and the crisis in Lebanon.

[683 Nuclear Arms Control—Theory and Practice
4 credits. Not offered 1990–91.]

[684 Politics of the Arms Race
4 credits. Not offered 1990–91.]

685 International Political Economy
Fall. 4 credits.
P. Katzenstein.
An exploration into a range of contemporary theories and research topics in the field of international political economy. The seminar will cover different theoretical perspectives and a number of substantive problems.

[686 International Strategy
4 credits. Not offered 1990–91.]

Independent Study

This course is *NOT* open to undergraduates. Undergraduates wishing to conduct supervised study should register for Government 499.

799 Independent Study
Fall or spring. 4 credits.
Staff.
Government 799 is a course of individualized readings and research for graduate students. Topics, readings, and writing requirements will be designed through consultation between the student and the instructor. Graduate students in government who are looking to use this as an option to fulfill their course requirements should check with their chairs to be certain that the program of study is acceptable for this purpose. Applications must be completed and signed by the instructor and by the chairs of their special committees. They are available from, and must be returned to, the graduate secretary in 125 McGraw Hall.

HISTORY

S. G. Cochran, chair; G. C. Altschuler, D. A. Baugh, S. Blumin, P. R. Dear, T. H. Holloway, C. Holmes, I. V. Hull, P. R. Hyams, J. J. John, M. Kammen, S. L. Kaplan, J. V. Koschmann, D. C. LaCapra, W. F. LaFeber, R. L. Moore, J. M. Najemy (graduate faculty representative, 341 McGraw Hall, 255-6748), M. B. Norton, C. A. Peterson, J. R. Piggott, W. M. Pintner, R. Polenberg, W. B. Provine, D. Sabean, T. Shiraishi, J. H. Silbey, F. Somkin, M. Steinberg, B. Strauss, B. Tierney, D. Usner (director of undergraduate studies, 363 McGraw Hall, 255-6753), M. Washington, J. H. Weiss, L. P. Williams, D. Wyatt

The popularity of history among Cornell students is due to its usefulness as preparation for graduate, professional, or law school and for any career that requires critical thinking and good writing; the reputation of the faculty for scholarship, teaching, and advising; and most of all, the intrinsic interest of the discipline. A wide variety of introductory and advanced courses is offered. The department is particularly strong in ancient, medieval, and modern European history; in American, Latin American, Chinese and Southeast Asian history; and in the history of science.

The Major

To complete the history major, a student must fulfill the requirements listed below:

1) Complete the prerequisite requirement by taking either Introduction to Western Civilization (History 151–152) or Introduction to Asian Civilizations (History 190–191) or, alternatively, three courses in European history—one in ancient history; one in medieval, Renaissance, or early modern history; and one in modern history.
2) Take history department courses totaling 36 credits (which may include the prerequisite courses) and complete all these courses with a grade of C or better. Of the 36 credits, a minimum of 20 must be taken in courses numbered 250 and above.
3) Take a minimum of 8 credits in each of two of the following fields: American, European, Asian, or Latin American history or history of science. Alternatively, a student may elect to take a total of 16 credits in three of these fields. Credits taken to fulfill the prerequisite requirement (see item 1, above) do not count toward this requirement.
4) Take at least one course at the advanced (400 or higher) level.
5) Take two courses above the elementary level offered by other departments that relate to the student's area of special historical interest. Prospective majors may want to discuss their projected program with the director of undergraduate studies before formally enrolling with the department.

Honors. History majors with an overall B+ average in all their history courses are eligible to enroll in History 400, Honors Proseminar, which is normally taken in the junior year or, at the latest, in the fall of the senior year. (Honors candidates are strongly encouraged to take an additional 400-level seminar during their junior year.) Successful completion of the Honors Proseminar is required for graduation with honors in history. A senior honors thesis is also required. Before the beginning of the candidate's senior year, he or she presents in conversation or in writing a thesis proposal to an appropriate member of the faculty of history. The faculty member who approves the proposal ordinarily becomes the thesis supervisor. If because of leaves of absence or other foreseeable causes it will become necessary for the supervisor's task to be taken on for one semester by some other history faculty member, that faculty member should also be consulted; this should occur no later than the fourth week after the beginning of the candidate's senior year.

Honors candidates should register in History 401, Honors Research, with their supervisors. Any exceptions to this must be approved by the Honors Committee. History 401 is a 4-credit course that permits honors candidates to conduct research and to begin writing the honors essay. At the end of the first semester of the senior year, as part of the requirements for History 401, the student will submit to his or her supervisor a ten-to-fifteen page overview, or, alternatively, a preliminary draft of some part of the thesis along with an outline of the whole and will undergo an oral examination on the broad field of history that the student researched. The examination will be administered by a committee consisting of the student's supervisor and one other department member, who will eventually serve as a reader of the thesis. The committee will then recommend whether the student may proceed to enroll in History 402, Honors Thesis, during the final semester of the senior year. History 402 is a 4-credit course that permits honors candidates to complete the honors essay and to prepare both to defend the essay and to demonstrate their understanding of the ways in which the themes explored in the thesis fit into a larger historical context.

Honors candidates must complete a minimum of 40 credits in history, 8 of which must be History 400 and 402. The completed thesis will be examined by three readers, including the two faculty members who administered the preliminary oral examination.

The text of the honors essay may not exceed sixty pages except by permission of the chair of the honors committee and the student's supervisor. Two copies will be due during the third or fourth week of April. In May each honors candidate will be given an oral examination administered by the supervisor and the First Reader (who is ordinarily the same person as the co-examiner who served at the end of the first senior-year semester.) The examination will focus on the specific issues of the essay as well as the broad field of history in which the student has concentrated his or her research (e.g., Periclean Athens, seventeenth-century science, nineteenth-century America).

To qualify for a Bachelor of Arts degree with honors in history, a student must (1) sustain at least a B+ cumulative average in all history courses and (2) earn at least a cum laude grade on the honors essay and on the oral examination.

Students considering the honors program should consult the department during the second term of their sophomore year or early in their junior year.

Course Offerings

Freshman writing seminars

Comparative history

History of science

American history

Latin American history

Asian history

Ancient European history

Medieval, Renaissance, and early modern European history

Modern European history

Honors and research courses

Course Numbering System

100–level courses are very general introductory courses (like 151–152, 190–191) and freshman writing seminars.

200–249–level courses are similar to freshman writing seminars, except that there is greater emphasis on subject matter and less on writing.

250–299–level courses have no prerequisites and admit freshmen. They cover a relatively broad geographical area, period of time, or subject.

300–399–level courses may have specified prerequisites or deal with more-specialized subjects than do those numbered 250–299. Admission of freshmen varies from course to course and is indicated in the course descriptions.

400–499 are upper level undergraduate courses.

600–699 and 700–799 are graduate level courses.

Freshman Writing Seminars

[104 Communes and Utopias: Alternative Life-Styles in American History
Not offered 1990–91.
G. C. Altschuler.
This course examines individual and group critiques of American society and experiments with alternative lifestyles. Topics include the Puritans, the Oneida community, the Mormons, Walden, the Ferrer Colony and Modern school, Vedanta monasteries, Walden II, and contemporary communes.]

[106 Democracy and Education: History of Learning in America
Fall. 3 credits. Not offered 1990–91.
M W F 11:15. G. C. Altschuler.
A survey of the history of educational thought and institutions from Puritan times to the present, with emphasis on the nineteenth and twentieth centuries. Topics include the family and church as educational institutions, the democratization of education, the emergence of the university, educational testing, and vocational education. John Dewey and progressive education, "alternate education," student radicalism.]

[107 The Family in American History
Not offered 1990–91.
M. B. Norton.
An examination of the American family in the context of changing times from the seventeenth century to the present day. Readings include both primary and secondary sources. Students research the past experience of their own families as part of the course.]

[108 Civil Liberties in the United States
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
T R 2:30–3:45. R. Polenberg.
Freedom of speech and dissent from Jefferson's time to the present, with emphasis on the twentieth century. Topics include Jefferson and Madison; Lincoln and martial law; Holmes, Brandeis, and the Supreme Court; the relocation of Japanese Americans; the cold war and McCarthyism; religious cults and "brainwashing"; censorship and obscenity; John Milton, John Stuart Mill, and the critique of libertarianism.]

[112 The North Atlantic Community and the Wider World
Not offered 1990–91.
T. H. Holloway.
The relationship between the attitudes and values of Europeans and the emergence of the global economic and political network since the Age of Discovery. The voyages of exploration, commercial expansion, and the consolidation and dissolution of modern empires are considered. Texts contemporaneous with these periods will be read and discussed to explore ways members of the North Atlantic community have explained and justified their emerging world influence in religious, racial, technological, and cultural terms.]

126 Local History: The Smallest History
Fall or spring.
T R 8:40–9:55. C. Kammen.
In this seminar students will investigate the history of Cornell University. The course will focus on Cornell's place in the history of American education, on Ithaca as the site of a major university, and on the development of the Cornell idea. Highlighted will be the founders, the students, teachers, courses, and activities at Cornell. Readings will be drawn from the documentary history of the University and will also include a host of Cornell authors: Carl Becker, Morris Bishop, Charlotte Conable, K.C. Parsons, E.B. White, and others. Paper assignments will include speculative essays about education and universities, and research topics requiring the use of diaries, manuscripts, and other archival materials.

[176 Britain and the Second World War
3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
T 3:35, R 2:30–4:30. D. A. Baugh.
The aim is to uncover the true facts of Britain's conduct and situation from 1936 to 1946. Emphasis is on the fighting on land, sea, and in the air, but preparedness, economic warfare, diplomacy, and imperial power are considered. Topics include the Battle of Britain, the Battle of the Atlantic, and strategic bombing.]

[192 Japan and the West
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
J. V. Koschmann.]

[205 The Growth of Political Democracy in the United States
Fall. 3 credits. Limited to 14 students. Prerequisite: permission of instructor. Not offered 1990–91.
T 2:30–4:30. J. H. Silbey.
An examination of the democratization of American political life since the American Revolution. Such topics as the expansion of white, Black, and women's suffrage and the changing concepts of participation and leadership in American politics will be explored. A number of books and documents covering the topic will be read and discussed and several short papers written.]

[219 Freshman Seminar: History of North American Indians
Spring. 3 credits. Limited to 18 students. Not offered 1990–91.
D. H. Usner.
This seminar examines major themes in Native American history from colonial times to the present. Discussions will consider the cultural histories of particular tribes as well as the comparative elements of Indian relations with non-Indians.]

Comparative History

274 Foodways: A Social History of Food and Eating
Spring. 4 credits.
T R 2:55–4:10. S. L. Kaplan.
An interdisciplinary examination of the validity of the adage "man is what he eats." Among the topics: food and nutrition, food and social structure, the politics of food control, food and modernization, taste making, and food in religion and literature. Cases will be drawn widely across space and time, from Pharaoh's Egypt to the 1980s.

[360 Early Warfare, East and West
Spring. 4 credits. Not offered 1990–91.]
M W F 1:25. C. A. Peterson.
A study of the principal modes of warfare found both in the East and the West from ancient times up to the eighteenth century. Tactical evolution and the impact of innovations are stressed, but attention is also paid to the general social background and the role of nonmilitary factors.]

[380 Social History of Western Technology
Fall. 4 credits. Not offered 1990–91.
For description see History of Science.]

393 Images of Humanity in Medieval China (also Society for the Humanities 425)
Fall. 4 credits. Permission required.
M 2:30–3:30 and W 2:30–4:25.
J. R. McRae and C. A. Peterson.
Marcham Seminar. The middle period in China's history, essentially the T'ang and Sung dynasties, feature some of the highest achievements of Chinese civilization. These centuries (the seventh through the thirteenth) are distinguished by the exceptionally high levels of literature, art, religious and secular thought, and proto-scientific development, as well as by fundamental changes in state, society, and the economy. This seminar will explore the China of this age by examining the lives of several representative figures — a politician, a poet, a Buddhist monk, a Taoist priest, an emperor, an empress, a "detective" and others. The aim will be to reconstruct the inner and outer worlds of men and women perhaps not so far removed from ourselves in their basic motivations and daily concerns.

[405 Population and History
4 credits. Open to sophomores. Not offered 1990–91.
R 2:30–4:30. S. L. Kaplan.
Seminar format. An examination of the impact of the methodology and findings of demography on historical scholarship and the implication of historical research for the study of population. Focus will be on the relation of population to family and social structure, economic growth, political stability, collective mentality, etc. Readings in European and American history from the Black Plague through the Industrial Revolution.]

[407 Death in Past Time
4 credits. Not offered 1990–91.
S. L. Kaplan.
Every culture has felt an urgent need to deal with death to disarm, rationalize, and integrate it by giving it sense. How a culture perceives and propitiates death reveals a great deal about its social and political structure, religious and artistic values, and economic and scientific goals. The nature of death is considered using a wide variety of examples drawn from throughout history.]

[409 Seminar on Work in Europe and America
Fall. 4 credits. Not offered 1990–91.
W 2:30–4:30. S. L. Kaplan.
A comparative study of the meaning of work in different societies from premodern times to the present. Emphasis on the "representations" of work of the actors themselves who worked, as well as of those who for various critical reasons did not work. The seminar will examine not only ideology but also the organization, practice, and physical place of work. It will explore theory as well as "cases," and draw on anthropological and sociological as well as historical materials.]

413 The History and Economics of Whaling in North America (also Agricultural Economics 454 and Society for the Humanities 413)
Spring. 4 credits.
To be arranged. D. Usner, J. Conrad.
The whaling industry of nineteenth-century America is a rich source of documents and data describing the people, resources, and technology that contributed to the development of the United States. Social relations, cross-cultural influences, economic motivations, prices, markets, resource dynamics, and technical change will be examined during the rise and fall of this unique American industry.

432 The City in History
Spring. 4 credits. Limited to 12 students. Prerequisite: permission of instructor.
R 2:30–4:30. S. Blumin.
Reading and discussion of classic interpretations of the rise, role, and character of cities in medieval and early–modern Europe, and in modern Europe and America. Further reading on a topic of the student's own choice.

[451 Lord and Peasant in Europe: A Seminar in Social History
4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
S. L. Kaplan.]

[454 The Herodotean Moment: The Uses and Abuses of "Western Civilization" (also Government 454)
Fall. 4 credits. Limited to 20 students. Prerequisite: permission of instructor. Not offered 1990–91.
TR 1:25–2:40. M. Bernal, J. M. Najemy.
The basic premise of the seminar is that the concept of "Western civilization" is a problematic one in need of critical analysis. The course will examine the historical evolution of the concept as seen in selected moments of actual and perceptual encounter with other civilizations. It will also inquire into the political uses and abuses of the concept, as well as its discursive, psychological, and anthropological dimensions.]

471 Black Emancipation in Comparative Perspective (also Africana Studies 471; Society for the Humanities 426)
Fall. 4 credits. Prerequisite: one course in American, Afro-American, or African history.
T 2:30–4:30. D. Ohadike and M. Washington.
This course will explore the black emancipation experiences in comparative perspective. Primary emphasis will be on Africa and the United States; secondary focus will be the Caribbean and Latin America. The African component will investigate social consequences of emancipation, the transformations accompanying that process and the experiences of former slaves. Perspectives on the Americans will include the complexities of emancipation, its socio-economic results and the legacy of race relations.

[476 Documenting the Depression: Film, Literature, and Memory
Not offered 1990–91.
For description see Modern European History.]

[621 Social Memory and the Transformation of Tradition in American Culture
For description see American History. Not offered 1990–91.]

[708 Seminar in the Research on the History of Food
Not offered 1990–91.
S. L. Kaplan.]

History of Science

233 Agriculture, Science, and Society: From Squanto to Biotechnology
Fall. 4 credits.
TR 12:20–1:10. M. Rossiter.
This course will survey the major themes in the development of agriculture and agribusiness in the United States in the nineteenth and twentieth centuries. These include particular individuals (such as Liberty Hyde Bailey, Luther Burbank, G. W. Carver, Henry A. Wallace, and Norman Borlaug), the rise of government support and institutions (including U.S.D.A. and Cornell), noteworthy events (the Dust Bowl, World War II, and the environmental movement), and the achievements of the recent Green and "Gene" Revolutions.

281–282 Science in Western Civilization
281, fall; 282, spring. 4 credits each term. History 281 is not a prerequisite to 282.
T R 11:40–12:55 plus disc to be arranged. P. R. Dear.
These courses aim to make comprehensible both to science majors and to students of the humanities the historical structure and development of modern science and to show science as a cultural phenomenon. Changing perceptions of nature and human knowledge from Greek Antiquity to the twentieth century form the framework for current Western views of the world, while the roots of the present-day dominance of "science" as a symbol of progress and modernity lie in an alliance between knowledge of nature and power over nature that took shape in the nineteenth century after a long period of emergence. 281 runs chronologically up to the death of Isaac Newton and focuses on the cultural traditions of Christian Europe and its selective appropriation of a Greek heritage; 282 covers the eighteenth, nineteenth, and early twentieth centuries.

287 Evolution (also Biological Sciences 207)
Fall. 3 credits.
T R 10:10–11; disc to be arranged. W. Provine.
Evolution is the most central concept in biology. This course examines evolution in historical and cultural context. Aims of the course include understanding of the major issues in the history and current status of evolutionary biology, and exploration of the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

[288 History of Biology (also Biological Sciences 202 and Biology and Society 288)
Spring. 3 credits. Prerequisite: one year of introductory biology.
T R 10:10–11:25. W. Provine. Not offered 1990–91.
An examination of the history of biology, emphasizing the interaction of biology and culture. Original writings of biologists constitute the bulk of reading assignments. This course covers the period from Classical antiquity to the present, but primary emphasis is on twentieth-century biology.]

[380 Social History of Western Technology
Fall. 4 credits. Not offered 1990–91.
T R 10:10–11:25, disc to be arranged. J. H. Weiss.
Studies in the interaction between technological changes and social changes in Western Europe and America since the eighteenth century. Readings and lectures will deal both with instances of social transformation that accompanied technological changes and with the role of technology in social thought and cultural expression. Special attention to three periods: Britain during the Industrial Revolution, America in the nineteenth century, and America during the Vietnam War.]

433 Comparative History of Science
Spring. 4 credits.
W 2:30–4:30. M. Rossiter.
A survey of the major scientific institutions in the United States and in foreign nations, including developing countries. The course covers the period 1660 to the present and gives some attention to who in each country becomes a scientist, who rises to the top, and who emigrates. Weekly readings and a research paper.

444 Historical Issues of Gender and Science (also Women's Studies 444)
Spring. 4 credits. Open to sophomores.
M 2:30–4:30. M. W. Rossiter
One-semester survey of women's role in science and engineering from antiquity to the 1980s with special emphasis on the United States in the twentieth century. Readings will include biographies and autobiographies of prominent women scientists, educational writings and other primary sources, and recent historical and sociological studies. By the end of the semester, we shall have attained a broad view of the problems that have faced women entering science and those that still remain.

[447–448 Seminar in the History of Biology (also Biology and Society 401–402)
4 credits. Not offered 1990–91.
T 2:30–4:30. W. Provine.]

482 The Origins of Modern Science 1500–1700
Spring. 4 credits.
T 2:30–4:30. P. R. Dear.
A seminar focusing on the changes in the European conception of nature and of human knowledge that created modern science. A new way of perceiving the world, and a new ideology justifying its experimental manipulation, transformed the finite, earth-centered, organic universe of 1500 into the infinite, mechanical universe of Isaac Newton. The course traces these developments above all through the study of primary materials, using the writings of Copernicus, Galileo, Descartes, Newton, and other lesser-known figures to

discover how technical and philosophical innovations emerged from the changing worldview of early modern Europe.

487 Science, Technology, and Strategy in the Post-Napoleonic World
Spring. 4 credits.
T 2:30–4:30. L. P. Williams
An examination of the effects of modern science and modern technology on strategy in modern war. Students will be expected to do one major research paper examining, in both historical and technological detail, some aspect of the strategic effects of science and/or technology.

488 The Golden Age of French Sciences: 1789–1830
Fall. 4 credits.
T 2:30–4:30. L. P. Williams.
In 1789, Antoine Laurent Lavoisier published his great *Elementary Treatise on Chemistry*, which created modern chemistry. In 1827, Pierre Simon de Laplace died. In between, such great French scientists as Lamarck, Cuvier, Ampere, Poisson, Biot, Bichat, Cabanis, and Pinel did their most important work. This seminar will deal with their original texts.

680 Seminar in Historiographical Approaches to Science
Fall. 4 credits.
T 2:30–4:30. P. R. Dear.
Examines philosophical, sociological, and methodological dimensions of recent historiography of science.

[681 Seminar in the History of Nineteenth-Century Physical Science
Fall. 4 credits. Not offered 1990–91.
T 2:30–4:30. L. P. Williams.]

687 Seminar in the History of Agricultural Sciences
Fall. 4 credits. Permission of instructor required.
Hours to be arranged. M. Rossiter.
Weekly readings and a research paper.

[781 Advanced Seminar in the History of Nineteenth-Century Physical Science
Fall and spring. 4 credits each term. Prerequisite: permission of instructor. Not offered 1990–91.
L. P. Williams.]

American History

101–102 Introduction to American History
101, fall; 102, spring. Summer. 3 credits each term. 101 is not a prerequisite to 102.
M W F 11:15. G. C. Altschuler.
A survey of U. S. history designed to introduce students to major themes and interpretations. History 101 traces the origins and evolution of the nation through 1865. Topics include Puritanism, the American Revolution, the Constitution, Jacksonian democracy, and the Civil War. History 102 covers the period from the Civil War to the present. Topics include the Reconstruction, the Gilded Age, the world wars, the 1960s, Vietnam, and Watergate.

208 The Era of Franklin D. Roosevelt
Fall. 4 credits. Primarily for sophomores. Prerequisite: permission of instructor.
T R 11:40–12:55. R. Polenberg.
The impact of the Great Depression and World War II on American politics, law, and culture.

[209 Political History of Indians in the United States
Fall. 4 credits. Not offered 1990–91.
T 2:30–4:25. D. H. Usner.
An investigation of political organization and change among Native American societies. Discussions and assignments examine forms of tribal government, diplomacy, and warfare, as well as political relations with European colonies and the United States. Specific topics include pan-Indian confederacies, Indian policy, struggles over sovereignty, and Indian strategies of autonomy and resistance.]

[210 The Supreme Court and Civil Liberties
Fall. 4 credits. Primarily for sophomores. Enrollment limited to 15 students. Prerequisite: permission of instructor. Not offered 1990–91.
T R 2:55–4:10. R. Polenberg.
The development of free speech doctrine from the era of Holmes and Brandeis to the present, with special attention to the controversies over such issues as dissent, libel, and censorship.]

[214 Seminar on American Foreign Policy
Fall. 4 credits. Open to freshmen and sophomores. Limited to 14 students; preference will be given to non–history majors. Prerequisite: permission of instructor. Not offered 1990–91.
T 2:30–4:30. W. LaFeber.]

227 Historical Perspectives on Modern American Sex Roles (also Women's Studies 227)
Spring. 4 credits. Limited to 20 students. Intended primarily for sophomores.
M 1:25–4:15. M. B. Norton.
A reading and discussion course. The class will begin by examining sex roles in the United States in the 1980s, looking at a variety of sources such as popular magazines and contemporary commentaries. We will then move backwards in time in an attempt to uncover the roots of current attitudes. The students will help determine which topics the class will investigate in detail.

255 The American Dream
Fall. 4 credits.
M W F 2:30–3:20. F. Somkin.
The culture of the United States is markedly different from that of the rest of the English-speaking world. What makes Americans distinct? Lacking from the beginning the blood-and-soil amalgam of other peoples, America has been primarily a set of promises: the American Dream. The emphasis of the course will be on the ironic contrast between this vision at its most grandiose and present American realities.

[256 African-American History, 1945–85
Spring. 4 credits. Open to freshmen with permission. Not offered 1990–91.
T R 11:40–12:55. M. Washington.
This course focuses on the history, culture, and literature of African-American people during the post–World War II, civil rights, and revolutionary nationalist period. It is an introductory course that examines key issues, themes, and events in a context of contemporary relevance. Emphasis will be on the historical evolution of the modern Black community, Black-white race relations, and the impact of modern economic and political institutions on Black life and thought. Topics include the impact of the Cold War on Black leaders and the Black press, integration and Black nationalism, the relevance of socialism and internationalism, the status of Black women, the African-American literary scene, the emergence of Black liberation theology, and the effects of contemporary Black politicization on the total society.]

[273 Women in American Society, Past and Present
Spring. 4 credits. Not offered 1990–91.
M W 10:10; disc, F 10:10 or 12:20.
M. B. Norton.
A survey of women's experiences in America from the seventeenth century to the present. Among the topics to be discussed are women's familial roles, the changing nature of household work, the women's rights movement, employment of women outside the home, racial and ethnic differences in women's experiences, and contemporary feminism.]

[275 Crime and Punishment: From the Puritans to Mickey Spillane
Spring. 4 credits. Not offered 1990–91.
M W F 1:25–2:15. F. Somkin.
A historical investigation of how the American literary imagination has dealt with the way of the transgressor in novels, short stories, plays, and movies. Readings on murder, guilt, and retribution on land and sea, from the frontier to the urban jungle. Emphasis on the intellectual and social context of moral values.]

276–277 American Indian History
276, fall; 277, spring. 4 credits each term.
M W 12:20 plus disc F 10:10, 12:20, or 1:25. D. H. Usner.
A survey of North American Indians from the beginning of European contact to the present. Cultural, political, and economic changes experienced by particular societies will be covered. Emphasis will be given to general themes of Indian-white relations, comparative tribal histories, and the role of Native Americans in the overall history of the United States.

303 African-American Women in Slavery and Freedom
Spring. 4 credits.
T R 11:40–12:55. M. Washington.
Historical exploration of African-American women from a sociopolitical perspective. Topics include women in africa, slavery and freedom, sexuality, labor, the family, feminism, and racism.

[307 The Jewish Immigrant Experience
Fall. 4 credits. Enrollment limited. Prerequisite: permission of instructor. Not offered 1990–91.
R 2–4. F. Somkin.
In the half century after 1880 several million Eastern European Jews entered the United States with profound cultural consequences for themselves, their descendants, and the dominant Anglo-Saxon capitalist society they encountered here. Through a study of selected fiction and nonfiction materials this course examines what America made of these immigrants and what they made of it.]

311–312 The Structure of American Political History
311, fall; 312, spring. 4 credits each term.
M W F 10:10. J. H. Silbey.
311 examines the course of American politics from 1787 to the Civil War, focusing on the nature of decision making, popular and legislative voting behavior, and the role of interest groups, political parties, and political elites in shaping our political history. 312 examines the course of American politics from 1865 to the present.

[313 U.S. Foreign Relations, 1750–1912
Fall. 4 credits. Open to freshmen with permission of instructor. Not offered 1990–91.
T R S 11:15 plus optional sec.
W. LaFeber.
Examines policy and policymakers from Benjamin Franklin to Woodrow Wilson. Emphasis is placed on domestic events that shaped foreign policy.]

314 History of American Foreign Policy, 1912 to the Present
Fall. 4 credits. Open to freshmen with permission of instructor.
T R S 11:15 plus disc. W. LaFeber.
Students examine the emergence of the United States as a world power in the twentieth century. The course focuses on the domestic sources of foreign policy and the assumptions of the major policymakers (Wilson through Reagan). Important themes include the American response to a revolutionary world since 1912, the increasingly dominant role of the president in the making of U. S. foreign policy, and the changing American position in the international economy. A special section, numbered 301.13, offers an additional 2 credits. Open only to juniors and seniors, it is limited to 15 students. This section will meet weekly and provide an opportunity to write supervised papers on U.S. foreign relations, 1912 to the present. Permission is required.

318 American Constitutional Development
Spring. 4 credits. Open to freshmen with permission of instructor.
M W 10:10; disc, F 10:10 or 12:20.
M. B. Norton.
A study of the major themes of the constitutional history of the United States. Among the topics to be considered are the drafting of the Constitution, the Marshall and Taney courts, the constitutional crisis caused by slavery and emancipation, the rise of substantive due process, the expansion of civil rights and liberties for women and men in the twentieth century, and the contemporary court.

[319 The Frontier in American Thought and Culture
4 credits. Not offered 1990–91.
D. H. Usner.
As a kind of place and a cluster of symbols, the West has deeply influenced ideology and intellectual life in the United States. Using fiction, art, popular culture, and social sciences as primary texts, this course examines how concepts about race and class, society and environment, national destiny and development were fused into various forms of a frontier mythology.]

321 The Origins of American Civilization
Spring. 4 credits.
M W F 1:25–2:15. M. Kammen.
The colonial genesis of American culture and society, with emphasis on the emergence of distinctive institutions, attitudes, and social patterns. Topics include race relations, religion, politics, movements of protest, and cultural developments. Open to qualified freshmen.

325 Age of the American Revolution, 1763–1815
Fall. 4 credits. Open to freshmen with permission of instructor.
T R 10:10–11:25. M. B. Norton.
An examination of the process by which the thirteen English colonies became an independent and united nation, with emphasis on political thought and practice, social and economic change, and cultural development. Attention will be paid to the impact of the American Revolution on women, Blacks, and Indians as well as on white males.

[327–328 American Frontier History
327, fall; 328, spring. 4 credits each term. Not offered 1990–91.
D. H. Usner.
Survey of exploration, settlement, and expansion across North America since the sixteenth century. The first term covers international rivalry over territory, frontier trade systems, Indian-colonial relations, and the early administration of U. S. territories. Topics in the second term include the evolution of land and Indian policies, life in frontier communities, and political movements and economic change in the American West.]

[330 The United States in the Middle Period, 1815–1850
Fall. 4 credits. Not offered 1990–91; next offered 1991–92.
M W F 10:10. J . H. Silbey.
An analysis of American society from the end of the second war with England to the crisis of 1850, stressing the developing trends of nationalism and sectionalism, the rise and results of Jacksonian democracy, and the internal tensions produced by physical growth and slavery.]

[331 The American Civil War and Reconstruction
Spring. 4 credits. Not offered 1990–91.
M W F 10:10. J. H. Silbey.
An analysis of the factors leading up to the breakup of the Union, the impact of the war in North and South, and the problems of restoration and reconstruction of the seceded states.]

332–334 The Urbanization of American Society
332, fall; 334, spring. 4 credits each term. 332 is not prerequisite to 334.
M W F 11:15 and disc F 10:10 or 11:15.
S. Blumin.
America was born in the country and moved to the city. This course examines the profound effects on American society of the growth and multiplication of cities and of the massive transfer of population from rural to urban and suburban milieux. It is also a history of the city itself, from the small, preindustrial ports of the initial European settlements to the industrial metropolises and urban corridors of the present. Fall term, 1600–1860; spring term, 1860–present.

333 U.S. Politics and Foreign Policy since 1945
Fall. 2 credits.
T or R 10:10–11:25. G. McGovern.
An examination of the major issues, domestic political conditions, and historical forces that have shaped American foreign policy from the end of World War II until the present time. Special attention will be given to the cold war as a central factor in U.S. foreign relations.

335 African-American History from Slavery to Freedom
Fall. 4 credits.
T R 11:40–12:55. M. Washington.
Introductory course on African-Americans from 1619 to 1865. Emphasis will be on life in bondage, the free black communities, and racism. Other topics include African cultural heritage, the slave trade, religion, the family, and the black freedom struggle.

[336 The Business of America: Capitalism and Society in the United States, 1776–1900.
Fall. 4 credits. Not offered 1990–91.
M W 11:15 plus disc to be arranged.
S. Blumin.
An examination of capitalism as a developing economic system, and as a force that shaped American society in the most crucial ways. Beginning in the pre-industrial, predominantly rural era of the American Revolution, we will trace the emergence and development of industrial and corporate institutions, the changing social experiences of working, middle, and upper classes, and the evolving ethos of "free enterprise" in the competitive society of the nineteenth century.]

[337 The Industrial Transformation of American Society, 1865–1990
Spring. 4 credits. Not offered 1990–91.
M W 11:15 plus disc to be arranged.
S. Blumin.
A history of American society since the Civil War, with emphasis on the transforming effects of industrial development, urbanization, large-scale foreign immigration, and new technologies of transportation and communication, on the social lives of "anonymous Americans."]

[340 Recent American History, 1917 to 1945
Fall. 4 credits. Not offered 1990–91.]
T R 12:20–1:10; disc to be arranged.
R. Polenberg.
Topics include civil liberties and dissent in World War I; individualism and conformity in the 1920s; radicalism and reform in the New Deal; class, race, and ethnicity; Franklin Roosevelt and World War II; the Holocaust; and the atomic age.]

341 Recent American History, 1945 to the Present
Spring. 4 credits.
T R 12:20–1:10; plus disc to be arranged.
R. Polenberg.
Topics include the Cold War and civil liberties; the Supreme Court and civil rights; Kennedy, Johnson, and social reform; the Vietnam War; the Carter and Reagan presidencies; and class, race, and ethnicity in modern America.

[344 American Ideas from the Puritans to Darwin
4 credits. Not offered 1990–91.
M W F 1:25. F. Somkin.]

345 The Modernization of the American Mind
Fall. 4 credits.
M W F 12:20–1:10; disc to be arranged.
R. L. Moore.
American thought and culture from 1890 to the present. Emphasizes the intellectual impact of major political and economic events and the adaptation of social ideas and values to new conditions.

346 Religion and the Cultural Life of Nineteenth-Century Americans
Spring. 4 credits.
T R 11:40–12:55. R. L. Moore.
An examination of religion as a basic component of popular cultures. The emphasis is not on churches but on how religious attitudes reached beyond formal organizations to shape the ways in which various American ethnic and racial groups organized, understood, and enjoyed their lives.

411 Undergraduate Seminar in American Political History
Fall. 4 credits. Prerequisite: permission of instructor.
M 2:30–4:30. J. H. Silbey.
Topic for 1990–91: The Elections of 1990 and the American Political Tradition.

414 Motivation of American Foreign Policy
Fall. 4 credits. Prerequisite: Permission of instructor.
R 2:30–4:15. W. LaFeber.
Topic to be announced.

[415 The United States and Russia, 1780 to 1914
Fall. 4 credits. Enrollment limited to 16 students. Primarily for juniors and seniors. Prerequisite: permission of instructor. Not offered 1990–91.
R 2:30–4:15. W. LaFeber.
The course will analyze diplomatic relations between the United States and Russia between 1780 and 1914. Special attention will be given to the causes of the friendship of the early decades and why it changed to animosity. The domestic origins of the foreign policies of both nations will be stressed. Extensive individual research projects will be assigned.]

[416 Six Americans
Spring. 4 credits. Not offered 1990–91.
R 2–4. F. Somkin.
A study of the lives and ideas of John Adams, Joseph Smith, Mark Twain, Jane Addams, Louis Sullivan, and Oliver Wendell Holmes, Jr., emphasizing the relation of personality to intellect within the context of dominant American ideals.]

[418 Undergraduate Seminar in the History of the American South
Spring. 4 credits. Prerequisite: permission of instructor.
M 2:30. J. H. Silbey. Not offered 1990–91.]

[419 Seminar in American Social History
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
R 2:30–4:30. S. Blumin.]

421 American Collective Memory in Comparative Perspective
Spring. 4 credits. Prerequisite: permission of instructor.
T 2:30–4:30. M. Kammen.
Every society has traditions and myths concerning its evolution and identity. The focus of this seminar will be to examine the role of tradition and memory in the United States—in comparative perspective. The so-called "problem of American exceptionalism" will be explored in depth.

[426 Undergraduate Seminar in Early American History
Spring. 4 credits. Not offered 1990–91.
M 1:25–3:20. M. B. Norton.]

428 Undergraduate Seminar in American Frontier History
Fall. 4 credits.
M 2:30–4:30. D. H. Usner.
Topic: The new environmental history.

[429 Undergraduate Seminar in Indians of Eastern North America
4 credits. Not offered 1990–91.
D. H. Usner.
A seminar examining the history of Native Americans in the eastern woodlands from colonial times to the present. The cultural and economic participation of Indians in the evolution of frontier societies will be examined. Major topics include fur-trade networks, political relations, removal, and the persistence of Indian communities in eastern states.]

430 Undergraduate Seminar in Law and Authority in American Life
Fall. 4 credits. Limited to seniors (any field) with 3.0 GPA or higher. Prerequisite: permission of instructor.
T 2:00–4:30. F. Somkin.
Ours is a highly legalistic society, probably having more laws, rulings, hearings, re-hearings, trials, re-trials, appeals, decisions, and lawyers than any civilization in history. At the same time we are accustomed to a level of social violence known elsewhere only in the most murderously lawless environments. Obviously, a suffocating legalism and lives that are nasty, brutish, and short may coexist in an atmosphere of self-congratulation about the blessings of liberty. This course examines the nature of our legal system and its characteristic style of reasoning, with their underlying assumptions, myths, and illusions.

[439 Undergraduate Seminar in Reconstruction and the New South
Fall. 4 credits. Prerequisite: senior standing (in history) or permission of instructor.
T 2:30–4:30. M. Washington. Not offered 1990–91.
This course focuses on the American South in the nineteenth century as it made the transition from Reconstruction to new forms of social organization and patterns of race relations. Reconstruction will be considered from a sociopolitical perspective, concentrating on the experiences of the freedpeople. The New South emphasis will include topics on labor relations, economic and political changes, new cultural alliances, the rise of agrarianism, and legalization of Jim Crow.]

440 Undergraduate Seminar in Recent American History
Fall. 4 credits. Prerequisite: permission of instructor.
T R 2:55–4:10. R. Polenberg.
Topic: Benjamin N. Cardozo and the Supreme Court.

442 Popular Culture in the United States
Fall. 4 credits. Prerequisite: one year of course work in American history.
W 2:30–4:30. R. L. Moore.
A reading and research seminar concerned with popular culture in nineteenth-century America (publications, performances, and audiences).

471 Black Emancipation in Comparative Perspective (Marcham Seminar: also Africana Studies 471; Soc Hum 426)
For description see Comparative History.

610 Afro-American Historiography
Spring. 4 credits.
T 2:30–5:30. M. Washington.
Reading and discussion course focusing on the way historians write and interpret the Black experience in America. Students will be concerned with individual historians, various schools of thought, and historical approaches.

[613–614 Seminar on American Diplomatic History
613, fall; 614, spring. 4 credits each term. Prerequisite: permission of instructor. Not offered 1990–91.
R 2:30–4:15. W. LaFeber.]

[615–616 Seminar in American Cultural and Intellectual History
615, fall; 616, spring. 4 credits.
F. Somkin. Not offered 1990–91.]

[617–618 Seminar in Recent American Cultural History
617: fall; 618: spring. 4 credits each term. Not offered 1990–91.
W 2:30–4:30. R. L. Moore.
A reading and research seminar concerned with popular culture in nineteenth-century America (publications, performances, and audiences.)]

[619 Seminar in American Social History
Fall. 4 credits. Not offered 1990–91.
R 2:30–4:30. S. Blumin.]

620 Seminar in American History
Fall. 4 credits.
R 3:30–6. M. Kammen.
This is a reading colloquium that will cover topics ranging from the seventeenth to the twentieth century. Emphasis on cultural, social, and political history, however, especially from the early republic to the present.

[621 Social Memory and the Transformation of Tradition in American Culture
Fall. 4 credits. Not offered 1990–91.
M. Kammen.]

624 Graduate Seminar in American Indian History
Fall. 4 credits.
Hours to be arranged. D. H. Usner.

[626 Graduate Seminar in the History of American Women
Fall. 4 credits. Not offered 1990–91.
T 2:30–4:30. M. B. Norton.
A reading and research seminar intended primarily for graduate students. Major works in American women's history will be carefully scrutinized, and each student will prepare a lengthy research paper.]

627 Graduate Seminar in Early American History
Fall. 4 credits.
T 2:30–4:30. M. B. Norton.
A reading course that will focus on influential and interesting books in colonial American history published in the past fifteen years. Authors include Edmund S. Morgan, Christine Heyrman, Rhys Isaac, Carol Karlsen, Alfred Crosby, D. W. Meinig, Mechal Sobel, and William Cronon.

[633 Seminar in Nineteenth-Century American History
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
M 2–4. J. H. Silbey.]

[634 Seminar in Nineteenth-Century American History
Spring. 4 credits. Not offered 1990–91.
J. Silbey.]

640 Graduate Seminar in Recent American History
Spring. 4 credits. Prerequisite: permission of instructor.
Hours to be announced. R. Polenberg.

710 Colloquium in American History
Spring. 4 credits. Required of all first-year American history graduate students.
M 2:30–4:30. J. Silbey.
Examination of the major themes, epochs, and interpretations of American history.

Latin American History

295 Colonial Latin America
Fall. 4 credits.
M W F 10:10. T. H. Holloway.
Survey of Latin America from the rise of pre-Columbian civilizations through the European conquest, the establishment of the Spanish and Portuguese colonial societies, imperial rivalries in the New World, the background of the independence movements, and the achievement of political independence.

296 Latin America in the Modern Age
Spring. 4 credits.
M W F 10:10. T. Holloway.
Survey of the Latin American nations from independence to the present. Major themes include the persistence of neocolonial economic and social institutions, the development of nationalist and populist politics, revolutionary movements of the twentieth century, and United States–Latin American relations.

[347 Agrarian Societies in Latin American History
Fall. 4 credits. Not offered 1990–91.
T R 10:10–11:25. T. H. Holloway.
The development of rural patterns of wealth, status, and power, focusing on the role of country people in the larger society. Topics include disruption of the conquest, evolution from encomienda to hacienda, rise of plantation agriculture and export enclaves, decline of Indian communities, peasant protest, and land reform and development programs of the recent past.]

348 Contemporary Brazil
Fall. 4 credits.
T R 10:10–11:25. T. H. Holloway.
With some historical background, the course focuses on the twentieth century. Topics include the export-led growth model, contradictions leading to military rule 1964–1985, transition to competitive politics, debt, ecology, regional and social disparities. Some comparisons are made to other Latin American countries.

449 Undergraduate Seminar in Latin American History
Spring. 4 credits. Prerequisite: permission of instructor.
M 2:30–4:25. T. H. Holloway.
Topic: History of Central America.

[649 Seminar in Latin American History
Not offered 1990–91.
T H. Holloway.]

Asian History

190 Introduction to Asian Civilizations
Spring. 4 credits.
W F 11:15; disc, M 11:15, 12:20, or 2:30.
J. R. Piggott, D. K. Wyatt.
An introduction to the distinctive cultures of China, India, Japan, and Southeast Asia that features an intensive examination of selected topics and periods of particular significance in the history of each.

191 Introduction to Asian Civilizations in the Modern Period
Fall. 4 credits.
W F 11:15; disc, M 11:15, 1:25, or 2:30. S. Cochran, D. K. Wyatt.
The history of Asian civilizations in modern times is introduced, focusing on the relationship between key figures and societies. English translations of autobiographies, novels, short stories, diaries, and other documents written by Asians are used to assess the perspectives, social priorities, and historical significance of intellectual and political leaders.

240 Social and Political Foundations of Modern South Asia
Fall. 4 credits.
M W F 10:10–11. R. Ahmed.
A survey of the social and political history of South Asia in the nineteenth and twentieth centuries. The course will concentrate on the social and political foundations of the three major South Asian countries—India, Pakistan, and Bangladesh—during the colonial period with particular focus on the role of the masses in the anticolonial struggle. It will emphasize the nature of response and reaction to colonial rule by the different classes and communities in the subcontinent and will explore how they interacted with each other and joined hands in the common struggle for freedom. It will conclude with some reflections on the recent social and political developments in the three countries.

[243 China and the West before Imperialism
Fall. 3 credits. Open to freshmen and sophomores. Prerequisite: permission of instructor. Limited to 15 students.
T 2:30–4:20. C. A. Peterson.]

293 History of China up to Modern Times
Fall. 4 credits.
T R 9:05 plus an additional hour, M 11:15 or 1:25. C. A. Peterson.
A survey of the principal developments in the history of China from the earliest times to the eighteenth century that also undertakes a topical introduction to Chinese culture and civilization, in part by the use of visual materials.

[294 History of China in Modern Times
Spring. 4 credits. Not offered 1990–91.
T R 10:10 plus additional hour, R 11:15, 1:25, or 2:30. S. Cochran.
A survey that concentrates on the rise of the last imperial dynasty in the seventeenth and eighteenth centuries, the upheavals resulting from domestic rebellions and foreign imperialism in the nineteenth century, and the twentieth-century efforts to achieve social mobilization and political unity.]

297 Premodern Japan: Historical Perspectives
Fall. 4 credits.
T R 1:25 plus disc, R 2:30. J. R. Piggott.
This course explores the premodern civilization of Japan from a variety of historical perspectives. A text, readings from primary sources and literature, several historical essays, and a catalog of art treasures will be assigned. Students will gain familiarity with the high points of premodern Japanese history and consider a number of comparative questions about Japan's premodern evolution compared with that of Europe and China.

[298 State, Society, and Culture in Modern Japan
Spring. 4 credits. Not offered 1990–91.
T R 1:25 plus disc, F 1:25 or 2:30.
J. V. Koschmann.
A survey of Japan from the mid-eighteenth century to the present, with special attention to changing configurations of institutional structure, knowledge, action, and conceptions of history. Japanese works in translation will be read and discussed in addition to secondary sources.]

[342 Hiroshima and Nagasaki
Summer. 4 credits. Not offered 1991.
J. V. Koschmann.
The biological, psychological, and social impact and lasting significance of the atomic bombings of Japan during World War II are reconsidered through historical and scientific studies, first-person memoirs, literature, and film. Evaluation of recent historical research on the American decision to use the bombs. Consideration of the relevance of Hiroshima and Nagasaki to the present American defense strategy and the danger of nuclear war.]

[360 Early Warfare, East and West
Spring. 4 credits. Not offered 1990–91.
For description see Comparative History.]

393 Images of Humanity in Medieval China (also Society for the Humanities 425)
Fall. 4 credits. Permission required.
M 2:30–3:30 and W 2:30–4:25.
J. R. McRae and C. A. Peterson.
For description see Comparative History.

395 Southeast Asia to the Eighteenth Century
Fall. 4 credits.
T R 11:15–12:05 plus disc R 2:30.
D. K. Wyatt.
A survey of the earlier history of Southeast Asia, concentrating particularly on regional movements of economic, social, cultural, and political change and using, to the extent possible, readings in primary sources.

396 Southeast Asian History from the Eighteenth Century
Spring. 4 credits.
T R 11:15–12:05 plus disc F 11:15, 2:30.
D. K. Wyatt.
A survey of the modern history of Southeast Asia with special attention to the formation of modern states (colonial as well as national), changing economic and social structure, and consciousness. Primary texts will be read in translation whenever feasible.

398 The *Tale of Genji* in Historical Perspective: Japan in the Year 1000
Fall. 4 credits.
W 2:30–4:30. J. R. Piggott.
The *Tale of Genji* is a classic of premodern Japanese literature and is often cited as the earliest novel in world literary history. It was written by a female courtier, Murasaki Shikibu, around the year 1000 A.D. The *Tale* gives readers a broad window into Japan's courtly society at a time when many of the component elements of Japan's classical tradition were in the making.

[399 War as Myth and History in Postwar Japan (also Asian Studies 381)
Fall. 4 credits. Not offered 1990–91.
T R 1:25. B. deBary, J. V. Koschmann.
How is the "war story" told in postwar Japan? The course will examine persisting manifestations of the war memory in contemporary Japanese cultural life, with emphasis on ways in which the story of World War II has been retold, reinterpreted, and given new symbolic and factual significance in light of changing historical circumstances. Class discussion will focus on the interpretation of texts, ranging from political thought and history to fiction, film, and poetry.]

[404 Topics in Premodern Japanese History
Not offered 1990–91.
J. R. Piggott.]

417 Islam in South Asia
Fall. 4 credits.
F 2:30–4:30. R. Ahmed.
This course will examine the dominant features of South Asian Islam, including the nature of beliefs and practices, the rituals and institutions in their different local contexts. One of the major objects of this course is to demonstrate that Islam never functioned as a monolithic system in South Asia and developed its own traditions in different local contexts, which did not necessarily conform to the orthodox interpretations by the ulema. It will conclude with a consideration of the major Islamic movements in South Asian Islam in more recent times.

423 Seminar in Premodern Japanese History: Rise of the Samurai—Warrior Government and Culture in Japan
Spring. 4 credits.
W 2:30–4:30. J. R. Piggott.
The seminar traces warrior institutions and culture from the Heian period (794–1185) through the Tokugawa age (1600–1868). This millennium spans the classical, medieval, and early modern ages. Because warriors governed Japan during much of this time, the story of warrior development opens a broad window onto premodern society. Students will read a variety of original sources in translation as well as analytical essays, and preliminary consultation with the instructor is advised.

434 The Social and Religious Movements in Colonial India
Spring. 4 credits.
Hours to be announced. R. Ahmed.
A study of the social and religious movements in colonial South Asia, which arose as a response and reaction to British Rule in the subcontinent. These movements were not confined to the elite or to any particular community, but touched almost every section of the Indian society. Although these movements were basically social and religious in character, in reality many of these had specific political objectives and influenced the nature and course of the anticolonial struggle. We will concentrate on specific movements and examine the social and economic background of their participants and their programs and strategies. We also explore how these movements created conditions for communal polarization by transforming the attitudes of the masses towards each other on a communal basis.

479 Continuity and Change in South Asian History: Society and Politics in the Post-Colonial Period
Spring. 4 credits.
M W 11:15–12:05, plus disc to be arranged. R. Ahmed.
The British left India in 1947 but did not take with them the colonial structure built over two hundred years of their rule in the subcontinent. The indigenous elites, including leaders such as Gandhi, Nehru, and Jinnah, who took over reins of the new states, were themselves the products of the colonial system and did not envisage any basic change in the structure of the states even after independence. They also had to address themselves to the pressing social and economic problems faced by the new states and satisfy the rising expectations of the new elites and also of the people. How far did they succeed? Did their attempts make any major break with the past? We will concentrate on the social, economic, and political developments in the three major countries of South Asia—India, Pakistan, and Bangladesh—in the post-colonial period and will examine the nature of changes that have shaped the history of region since 1947.

[489 Undergraduate Seminar in Modern Japanese History
Fall. 4 credits. Prerequisites: History 297 (formerly 397) or 298 (formerly 398) or equivalent, and permission of instructor.
J. V. Koschmann. Not offered 1990–91.]

[492 Undergraduate Seminar in Medieval Chinese History
Fall. 4 credits. Prerequisite: History 393 or 360 or permission of instructor. Not offered 1990–91.
Hours to be arranged. C. A. Peterson.]

[493 Self and Society in Late Imperial and Twentieth-Century China
Fall. 4 credits. Prerequisite: History 191 or 394 or permission of instructor. Not offered 1990–91.
R 2:30–4:30. S. Cochran.
Conceptions of self and relations between the individual and society in China from the seventeenth century to the present.]

[495 Japanese Kingship in Comparative Perspective
4 credits. Not offered 1990–91.
T 2:30–4:30. J. R. Piggott.
In this seminar we will examine the early and medieval development of one of the oldest ruling institutions in the world today. Theoretical and comparative readings from premodern societies in Europe and Asia will provide a frame of reference. Prospective seminar members should have completed some study of premodern Japanese history and preliminary consultation with the instructor is advised.]

[499 Art and Society in Modern China
Spring. 4 credits. Not offered 1990–91.
W 2:30–4:30. S. Cochran, M. Young.
The relation between the visual arts and social change in China from the seventeenth century to the present. The value of art as a reflection of social reality and as an agent for social reform is analyzed on the basis of a variety of visual materials that range from calligraphy, paintings, and porcelains of the seventeenth and eighteenth centuries to woodblock prints, photographs, and films of the nineteenth and twentieth centuries.]

691 Chinese Historiography and Source Materials
Fall. 4 credits. Prerequisite: permission of instructor.
Hours to be arranged. C. A. Peterson.

693–694 Problems in Modern Chinese History
693, fall; 694, spring. 4 credits. Prerequisite: permission of instructor.
R 2:30–4:25. S. Cochran.

695 Early Southeast Asia: Graduate Proseminar
Fall. 4 credits.
R 2:30–4:30. D. K. Wyatt.
Introduction to the history of Southeast Asia for graduate students. Students will be expected to attend the lectures and complete the readings for History 395, and they will meet separately as a group to further explore selected topics.

696 Modern Southeast Asia: Graduate Proseminar
Spring. 4 credits.
R 2:30–4:30. D. K. Wyatt.
Introduction to the modern history of Southeast Asia for graduate students. Students will be expected to attend the lectures and complete the readings for History 396, and they will meet separately as a group to further explore selected topics.

697 Seminar in Southeast Asian Paleography
Fall. 4 credits.
Hours to be arranged. D. K. Wyatt.
Examination of the writing systems of Southeast Asia, paying particular attention to premodern sources, including manuscripts and inscriptions. Topic for 1990: Tai scripts, including Tai Yuan, Khoen, Lü, Lao, Shan, and Tai Dam.

[791–792 Seminar in Medieval Chinese History
791, fall; 792, spring. 4 credits each term. Prerequisite: permission of instructor. Not offered 1990–91.
C. A. Peterson.]

[793–794 Seminar in Modern Chinese History
793, fall; 794, spring. 4 credits each term. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged. S. Cochran.]

795 Seminar in Modern Southeast Asian History
Fall. 4 credits. Prerequisite: History 696.
Hours to be arranged. D. K. Wyatt.
Advanced seminar in modern Southeast Asian history.

796 Seminar in Southeast Asian History
Spring. 4 credits.
Hours to be arranged. D. K. Wyatt.

[797–798 Seminar in Japanese Thought
797, fall; 798, spring. 4 credits each term. Not offered 1990–91.]
Hours to be arranged. J. V. Koschmann.]

Ancient European History

[265 Ancient Greece from Homer to Alexander the Great
Fall. 4 credits. Open to freshmen. Not offered 1990–91; next offered 1991–92.
T R 10:10–11; disc, W 3:35, R 12:20 or 2:30. B. Strauss.
A survey of Greece from the earliest times to the end of the Classical period in the late fourth century B.C. The course focuses on the Greek genius: its causes, its greatness, its defects, and its legacy. The Heroic Age, the city-state, ancient democracy, and the intellectual ferment of the Greek Enlightenment are the main topics of study. Readings in translation from Homer, Aristophanes, Sophocles, Herodotus, Thucydides, Plato, Aristotle, and from the evidence of ancient inscriptions, coins, art, and architecture.]

266 War and Peace in Greece and Rome (also Government 393)
Fall. 4 credits. Open to freshmen.
T R 10:10–11:25; disc to be arranged. B. Strauss, R. N. Lebow.
A study of war and peace in the ancient Mediterranean world in light of modern theories of international relations. The course will test the validity of modern theories against ancient models and will ask why the ancient experience can contribute to modern theory and practice. Case studies include the Peloponnesian War, the second Punic War, Alexander's conquests, and the defense of the Roman empire.

268 A History of Rome from Republic to Holy City
Spring. 4 credits. Open to freshmen.
T R 10:10–11; disc. W 3:35, R 12:20 or 2:30. B. Strauss.
A survey of Rome from the founding of the Republic to the end of the Western Empire. The focus is on the Roman conquest of the Mediterranean world and on the cultural reconquest of Rome by the vanquished. Roman politics, peasant society, Imperialism, and propaganda are the main topics of the first half. The government of the Caesars, society during the Roman peace, and the fertile interaction of Romans, Jews, and Greeks that produced Christianity are the main topics of the second. Readings in translation include Cicero, Polybius, Josephus, Tacitus, Petronius, Plutarch, and Saint Augustine.

[373 The Greek City from Alexander to Augustus
4 credits. Not offered 1990–91.
T R 10:10–11:00; disc to be arranged. B. Strauss.
A twofold search for Alexander the conqueror and the man and for the character of the world he created, in which the Greek city was planted as far as Egypt and India. These new cities saw a change from republicanism to monarchy, from community values to individualism, from particularism to ecumenicalism; embraced the new philosophies of Stoicism and Epicureanism; and were the hothouses of a new religion: Christianity. Readings in translation include Arrian, Plutarch, Aristophanes, Menander, Theocritus, Polybius, the Book of Maccabees, Epicurus, and Lucretius.]

452 The Tragedy of Classical Athens, 462–404 B.C.
Spring. 4 credits. Prerequisite: permission of instructor.
T 2:30–4:30. B. Strauss.
The nature of Athenian democracy, society, and culture in the "golden age" of Athens. The course will examine the influence of Athenian political life on the great tragedians of the age and the influence of tragedy on the Athenians' conception of their character and history. Readings from Herodotus, Thucydides, Aeschylus, Sophocles, Euripides, Aristophanes, Plato, Aristotle, and Plutarch.

[453 Crisis of the Greek City-State, 415–336 B.C.
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
M 2:30–4:30. B. Strauss.
The fortunes of the city-state and citizen in an age of uncertainty. The focus is on Athens with some attention paid to the wider Greek world. Topics include the nature of Athenian politics, Athenian society, cultural change, the war between the city-states, crisis as a historical concept, and anthropology and ancient Greece. Readings in translation include Thucydides, Sophocles, Euripides, Aristophanes, Plato, Aristotle, Demosthenes, and Xenophon.]

455 The Family and Politics in Ancient Greece and Rome
Fall. 4 credits. Prerequisite: History 265, 268, or 461 or permission of instructor.
T 2:30–4:30. B. Strauss.
If Greece and Rome are the foundation, at least symbolically, of Western civilization, then the family is the foundation of Greece and Rome. We shall consider such topics in the ancient family as parents and children, sibling rivalry, marriage, gender roles, birth control, the family and social crisis, the family and politics, and the family in the early church. Wherever possible, analogies to, comparisons with, and the implications for, the United States in the 1980s will be suggested. Readings include legal and political speeches, comedy, tragedy, philosophy, sermons and religious texts, inscriptions, and modern scholarship.

[461 The Greco-Roman World in Late Antiquity and Early Byzantine Times, A.D. 306–565
Spring. Not offered 1990–91.
For description see Medieval, Renaissance, and Early Modern European History.]

496 Origins of the Hellenistic World: Alexander the Great and his Legacy (also Classics 496 and Classics 602)
Spring. 4 credits. Prerequisite: permission of instructor.
R 1:25–4:25. E. Gruen.
This course will explore the sweeping changes (political, institutional, religious, and cultural) set in motion by Alexander's invasion of the Persian empire and the fierce contest over his heritage. The seminar requires active participation in the weekly discussions, two oral reports, and one research paper.

Medieval, Renaissance, and Early Modern European History

151 Introduction to Western Civilization
Fall. 4 credits.
T R 11:15–12:05, plus one disc section per week. L. P. Williams.
History 151 is offered in two distinct sections: History 151W (W is for writing) and 151R (R is for reading). The lectures are the same for both sections. History 151 will examine the basic political, social, economic, and intellectual institutions of western civilization from antiquity to 1600 AD. In History 151W this is done through selections from original and secondary sources; in History 151R, some of the great contemporary works will be read *in toto*. Among these will be the Egyptian Memphite theology, Plato's *Apology*, Augustine's *Confessions*, and Thomas Moore's *Utopia*. Students in History 151W will write weekly 1000-word essays until they receive two B+ grades in a row, after which the papers become optional. Students in 151R will write one critical review of 750 words of one of the works read by them. All freshmen *must* take History 151W.

152 Introduction to Western Civilization
Spring. 4 credits.
For description see Modern European History.

222 Public Life and Literature in Tudor England
Fall. 4 credits. Prerequisite: permission of instructor.
M W 9:05–9:55. F. G. Marcham.
A study of the chief developments in the political, governmental, and religious life of England in the sixteenth century and weekly discussions of a selection of Tudor prose, poetry, and drama.

257 English History from Anglo-Saxon Times to 1485
Spring. 4 credits.
M W F 11:15–12:05. P. Hyams.
A survey of the government, social organization, and cultural and religious experience of the English people. Particular stress is laid on the unification of the realm, the emergence of state insitutions such as parliament, and changes in economic organization (manors, towns and commerce). The approach will be comparative within a context of contemporary European developments.

[259 The Crusades
Fall. 4 credits.
M W F 11:15–12:05 plus disc to be announced. P. R. Hyams. Not offered 1990–91.
This lecture course examines the Crusading Movement and the states it produced from the eleventh century to the fall of the mainland Kingdom of Jerusalem in 1292. Central themes include: the history of the Church and its contextual intellectual history, political narrative and military history, social and economic analysis of Europeans in Outremer (the Mid-East), and the conflict of cultures and religions during a formative period in Western civilization.]

263 The Earlier Middle Ages
Spring. 4 credits.
M W F 12:20. J. J. John.
A survey of Medieval civilization from ca. 300 to ca. 1100 dealing with religious, intellectual, political, and economic developments in Western Europe.

264 The High Middle Ages
Fall. 4 credits.
M W F 11:15–12:05. P. Hyams.
A survey of Medieval civilization from ca. 1100 to ca. 1450 dealing with religious, intellectual, political, and economic developments in Western Europe. Lectures and class discussions.

[350 Early Renaissance Europe
Fall. 4 credits. Not offered 1990–91.
T R 10:10–11:25. J. M. Najemy.
An exploration of intellectual, cultural, and religious developments in Western Europe, but with special attention to Italy, from the age of Dante and Marsilius, through the several stages of Italian humanism from Petrarch to Alberti to Pico, down to the generation of Machiavelli, More, and Erasmus. The course will seek to problematize the notion of a "Renaissance" in the period's ambivalent attitudes toward history, learning, culture, language, and the role of intellectuals in politics and society. Emphasis will be placed on the close reading of primary sources and on issues of interpretation.]

351 Machiavelli
Spring. 4 credits.
T R 11:40–12:55. J. M. Najemy.
This course will present Machiavelli in a variety of historical and interpretive contexts: European and Italian politics in the early sixteenth century; the decline of the Florentine republic and the rise of the Medicean principate; Machiavelli's own career in government and his, and the republic's, crisis in 1512–13; the intellectual traditions of Renaissance humanism, political thought, and the revival of antiquity; vernacular literary currents and popular culture; and the remarkable generation of political figures, writers, and theorists with whom Machiavelli associated and corresponded. Emphasis will be placed on a close reading of the major works (including the letters, The Prince, the Discourses, The Mandragola, and selections from The Art of War and the Florentine Histories, all in translation) and a critical examination, in the light of that reading, of some major modern interpretations of Machiavelli.

364 The Culture of the Later Renaissance (also Comparative Literature 362 and English 325)
Spring. 4 credits.
T R 10:10–11; disc R and F to be arranged. C. Kaske.
Members of various departments will lecture on Luther, Michelangelo, Montaigne, Edmund Spenser, Monteverdi, Cervantes, Copernicus, and Galileo. Guest lecturers will include R. Harris-Warrick, music; Peter Dear, history; and C. Arroyo, romance studies. Lectures and discussion will undertake close readings of texts, literary and visual, and will introduce different methods of interpretation and of historical analysis. Written requirements: two short papers and final examination.

[365 Medieval Culture, 400–1150
Spring. 4 credits. Prerequisite: History 263 or permission of instructor. Not offered 1990–91. Next offered 1991–92.
T R 2:55–4:10. J. J. John.
Intellectual and cultural developments in the age of monasticism, from St. Augustine and St. Benedict to St. Anselm and St. Bernard of Clairvaux.]

366 Medieval Culture, 1100–1300
Spring. 4 credits. Prerequisite: History 264 or permission of instructor.
T R 2:55–4:10. J. J. John.
The origin and development of the universities will be studied as background for a consideration of the scholastic mentality and its influence on the art, literature, philosophy, science, script, and theology of the period. Readings from Abelard, Hugh of St. Victor, Bonaventure, Thomas Aquinas, Dante, and others.

367 Feudalism and Chivalry: Secular Culture in Medieval France, 1000–1300
Fall. 4 credits. No prerequisites; History 263 or 264 would help.
M 2:30–4:25. P. R. Hyams.
An upper-level reading survey of the main currents of noble lay culture in France, which led European fashions in love, warfare, entertainment, and environment through most of the period. There will be heavy emphasis on contemporary sources (in English), including lively and complete readings from epic literature (the *Song of Roland*), lives, and chronicles.

368 Marriage and Sexuality in Medieval Europe
Spring. 4 credits.
M W F 2:30–3:25. P. R. Hyams.
This seminar examines the forces defining and enlivening marriage, as a central event in every person's life and career. Its focus ranges from Church prescriptions, in canon law and theology that still affect twentieth-century attitudes, to secular sexual practice.

369 The History of Florence in the Time of the Republic, 1250–1530
Fall. 4 credits.
T R 10:10–11:25. J. M. Najemy.
Florentine politics and society from the communal period through the age of Dante, the rise and decline of the guild republic, the age of the civic humanism, and the rise of the Medici to the time of Machiavelli. Economic structures and social classes, corporate politics, family history, and political and historical ideas are considered in the context of the emergence and transformation of Republican government.

371 History of England under the Tudors and Stuarts
Fall. 4 credits. Not opened to freshmen except by permission of instructor.
T R 2:55–4:10. P. Lake.
A survey of the period of reformation and revolution in which many historians have discerned the emergence of modern society. The course takes account of the relations of England with other parts of the British Isles and Europe, but emphasizes the workings of the political system as well as the impact of religious conflict and ideological change.

372 Religion and Society in Early Modern England
Spring. 4 credits. Not open to freshmen except by permission of instructor.
T R 2:55–4:10. P. Lake.
An examination of religious change from the late middle ages to the late 17th century—from Catholic unity to pluralist Protestantism—with attention to the way this change influenced a wide range of social and cultural contexts. Among the manifestations to be looked at are: the growth of literacy, social and cultural differentiation, and the "reformation of manners."

[374 War, Trade, and Empire, 1500–1815
Spring. 4 credits. Not offered 1990–91. Next offered fall 1991.
M W 2:30–4. D. A. Baugh.
Maritime enterprise, imperial policy, and naval power in the age of expansion. The rise and decline of the Portuguese and Spanish empires are considered, but the emphasis is on English, French, and Dutch rivalry in the Atlantic and Caribbean.]

387 Social and Cultural History of Sixteenth-Century Europe
Fall. 4 credits.
M W 1:25–2:15 plus disc W 2:30 or 3:35. D. Sabean.
This course examines social processes and perceptions of change during the Reformation era. Topics include social differentiation in the countryside, forms of aristocratic domination, court society, rural and urban attempts at resistance and rebellion, violence, the exercise of state power and its representation, religious and political ideology, popular culture, and the reform of manners.

388 Social and Cultural History of Seventeenth-Century Europe
For description, see Modern European History.

[405 Population and History
Not offered 1990–91.
For description see Comparative History.]

[409 Seminar on Work in Europe and America
Not offered 1990–91.
For description see Comparative History.]

437 Church and State during the Middle Ages
Fall. 4 credits.
T R 11:40–12:55. B. Tierney.
Relationships between ecclesiastical and secular authorities and the ways in which these relationships influenced the growth of government in the Middle Age are considered. Particular attention is given to the growth of Medieval constitutionalism.

[438 Francis of Assisi and the Franciscans
Fall. 4 credits. Not offered 1990–91.
T 2:30–4:30. B. Tierney.
A seminar with lectures, class papers, and class discussions. The course will begin with detailed study of the early lives of Francis in translation, then consider the impact of the Franciscans on the medieval church and vice versa.]

[451 Lord and Peasant in Europe: A Seminar in Social History
Not offered 1990–91.
For description see Comparative History.]

[461 The Greco-Roman World in Late Antiquity and Early Byzantine Times, A.D. 306–565
Spring. 4 credits. Prerequisite: History 263, 265, or 268 or permission of instructor. Not offered 1990–91.
T 2:30–4:30. B. Strauss.
A seminar in the cultural, socioeconomic, and political history of the period. Topics include the interaction of paganism and Christianity; art form, civic life, and the individual; the family; Julian and Justinian; and the concept of decline and fall.]

463 Seminar on Europe during the Age of Absolutism
Fall. 4 credits. Permission of instructor required.
M 2:30–4:30. D. Sabean.
This seminar examines different topics on the social and cultural history of Europe during the sixteenth and seventeenth centuries. It will be concerned with issues of power and state practice, popular culture, religion, rituals of domination and resistance, and the ideology of statecraft. Readings will include primary and secondary text. The topic for fall 1990 is the witch persecution.

[468 Undergraduate Seminar in Renaissance History
Fall. 4 credits. Not offered 1990–91.
J. M. Najemy.]

469 Emergence of the English State, 1530–1730
Fall. 4 credits. Seminar for juniors and seniors; others by permission of instructor.
M 2:30–4:30. P. Lake and D. Baugh.
The course considers the claim that the world's first modern state developed in England at this time. It studies the innovation and adaptation of informal structures as well as formal institutions; the problem of royal revenue; the impact of war on administration; and the resulting changes in political culture. Some comparisons are made with what was occurring in other countries. Theories of governmental development, along with usages of such key terms as 'state,' 'bureaucracy,' and 'corruption,' are critically examined.

472 Political and Constitutional Conflict in England, 1560–1688
Spring. 4 credits. Seminar for juniors and seniors; others by permission of instructor.
M 2:30–4:30. P. Lake.
The course explores the conflict between Crown and Parliament, giving attention to practical political maneuvers as well as ideology, political culture, and contending constitutional theories of the time. The traditional Whig conception of English constitutional history is critically examined in the light of recent revisionist investigations into the nature of court and local politics.

[473 History of Sexuality
Not offered 1990–91.
For description, see Modern European History.]

[663 Seminar in Renaissance History
Spring. 4 credits. Not offered 1990–91.
J. M. Najemy.]

664–665 Seminar in Latin Paleography
664, fall; 665, spring. 4 credits each term.
Hours to be arranged. J. J. John.

666 Seminar in Medieval History
Fall. 4 credits.
Hours to be arranged. J. J. John.

[669 Seminar in Medieval History
Fall. 4 credits. Not offered 1990–91.
Hours to be arranged. B. Tierney.]

Modern European History

151 Introduction to Western Civilization
Fall. Summer. L. P. Williams.
For description see Medieval, Renaissance, and Early Modern European History.

152 Introduction to Western Civilization (1600 to the end of World War II)
Spring. 4 credits.
T R 11:15–12:05; disc to be arranged.
L. P. Williams.
History 152 is offered in two distinct sections: History 151W (W is for writing) and 151R (R is for reading). The lectures are the same for both sections. Emphasis in this course is on the interpretation of important historical issues. A small number of papers is required in which the student will enjoy the pleasure of putting historical data together into a satisfying interpretive whole. Readings include a number of novels that cast light upon various periods or events, as well as original documents and interpretations by professional historians. History 151 is not a prerequisite for History 152, although it is recommended.

218 The Russian Military Effort and Foreign Policy
Fall. 3 credits.
W 12:20–2:20. W. M. Pintner.
An examination of the interrelation of the Imperial Russian military effort and Russian foreign policy. Examples will be taken from various periods ranging from the early Muscovite period to the First World War. Students will write 6 or 7 short papers, do extensive reading, and participate in class discussion.

226 Public Life and Literature in Twentieth-Century Great Britain
Spring. 4 credits. Prerequisite: permission of instructor.
T R 9:05–9:55. F. G. Marcham.
A study of British political, social, and constitutional history is paralleled by the reading of plays. Both history and literature are considered. The development of parliamentary democracy in Great Britain, the consequences for her of the two world wars, the emergence of the welfare state, the application to the economy of nationalization, and Great Britain's withdrawal from imperialism are presented. Among the writers read and discussed are Shaw, Maugham, O'Casey, Sherriff, and Osborne.

[229 A History of European Childhood
Spring. 4 credits. Not offered 1990–91. Next offered fall 1991.
N. Karwan–Cutting.
Surveys the history of childhood in Europe from the mid–seventeenth century to the present. Comparisons are made across Western, Eastern, and Mediterranean European Societies. The course delineates those cultural, demographic, religious, political, and economic factors that shaped childhood, both in periods of transition and in times of violent instability. Changing perceptions of childhood are treated in the context of, for example: religious conflict, urbanization, development in science and technology, war, and occupation. All readings are in English.]

[242 Europe since 1789
Spring. 4 credits. Not offered 1990–91.
M. P. Steinberg.
An introduction to major themes, problems, and interpretations in European history from the French Revolution to the consolidation of the Common Market in our own day. The organization will be chronological, but focus will be on the varying forms of political and industrial revolution, liberalism, conservatism, socialism, nationalism, imperialism, fascism, and world war. Readings will include primary materials in political and social theory (Marx and Mill) as well as literature (Thomas Mann, Peter Schneider).]

252 Russian History to 1800
Fall. 4 credits.
T R 10:10–11:25. W. M. Pintner.
The origin and development of the fundamental social, political, economic, and cultural institutions that have determined the nature of contemporary Soviet society.

253 Russian History since 1800
Spring. 4 credits. First preference will be given to students who have taken History 252 if enrollment is limited.
T R 10:10–11:25. W. Pintner.
Nineteenth- and twentieth-century Russia, with emphasis on the major social, political, and economic changes that have transformed Russia since the mid-nineteenth century.

[258 English History from the Revolution of 1688 to the Present
Spring. 4 credits. Not offered 1990–91. Next offered Spring 1992.
T R 1:25–2:40. D. A. Baugh.
An introductory course encompassing political, social, economic, imperial, and constitutional developments. Major themes are the significance of 1688, eighteenth-century society and politics, the rise and decline of liberalism, the Irish Question, the impact of the two world wars, and the challenges and achievements of the welfare state.]

283 Contemporary European Society and Culture (also Government 343; Ger Lit 283)
Fall. 4 credits.
T R 2:55–4:10; disc to be arranged.
J. H. Weiss, J. Pontusson, G. Waite.
The crisis of communist regimes in Eastern Europe has brought an end to the postwar division of Europe. At the same time, the European Community is emerging as a major economic and political power in the world. This course explores these dramatic new developments against the background of an interdisciplinary and comparative investigation of postwar European politics, society, and culture. Topics include generational change, class structure, economic and social polity, new social movements, family and community life, film, and cultural criticism.

[352 The End of the Austro-Hungarian Monarchy, 1848–1919
Fall. 4 credits. Open to freshmen with permission of instructor. Not offered 1990–91.
M W 9:05; disc, W 10:10 and 2:30.
I. V. Hull.
The decline and fall of the multinational empire. Emphasis is on the political and social problems presented to the monarchy both by industrialization and by the increasingly restive subject nationalities (Poles, Czechs, Serbs, Croats). How did the monarchy handle these problems? Why did it fail? Focus is on cultural matters. Readings are drawn from Freud, Schnitzler, Hofmannsthal, Karl Kraus, Joseph Roth, and others.]

[353 Nineteenth-Century European Intellectual History
Fall. 4 credits. Not offered 1990–91.
T R 11:40–12:55. D. LaCapra.
The focus is on social and cultural thought in France, Germany, and England. Topics include reactions to the French Revolution and industrialization; the definition of conservative, liberal, and radical perspectives; and the relation between literature and social thought. Readings include Tocqueville, Mill, Hegel, Marx, Stendhal, Flaubert, Dostoevsky, Nietzsche, and Durkheim.]

354 Twentieth-Century European Intellectual History
Fall. 4 credits.
T R 11:40–12:55. D. LaCapra.
This course examines significant currents in twentieth-century thought in France, Germany, and England. Topics include the varieties of existentialism, the development of the social sciences, psychoanalysis, the modern novel, structuralism, and poststructuralism. Readings include Weber, Freud, Heidegger, Sartre, Camus, Woolf, Foucault, and Derrida.

355 The Old Regime: France in the Seventeenth and Eighteenth Centuries
Fall. 4 credits.
T R 2:55–4:10 plus disc to be arranged. S. L. Kaplan.
A systematic examination of the social structure, economic life, political organization, and collective mentalities of a society that eclipsed all others in its time and then, brutally and irreversibly, began to age. France, in European perspective, from the wars of religion through the age of Voltaire.

[356 The Era of the French Revolution and Napoleon
Spring. 4 credits. Not offered 1990–91.
T R 2:55–4:10. S. L. Kaplan.
A study of the failure of the traditional system, its dismantling and replacement in France, and the international consequences. Focus will be on the meaning of the revolutionary experience, the tension between the desires to destroy and to create, and the implications of the Revolution for the modern world.]

[357 Survey of German History, 1648–1890
Fall. 4 credits. Open to freshmen with permission of instructor. Not offered 1990–91. Next offered Fall 1991.
M W 11:15–12:05; undergrad disc, W 1:25 or 2:30; grad disc, W 1:25. I. V. Hull.
An examination of the social, political, intellectual, and diplomatic history of the German states from the devastation of the Thirty Years' War, through absolutism, the bourgeois revolutions of 1848, and the struggle for unification, to the beginning of the modern industrial state.]

[358 Survey of German History, 1890 to the Present
Spring. 4 credits. Open to freshmen with permission of instructor.
M W F 11:15–12:05; undergrad disc, W 1:25 or 2:30; grad disc, W 1:25. I. V. Hull. Not offered 1990–91. Next offered Spring 1992.
The "German problem" is examined. Major topics include tensions caused by rapid industrialization presided over by a preindustrial, political elite; origins of World War I; growth of anti-Semitism; social dislocations of World War I; failure of the socialist revolution of 1918–1919; unstable Weimar democracy and the rise of nazism; the Nazi state; World War II; and the two Germanies.]

[362 European Cultural History, 1815–1870
4 credits. Not offered 1990–91.
M. P. Steinberg.
An analysis of major problems and themes associated with the construction and interpretation of European modernity, from the Enlightenment and the French and industrial revolutions to the unification of Germany. The interplay between political change and cultural and intellectual life will be stressed, with emphasis on primary materials (discursive works as well as painting, music, opera, architecture, and cultural festivals and institutions.]

[363 European Cultural History, 1870–1945
4 credits. Next offered 1991–92.
M. P. Steinberg.
The question of the "crisis of European culture," in its ideological and critical manifestations, from the various European "fins-de-siécle" to the two world wars.]

[379 War and Society: The Origins of the First World War, 1870–1919
Fall. 4 credits. Open to freshmen with permission of instructor. Not offered 1990–91. Next offered Spring 1992.
M W F 11:15. I. V. Hull, W. M. Pintner, D. Baugh.
The First World War destroyed the European world: its hegemony in international politics, its international balance, its social and economic structures, its intellectual certainties. This course examines the long-term and immediate causes of this cataclysm, with special focus on the relations between the various countries' domestic politics and their foreign policies, the changing balance of power, economic rivalries, imperialism, the growth of extreme nationalism, and the arms race. It ends by considering why the war was so long and destructive and why, afterwards, no one could put the pieces back together again.]

[380 Social History of Western Technology
Fall. Not offered 1990–91.
For description see History of Science.]

383 Europe, 1900–1945
Fall. 4 credits.
T R 10:10 plus disc on W. J. H. Weiss.
An investigation of the major developments in European politics between 1900 and the end of the Second World War. Emphasis on the rise and fall of democratic political systems nad their alternatives. Topics include the reorientation of liberalism and socialism, the transforming effects of war and depression, the dynamics and diplomacy of fascism, the European response to the economic and ideological influence of America and the Soviet Union, the changes in Eastern Europe during the interwar years, and the interaction between politics and social structure.

384 Europe, 1945–1968
Spring. 4 credits.
T R 10:10 plus disc on W. J. H. Weiss.
A political and social history of Europe between the fall of fascism and the political crises of 1968. Emphasis on the comparative study of the elaboration of democratic institutions and ideologies. Topics include the origins and course of the Cold War in Western and Eastern Europe, Gaullism and Christian Democracy, the emergence of welfare states, liberal-democratic and Communist culture, the end of colonial empires in the West, opposition movements in Eastern Europe, and the general upheaval of 1968.

[385 Europe, 1968–1990
Fall. 4 credits. Not offered 1990–91.
T R 10:10 plus disc on W. J. H. Weiss.
A political and social history of Europe between the crises of 1968 and the collapse of Communist regimes in Eastern Europe. Emphasis on the comparative study of the democratic institutions and ideologies. Topics include the weakening of democratic welfare states; the end of dictatorship in Spain, Portugal, and Greece; the role of ethnic minorities; the politics of the arms race; Thatcherism and its alternatives; opposition social movements in Western and Eastern Europe; and European migration.]

388 Social and Cultural History of Seventeenth-Century Europe
Spring. 4 credits.
T R 1:25. D. Sabean.
An examination of cultural formations in a period of social and political crisis. Topics include the ideology of the patriarchal household, church and state programs of discipline, the reconstruction of the aristocracy, court society, Baroque culture, local and social systems, peasant revolts, gender construction, and representations of the self.

[405 Population and History
Not offered 1990–91.
For description see Comparative History.]

406 The People in the French Revolution
Spring. 4 credits.
W 2:30–4:30. S. L. Kaplan.
The Revolution was nothing if not a mass event. Mass action played a critical part in shaping its course. The "re-invention" of France affected the population down to each village and demanded decisions from virtually every adult. This course will focus on the people as actors: their collective memory, their ideologies, their repertoire of intervention, the formation of a popular political culture. It will examine the encounters between the people (in their multiple incarnations) and the revolutionary elites who sought to articulate and appropriate the Revolution. A major theme will be the tension between the ambitions to achieve liberty and equality.

[409 Seminar on Work in Europe and America
Not offered 1990–91.
For description see Comparative History.]

[435 Collective Action and Politics in Modern Europe (also Government 435)
Fall. 4 credits. Not offered 1990–91.
W 2:30 4:30. S. L. Kaplan, S. Tarrow.
An interdisciplinary seminar examining the causes, dynamics, and outcomes of social movements in modern and contemporary Europe. Ranging from the carnivalesque uprisings, bread riots, and tax revolts of early modern Europe to the strikes and revolutions of the nineteenth century, to the student, peace, and women's movements of the present, these movements have deeply marked the development of contemporary state and society. Cases will be drawn mainly from Europe with ventures into America and the non-Western world. Our ambition is to assess the ways in which popular collective action both shaped and was shaped by the development of the modern state. A senior seminar in modern European studies.]

[441 Seminar in the European Enlightenment
Spring. 4 credits. Prerequisite: permission of instructor.
T 2:55–4:20. I. V. Hull. Not offered 1990–91.
This seminar examines the eighteenth-century Enlightenment from a number of different vantage points: its intellectual debates, the social bases carrying it, the institutions (state, social, and economic) that spread it, and the ways historians have (re-) interpreted it over the years. The reading mixes primary sources (major thinkers of the period in England, Germany, Italy, and France) with secondary analyses by scholars. The specific topic for spring 1990 is the development of the sex/gender system.]

[450 Seminar in European Imperialism
Spring. 4 credits. Open to upper-level undergraduates. Prerequisite: permission of instructor. Not offered 1990–91.
M 12:20–2:20. I. V. Hull.
Focuses on the various theories of imperialism with particular reference to the domestic causes, uses, and repercussions of late nineteenth century imperialism in Germany, France, and Great Britain.]

[451 Lord and Peasant in Europe: A Seminar in Social History
Not offered 1990–91.
For description see Comparative History.]

[457 Seminar in European Fascism
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
M 1:25–3:25. I. V. Hull.
An attempt to define and understand the social, political, and intellectual origins, mechanisms, and goals of European fascist movements of the 1920s and 1930s by detailed study of German national socialism, Italian fascism, and the Action Française.]

[459 The Making of the English Ruling Class, 1660–1780
Spring. 4 credits. Not offered 1990–91.
M 2:30–4:30. D. A. Baugh.
Perspectives on the landed aristocracy's continuing domination of politics. Topics include the political system, political and social thought, aristocratic lifestyle, religion, crime and criminal justice, the Old Poor Law, land and commerce, the role of London, and relations with Scotland, Ireland, and America. Readings are drawn from both modern historians and eighteenth-century authors.]

464 Russian Social History
Spring. 4 credits. Prerequisite: one semester of Russian history or permission of instructor.
W 12:20–2:20. W. M. Pintner.
A seminar devoted to an examination of the diverse social groups that comprise imperial Russia and Soviet society. Includes systematic comparison with other countries.

[465 Seminar on Modernity and Modernism
Spring. 4 credits. Not offered 1990–91.
M. P. Steinberg.
An exploration of the definitions of "modernity" from the Enlightenment to the present and of the varied responses, political, cultural, and aesthetic, known as "modernism." Discussion as well of the questions of the end of modernity, of the post-modern, and their implications.]

[467 Seminar in Modern European Political History
Spring. 4 credits. Not offered 1990–91.
R 2:30–4:30. J. H. Weiss.]

470 Social and Cultural History of Contemporary Europe
Spring. 4 credits. Prerequisite: one course on contemporary Europe or permission of instructor.
T R 2:55. J. H. Weiss.
Topic: the "other Europe": language, culture, and nation among the minority peoples of Europe. A comparative investigation of the development of the cultural and historical identity of non-dominant European ethnic groups and their relation to the formation and policies of European national states: the Basques, the Welsh, the Catalans, the Bretons, the Occitans, the Gaelic Irish, the Faroese, the Gypsies, the Romansh, and others. The course will combine historical, literary, and sociolinguistic approaches.

[473 History of Sexuality
Fall. 4 credits. Not offered 1990–91.
W 2:30–4:30. D. Sabean.
A seminar devoted to recent historical approaches to the history of sexuality in Europe from late antiquity to the present, looking at issues of politics, power, ideology, perception, representation, and gender.]

474 Topics in Modern European Intellectual History
Spring. 4 credits. Prerequisite: permission of instructor.
T 2:30–4:30. D. LaCapra.

[476 Documenting the Depression: Film, Literature, and Memory
4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged: one screening session and one disc per week.
J. H. Weiss.
Social and intellectual history of Britain and America in the 1930s with special attention to modes of documentary expression and to subjects lending themselves to treatment by film or oral history: work, popular culture, changes in urban and rural communities, family life, and poverty.]

477 Seminar on the Politics of the Enlightenment
Fall. 4 credits.
W 2:30–4:30. S. L. Kaplan.
An inquiry into the historical origins of European (especially French) political, social, and economic thought, beginning in the 1680s, at the zenith of Louis XIV's absolutism, and culminating in the French Revolution a century later. Emphasis is on the relation of criticism and theory to actual social, economic, religious, and political conditions. An effort is made to assess the impact of enlightened thought on the eighteenth-century world and to weigh its implications for modern political discourse. Readings in translation from such authors as Bayle, Montesquieu, Voltaire, Rousseau, Diderot, and others as well as from modern scholarly and polemical literature.

[478 Seminar in Eighteenth-Century French Social History
Spring. 4 credits. Not offered 1990–91.
W 2:30–4:30. S. L. Kaplan.
An assessment of the work and influence of F. Braudel, with attention to the trajectory of the "Annales" school.]

480 Twentieth-Century Britain
Fall. 4 credits. Open to sophomores, juniors, and seniors.
T R 1:25–2:40. D. A. Baugh.
A seminar course with some lectures, focusing on political history. The main emphasis is on the two world wars and their role in British economic and imperial decline. The course also looks at some great personages—Lloyd George, Churchill, and Bevin—and the major political and social transitions, taking departure from Edwardian Liberalism. It examines the rise of the welfare state, the special attributes of the British Labor movement and British socialism, and the significance of Thatcherite Conservatism.

[483 Seminar in Modern European Social History
Fall. 4 credits. Not offered 1990–91.
J. H. Weiss.]

[498 German Cultural and Social Theory, 1870–1945
4 credits. Prerequisite (for undergraduates): History 363 or instructor's permission. Not offered 1990–91. Next offered 1991–92.
M. P. Steinberg.
The production and the critique of cultural ideology in political and cultural contexts from Nietzsche and Wagner to the Austrian "fin-de siècle" and the rise of German sociology and the new art history, to the attempt at integrated cultural criticism of the Frankfurt School].

[605 Graduate Seminar in European Cultural and Intellectual History
Spring. 4 credits. Not offered 1990–91.
Hours to be arranged. M. P. Steinberg.
Analysis and evaluation of Walter Benjamin's historical thinking as a paradigm of a historical theory of modernity. Focus will be on the interplay of political, cultural, and aesthetic methods and objects of analysis, in Benjamin's work as well as that of contemporaries (Adorno, Cassirer, Warburg), models (Goethe, Hofmannsthal, Baudelaire), and inheritors (Habermas).]

[655 Seminar in Eighteenth-Century British History
4 credits. Not offered 1990–91.
D. A. Baugh.]

[656 Seminar in Nineteenth-Century British History
Spring. 4 credits. Not offered 1990–91.
Hours to be arranged. D. A. Baugh.]

[661 Graduate Seminar in Twentieth-Century German History
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
T 4–6. I.V. Hull.
This course explores selected topics in the political, social, and cultural history of Germany from 1900 to the present. It is designed to introduce graduate students to the history and historiography of modern Germany and to allow those with sufficient preparation to pursue directed research during the semester.]

[671 Seminar in the French Revolution
Not offered 1990–91.
S. L. Kaplan.]

672 Seminar in European Intellectual History
Fall. 4 credits.
Hours to be arranged. D. LaCapra.

673 Seminar in European Intellectual History
Spring. 4 credits.
Hours to be arranged. D. LaCapra.

[674 Graduate Seminar in German History, 1789–1918
Spring. 4 credits. Not offered 1990–91.
M 12:20–2:15. I. V. Hull.
This course explores selected topics in the political, social, and cultural history of Germany from 1770 to 1918. It is designed to introduce graduate students to the history and historiography of modern Germany and to allow those with sufficient preparation to pursue directed research during the semester.]

677 Seminar in Russian History
Spring. 4 credits each term.
Hours to be arranged. W. M. Pintner.

[678 Seminar in Modern European Social History
Spring. Not offered 1990–91.
Hours to be arranged. J. H. Weiss.]

[679 Seminar in European History
Not offered 1990–91.
S. L. Kaplan.]

682 Seminar in European Social and Cultural History
Spring. 4 credits.
W 2:30–4:30. D. Sabean.
A research seminar devoted to selected topics on the construction of the self in European history.

Honors and Research Courses

Note: History 301–302 are not regular courses for which students may sign up at will. They are personal arrangements between an instructor and a particular student. Students must first gain the consent of a particular instructor to work with them.

301 Supervised Reading
Fall or spring. 2 credits. Open only to upperclass students. Prerequisite: permission of instructor.

302 Supervised Research
Fall or spring. 3 or 4 credits. Open only to upperclass students.
Prerequisite: permission of instructor.

400 Honors Proseminar
Fall and spring. 4 credits. Limited to 15 students. For prospective honors candidates in history. Prerequisite: permission of a member of the Honors Committee is required to register.
Fall and spring W 2:30–4:30. Fall: M. Kammen; Spring: R. L. Moore.
An examination of major approaches to historical inquiry and analysis. Masterworks of historical writing (traditional as well as recent) will be discussed. There will be one short essay and a longer paper (a study of the work of one major historian). The readings will be drawn from all time periods and diverse cultures.

401 Honors Research
Fall or spring. 4 credits. Prerequisites: History 400 and permission of instructor.

402 Honors Thesis
Fall or spring. 4 credits. Prerequisites: History 400 and permission of instructor.

703–704 Supervised Reading
703, fall; 704, spring. 4 credits each term. Limited to graduate students. Prerequisite: permission of instructor.

709 Introduction to the Graduate Study of History
Fall. 4 credits. Required of all first-year graduate students.
R 3–5. S. Blumin, J. Najemy.
The course is designed to introduce entering graduate students to crucial issues and problems in historiography that cut across various areas of specialization.

HISTORY OF ART

A. Ramage, chair; L. L. Meixner, director of undergraduate studies; J. E. Bernstock, R. G. Calkins, P. Kuniholm, C. Lazzaro, T. W. Leavitt, S. J. O'Connor, T. Willette, M. W. Young

The visual arts—painting, sculpture, and architecture—are a principal mode of human expression. Art historians investigate works of art to understand them in their artistic, historical, and cultural contexts. Courses offered by the department cover the mainstream of Western art (Classical, Medieval, Renaissance, Baroque, and nineteenth and twentieth century) and non-Western art, including that of East and Southeast Asia. Art history is an integral part of interdisciplinary programs such as the Archaeology Program, the East Asia Program, Medieval Studies, and the Southeast Asia Program.

Course offerings vary in scope from introductory courses designed to acquaint the student with the ways of seeing, discussing, and writing about works of art to advanced seminars that concentrate on more-specialized topics. The resources of the Herbert F. Johnson Museum of Art frequently serve as the focus for discussion sections and research assignments.

The Major

Students who want to major in the history of art should complete two courses in the Department of History of Art by the end of their sophomore year. These courses are prerequisites for admission to the major but may not be counted toward fulfillment of the major requirements. Prospective majors should apply to the director of undergraduate studies and in their junior and senior years work closely with their advisers to determine a course of study that takes into account the richness and diversity of art history. The program should include at least 30 credits in history of art courses and a minimum of two additional courses in this department or in a related field (such as anthropology, literature, or history) approved by their adviser. Ordinarily the 30 credits in history of art will include the proseminar History of Art 400, that all majors are expected to take in their junior year and at least two additional seminars selected from courses at the 400 or 500 level. Majors are required to have at least one non-Western art course in their program. Majors are encouraged to take studio courses offered by the Department of Art, but these are considered to be electives and do not fulfill major requirements.

Honors

To become a candidate for the degree of Bachelor of Arts with honors in the history of art, a student must have a cumulative average of B+ for all courses taken in the department and a cumulative average of B in all arts and sciences courses. Admission to the program requires application to the director of undergraduate studies during the second term of the junior year. The application must include a summary of the proposed project, an endorsement by a faculty sponsor, and a copy of the student's transcript. In the senior year the honors candidate will include among the regular requirements History of Art 600 and 601, which entail the preparation of a senior thesis. This program may not be condensed into one semester.

Freshman Writing Seminars

For Freshman Writing Seminar offerings in the History of Art, see the John S. Knight Writing Program's special brochure. These courses may be used as freshman electives but not to satisfy the distribution requirement.

Courses

220 Introduction to Art History: The Art of the Classical World (also Classics 220)
Spring. 3 credits.
M W F 10:10–11. A. Ramage.
The sculpture, vase painting, and architecture of the ancient Greeks from the Geometric period through the Hellenistic, and the art of the Romans from the early Republic to the late Empire.

221 Introduction to Art History: Minoan-Mycenaean Art and Archaeology (also Classics 221 and Archaeology 221)
Fall. 3 credits. Note: Students may not obtain credit for both this course and Classics 319.
M W F 10:10–11. P. Kuniholm.
The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia.

[223 Etruscan Art and Archaeology (also Classics 250 and Archaeology 250)
3 credits. Not offered 1990–91.
J. Whitehead.]

230 Introduction to Art History: Monuments of Medieval Art
Spring. 3 credits.
M W F 12:20–1:10. R. G. Calkins.
An introduction to the approaches to art history through a study of selected works of art from the Middle Ages: architecture, sculpture, painting, manuscript illumination, metalwork, and ivory.

245 Introduction to Art History: Renaissance and Baroque Art
Fall. 3 credits. Not open to students who have taken History of Art 240 or 250.
M W and alternate F 10:10–11; discs alternate weeks W 1:25, 2:30, or 3:35; R 9:05, 1:25, or 2:30 or F 10:10. T. Willette.
A survey of selected works of European painting, sculpture, and architecture from 1400 to 1700. The artists considered include Botticelli, Michelangelo, Rembrandt, Velazquez, and Bernini. These and other major artists will be emphasized and viewed through the context of the principal trends and ideas of the time. In addition to distinguishing artists' styles and aesthetic concerns, the course will consider other cultural factors shaping the work of art, such as patronage, religion, politics, and economics. This course is committed to improving student writing as well as teaching how to look at works of art.

260 Introduction to Art History: The Modern Era
Fall. 3 credits. Not open to students who have taken History of Art 261.
T R 11:40–12:55. J. E. Bernstock.
A discussion of the most important developments in art during the nineteenth and twentieth centuries. The emphasis is on major movements and artists such as Impressionism (Monet), Post-Impressionism (van Gogh, Cezanne), Cubism (Picasso), Fauvism (Matisse), Surrealism (Miro), Abstract Expressionism (Pollock), Pop Art (Warhol), and Psychological Realism (Fischl).

[270 Introduction to Art History: American Art to 1945
3 credits. Not offered 1990–91.]

280 Introduction to Art History: Asian Traditions
Fall. 3 credits.
M W F 11:15–12:05. S. J. O'Connor.
Designed to introduce students to the varied responses of the Asian artist in different social and geographical contexts. By selective focus and emphasis rather than broad survey, the student will gain some familiarity with the Javanese shadow-puppet theatre, high-fired ceramics, Chinese landscape painting, Buddhist sculpture and painting of Thailand, Indian miniature paintings, and Japanese prints. A number of class sessions will meet in the Herbert F. Johnson Museum of Art.

309 Dendrochronology of the Aegean (also Classics 309 and Archaeology 308)
Fall and spring. 4 credits. Prerequisite: permission of the instructor. Limited to 10 students.
M 12:20; two labs to be arranged.
P. Kuniholm.
Participation in a research project of dating modern and ancient tree-ring samples from the Aegean and Mediterranean. Supervised reading and laboratory work. A possibility exists for summer fieldwork in Greece or Turkey.

[320 The Archaeology of Ancient Greece (also Classics 320)
4 credits. Not offered 1990–91.
J. Coleman.]

322 Arts of the Roman Empire (also Classics 350)
Fall. 4 credits. Prerequisite: History of Art 220 or permission of the instructor.
T R 10:10–11:25. J. Whitehead.
The visual arts in the service of the first world state. The course starts with the Etruscan and Republican period but concentrates on monuments of the Imperial era in Italy and the provinces until the time of Constantine.

[323 Painting in the Greek and Roman World (also Classics 323)
4 credits. Not offered 1990–91.]

[324 Architecture in the Greek and Roman World (also Classics 324)
4 credits. Not offered 1990–91.]

[325 Greek Vase Painting (also Classics 325)
4 credits. Not offered 1990–91.
A. Ramage.]

[326 Art and Archaeology of Archaic Greece (also Classics 326)
4 credits. Not offered 1990–91.]

[327 Greek and Roman Coins (also Classics 327)
4 credits. Not offered 1990–91.
A. Ramage.]

[328 Greeks and Their Neighbors (also Classics 322)
4 credits. Not offered 1990–91.
J. Coleman.]

[329 Greek Sculpture (also Classics 329)
4 credits. Not offered 1990–91.]

[332 Architecture in the Middle Ages (also Architecture 382)
4 credits. Not offered 1990–91.
R. G. Calkins.]

[333 Early Medieval Art and Architecture
4 credits. Not offered 1990–91.
R. G. Calkins.]

[334 Romanesque Art and Architecture
4 credits. Not offered 1990–91.
R. G. Calkins.]

[335 Gothic Art
4 credits. Not offered 1990–91.]

[336 Prelude to the Italian Renaissance
Spring. 4 credits. Not offered 1990–91.
R. G. Calkins.]

[337 The Medieval Illuminated Book
4 credits. Not offered 1990–91.
R. G. Calkins.]

[341 Flemish Painting
4 credits. Not offered 1990–91.]

[342 Medieval and German Renaissance Art
4 credits. Not offered 1990–91.
R. G. Calkins.]

[343 Italian Renaissance of the Fifteenth Century
4 credits. Not offered 1990–91.
C. Lazzaro.]

344 Italian Renaissance of the Sixteenth Century: Leonardo, Michelangelo, and Raphael
Spring. 4 credits. Prerequisites: one or more of the following courses: History of Art 240, 245, 343, 350, 351, or permission of the instructor.
T R 10:10–11:25. C. Lazzaro.
A thorough examination of the works of these three masters and of their cultural and historical environment. Primary emphasis is on their painting, sculpture, and architecture, but the writings of Leonardo and Michelangelo are also considered. Students are expected to discuss reading assignments in class. There will be a prelim and final exam with slides and essays and either two short papers or one long paper.

[350 The Culture of the Early Renaissance (also Romance Studies 361 and Comparative Literature 361)
4 credits. Not offered 1990–91.
C. Lazzaro.]

[354 European Painting of the Seventeenth Century
4 credits. Not offered 1990–91.]

[355 Painting and Public Life in Seventeenth-Century Northern Europe
4 credits. Not offered 1990–91.]

[357 European Art of the Eighteenth Century
4 credits. Not offered 1990–91.]

[359 Major Masters of the Graphic Arts
4 credits. Not offered 1990–91.
C. Lazzaro.]

[360 Nineteenth-Century American Art
4 credits. Not offered 1990–91.]

361 Nineteenth-Century European Art
Fall. 4 credits. Prerequisite: History of Art 245.
M W F 9:05–9:55. L. L. Meixner.
A study of the major movements in nineteenth-century art history: Neo-Classicism, Romanticism, Realism, Impressionism, Post-Impressionism, and Symbolism. The primary artists discussed include Jacques-Louis David, Eugene Delacroix, Francisco Goya, Caspar D. Friedrich, Joseph W. M. Turner, Claude Monet, Vincent van Gogh, and Paul Gauguin. Literary and political developments are examined with respect to the broader cultural contexts of the specific art movements.

362 European Art 1900–1940
Spring. 4 credits. Prerequisite: History of Art 260 or 361.
L. L. Meixner.
An examination of the major movements in European art during the first half of the twentieth century: Fauvism, German Expressionism, Cubism and its satellite schools, Dada, and Surrealism. Emphasis will be placed on major artists, including Matisse, Picasso, Kirchner, Kandinsky, and Duchamp. Relevant political background influencing the period is included as well.

[364 American Art 1900–1940
4 credits. Not offered 1990–91.]

365 Art from 1940 to the Present
Spring. 4 credits.
T R 11:40–12:55. J. E. Bernstock.
Major artists and movements in the United States since 1940, beginning with Jackson Pollock and Abstract Expressionism, and continuing through recent developments in art. Attention is devoted to the critical reception that artists have received and to the artists' statements themselves.

371 Architectural History of Washington, D.C.
Fall or spring. Variable credit. Only for students in the Cornell-in-Washington program. Only for non-architects.
P. Scott.
A historical and critical survey of the architecture of Washington. Attention will be given to the periods, styles, architects, and clients—public and private—of the notable buildings and to the urbanscape of the nation's capital. The vocabulary of architectural analysis and criticism will be taught. Field trips required.

[376 Painting and Sculpture in America: 1850–1950
4 credits. Not offered 1990–91.
T. W. Leavitt.]

[380 Introduction to the Arts of China
4 credits. Not offered 1990–91.
M. W. Young.]

[381 Buddhist Art in Asia
4 credits. Not offered 1990–91.
S. J. O'Connor.]

[383 The Arts of Early China
4 credits. Not offered 1990–91.
M. W. Young.]

[384 The Arts of Japan
4 credits. Not offered 1990–91.
M. W. Young.]

[385 Chinese Painting
4 credits. Not offered 1990–91.
M. W. Young.]

[386 Studies in Indian and Southeast Asian Art
4 credits. Not offered 1990–91.
S. J. O'Connor.]

[388 Architecture and Gardens of Japan
4 credits. Not offered 1990–91.]

[389 Japanese Painting
4 credits. Not offered 1990–91.]

396 The Arts of Southeast Asia
Spring. 4 credits.
M W F 11:15–12:05. S. J. O'Connor.
The arts of Southeast Asia will be studied in their social context since in traditional societies art plays a role in most of the salient occasions of life. Special emphasis will be devoted to developments in Cambodia, Thailand, and Bali. Among topics covered will be the shadow puppet theater of Java, ceramics, architecture, and sculpture.

Seminars

Courses at the 400 and 500 level are open to upperclass students, majors, and graduate students. All seminars involve the writing and presentation of research papers. Enrollment is limited to 15 students, and permission of the instructor is required. Students may repeat courses that cover a different topic each semester.

400 Proseminar for Art History Majors: The History and Practice of Art History
Fall. 4 credits. Prerequisite: History of Art majors only. Enrollment is limited.
M 2:30–4:30. R. G. Calkins.
This seminar, limited to majors in the department, will serve a dual purpose. It will provide intensive training in the skills of visual analysis, critical method, and writing. Five short papers will be assigned, each analyzing a different art form and type of art-historical problem, from connoisseurship and stylistic analysis to research in the social history of art. The course will also provide a basic introduction to the historiography of the field and major writers and modes of inquiry that have been adopted for the study of the visual arts and architecture. Readings will include selections from Heinrich Wolfflin, Roger Fry, Erwin Panofsky, Jacob Rosenberg, and Michael Fried.

401 Independent Study
Fall or spring. 2–4 credits. May be repeated for credit. Prerequisite: permission of a department faculty member.
Hours to be arranged. Staff.
Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

402 Independent Study
Fall or spring. 2–4 credits. May be repeated for credit. Prerequisite: permission of a department faculty member.
Hours to be arranged. Staff.
Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

[404 Women Artists (also Women's Studies 404)
Fall. 4 credits. Not offered 1990–91.
J. E. Bernstock.]

[406 Introduction to Museums
2 credits. Not offered 1990–91.
T. W. Leavitt.]

407 Seminar on Museum Issues
Fall. 4 credits. Class will meet in the Herbert F. Johnson Museum of Art. Prerequisite: permission of instructor.
W 2:30–4:30. T. W. Leavitt.
This course will explore the issues, ideas, problems, and opportunities faced by art museums in contemporary American society. The nature of museum research, the theory of museum education, connoisseurship, effective museum leadership, and the role of art museums in American cultural life will be discussed.

421 History of Art Criticism
Spring. 4 credits. Prerequisite: permission of the instructor.
W 2:30–4:30. S. J. O'Connor.
An introduction to the work of some of those art critics who had a powerful impact on the way their contemporaries perceived, valued, and discussed art. Representative works will be studied with attention both to the critic's central aesthetic concerns and also to characteristic qualities of argument and expression. Among the critics to be considered will be Fromentin, Reynolds, Ruskin, Pater, Baudelaire, Fry, Bell, and Greenberg.

[423 Ceramics (also Classics 423 and Archaeology 423)
4 credits. Not offered 1990–91.
A. Ramage.]

[427 Seminar on Roman Art (also Classics 435)
4 credits. Not offered 1990–91.
J. Whitehead.]

[431 Greek Sculpture (also Classics 431)
4 credits. Not offered 1990–91.
A. Ramage.]

[432 Sardis and the Cities of Asia Minor (also Archaeology 432 and Classics 432)
4 credits. Not offered 1990–91.
A. Ramage.]

[434 The Rise of Classical Greece (also Classics 434)
4 credits. Prerequisite: Classics 220 or History of Art 220, Classics 221 or History of Art 221, or permission of instructor. Not offered 1990–91.
P. Kuniholm.]

[447 The Artist's Self-Image in the Renaissance and Baroque
4 credits. Not offered 1990–91.
C. Lazzaro.]

448 Studies in Sixteenth-Century European Art
Fall. 4 credits. Prerequisite: permission of the instructor.
R 2:30–4:30. C. Lazzaro.
Topic for fall 1990: Concepts of Mannerism. A critical study of the concept of Mannerism and a detailed investigation of several specific paintings, buildings, and other sixteenth-century works that are considered to be Mannerist. Weekly reading assignments will be discussed in class. A term paper on a topic of the student's choice is required. Open to undergraduates with some background in Renaissance art and to graduate students.

[449 Studies in Italian Renaissance Art
Fall. 4 credits. Not offered 1990–91.
C. Lazzaro.]

450 Women in Italian Renaissance Art
Spring. 4 credits. Prerequisite: permission of the instructor.
T 2:30–4:30. C. Lazzaro.
In this seminar, representations of women—biblical and historical heroines, mythological figures, and portraits, primarily in paintings, but also in prints and sculpture—will be examined in their social as well as artistic context. Among the topics to be discussed are: moralizing stories directed at women that are represented on fifteenth-century *cassoni*, or marriage chests, and similar domestic paintings; Italian versions of the popular "power of women" subjects in Northern prints; gender difference in the conventions of Renaissance portraiture; the representation of the female nude; the rise of mythological subjects and male delectation as a function of painting; allegories of chastity, love, and lust in painting and prints; the role of the female in sixteenth-century political allegory.

[451 Prints of the Fifteenth through the Seventeenth Century
4 credits. Not offered 1990–91.
C. Lazzaro.]

[456 The Social History of Art: Images of Labor and Problems in the Tradition of European Genre Painting, ca. 1550–1880
4 credits. Not offered 1990–91.]

[459 Caravaggio and Caravaggism in Seventeenth-Century Painting
4 credits. Not offered 1990–91.]

461 Fin-de-siècle Cultures in Europe, England, and America
Spring. 4 credits. Prerequisite: permission of the instructor. Auditing is not permitted.
W 2:30–4:30. L. L. Meixner.
This seminar poses the question of whether there existed a fin-de-siècle mentality in Europe and America of the 1890s. Artists including Toulouse-Lautrec, Beardsley, and Munch will be studied within the larger literary and social contexts of their day, including popular culture and theatre. Readings and student presentations will emphasize interdisciplinary approaches and research methods ranging from new historicism to psychoanalytical art history. American artists examined will include Albert P. Ryder, John Singer Sargent, Winslow Homer, Thomas Eakins. Utopian novels, the writings of both Henry and William James, and the modern scholarship of T. J. Jackson Lears and Walter Benn Michaels will provide background for discussion.

462 Barbizon and Impressionist Art in Nineteenth-Century France
Fall. 4 credits. Prerequisite: permission of the instructor. No auditing permitted.
W 2:30–4:30. L. L. Meixner.
The art of the Barbizon community is of central significance to the development of French painting during the second half of the nineteenth century. This group of painters, who lived in a rural peasant community where they worked out-of-doors, brought both images of labor and landscape into a new era of social conflict. Reflecting the awakened democratic sensibilities of the 1850s, certain artists portrayed the epic quality of rural labor. Others developed new landscape styles. The results were of great importance to the young French Impressionists. The seminar will examine both Barbizon genre and landscape art through the works of Jean-Francois Millet, Theodore Rousseau, Camille Corot, Diaz de la Pena, and others. It will also focus on Claude Monet, Camille Pissarro, and Vincent van Gogh, who were deeply influenced by their Barbizon precursors. Readings and discussions will emphasize recent scholarship that treats Impressionist images from the perspective of social history. Also, the relationships between painters and writers, such as Sand, Zola, Mallarmé, will be explored.

463 Studies in Modern Art
Fall. 4 credits. Prerequisite: permission of the instructor. No auditing permitted.
T 2:30–4:30. J. E. Bernstock.
Topic to be announced.

464 Studies in Modern Art
Spring. 4 credits. Prerequisite: permission of instructor. Auditing is not permitted.
T 2:30–4:30. J. E. Bernstock.

[476 Seminar in American Art
4 credits. Not offered 1990–91.
T. W. Leavitt.]

[477 Impressionism in America and France
4 credits. Not offered 1990–91.
L. L. Meixner.]

[478 Post-Impressionism in France
4 credits. Not offered 1990–91.
L. L. Meixner.]

[481 The Arts in Modern China
4 credits. Not offered 1990–91.
M. W. Young.]

482 Ceramic Art of China and Southeast Asia
Fall. 4 credits. Prerequisite: permission of the instructor.
T 2:30–4:30. S. J. O'Connor.
Chinese ceramics were a staple of the traditional trade of Asia for one thousand years. High-fired ceramics were also produced in Thailand and Vietnam to supply the brisk demand in maritime Southeast Asia. The Johnson Museum collection will be studied within the context of trade patterns and trading sites in the South China Seas.

[483 Chinese Art of the T'ang Dynasty
4 credits. Not offered 1990–91.
M. W. Young.]

[484 Studies in Japanese Art and Architecture
4 credits. Not offered 1990–91.]

[485 The Ceramic Arts of Japan
4 credits. Not offered 1990–91.]

[486 Studies in Chinese Painting
4 credits. Not offered 1990–91.
M. W. Young.]

[488 Traditional Arts of Southeast Asia
4 credits. Not offered 1990–91.
S. J. O'Connor.]

[491 Japanese Prints
4 credits. Not offered 1990–91.]

[531 Problems in Medieval Art and Architecture
4 credits. Not offered 1990–91.
R. G. Calkins.]

[540 Seminar in Renaissance Art
4 credits. Not offered 1990–91.
C. Lazzaro.]

[550 Seminar in Baroque Art
4 credits. Not offered 1990–91.]

[564 Problems in Modern Art: Post-1940 American Art
4 credits. Not offered 1990–91.]

[580 Problems in Asian Art
4 credits. Not offered 1990–91.
S. J. O'Connor.]

591–592 Supervised Reading
591, fall; 592, spring. 4 credits. May be repeated for credit. Limited to graduate students.
Staff.

[595 Methodology Seminar
4 credits. Not offered 1990–91.
R. G. Calkins.]

[596 Problems in Art Criticism
4 credits. Not offered 1990–91.
S. J. O'Connor.]

600 Honors Work
Fall or spring. 4 credits. Intended for senior art history majors who have been admitted to the honors program.
Hours to be arranged. Staff.
Basic methods of art historical research will be discussed and individual readings assigned, leading to the selection of an appropriate thesis topic.

601 Honors Work
Fall or spring. 4 credits. Prerequisite: History of Art 600.
Hours to be arranged. Staff.
The student under faculty direction will prepare a senior thesis.

MATHEMATICS

R. K. Dennis, chair; D. Barbasch, B. Barkee, I. Berstein, L. Billera, J. Bramble, K. Brown, L. Brown, J. Cao, S. Chase, M. Cohen, R. Connelly, R. K. Dennis, R. Durrett, E. Dynkin, C. Earle, R. Farrell, L. Gross, J. Guckenheimer, A. Hatcher, D. Henderson, P. Holmes, J. Hubbard, J. Hwang, P. Kahn, H. Kesten, C. King, D. Kozen, S. Lichtenbaum, R. C. Liu, G. Livesay, M. Morley, A. Nerode, L. Payne, R. Platek, T. Rishel, O. Rothaus, A. Schatz, S. Sen, J. Smillie, R. Shore, B. Speh, F. Spitzer, M. E. Stillman, R. Strichartz, B. Sturmfels, M. Sweedler, K. Vogtmann, L. Wahlbin, J. West, Y. Ye, A. C. Zitronenbaum. (Emeritus: W. Fuchs, A. Rosenberg)

Mathematics is the language of modern science; basic training in the discipline is essential for those who want to understand, as well as for those who want to take part in, the important scientific developments of our time. Acquaintance with mathematics is also extremely useful for students in the social sciences and valuable for anyone interested in the full range of human culture and the ways of knowing the universe in which we live.

The Department of Mathematics faculty has strong groups specializing in algebra, number theory, real and complex analysis, Lie groups, topology and geometry, logic, probability and statistics, mathematical physics, and applied mathematics. Related departments at Cornell have specialists in computer science, operations research, linear programming, and game theory, and courses in these topics can be integrated readily into the mathematics major.

The department offers a rich variety of undergraduate courses, and many of its beginning graduate courses are suitable for advanced undergraduates as well. Under some conditions, a student may carry out an independent reading and research project for college credit under the supervision of a faculty member.

Members of the department are available to discuss with students the appropriate course for their levels of ability and interest, and students are urged to avail themselves of this help.

Students who want to take any of the courses numbered 300 or above are invited to confer, before registering, with the instructor concerned. The level of a course is indicated by the first digit of the course number: roughly, 1, 2, indicate underclass courses; 3, 4, upperclass courses; 5, 6, graduate courses. The subject matter of courses is indicated by the second digit: 0, general; 1, 2, analysis; 3, 4, algebra; 5,6, topology and geometry; 7, probability and statistics; 8, logic; 9, other.

Midterm grades, when required, will be S or U only, except in special circumstances. In all 600-level courses, in all grades will be S-U only, with the exception of 690. In courses with numbers below 600, students will receive letter grades, with the exception of non-mathematics majors who have requested an S-U grade.

Advanced Placement

Secondary school students are strongly urged to take one of the two advanced placement examinations of the College Entrance Examination Board in their senior year. Freshmen who have had some calculus but who have not taken an advanced placement examination should take the placement examination in mathematics offered at Cornell just before the beginning of classes in the fall. It is most important that anyone with any knowledge of calculus carefully read "Advanced Placement of Freshmen," p. 6.

The Major

The mathematics major adapts to a number of purposes. It can emphasize the theoretical or the applied. It can be appropriate for professionals and nonprofessionals alike. It can be broad or narrow. Questions concerning the major should be brought to a departmental representative.

For students interested in secondary school teaching there are several programs available, including a five-year B.S./M.A.T. program. These programs are administered jointly by the departments of Education and Mathematics. For more information, contact Professors D. Henderson or A. Solomon (mathematics), or Professors J. Confrey or J. Volmink (education).

Prerequisites: The preferred prerequisites are Mathematics 221–222 or 293–294. A unit on infinite series is required. Such a unit is offered in Mathematics 112, 122, and 192. Normally students will be admitted to the major only when they have grades of B– or better in all sophomore-level mathematics courses they have taken. Alternative prerequisites are Mathematics 213, 231, normally with grades of B+ or better.

Requirements

There are five requirements for the major:

1) Computer Science 100 Students are urged to take this course before the end of the sophomore year
2) Two courses in algebra. Eligible courses are Mathematics 431 or 433, 432 or 434 or 332, 336.
3) Two courses in analysis. Eligible courses are Mathematics 411 or 413, 412 or 414, 418, 421, 422, 423.
4) Further high-level mathematical courses. Any one of the following is sufficient:
   a) three mathematics courses numbered 371 or higher, other than those used to satisfy the previous two requirements. Computer Science 621 and/or 622 may also be used toward satisfying this requirement.
   b) four Computer Science courses numbered 310 or higher.
   c) four Operations Research and Industrial Engineering courses numbered 320 to 383 or 431 to 472, but not 350.
5) One course dealing with mathematical models. Any one of the following is sufficient:
   a) Mathematics 305 (not offered every year).
   b) Physics 208, 213, or 217.
   c) Computer Science 211, provided no Computer Science course has been used toward satisfying the previous requirement.
   d) One course other than Physics 112 or 207 from outside mathematics with serious mathematical content and dealing with scientific matters, provided the course has not been used toward satisfying the previous requirement.

Major advisers can alter these requirements upon request of an advisee, provided the intent of the requirements is met.

Sample Major Programs

Below are some suggestions for what the schedule of a student with a mathematics major might look like. Many variations are possible.

For Graduate School in Mathematics

First two years: Mathematics 111–122–221–222, Computer Science 100, Physics 207–208.

Last two years: Mathematics 433–434, 413–414, 453–454; two of 418, 428, 471.

The sophomore courses Mathematics 221–222 are more suitable than 293–294 in this case. A student planning to enter graduate school may get by with 411–412 and 431–432 instead of the honors versions 413–414 and 433–434, but the honors versions are strongly recommended.

For Many Technical Careers

First two years: Mathematics 111–122–221–222 or 191–192–293–294, Computer Science 100–211, Physics 112–213 or 207–208.

Last two years: Mathematics 431–336, 421–422, 428, 471–472.

Two or more semesters of computer science are highly recommended.

For Emphasis on Computer Science

First two years: Mathematics 111–122–221–222, Computer Science 100–211.

Last two years: Mathematics 431–432, 421–422, Computer Science 314, 381, 410, 414, 421.

Requirement 5 is met by Computer Science 381 in this sample program. Students interested in computer science should give consideration to a double major in mathematics and computer science.

For Emphasis on Operations Research

First two years: Mathematics 111–122–221–222 or 191–192–293–294, Computer Science 100–211.

Last two years: Mathematics 431–432, 421–422, 471; Operations Research and Industrial Engineering 320, 321, 361, two of 431, 432, 435, and possibly 462 or 471.

For Prelaw or Premed (first example)

First two years: Mathematics 111–122–221–222, Computer Science 100, Physics 207–208.

Last two years: Mathematics 431–336, 411–421, 381, 471–472.

The sophomore courses Mathematics 221–222 are recommended rather than 293–294 in this sample because they provide better preparation for 411.

For Prelaw or Premed (second example) or Prebusiness

First two years: Mathematics 111–112–213–231, Computer Science 100–211

Last two years: Mathematics 332–336, two of 411–421–418, and also 381, 403, 451.

A course in statistics is also strongly recommended.

For Secondary School Teachers

First two years: Mathematics 111–122–221–222–305, Computer Science 100.

Last two years: Mathematics 431–336, 411–421, 451, 403, 471, 408.

Honors. Honors in mathematics will be awarded on the basis of a high level of performance in departmental courses. Further requirements, if any, will be announced during the year.

Distribution Requirement

The distribution requirement is satisfied in mathematics by any 6 credits, not including more than one course from Mathematics 105 or 403. Computer Science 100 may be used for three of these credits. The mathematics distribution requirement is also satisfied by a score of 3 or higher on the CEEB calculus BC examination. Mathematics 109 or ALS 115 (College of Agriculture and Life Sciences) may not be used to satisfy the requirement.

Basic Sequences

Precalculus

Description	*Course Numbers*
1) Algebra and trigonometry to prepare students for calculus	Mathematics 109* or Agriculture and Life Sciences 5*
2) Algebra, analytic geometry, elements of calculus	Agriculture and Life Sciences 115**

*Mathematics 109 and ALS 5 do not carry credit for graduation.

**Students who want a second semester of mathematics after ALS 115 may take Mathematics 105 or if they need more calculus, 111.

Calculus

Description	*Mathematics Course Numbers*
1) Standard three-semester sequence for students who do not expect to take advanced courses in mathematics	111–112–213
2) Usual sequence for prospective mathematics majors and others who expect to take advanced courses in mathematics	111–122–221–222
3) Calculus for engineers (also taken by some physical science majors)	191–192–293–294

Mathematics 191 may be substituted for 111 in sequences 1 and 2. Sequences 2 and 3 are two-year sequences that include some linear algebra.

Students who take sequence 1 may learn some linear algebra by taking Mathematics 231. A student whose performance in 112 is exceptional may switch to sequence 2 and take 221.

Special-Purpose Sequences

Description	*Mathematics Course Numbers*
1) Finite mathematics and calculus for biology majors	105–106
2) Other possible finite mathematics and calculus sequence	105–111

Students who want to take two semesters of calculus are advised to take the first two semesters of one of the three calculus sequences. It is also possible to follow Mathematics 106 with 112 or 122.

Switching between calculus sequences is often difficult, especially at the 200-level. Students should not attempt such a switch without consulting the associate chair.

Courses with Overlapping Content

Because the department offers many courses with overlapping content, students must choose their courses carefully to ensure that they will receive credit for each course they take. Listed below are groups of courses with similar content. Students will receive credit for only one of the courses in each group.

	213 and 294
106, 111, 191	213 and 222
112, 122, and 192	221, 294, and 231
132 and 332	332 and 432
213 and 293	372 and 472

Fees

In some courses there may be a small fee for photocopying materials to be handed out to students.

Basic Sequences

105 Finite Mathematics for Biologists (also Theoretical and Applied Mechanics 105)

Fall or summer. 3 credits. Prerequisite: three years of high school mathematics, including trigonometry and logarithms.*

Lecs, T R 12:20, plus 2 hours to be arranged. Prelims: 7:30 p.m., Sept. 24, Nov. 1, Dec. 6.

Mathematical modeling, sets, functions, and graphing (including use of log and semi-log paper). Probability (with some applications to genetics). Matrices, systems of linear equations, and Markov chains. Examples from biology are used.

106 Calculus for Biologists (also Theoretical and Applied Mechanics 106)

Spring. 3 credits. Prerequisite: Mathematics 105 or 109 or ALS 115 or permission of instructor. (A strong background in functions is required.) Mathematics 111, rather than 106, is recommended for those planning to take 112.*

Lecs, T R 11:15, plus 2 hours to be arranged. Prelims: 7:30 p.m., Feb. 19, Mar. 28, Apr. 25.

Introduction to differential and integral calculus, partial derivatives, elementary differential equations. Examples from biology are used.

109 Precalculus Mathematics

Summer. 3 transcript credits only; cannot be used toward graduation.

M–F 8:30.

This course is designed to prepare students for Mathematics 111. Algebra, trigonometry, logarithms, and exponentials are reviewed.

111 Calculus

Fall, spring, or summer. 4 credits. Limited to 22 students a section. Prerequisite: Mathematics 109 or three years of high school mathematics, including trigonometry.*

Hours to be arranged. Prelims: fall, 7:30 p.m., Oct. 2, Nov. 1, Nov. 29; spring, 7:30 p.m., Feb. 19, Mar. 21, Apr. 25.

Plane analytic geometry, differentiation and integration of algebraic and trigonometric functions, applications of differentiation, logarithmic and exponential functions. One section will be taught experimentally with use of computers in fall term.

*See the list of courses with overlapping content at the end of the introduction.

112 Calculus

Fall, spring, or summer. 4 credits. Limited to 22 students a section. Prerequisites: Mathematics 106 or 111 with a grade of C or better. Those who do extremely well in Mathematics 111 should take 122 instead of 112, unless they plan to continue with 213.*

Hours to be arranged. Prelims: fall, 7:30 p.m., Oct. 2, Nov. 1, Dec. 6; spring, 7:30 p.m., Feb. 19, Mar. 28, Apr. 25.

Methods and applications of integration, plane curves and polar coordinates, vectors and solid analytic geometry, introduction to partial derivatives. One section will be taught experimentally with use of computers in spring term.

122 Calculus

Fall or spring. 4 credits. Prerequisite: performance at a high level in Mathematics 111 or permission of the department. Students planning to continue with Mathematics 213 are advised to take 112 instead of this course.*

Fall: M W F 10:10 or 11:15, plus one hour to be arranged. Spring: M W F 11:15 or 12:20, plus one hour to be arranged. Prelims: fall, 7:30 p.m., Oct. 2, Nov. 1, Dec. 6; spring, 7:30 p.m., Feb. 19, Mar. 28, Apr. 25.

Differentiation and integration of elementary transcendental functions, the techniques of integration, applications, polar coordinates, infinite series, and complex numbers, as well as an introduction to proving theorems. The approach is more theoretical than in Mathematics 112.

191 Calculus for Engineers

Fall. 4 credits. Prerequisite: three years of high school mathematics, including trigonometry.

Lecs, M W F 9:05 or 11:15, plus 2 hours to be arranged. Prelims: 7:30 p.m., Oct. 4, Nov. 1, Dec. 6.

Plane analytic geometry, differential and integral calculus, and applications.

192 Calculus for Engineers

Fall, spring, or summer. 4 credits. Prerequisite: Mathematics 191.

Fall: lecs, M W F 9:05 or 11:15, plus 2 hours to be arranged. Spring: lecs, M W F 9:05 or 11:15, plus 2 hours to be arranged. Prelims: fall, 7:30 p.m., Oct. 4, Nov. 1, Dec. 6; spring, 7:30 p.m., Feb. 19, Mar. 28, Apr. 25.

Methods of integration, hyperbolic functions, polar coordinates, infinite series, complex numbers, introduction to partial derivatives, introduction to surface and volume integrals.

213 Calculus

Fall, spring, or summer. 4 credits. Prerequisite: Mathematics 112, 122, or 192.

Lecs M W F 10:10, plus 2 hours to be arranged. Prelims: fall, 7:30 p.m., Nov. 8, Nov. 29; spring, 7:30 p.m., Feb. 21, Apr. 2.

Vectors, vector-valued functions, line integrals. Multivariable calculus, multiple integrals. First- and second-order differential equations with applications. Introduction to numerical methods, series solutions, systems of differential equations, elementary partial differential equations.

*See the list of courses with overlapping content at the end of the introduction.

221 Linear Algebra and Calculus
Fall or spring. 4 credits. Prerequisite: Mathematics 122 with a grade of B or better, or permission of instructor.
Fall: M W F 8, 9:05, 10:10, or 11:15, plus one hour to be arranged. Spring M W F 10:10 or 11:15, plus one hour to be arranged. Prelims: fall, 7:30 p.m., Sep. 27, Nov. 1, Dec. 6; spring, 7:30 p.m., Feb. 21, Mar. 26, Apr. 30.
Linear algebra and differential equations. Topics include vector algebra, linear transformations, matrices, linear differential equations, as well as an introduction to proving theorems.

222 Calculus
Fall or spring. 4 credits. Prerequisite: Mathematics 221.
Fall: M W F 11:15 or 12:20, plus one hour to be arranged. Spring: M W F 9:05 or 10:10 or 11:15, plus one hour to be arranged.
Vector differential calculus, calculus of functions of several variables, multiple integrals.

293 Engineering Mathematics
Fall, spring, or summer. 4 credits. Prerequisites: Mathematics 192 plus a knowledge of computer programming equivalent to that taught in Engineering Common Courses 105. In exceptional circumstances, Mathematics 192 and 293 may be taken concurrently.
Fall: lecs, M W 10:10, 11:15, or 12:20, plus one hour to be arranged, plus four three-hour computer labs during the semester. Spring: lecs, M W 10:10 or 12:20, plus one hour to be arranged, plus four three-hour computer labs during the semester. Prelims: fall, 7:30 p.m., Sept. 27, Nov. 1, Nov. 29; spring: 7:30 p.m., Feb. 21, Mar. 26, Apr. 30.
Introduction to physical vectors, linear algebra and matrix theory, inner product spaces. Includes microcomputer use in solving problems.

294 Engineering Mathematics
Fall, spring, or summer. 4 credits. Prerequisite: Mathematics 293.*
Fall: lecs, M W 10:10 or 12:20, plus one hour to be arranged, plus four three-hour computer labs during the semester. Spring: lecs, 10:10, 11:15, or 12:20, plus one hour to be arranged, plus four three-hour computer labs during the semester. Prelims: fall, 7:30 p.m., Sept. 27, Nov. 1, Nov. 29; spring, 7:30 p.m., Feb. 21, Mar. 26, Apr. 30.
Systems of linear ordinary differential equations, introduction to ordinary differential equations. Vector fields and vactor calculus. Boundary-value problems and introduction to Fourier series. Includes microcomputer use in solving problems.

General Courses

101 History of Mathematics
Summer. 4 credits. Prerequisite: three years of high school mathematics.
The history of the main ideas of mathematics from Babylonian, Egyptian, and Greek times to the present day.

*See the list of courses with overlapping content at the end of the introduction.

103 Mathematical Explorations
Fall. 3 credits. Limited to 15 students. This course may be used to satisfy the distribution requirement in mathematics.
Lecs, T R 8:40.
This course is for students who wish to experience how mathematical ideas naturally evolve; especially for students who have not yet found mathematics to be a world in which they move comfortably. The homework will consist in the students actively investigating mathematical ideas such as the nature of infinity and geometric reality and the ideas leading to calculus. The course will emphasize ideas and imagination as opposed to techniques and calculations.

[104 Mathematics and Art
Fall. 3 credits. Limited to 12 students. Does not satisfy the mathematics distribution requirement; for graduation credit only. Not offered 1990–91.
The impact of mathematical ideas on the arts and the impact of the arts on mathematical ideas through the ages, with a special emphasis on theories of perspective in the visual arts. The course will be cooperatively taught by a mathematician and an art historian. There will be both mathematical and artistic assignments based on the theories, and assignments of readings from the original texts.]

[117 Foundations of Calculus
3 credits. Limited to 18 students. Not offered 1990–91. Prerequisite: Mathematics 111 or 106 or equivalent. May be used toward the mathematics distribution requirement.
Intended either for nonscientists who will not need the conventional second-semester calculus course or for future math or science majors who would like to deepen their understanding before going on in calculus. This course delves into the questions concerning limits and infinite processes that puzzled scholars for over two thousand years. Students study anew the real number system, the theory of limits, continuity, differentials, derivatives, and the definite integral. The pedagogical method is partly historical, viewing the development of these interlocked topics from the time of the ancient Greeks (Zeno's paradoxes, the discovery of irrationals, Eudoxus' Method of Exhaustion, and the work of Archimedes) through the seventeenth-century work of Fermat, Newton, and Leibniz and into modern times. Readings of excerpts from original manuscripts are compared with the descriptions of the same material given in a standard beginning calculus book.]

123 Analytic Geometry and Calculus
Summer. 4 credits. Prerequisite: High school mathematics through trigonometry and plane analytic geometry.
The honors section of Math 111. Covers the same topics more deeply (at the level of Apostol's *Calculus*).

[150 From Space to Geometry
Spring. 4 credits. Enrollment limited to 18 students. Not offered 1990–91.
Over the centuries mathematicians have interpreted the concept of "space" in numerous ways. This course will survey some of these approaches from the time of Euclid to the later perspective of non-Euclidean systems. We will evaluate the impact of these viewpoints on such concepts as distance, angle measurement, straightness and curvature, dimension, and surface. We will make and analyze models to get a feel for the concepts and to assess the relevance of various approaches to geometry.]

[151 The Geometry of Tilings, Polyhedra, and Structural Engineering
Spring. 3 credits. Limited to 15 students. Not offered 1990–91.
An introduction to topics in geometry, including the classification of tilings by the group of symmetries that act on them, examples of artists such as Escher, the aperiodic tilings of R. Penrose, the study of polyhedra, Euler's formula, regular polyhedra, linkages that draw straight lines, "Buckminster Fuller's" geodesic domes, and tensegrities. Emphasis will be on the geometric ideas involved, with formal proofs studied only as needed for overall understanding.]

200 Basic Concepts of Mathematics
Summer. 3 credits. Prerequisite: a good knowledge of high school mathematics, including trigonometry.
Discussion of basic ideas in mathematics drawn from algebra and topology. An example of the problems treated is the proof of the impossibility of trisecting an angle by ruler and compass. Suitable for teachers, prospective teachers, and high school students with a strong interest in mathematics.

227 Mathematical Model Modeling
Spring. 4 credits. Limited to 25 students. Prerequisite: Mathematics 111 or 106 or equivalent. May be used to satisfy the mathematics distribution requirement. Not intended for upperclass science majors.
Mathematical modeling is the process of bringing mathematical methods to bear on problems arising in the real world. In this course students will study selected mathematical models, learn general modeling techniques, and gain experience in constructing original mathematical models and comparing their predictions with reality, both to appreciate the usefulness of mathematical models and to be aware of their limitations.

[305 Mathematics in the Real World
Summer. 4 credits. Not offered 1990–91.
Selected uses of mathematics to solve current relevant problems; illustration of, and active student involvement in, the complete applied mathematical methodology.]

403 History of Mathematics
Spring. 4 credits. Prerequisites: two courses in mathematics above 300, or permission of instructor.
T R 1:25–2:40.
Survey of the development of mathematics from antiquity to the present, with an emphasis on the achievements, problems, and mathematical viewpoints of each historical period and the evolution of such basic concepts as number, geometry, construction, and proof. Readings from original sources in translation. Students will be required to give oral and written reports.

408 Mathematics in Perspective
Spring. 4 credits. Prerequisite: consent of instructor (intended for senior mathematics majors and other students with strong mathematics backgrounds).
The purpose of this course is for students to step back and to form an overview of the mathematics which they have learned.

490 Supervised Reading and Research
Fall, spring, or summer. 1–6 credits.
Supervised reading and research by arrangement with individual professors. Not applicable for material currently available in regularly scheduled courses.

508 Mathematics for Secondary School Teachers
Fall, spring, or summer. 1–6 credits. Prerequisite: secondary school mathematics teacher, graduate standing, or permission of instructor. May not be taught every semester.
An examination of the principles underlying the content of the secondary school mathematics curriculum, including connections with the history of mathematics and current mathematics research.

690 Supervised Reading and Research
Variable credit (maximum 6 each term).

Analysis

411–412 Introduction to Analysis
411, fall; 412, spring. 4 credits each term. Prerequisite: Mathematics 222. Students who need measure theory and Lebesgue integration for advanced probability courses should take Mathematics 413–414 or arrange to audit the first few weeks of Mathematics 521. Undergraduates who plan to attend graduate school in mathematics should take 413–414.
T R 8:40–9:55.
An introduction to the theory of functions of real variables, stressing rigorous logical development of the subject rather than technique of applications. Topics include Euclidean spaces, the real number system, continuous and differentiable functions, Riemann integral, uniform convergence and approximation theorems, Fourier series, calculus in several variables, and differential forms.

413–414 Introduction to Analysis
413, fall; 414, spring. 4 credits each. Prerequisite: Mathematics 222.
413: T R 8:40 or 10:10; Prelims: 7:30 p.m., Oct. 16, Nov 27. 414: T R 8:40.
Honors version of Mathematics 411–412. Metric spaces are included in Mathematics 413, and 413 proceeds at a faster pace than 411. The second semester includes an introduction to the Lebesgue integral.

418 Introduction to the Theory of Functions of One Complex Variable
Spring. 4 credits. Prerequisite: Mathematics 222 or 294 or 213. May be offered only in alternate years.
T R 1:25–2:40.
A rigorous introduction to complex variable theory. Complex numbers. Differential and integral calculus for functions of a complex variable, including Cauchy's theorem and the calculus of residues. Elements of conformal mapping.

Applied Mathematics and Differential Equations

421 Applicable Mathematics
Fall, spring, or summer. 4 credits. Prerequisites: high level of performance in Mathematics 294, or 221 and 222, or 213 and 231. Graduate students who need mathematics extensively in their work and who have had a solid advanced calculus course and complex variables course as undergraduates should take Mathematics 515–516. With less preparation, they should take Mathematics 421–422–423.
T W R F 9:05 or 12:20. Prelims: fall, 7:30 p.m., Oct. 16, Nov. 27; spring, 7:30 p.m., Mar. 5, Apr. 18.
Theorems of Stokes, Green, Gauss, etc. Sequences and infinite series. Fourier series and orthogonal functions. Ordinary differential equations. Solution of partial differential equations by separation of variables.

422 Applicable Mathematics
Fall, spring, or summer. 4 credits. Prerequisite: Mathematics 421.
T W R F 12:20. Prelims: fall, 7:30 p.m., Oct. 16, Nov. 27; spring, 7:30 p.m., Mar. 6, Apr. 18.
Complex variables Fourier transforms, Laplace transforms. An introduction to generalized functions. Applications to partial differential equations.

423 Applicable Mathematics
Fall or spring. 4 credits. Prerequisite: Mathematics 421; however, students who have not taken 422 should talk to the instructor before taking this course.
T W R F 12:20. Prelims: fall, 7:30 p.m., Oct. 16, Nov. 27; spring, 7:30 p.m., Mar. 5, Apr. 18.
Normed vector spaces. Elementary Hilbert space theory. Projections. Fredholm's alternative. Eigenfunction expansions. Applications to elliptic partial differential equations and to integral equations.

425 Numerical Solutions of Differential Equations
Spring. 4 credits. Prerequisites: Mathematics 222 or 294, one course numbered 300 or higher in mathematics, and Computer Science 321, or permission of instructor. This course is a natural sequel to Computer Science 321. Methods and basic theory for the numerical solution of ordinary and partial differential equations. Linear multistep methods, Runge-Kutta methods, and the problem of stiffness for ordinary differential equations. Finite difference methods and Galerkin finite element methods for partial differential equations. Homework will involve use of a computer.

427 Introduction to Ordinary Differential Equations
Fall. 4 credits. Prerequisite: Mathematics 222 or 294 or permission of instructor.
T R 8:40.
Covers the basic existence, uniqueness, and stability theory together with methods of solution and methods of approximation. Topics include singular points, series solutions, Sturm-Liouville theory, transform methods, approximation methods, and application to physical problems.

428 Introduction to Partial Differential Equations
Spring. 4 credits. Prerequisite: Mathematics 222 or 294 or permission of instructor.
T R 10:10–11:25.
Topics selected from first-order quasilinear equations, classification of second-order equations, with emphasis on maximum principles, existence, uniqueness, stability Fourier series methods, approximation methods.

Algebra

231 Linear Algebra
Spring or summer. 3 credits. Prerequisite: Mathematics 111 or equivalent.*
M W F 10:10. Prelims: spring, Feb. 21, Mar. 26, Apr. 30.
Vectors, matrices, and linear transformations, affine and Euclidean spaces, transformation of matrices, and eigenvalues.

*See the list of courses with overlapping content at the end of the introduction.

332 Algebra and Number Theory
Fall. 4 credits. Prerequisites: one year of calculus and one course from Mathematics 221, 231, and 294. Mathematics 332 does not satisfy prerequisites for courses numbered 500 and above.
M W F 9:05.
Various topics from modern algebra and number theory, usually including rings, fields, and finite groups. Motivation and examples are derived mostly from geometry, arithmetic, and congruence problems on the integers.

336 Applicable Algebra
Fall or spring. 4 credits. Prerequisites: Mathematics 221, 294, or 231.
Fall: M W F 10:10; spring: M W F 9:05.
An introduction to concepts and methods of abstract algebra that are of importance in science and engineering. Applications of the theory to concrete problems will be stressed. Each year the course will treat aspects usually chosen from the following topics: partially ordered sets, lattices, graph theory, and Boolean algebras; finite machines and languages; applications of groups, fields, and modular arithmetic, such as Latin squares, elementary coding theory, or fast Fourier transform; difference equations. Additional topics may be chosen by the instructor.

431–432 Introduction to Algebra
431, fall or spring or sumer; 432, spring. 4 credits each. Prerequisite: Mathematics 221 or 231. Undergraduates who plan to attend graduate school in mathematics should take 433–434.
431: Fall: M W F 10:10; spring: M W F 9:05. 432: M W F 10:10.
431: An introduction to linear algebra, including the study of vector spaces, linear transformations, matrices, and systems of linear equations; quadratic forms and inner product spaces; canonical forms for various classes of matrices and linear transformations; determinants. 432: an introduction to various topics in abstract algebra, including groups, rings, fields, factorization of polynomials and integers, congruences, and the structure of finitely generated modules over Euclidean domains with application to canonical forms of matrices.

433–434 Introduction to Algebra
433, fall; 434, spring. 4 credits each. Prerequisite: Mathematics 221 or 231.
M W F 10:10.
Honors version of Mathematics 431–432 Mathematics 433–434 will be more theoretical and rigorous than 431–432 and will include additional material such as multilinear and exterior algebra.

Geometry and Topology

451–452 Classical Geometries
451, fall or summer; 452, spring. 4 credits each term. Prerequisite: Mathematics 221 or 231 or permission of instructor. 451 is not usually a prerequisite for 452.
Fall: T R 2:55, spring: M W F 9:05.
Foundations of geometry. Various geometric topics, including Euclidean, non-Euclidean, and projective geometry and rigidity theory.

453 Introduction to Topology
Fall. 4 credits. Prerequisites: Mathematics 411 and 221, or permission of instructor.
M W F 11:15.
Basic point set topology, connectedness, compactness, metric spaces, fundamental group. Application of these concepts to surfaces such as the torus, the Klein bottle, the Moebius band.

454 Introduction to Differential Geometry
Spring. 4 credits. Prerequisites: Mathematics 222 or 294, plus at least one mathematics course numbered 300 or above. Mathematics 453 is not a prerequisite.
M W F 11:15.
Differential geometry of curves and surfaces. Curvature, geodesics, differential forms. Introduction to n-dimensional Riemannian manifolds. This material provides some background for the study of general relativity; connections with the latter will be indicated.

Probability and Statistics

171 Statistical Theory and Application in the Real World
Spring. 4 credits. Prerequisites: high school mathematics.
Lecs: 3 hours (to be arranged; lab one hour (to be arranged).
This introductory statistics course will discuss techniques for analyzing data occurring in the real world and the mathematical and philosophical justification for these techniques. Topics include population and sample distributions, central limit theorem, and statistical theories of point estimation, confidence intervals, and testing hypotheses, the linear model, and the least squared estimator. The course concludes with a discussion of tests and estimates for regression and analysis of variance (if time permits). The computer will be used to demonstrate some aspects of the theory, such as sampling distributions and the Central Limit Theorem. In the lab portion of the course, students will learn and use computer-based methods for implementing the statistical methodology presented in the lectures. (No previous familiarity with the computer is presumed.)

372 Elementary Statistics
Fall. 4 credits. Prerequisites: one year of calculus, and Computer Science 100 or 101 or 108 or permission of instructor. A terminal course for students who will take no further courses in statistics.*
M W F 9:05. Evening prelims may be given.
Introduction to the principles underlying modern statistical inference, to the practical application of statistical techniques, and to the rationale underlying the choice of statistical methods in various situations. Topics in probability that are essential to an understanding of statistics. Homework involves statistical analysis of data sets on hand calculators and on a computer by means of packaged programs.

*See the list of courses with overlapping content at the end of the introduction.

471 Basic Probability
Fall. 4 credits. Prerequisite: Mathematics 221. May be used as a terminal course in basic probability. Intended primarily for those who will continue with Mathematics 472.
Lecs, M W F 11:15; rec, R 12:20. Prelims: 7:30 p.m., Oct. 16, Nov. 27.
Topics include combinations, important probability laws, expectations, moments, moment-generating functions, limit theorems. Emphasis is on diverse applications and on development of use in statistical applications. See also the description of Mathematics 571.

472 Statistics
Spring. 4 credits. Prerequisite: Mathematics 471 and knowledge of linear algebra such as taught in Mathematics 221. Some knowledge of multivariate calculus helpful but not necessary.*
M W F 9:05. Prelims: 7:30 p.m., Mar. 5, Apr. 18.
Classical and recently developed statistical procedures are discussed in a framework that emphasizes the basic principles of statistical inference and the rationale underlying the choice of these procedures in various settings. These settings include problems of estimation, hypothesis testing, large sample theory.

[473 Further Topics in Statistics
Fall. 4 credits. Prerequisite: Mathematics 472 or 574. Not offered 1990–91.
M W F 11:15.
More detailed discussion of some of the topics not covered at length in Mathematics 472. Design and analysis of experiments. Multivariate analysis. Nonparametric inference; robustness. Sequential analysis. For corresponding subject matter taught in more detail, see description of Mathematics 573 and 675.]

Mathematical Logic

481 Mathematical Logic
Fall. 4 credits. Prerequisite: Mathematics 221. Propositional and predicate logic. Classical proof procedures. Completeness and compactness. Decidability and undecidability. The Godel incompleteness theorem. Elements of set theory.

483 Intensional Logics and Alternatives to Classical Logics (also Philosophy 436)
Spring. Prerequisite: Philosophy 231 or equivalent or any mathematics or computer science logic course or permission of instructor.
Topics: (1) The abstract concept of consequence. What makes a logic intensional? (2) Sentential logics: soundness and completeness for some normal modal and tense logics, intuitionistic logic, the Stalnaker, D. Lewis, and Adams conditionals; incomplete modal logics; the correspondence problem. (3) Predicate (first-order) logics: soundness and completeness for classical free logic and some normal modal logics; the Barcan and converse-Barcan schemes; actuality and two-dimensional semantics; the interpolation problem. (4) Time permitting, topics from among the following: non-normal modal logics; additional semantics for intuitionistic logic; 3-valued logics; individual-actualism; higher-order logics, dynamic logic; auto-epistemic logic and non-monotone inference; decision problems associated with some of these logics.

*See the list of courses with overlapping content at the end of the introduction.

486 Applied Logic (also Computer Science 486)
Fall or summer. 4 credits. Prerequisites: Mathematics 222 or 294, Computer Science 100, and some additional course in mathematics or Computer Science 381.
T R 10:10–11:25, plus one-hour lab to be arranged.
Propositional and predicate logic, compactness and completeness by tableaux. Equational logic. Herbrand Universes, the resolution method, and unification. Rewrite rules and equational logic. Knuth-Bendix method and the congruence closure algorithm and lamda-calculus reduction strategies. Restrictions on resolution and their completeness. Introduction to automatic theorem proving. Topics in Prolog, Lisp, or ML on microcomputers or, possibly, exposure to a larger system such as Nuprl. Input resolution and Prolog. Applications to expert systems and program verification.

[487 Applied Logic II
Spring. 4 credits. Prerequisite: Mathematics 221 or equivalent. Not offered 1990–91. Intuitionistic propositional and predicate logic. Natural deduction and tableaux as proof procedures. Curry partial application structures. Their polynomial extensions as lambda calculi. Typed and untyped lambda calculi, cartesian closed categories. Heyting semantics of constructions as interpretations in partial combinatory structures, Kleene realizabilities. Curry-Howard isomorphisms. Intuitionistic first order arithmetic and Godel's system T. Intuitionistic higher order logic and polymorphism. Weak and strong nomalizations for simple and polymorphic calculi. Application to consistency proofs. Term extraction as the context for understanding compilers and interpreters for applicative languages such as LISP, NUPRL, MIRANDA, etc.]

Graduate Courses

Students interested in taking graduate courses in mathematics should consult the department for further course details, times, and possible changes in courses as described below.

[503 History of Mathematics
4 credits. Prerequisites: Mathematics 511 and 531. Intended for graduate students in the mathematical sciences. Not offered 1990–91. This course will be devoted to the history of mathematics in the nineteenth century from the original sources, with emphasis on the history of the foundations of analysis and of the foundations of commutative algebra. Typical authors in algebra who will be studied are Lagrange, Ruffini, Gauss, Abel, Galois, Dirichlet, Kummer, Kronecker, Dedekind, Weber, M. Noether, Hilbert, Steinitz, Artin, and E. Noether. Typical authors in analysis who will be studied are Cauchy, Fourier, Bolzano, Dirichlet, Riemann, Weierstrass, Heine, Cantor, Peano, and Hilbert. If time permits, a sketch will be given of the history of probability and statistics from Bernoulli to Pearson. Students will be required to read and explain one important nineteenth-century paper.]

511–512 Real and Complex Analysis
511, fall; 512, spring.
511: measure and integration, functional analysis. 512: complex analysis, Fourier analysis, and distribution theory.

513–514 Topics in Analysis
513, fall; 514, spring.

515–516 Mathematical Methods in Physics
515, fall; 516, spring. 4 credits each. Intended for graduate students in physics or related fields who have had a strong advanced calculus course and at least two years of general physics. A knowledge of the elements of finite dimensional vector space theory, complex variables, separation of variables in partial differential equations, and Fourier series will be assumed. The course overlaps with parts of Mathematics 421–422–423. Undergraduates will be admitted only with permission of instructor. Mathematics 515 is a prerequisite for 516.
M W F 12:20–1:25.
Topics designed to give a working knowledge of the principal mathematical methods used in advanced physics. A brief discussion of some basic notions: metric space, vector space, linearity, continuity, integration. Generalized functions (Schwartz distributions). Fourier series and Fourier integrals. Saddle point method. Linear operators. Differential operators and integral operators, the equations and eigenvalue problems connected with them and the special functions arising from them. Elements of group theory. The rotation group and its representations.

517 Dynamical Systems
Fall. Not offered 1990–91.
Topics: Existence and Uniqueness Theorems for ODEs. Poincaré-Bendixon theorem and global properties of two dimensional flows. Limit sets, non-wandering sets, chain recurrence, pseudo-orbits and structural stability. Linearization at equilibrium points: stable manifold theorem and the Hartman-Grobman theorem. Generic properties: transversality theorem and the Kupka-Smale theorem. Examples: expanding maps and Anosov diffeomorphisms. Hyperbolicity: the horseshoe and the Birkhoff-Smale theorem on transversal homoclinic orbits. Rotation numbers: Herman's theorem. Characterization of structurally stable systems.]

[518 Smooth Ergodic Theory
Spring. Not offered 1990–91.
Topics: Invariant measures. Entropy. Hausdorff dimension and related concepts. Hyperbolic invariant sets: Stable manifolds, Markov partitions and symbolic dynamics. Equilibrium measures of hyperbolic attractors. Ergodic theorems. Pesin theory: stable manifolds of non-hyperbolic systems. Liapunov exponents: relations between entropy, exponents and dimensions.]

519–520 Partial Differential Equations
519, fall; 520, spring.
Basic theory of partial differential equations.

521 Measure Theory and Lebesgue Integration
Fall.
Measure theory, integration, and Lp spaces.

522 Applied Functional Analysis
Spring.
Spectral theorem for bounded operators, spectral theory for unbounded operators in Hilbert space, compact operators, distributions. Applications.

531–532 Algebra
531, fall; 532, spring.
531: finite groups, field extensions, Galois theory, rings and algebras, tensor and exterior algebra. 532: Wedderburn structure theorem, Brauer group, group cohomology, Dedekind domains, primary decomposition, Hilbert basis theorem, local rings.

537 Analytic Number Theory
Fall. Prerequisites: Math 511, 521, 431.
Topics: The Prime Number Theorem. Primes in Arithmetic Progressions. The Large Sieve and Some of its Applications.

549 Lie Groups and Differential Geometry
Fall.

550 Lie Groups and Lie Algebras
Spring.

551 Introductory Algebraic Topology
Spring.
Fundamental group and covering spaces. Homology theories for complexes and spaces.

552–553 Differentiable Manifolds
552 fall, 553 spring. Prerequisites: advanced calculus, linear algebra (Mathematics 431), point set topology (Mathematics 453). This is a year-long introduction to differential topology and differential geometry at the level of the beginning graduate student.
Topological manifolds. Smooth manifolds, immersions and embeddings, tangent bundles, fiber bundles, vector fields and dynamical systems, Froebenius' theorem. Lie groups. Integration on manifolds, differential forms, Stokes theorem. Tubular neighborhoods, transversality and cobordism. Connections, Riemannian manifolds, geodesics, curvature, Gauss-Bonnet theorem.

[561 Geometric Topology
Topics from general topology. Introduction to geometric properties of manifolds. Not offered 1990–91.]

571–572 Probability Theory
571, fall; 572, spring. Prerequisite: a knowledge of Lebesgue integration theory, at least on the real line. Students can learn this material by taking parts of Mathematics 413–414 or 521. Properties and examples of probability spaces. Sample space, random variables, and distribution functions. Expectation and moments. Independence, Borel-Cantelli lemma, zero-one law. Convergence of random variables, probability measures, and characteristic functions. Law of large numbers. Selected limit theorems for sums of independent random variables. Markov chains, recurrent events. Ergodic and renewal theorems. Martingale theory. Brownian motion and processes with independent increments.

571–574 Probability and Statistics
571, fall; 574, spring. This course is a prerequisite to all advanced courses in statistics.
571: same as Mathematics 571 above. 574: topics include an introduction to the theory of point estimation, consistency, efficiency, sufficiency, and the method of maximum likelihood; the classical tests of hypotheses and their power; the theory of confidence intervals; the basic concepts of statistical decision theory; the fundamentals of sequential analysis. Intended to furnish a rigorous introduction to mathematical statistics.

[573 Experimental Design, Multivariate Analysis
Fall. Not offered 1990–91.
Rationale for selection of experimental designs and algorithms for constructing optimum designs. Optimum properties and distribution theory for classical analysis of variance procedures and their simplest multivariate analogues.]

[575 Sequential Analysis, Multiple Decision Problems
Fall. Prerequisite: a course in mathematical statistics such as Mathematics 574. Not offered 1990–91.]

[577 Nonparametric Statistics
Fall. Not offered 1990–91.
A study of nonparametric techniques, especially order statistics, rank order statistics, scores, local optimality properties, and perhaps some asymptotic theory.]

581 Logic
Spring.
Basic topics in mathematical logic, including propositional and predicate calculus; formal number theory and recursive functions; completeness and incompleteness theorems.

611–612 Seminar in Analysis
611, fall; 612, spring.

[613 Functional Analysis
Fall. Not offered 1990–91.
Topological vector spaces. Banach and Hilbert spaces, Banach algebras. Additional topics to be selected by instructor.]

[615 Fourier Analysis
Spring. Not offered 1990–91.]

[622 Riemann Surfaces
Fall. Not offered 1990–91.]

[623 Several Complex Variables
Not offered 1990–91.]

[627–628 Seminar in Partial Differential Equations
627, fall; 628, spring. Not offered 1990–91.]

631–632 Seminar in Algebra
631, fall; 632, spring.

635 Topics in Algebra
Fall.
Selection of advanced topics from algebra, algebraic number theory, and algebraic geometry. Course content varies.

637 Algebraic Number Theory
Fall.

639 Topics in Algebra II
Spring.
Selection of advanced topics from algebra, algebraic number theory, and algebraic geometry. Course content varies.

640 Homological Algebra
Spring.

651–652 Seminar in Topology
651, fall; 652, spring.

653–654 Algebraic Topology
653, fall; 654, spring.
Duality theory in manifolds, applications, cohomology operations, spectral sequences, homotopy theory, general cohomology theories, categories and functors.

[655 Mathematical Foundations for Computer Modeling and Simulation (also Computer Science 655)
Spring. 4 credits. Prerequisites: Mathematics 431 and 432 or the equivalent, both in content and in the level of mathematical sophistication, or permission of instructors. Not offered 1990–91.
M W F 10:10.
This course will have two parts, one purely mathematical, the other applied. The former is intended to introduce students to theoretical tools that are relevant to the study of robotics, solid modeling, and simulation. These tools will be drawn from the areas of (real and complex) algebraic geometry, topology, differential geometry, and differential equations. The latter part of the course will provide applications that illustrate uses of the mathematics and point the way to needed further developments.]

657–658 Advanced Topology
657, fall; 658, spring.
Selection of advanced topics from modern algebraic, differential, and geometric topology. Course content varies.

661–[662] Seminar in Geometry
661, fall; [662, spring. Not offered 1990–91.]

667 Algebraic Geometry
Spring.

670 Topics in Statistics
Fall and spring.
A course taught occasionally to cover special topics in theoretical statistics not treated in other listed courses. Typical of the subjects that will be treated are time series analysis, and classification and cluster analysis.

671–672 Seminar in Probability and Statistics

[674 Multivariate Analysis
Spring. Not offered 1990–91.]

[675 Statistical Decision Theory
Spring. Not offered 1990–91.]

677–678 Stochastic Processes
677, fall; 678, spring.

681–682 Seminar in Logic
681, fall; 682, spring.

683 Model Theory
Fall.

684 Recursion Theory
Spring.
Theory of effectively computable functions. Classification of recursively enumerable sets. Degrees of recursive unsolvability. Applications to logic. Hierarchies. Recursive functions of ordinals and higher type objects. Generalized recursion theory.

[685 Topics in Logic
Fall. Not offered 1990–91.
Topics in metamathematics. Course content varies.]

[687 Set Theory
Spring. Not offered 1990–91.
Models of set theory. Theorems of Godel and Cohen, recent independence results.]

688 Automated Theorem Proving
Fall.

701–702 Oliver Club Seminar

703–704 Olivetti Club Seminar

711–712 Seminar in Analysis

727–728 Seminar in Numerical Analysis

731–732 Seminar in Algebra

733–734 Seminar in Computational Algebra

751–752 Topics in Geometry and Topology

776 Qualitative Theory of Dynamical Systems
Spring. 3 credits. Suggested prerequisite: T&AM 675, Mathematics 517, or equivalent. Offered alternate years.
Review of planar (single-degree-of-freedom) systems. Local and global analysis. Structural stability and bifurcations in planar systems. Center manifolds and normal forms. The averaging theorem and perturbation methods. Melnikov's method. Discrete dynamical systems, maps and difference equations, homoclinic and heteroclinic motions, the Smale Horseshoe and other complex invariant sets. Global bifurcations, strange attractors, and chaos in free and forced oscillator equations. Applications to problems in solid and fluid mechanics.

MODERN LANGUAGES AND LINGUISTICS

J. Bowers, chair; W. Harbert, graduate faculty representative (214 Morrill Hall); A. Cohn, director of undergraduate studies (216 Morrill Hall); L. Babby, W. Browne, V. Carstens, G. Chierchia, N. Clements, G. Diffloth, J. Gair, J. Grimes, J. Huang, J. Jasanoff, J. Kingston, H. Kufner, F. Landman, R. Leed, S. McConnell-Ginet, J. Noblitt, A. Nussbaum, C. Rosen, C. Shih, D. Solá, M. Suñer, L. Waugh, J. Whitman, J. Wolff

The Department of Modern Languages and Linguistics offers courses in linguistics (the study of the general nature, structure, and history of language) and elementary, intermediate, and advanced courses in many of the languages of Europe, Africa, and south, southeast, and east Asia.

Most courses in modern languages and linguistics are offered by the Department of Modern Languages and Linguistics; see listings below under individual language names (e.g., Spanish) and under Linguistics. Courses in foreign language literatures and certain language courses as well are taught in the following departments; consult entries under the department name for course listings.

Africana Studies and Research Center: Ewe, Swahili

Asian Studies: Chinese, Japanese, Korean, Vietnamese

Classics: Greek, Latin, Sanskrit

German Studies: German

Near Eastern Studies: Akkadian, Arabic, Aramaic, Hebrew, Turkish

Romance Studies: French, Italian, Spanish

Russian Literature: Russian

The Full-year Asian Language Concentration (FALCON Program) offers intensive instruction in Chinese, Japanese, or Indonesian to students wishing to gain fluency in the language in a single year.

Arabic

See listings under Near Eastern Studies.

Bengali

121–122 Elementary Bengali
121, fall; 122, spring. 4 credits each term. Prerequisite: for Bengali 122, Bengali 121 or examination.
Hours to be arranged. D. Sudan.
The emphasis is on basic grammar, speaking, and comprehension skills; Bengali script will also be introduced.

201–202 Intermediate Bengali
201, fall; 202, spring. 3 credits each term. Prerequisites: for Bengali 201, Bengali 122 or examination; for Bengali 202, Bengali 201 or examination.
Hours to be arranged. D. Sudan.
Continuing instruction in grammar with attention to writing skills.

203–204 Continuing Bengali
203, fall; 204, spring. 3 credits each term. Prerequisites: for Bengali 203, Bengali 122 or examination; for Bengali 204, Bengali 203 or examination.
Hours to be arranged. D. Sudan.
Continuing instruction in grammar with attention to speaking and reading skills.

303–304 Bengali Literature I, II
303, fall; 304, spring. 4 credits each term. Prerequisites: Bengali 203–204 or equivalent.
Hours to be arranged. D. Sudan.
An introduction to noted Bengali writers. Selections of works by Rabindranath Tagore and Abanindranath Tagore and short stories by Bohophul will be covered. The course will be devoted to reading these works and developing literary criticism and creative writing in Bengali.

Burmese

101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite: for Burmese 102, Burmese 101 or equivalent.
Hours to be arranged. J. Wheatley.
A semi-intensive course for beginners or for those who have been placed in the course by examination. Gives a thorough grounding in all the language skills: listening, speaking, reading, and writing.

201–202 Intermediate Burmese Reading
201, fall; 202, spring. 3 credits each term. Prerequisites: for Burmese 201, Burmese 102; for Burmese 202, Burmese 201.
Hours to be arranged. J. Wheatley.

203–204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Burmese 203, Burmese 102; for Burmese 204, Burmese 203.
Hours to be arranged. J. Wheatley.

301–302 Advanced Burmese Reading
301, fall; 302, spring. 4 credits each term. Prerequisites: for Burmese 301, Burmese 202 or permission of instructor; for Burmese 302, Burmese 301.
Hours to be arranged. J. Wheatley.
Selected Burmese readings in various fields.

401–402 Burmese Directed Individual Study
Fall or spring. 4 credits each term. Prerequisite: permission of instructor.
Hours to be arranged. J. Wheatley.
For students who wish to address special problems in the speech, grammar, or literature.

Cambodian

See Khmer.

Cebuano (Bisayan)

101–102 Elementary Course
101, fall; 102, spring. Offered according to demand. 6 credits each term. Prerequisite for Cebuano 102: Cebuano 101 or equivalent.
Hours to be arranged. J.U. Wolff.
A semi-intensive course for beginners.

Chinese

For literature courses see Asian Studies.

Fees. Depending on the course, a small fee may be charged for photocopied texts for course work.

101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite for Chinese 102: Chinese 101 or equivalent.
Lecs, M W F 9:05; drill, M–F 8 or 2:30.
J. Wheatley, and staff.
A semi-intensive course for beginners or for those who have been placed in the course by examination. The course gives a thorough grounding in all the language skills: listening, speaking, reading, and writing. Students who speak some Mandarin but do not read should take 109/110. Students who read Chinese, speak Cantonese or other "dialects," and want to learn Mandarin should see the program director in Morrill Hall.

109–110 Elementary reading (with Mandarin pronunciation)
109, fall; 110, spring. 3 credits each term. Prerequisite: for Chinese 110, 109 or equivalent.
M W F 8. P. Wang.
This course is for the students who have spoken some Chinese in the home, but who do not read. If in doubt about eligibility, see instructor.

111–112 Cantonese Elementary Speaking
111, fall; 112, spring. 3 credits each term. Prerequisites: for Chinese 111, permission of instructor; for Chinese 112, Chinese 111. Both Chinese 112 and 114 or equivalents are necessary to fulfill any language requirements.
Lec T 12:20; drills, M W F 9:05 or 11:15.
E. Leung.
Conversation in standard Cantonese as spoken in Hong Kong and Canton.

113–114 Cantonese Elementary Readings
113, fall; 114, spring. 3 credits each term. Prerequisites: for Chinese 113, permission of instructor; for Chinese 114, Chinese 113. Both Chinese 112 and 114 or equivalents are necessary to fulfill any language requirements.
Lec, R 12:20; drills, T R 9:05. E. Leung.
Readings in modern expository prose with Cantonese pronunciation.

201–202 Intermediate Chinese
201, fall or summer; 202, spring or summer. 4 credits each term. Prerequisite: for Chinese 201, Chinese 102 or equivalent; for Chinese 202, Chinese 201.
M–F 9:05 or 11:15. Staff.

211–212 Intermediate Cantonese
211, fall; 212, spring. 4 credits each term. Prerequisites: for Chinese 211, Chinese 112 and 114 or equivalent; for Chinese 212, Chinese 211.
M W F 9:05. E. Leung.

301–302 Advanced Chinese
301, fall; 302, spring. 4 credits each term. Prerequisites: for Chinese 301, Chinese 202 or equivalent; for Chinese 302, Chinese 301.
M W F 11:15 or 12:20. Staff.
Readings and drills in modern expository Chinese.

303–304 Advanced Chinese Conversation
303, fall; 304, spring. 1 credit each term. Prerequisites: Chinese 201–202 or equivalent; or permission from instructor. S-U grades only.
T R 11:15. Staff.
Guided conversation and oral composition and translation. Corrective pronunciation drill.

311–312 Advanced Cantonese
311, fall; 312, spring. 4 credits each term. Prerequisites: for Chinese 311, Chinese 212 or equivalent; for Chinese 312, Chinese 311.
M W F 10:10. E. Leung.

[401 History of the Chinese Language
Fall or spring, according to demand. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged. Staff.
Survey of phonological and syntactic developments in Chinese.]

[403 Linguistic Structure of Chinese I
Fall. 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1990–91.
Hours to be arranged. Staff.
Introductory course in the phonology of modern Mandarin Chinese.]

[404 Linguistic Structure of Chinese II
Spring, according to demand. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged. J. Huang.
Syntax of modern Mandarin Chinese.]

[405 Chinese Dialects
Fall or spring, according to student demand. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged. Staff.
Introductory survey of modern dialects and their distinguishing characteristics.]

411–412 Readings in Modern Chinese (Mandarin pronunciation only)
411, fall; 412, spring. 4 credits each term. Prerequisites: for Chinese 411, Chinese 302 or equivalent; for Chinese 412, Chinese 411.
M W F 1:25 or 2:30. Staff.

413–414 Chinese Reading Tutorials
413, fall; 414, spring. 2 credits each term. Prerequisites: Chinese 302; or equivalent and permission of instructor.
Hours to be arranged. Staff.
Individual or small-group guidance in advanced Chinese texts, designed primarily for Asian studies majors taking other courses with reading assignments in Chinese.

415–416 Expository Writing in Modern Chinese
415, fall; 416, spring. 3 credits. Prerequisites: Chinese 411–412 or equivalent.
Hours to be arranged. Staff.
Designed for students with advanced speaking and reading ability in Mandarin Chinese who require further practice in writing.

[607 Chinese Dialect Seminar
Fall or spring, on student demand. 4 credits. Prerequisites: Chinese 405 and permission of instructor. Not offered 1990–91.
Hours to be arranged. Staff.
Analysis and field techniques in a selected dialect area.]

FALCON
J. Wheatley, 416 Morrill Hall (255–9301).

161–162 Intensive Mandarin Course
161, fall; 162, spring. 16 credits each term. Prerequisites: for Chinese 161, Chinese 160 (Cornell summer intensive course) or permission of instructor; for Chinese 162, Chinese 161.
M–F 6 hours each day. J. Wheatley and staff.
Foreign language requirement: Proficiency is attained by passing 161.

Danish

131–132 Elementary Course
131, fall; 132, spring. 3 credits each term. Prerequisite for Danish 132, Danish 131 or equivalent. This language series cannot be used to satisfy the language requirement.
M W F 8. P.M. Mitchell.

Dutch

121–122 Elementary Course
121, fall or summer; 122, spring or summer. 4 credits each term. Prerequisite: permission of instructor.
M T W F 1:25. M. Briggs.
Intensive practice in listening, speaking, reading, and writing basic Dutch in meaningful contexts. The lecture offers insight into Dutch language, culture, and society.

123 Continuing Course
Fall. 4 credits each term. Prerequisites: Dutch 122 or equivalent.
M T W F 11:15. M. Briggs.
Improves speaking skills, such as fluency and pronoun creation, focusing on verbal communication skills; offering a wide range of readings and sharpening listening skills based on Dutch and Dutch-speaking cultures.

203 Intermediate Composition and Conversation
Spring. 3 credits. Prerequisite: Qualification in Dutch or permission of instructor.
M W F 11:15. M. Briggs.
Improved control of Dutch grammatical structures and vocabulary through guided conversation, compositions and reading, drawing on Dutch and other Dutch-speaking cultures.

English

Intensive English Program, see p. 310.

205 English as a Second Language
Fall. 4 credits. Prerequisite: placement by examination.
M T W R 10:10 or 3:35. M. Martin.
Advanced spoken and written English, with emphasis on speaking, understanding, and reading.

206 English as a Second Language
Spring. 3 credits. Prerequisite: English 205 or placement by examination.
M W F 10:10. M. Martin.
Designed for those who have completed English 205 and who require or desire further practice. Emphasis is on developing control of written as well as spoken language.

209 English as a Second Language
Fall or spring. 1 credit. Prerequisite: placement by examination.
Hours to be arranged. M. Martin.
Practice in informal conversational English pronunciation, techniques for gaining information, informal conversation, and classroom speaking. Students also practice giving informal presentations. Personal conferences with the instructor supplement class work.

210 English as a Second Language
Spring. 1 credit. Prerequisite: placement by examination.
Hours to be arranged. M. Martin.
Practice in academic speaking. Formal classroom discussion techniques and presentation of information in various forms. Personal conferences supplement class work.

211–212 English as a Second Language
211, fall, spring, or summer; 212, spring. 3 credits each term. Prerequisite: placement by examination.
211: M W F 9:05, 10:10, 11:15, or 2:30. T R 10:10–11:25 or 2:55–4:10. 212: M W F 9:05 or 11:15; T R 2:55–4:10. M W 4:45–6 for students in the social sciences and humanities; T R 4:45–6 for students in science and technology. D. Campbell.
Advanced writing, with emphasis on improving vocabulary, grammar, and control of college-level written English.

213 Written English for Non-Native Speakers
Spring. 3 credits. Prerequisite: placement by examination.
T R 10:10, plus a weekly conference. M. Martin.
Designed for those whose writing fluency is sufficient for them to carry on regular academic work but who feel the desire for refining and developing their ability to express themselves clearly and effectively. As much as possible, students receive individual attention.

Freshman Writing Seminar

215–216 English for Later Bilinguals
215, fall or summer; 216, spring. 3 credits each term. Not designed for students whose schooling has been mostly in English. Prerequisite for English 216: English 215.
M W F 2:30. M. Martin.
A course designed to strengthen the English-language skills of students from other countries who have studied for one to five years in American high schools and whose language in the home is not English. Intensive work in written English is offered, with emphasis on sentence structure, cohesion, vocabulary expansion, grammatical structure, and maturity of style. Individual conferences on papers supplement class work. The focus of English 216 is the process of producing a full-length library research paper.

French

A. Cohn, J.S. Noblitt, L.R. Waugh (director of undergraduate studies, 315 Morrill Hall, 255–0717).

For literature courses see Romance Studies.

The Major

The major in French linguistics is designed to give students proficiency in the oral and written language, and to develop skills in the linguistic analysis of French. (For the major in French literature see the description under Romance Studies).

While prospective majors should try to plan their programs as far ahead as possible, no student will be refused admission merely because of a late start. It is even possible for a student to begin French and/or Linguistics at Cornell and become a major. Students wishing to major in French linguistics should consult the director of undergraduate studies of the Department of Modern Languages and Linguistics, Professor Linda Waugh, who will admit them to the major.

The Core

1) All majors are expected to acquire a sound degree of competence in language. This competence is demonstrated by the successful completion of French 312 or by the passing of a special examination to be taken no later than the end of the junior year. A typical program will involve two semesters of language at the 200 level (to be taken no later than the end of the sophomore year) and two semesters of language at the 300 level (French 311–312). Students may bypass any part of the sequence through placement examinations.
2) All majors are expected to take either French 201 or 202, at least one of which should be completed successfully no later than the end of the sophomore year.
3) All majors must have successfully completed Linguistics 101–102, or Linguistic 101–Linguistic 400, or the equivalent.

The Linguistic Option

1) The successful completion of six courses in French, Romance, and general linguistics (in addition to Linguistics 101–102), of which at least 3 will be in French and Romance Linguistics. These courses will include at least one course concerning the history of French (e.g., French 401, Romance Linguistics 321) and one course concerning the structure of French (e.g., French 408, 410, or 602).
2) The successful completion of two courses (preferably a sequence) in some allied area, for example, (a) French literature and civilization, (b) psycholinguistics, (c) philosophy of language, (d) French history, culture, music, or history of art or architecture.

Study Abroad in France

French majors or other interested students may study in France for one or two semesters during their junior year. Opting for one of several study-abroad plans recognized by the departments of Romance Studies and Modern Languages and Linguistics facilitates the transfer of credit. Information about these plans is available from Jacques Bèreaud, director of undergraduate studies, Department of Romance Studies. (See the description of the program in Paris sponsored by Cornell under the Department of Romance Studies.)

Honors. The honors program encourages well-qualified students majoring in French linguistics to do independent work in French outside the structure of courses. The preparation of the senior honors essay, generally spread over two terms, provides a unique learning opportunity, since it allows for wide reading, and extensive rewriting to a degree not practically possible in the case of course papers.

No special seminars or courses are required of honors students, but they will have regular meetings with the faculty advisers who have agreed to supervise their work. They may receive course credit by enrolling in French 429–430, but these independent study courses must be taken in addition to the courses that meet the minimum requirements for the major. At the end of the senior year each honors student is examined orally on the honors essay by a jury consisting of his or her faculty adviser and two other faculty members. The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

Fees. Depending on the course, a small fee may be charged for copies of texts for course work.

101 Basic Course I
Summer only. 6 credits.
M–F 8–12. Staff.
An introductory course offering opportunities for student interaction and intensive practice in listening to, speaking, reading, and writing basic French in meaningful contexts. Students who have previously studied French must take the qualifying examination before registering for this course.

121 Beginning French
Fall only. 4 credits. No prerequisites. Intended for beginning students or those placed by examination.
Lec, R 9:05, 10:10 or 11:15; Sec, M T W F 8, 9:05, 10:10, 11:15, 12:20, 1:25 or 2:30. N. Gabriel.
The four recitation sections per week offer the opportunity for student interaction and intensive practice in listening to, speaking, reading, and writing basic French in meaningful contexts. Lectures offer insights into French language, culture, and society.

122 Elementary French
Fall or spring. 4 credits. Prerequisite: French 121 or CPT score between 370 and 440. Students who obtain a CPT score of 560 after French 122 attain qualification and may enter the 200-level sequence; otherwise, French 123 is required for qualification.
Fall: Lec, R 1:25; Sec, M T W F 9:05, 10:10, 12:20, 1:25 or 2:30. M. J. Ellis.
Spring: Lec, R 9:05, 10:10 or 11:15; Sec, M T W F 8, 9:05, 10:10, 11:15, 12:20, 1:25 and 2:30. N. Gabriel.
The goal of French 122 is to build on the students' elementary knowledge of French so that they can function in basic situations in a French-speaking culture. Sections continue to provide intensive, context-specific practice in speaking, listening, reading, and writing. Lectures address cultural and linguistic issues.

123 Continuing French
Fall, spring, or summer. 4 credits. Fall enrollment strictly limited. Limited to students who have previously studied French and have a CPT score between 450 and 559. Satisfactory completion of French 123 fulfills the qualification portion of the language requirement.
Lec, T 10:10 or 12:20; Sec, M W R F 9:05, 10:10, 11:15, 12:20, 1:25, or 2:30. A. Levy.
French 123 is an all-skills course designed to improve pronunciation, oral communication, and reading ability; to establish a groundwork for correct writing; and to provide a substantial grammer review. Both lectures and sections encourage the student to see a foreign language as something beyond a batch of skills to be memorized. The course features authentic texts, a functional grammar, and exchange students from France who visit the sections.

Note: Students placed in 200-level courses have the option of taking language and literature courses, See listings under Romance Studies for descriptions of the literature courses, any of which may be taken concurrently with the 203–204 language courses described below.

203 Intermediate Composition and Conversation
Fall, spring, or summer. 3 credits. Prerequisite: qualification in French (French 123 or CPT score 560–649).
Lec, T 11:15 or 1:25 or R 10:10; drills, M W F 9:05, 10:10, 11:15, 12:20, 1:25, 2:30, or 3:35. I. Daly.
Improved control of French grammatical structure and vocabulary through guided conversation, composition, and reading. Lectures include grammar review, listening comprehension exercises, and videos on current topics. Taught in French.

204 Intermediate Composition and Conversation
Fall, spring, or summer. 3 credits. Enrollment limited. Prerequisite: French 203, permission of instructor, or placement by Cornell Advanced Standing Examination (CASE) offered by the Department of Modern Languages and Linguistics. This course, or its equivalent, is required for admission to the Cornell Abroad program.
Fall: lec, T 10:10 or 2:30; drills, M W F 10:10, 11:15, 12:20, 1:25 or 2:30. Spring: lec, T 10:10 or 2:30; drills, M W F 9:05, 10:10, 11:15, 12:20, or 1:25. C. Waldron.
Emphasis on improving oral and written expression of accurate, idiomatic French. Includes enrichment of vocabulary, readings in contemporary prose, treatment of specific problems in grammar, guest speakers, and presentations of videos and films. Taught in French.

401 History of the French Language
Fall. 4 credits. Prerequisites: qualification in French and Linguistics 101, or permission of instructor. Offered alternate years.
M W F 2:30. A. Colby-Hall.
Diachronic development of French from Latin, with emphasis on phonological and morphological change. Course work includes problems in reconstruction, textual analyses, discussions of theoretical topics, and external history.

[407 Applied Linguistics: French
Fall. 4 credits. Prerequisite: qualification in French. Offered alternate years.
M W F 10:10. J. S. Noblitt.
Designed to equip the student with the ability to apply linguistic descriptions in teaching French, with special emphasis on phonetics and morphology.]

[408 Linguistic Structure of French I (also Linguistics 408)
Fall. 4 credits. Prerequisites: qualification in French and Linguistics 101 or Linguistics 400, or permission of instructor.
Hours to be arranged. A. Cohn.
A synchronic study and analysis of modern French, with emphasis on its phonology, morphology, and syntax.]

410 Linguistic Structure of French II
Fall. 4 credits. Prerequisite: permission of instructor. Offered alternate years.
Hours to be arranged. L. Waugh.
A synchronic study and analysis of modern French, with emphasis on semantics, pragmatics, and discourse analysis.

[602 Linguistic Structure of Old and Middle French
Spring. 4 credits. Prerequisite: French 408 or permission of instructor. Offered alternate years.
Hours to be arranged. J.S. Noblitt.
Through study of Old and Middle French texts, student analyze synchronically aspects of the grammar of the language at different periods.]

[604 Contemporary Theories of French Grammar
Spring. 4 credits. Prerequisite: permission of instructor.
Hours to be arranged. L. Waugh.
Selected readings of twentieth-century French linguistics.]

630 French for Reading—Graduate Students
Spring. 3 credits. Limited to graduate students.
Hours to be arranged. Staff.
The primary aim of this course is to develop skill in reading French. (Those interested in an all-skills approach should consider French 121–122.) Some flexibility in selecting texts according to field of interest is offered. One hour per week is devoted to vocabulary building and preparation for standardized tests.

700 Seminar in French Linguistics
Fall or spring, according to demand. Credit to be arranged.
Hours to be arranged. Staff.
Seminars are offered according to faculty interest and student demand. Topics in recent years have included current theories in French phonology, current theories in French syntax, and semantics of French. Topic for spring 1991: Acoustics of French (A. Cohn).

German

W. Harbert, J.H. Jasanoff, H.L. Kufner (director of undergraduate studies, 211 Morrill Hall, 255–0723).

For literature courses see German Studies.

The German Major

See German Studies.

Study Abroad

Cornell has a formal agreement with the University of Hamburg enabling its undergraduates to take courses in any field offered by the German university. The program offers a challenging course of study and the experience of total immersion in German life and culture. Participants in this program attend a required 3-credit orientation course in September, which is designed to help them adjust to the academic and social life of Germany. Special field trips are organized as part of the orientation session. Beginning in mid-October, students enroll as fully matriculated students at the University of Hamburg.

Cornell maintains a center in Hamburg with appropriate support staff. The resident director is a faculty member from Cornell, who teaches a special seminar each semester, provides academic advice, and helps ensure the quality of the courses. The center, which includes a classroom, a small library, and word-processing facilities, is used by students for the orientation session, special seminars, tutorials, lectures, and informal gatherings.

Applicants are expected to have attained at least proficiency in German prior to departure. Students are strongly encouraged to study abroad for the entire year rather than for one semester. For further information, students should contact H.L. Kufner, Director of undergraduate studies, Department of Modern Languages and Linguistics, and the Cornell Abroad Office (474 Uris Hall, 255–6224).

German Area Studies Major

See German Studies.

Honors. The honors program in German is open to superior students who want to work independently in an area of their own choice. Students are free to select any faculty member of the Field of Germanic Studies (in the case of area studies majors, the appropriate member of their committee) to assist them in designing their honors program, to supervise their work, and to help them select a suitable topic for an

honors essay. The independent study courses, German 451 and 452, may form part of the program.

Freshman Writing Seminar Requirement
See German Studies.

Fees. Depending on the course, a small fee may be charged for photocopied texts for course work.

121–122 Elementary Course
121, fall or summer; 122, spring or summer. 4 credits each term. Prerequisite for German 122: German 121 or equivalent. Intended for beginners or students placed by examination. Students who obtain a CPT score of 560 after German 121–122 attain qualification and may enter the 200-level sequence; otherwise German 123 is required for qualification.
Lec, T 9:05, 11:15, or 1:25; drills, M W R F 8, 9:05, 10:10, 11:15, 12:20 or 1:25. H. L. Kufner.
A thorough grounding in all the language skills is given: listening, speaking, reading, and writing. Language practice is in small groups. Lectures cover grammar, reading, and cultural information.

123 Continuing German
Fall, spring, or summer. 4 credits. Limited to students who have previously studied German and have a CPT achievement score between 450 and 559. Satisfactory completion of German 123 fulfills the qualification portion of the language requirement.
Fall: Lec, M 12:20; drills, T–F 9:05, 10:10, 11:15, or 12:20. Spring: Lec, M 12:20; drills, T–F 10:10 or 12:20 H. L. Kufner.
An all-skills course designed to prepare students for study at the 200 level.

203 Intermediate Composition and Conversation
Fall or spring. 3 credits. Prerequisite: qualification in German (German 123 or CPT score of 560–649).
Fall: M W F 9:05, 10:10, 11:15, or 1:25. Spring: M W F 9:05, 10:10, or 1:25. Staff.
Guided conversation, composition, reading, and grammar review emphasizing the development of accurate and idiomatic expression.

204 Intermediate Composition and Conversation
Fall or spring. 3 credits. Prerequisite: German 203 or permission of instructor.
Fall: M W F 11:15. Spring: M W F 10:10, 11:15, or 1:25. Staff.

303–304 Advanced Composition and Conversation
303, fall; 304, spring. 4 credits each term. Prerequisite for German 303: German 204 or equivalent. Prerequisite for German 304: German 303 or equivalent.
Fall: M W F 10:10 or 11:15; Spring: M W F 11:15. G. Valk.
Emphasis is on increasing the student's oral and written command of German. Detailed study of present-day syntax and different levels of style.

306 Zeitungsdeutsch
Fall. 4 credits. Prerequisite: German 304 or equivalent.
M W F 9:05. G. Valk.

401 Introduction to Germanic Linguistics
Fall. 4 credits. Prerequisite: Linguistics 101 or permission of instructor.
Hours to be arranged. W.E. Harbert.
Survey of major issues in historical Germanic linguistics.

[402 History of the German Language
Spring. 4 credits. Prerequisites: German 204 and Linguistics 101 or permission of instructor. Offered alternate years. Not offered 1990–91.
Hours to be arranged. Staff.
Phonological, morphological, syntactic, and semantic developments from pre-Old High German times to the present.]

[403 Modern German Phonology
Fall. 4 credits. Prerequisites: German 304 or equivalent, and Linguistics 101 or 301. Not offered 1990–91.
Hours to be arranged. Staff.
The phonological system of German is viewed from various theoretical approaches.]

[404 Modern German Syntax
Spring. 4 credits. Prerequisite: German 304 or equivalent, and Linguistics 101 or 303. Not offered 1990–91.
Hours to be arranged. W.E. Harbert.
An application of selected theoretical syntactic models to problems in the syntax of modern German.]

406 Runology
Spring. 4 credits. Prerequisite: German 401.
Hours to be arranged. W. Harbert.
A study of the inscriptions in the older futhark and their relevance to historical Germanic linguistics.

407 Applied Linguistics: German
Fall. 4 credits.
M W F 10:10. H.L. Kufner.
Designed to equip the teacher of German with the ability to apply current linguistic theory to the second-language learning situation.

[602 Gothic
Spring. 4 credits. Prerequisite: Linguistics 101. Offered alternate years.
Hours to be arranged. W.E. Harbert.
Linguistic structure of Gothic, with extensive readings of Gothic texts.]

603 Old High German, Old Saxon
Fall. 4 credits. Prerequisite: Linguistics 101. Offered alternate years.
Hours to be arranged. W. Harbert.

[605 Structure of Old English
Fall. 4 credits. Prerequisite: German 401. Not offered 1990–91.
Hours to be arranged. W.E. Harbert.
Linguistic overview of Old English, with emphasis on phonology and syntax.]

[606 Topics in Historical Germanic Phonology
Fall. 4 credits. Prerequisite: German 401. Not offered 1990–91.
Hours to be arranged. Staff.
The development of the sound system from Proto-Germanic to its daughter languages.]

[607 Topics in Historical Germanic Morphology
Fall. 4 credits. Prerequisite: German 401. Not offered 1990–91.
Hours to be arranged. J. Jasanoff.
The Germanic verbal system and its Indo-European origins.]

608 Topics in Historical Germanic Syntax
Fall. 4 credits. Prerequisite: German 401.
Hours to be arranged. W.E. Harbert.
A diachronic and comparative investigation of syntactic processes in the older Germanic languages.

609–610 Old Norse
609, fall or summer; 610, spring or summer. 4 credits each term.
Hours to be arranged. Staff.
Study of the linguistic structure of Old Norse, with extensive reading of Old Norse texts.

[611 Readings in Old High German and Old Saxon
Spring. 4 credits.
Hours to be arranged. J. Jasanoff.
Texts are chosen to suit the interests of the students taking the course but normally include selections from the more extensive Old High German and Old Saxon sources (Otfrid, Tatian, Heliand) as well as representative shorter works such as Hildebrandslied, Muspilli, and Genesis.]

631–632 Elementary Reading I
631, fall or summer; 632, spring or summer. 3 credits each term. Limited to graduate students. Prerequisite for German 632: German 631 or equivalent.
M W F 9:05 or 12:20. D. McGraw.
Emphasis is on developing skill in reading, although some attention will be devoted to the spoken language, especially to listening comprehension.

[710 Seminar in Germanic Linguistics
Fall or spring, subject to the needs of students and to the limitations of staff time. 4 credits. Not offered 1990–91.
Hours to be arranged. Staff.]

[720 Seminar in Comparative Germanic Linguistics
Fall or spring, subject to the needs of students and to the limitations of staff time. 4 credits. Not offered 1990–91.
Hours to be arranged. Fall: staff; spring: W.E. Harbert.
Topics include phonology, morphology, syntax, and dialectology of the older Germanic languages.]

[730 Seminar in German Linguistics
Fall or spring, subject to the needs of students and the limitations of staff time. 4 credits. Not offered 1990–91.
Hours to be arranged. Staff.
Selected topics including the history, structure, and dialects of German.]

Modern Greek
See listings under Classics.

Modern Hebrew

Hindi-Urdu

101–102 Hindi-Urdu Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite for Hindi 102: Hindi 101 or equivalent.
Lecs, M W 2:30; drills, M–F 10:10. Staff.
A semi-intensive course for beginners. A thorough grounding in all the language skills is given: listening, speaking, reading, and writing.

201–202 Intermediate Hindi Reading
201, fall; 202, spring. 3 credits each term. Prerequisites: for Hindi 201, Hindi 102; for Hindi 202, Hindi 201 or permission of instructor.
M W F 9:05. Staff.

203–204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Hindi 203, Hindi 102; for Hindi 204, Hindi 203 or permission of instructor.
Hours to be arranged. Staff.

[301–302 Advanced Readings in Hindi Literature
301, fall; 302, spring. 4 credits each term. Prerequisites: for Hindi 301, Hindi 202; for Hindi 302, Hindi 301 or equivalent. Not offered 1990–91.
Hours to be arranged. Staff.]

303–304 Advanced Composition and Conversation
303, fall; 304, spring. 4 credits each term. Prerequisites: for Hindi 303, Hindi 204 or equivalent; for Hindi 304, Hindi 303 or equivalent.
Hours to be arranged. Staff.

[305–306 Advanced Hindi Readings
305, fall; 306, spring. 4 credits each term. Prerequisites: for Hindi 305, Hindi 202 or equivalent; for Hindi 306, Hindi 305 or equivalent. Not offered 1990–91.
Hours to be arranged. Staff.
Intended for those who wish to do readings in history, government, economics, etc., instead of literature.]

Note: For complete descriptions of courses numbered 600 and above, consult the appropriate instructor.

[700 Seminar in Hindi Linguistics
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged. Staff.]

Hungarian

[131–132 Elementary Course
131, fall; 132, spring. 3 credits each term. This language series cannot be used to satisfy the language requirement. Offered alternate years. Not offered 1990–91.
M W F 9:05. Staff.
Intended for beginners or students with limited knowledge of the language.]

Indonesian

For students who have completed Indonesian 101–102 or its equivalent there is the option of a one-semester program in Malang, East Java, during the junior year. The program combines a variety of cultural and artistic options with area course work and advanced language study. Complete information is available through Cornell Abroad.

Students who have completed a minimum of 18 credits or the equivalent are eligible to apply for a summer program in the Advanced Indonesian Abroad Program. Further information is available from Professor J. U. Wolff.

101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite for Indonesian 102: Indonesian 101.
M–F 9:05, plus 2 hours to be arranged. J. U. Wolff.
A semi-intensive course for beginners.

201–202 Intermediate Indonesian Reading
201, fall; 202, spring. 3 credits each term. Prerequisites: for Indonesian 201, Indonesian 102; for Indonesian 202, Indonesian 201 or permission of instructor.
Hours to be arranged. J. U. Wolff.

203–204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Indonesian 203, Indonesian 102; for Indonesian 204, Indonesian 203 or permission of instructor.
Hours to be arranged. J. U. Wolff.

300 Linguistic Structure of Indonesian
Fall or spring. 4 credits. Prerequisites: Indonesian 101–102 or equivalent, and Linguistics 101.
Hours to be arranged. J. U. Wolff.

301–302 Advanced Readings in Indonesian and Malay
301, fall; 302, spring. 4 credits each term. Prerequisites: for Indonesian 301, Indonesian 201–202 or equivalent; for Indonesian 302, Indonesian 301.
Hours to be arranged. J. U. Wolff.

303–304 Advanced Indonesian Conversation and Composition
303, fall; 304, spring. 4 credits each term. Prerequisites: for Indonesian 303, Indonesian 204; for Indonesian 304, Indonesian 303 or equivalent.
Hours to be arranged. J. U. Wolff.

305–306 Directed Individual Study
305, fall; 306, spring. 2–4 credits. Prerequisite: Indonesian 301–302 and 303–304 or equivalent knowledge of Indonesian or Malay.
Hours to be arranged. J. U. Wolff.
A practical language course on an advanced level in which the students will read materials in their own field of interest, write reports, and meet with the instructor for two hours a week for two credits and twice a week for four credits.

401–402 Advanced Readings in Indonesian and Malay Literature
401, fall; 402, spring. 4 credits each term. Prerequisites: for Indonesian 401, Indonesian 302 or equivalent; for Indonesian 402, Indonesian 401 or equivalent.
Hours to be arranged. J. U. Wolff.

FALCON

161–162 Intensive Course
161, fall; 162, spring. 16 credits each term. Prerequisite: permission of instructor.
M–F 6 hours each day. J. U. Wolff and staff.

For literature courses see Romance Studies.

The Italian Major

See Romance Studies.

Study Abroad

Italian majors may study in Italy, generally during their junior year, under any of those study-abroad plans organized by American universities that allow the transfer of grades and credit, such as the Cornell program in Rome.

The College of Architecture, Art, and Planning maintains a program open to all qualified students attending Cornell. The program is housed in the sixteenth-century Palazzo Massimo, designed by the architect Baldassare Peruzzi, on the Corso Vittorio Emanuele, in the heart of Rome. Students may enroll for a semester in the fall or spring. Courses regularly taught at the Palazzo Massimo include: Architecture 300, 401, 402, 500, 502, Design Studio; Architecture 338 and 399, Special Topics in Architectural History; Architecture 458, Special Projects in Design Communications; Architecture 367, Contemporary Italian Culture; Architecture 510, Thesis Introduction; Art 251, 311, 322, and 371; and History of Art 371, Renaissance and Baroque Art in Rome; Italian 111, 112, elementary Italian 111 and 112 correspond to Cornell courses 121 and 122 respectively (see below). Students having passed 111 in Rome will be admitted to 122 when they get back to Cornell. Students having passed 112 in Rome will be granted credit but must take the CPT (after Fall 1990: the Italian Skills Assessment) for satisfaction of the language requirement and for placement into more advanced courses upon their return to Cornell.

To be eligible, students must have completed the first two years of their curriculum requirements and be in good academic standing.

Fees. Depending on the course, a small fee may be charged for copies of texts for course work.

101 Basic Course I
Summer only. 6 credits.
M–F 8–12. Staff.
A thorough grounding in all basic language skills. Students who have previously studied Italian must take the qualifying examination before registering for this course.

121–122 Elementary Italian
121, fall; 122, spring. 4 credits each term. Prerequisite for Italian 122: Italian 121 or equivalent. Intended for beginners or students placed by examination. At the end of Italian 122, students who score 560 or higher on the CPT (after Fall 1990: the Italian Skills Assessment) attain qualification and may enter the 200-level sequence; otherwise Italian 123 is required for qualification.
Lec, T 10:10, 12:20, or 2:30; drills, M W R F 8, 9:05, 10:10, 11:15, 12:20, 1:25, 2:30, 3:35 or 4:40. I. Chierchia.
A thorough grounding is given in all the language skills: listening, speaking, reading, and writing. Language practice is in small groups. Lectures cover grammar and cultural information.

123 Continuing Italian
Fall and summer. 4 credits. Limited to students who have previously studied Italian and score between 450 and 559 on the CPT (after Fall 1990: the Italian Skills Assessment). Satisfactory completion of Italian 123 fulfills the qualification portion of the language requirement.
M–F 9:05, 10:10, or 11:15. J. Scarpella.

203–204 Intermediate Composition and Conversation
203, fall or spring; 204, spring. 3 credits each term. Prerequisites: for Italian 203, qualification in Italian, for Italian 204, 203 or equivalent.
203, fall: M W F 10:10, 12:20, 1:25 or 2:30. M. Swenson. 203, spring: M W F 1:25. J. Scarpella. 204, spring: M W F 12:20, 1:25 or 2:30. I. Chierchia.
Guided conversation, composition, reading, pronunciation, and grammar review emphasizing the development of accurate and idiomatic expression in the language.

Note: Students placed in 200-level courses also have the option of taking courses in introductory literature; see separate listing under Italian 201 for description of this course, which may be taken concurrently with the Italian 203–204 language courses described above. The introductory literature courses are offered by the respective literature departments, and the 203–204 language courses by the Department of Modern Languages and Linguistics.

300 Advanced Italian: Language in Italian Culture
Spring. 3 credits. Prerequisite: Italian 204 or equivalent or permission of instructor.
M W F 11:15. I. Chierchia.
Further development of all skills, with emphasis on self-expression. Readings center on two themes: (1) contemporary Italian life and (2) the Italian language, its origins, development, and present state, including the role of the dialects. Emphasis on vocabulary building and awareness of stylistic levels.

[403 Linguistic Structure of Italian
Spring. 4 credits. Prerequisites: Linguistics 101 or equivalent, and qualification in any Romance language. Offered alternate years. Not offered 1990–91.
Hours to be arranged. G. Chierchia, C. Rosen.
Survey of Italian grammar in the light of current linguistic theories. Central topics in syntax (auxiliaries, modals, clitics, agreement, impersonal constructions, causatives) and in phonology (syllable format, stress, raddoppiamento phenomena).]

[631 Readings in Italian Opera Libretti
Spring. 2 credits. For graduate students only. Prerequisite: permission of instructor. Offered alternate years. Not offered 1990–91.
Hours to be arranged. C. Rosen.
Several libretti are read with the aim of understanding the syntax, literal meaning, and immediate metaphorical meanings. Some discussion of metrics. Intended primarily for grads concurrently enrolled in a music seminar, with which the readings are correlated.]

Japanese

For literature courses see Asian Studies.

101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite for Japanese 102: Japanese 101 or placement by the instructor during registration. Intended for beginners or for those who have been placed in the course by examination.
Lecs, M W F 10:10 or 12:20; Drills, M–F 8, 9:05, 10:10, 11:15, 12:20, 1:25, 2:30, or 3:35. Staff.
A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

123 Accelerated Introductory Japanese
Fall. 6 credits. Prerequisite: placement by the instructor at beginning of semester.
Lecs, M W F 12:20 (with Japanese 101); drills, M W F 1:25. Staff.
Accelerated training in listening, speaking, reading, and writing for students who have already acquired a limited facility in Japanese through residence in Japan or brief formal study but who require additional training to qualify for admission to Japanese 102.

201–202 Intermediate Japanese Reading I
201, fall; 202, spring. 2 or 3 credits each term. Students having had Japanese 203 and 204 register for 2 credits and attend the W drill and the F lecture; other students register for 3 credits (with permission of instructor) and attend the W drill and the M, W, F lectures. Prerequisites: for Japanese 201, Japanese 102 or placement by the instructor during registration; for Japanese 202, Japanese 201 and 204 or placement by the instructor during registration.
Lecs, M W F 1:25; drill, W 10:10, 2:30, or 3:35. Staff.
Reading of elementary texts with emphasis on expository style.

203–204 Intermediate Japanese Conversation
203, fall and summer; 204, spring and summer. 4 credits each term. Prerequisites: for Japanese 203, Japanese 102 or placement by the instructor during registration; for Japanese 204, Japanese 203, 205, or 223, or placement by the instructor during registration.
Lecs, M W 1:25; drills, M T R F 10:10, 11:15, 12:20, 2:30, or 3:35. Staff.
Training in listening and speaking for students who have acquired basic oral proficiency. Students are strongly encouraged to enroll in Japanese 201–202 concurrently.

[223 Transition to Intermediate Japanese Conversation
Fall. 6 credits. Prerequisite: Japanese 160 (Cornell intensive summer course) or placement by the instructor during registration. Not offered 1990–91.
Lecs, T R 1:25 plus one hour to be arranged; drills, M–F 12:20. Staff.
Provides transition, primarily for summer course students, into regular program. After Japanese 223 the students will have covered the same material that 203 students have covered. Japanese 223 satisfies prerequsite for 204. Recommended also for students with insufficient background to qualify for Japanese 203, determined by examination during registration period.]

301–302 Intermediate Japanese Reading II
301, fall; 302, spring. 4 credits each term. Prerequisites: for Japanese 301, Japanese 202 or placement by the instructor during registration; for Japanese 302, Japanese 301 or placement by the instructor during registration.
M W F 11:15 or 2:30. K. Smith or K. Selden.
Reading of selected modern texts with emphasis on expository style.

303–304 Communicative Competence
303, fall; 304, spring. 3 credits each term. Prerequisite for Japanese 303, Japanese 204 or placement by the instructor during registration; for Japanese 304, Japanese 303 or placement by the instructor during registration.
M W F 1:25 or 3:35; lec to be arranged. Staff.
Drill in the use of spoken Japanese within the constraints set by Japanese social settings.

341–342 Advanced Japanese for Business Purposes
341, fall; 342, spring. 4 credits each term. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
This course sequence will offer advanced training in Japanese with concentration on topics relating to the conduct of business. The emphasis will be on spoken skills, with provision for an optional reading component.

401–402 Advanced Japanese Reading
401, fall; 402, spring. 4 credits each term. Prerequisites: for Japanese 401, Japanese 302 or placement by the instructor during registration; for Japanese 402, Japanese 401 or placement by the instructor during registration.
M W F 2:30 or 3:35. K. Smith and K. Selden.
Reading of selected modern texts with emphasis on expository style.

[404 Linguistic Structure of Japanese
Spring. 4 credits. Prerequisites: Japanese 102 or permission of instructor, and Linguistics 101, or equivalent introductory course in linguistics. Not offered 1990–91.
Hours to be arranged. J. Whitman.]

407–408 Oral Narration and Public Speaking
407, fall; 408, spring. 2 credits each term. Prerequisites: for Japanese 407, Japanese 304 or placement by the instructor during registration; for Japanese 408, Japanese 407 or placement by the instructor during registration.
T R 1:25. K. Noguchi.
Instruction in storytelling, lecturing, and speechmaking, with emphasis on both the construction of discourse and Japanese patterns of oral delivery.

[410 History of the Japanese Language
Fall. 4 credits. Prerequisite: Permission of instructor. Offered alternate years. Not offered 1990–91.
Hours to be arranged. J. Whitman.
An overview of the history of the Japanese language followed by intensive examination of issues of interest to the participants. Students should have a reading knowledge of Japanese or a background in historical or comparative linguistics. Interests of both groups will be addressed.]

421–422 Directed Readings
421, fall; 422, spring. Credit to be arranged. Limited to advanced students and offered according to staff-time availability. Prerequisite: placement by the instructor during registration.
Hours to be arranged. Staff.
Topics are selected on the basis of student needs.

543–544 Intermediate Japanese for Business Purposes
543, fall; 544, spring. 4 credits. For graduate students only.
Hours to be arranged.
Training in listening and speaking for students who have acquired basic oral proficiency.

545–546 Advanced Japanese for Business Purposes
For graduate students only; undergraduates register for Japanese 341–342.
Hours to be arranged. Staff.
For description see Japanese 341–342.

FALCON

R. Sukle, 412 Morrill Hall (255–0734)

161–162 Intensive Japanese (FALCON)
161, fall; 162, spring. 16 credits each term. Prerequisites: for Japanese 161, Japanese 102 or 160 (Cornell summer intensive course) at Cornell, or placement by the instructor during registration; for Japanese 162, Japanese 161 at Cornell or placement by the instructor during registration.
M–F, 6 hours each day. R. Sukle and staff.

Javanese

131–132 Elementary Course
131, fall; 132, spring. 3 credits each term. Prerequisite: for Javanese 132, Javanese 131 or equivalent.
Hours to be arranged. J. U. Wolff.
An elementary language course for those who have had no previous experience in the language.

133–134 Continuing Course
133, fall; 134, spring. 3 credits each term. Prerequisites: for Javanese 133, Javanese 132 or equivalent; for Javanese 134, Javanese 133 or equivalent.
Hours to be arranged. J. U. Wolff.

203–204 Directed Individual Study
203, fall; 204, spring. 3 credits. Prerequisite: Javanese 134 or equivalent.
Hours to be arranged. J. U. Wolff.
This is a practical language course on an intermediate level in which the students will work through readings and conversations under the guidance of a native speaker for three contact hours a week.

Old Javanese

See Linguistics 651–652.

Khmer (Cambodian)

101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite for Khmer 102: Khmer 101 or equivalent.
Hours to be arranged. G. Diffloth.

201–202 Intermediate Khmer Reading
201, fall; 202, spring. 3 credits each term. Prerequisites: for Khmer 201, Khmer 102; for Khmer 202, Khmer 201.
Hours to be arranged. G. Diffloth.

203–204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Khmer 203, Khmer 102; for Khmer 204, Khmer 203.
Hours to be arranged. G. Diffloth.

301–302 Advanced Khmer
301, fall; 302, spring. 4 credits each term. Prerequisites: for Khmer 301, Khmer 202 or equivalent; for Khmer 302, Khmer 301.
Hours to be arranged. G. Diffloth.

[401–402 Directed Individual Study
401, fall; 402, spring. For advanced students. 4 credits each term. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged. G. Diffloth.]

[404 Structure of Khmer
Spring. 4 credits. Prerequisite: Linguistics 101–102 or equivalent. Not offered 1990–91.
Hours to be arranged. G. Diffloth.]

Korean

101–102 Elementary Korean
101, fall; 102, spring. 4 credits.
Lec, T R 9:05; drills: M T W R 8, 11:15, or 3:35. H. Diffloth.
Covers basics of speaking, reading, and writing. Introduces Hangul writing system and rudiments of grammar.

201–202 Intermediate Korean
201, fall; 202, spring. 4 credits.
Lec, T 1:25; Sec, M W R 1:25. H. Diffloth.
Covers the basics of speaking, reading, and writing at the intermediate level. Introduces some reading and writing with Chinese characters.

Latin

See listings under Classics.

Linguistics

Linguistics, the systematic study of human speech, lies at the crossroads of the humanities and the social sciences, and much of its appeal derives from the special combination of intuition and rigor that the analysis of language demands. The interests of the members of the Department of Modern Languages and Linguistics span most of the major subfields of linguistics, phonetics and phonology, the study of speech sounds; syntax, the study of sentence structure; semantics, the study of meaning; historical linguistics, the study of language change in time; sociolinguistics, the study of language as a social and cultural artifact; and applied linguistics, which relates the results of linguistic research to problems of bilingual education, second-language learning, and similar practical concerns.

Studying linguistics is not a matter of studying many languages. Linguistics is a theoretical discipline with ties to such areas as cognitive psychology, philosophy, logic, computer science, and anthropology. Nonetheless, knowing particular languages (e.g., Spanish or Japanese) in some depth can enhance understanding of the general properties of human language. Not surprisingly, then, many students of linguistics owe their initial interest to a period of exposure to a foreign language, and those who come to linguistics by some other route find their knowledge about languages enriched and are often stimulated to embark on further foreign language study.

Students interested in learning more about linguistics and its relationship to other disciplines in the humanities and social sciences are encouraged to take Linguistics 101–102, which is a prerequisite for most other courses in the field. The Cornell Linguistic Circle, a student organization, sponsors frequent colloquia on linguistic topics; these meetings are open to the university public, and anyone wishing to learn more about linguistics is most welcome to attend.

The Major

The prerequisite for a major in linguistics is completion of Linguistics 101–102. The major has its own language requirement, which should be completed as early as possible: qualification in two languages other than English, one of which must be non-European or non-Indo-European. With approval of the department's director of undergraduate studies, this requirement may be waived (i.e., reduced to the normal arts college language requirement) for students taking the cognitive studies concentration or a double major.

The other requirements for the linguistics major are:

1) Linguistics 301 (phonology), Linguistics 303 (syntax), Linguistics 309 or 310 (morphology), and Linguistics 410 (historical linguistics)
2) a course at or beyond the 300 level in the structure of English or some other language or a typological or comparative structure course such as Linguistics 401
3) two additional linguistics courses totaling at least 8 credits, one of which may be a course with significant linguistic content in a related field.

Prospective majors should see Professor Cohn, 216 Morrill Hall.

For other courses relevant to linguistics, see anthropology, psychology, human development and family studies, computer science, cognitive studies, and philosophy.

Honors. Applications for honors should be made during the junior year. Candidates for admission must have a 3.0 (B) average overall and should have a 3.2 average in linguistic courses. In addition to the regular requirements of the major, the candidate for honors will complete an honors thesis and take a final oral examination in defense of it. The thesis is usually written during the senior year but may be begun in the second term of the junior year when the student's program so warrants. The oral examination will be conducted by the honors committee, consisting of the thesis adviser and at least one other faculty member in linguistics. Members of other departments may serve as additional members if the topic makes this advisable. Linguistics 493 and 494 may be taken in conjunction with thesis research and writing but are not required.

Distribution Requirement

The distribution requirement in the social sciences may be satisfied by taking Linguistics 101 and (1) any other course in linguistics or (2) any other course offered by the Department of Modern Languages and Linguistics for which this introductory linguistics course is a prerequisite.

Note: See also courses on the structure and history of particular languages or language families listed at the end of this section.

101 Theory and Practice of Linguistics

101, fall, spring or summer. 4 credits each term
M W F 10:10; disc to be arranged.
M. Montalbetti.

An introductory course designed to provide an overview of the science of language, especially its theoretical underpinnings, methodology, and major findings. Linguistics 101 plus any other course in linguistics or any DMLL course for which Linguistics 101 is a prerequisite satisfies the social science distribution requirement.

113 Dos Worlds-Two Mundos

113, fall or spring. 3 credits each term. Freshman Seminar.
T R 10:10–11:25. A. Toribio.

What does it mean to be a Hispanic bilingual? In this course, we will investigate various aspects of Hispanic bilingualism from the perspective of a wide variety of disciplines–education, history, linguistics, psychology and sociology.

[118 Varieties of Human Language

Spring. 3 credits. Applicable toward the social science distribution requirement.
M W F 10:10. J.E. Grimes.

Language diversity is a fact of our complex world. Whether spoken by a handful of speakers or by hundreds of millions, each language manages the same tasks of communication and fits in with its social environment. Language identification, literacy, and multilingualism are among the issues touched on.]

121 Language and Gender (also Women's Studies 121)

Fall and summer. 3 credits. Freshman Seminar.
T R 1:25–2:40. S. McConnell-Ginet.

What does it mean to speak "like a woman" or "like a man," "like a girl" or "like a boy"? Even ten-year-olds in our culture approach similar communicative tasks in gender-differentiated ways: girls often get others to do things by saying things like, "let's get some coat-hangers," whereas their male peers are more likely to say something like "get me a coat-hanger." How do race, social class, age, setting, and aims interact with gender in affecting communicative style? How do our ways of writing and talking reflect and perpetuate gender stereotypes or biases? What is the role of sex and gender in language change?

123 Language in a Changing World

Fall or spring. 3 credits: Freshman seminar.
T R 11:40–12:55. D. Silva.

Language connects individual human minds in larger social groups. Not surprisingly, we find diversity and change in language both reflecting and creating diversity and change in society. Sociolinguistic history is revealing. Writing assignments will explore facts and theories as well as fiction about the linguistic dimensions of social change and the historical shaping of language, drawing on assigned readings and class discussion.

125 Women, Fire, and Dangerous Things

Spring. 3 credits: Freshman seminar.
Hours to be arranged. A. Wyner.

This course will explore the way we use language to express our ideas and feelings of ourselves, other people, and the objects and events we see around us. The course will encourage close scrutiny of language and thought, developing attention to linguistic categorizations of experience.

201 Introduction to Phonetics and Phonology

Spring. 4 credits. Prerequisite: Linguistics 101 or equivalent or permission of instructor.
M W F 11:15. A. Cohen.

An introduction to the study of human speech sounds and how they pattern in languages. The first part of the course will focus on phonetics: the production, acoustics, and perception of speech, with attention to both the common and the less common sounds of the world's languages. The second part of the course will focus on phonology: how human speech sounds pattern within and across languages, with an emphasis on the rules that govern these patterns and their possible representation.

[244 Language and Gender/Sex (also Women's Studies 244)

Spring. 4 credits. For non-majors or majors. Not offered 1990–91.
Hours to be arranged.
S. McConnell-Ginet.

This course explores connections between language (use) and gender/sex systems, addressing such questions as the following. How do sex and gender affect the ways we speak, the ways we interpret and evaluate speech? How do sociocultural differences in women's and men's roles affect their language use, their relation to language change? What is meant by sexist language? How does conversation structure the social worlds of women and men? Readings draw from work in linguistics, anthropology, philosophy, psychology, literature, and general women's studies and feminist theory.]

[264 Language, Mind, and Brain

Fall. 4 credits. For non-majors or majors. Prerequisite: a basic course in linguistics and/or psychology is desirable. Not offered 1990–91.
T R 1:25–2:40. J. S. Bowers.

An introductory course that emphasizes the formal structure of natural language and its biological basis. The following topics are covered: the formal representation of linguistic knowledge, principles and parameters of universal grammar, the basic biology of language, mechanisms of linguistic performance, the modularity hypothesis, and language and cognition. This course is especially suited for majors in fields such as psychology, philosophy, computer science, and linguistics (and also for those enrolled in the concentration in cognitive studies) who want to take a one-semester introduction to linguistics that concentrates on the formal principles that govern linguistic knowledge, along with some discussion of their biological realization and their use in perception and production.]

300 Multilingual Societies and Cultural Policy

Fall. 4 credits.
T R 2:55–4:10. D. F. Solá.

An interdisciplinary analysis of the impact of bilingualism on society, particularly in education and communication arts. The FLEX model is used to suggest a method of evaluating policy and program alternatives.

301–302 Phonology I, II

301, fall; 302, spring. 4 credits each term. Prerequisites: for Linguistics 301, Linguistics 102; for Linguistics 302, Linguistics 301 or permission of instructor.
M W 2:30–3:45. N. Clements.

An introduction to contemporary phonology, which studies the system of rules and representations underlying the human ability to produce and understand speech; 301: an overview of descriptive phonetics and phonetic transcription, the phoneme, principles of phonological analysis, phonological rules and their interaction, distinctive features, and the syllable. 302: using American English as a case study, explores in detail the nature of rule systems and rule interaction, levels of representation, stratal organization of phonological rules, lexical and morphonological conditioning of rules, and the relation between phonology and syntax.

303–304 Syntax I, II

303, fall; 304, spring. 4 credits each term. Prerequisites: for Linguistics 303, Linguistics 102; for Linguistics 304, Linguistics 303 or permission of instructor.
T R 10:10–11:25. J. S. Bowers.

303 is an introduction to syntactic theory, with emphasis on the classical theory of transformational grammar. 304 is an advanced course, surveying current syntactic models and dealing with such issues as the nature of syntactic representation, levels of representation, principles of universal grammar, and the relation of syntax and semantics.

[306 Functional Syntax

Fall. 4 credits. Prerequisite: Linguistics 102 or permission of instructor. Not offered 1990–91.
M W F 9:05. D. F. Solá.

A general survey of syntactic theories that highlight grammatical function and reveal its role in discourse structure.]

309–310 Morphology I, II

309, fall; 310, spring. 4 credits each term. Prerequisite: Linguistics 102 or equivalent or permission of instructor.
T R 11:40–12:55. Fall: L. Waugh; spring: staff.

309 is a general survey focusing on the relationship of meaning and form in morphology and introducing techniques of morphological analysis. Current research on form meaning questions is discussed. 310 considers recent discussions in morphological theory.

[311–312 The Structure of English

311, fall; 312, spring. 4 credits each term. Prerequisites: for Linguistics 311, Linguistics 102 or permission of instructor; for Linguistics 312, Linguistics 311 or permission of instructor. Not offered 1990–91.
M W F 11:15. S. McConnell-Ginet.

311 provides an overview of the syntactic structure of English, drawing upon relevant theoretical approaches. 312 deals with phonology, morphology, and special problems of English structure and semantics.]

[313 English for Teachers of English
Fall. 4 credits. Prerequisites: for undergraduate majors, Linguistics 101–102 or equivalent; for graduate students, concurrent registration in Linguistics 101 or equivalent.
M W F 11:15, plus one hour to be arranged. M. Martin. Not offered 1990–91.
A course in modern English for teachers of non-native speakers. An analysis of the phonetics, grammar, and semantics of the language in terms applicable to both classroom teaching and materials development.]

[314 Teaching English as a Foreign Language
Spring. 4 credits. Prerequisite: Linguistics 313.
M W F 11:15, plus one hour to be arranged. M. Martin. Not offered 1990–91.
Methods and techniques used in the teaching of English language skills to non-native speakers are examined. Attention is given to materials design and to current issues and new trends in the fields.]

[316 Introduction to Mathematical Linguistics
Spring. 4 credits. Prerequisite: Linguistics 101–102 or equivalent. Offered alternate years. Not offered 1990–91.
Hours to be arranged. F. Landman.
The course is an introduction to the mathematical concepts and techniques most frequently used in theoretical linguistics. Topics will include the following: elementary set theory, elementary logic, formal systems and algorithms, and trees, automata, and formal grammars. The course is designed for students who are interested in formal linguistics but feel they have a weak mathematical background. It presupposes no previous knowledge of formal methods and it will try to overcome any "anxiety" that such methods may give rise to.]

[319 Phonetics I
Fall. 3 credits. Not offered 1990–91.
M W F 10:10; disc to be arranged. J. Kingston.
An introduction to phonetic theory, with an equal emphasis on the general properties of speech production, acoustics, and perception. Training in production and transcription in a discussion section, in conjunction with Linguistics 301.]

[320 Phonetics II
Spring. 3 credits. Prerequisite: Linguistics 319. Not offered 1990–91.
M W F 10:10; disc to be arranged. J. Kingston.
Surveys current controversies in research on articulation, acoustics, or perception. Possible topics include: phonetic explanation in phonology; testing of the psychological reality of theoretical constructs in phonology; and phonetic implementation of phonological representations.]

[321 History of the Romance Languages
Fall. 4 credits. Prerequisites: Linguistics 101 or equivalent, and qualification in any Romance language. Offered alternate years. Not offered 1990–91.
M W F 1:25. C. Rosen.
Popular Latin. Pan-Romance trends in phonology, morphology, syntax, and the lexicon. Regional divergence. Non-Latin influences. Medieval diglossia and emergence of Romance standards.]

323 Comparative Romance Linguistics
Fall. 4 credits. Prerequisites: Linguistics 101 or equivalent, and qualification in any Romance language. Offered alternate years.
M W F 1:25. C. Rosen.
The Romance language family in a typological perspective. Salient features of eight Romance languages; broad and localized trends in phonology, syntax, and the lexicon; and elements of dialectology.

[325 Pragmatics
Fall. 4 credits. Prerequisite: Linguistics 102 or permission of instructor. Not offered 1990–91.
M W F 10:10. S. McConnell-Ginet.
An introduction to the study of such topics as speech acts, presupposition, deixis, implicatures, and conversational strategies.]

334 Non-Linear Syntax
Spring. 4 credits. Prerequisite: Linguistics 303 or equivalent.
M W F 11:15. C. Rosen.
Analyses of some twenty diverse languages are examined with the aim of building a formal account of the syntactic constructions existing in the world's languages, and discerning universals that delimit this inventory. Non-linear theory, designed for comparative work, depicts constructions in the abstract, not imagining them as arrays of elements in space. Simultaneously it studies the morphosyntactic systems that relate constructions to their linear realizations.

[366 Spanish in the United States (also Spanish 366)
Fall. 4 credits. Prerequisite: some knowledge of Spanish. Offered alternate years. Not offered 1990–91. Applicable toward the social science distribution requirement.
Hours to be arranged. M. Suner.
Examination of major Spanish dialects in the United States from a linguistic perspective. Contrast with the standard language. Borrowing, interference, and code switching. Syntactic, morphological, and phonological characteristics. Sex-related phenomena.]

[370 Language and Cognition (also Psychology 370)
Spring. 4 credits. Prerequisites: Linguistics 101 or 264 or Psychology 215, or permission of one of the instructors. Not offered same years as Psychology 416.
T R 1:25–2:40. J. Bowers, H. Kurtzman.
Examination of current research on selected topics on language from both linguistic and psychological perspectives. Topics may include: Universal Grammar and language acquisition, syntactic parsing, word recognition, sentence production, aphasia, and schizophrenic language.]

400 Semiotics and Language (also Comparative Literature 410)
Spring. 4 credits. Prerequisite: some background in an area relevant to semiotics: e.g., linguistics, philosophy, psychology, anthropology, or literature: or permission of instructor.
Hours to be arranged. L. Waugh.
An introduction to the study of semiotics in general and to particular semiotic theories (for example, those of Saussure, Peirce, Jakobson) and to language as a semiotic system. The particular topics to be discussed will depend on the interest of the students.

401 Language Typology
Fall. 4 credits. Prerequisite: Linguistics 102 or equivalent.
M W F 10:10. J. Whitman.
Study of a basic question of contemporary linguistics: in what ways do languages differ, and in what ways are they all alike? Efforts to formalize universals of syntax and to characterize the total repertory of constructions available to natural languages. Common morphological devices and their syntactic correlates. Emphasis on systems of case, agreement, and anaphora.

[402 Languages in Contact
Fall. 4 credits. Prerequisite: Linguistics 102 or permission of instructor. Offered alternate years.
M W F 9:05. H. L. Kufner.
Examination of a variety of areas where languages exhibit interference phenomena: diglossia, bilingualism, dialects, second-language acquisition.]

405–406 Sociolinguistics
405, fall; 406, spring. 4 credits each term. Prerequisite: Linguistics 102 or permission of instructor. Linguistics 405 is not a prerequisite to 406.
Hours to be arranged. Staff.
405: Social differences in the use of language according to sex, class, age, race, situation, etc. Societal multilingualism, diglossia, etc. Social attention to language: norms and standards, taboo and euphemism, and language planning.
406: the study of language variation. Theoretical and methodological issues in the study of sociolinguistic differences. Variable rules, locating variation in the grammar, and quantitative methods in linguistics.

[410 Introduction to Historical Linguistics
Spring. 4 credits. Prerequisite: Linguistics 102 or permission of instructor.
M W F 10:10. J. Jasanoff.
A survey of the basic mechanisms of linguistic changes, with examples from a variety of languages.]

[412 Process and Knowledge in Speech Perception and Word Recognition
Spring. 4 credits. Prerequisite: Linguistics 319 or permission of instructor. Not offered 1990–91.
T R 1:25–2:40. J. Kingston.
This course examines how speech sounds are received and how words are recognized. The focus in the discussion of speech perception is on the question of whether speech perception requires mechanisms which are unique to it, or if instead general auditory mechanisms are sufficient. Word recognition is examined in terms of the role of phonetic and phonological processes, structures, and knowledge in recognizing words.]

[415–416 Social Functions of Language
415, fall; 416, spring. 4 credits each term. Prerequisites: Linguistics 102 or permission of instructor. Not offered 1990–91.
Hours to be arranged. Staff.
The function of language in society; social constraints on linguistic behavior, including taboos, jargons, registers, social and socially perceived dialects.]

[417 History of the English Language
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
Hours to be arranged. Staff.
Development of modern English; external history; phonological, grammatical, and lexical change. The English language in America.]

418 Nonlinear Phonology
Fall. 4 credits. Prerequisite: Linguistics 302.
M W 4–5:15. A. Cohn.
Explores a comprehensive model of phonological description arising out of work in autosegmental and metrical phonology. Particular topics include tone systems, syllable structure, quantity, stress and intonation, vowel harmony, and feature organization. These topics are related to fundamental issues in phonological theory such as naturalness, markedness, learnability, and universals.

[420 Fundamentals of Speech Acoustics
Spring, according to demand. 4 credits. Prerequisites: Linguistics 319 and at least 1 year of college calculus, including the mathematics of complex variables. Not offered 1990–91.
T R 10:10–11:25. J. Kingston.
This course develops a model of vocal tract acoustics, based on the fundamental principles of acoustic theory.]

421–422 Semantics I, II
421, fall; 422, spring. 4 credits each term. Prerequisites: for Linguistics 421, Linguistics 102; for Linguistics 422, Linguistics 421 or permission of instructor.
T R 2:55–4:10. Fall: F. Landman. Spring: G. Chierchia.
421: an introduction to semantics of natural language. The course starts from basic foundational questions concerning the nature of meaning and the empirical domain of semantic theory. Truth-conditional and logical theories and their application to the investigation of the structure of natural languages are extensively explored (with some comparisons with other approaches). Through the study of quantification, scope, anaphora, modalities, presuppositions, and the like, one tries to gain insight into general characteristics of the cognitive apparatus that is at the basis of our capacity for understanding sentences.

422: guides students into current work in semantic theory. The first half of the course is an introduction to Montague-style semantics, whose influence on current research is quite extensive. The second half of the course focuses on selected topics that have grown out of (and sometimes against) classical Montague semantics. Such topics are usually drawn from the following: generalized quantifiers and anaphora, type-shifting, problems of tense and aspect, the linguistic relevance of algebraic approaches to properties, propositions, events and thematic roles, and discourse representation theory.

[423–424 The Structure of Turkish
423, fall; 424, spring. 4 credits each term. Prerequisites: Linguistics 303–304 or equivalent. Not offered 1990–91.
Hours to be arranged. L. H. Babby.
The purpose of Linguistics 423–424 is to familiarize students of linguistics with a language whose structure is radically different from that of the familiar Indo-European languages and to evaluate its contribution to current linguistics theory. Linguistics 423 introduces the basic phonology, morphology, and syntax of Turkish, along with the special problems of agglutinative morphology and left-branching (SOV) syntax. Among the topics covered are: causativization, passive, phrase-structure, case and semantic roles, word order, the syntax of non-finite categories, and the auxillary system. Linguistics 424 is devoted to recent monographs dealing with Turkish and its contribution to current linguistic theory and to the reading and analysis of selected Turkish prose texts.]

[425–426 Structure of Bantu I and II
425, fall; 426, spring. 4 credits each term. Prerequisites: for Linguistics 425, Linguistics 301 or permission of instructor; for Linguistics 426, Linguistics 303 and 425 or permission of instructor. Not offered 1990–91.
Hours to be arranged. G. N. Clements.
425 is an introduction to descriptive and historical Bantu linguistics. Following a review of basic features of Proto-Bantu grammar and lexicon, we examine the phonology and morphology of a selected Bantu language with the help of a native speaker assistant. 426 is a sequel to Linguistics 425 and investigates aspects of Bantu syntax and its relation to phonology, morphology, and discourse function.]

430 Structure of Korean
Spring. 4 credits. Offered alternate years.
Hours to be arranged. J. Whitman.
Intensive examination of the syntax and phonology of a non-Indo-European language with the objective of testing principles of current linguistic theory. No previous knowledge of Korean required.

[436 Language Development (also Psychology 436 and Human Development and Family Studies 436)
Spring. 4 credits. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linquistics. Offered alternate years. Not offered 1990–91.
T R 11:40–12:55. B. Lust.
A survey of basic issues, methods, and research in study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental linguistic issues of universal grammar and the biological foundations for acquisition are discussed, as are the issues of relations between language and thought. The acquisition of communication systems in nonhuman species such as chimpanzees are addressed, but major emphasis is on the child.]

[440 Dravidian Structures
Spring, according to demand. 4 credits. Prerequisite: Linguistics 102.
Hours to be arranged. Staff.
A comparative and constrative analysis of the structures of several Dravidian languages.]

[442 Indo-Aryan Structures
Fall, according to demand. 4 credits. Prerequisite: Linguistics 102.
Hours to be arranged. J. W. Gair.
Typological discussion of the languages of the subfamily. Specific topics and emphasis may vary depending on the interest of the students.]

[443–444 Linguistic Structure of Russian (also Russian 403–404)
443, fall; 444, spring. 4 credits each term. Prerequisite for Linguistics 443: permission of instructor, Linguistics 101–102 recommended. Prerequisite for Linguistics 444: Linguistics 443 or equivalent. Offered alternate years. Not offered 1990–91.
T R 10:10–11:40. L. H. Babby.
A synchronic analysis of the structure of modern Russian. Linguistics 443 deals primarily with morphology and its relation to syntax and 444 with syntax and word order. Topics covered include case theory, the functions of word order, voice, agreement, impersonal constructions, negation, nonuniversal categories, and the relation between morphology and syntax.]

[450 Computational Linguistics
Fall. 4 credits. Prerequisite: Linguistics 303. Not offered 1990–91.
Hours to be arranged. F. Landman.
In this course we will study questions concerning the generative capacity, learnability, and parsing of different syntactic models. Some knowledge of recent developments in syntax is important. Some knowledge of mathematical linguistics may be helpful, but is not required. The course is meant for graduate students and advanced undergraduate students in linguistics, but may also be of interest to students in psychology/psycholinguistics, computer science, and cognitive studies.]

493 Honors Thesis Research
Fall. 4 credits.
Hours to be arranged. Staff.
May be taken before or after Linguistics 494, or may be taken independently.

494 Honors Thesis Research
Spring. 4 credits.
Hours to be arranged. Staff.
May be taken as a continuation of, or before, Linguistics 493.

600 Field Methods
Fall or spring. 4 credits. Prerequisites: Linguistics 101 or 319.
Hours to be arranged. G. Diffloth.
Elicitation, recording, and analysis of data from a native speaker of a non-Western language not generally known to students.

601 Topics in Phonological Theory
Spring. 4 credits. Prerequisites: Linguistics 301 and one other course in phonology.
Hours to be arranged. N. Clements.
Selected topics in current phonological theory.

[603 History of Linguistics
Fall. 4 credits. Not offered 1990–91.
Hours to be arranged. Staff.
The history of linguistics from early Greek and Sanskrit grammarians to the modern period.]

604 Research Workshop
Spring. 4 credits. Prerequisite: three or more semesters of graduate study in linguistics.
Hours to be arranged. Staff.
Participants will present their own ongoing research and discuss it with their colleagues. Individual topics will be chosen on the basis of interest, experience, and probable focus of dissertation research.

[608 Discourse Analysis
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1990–91.
M 2:30–4:30. J. E. Grimes.
Linguistic theory applied to relationships beyond the sentence.]

[609 Greek Comparative Grammar (also Classics 421)
Fall. 4 credits. Prerequisite: thorough familiarity with the morphology of classical Greek. Not offered 1990–91.
M W F 10:10. A. Nussbaum.
The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.]

[610 Latin Comparative Grammar (also Classics 422)
Fall or spring. 4 credits. Prerequisite: thorough familiarity with the morphology of classical Latin. Not offered 1990–91.
Hours to be arranged. A. Nussbaum.
The prehistory and evolution of the sounds and forms of classical Latin as reconstructed by comparison with the other Indo-European languages.]

[611 Greek Dialects (also Classics 425)
Fall or spring. 4 credits. Not offered 1990–91.
M W F 9:05. A. Nussbaum.
A survey of the dialects of ancient Greek through the reading and analysis of representative epigraphical and literary texts.]

[612 Italic Dialects (also Classics 424)
Fall. 4 credits. Not offered 1990–91.
T R 11:40–12:55. A. Nussbaum.
The phonology and morphology of Faliscan, Oscan, and Umbrian studied through the reading of epigraphical texts. Attention to the relations of these languages to Latin and the question of proto-Italic.]

[613 Homeric Philology (also Classics 427)
Fall or spring. 4 credits. Prerequisite: ability to read Homeric Greek. Not offered 1990–91.
Hours to be arranged. A. Nussbaum.
The language of the Homeric epics: dialect background, archaisms, epicisms, and modernizations. The notion of a Kunstsprache: its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.]

[614 Archaic Latin (also Classics 426)
Spring. 4 credits. Prerequisite: reading knowledge of Latin. Not offered 1990–91.
Hours to be arranged. A. Nussbaum.
Reading of epigraphic and literary preclassical texts with special attention to archaic and dialectal features. The position of Latin among the Indo-European languages of ancient Italy, the rudiments of Latin historical grammar, and aspects of the development of the literary language.]

[615 Mycenaean Greek (also Classics 429)
Fall or spring. 4 credits. Prerequisite: thorough familiarity with the morphology of classical Greek. Not offered 1990–91.
Hours to be arranged. A. Nussbaum.
An introduction to the epigraphy, language, and content of the Linear B tablets with special attention to their implications for Greek historical grammar and dialectology.]

[617–618 Hittite
617, fall; 618, spring. 4 credits each term. Prerequisites: for Linguistics 617, permission of instructor; for Linguistics 618, Linguistics 617 or permission of instructor. Not offered 1990–91.
Hours to be arranged. J. Jasanoff.]

[619 Rigveda
Fall. 4 credits. Not offered 1990–91.
Hours to be arranged. J. Jasanoff.
Reading and linguistic analysis of selected Vedic hymns.]

620 Area Topics in Romance Linguistics
Spring. 4 credits. May be repeated for credit. Offered alternate years.
Hours to be arranged. C. Rosen.
Topic for 1991: reading and linguistic analysis of selected early Romance texts.

[621 Problems and Methods in Romance Linguistics
Spring. 4 credits. Prerequisites: one syntax course and qualification in two Romance languages. Offered alternate years. Not offered 1990–91.
Hours to be arranged. C. Rosen.
Central topics in Romance syntax in the light of current theories of universal grammar.]

[623–624 Old Irish
623, fall; 624, spring. 4 credits each term. Prerequisite for 624: 623 or permission of instructor. Not offered 1990–91.
Hours to be arranged. J. Jasanoff.]

[625–626 Middle Welsh
625, fall; 626, spring. 4 credits each term. Prerequisites: for Linguistics 625, knowledge of one ancient or medieval European language or permission of instructor; for Linguistics 626, Linguistics 625 or equivalent. Not offered 1990–91.
Hours to be arranged. Staff.]

[627 Advanced Old Irish
Spring. 3 credits. Prerequisite: one year of Old Irish. Not offered 1990–91.
Hours to be arranged. Staff.]

[631 Comparative Indo-European Linguistics
Fall. 4 credits. Prerequisite: permission of instructor.
T R 10:10–11:25. J. Jasanoff.
An introduction to the comparative grammar of the Indo-European languages.]

[633 Seminar in First-Language Acquisition: Cross-linguistic Studies of the Acquisition of Anaphora (also Human Development and Family Studies 633)
Fall or spring. 1–4 credits. Prerequisite: Linguistics 436 or equivalent or permission of instructor. Not offered 1990–91.
Hours to be arranged. B. Lust.
This seminar will review and critique current theoretical and experimental studies of the first-language acquisition of anaphora, with a concentration on insights gained by cross-linguistic study of this area. The seminar will forcus on relating current developments in linguistic theory regarding anaphora to current experimental research on first-language acquisition of anaphora. Attention will also be given to the development of research proposals.]

[635–636 Indo-European Workshop
635, fall; 636, spring. 4 credits each term. Prerequisite: permission of instructor.
Hours to be arranged. Fall: A. Nussbaum; spring: J. Jasanoff.
An assortment of subjects intended for students with previous training in Indo-European linguistics: problems in the reconstruction of Proto Indo-European, topics in the historical grammars of the various IE languages, reading and historical linguistic analysis of texts, and grammatical sketches of "minor" IE languages.]

[639–640 Introduction to Pali
639, fall; 640, spring. 3 credits each term.
Hours to be arranged. J. W. Gair.
639 is an introduction to the language of the canonical texts of Theravada Buddhism. Reading of authentic texts with emphasis on both content and grammatical structure. Familiarity with Sanskrit is not required. 640 is a continuation of 639 with further readings.]

[647–648 Speech Synthesis by Rule
647, fall; 648, spring. 4 credits each term. Prerequisite: phonology and phonetics or knowledge of computer programming and permission of instructor. Offered alternate years.
Hours to be arranged. S. R. Hertz.
Linguistics 647 is an introduction to speech synthesis by rule. Particular emphasis will be given to synthesizing English, with a consideration of how to derive phonetic values on the basis of multi-tiered phonological representations (e.g., coordinated phrase, word, syllable, and phoneme units). Students will have first-hand experience synthesizing speech in the Cornell Phonetics Laboratory using the Delta System, which provides a special-purpose programming language for research in non-linear phonology, phonetics, and speech synthesis. Linguistics 648 is a less formal workshop, in which students will use the Delta System to work on selected projects.]

651–652 Old Javanese
Fall or spring, according to demand. 4 credits.
Hours to be arranged. J. U. Wolff.
Grammar and reading of basic texts.

653–654 Seminar in Southeast Asian Linguistics
653, fall; 654, spring. 4 credits each term. Prerequisite: Linguistics 303 or permission of instructor. Linguistics 653 is not a prerequisite for 654.
Hours to be arranged. G. Diffloth.
Languages of mainland Southeast Asia. Topics, chosen according to student interests, may include description, dialectology, typology, comparative reconstruction, and historical studies.

655–656 Seminar in Austronesian Linguistics
655, fall; 656, spring. 4 credits each term. Prerequisites: for Linguistics 655, Linguistics 102 and permission of instructor; for Linguistics 656, Linguistics 655.
Hours to be arranged. J. U. Wolff.
Descriptive and comparative studies of Malayo-Polynesian languages.

657–658 Seminar in Austroasiatic Linguistics
657, fall; 658, spring. 4 credits each term. Prerequisites: Linguistics 102 or permission of instructor.
Hours to be arranged. G. Diffloth.
Descriptive and comparative studies of Austroasiatic languages.

700 Seminar
Fall or spring, according to demand. Credit to be arranged.
Hours to be arranged. Staff.
Seminars are offered according to faculty interest and student demand. Topics in recent years have included subject and topic, Montague grammar, speech synthesis, lexicography, classical and autonomous phonology, Japanese sociolinguistics, relational grammar, semantics and semiotics, and others.

701–702 Directed Research
701, fall; 702, spring. 1–4 credits.
Hours to be arranged. Staff.

[753 Tibeto-Burman Linguistics
Fall. 4 credits. Prerequisites: Linguistics 404 or equivalent, and permission of instructor. Not offered 1990–91.
Hours to be arranged. Staff.
Comparative reconstruction of Tibeto-Burman with emphasis on the Lolo-Burmese branch and historical study of Burmese.]

774 Proseminar in Cognitive Studies II (also Computer Science 774)
Spring. 2 credits.
T R 1:30–3. Staff.
The focus will be on the contribution of linguistics, computer science, and neuroscience to the study of cognition. Topics may include the phonology, syntax, and semantics of natural language; artifical intelligence work in natural language processing, vision, and reasoning; parallel distributed processing; and neuropsychology.

Additional Linguistics Courses

[Chinese 401 History of the Chinese Language]

[Chinese 403 Linguistic Structure of Chinese I]

[Chinese 404 Linguistic Structure of Chinese II]

[Chinese 405 Chinese Dialects]

[Chinese 607 Chinese Dialect Seminar]

Tagalog 300 Linguistic Structure of Tagalog

Nepali

101–102 Elementary Nepali
101, fall; 102, spring. 6 credits each term. Prerequisite: for Nepali 102, 101 or examination.
Hours to be arranged. K.S. March and staff.
Intended for beginners. The emphasis is on basic grammar, speaking and comprehension skills, utilizing culturally appropriate materials and texts. Devanagari script for reading and writing is also introduced.

201–202 Intermediate Nepali Conversation
201, fall; 202, spring. 3 credits each term. Prerequisites: for Nepali 201, Nepali 102 or examination; for Nepali 202, Nepali 201 or examination.
Hours to be arranged. K.S. March and staff.
Intermediate instruction in spoken grammar and verbal comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students' professional fields.

203–204 Intermediate Nepali Composition
203, fall; 204, spring. 3 credits each term. Prerequisites: for Nepali 203, Nepali 102 or examination; for Nepali 204, Nepali 203 or examination.
Hours to be arranged. K.S. March and staff.
A systematic review of written grammar and reading comprehension, with special attention to the technical vocabularies, necessary writing skills, and published materials typical of advanced students' professional fields.

Pali

See Linguistics 639–640.

Polish

131–132 Elementary Course
131, fall; 132, spring. 3 credits each term. Prerequisite for Polish 132: Polish 131 or equivalent. Offered alternate years.
M W F 10:10 or 1:25. Staff.

[133–134 Continuing Course
133, fall; 134, spring. 3 credits each term. Prerequisites: for Polish 133, Polish 132 or equivalent; for Polish 134, Polish 133 or equivalent. Offered alternate years. Not offered 1990–91.
Hours to be arranged. E. W. Browne.]

Portuguese

121–122 Elementary Course
121, fall; 122, spring. 4 credits each term. Intended for beginners. Students may attain qualification upon completion of 122 by achieving a satisfactory score on a special examination.
M–F 10:10. J. Oliveira.
A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

203–204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Portuguese 203, Portuguese 122 or permission of instructor; for Portuguese 204, Portuguese 203 or permission of instructor.
M W F 11:15. J. Oliveira.
Conversational grammar review with special attention to pronunciation and the development of accurate and idiomatic oral expression. Includes readings in contemporary Portuguese and Brazilian prose and writing practice.

303–304 Advanced Composition and Conversation
303, fall; 304, spring. 4 credits each term. Prerequisite: for Portuguese 303, Portuguese 204 or equivalent; for Portuguese 304, Portuguese 303 or equivalent.
Hours to be arranged. J. Oliveira.

Quechua

131–132 Elementary Course
131, fall; 132, spring. 3 credits each term. Prerequisite: qualification in Spanish.
Hours to be arranged. D. F. Sola.
A beginning conversation course in the Cuzco dialect of Quechua.

133–134 Continuing Course
133, fall; 134, spring. 3 credits each term. Prerequisites: for Quechua 133, Quechua 131–132 or equivalent; for Quechua 134; Quechua 133 or equivalent.
Hours to be arranged. D. F. Sola.
An intermediate conversation and reading course. Study of the Huarochiri manuscript.

135–136 Quechua Writing Lab
135, fall; 136, spring. 1 credit each term. Prerequisites: concurrent enrollment in Quechua 131–132 or instructor's approval. Letter grade only.
Hours to be arranged. D. F. Sola.
Computer-assisted drill and writing instruction in elementary Quechua.

403 Linguistic Structure of Quechua
Fall. 4 credits.
Hours to be arranged. D. F. Sola.
Survey of the grammatical structure of Quechua dialects.

700 Seminar in Quechua Linguistics
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor.
Hours to be arranged. D. F. Sola.

Romance Linguistics

[321 History of the Romance Languages
Fall. 4 credits. Prerequisites: Linguistics 101 or equivalent, and qualification in any Romance language. Offered alternate years. Not offered 1990–91.
M W F 1:25. C. Rosen.
For description see Linguistics 321.]

323 Comparative Romance Linguistics
Fall. 4 credits. Prerequisites: Linguistics 101 or equivalent, and qualification in any Romance language. Offered alternate years.
M W F 1:25. C. Rosen.
For description see Linguistics 323.

620 Area Topics in Romance Linguistics
Spring. 4 credits. May be repeated for credit. Offered alternate years.
Hours to be arranged. C. Rosen.
For description see Linguistics 620.

[621 Problems and Methods in Romance Linguistics
Spring. 4 credits. Prerequisites: one syntax course and qualification in two Romance languages. Offered alternate years. Not offered 1990–91.
Hours to be arranged. C. Rosen.
For description see Linguistics 621.]

Rumanian

[131–132 Elementary Course
131, fall; 132, spring. Offered according to demand. 3 credits. Prerequisite for Rumanian 132: Rumanian 131 or equivalent. Not offered 1990–91.]

[133–134 Continuing Course
133, fall; 134, spring. Offered according to demand. 3 credits. Prerequisite for Rumanian 134: Rumanian 133 or equivalent. Not offered 1990–91.]

Russian

L. H. Babby, E. W. Browne, R. L. Leed (director of undergraduate studies, 302 Morrill Hall, 255-2322).

For literature courses see Russian Literature.

The Russian Major

See Russian Literature.

Study Abroad

Cornell is an affiliated institution in the Council on International Education Exchange program for Russian language study at Leningrad State University. Cornell students also frequently go on the American Council of Teachers of Russian program in Moscow and other Russian language programs. Opportunities are available for study during the summer, a single semester, or the full year. Further information is available from Professor Patricia Carden or Diane Williams, 236 Goldwin Smith Hall.

Honors. Students taking honors in Russian undertake individual reading and research and write an honors essay.

Fees. Depending on the course, a small fee may be charged for photocopied texts for course work.

Freshman Writing Seminar Requirement

See Russian Literature.

Russian and Soviet Studies Major

See "Special Programs and Interdisciplinary Studies," which follows the department listings.

101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite for 102: Russian 101 or equivalent. Intended for beginners or students placed by examination.
Drills, M–F 8, 9:05, 12:20 or 1:25; conversation practice, M W 9:05, 11:15, 1:25 or 3:35 or T R 9:05, 10:10, 11:15 or 2:30. Staff.
A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

123 Continuing Russian
Fall or summer. 4 credits. Limited to students who have previously studied Russian and have a CPT achievement score between 450 and 559 or the equivalent. Satisfactory completion of Russian 123 fulfills the qualification portion of the language requirements.
Recitation, M–F 12:20 or 1:25. Staff.
A prequalification course designed to prepare students for study at the 200 level. Passing this course is equivalent to qualification.

203–204 Intermediate Composition and Conversation
203, fall, spring or summer; 204, spring. 3 credits each term. Prerequisite: qualification in Russian (Russian 123 or CPT score 560–649). Prerequisite for Russian 204: Russian 203 or equivalent.
203, fall: M T R F 10:10, 11:15, 2:30 or 3:35; Spring: M T R F 11:15. L. Paperno, S. Paperno, and V. Tsimberov 204, spring: M T R F 10:10, 11:15, or 2:30. L. Paperno, S. Paperno, and V. Tsimberov.
Guided conversation, composition, reading, pronunciation, and grammar review, emphasizing the development of accurate and idiomatic expression in the language.

205–206 Reading Soviet Press
205, fall; 206, spring. 2 credits each term. Prerequisites: qualification in Russian (Russian 102 or 123 or CPT score 560–649). Both semesters must be taken in order to satisfy the proficiency level for the language requirement. This course cannot be used to satisfy the humanities requirement.
M W 10:10. S. Paperno.
Reading unabridged articles on a variety of topics from current soviet periodicals.

Note: Students placed in the 200-level courses also have the option of taking courses in introductory literature; see separate listings under Russian 201 and 202 for descriptions of these courses, any of which may be taken concurrently with the 203–204 and 205–206 language courses described above. The introductory literature courses are offered by the Department of Russian Literature, and the 203–204 and 205–206 language courses by the Department of Modern Languages and Linguistics.

301–302 Advanced Russian Grammar and Reading
301, fall; 302, spring. 4 credits each term. Prerequisites: for Russian 301, second-year Russian or permission of instructor; for Russian 302, Russian 301. Offered alternate years.
T R 2:55–4:10. L. H. Babby.
This course is intended primarily to increase the student's active command of difficult Russian syntactic constructions. Special attention is paid to word order, impersonal sentences, voice, negation, participles, gerunds, and also to building active vocabulary through reading modern Russian prose. Problems of phonology are also discussed.

303–304 Advanced Composition and Conversation
303, fall; 304, spring. 4 credits each term. Prerequisites: for Russian 303, Russian 204 or equivalent; for Russian 304, Russian 303 or equivalent.
M W F 10:10 or 2:30. L. Paperno, S. Paperno, and V. Tsimberov.
Grammar review, reading, viewing, and listening to authentic language materials (newpapers, TV, radio).

305–306 Directed Individual Study
305, fall; 306, spring. 2 credits. Prerequisites: for Russian 305, Russian 303–304 or equivalent; for Russian 306, Russian 305.
Hours to be arranged. Staff.

401–402 History of the Russian Language
401, fall; 402, spring. 4 credits each term. Prerequisites: for Russian 401, permission of instructor; for Russian 402, Russian 401 or equivalent. Offered alternate years.
T R 10:10–11:25. L. H. Babby.
Phonological, morphological, and syntactic developments from Old Russian to modern Russian.

[403–404 Linguistic Structure of Russian (also Linguistics 443–444)
403, fall; 404, spring. 4 credits each term. Prerequisite for Russian 403: permission of instructor, Linguistics 101–102 recommended. Prerequisite for Russian 404: Russian 403 or equivalent. Offered alternate years. Not offered 1990–91.
T R 10:10–11:40. L. H. Babby.
A synchronic analysis of the structure of modern Russian. Russian 403 deals primarily with morphology and its relation to syntax and 404 with syntax and word order. Topics

covered include case theory, the functions of word order, voice, agreement, impersonal constructions, negation, nonuniversal and the relation between morphology and syntax.]

407 Russian Phonetics
Fall. 4 credits. Prerequisite: Russian 204.
Hours to be arranged. R. Leed.
Treats both the practical and theoretical aspects of Russian phonetics. Lab work includes the use of the computer for acoustic phonetics, primarily for undergraduate majors in Russian and for graduate students in Slavic linguistics and Russian literature.

413–414 Advanced Conversation and Stylistics
413, fall; 414, spring. 2 credits each term. Prerequisites: for Russian 413, Russian 303–304 or the equivalent, for Russian 414, Russian 413.
T R 3:35–4:25. L. Paperno, S. Paperno, or V. Tsimberov.
Discussion of authentic unabridged Russian texts and TV series in a variety of nonliterary styles and genres.

[601 Old Church Slavic
Fall. 4 credits. This course is prerequisite to Russian 602. Offered alternate years. Not offered 1990–91.
M W F 10:10. E. W. Browne.
Grammar and reading of basic texts.]

[602 Old Russian Texts
Spring. 4 credits. Prerequisite: Russian 601. Offered alternate years. Not offered 1990–91.
Hours to be arranged. L. H. Babby.
Grammatical analysis and close reading of Old Russian texts.]

633–634 Russian for Graduate Specialists
633, fall; 634, spring. 2 credits each term. Prerequisite: four years of college Russian. For graduate students only.
Hours to be arranged. L. Paperno and S. Paperno.
The course is designed for graduate students who specialize in an area of Russian studies requiring fine active control of the language. Students will have an opportunity to speak formally and informally on topics in their specialty. Fine points of syntax, usage, and style will be discussed.

[651–652 Comparative Slavic Linguistics
651, fall; 652, spring. 4 credits each term. Prerequisites: for Russian 651, Russian 601 taken previously or simultaneously or permission of instructor; for Russian 652, Russian 651 or permission of instructor. Offered alternate years. Not offered 1990–91.
Hours to be arranged. E. W. Browne.
Sounds and forms of the Slavic languages and of prehistoric common Slavic; main historical developments leading to the modern languages.]

700 Seminar in Slavic Linguistics
Offered according to demand. Variable credit.
Hours to be arranged. Staff.
Topics chosen according to the interests of staff and students.

Sanskrit

[131–132 Elementary Sanskrit (also Classics 131–132)
131, fall; 132, spring. 3 credits each term. Not offered 1990–91.
M W F 2:30. C. Minkowski.]

251–252 Intermediate Sanskrit (also Classics 251–252)
251, fall; 252, spring. 3 credits each term. Prerequisite: Sanskrit 132 or equivalent.
Hours to be arranged. C. Minkowski.
Readings from the literature of Classical Sanskrit. Fall: Selections from the two Sanskrit epics, the Mahabharata and the Ramayana. Spring: More selections from the epics and selections from either Sanskrit story literature or from Sanskrit dramas.

Serbo-Croatian

131–132 Elementary Course
131, fall; 132, spring. 3 credits each term. Prerequisite for Serbo-Croatian 132: Serbo-Croatian 131 or equivalent. Offered alternate years.
Hours to be arranged. Staff.

[133–134 Continuing Course
133, fall; 134, spring. 3 credits each term. Prerequisites: for Serbo-Croatian 133, Serbo-Croatian 132 or equivalent; for Serbo-Croatian 134, Serbo-Croatian 133 or equivalent. Not offered 1990–91.
Hours to be arranged. Staff.]

Sinhala (Sinhalese)

101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite for Sinhala 102: Sinhala 101 or equivalent.
Hours to be arranged. J. W. Gair and staff.
A semi-intensive course for beginners. A thorough grounding is given in all the language skills; listening, speaking, reading, and writing.

201–202 Intermediate Sinhala Reading
201, fall; 202, spring. 3 credits each term. Prerequisites: for Sinhala 201, Sinhala 102; for Sinhala 202, Sinhala 201 or equivalent.
Hours to be arranged. J. W. Gair and staff.

203–204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Sinhala 203, Sinhala 102 or permission of instructor; for Sinhala 204, Sinhala 203 or equivalent.
Hours to be arranged. J. W. Gair and staff.

Related Courses
See also Linguistics 442, 631, 639, 640.

Spanish
M. Suñer (director of undergraduate studies, 218 Morrill Hall, 255-0714).

For advanced Spanish language and literature courses see Romance Studies.

The Major
The major is designed to give students proficiency in the oral and written language, to acquaint them with Hispanic culture, and to develop their skill in the linguistic analysis of Spanish. (For the major in Spanish literature see the description under Romance Studies.)

Satisfactory completion of the major should enable students to meet language requirements for teaching, to continue with graduate work in Spanish or other appropriate disciplines, or to satisfy standards for acceptance into the training programs of the government, social agencies, and business concerns. A Spanish major combined with another discipline may also allow a student to undertake pre-professional training for graduate study in law, medicine, business, etc. Students interested in a Spanish major are encouraged to seek faculty advice as early as possible. For acceptance into the major, students should consult the director of undergraduate studies of the Department of Modern Languages and Linguistics, Professor Suñer (218 Morrill Hall), who will admit them to the major.

The Core
All majors will work out a plan of study in consultation with their advisers. Previous training and interests as well as vocational goals are taken into account when the student's program of courses is determined. Spanish 201 and 204 or 212 (or equivalent) are prerequisite to entering the major in Spanish. All majors normally include the following core courses in their programs:

1) Spanish 315–316–317

2) Spanish 311 and 312 (or equivalent)

Spanish majors have great flexibility in devising their programs of study and areas of concentration.

The Linguistic Option
Spanish linguistics, for which the program normally includes 366, 401, 407, 408, and at least 8 additional credits in general or Spanish linguistics. (Linguistics 101–102 are recommended before entering this program.)

The J. G. White Prize and Scholarships are available annually to students who achieve excellence in Spanish.

Study Abroad in Spain
Cornell and the University of Michigan cosponsor an academic year in Spain program. Students enrolled in this program spend the first four weeks before the fall semester begins in a residential college located on the campus of the University of Madrid, where they take a course in Spanish language and contemporary society and take advantage of special lectures and field trips to Madrid and Castile. This course carries three credits. In early October the program moves to Seville, where students enroll in as many regular classes at the University of Seville as their language competency and general education permit. Their academic work is supplemented by courses designed explicitly for the program by Seville faculty, as well as a seminar regularly offered by the resident director, who is chosen from the faculty of either Cornell or Michigan. The special courses normally include history of art and architecture, Spanish composition and syntax, and modern Spanish history. In Seville students live with selected families or in a few cases in colegios mayores. Cornell-Michigan also maintains a center in Seville, which is used by students for special seminars, tutorials, lectures, and informal gatherings.

Applicants are expected to have at least completed Spanish 204 prior to departure. Students are strongly encouraged to study abroad for the entire year rather than for one semester. Students interested in the study abroad program should consult with the Cornell Abroad office for further information (474 Uris Hall, 255-6224).

Honors. Honors in Spanish may be achieved by superior students who want to undertake guided independent reading and research in an area of their choice. Students in the senior year select a member of the Spanish faculty from either the Department of Romance Studies or the Department of Modern Languages and Linguistics to supervise their work and direct the writing of their honors essays (see Spanish 429–430).

Fees. Depending on the course, a small fee may be charged for copies of course work.

101 Basic Course I
Summer only. 6 credits.
M–F 8–12. Staff.
A thorough grounding in all language skills: listening, speaking, reading, and writing. Language practice in small groups. Lectures cover grammar, reading, and cultural information. Students who have previously studied Spanish must take the qualifying examination before registering for this course.

110 Basic Conversation Course
Summer only. 3-week session. 3 credits. Limited to students who have previously studied Spanish and have a minimum CPT achievement score of 500 or permission of instructor.
M–F 9–12. One overnight field trip. Z. Iguina.
Intensive course designed for students who wish to improve their oral and listening skills and increase their confidence in speaking the language.

121 Elementary Spanish
Fall only. 4 credits. Special sections of this course are available for students with qualification in another language. Intended for beginners or students placed by examination.
Lec, F 10:10, 11:15 or 1:25; Secs, M–R 8, 9:05, 10:10, 11:15, 12:20, 1:25, 2:30 or 3:35. Evening prelims: 7:30 p.m. Oct. 25. Z. Iguina.
A thorough grounding is given in all language skills: listening, speaking, reading, and writing. Language practice is in small groups. Lecture covers grammar, reading, and cultural information.

122 Elementary Spanish
Fall or spring. 4 credits. Prerequisite: Spanish 121 or CPT score between 370 and 440. Students who obtain a CPT achievement score of 560 after Spanish 122 attain qualification and may enter the 200-level sequence; otherwise Spanish 123 is required for qualification. Evening prelims: Fall: 7:30 p.m. Oct. 25; Spring: 7:30 p.m. March 5, April 25.
Fall: Lec, R 2:30; Sec, M T W R 9:05, 10:10, 11:15, 12:20, or 1:25. M. Rice.
Spring: Lec, F 10:10, 11:15 or 1:25; Secs, M-R 8, 9:05, 10:10, 11:15, 12:20, 1:25, 2:30 or 3:35. Z. Iguina.
A thorough grounding is given in all language skills: listening, speaking, reading, and writing. Language practice is in small groups. Lecture covers grammar, reading, and cultural information.

123 Continuing Spanish
Fall, spring, or summer. 4 credits. Limited to students who have previously studied Spanish and have a CPT achievement score between 450 and 559. Satisfactory completion of Spanish 123 fulfills the qualification portion of the language requirement.
Fall: lec, M 11:15, 1:25 or 2:30; drills, T–F 8, 9:05, 10:10, 11:15, 12:20, 1:25, or 2:30. Spring: lec, M 11:15 or 1:25; drills, T–F 8, 9:05, 10:10, 11:15, 12:20 or 1:25. Evening prelims: fall, 7:30 p.m., Oct. 16; spring, 7:30 p.m., Feb. 26, April 18. J. Routier-Pucci.
An all-skills course designed to prepare students for study at the 200–level.

203 Intermediate Composition and Conversation
Fall, spring or summer. 3 credits. Prerequisite: qualification in Spanish (Spanish 123 or CPT score 560–649).
Fall: M W F 8, 9:05, 10:10, 11:15, 12:20, 1:25, or 2:30. Spring: M W F 8, 9:05, 10:10, 11:15, 12:20, 1:25, or 2:30. E. Dozier.
Conversational grammar review with special attention to the development of accurate and idiomatic oral expression. Includes readings in contemporary Spanish prose and practice in writing.

Hotel 267 Intermediate Spanish: Español de hotelería
Spring. 3 credits. Prerequisite: Spanish 123 or CPT 560 min. Hotel School elective.
M W F 12:20. E. Dozier.
An intermediate-level Spanish language course designed for students interested in improving their proficiency in the language within the specific thematic context of the hospitality and restaurant industries. The course provides a solid background of essential vocabulary, practice of all skills, and cultural background of the hispanic world.

204 Intermediate Composition and Conversation
Fall or spring. 3 credits. Prerequisite: Spanish 203 or permission of instructor.
Fall: M W F 9:05 (204.1: for bilinguals only), 12:20, or 1:25. Spring: M W F 8, 9:05, 10:10, 11:15, 12:20, or 1:25. Staff.
Practice in conversation with emphasis on improving oral and written command of Spanish. Includes treatment of specific problems in grammar, expository writing, and readings in contemporary prose.

213 Intermediate Spanish for the Medical and Health Professions
Fall or Spring. 3 credits. Prerequisite: qualification in Spanish (Spanish 123 or CPT score 560–649), or permission of instructor.
Fall: M W F 9:05; Spring: M W F 1:25. A. Tió.
Conversational grammar review, with dialogues, debates, compositions and readings on health-related themes. Fulfills proficiency requirement.

310 Advanced Conversation and Pronunciation
Spring. 2 credits. Prerequisite: Spanish 204 or equivalent.
M W F 9:05. Z. Iguina.
A conversation course with intensive oral practice obtained through the production of video programs. Study of the fundamental aspects of communication in the standard spoken and written Spanish, with some focus on dialectal variations. Weekly phonetics labs to improve pronunciation.

[366 Spanish in the United States (also Linguistics 366)
Fall. 4 credits. Prerequisite: some knowledge of Spanish. Offered alternate years. Counts toward the social science distribution requirement. Not offered 1990–91.
Hours to be arranged. M. Suñer.
Examination of major Spanish dialects in the United States from a linguistic perspective. Contrast with the standard language. Borrowing, interference, and code switching. Syntactic, morphological, and phonological characteristics. Sex-related phenomena.

[401 History of the Spanish Language
Spring. 4 credits. Prerequisite: Linguistics 101 and qualification in Spanish, or permission of the instructor. Not offered 1990–91.
M W F 11:15. Staff.
A historical analysis of the phonology, morphology, syntax, and lexicon of the Spanish language up to the seventeenth century. Selected medieval documents are read and discussed.]

407 Applied Linguistics: Spanish
Fall. 4 credits. Prerequisites: qualification in Spanish, or permission of instructor.
M 9:05, F 9:05–11:00. M. Suñer.
Designed to equip the student or future teacher of Spanish with insights into problem areas for second-language learners by using linguistic descriptions.

[408 The Grammatical Structure of Spanish
Spring. 4 credits. Prerequisites: proficiency in Spanish and Linguistics 101 or permission of instructor. Not offered 1990–91.
Hours to be arranged. Staff.
Survey of the salient morphological and syntactic characteristics of contemporary Spanish.]

601 Hispanic Dialectology
Fall, according to demand. 4 credits.
Hours to be arranged. Staff.
Survey of dialects of Latin America and the Caribbean.

602 Linguistic Structure of Ibero-Romance
Fall or spring, according to demand. 4 credits.
Hours to be arranged. Staff.
Phonological, morphological, and syntactic characteristics of the Romance languages (Catalan, Galician, Portuguese, Sephardic) and of the main dialects of the Iberian Peninsula, studied in relation to each other and to Castillian Spanish.

[604 Contemporary Theories of Spanish Grammar
Fall or spring, according to demand. 4 credits.
Hours to be arranged. Staff.
Selected readings of contemporary Spanish linguists who exemplify different theoretical points of view.]

700 Seminar in Spanish Linguistics
Fall or spring, according to demand. Variable credit.
Hours to be arranged. Staff.
Topics in synchronic and diachronic Spanish linguistics.

Swahili

See listings under Africana Studies and Research Center.

Swedish

121–122 Elementary Course
121, fall; 122, spring. 4 credits each term. Prerequisite for 122: Swedish 121 or equivalent.
M T W R 11:15. L. Trancik.
The aim of this course is to develop skills in listening, speaking, reading and writing within Sweden's cultural context.

123 Continuing Swedish
Fall. 4 credits. Prerequisite: Swedish 122 or equivalent.
M T W R 12:20. L. Trancik.
Continues developing skills in spoken and written Swedish within Sweden's cultural context.

203 Intermediate Swedish
Spring. 3 credits. Prerequisites: Swedish 123 or permission of instructor.
Hours to be arranged. L. Trancik.
Emphasis on development of all skills, through writing, reading and discussion of culturally significant texts. Audiovisual material will further enhance language comprehension.

Tagalog

101–102 Elementary Course
101, fall: 102, spring. 6 credits each term. Offered according to demand. Prerequisite for Tagalog 102: Tagalog 101.
M-F 8. J. U. Wolff.

201–202 Intermediate Tagalog Reading
201, fall; 202, spring. 3 credits each term. Prerequisites: for Tagalog 201, Tagalog 102 or equivalent; for Tagalog 202, Tagalog 201 or equivalent.
Hours to be arranged. J. U. Wolff.

300 Linguistic Structure of Tagalog
Fall or spring. 4 credits. Prerequisite: Linguistics 101.
Hours to be arranged. J. U. Wolff.

Tamil

[101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Offered according to demand. Prerequisite for Tamil 102, Tamil 101 or equivalent. Not offered 1990–91.
Hours to be arranged. J. W. Gair.]

Thai

101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite for Thai 102, Thai 101 or equivalent. Intended for beginners or students placed by examination.
M-F 8–8:55. N. Jagacinski.
A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

201–202 Intermediate Thai Reading
201, fall; 202, spring. 3 credits each term. Prerequisites: for Thai 201, Thai 102; for Thai 202, Thai 201 or equivalent.
T R 9:05–11. N. Jagacinski.

203–204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Thai 203, Thai 102; for Thai 204, Thai 203.
Hours to be arranged. N. Jagacinski.

301–302 Advanced Thai
301, fall; 302, spring. 4 credits each term. Prerequisite: Thai 202 or equivalent.
Hours to be arranged. N. Jagacinski.
Selected readings in Thai writings in various fields.

303–304 Thai Literature
303, fall; 304, spring. 4 credits each term. Prerequisite: Thai 302 or equivalent.
Hours to be arranged. N. Jagacinski.
Reading of significant novels, short stories, and poetry written since 1850.

401–402 Directed Individual Study
401, fall; 402, spring. 4 credits each term. For advanced students or students with special problems or interests. Prerequisite: permission of instructor.
Hours to be arranged. N. Jagacinski.

Ukrainian

[131–132 Elementary Course
131, fall; 132, spring. 3 credits each term. Prerequisite for Ukrainian 132, Ukrainian 131 or equivalent. Not offered 1990–91.
Hours to be arranged. E. W. Browne.]

Vietnamese

101–102 Elementary Course
101, fall; 102, spring. 6 credits each term. Prerequisite for Vietnamese 102, Vietnamese 101 or equivalent. Intended for beginners or students placed by examination.
Hours to be arranged. G. Diffloth.

201–202 Intermediate Vietnamese Reading
201, fall; 202, spring. 3 credits each term. Prerequisites: for Vietnamese 203, Vietnamese 102: for Vietnamese 204, Vietnamese 203.
Hours to be arranged. G. Diffloth.

203–204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Vietnamese 203, Vietnamese 102; for Vietnamese 204, Vietnamese 203.
Hours to be arranged. G. Diffloth.

301–302 Advanced Vietnamese
301, fall; 302, spring. 4 credits each term. Prerequisite: Vietnamese 202 or equivalent.
Hours to be arranged. G. Diffloth.

401–402 Directed Individual Study
401, fall; 402, spring. 4 credits each term. Prerequisite: permission of instructor. Intended for advanced students.
Hours to be arranged. G. Diffloth.

Yoruba

121–122 Elementary Course (also Africana Studies and Research Center 131–132)
121, fall; 122, spring. 4 credits each term. Prerequisite for Yoruba 122, Yoruba 121 or equivalent.
Hours to be arranged. V. Carstens.

123–203 Continuing Course (also Africana Studies and Research Center 133–134)
123, fall; 203, spring. 4 credits each term. Prerequisites: for Yoruba 123, Yoruba 122 or equivalent; for Yoruba 203, Yoruba 123 or equivalent.
Hours to be arranged. V. Carstens.

MUSIC

T. Sokol, chair; M. Hatch, director of undergraduate studies (110 Lincoln Hall, 255-5049); N. Zaslaw, graduate faculty representative (113 Lincoln Hall, 255-4279); V. K. Agawu, M. Bilson, D. Borden, L. Coral, M. Gilman, R. Harris-Warrick, J. Hsu, K. Husa, S. Jeneary, J. LaBarbera, S. Monosoff, E. Murray, R. Parker, D. R. M. Paterson, D. Randel, D. Rosen, M. Scatterday, J. Shames, S. Stucky, J. Webster, S. Davenny Wyner

Musical Performance and Concerts

Musical performance is an integral part of Cornell's cultural life and an essential part of its undergraduate academic programs in music. The department encourages music making through its offerings in individual instruction and through musical organizations and ensembles that are directed and trained by members of the faculty. Students from all colleges and departments of the university join with music majors in all of these ensembles:

Big Red Marching Band
Cornell Symphony Orchestra
Cornell Chamber Orchestra
Cornell Chamber Ensemble
Cornell Symphonic Band
Cornell Wind Ensemble
Small wind and brass ensembles
Collegium Musicum
Cornell Chorale
Cornell Gamelan Ensemble
Chamber music ensembles
Cornell Chorus
Cornell Glee Club
Chamber Singers
Sage Chapel Choir
Cornell Jazz Ensembles

Information about requirements, rehearsal hours, and conditions for academic credit can be found in the following listings for the Department of Music. Announcements of auditions are posted during registration each fall term and, where appropriate, each spring term as well.

The Department of Music and the Faculty Committee on Music sponsor more than one hundred formal and informal concerts each year by Cornell's ensembles, faculty, and students and by distinguished visiting artists. A special feature is the annual Cornell Festival of Contemporary Music. The great majority of concerts are free and open to the public. Lectures and concerts are listed in special monthly posters and the usual campus media.

Nonmajors

In addition to its performing, instructional, and concert activities, the department offers numerous courses for nonmajors, many of which carry no prerequisites and presuppose no previous formal training in music. Consult the following course listings, and for further information apply to the department office, 104 Lincoln Hall (255-4097), or to the director of undergraduate studies, Professor Martin Hatch.

The Major

Two options are available to the student planning to major in music. Each carries the study of music to an advanced level through the integration of performance, music theory, and music history. Option I is a general course, not necessarily oriented toward eventual graduate or professional work in music. Option II is a more specialized and concentrated program, suitable for students who want to prepare for graduate or professional work in music.

All students contemplating a major in music under either option should arrange for placement examinations and advising in the department as early as possible, usually during the freshman orientation period. Information is available from the director of undergraduate studies, Professor Martin Hatch, 110 Lincoln Hall (255-5049), or from the chair, Professor Thomas Sokol, 106 Lincoln Hall (255-3671). All students are expected to have chosen an adviser from among the department faculty at the time of application for major status.

Option I presupposes some musical background before entering Cornell. Prerequisites for admission to the major are the satisfactory completion of Music 152, at the latest by the end of the sophomore year (the freshman year is preferable), with a final grade of C or better, including an average grade of C or better in all the musicianship components of Music 152 and failure in none of them; and the passing of a simple piano examination (details are available from the department office). Students must apply to the department for formal acceptance as a music major.

The requirements for the Bachelor of Arts degree with a major in music under Option I comprise the following:

1) in music theory:
Music 251–252, 351, and 352.

2) in music history:
sixteen credits in courses numbered at the 300 level or above listed under Music History. At least three of these courses must be drawn from the four-course sequence Music 381–384.

3) in performance:
four semesters of participation in a musical organization or ensemble sponsored by the Department of Music.

Option II presupposes considerable musical study before entering Cornell. Prerequisites for admission into the Option II program are previous acceptance as an Option I major and satisfactory completion of Music 252, normally by the end of the sophomore year. Students must apply to the department for formal acceptance as an Option II major. An Option II major concentrates in one of the three areas listed below. For Option II in performance, exceptional promise must be demonstrated, in part by a successful solo recital before the end of the sophomore year.

The requirements for the Bachelor of Arts degree with a major in music under Option II are:

1) completion of all the requirements for Option I, except as noted below, and

2) in addition:

a) in performance:

(1) the requirement for four semesters of participation in a musical organization or ensemble is waived (but such majors are expected to participate actively in chamber and other ensembles sponsored by the department);

(2) sixteen credits in individual instruction in the student's major instrument, or voice, earned by taking Music 391–392 throughout the junior and senior years

b) in theory and composition or in history:

(1) for two of the four semesters of participation in a musical organization or ensemble, Music 462 or 463 may be substituted;

(2) twelve additional credits in this area of concentration at the 300 level or above, of which either four may be earned in Music 301 or 302 when taken once for four credits, or eight may be earned in Music 401–402.

Honors. The honors program in music is intended to provide special distinction for the department's ablest undergraduate majors. To become a candidate for honors in music, a student must be invited by the faculty at the beginning of the second semester of the junior year. As soon as possible thereafter, the student will form a committee of three or more faculty members to guide and evaluate the honors work. In the senior year the candidate will enroll in Music 401–402 with the chair of the honors committee as instructor. Candidates will be encouraged to formulate programs that allow them to demonstrate their musical and scholarly abilities, culminating in an honors thesis, composition, or recital, to be presented not later than April 1 of the senior year. A comprehensive examination administered by the honors candidate's committee will be held not later than May 1. The level of honors conferred will be based primarily on the candidate's performance in the honors program, and secondarily on the candidate's overall record in departmental courses and activities.

Distribution Requirement

The distribution requirement in the expressive arts may be satisfied with 6 credits in music, except freshman writing seminars. A maximum of 4 credits in Music 321–322 and a maximum of 3 credits in Music 331 through 338 and 441 through 450 may be used to satisfy this requirement.

Facilities

Music Library. The Music Library, in Lincoln Hall, has an excellent collection of standard research tools. Its holdings consist of approximately ninety-five thousand books, periodicals, and scores and forty thousand recordings. Particularly noteworthy are the collections of opera from all periods; twentieth-century scores and recordings; a large microfilm collection of Renaissance sources, both theoretical and musical; and a collection of eighteenth-century chamber music. In addition, the Department of Rare Books, in Olin Library, houses a collection of early printed books on music and musical manuscripts.

Concert Halls. The Department of Music sponsors more than one hundred concerts annually. Cornell's principal concert halls are Bailey Hall Auditorium (about 2,000), Alice Statler Auditorium (about 900), Sage Chapel (about 800) and Barnes Hall Auditorium (about 280).

Rehearsal Spaces. The orchestras and bands rehearse in Bailey Hall, Barnes Hall, and Barton Hall; the Jazz Ensembles, Gamelan, and Chamber Ensembles rehearse in Lincoln Hall; and the choral ensembles are quartered in Sage Chapel. Eleven practice studios in Lincoln Hall are available for individual practice by pianists, vocalists, and instumentalists.

Twenty-two grand pianos and eight upright or studio pianos are housed in Cornell's offices, classrooms, and rehearsal spaces. In addition, our Center for Keyboard Studies includes two concert grand pianos (Steinway and Mason & Hamlin), two eighteenth-century fortepiano replicas (copies of Johann Andreas Stein and Anton Walter), an original Broadwood grand piano from 1827, an original Graff grand piano from 1825, one Dowd and one Hubbard harpsichord, and a Challis clavichord. Barnes Hall houses a portative organ by Derwood Crocker and a self-contained tracker organ by Schlicker. A large Aeolian Skinner Organ is located in Sage Chapel and there is a Helmuth Wolff tracker organ in Anabel Taylor Chapel. The music department also owns a quartet of stringed instruments in eighteenth-century proportions, with appropriate bows.

Digital/Electronic Equipment. A Macintosh-computer-based MIDI studio is available for independent studio work and live performance. The instruments include a Yamaha KX88 MIDI Controller Keyboard, a Yamaha TX802 FM Synthesizer, and a Casio FZ 10M Sampler. In addition, there are two MIDI work stations with additional instruments.

Freshman Seminars

111 Sound, Sense, and Ideas
Fall. 3 credits. Each section limited to 17 students. No prerequisites; no previous training in music required. May not be counted for the distribution requirement in the expressive arts.

T R 10:10–11:25. R. Harris-Warrick.
Ways of listening, thinking, talking, and writing about music. Non-Western and popular music are considered, as well as Western classical music. Students will be given the opportunity to write about music with which they are already familiar in addition to exploring unfamiliar works and styles.

112 Words and Music
Fall or spring. 3 credits. Each section limited to 17 students. No prerequisites; no previous training in music required. May not be counted for the distribution requirement in the expressive arts.

T R 8:40–9:55. D. Feurzeig.
Students will think and write about songs. The focus will be on twentieth-century music, especially African-American music and its spin-offs: spirituals, blues, gospel, jazz, R&B, rock, protest music, and pop. Other topics may

include traditional West African music and newer styles such as zydeco and rap.

113 Music since 1965
Spring. 3 credits. Each section limited to 17 students. No prerequisites; no previous training in music required. May not be counted for the distribution requirement in the expressive arts.
M W F 10:10–11. S. Taylor.
Readings will focus on music composed within the last twenty-five years—popular, jazz, film and concert music—as well as the growing influence of world musics in the West. Additional assignments will include listening to recordings and attending concerts. Students will be given the opportunity to present and write about music with which they are already familiar.

Introductory Courses

[101 The Art of Music
Fall. 3 credits. Not offered 1990–91.
T R 11:15–12:05; 1-hour disc to be arranged. Staff.
Explorations designed to speed up the continuing, unending development of various independent tastes. Each student chooses individually what to study from diverse styles of music and how far to study at least two contrasting styles through recordings, through singing and playing, through reading and writing; instructors help refine these choices through the term. Everyone studies a few assigned works to facilitate exchanging ideas with concrete references: in 1989 these are the 48 Preludes and some of the Fugues from Bach's Well-Tempered Clavier. Other things—from Vedic chant to songs of Bobby McFerrin—can be related to Bach with respect to qualities of sound, intervals of pitch, timing, and functional contexts. Orchestral and vocal works of Bach make likely optional contexts for the keyboard pieces that constitute the common center.]

103 Introduction to the Musics of the World
Fall. 3 credits. No previous training in music required.
T R 11:15–12:05; 1-hour disc to be arranged. M. Hatch.
A survey of folk, popular, and art music in several regions of the world. Topics include pitch, scale, rhythm, meter, timbre, and form in instrumental and vocal music. Recordings are the main material for study; labs present opportunities to begin performance on instruments from the regions covered.

105–106 Introduction to Music Theory
105, fall, spring, or summer; 106, spring. 3 credits each term. Some familiarity with music is desirable. Prerequisite for Music 106: 105 with grade of B– or better. Music 106 is limited to 50 students.
Fall or spring: M W 9:05–10:10 plus 2 hrs to be arranged. Spring: M W F 9:05 plus 1 hr to be arranged. D. Randel, 105 fall; M. Scatterday, 105 spring.
D. R. M. Paterson, 106 spring.
An elementary, self-contained introduction to music theory emphasizing fundamental musical techniques, theoretical concepts, and their application. Music 105: notation, pitch, meter; intervals, scales, triads; basic concepts of tonality; extensive listening to music in various styles; analysis of representative works of Bach, Mozart, Beethoven, and Debussy. Music 106: systematic introduction to writing tonal harmony and melody; ear training.

108 Bach to Debussy
Spring. 3 credits. Prerequisite: Music 105 or permission of instructor.
M W 10:10–11; 1-hour disc to be arranged. R. Harris-Warrick.
A chronological survey of major works in the Western concert repertory in all genres, from works of Bach and Handel that embody the newly consolidated language of tonality to works of Mahler and Debussy that signal the beginning of new strategies for many composers of the twentieth century.

120 Learning Music through Digital Technology
Fall or spring. 3 credits. Enrollment limited. Prerequisite: permission of instructor.
Fall: T R 1:25–2:40 or M W F 2:30–3:20; spring. M W F 2:30–3:20. D. Borden.
This course uses selected commercially available technological resources to produce live music. The student is expected to master the Macintosh computer, several music software programs, and several synthesizers using MIDI. Each student must learn to read music if he or she has not already done so. The course will also cover the rudimentary procedures for making a good-quality tape recording. The final is a live concert presentation of the student's final project.

173 Music and Poetry from Dowland to Dylan
Fall. 3 credits.
M W F 1:25–2:15. R. Parker
The course will consider a broad range of musical responses to poetry, with examples from each of the last four centuries. There will be an emphasis on class discussion and encouragement of live performances within class.

Music Theory

151–152 Elementary Tonal Theory
151, fall; 152, spring. 5 credits each term. Prerequisite for Music 151: knowledge of the rudiments of music and some ability to perform demonstrated through proficiency tests given on the first two days of the term (registration is provisional, contingent on passing this test). Prerequisite for Music 152: 151 or equivalent. Intended for students expecting to major in music and other qualified students. Required for admission to the music major. All students intending to major in music, especially those intending to elect Option II should if possible enroll in Music 151–152 during the freshman year.
M W F 11:15–12:05; 2 discs to be arranged. E. Murray and staff.
Detailed study of the fundamental elements of tonal music; rhythm, scales, intervals, triads; melodic movement, two-part counterpoint, harmonic progression in the chorale style of J. S. Bach; and introduction to analysis of small forms. Drill in aural discrimination, sight singing, keyboard harmony, and elementary figured bass; rhythmic, melodic, and harmonic dictation; and score reading.

220 Learning Counterpoint through Digital Technology
Spring. 3 credits. Enrollment limited. Prerequisite: 151/152 and/or permission of instructor.
T R 1:25–2:40. D. Borden.
This course is a study of traditional contrapuntal techniques from the fourteenth century to the present, with emphasis on the structures used by J. S. Bach. Synthesizers, samplers, MIDI, and music software will be covered.

245–246 Introduction to the Gamelan
245, fall; 246, spring. 1 credit each term. 2 credits with permission of instructor. No previous knowledge of musical notation or performance experience necessary. Music 245 is not a prerequisite to 246.
M W 1:25–2:15; 2:30–3:20 or
T R 3:35–4:25. M. Hatch and staff.
Concentrated instruction in the repertories and practices of Indonesian gamelan traditions. Related aspects of culture—drama, dance, literature, and oral poetry—will be studied in their influence on musical practices. This sequence concentrates on instruction in elementary techniques of performance on the gamelan. Music 245–246 is a course for beginners in gamelan that covers only instruction in elementary gamelan performance techniques.

251–252 Intermediate Tonal Theory
251, fall; 252, spring. 5 credits each term. Prerequisite for Music 251: 152 or the equivalent or a suitable level of performance on a proficiency test given by the department during orientation each fall term. Prerequisite for Music 252: 251.
M W F 10:10; 2 discs to be arranged.
J. Webster, fall; D. R. M. Paterson, spring.
Continuation of the study of harmony by composition and analysis, including seventh chords, secondary dominants, and chromatic harmony. Students are expected to write several short pieces in eighteenth- and nineteenth-century styles and forms, such as two-part inventions and minuets scored for string quartet. Continuation of analysis of forms, with emphasis on large forms, e.g., sonata form. Ear training, keyboard harmony, figured bass, sight singing, dictation, and score reading.

351 Advanced Tonal Theory
Fall. 4 credits. Prerequisite: Music 252 or permission of instructor.
M W F 11:15. R. Parker.
Inventions, chromatic harmony, analysis of larger forms and nineteenth-century music, ear training, score reading, and advanced keyboard studies, including figured bass. Students probe questions about the meaning of "theory" and "analysis" in music and in other realms of study. They question and refine their own usages of the word "tonal" in relation to older and newer music, while returning often to short pieces of Chopin with which to consider applications of tonal theory in practice.

352 Materials of Twentieth-Century Music
Spring. 4 credits. Prerequisite: Music 351.
M W F 11:15. J. Webster.
Introduction to some techniques of composers from 1900 to 1950, including expanded tonal resources, atonality, and new approaches to form and rhythm. Analysis of representative smaller works by Bartok, Hindemith, Schoenberg, Stravinsky, Webern, and some American composers. Writing assignments in various styles.

[456 Orchestration
Fall. 4 credits. Prerequisite: Music 252 or permission of instructor. Not offered 1990–91.
T 10:10–12:05. K. Husa.
A study of the instruments of the orchestra and their use in representative works from 1700 to the present. Scoring for various instrumental groups, including large orchestra. Students will occasionally attend rehearsals of Cornell musical organizations and ensembles.]

462 Orchestral Conducting
Spring. 2 credits. Prerequisite: Music 352.
T 10:10–12:05. K. Husa.
The fundamentals of score reading and conducting technique; study of orchestral scores from baroque, classical, romantic, and contemporary periods. Occasionally the class will visit rehearsals of Cornell musical organizations.

463 Choral Conducting
Fall. 2 credits. Prerequisite: Music 252 or permission of instructor.
F 1:25–2:40. T. Sokol.

Music History

[217 The Organ and Its Literature
Fall. 3 credits. Prerequisite: Music 105 or permission of instructor. Not offered 1990–91.
M W F 11:15. D. R. M. Paterson.
An analytical survey of the history of the organ, including its design and construction and its most significant repertoire.]

[222 Topics in Jazz History
Spring. 3 credits. Enrollment limited. Prerequisite: permission of instructor. Not offered 1990–91.
TR 11:15; one disc to be arranged.
M. Hatch.
Lectures will introduce various jazz styles and techniques from around 1900 to the 1970s. Sections will present progressive exercises in analysis of fundamental aspects of jazz, including rhythm, meter, melody, harmony, timbre, and form. Focus: the recorded anthology Smithsonian Collection of Classical Jazz.]

[271 Monteverdi and the Birth of the Baroque
Fall. 3 credits. Prerequisite: any three-credit music course or permission of instructor.
M W 10:10. N. Zaslaw.
Using as its focal point the career and music of Claudio Monteverdi (1567–1643), the course will examine the changes music underwent between the second half of the 16th century and the first half of the next century. Monteverdi's operas Orpheus and The Coronation of Poppea as well as representative canzonettas, madrigals, and church works will be studied alongside works of his contemporaries. Attention will also be paid to the social, political, and cultural contexts of the music discussed.]

[272 Music and the Dance (also Theatre Arts 272)
Spring. 3 credits. Prerequisite: any three-credit music course or permission of instructor. Not offered 1990–91.
T R 9:05. R. Harris-Warrick.
This course will explore selected topics in the interrelations between music and dance in the Western tradition. Some of the areas to be examined include the influence of dance movement on musical composition, composer-choreographer relationships, and a comparison of music composed for dancing with dance music composed for listening. Examples will be drawn from the Renaissance, the baroque period, and the modern era. Students will be asked to pursue an independent project.]

274 Opera
Spring. 3 credits.
M W F 12:20–1:10. D. Rosen
An introduction to major works of the operatic repertory, with discussion of texts and theatrical performances as well as music. Video recordings will be an integral part of the course; optional trips to live performances will be scheduled where possible.

[275 The Choral Tradition
Spring. 3 credits. Prerequisite: any three-credit music course or permission of instructor. Not offered 1990–91.
M W F 10:10. R. Harris-Warrick.
A survey of representative works, both sacred and secular, in the Western choral tradition from the Middle Ages to the twentieth century. Class will include discussion of performances as well as historical and stylistic issues, and will be integrated with local concert offerings whenever possible.]

[277 Baroque Instrumental Music
Spring. 3 credits. Prerequisite: any three-credit music course or permission of instructor. Not offered 1990–91.
M W F 12:20. N. Zaslaw.
Topics covered will include the rise of purely instrumental music; Renaissance string bands; the English virginalists and viol consorts; the Italian violin school; the German organ school; lute and guitar music; the invention of the baroque winds, orchestra, and fortepiano; and the sonatas, concertos, and suites of Bach, Corelli, Couperin, Handel, Purcell, Rameau, Telemann, and Vivaldi.]

281 Music of the Baroque Period
Fall. 3 credits. Prerequisite: ability to read music.
T R 1:25–2:40. J. Hsu.
A study of selected instrumental works by J. S. Bach and other composers of the seventeenth and eighteenth centuries, illustrating the different traditions of the various genres and the confluence of the different national styles of the period.

[282 Music of the Classical Period
3 credits. Prerequisite: any three-credit music course or permission of instructor. Not offered 1990–91.
M W 1:25. J. Webster.]

[283 Music of the Romantic Era
3 credits. Prerequisite: any three-credit music course or permission of instructor. Not offered 1990–91.]

[285 Music in the Middle Ages
Fall. 3 credits. Prerequisite: any three-credit music course or permission of instructor. Not offered 1990–91.
M W F 10:10. D. Randel.]

[286 Music in the Renaissance
Spring. 3 credits. Prerequisite: any three-credit music course or permission of instructor. Not offered 1990–91.
M W F 10:10. D. Randel.]

287 Mozart
Fall. Prerequisite: any three-credit music course or permission of instructor. 3 credits.
T R 2:55–4:10. N. Zaslaw.
A chronological tour of the life and works of Wolfgang Amadeus Mozart by means of original documents, scores, recordings, and live performances. As a postlude, an evaluation of Peter Shaffer's play and movie Amadeus will be undertaken.

[374 Music and Drama
Fall. 4 credits. Prerequisite: any three-credit music course or proficiency in German or Italian. Not offered 1990–91.
T 1:25–4:25. A. Groos, R. Parker.
A team-taught study of major works of the German and Italian repertory between 1780 and 1920. Among the issues to be considered will be source-libretto and words-music relationships, reception, and criticism. Works to be studied will include operas by Mozart, Verdi, Wagner, Puccini, and Strauss.]

[379 The Study of Non-Western Musics
4 credits. Prerequisite: any three-credit music course or permission of instructor. Not offered 1990–91.
Staff.]

Music History Seminars for Majors and Qualified Non-Majors
Prerequisite: Music 152 or permission of instructor. Intended primarily for music majors, these seminars will investigate selected topics and repertories from each period in some detail. Each seminar will include listenings, readings, oral and written papers, and analyses.

[381 Music in Western Europe to 1700
Fall. 4 credits. Not offered 1990–91.
T R 8:40. R. Harris-Warrick.]

[382 Music of the Eighteenth Century
Spring. 4 credits. Not offered 1990–91.
T R 8:40. J. Webster.]

383 Music of the Nineteenth Century
Fall. 4 credits.
T R 8:40–9:55. D. Rosen.

384 Music of the Twentieth Century
Spring. 4 credits.
T R 10:10–11:25. S. Stucky.

398–399 Independent Study in Music History
398, fall; 399, spring. 4 credits. Prerequisite: Music 152 and permission of instructor.
Staff.
Advanced study of various topics in music history. Students enrolling in Music 398–399 participate in, but do not register for, an approved 200-level music history course and, in addition, pursue independent research and writing projects.

412 The Good and the Bad in Popular Culture (also Society for the Humanities 412)
Spring. 3 credits. No prerequisite. Limited enrollment.
R 2:30–4:30. S. Frith.
Academic accounts of popular culture tend to treat the question of value in very general terms. Either mass-produced art is taken to be worthless by definition (e.g., Adorno, Bloom) or else the popular and the valuable are simply equated (e.g., Kiske). The purpose of this course is to examine the quality of popular culture more rigorously, and I will be less interested in the familiar critical commentaries than in investigating the ways in which value judgments work in the actual production and consumption of popular music, television, film, fiction, etc.

413 American Music (also Society for the Humanities 413)
Fall. 3 credits. No prerequisite. Limited enrollment.
R 2:30–4:30. T. Ross.
A study of several traditions in America's musical fabric, such as jazz, shape-note singing, zydeco, salsa, symphonic and experimental music, rock 'n' roll, and one-man bands. How are these defined, and what mutual influences can be observed both near at hand and globally? Diverse musical ethnicities are examined through lecture, field-tapes (video and audio), reading, and some in-class performance.

Independent Study

301–302 Independent Study in Music
301, fall; 302, spring. Credit to be arranged. Prerequisite: departmental approval. Presupposes experience in the proposed area of study.
Hours to be arranged. Staff.

Honors Program

401–402 Honors in Music
401, fall; 402, spring. 4 credits each term. Limited to honors candidates in their senior year.
Staff.

Musical Performance

321–322 Individual Instruction in Voice, Organ, Harpsichord, Piano, Strings, Woodwinds, and Brass
The number of places is strictly limited. Prerequisite: successful audition with the instructor. Students may register only with the prior permission of the instructor. Students may register for this course in successive years. For information, consult the music department office, Lincoln Hall.

Students may sign up for individual instruction in music performance, *with permission of the instructor only,* following a successful audition; usually scheduled during the first week of classes. Lessons without credit (Music 321–322): The fee for one half-hour lesson weekly, *without credit* during the term is $90. For a one-hour lesson or two half-hour lessons *without credit* the fee is $180. Practice-room fees for six hours weekly are $30 per term for a room with a piano; $10 for a room without a piano; $50 for use of a pipe organ.

Lessons for credit (Music 321–322): Advanced students, at the sole discretion of the instructor, may earn 2 credits each term for a one-hour lesson (or two half-hour lessons) weekly accompanied by an appropriate practice schedule. For every 4 credits earned in Music 321–322, the student must have earned, or currently be earning, at least 3 credits in music courses (not including Freshman Seminars, Music 321–322, 331 through 338, 391–392, or 441 through 450); these 3 credits must be earned prior to, or simultaneously with, the first 2 credits in 321–322. The fee for a one-hour lesson (or two half-hour lessons) weekly, *for credit,* during the term is $135. Practice-room fees for twelve hours weekly are $40 *per term* for a room with a piano; $20 for a room without a piano; $75 for use of a pipe organ.

Fees are non-refundable once lessons begin, *even if the course is subsequently dropped.*

Music majors receive a scholarship equal to the lesson fee listed above. Members of department-sponsored performance ensembles and organizations may, with permission of the director of the organization, receive a scholarship of up to one-half the Cornell fee for the type of lessons chosen during the term. (These scholarships are intended for lessons in the student's primary performing medium.)

Under certain conditions students may earn credit for lessons taken outside Cornell (Music 321h–322h). Arrangements must be made through the Department of Music office. Lesson-fee scholarships apply, when awarded, in the same dollar amounts as those for lessons taken at Cornell.

321a–322a Individual Instruction in Voice
321a, fall; 322a, spring. 2 credits each term.
Hours to be arranged.
S. Davenny Wyner.
The Vocal Coaching Program (non-credit) is administered through individual choral ensembles, coordinated by Ms. Hanson.

321b–322b Individual Instruction in Organ
321b, fall; 322b, spring. 2 credits each term.
Hours to be arranged. D. R. M. Paterson.

321c–322c Individual Instruction in Piano
321c fall; 322c, spring. 1–2 credits each term.
Hours to be arranged. M. Bilson, J. Shames, and staff.

[321d–322d Individual Instruction in Harpsichord
321d, fall; 322d, spring. 2 credits each term. Not offered 1990–91.
Hours to be arranged. Staff.]

321e–322e Individual Instruction in Violin or Viola
321e, fall; 322e, spring. 2 credits each term.
Hours to be arranged. S. Monosoff.

321f–322f Individual Instruction in Cello or Viola da Gamba
321f, fall; 322f, spring. 2 credits each term.
Hours to be arranged. J. Hsu.

321g–322g Individual Instruction in Brass
321g fall; 322g, spring. 2 credits each term.
Hours to be arranged. M. Scatterday.

321h–322h Individual Instruction outside Cornell
321h, fall; 322h, spring. 2 credits each term.
Staff sponsored.
All the standard orchestral and band instruments and guitar may, under certain conditions, be studied for credit with outside teachers. This course is available primarily for the study of instruments not taught at Cornell and for the use of those who for reasons of space cannot be admitted to Music 321a–g or 322a–g. Prior approval by a member of the faculty in the department is required. For information and a list of approved teachers, consult the department office, 104 Lincoln Hall.

391–392 Advanced Individual Instruction
391, fall; 392, spring. 4 credits each term.
Open only to juniors and seniors majoring in music under Option II with concentration in performance and to graduate students. Option II majors whose lessons must be taken outside Cornell may apply to the department for financial assistance toward the cost of lessons; $135 per semester will normally be awarded to such students and a larger amount may be awarded under certain circumstances. Music 391 is not a prerequisite to 392.
Hours to be arranged. Staff.

Musical Organizations and Ensembles

Students may participate in musical organizations and ensembles throughout the year. Permission of the instructor is required, and admission is by audition only, except that the Sage Chapel Choir and the Cornell Gamelan Ensemble are open to all students without prior audition. Registration is permitted in two of these courses simultaneously and students may register in successive years, but no student may earn more than 6 credits in these courses. Membership in these musical organizations and ensembles is also open to qualified students who wish to participate without earning credit.

331–332 Sage Chapel Choir
331, fall or summer; 332, spring. 1 credit. No audition for admission.
M 7–8:30 p.m., R 7–8:30 p.m., Sunday 9:30 a.m. D. R. M. Paterson.

333–334 Cornell Chorus or Glee Club
333, fall; 334, spring. 1 credit. Prerequisite: permission of instructor.
Chorus: T 7:15–9:15 p.m., plus 2 hours to be arranged. Glee Club: W 7:15–9:15 p.m., plus 2 hours to be arranged.
S. Davenny Wyner or T. Sokol.

335–336 Cornell Orchestra
335, fall; 336, spring. 1 credit. Prerequisite: permission of instructor.
Rehearsals for the Cornell Symphony Orchestra: W 7:30–10 p.m. E. Murray.

337–338 University Bands
337, fall; 338, spring. 1 credit.
Symphonic band: fall or spring, T and W 4:45–6. Wind ensemble: spring, M 7:30–9:30 p.m. and R 4:45–6.
M. Scatterday.
Students interested in participating in the Big Red Marching Band should consult Mr. Jeneary. For information about the Jazz Ensembles, please speak with Mr. LaBarbera.

421–422 Cornell Chamber Ensemble
1 credit. Prerequisite: permission of instructor.
R 5–6:30. J. Hsu.
Study and performance of the chamber symphonies of Haydn, Mozart, and their contemporaries. For strings, woodwinds, and horns.

437/438 Chamber Winds
437, fall. 438, spring. 1 credit each term. Prerequisite: permission of instructor.
R 4:45–6. M. Scatterday.
A flexible instrumentation ensemble performing original woodwind, brass, and percussion music from Gabrieli brass choirs and Mozart serenades through more contemporary works such as Stravinsky's Octet or *L'Histoire Du Soldat.* The ensemble will perform on symphonic band and wind ensemble concerts in addition to several chamber concerts throughout the year.

441–442 Chamber Music Ensemble
441, fall; 442, spring. 1 credit. Prerequisite: permission of instructor.
J. Hsu, fall; S. Monosoff, spring.
Study and performance of chamber music literature: strings, winds, piano; duos, trios, quartets, etc. Emphasis on interpretation.

443–444 Chorale
Fall or spring. 1 credit each term. Prerequisite: permission of instructor.
Fall, M 4:30–6:30. S. Davenny Wyner.
Spring, F 4:30–6:15, T. Sokol.
Study and performance of selected choral music.

445–446 Cornell Gamelan Ensemble
445, fall; 446, spring. 1 credit each term.
R 7:30–10 p.m. M. Hatch and staff.
Advanced performance on the central Javanese gamelan. Tape recordings or gamelan and elementary cypher notation are provided. Some instruction by Indonesian musicians is offered in most years.

447–448 Collegium Musicum
1 credit. Prerequisite: permission of instructor.
T 5–6: 30. J. Hsu.
Study and performance of Renaissance and Baroque instrumental music. For string and wind instruments.

Graduate Courses

Open to qualified undergraduates with permission of instructor.

601 Introduction to Bibliography and Research
Fall. 4 credits.
M 1:30–4:25. L. Coral.
This course explores the nature of the discipline and introduces the many types of bibliographic tools needed to pursue research in music.

[602 Analytical Technique
Fall. 4 credits. Not offered 1990–91.
M 1:25–4. J. Webster.
A critical survey of various analyical methods in current use. Frequent analytical assignments and class presentations.]

[603 Editorial Practice
Spring. 4 credits. Not offered 1990–91.
F 10:10–12:05. R. Harris-Warrick.
Fundamental techniques of source study and filiation, the nature of a musical text, and the editorial process. Opportunity to make a critical edition based on original sources.]

[604 Ethnomusicology: Areas of Study and Methods of Analysis
Spring. 4 credits. Not offered 1990–91. Open to graduate students in anthropology, linguistics, psychology, sociology, and other cognate fields with permission of instructor. Major aspects of research into musical cultures of the world. Problems, theories, and methods, especially those affecting analytical terminology, transcription and analysis of sound events, and fieldwork.]

[622 Historical Performance Practicum
Spring. 4 credits. Not offered 1990–91.
R 2:30–4:25. N. Zaslaw, M. Bilson.
The study of eighteenth-century instrumental manuals and its application to modern performance.]

[653 Topics in Tonal Theory and Analysis
Fall. 4 credits. Not offered 1990–91.
R 1:30–4:25. V. K. Agawu.]

[654 Topics in Post-tonal Theory and Analysis
Spring. 4 credits. Not offered 1990–91.
M 1:25–4:30. E. Murray.
Various approaches to the post-tonal repertory will be explored, including set theory, voice leading, and rhythmic factors. Music studied will include works by Berg, Webern, Stravinsky, Dallapiccola, Boulez, and others.]

[656 Modern Orchestration
Fall. 4 credits. Not offered 1990–91.
T 10:10–12:05. K. Husa.]

657–658 Composition
657, fall; 658, spring. 4 credits each term.
W 1:25–4:30. S. Stucky.

659–660 Composition
[659, fall;] 660, spring. 4 credits each term.
T 2:30–4:25. K. Husa. 659 not offered fall 1990.

662 Orchestral Conducting
Spring. 4 credits.
T 10:10–12:05. K. Husa.

669–[670] Debussy to the Present
669, fall; [670, spring]. 4 credits each term. 670 not offered 1990–91.
T 2:30–4:25. S. Stucky.
Topic for fall 1990: Biobibliographic, analytical, and critical approaches to the music of Witold Lutoslawski, with emphasis on the works composed since 1976 and the literature published since 1981. Comparative studies may refer to composers such as Boulez, Carter, Berio, Ligeti, and Messiaen.

[677 Mozart: His Life, Works, and Times (also German 757)
Fall. 4 credits. Not offered 1990–91.
T 2:30–5. N. Zaslaw.
After an introduction to the current state of Mozart studies, students will pursue individual research projects while the seminar undertakes a group investigation of the manuscript and printed sources for, and historical context of, Mozart's Symphony in D major, K. 297.]

[680 Topics in Ethnomusicology
Spring. 4 credits. Not offered 1990–91.
W 2:30–4:25. M. Hatch.
Advanced readings in ethnomusicology, with attention focused on a particular topic.]

[681 Seminar in Medieval Music
Fall. 4 credits. Not offered 1990–91.
D. Randel.]

[683]–684 Seminar in Renaissance Music
[683, fall;] 684, spring. 4 credits each term. 683 not offered 1990–91.
W 1:25–4:25. D. Randel.
Topic for spring 1991: The French chanson from Dufay to Josquin.

686 Seminar in Baroque Music
Fall. 4 credits.
W 1:25–4:25. N. Zaslaw.
An investigation of the music of the German and Austrian followers of Jean-Baptiste Lully in the period c. 1675–1710. Issues of transmission, style, performance practice, and cultural context will be addressed.

687 Seminar in Classical Music
Spring. 4 credits.
M 1:25–4. L. Coral.
Based on auction records, publishers catalogues, and other documents, this seminar will explore the dissemination of music in the second half of the eighteenth century.

[688 Seminar in Classical Music
Spring. 4 credits. Not offered 1990–91.
R 1:30–4:25. J. Webster.]

[689]–690 Seminar in Music of the Romantic Era
Spring. 4 credits. 689 not offered 1990–91.
R 1:25–4:25. J. Webster.
Topics in nineteenth-century instrumental music.

[691–692 Performance Practice
691, fall; 692, spring. 4 credits each term. Not offered 1990–91.
W 2:30. N. Zaslaw.
The rise of the orchestra in the late seventeenth and early eighteenth centuries.]

697–698 Independent Study and Research
697, fall; 698, spring. Credit to be arranged. Hours to be arranged. Staff.

[699 Musical Notation
Fall. 4 credits. Not offered 1990–91.
N. Zaslaw, K. Husa, J. Hsu, M. Hatch.]

[785–786 History of Music Theory
785, fall; 786, spring. 4 credits each term. Not offered 1990–91.
J. Webster.]

[788 History and Criticism
Spring. 4 credits. Not offered 1990–91.
T 2:30. D. Randel.
The nature of history and criticism in musicology in the light of current thought in other disciplines such as literary criticism, history, and philosophy.]

[789 Liturgical Chant in the West
Fall. 4 credits. Not offered 1990–91.
F 10:10–12:05. D. Randel.
The formation of the major Western liturgical repertories, their interrelation, and their early history.]

NEAR EASTERN STUDIES

R. Brann, chair; J. Katz (Mellon fellow), S. Katz, S. Mehrez (director of undergraduate studies), D. I. Owen (acting director of the Program of Jewish Studies), L. Peirce, D. Powers (graduate faculty representative and chair of the Committee for Arabic and Islamic Studies), G. Rendsburg, N. Scharf, M. Winter, M. Younes

Joint faculty: M. Bernal, S. Gilman, S. Telhami

The Department

The Department of Near Eastern Studies (360 Rockefeller Hall, 255-6275) offers courses in the archaeology, civilization, history, languages, and literatures of the Near East. Students are encouraged to take an interdisciplinary approach to the cultures of this region that has had such an important impact on the development of our own civilization and that plays so vital a role in today's world community. The department's course offerings treat the Near East from ancient times to the modern period and emphasize methods of historical and literary analysis. Near Eastern Studies also provides the basic courses in the Program of Jewish Studies and serves as the home of the Faculty Committee for Arabic and Islamic Studies.

Distribution Requirements

Any two Near Eastern studies history or archaeology courses at the 200 or 300 level that form a reasonable sequence or combination satisfy the distribution requirement in the social sciences or history. Any two Near Eastern studies civilization or literature courses at the 200 or 300 level that form a reasonable sequence or combination satisfy the distribution requirement in the humanities. NES 197 or NES 198 plus any other Near Eastern studies course will constitute a sequence to fulfill the distribution requirement in either social sciences or humanities, depending on the second course. All 200- and 300-level language courses may fulfill the humanities requirement.

The Major

The student who majors in Near Eastern Studies may concentrate in one of the following five areas:

1. Near Eastern languages and literatures
2. Ancient Near Eastern studies
3. Judaic studies
4. Islamic studies
5. Contemporary Near Eastern studies

The precise sequence and combination of courses chosen to fulfill the major is selected in consultation with the adviser; all majors, however, must satisfy the following requirements (S-U options not allowed):

1) Qualification in one of the languages offered by the department
2) Eight NES courses (which may include intermediate and advanced language courses), including NES 197 or NES 198
3) Four courses in subjects related to the student's concentration, which may, in some cases, be taken outside the department

Prospective majors should discuss their plans with the director of undergraduate studies before formally enrolling in the department. To qualify as a major, a cumulative grade average of C or better is required.

Honors. Candidates for the degree of Bachelor of Arts with honors in Near Eastern languages and literatures, Ancient Near Eastern studies, Judaic studies, or Islamic studies must fulfill the requirements of the appropriate major study and enroll in the honors course, NES 499, in the first semester of their senior year. For admission to the honors program, candidates must have a cumulative average of B+ or better and have demonstrated superior performance in Near Eastern studies courses. After consulting their major adviser, candidates should submit an outline of their proposed honors work to the department during the second semester of their junior year.

Study abroad. There are many opportunities for study in the Near East. Cornell has agreements with the American University in Cairo, Ben-Gurion University, the University of Haifa, Hebrew University, Tel Aviv University, and the Technion in Israel that will permit students to enroll for a year or in some cases for a semester. Study in regular university courses at Haifa, Hebrew University, and Tel Aviv University will be permitted for students with adequate language preparation; otherwise, students enroll in the Overseas Study Program of the institution. Except for instruction in Arabic language and literature, courses at the American University in Cairo are taught in English. Cornell Abroad students may also have the option of undertaking independent study in the summer following their academic year abroad. Students planning to study overseas during their junior year should develop language skills during their freshman and sophomore years.

Program of Jewish Studies

The field of Jewish studies encompasses a broad spectrum of disciplines that include civilization, language, literature, philology, and history. The Department of Near Eastern Studies offers students the opportunity to take a wide variety of courses in Jewish studies whose subjects are not represented in this department. Students interested in planning a program in Jewish studies should consult the Department of Near Eastern Studies. For complete listings and details see Program of Jewish Studies under "Special Programs and Interdisciplinary Studies."

Committee for Arabic and Islamic Studies

The Committee for Arabic and Islamic Studies was created to promote the study at Cornell of the languages, history, culture, and politics of the Near East. Composed of members of the College of Arts and Sciences faculty representing a variety of disciplines, the committee currently sponsors the Comparative Muslim Societies Seminar, which is devoted to the interdisciplinary study of Muslim societies throughout the world. The committee also sponsors lectures and conferences on other topics related to its mandate. Students interested in pursuing Arabic and Islamic Studies should consult with the Director of Undergraduate Studies in the Department of Near Eastern Studies.

Shiloah Program with the Dayan Center, Tel Aviv University

The Department of Near Eastern Studies has established a program with the Dayan Center for Middle Eastern and African Studies at Tel Aviv University. Since spring semester 1982, the department has had a professor visiting from the center to teach a course or courses on the modern Middle East in his or her area of specialty. Courses have included a general survey on the history of the modern Middle East and seminars on Egypt, Lebanon, Saudi Arabia, and the Arab-Israeli conflict.

Freshman Writing Seminars

115 Literature and Politics in the Arab World

Fall. 3 credits.
M W F 11:15–12:05. S. Mehrez.

For the past century or so, the Middle East has provided an almost uninterrupted scene of political and ideological struggle. Revolution, nationalism, war, socialism, radicalism, and fundamentalism have all been part and parcel of the modern history of the Middle East. Where does literature fit into this picture? What is the role of the intellectual in a part of the world where writers cannot afford to sit back and poke sophisticated irony at one another or explore the anguished world of lonely individuals abstracted from time and actual circumstances. Through readings of Middle Eastern literary texts we will explore how writers have participated and continue to participate not so much in the writing of but rather in the making of history. The emphasis of the course is on improving reading and writing skills. Students will be assigned a number of short papers at first, then longer essays toward the second half of the semester.

118 A Nobel Prize for the Arabs

Spring. 3 credits.
M W F 9:05–9:55. S. Mehrez.

This course will investigate the politics of the Nobel prize in general and how awarding it to Naguib Mahfouz was received in the Arab world at large, and in Egypt, in particular. Close attention will be given to the "Rushdie Affair" and how it reflected on the Nobel prize winner in Egypt. Through selected readings in Naguib Mahfouz's translated works, students will become acquainted not only with the "father of the Arabic novel," but with the development of the novel itself as a twentieth-century genre in Arabic literature as well.

154 Harems, Houris, and Hashish: Western Perceptions of the Middle East

Spring. 3 credits.
T R 10:10–11:25. D. Powers.

Societies acquire their identities, in part, by defining themselves in relation to foreigners, strangers, aliens, or enemies; we divide the world into the familiar (Europe, the West, "us") and the strange (the Orient, the East, "them"). In this course we will explore how contemporary Western perceptions of the Middle East have been shaped by the imperial and colonial experience of the past 150 years, paying special attention to the role of power and politics in the production of culture and knowledge.

161–162 Archaeology and National Identity

161, fall; 162, spring. 3 credits.
M W F 9:05–9:55. Staff.

This seminar will explore the link between archaeology and nationalism in the Middle East in the twentieth century. Emphasis will be placed on the political use of archaeology in Israel, Iraq, and Iran, although other countries will be discussed. Topics to be explored will include: a) The use of the past to legitimize current regimes; b) how the past is made to "fit" present day ideologies; c) how the understanding of the nation's past can undergo radical revision with a change of leadership (i.e., Iran's view of its pre-Islamic past under the Shah and under Komeini).

Language Courses

101–102 Elementary Modern Hebrew I and II (also Jewish Studies)
101, fall; 102, spring. 6 credits each term. Prerequisite for NES 102: 101 or permission of instructor. Satisfactory completion of NES 102 fulfills the qualification portion of the language requirement. Enrollment limited to 15 students in each section.

M–F 9:05, 10:10, or 1:25. Sections I and II, S. Shoer; Section III, N. Scharf.

Intended for beginners (section 1 for students without any previous background). A thorough grounding is given in all the language skills, emphasizing reading, writing, grammar, listening, and speaking. (1) Oral comprehension and production: (a) in the class room—ability to understand the basic dialogues and passages without the aid of written texts, to use these texts in variation, and to create new ones; (b) in the outside world—ability to meet basic travel needs and daily routine needs, both at work and in a study situation. (2) Reading: (a) in the classroom—ability to read the texts in the lessons, as well as new texts based on materials presented in class, and to deal with extensive readings (i.e., materials based on texts presented in the classroom as well as additional contextually relevant vocabulary items); (b) in the outside world—ability to read simple road signs, train and bus schedules, menus, simple directions, etc. (3) Writing: (a) in the classroom—ability to communicate by writing short sentences and to construct short dialogues based on simple sentences or brief passages on topics included in classroom discussions; (b) in the outside world—ability to construct simple, very short letters or notes, or brief summaries or reports. (4) Culture: meet basic courtesy needs in informal situations, know basic geographic facts, and become aware of the composition of the people of the country.

103 Elementary Modern Hebrew (also Jewish Studies)
Summer (six-week session). 4 credits. Enrollment limited to 15 students.

M–F 8:30–9:45. N. Scharf.

The fundamentals of grammar, syntax, and vocabulary as applied to both conversational and written Hebrew in the modern idiom. Students are expected to know the Hebrew alphabet for the first session of class.

111–112 Elementary Arabic
111, fall; 112, spring. 6 credits each term. Prerequisite for Arabic 112: Arabic 111 or permission of instructor.

M–F 10:10–11. M. Younes.

The course provides a thorough grounding in all language skills: listening, speaking, reading, and writing. It starts with spoken Arabic and gradually integrates Modern Standard Arabic in the form of listening and reading texts. Emphasis will be on learning the language through using it in meaningful contexts. The student who successfully completes the two-semester sequence will be able to: 1) understand and actively participate in simple conversations involving basic practical and social situations (introductions, greetings, school, home and family, work, simple instructions, etc.; 2) read Arabic material of limited complexity and variety (simple narrative and descriptive texts, directions, etc.; 3) write notes and short letters describing an event or a personal experience. An important objective of the course will be familiarizing the students with basic facts about the geography, history, and culture of the Arab world.

[113–114 Egyptian Arabic
113, fall; 114, spring. 4 credits each term. 113: no prerequisite. Prerequisite for NES 114: 113 or permission of instructor. All texts in Roman alphabet. Not offered 1990–91.]

181–182 Elementary Turkish
181, fall; 182, spring. 6 credits each term.

M–F 11:15–12.05. Staff.

This course aims at developing speaking, reading, and writing skills in modern Turkish. The fall term will be devoted primarily to intensive study of grammar but will include simple reading and writing exercises. Oral drill and conversation practice will be integrated into all class periods. In the spring term, while the study of grammar will continue, more time will be devoted to reading and writing. Oral practice will include both informal conversation and structured situations.

201–202 Intermediate Modern Hebrew I and II (also Jewish Studies)
201, fall; 202, spring. Enrollment limited to 15 students each term. 4 credits each term. Prerequisites for NES 201, 102 or permission of instructor; for NES 202, 201 or permission of instructor. Satisfactory completion of NES 202 fulfills the proficiency portion of the language requirement.

M T W R 10:10–11. N. Scharf.

Second-year modern Hebrew. Continued development of reading, writing, composition, listening, and speaking skills. (1) Oral comprehension and production: (a) in the classroom—ability to carry on a conversation, listen to a short lecture, or deliver a short lecture on topics covered in the classroom or related topics; (b) in the outside world—ability to interact with speakers of Hebrew and exchange ideas on basic interests and current events, in work or study situations or informal gatherings, and to relay simple information and give directions. (2) Reading: (a) in the classroom—ability to read simplified short stories, short news items, and newspaper headlines; (b) in the outside world—ability to read short newspaper items, work directions, maps, plans, etc. (3) Writing: (a) in the classroom—ability to write short compositions, take notes in class, compose schedules, write out directions, etc.; (b) in the outside world—ability to write letters, reports, and summaries of events, and to complete questionnaires. (4) Culture: expand knowledge of culture into some areas of literature, popular culture, and historical background.

211–212 Intermediate Arabic
211, fall; 212, spring. 4 credits each term. Prerequisites: for NES 211, one year of Arabic or permission of instructor; for NES 212, 211 or permission of instructor.

M T W R 12:20–1:10. M. Younes.

A sequel to NES 111–112. Continued development of the four language skills through extensive use of graded materials on a wide variety of topics. More attention will be given to developing native-like pronunciation and to grammatical accuracy than in NES 111–112, but the main focus will be on encouraging ideas in it. The student who successfully completes 212 will be able to: 1) understand and express himself or herself in Arabic in situations beyond the basic survival needs; 2) read and comprehend written Arabic of average difficulty; 3) write a letter, a summary of a report or a reading selection, etc. An appreciation of Arabic literature and culture will be sought through the use of authentic materials.

[238 Aramaic
Spring. 3 credits. Not offered 1990–91.]

[283–284 Intermediate Turkish
283, fall; 284, spring. 3 credits. Not offered 1990–91.]

301–302 Advanced Modern Hebrew I and II (also Jewish Studies)
301, fall; 302, spring. 4 credits each term. Prerequisite for NES 301: 202 or equivalent with permission of instructor. Prerequisite for NES 302: 301 or equivalent with permission of instructor. This sequence may be used as literature to fulfill the humanities distribution requirement.

M W F 12:20–1:10. N. Scharf.

Advanced study of Hebrew through the analysis of literary texts and expository prose. This course employs a double perspective: the language is viewed through the literature and the literature through the language. Students will develop composition skills by studying language structures, idioms, and various registers of style.

311–312 Advanced Arabic
311, fall; 312, spring. 4 credits each term. Prerequisite for NES 311: NES 212 or permission of instructor; prerequisite for NES 312: NES 311.

M W F 2:30–3:20. Fall, M. Younes; spring, S. Mehrez.

Students will be introduced to authentic, unedited Arabic language materials ranging from short stories and novels to political speeches and writings. Emphasis will be on developing fluency in oral expression through lively discussions of socially and politically provocative issues that are presented in the reading selections. A primary objective will be increased accuracy in pronunciation and grammar.

[330–331 Hieroglyphic Egyptian
330, fall; 331, spring. 4 credits each semester. Not offered 1990–91.]

[333–334 Elementary Akkadian (also NES 633–634)
333, fall; 334, spring. 4 credits each term. Prerequisite for NES 334: NES 333 or permission of instructor. Not offered 1990–91.]

335–336 Readings in Akkadian Texts (also NES 635–636)
335, fall; 336, spring. 4 credits. Prerequisite for NES 335: 334; prerequisite for NES 336: 335.

Hours to be arranged. D. I. Owen.

Selected readings in Akkadian texts.

[337–338 Ugaritic
337, fall; 338, spring. 4 credits. Not offered 1990–91.]

412 Introduction to Arabic Linguistics (also DMLL 512)
Spring. 4 credits. Prerequisites: one year of Arabic and an introductory course in linguistics or permission of instructor.

T R 1:25–2:40. M. Younes.

The course offers a survey of major issues in Arabic linguistics, particularly diglossia (the roles of Modern Standard Arabic and the spoken dialects), phonology, morphology, and syntax. Students will have the opportunity to do an in-depth study of a specific topic of their choice.

625 West Semitic Inscriptions
Fall. 4 credits. Prerequisite: knowledge of Hebrew.
T R 2:55–4:10. G. Rendsburg.
A study of the major inscriptions of the west semitic languages of the Iron Age. These include texts in Hebrew, Aramaic, Phoenician, Ammonite, and Moabite.

635 Readings in Akkadian Texts (also NES 335)
Fall. 4 credits.
Hours to be announced. D. I. Owen.
For description see NES 335 under Near Eastern Studies Languages.

Archaeology

243 The History and Archaeology of Ancient Israel (also Jewish Studies and Religious Studies)
Spring. 4 credits.
T R 11:40–12:55. D. I. Owen.
A detailed survey of the history and archaeology of the land of Canaan from the traditional origins of the Israelite tribes in the early second millennium/middle Bronze Age (ca. 2000 B.C.E.) through the Babylonian exile to the arrival of Ezra and Nehemia (ca. 450 B.C.E.). Lectures on, and discussions of, Biblical and Near Eastern literary sources relating to the history of ancient Israel, as well as an analysis of the archaeological evidence, will form the basis of the course. (This course is recommended for students planning to participate in NES 364, Introduction to Field Archaeology in Israel.)

[261 Ancient Seafaring (also Archaeology 275)
Fall. 3 credits. Not offered 1990–91.]

[263 Introduction to Biblical History and Archaeology (also Jewish Studies)
Summer. 3 credits. Not offered 1990–91.]

[264 Agriculture and Society in the Ancient Near East
Spring. 3 credits. Not offered 1990–91.]

[267 Mediterranean Archaeology (also Classics 219)
Fall. 3 credits. Not offered 1990–91.]

[361 Interconnections in the Eastern Mediterranean World in Antiquity
Fall. 4 credits. Not offered 1990–91.]

[362 The History and Archaeology of Ebla
Fall. 4 credits. Prerequisite: Archaeology 100 or any introductory course in ancient history or archaeology. Not offered 1990–91.]

364 Introduction to Field Archaeology in Israel (also Jewish Studies)
Summer. 6 credits.
D. I. Owen.
An introduction to archaeology fieldwork—excavation techniques, pottery analysis, and recording. Materials studied will range from the early Bronze Age to the Roman period. Emphasis also on the role archaeology plays in the reconstruction of biblical history and the various approaches used to achieve that reconstruction. On-site supervision will be supplemented by regular lectures on the history, culture, and literature of the peoples whose remains will be exposed. Requirements include regularly assigned readings and two papers. Graduate credit by special arrangement. Please contact department (255-6275) for further details.

[365 The Divided Monarchy (also Jewish Studies)
Fall. 4 credits. Prerequisite: NES 243 or permission of instructor. Not offered 1990–91.]

[366 The History and Archaeology of the Ancient Near East (also Archaeology 310)
Fall. 4 credits. Not offered 1990–91.]

[367 The History and Archaeology of Ancient Egypt
Fall. 4 credits. Not offered 1990–91.]

[461 Seminar in Syro-Palestinian Archaeology: The Israelite Conquest of Canaan (also Jewish Studies)
Fall. 4 credits. Not offered 1990–91.]

Civilization

[157 Introduction to Islamic Civilization
Fall. 3 credits. Not offered 1990–91.]

[197]–198 Introduction to Near Eastern Civilization
[197 not offered 1990–91]; 198; spring. 3 credits. Required for all department majors. NES 197 or 198 and any other Near Eastern studies course will constitute a sequence to fulfill the distribution requirement in either the social sciences or the humanities, depending on the second course used in combination with 197 or 198.
T R 1:25–2:40. R. Brann.
This course is designed to provide an introductory overview of Near Eastern society and culture from ancient to modern times for students with little or no previous training. Lectures will focus on four major periods of Near Eastern history: ancient, biblical, Islamic, and modern. In each historical period we will consider the development of major religious ideas, social and political institutions, economic structures, and literary forms. Readings will be chosen from primary sources in translation and modern secondary materials. In addition, movies, slides and other visual materials will be used as integral parts of the course.

[234 Muslims, Christians, and Jews in Islamic Spain: Literature and Society (also Comparative Literature 234 and Jewish Studies)
Spring. 3 credits. Not offered 1990–91.]

250 Shi'ism and the Iranian Revolution (also Religious Studies)
Fall. 3 credits.
M W F 9:05–9:55. J. Katz.
This course explores the classical roots of a contemporary phenomenon. How did shi'ism become the state religion of Iran? How did the attitude of the clery toward political power evolve? How did Khomeini and the clergy emerge at the helm of the Iranian revolution? Finally, what makes the Iranian revolution so revolutionary? In addition to examining the transformation of shi'ism from a sectarian doctrine to a radical ideology, we will also examine the social origins and consequences of the Iranian revolution. As the revolution enters its second decade, who has gained and who has lost? How does life under Khomeini and his successors differ from life under the Shah?

253 An Introduction to the History of Iran
Spring. 3 credits.
M W F 9:05–9:55. J. Katz.
At the crossroads of Asia, Iran has endured a succession of foreign conquests and challenges from Greeks, Arabs, Turks, Mongols, and modern European states. In addition to surveying major historical events and social movements since the Arab conquest of 642, this course will serve as an introduction to Iranian cultural and intellectual achievements. The broad theme of this course is the resiliency of a distinctly Iranian culture and identity. By semester's end we will consider the following questions: How was the Iranian national identity propagated and maintained? What elements in Islamic civilization may be thought of as specifically Persian contributions? Is a national culture the same as "nationalism" in an Islamic context? How has contact with the West caused Iranians to re-examine their culture and history?

[282 Culture and Society of the Turks
Spring. 3 credits. Not offered 1990–91.]

[293 Judaism, Christianity, and Islam in Comparative Perspective (also Jewish Studies)
Spring. 3 credits. Not offered 1990–91.]

[297 Beyond the Stereotype: Images of Women in the Middle East (also Women's Studies 297)
Spring. 3 credits. Not offered 1990–91.]

[346 Jews of Arab Lands (also Jewish Studies)
Fall. 4 credits. Not offered 1990–91.]

351 Introduction to Islamic Law (also Religious Studies)
Spring. 4 credits.
T R 1:25–2:40. D. Powers.
An examination of the historical development of Islamic law from its formative period to modern times, with special emphasis on the laws of personal status (marriage, divorce, and inheritance). Topics to be discussed will include the origins of Islamic law; the relationship between law and society; the nature and function of legal documents; the impact of colonialism on legal institutions; and the problems and challenges of legal reform.

[352 Islam and the West
Spring. 3 credits. Not offered 1990–91.]

[357 Islamic Law and Society
Fall. 4 credits. Not offered 1990–91.]

History

243 History and Archaeology of Ancient Israel (also Jewish Studies)
Spring. 4 credits.
For description see NES 243 under Near Eastern Archaeology.

248 Introduction to Classical Jewish History (also Jewish Studies)
Fall. 3 credits.
M W F 11:15–12:05. S. Schwartz.
A survey of the major developments in Jewish history between the destruction of the first temple in 586 B.C.E. and the rise of Islam. Topics will include the return under Ezra and Nehemiah; the encounter with Hellenism; the Antiochene persecutions; the growth of Roman influence; the rebellion of 70 C.E.; the rise of such Jewish groups as the Sadducees, Pharisees, and Essenes; the conflict with early Christianity; and the nature of rabbinic Judaism.

249 Introduction to Modern Jewish History (also Jewish Studies)
Spring. 3 credits.
M W F 11:15–12:05. S. Schwartz.
A survey of the major developments in Jewish history between the expulsion from Spain (1492) until 1900. Topics will include the growth of mysticism and Hasidism; the development of Eastern European Jewry; the impact of emancipation; the rise of Jewish pluralism, e.g., Reform Judaism, Conservative Judaism, Neo-Orthodoxy; the character of modern anti-Semitism; the origins and growth of American Jewry; and the beginnings of political Zionism.

257 Islamic History: 600–1258 (also Religious Studies)
Fall. 3 credits.
T R 3:35–4:25; F 2:30–3:20. D. Powers.
A survey of Islamic history from the lifetime of Muhammad to the Mongol conquest of Baghdad with special emphasis on contacts between the Islamic world and the West. Topics to be discussed will include the emergence of Islam as a major world religion; the effect of the Arab conquests on the unity of the Mediterranean world; political, cultural, and economic contacts between the Near East and Europe; the Crusades; and the Spanish Reconquista.

[258 Islamic History, 600–1517
Fall. 3 credits. Not offered 1990–91.]

[259 The Ottoman Empire from 1517 to 1923
Spring. 3 credits. Not offered 1990–91.]

[261 Ancient Seafaring (also Archaeology 275)
Not offered 1990–91.]

[264 Agriculture and Society in the Ancient Near East
Spring. 3 credits. Not offered 1990–91.]

[277 Seminar in Jewish History (also Jewish Studies)
Spring. 3 credits. Not offered 1990–91.]

[281 Gender and Society in the Muslim Middle East (also Women's Studies 281)
Fall. 3 credits. Not offered 1990–91.]

294 Modern History of the Middle East: Changing Politics, Society, and Ideas (also Government 358)
Fall. 4 credits. Fulfills the college distribution requirement in history or the social sciences.
M W F 2:30–3:20. M. Winter.
This introductory course is designed to acquaint students with the main political, social, and cultural trends that have shaped the modern and contemporary history of the Middle East. While discussing developments in the region during the nineteenth and twentieth centuries, the lectures will focus on such themes as modernization, nationalism, Islamic response, and Arab politics in the global and regional contexts. The course does not presuppose the knowledge of Middle Eastern languages.

351 Introduction to Islamic Law
Spring. 4 credits. D. Powers.
For description see NES 351 under Near Eastern Civilization.

[352 Islam and the West
Spring. 3 credits. Not offered 1990–91.]

[355 Islam and Politics
Spring. 4 credits. Not offered 1990–91.]

[358 The Islamic Resurgence
Spring. 4 credits. Prerequisite: NES 258 or NES 294. Not offered 1990–91.]

[361 Interconnections in the Eastern Mediterranean World in Antiquity
Fall. 4 credits. Not offered 1990–91.]

[362 The History and Archaeology of Ebla
Not offered 1990–91.]

[365 The Divided Monarchy (also Jewish Studies)
Not offered 1990–91.]

[366 Archaeology of the Ancient Near East (also Archaeology 310)
Fall. 4 credits. Not offered 1990–91.]

[367 The History and Archaeology of Ancient Egypt
Fall. 4 credits. Not offered 1990–91.]

397 Topics in the Middle East: Islam and the State in the Middle East (also Government 352)
Spring. 4 credits.
T R 11:40–12:55. M. Winter.
The seminar aims to survey and analyze the problematic relationship between Islam and the modern nation-state in the Middle East, against the historical background of the region. The first part of the course will address the pervasive patterns of this relationship. The second part will be devoted to case studies of the various countries in the Middle East: the Arab states and the Palestinian Arabs, Turkey, and Iran.

453 Islam in South Asia (also History 417)
Fall. 4 credits.
F 2:30–4:25. R. Ahmed.
This course will examine the dominant features of South Asia, including the nature of beliefs and practices and the rituals and institutions of their different local contexts. One of the major objects of this course is to demonstrate that Islam never functioned as a monolithic system in South Asia and developed it own traditions in different local contexts, which did not necessarily conform to the orthodox interpretations by the ulema. It will conclude with a consideration of the major Islamic movements in South Asia Islam in more recent times.

682 International Relations of the Middle East (also Government 682)
Spring. 4 credits.
T 1:25–3.20. S. Telhami.
The focus of this seminar will be the contemporary international relations of the Middle East, with special attention paid to patterns of relations among states of the Middle East and to the international and domestic variables that could account for these patterns. In Part I of the seminar, we will study a) the ways in which superpower competition and changing objectives affect the relations of states in the Middle East; b) the extent to which a change in the distribution of political, military, and economic power in the Middle East alters politics in the region; and, c) the impact of domestic variables on the foreign policies of states in the Middle East. In Part II, we will examine three major international crises in the Middle East: the Arab-Israeli conflict, the Iran-Iraq conflict, and the crisis in Lebanon.

Literature

[155 Classics of the Arabic Literary Tradition
Fall. 4 credits. Not offered 1990–91.]

220 The New Testament (also Classics 202)
Spring. 3 credits. Prerequisite: at least one year of ancient Greek (Classics 101–103 or permission of instructor).
M W F 9:05–9:55. J. Rusten.
Selections in Greek from all four gospels and the letters of Paul, with special attention to Luke, Acts, and Corinthians I–II.

[221 Readings in Classical Hebrew Literature: The Art of Biblical Narrative (also Jewish Studies)
Fall. 3 credits. Prerequisite: one year of Hebrew, biblical or modern. May be used as literature to satisfy the humanities distribution requirement. Not offered 1990–91.]

[222 Readings in Classical Hebrew Literature: The Art of Biblical Poetry (also Jewish Studies)
Spring. 3 credits. Not offered 1990–91.]

223 Introduction to the Bible (also Jewish Studies and Religious Studies)
Fall. 3 credits.
T R 1:25–2:40. G. Rendsburg.
This course will survey the main historical, religious, and literary issues raised by a close textual reading of the Hebrew Bible (from Genesis to Deuteronomy). It will be concerned with both situating the Bible in its ancient Near Eastern context as well as with discerning its meaning for contemporary reality. All readings will be in English translation.

[224 Wisdom Literature: An Introduction
Spring. 3 credits. Not offered 1990–91.]

[226 Exodus and Conquest
Spring. 3 credits. Not offered 1990–91.]

[227 Introduction to the Prophets
Spring. 3 credits. Not offered 1990–91.]

[228 Genesis (also NES 628 and Jewish Studies)
Fall. 3 credits. Not offered 1990–91.]

[231 Classics of Hebrew Literature: A Survey of the Hebrew Literary Tradition (also Comparative Literature 231 and Jewish Studies)
Fall. 3 credits. Not offered 1990–91.]

[233 The Lyrics of Love and Death: Medieval Hebrew Poetry in Translation (also Medieval Studies 233 and Comparative Literature 333 and Jewish Studies)
Spring. 3 credits. Not offered 1990–91.]

[236 Israel: Literature and Society
Spring. 3 credits. Not offered 1990–91.]

[251 The Modern Arabic Novel
Spring. 3 credits. Not offered 1990–91.]

[252 Arabian Nights in the East and the West
Spring. 3 credits. Not offered 1990–91.]

256 A Quest for Identity: The Arabic Short Story
Fall. 3 credits.
M W F 1:25–2:15. S. Mehrez.
After a long period of colonization and cultural isolation, the question of identity becomes very urgent for Middle Eastern writers. Through readings of Arabic fiction in English translation we will explore how Arab writers continue to mold a tradition of short-story writing that reflects (both formally and thematically) a direct engagement in their sociopolitical and cultural context.

279 Jewish Sectarian Literature in Late Antiquity (also Jewish Studies and Religious Studies)
Spring. 3 credits.
M W F 2:30–3:20. S. Schwartz.
This course examines the challenge to Judaism's social, legal, and religious institutions posed by adherents of apocalyptic and other sectarian ideologies in antiquity. The focus is on the Dead Sea Scrolls and the Qumran community but will include literature from other communities in the Greco-Roman era fourth century B.C.E. to second century C.E. All readings in English translation. We will focus on the imagery and rhetoric of apocalyptic ideology in our analysis of literary texts. We will arrive inductively at a definition of apocalyptic, both as a movement and as literature. Sources include readings from the prophets, Enoch, Jubilees, Dead Sea Scrolls, 4th Ezra, Revelation.

[291 Women in Jewish Literature: Tradition and the Literary Imagination (also Women's Studies 291 and Jewish Studies)
Spring. 3 credits. Open to freshmen. Not offered 1990–91.]

[292 Women in the Hebrew Bible (also Women's Studies 292 and Jewish Studies)
Fall. 3 credits. Open to freshmen. Not offered 1990–91.]

[303 Seminar in Modern Hebrew Literature: The Short Story (also Jewish Studies)
Fall. 4 credits. Not offered 1990–91.]

[304 Seminar in Modern Hebrew Literature: The Novel (also Jewish Studies)
Spring. 4 credits. Not offered 1990–91.]

[313 The Arab Writer and the State
Fall. 4 credits. Not offered 1990–91.]

[322 Undergraduate Seminar in Biblical Literature: Prophecy in Ancient Israel
Spring. 4 credits. Not offered 1990–91.]

[332 Ancient Near Eastern Literature
Spring. 4 credits. Not offered 1990–91.]

[402 Seminar in Hebrew Literature and Poetics (also Jewish Studies)
Spring. 4 credits. Prerequisites: NES 301 or equivalent and permission of instructor. Not offered 1990–91.]

411 Readings in Classical Arabic Texts (also Medieval Studies 411)
Fall. 4 credits.
Hours to be announced. D. Powers.
Selected readings in a variety of classical Arabic texts.

[420 Readings in the Hebrew Bible (also Jewish Studies)
Fall. 4 credits. Prerequisite: one year of Hebrew, biblical or modern. May be repeated for credit. Not offered 1990–91.]

[421 Readings in Biblical Hebrew Poetry (also Jewish Studies)
Fall. 4 credits. Prerequisite: one year of biblical or modern Hebrew. May be repeated for credit. Not offered 1990–91.]

428 Medieval Biblical Hebrew Exegesis (also Jewish Studies and Religious Studies)
Spring. 4 credits. Prerequisite: Advanced knowlege of Hebrew or permission of instructor.
W 2:30–4:10. R. Brann.
This seminar will concern itself with the reading and analysis of some of the basic works of the medieval Hebrew biblical interpretive tradition. The primary emphasis will be on providing students with the skills necessary to use this important literature by themselves. Readings will be chosen from such classic commentators as Abraham Ibn Ezra, Moses ben Nachman, and David Kimche.

[429 Readings in the New Testament (also Comparative Literature 429)
Spring. 4 credits. Limited to 25 students. Not offered 1990–91.]

[432 Readings in Judeo-Arabic: Medieval Judeo Arabic and Hebrew Poetics (also Jewish Studies)
Spring. 4 credits. Prerequisite: Arabic 212, Hebrew 202, or equivalents. Designed for graduate students but open to undergraduates with permission of instructor. Entire sequence may be repeated for credit; readings will vary from year to year. Not offered 1990–91.]

491–492 Independent Study, Undergraduate Level
Fall or spring. Variable credit. Prerequisite: permission of instructor.
Staff.

499 Honors Seminar: Independent Study
Fall or spring. Variable credit. Prerequisite: permission of instructor.
Staff.

635–636 Readings in Akkadian Texts (also NES 335–336)
635, fall; 636, spring. 4 credits.
T R 2:55–4:10. David I. Owen.
For description see NES 335–336 under Near Eastern Languages.

[628 Genesis (also NES 228 and Jewish Studies)
Fall. 4 credits. Not offered 1990–91.]

691–692 Independent Study, Graduate Level
Fall or spring. Variable credit. Prerequisite: permission of instructor.
Staff.

The Program of Jewish Studies

244 Jurisprudence and the Holocaust
Fall. 2 credits.
M 9:05–11:00. N. Sher.
Please see Program of Jewish Studies under "Special Programs and Interdisciplinary Studies" for complete description.

247 Seminar: The Eichmann Case
Spring. 2 credits. Prerequisites: 241 and/or 244 or permission of instructor. Enrollment limited to 20 students.
M 9:05–11:00. N. Sher.
Please see Program of Jewish Studies under "Special Programs and Interdisciplinary Studies" for complete description.

404 History into Fiction: Nazis and the Literary Imagination (also Comparative Literature 404, English 404, and Jewish Studies)
Fall. 4 credits.
T R 11:40–12:55. E. Rosenberg.
Please see Program of Jewish Studies under "Special Programs and Interdisciplinary Studies" for complete description.

PHILOSOPHY

N. L. Sturgeon, chair; K. A. Appiah, R. N. Boyd, M. D. Crimmins, G. Fine, C. A. Ginet, H. Hodes, T. H. Irwin, J. Jarrett, N. Kretzmann, D. Lyons, R. W. Miller, S. Shoemaker, M. Wachsberg, A. W. Wood

The study of philosophy provides students with an opportunity to become familiar with some of the ideas and texts in the history of thought while developing analytical skills that are valuable in practical as well as academic affairs. It affords the excitement and satisfaction that come from understanding and working toward solutions of intellectual problems. The curriculum includes offerings in the history of philosophy, logic, philosophy of science, ethics, social and political philosophy, metaphysics, and theory of knowledge. Any philosophy course numbered in the 100s or 200s is suitable for beginning study in the field. Sections of Philosophy 100 are part of the freshman writing seminar program; they are taught by various members of the staff on a variety of philosophical topics, and because of their small size (seventeen students at most) they provide ample opportunity for discussion.

Students who want a broad introduction to philosophy may take Philosophy 101, but many students with special interests may find that the best introduction to philosophy is a 200-level course in some particular area of philosophy; such courses have no prerequisites and are usually open to freshmen.

The Major

Students expecting to major in philosophy should begin their study of it in their freshman or sophomore year. Admission to the major is granted by the director of undergraduate studies of the department on the basis of a student's work during the first two years. Eight philosophy courses are required for the major. They must include at least one course in ancient philosophy (Philosophy 210 or 211, or a course with a large component on Plato or Aristotle), at least one course in classical modern metaphysics and epistemology. (Philosophy 212 or a course on the empiricists, the rationalists, or Kant), and a minimum of three courses numbered above 300, at least one of which must be numbered above 400 (and be other than 490). A course in formal logic (e.g., Philosophy 231), while not required, is especially recommended for majors or prospective majors.

Philosophy majors must also complete at least 8 credits of course work in related subjects approved by their major advisers. Occasionally majors may serve as teaching or research aides, working with faculty members familiar with their work.

Honors. A candidate for honors in philosophy must be a philosophy major with an average of B- or better for all work in the College of Arts and Sciences and an average of B+ or better for all work in philosophy. In either or both terms of the senior year a candidate for honors enrolls in Philosophy 490 and undertakes research leading to the writing of an honors essay by the end of the final term. Honors students normally need to take Philosophy 490 both terms of their senior year in order to write a satisfactory honors essay. Prospective candidates should apply at the philosophy department office, 218 Goldwin Smith Hall.

Fees

In some courses there may be a small fee for photocopying materials to be handed out to students.

Introductory Courses

These courses have no prerequisites; all are open to freshmen.

100 Freshman Seminar in Philosophy
Fall and spring. 3 credits.
Fall: M W F 9:05, staff; 10:10, H. Hodes; 11:15, 12:20, staff; T R 10:10–11:25, R. Boyd; 11:40–12:55, M. Crimmins and staff; 1:25–2:15, staff; 2:55–4:10, R. Miller; M W 7:30–8:45 p.m., staff. Spring: M W F 10:10, staff; 11:15, 12:20, staff; 1:25–2:15, J. Jarrett; T R 10:10–11:25, 11:40–12:55, 2:55–4:10, staff; M W 7:30–8:45 p.m., staff.

101 Introduction to Philosophy
Fall and spring. 3 credits. Normally offered in the six-week summer session.
Fall: M W F 11:15. S. Shoemaker.
This course will deal with a number of the central problems of philosophy, including the existence of God, our knowledge of the external world, the mind-body problem, free will and the foundations of morality. Readings will consist partly of selections from such perennially important philosophers as Descartes, Berkeley, Hume, and J. S. Mill, and partly of more recent writings. Two lectures and one section per week.

Spring: M W F 10:10. M. Crimmins.
A broad introduction to philosophical thinking and central philosophical questions. We will discuss questions of epistemology (what can we know for sure?), religion (are there good reasons to believe that God exists?), philosophy of mind (is your mind just the same thing as your brain? could a computer think? do you really have free will?), and ethics (what is it to make the right choice, or to do a good thing, or to be moral? what is justice? is it wrong not to contribute to charities? is reverse discrimination wrong?). The emphasis will be on careful analytic thinking about these difficult issues. Readings will be chosen from classic and contemporary writers. Two lectures and one section each week.

[131 Logic: Evidence and Argument
3 credits. Not offered 1990–91.]

201 Philosophical Problems
Spring. 4 credits.
M W F 9:05. C. A. Ginet.
This course will discuss the following well-known puzzles: Zeno's paradoxes of motion (the Racecourse, the Arrow, the Stadium), Zeno's paradox of plurality, the paradox of the heap, the paradox of the liar, the paradox of the surprise examination, the prisoner's dilemma, and Newcomb's problem. These puzzles present us with reasoning that is paradoxical in the sense that, although it seems clear that there must be something wrong with the reasoning, it is not easy to say what it is. Besides being an intriguing exercise in itself, studying such puzzles can show interesting and important things about some of our basic concepts, such as those of space, time, motion, truth, knowledge, rational choice, and causation.

[210 Ancient Thought
Fall. 4 credits. Not offered 1990–91.]

211 Ancient Philosophy
Fall. 4 credits. Normally offered in the six-week summer session.
T R 1:25–2:40. J. Whiting.
A survey of the origins of western philosophical thought (both scientific and moral) in the attempts of ancient Greeks (from the Presocratics through Plato and Aristotle to the Stoics, Sceptics and Epicureans) to understand the natural world and their place in it. Special attention will be paid to the relationship of moral and political thought to natural philosophy.

212 Modern Philosophy
Spring. 4 credits. Normally offered in the six-week summer session.
T R 11:40–12:55. E. Vailati.
A survey of major philosophical problems in metaphysics and the theory of knowledge in seventeenth- and eighteenth-century European philosophy. Readings from Descartes, Spinoza, Locke, Leibniz, Berkeley, Hume, and Kant.

213 Existentialism
Fall. 4 credits.
T R 10:10–11:25. A Wood.
A study of selected writings, literary as well as philosophical, of four major existentialist thinkers in the nineteenth and twentieth centuries: Kierkegaard, Dostoyevsky, Nietzsche, and Sartre.

[214 Philosophical Issues in Christian Thought
4 credits. Not offered 1990–91.]

[215 Medieval Philosophy
Fall. 4 credits.
T R 10:10–11:25. N. Kretzmann. Not offered 1990–91.]

231 Introduction to Formal Logic
4 credits. Normally offered in the six-week summer session.
Fall: M W F 9:05, C. A. Ginet. Spring: T R 10:10–11:25, H. Hodes; disc, 1 hour each week to be arranged.
Analysis and evaluation of deductive reasoning in terms of formalized languages. The logic of sentences, predicates, and quantifiers. (This course, rather than Philosophy 331, is the recommended introductory formal logic course.)

241 Ethics
Spring. 4 credits.
T R 2:55–4:10. R. Miller.
Introduction to the philosophical study of major moral questions: Are all values relative, or are there some objective moral values? Can ethics be a science? Is human nature inevitably selfish? Have we ever any good reason to care about the interests of other people? Do people have rights with which governments should not interefere, even to advance the general welfare? What inequalities are unjust? The course discusses these general issues in moral philosophy, together with some of their implications for particular current moral controversies, such as the debates over abortion, reverse discrimination, and policies reducing economic inequality. Readings from major philosophers of the past—for example, Hobbes, Mill, and Marx—as well as contemporary sources. In 1990–91, the course will be specially concerned with theories of justice, liberty, and equality from Hobbes to the present.

[242 Social and Political Theory
4 credits. Not offered 1990–91.]

[243 Aesthetics
4 credits. Not offered 1990–91.]

[244 Philosophy and Literature
Fall. 4 credits. Not offered 1990–91.]

245 Ethics and Health Care (also Biology and Society 205 and Biological Sciences 205)
Fall. 4 credits. Normally offered in the six-week summer session. Limited to 80 students. (40 under philosophy, 15 under Biology and Society, and 25 under Biological Sciences). Registered students not attending the first week will be dropped from the course. Open to sophomores, juniors, and seniors; permission of instructor required for graduate students.
Lecs, T R 10:10–11:25; disc, 1 hour each week to be arranged. M. Wachsberg.
Critical *philosophical* analysis of the conceptual frameworks in which ethical problems associated with health care can be formulated and solutions evaluated. General topics (with sample issues indicated in parentheses) include knowledge in ethics (ethical scepticism, ethical relativism); proper social allocation of resources for, and within, medicine (entitlement to health care, access to scarce medical resources, cost-benefit analysis); the proper account of basic concepts such as illness, death, autonomy, and personhood (abortion, euthanasia, procreative technologies); and the professional-patient relationship (informed

consent, confidentiality, medical paternalism). Note: a more detailed description of this course is available in the philosophy department office.

246 Ethics and the Environment (also Biology and Society 206 and Biological Sciences 206)
Spring. 4 credits. Open to all undergraduates. Permission of instructor required for graduate students.
Lecs, T R 10:10–11:25; disc, 1 hour each week to be arranged. M. Wachsberg.
Critical *philosophical* analysis of the conceptual frameworks in which policies affecting the environment are formulated and judged. An introductory section of the course discusses the nature of ethics and the possibility of knowledge in ethics. The first major substantive component of the course deals with the nature and extent of individual and social obligations to spatially distant people, future generations, nonhuman animals, and nonsentient things (e.g., the ecosystem). The second major component of the course deals with the appropriate analysis of the origin of environmental problems and the range of options for their solution. Topics include individual vs. collective goods, cost-benefit analysis, and coordination problems. Note: a more detailed description of the course is available in the philosophy department office.

247 Ethics and Public Life
Spring. 4 credits.
T R 1:25–2:40. H. Shue.
An examination of the relative strength of human responsibilities at three levels: toward intimates, toward compatriots, and toward strangers. At the level of intimates the focus is on feminist critiques of relationships within the conventional family and of gendered roles more generally: how should men and women relate to each other? Attention in the historical arena is on contemporary debates about the basis and scope of the welfare state: how should the well-fed and well-housed deal with fellow citizens who are hungry or homeless? Relationships toward strangers are examined at the international level in the case of distant famines: do the well-fed and well-housed of one nation have responsibilities toward the hungry and homeless of other nations? At all three levels, emphasis is on the meaning and implications of belief in human equality.

[261 Knowledge and Reality
Spring. 4 credits. Not offered 1990–91.]

262 Philosophy of Mind
Spring. 4 credits.
M W F 10:10. S. Shoemaker.
This course will serve as an introduction to philosophy through a consideration of philosophical issues about the nature of mind. Central to the course will be the mind-body problem; here we will be concerned with the question of whether there is a mind (or soul or self) that is distinct from the body and how thought, feelings, sensations, etc., are related to states of the brain and body. Other issues will include knowledge of other minds (how do we know that other human beings are not mindless automata?), the nature of self-consciousness (how do we know about our own mental states?), the nature of mental representation (how can states of a mind be "about" things and a state of affairs outside it?), and the nature of personal identity (what makes someone existing now and someone existing a year ago one and the same person?). Written work for the course will consist of several short papers, and a final examination.

263 Religion and Reason
Fall. 4 credits.
T R 11:40–12:55. N. Kretzmann.
Recent and traditional literature will be taken into account in the examination of such topics as evidence for and against the existence of a god, philosophical problems associated with the attributes of God as described in the great monotheistic religions, and philosophical problems associated with the relationship of God to the physical universe and to human beings.

286 Science and Human Nature
Spring. 4 credits.
M W F 11:15. R. N. Boyd.
An examination of attempts in the biological and social sciences to offer scientific theories of human nature and human potential and to apply such theories to explain important social and psychological phenomena. Topic for 1990–91: Darwin, social Darwinism, and sociobiology.

Intermediate Courses

Some of these courses have prerequisites.

[309 Plato
4 credits. Not offered 1989–90.]

310 Aristotle
Spring. 4 credits.
T R 10:10–11:25. J. Whiting.
A critical survey of Aristotle's systematic thought from his logical and metaphysical through natural and psychological to moral and political works, with some discussion of his responses to Plato and the Presocratics and his effects on subsequent philosophical thought. Special attention will be paid to the contemporary interest in resuscitating Aristotelian ethics.

[311 Modern Rationalism
4 credits. Not offered 1990–91.]

312 Modern Empiricism
Spring. 4 credits.
M W F 2:30. S. Shoemaker.
The course will be devoted to the philosophy of Bishop Berkeley, in particular to his *New Theory of Vision*, his *Principles of Human Knowledge*, and his *Three Dialogues between Hylas and Philonous*. As background we will also look at parts of John Locke's *Essay Concerning Human Understanding*. Topics will include Berkeley's views about perception, his attack on Locke's distinction between primary and secondary qualities, his attack on abstract ideas, and, most centrally, his idealism and his attack on the notion of material substance.

[314 Topics in Ancient Philosophy
4 credits. Not offered 1990–91.]

[315 Special Topics in the History of Philosophy
4 credits. Not offered 1990–91.]

316 Kant
Fall. 4 credits.
T R 11:40–12:55. A. Wood.
Introduction to Kant's main doctrines in metaphysics, theory of knowledge, and ethics. Topics include the possibility of nonempirical knowledge, the nature of space and time and our knowledge of them, proof of the existence of an objective world, why events must have causes, determinism and the possibility of free will, and the basis of morality.

317 Hegel
Spring. 4 credits.
T R 1:25–2:40. A Wood.
An introduction to Hegel's philosophical method, concentrating on its application to issues of ethics and political philosophy in *The Philosophy of Right*.

[318 Twentieth-Century Philosophy
Spring. 4 credits.
Not offered 1990–91.]

[319 Philosophy of Marx
4 credits. Not offered 1990–91.]

331 Formal Logic
Fall. 4 credits. Prerequisite: Philosophy 231 or equivalent.
M W F 11:15. H. Hodes.
Review of derivations and other material covered in 231; basic set theory; truth in a model and the semantic definitions of consequence, validity, equivalence, and other logic concepts; and the soundness and completeness of a natural-deduction formalization of elementary logic. Further topics will be covered if time permits.

[332 Philosophy of Language
Not offered 1990–91.]

341 Ethical Theory
Spring. 4 credits.
T R 1:25–2:40. M. Wachsberg.
Topic for 1990–91: Consequentialism and its critics.

342 Law, Society, and Morality (also Law 666)
Fall. 4 credits.
T R 1:25–2:40. D. Lyons.
This is an introduction to the philosophy of law. It will emphasize the nature of law and its relation to moral principle. Theories to be discussed include natural law, legal positivism, legal realism, and contemporary interpretive and critical theories of law.

[344 History of Ethics—Ancient and Medieval
Not offered 1990–91.]

[345 History of Ethics—Modern
Not offered 1990–91.]

346 Modern Political Philosophy
Spring. 4 credits.
M W 2:30–3:45. J. Whiting.
Topics for 1990–91: Feminism and the Liberal Tradition. We will study contemporary feminist analyses (including, among others, those by Catherine MacKinnon and Susan Moller Okin) of classical and contemporary sources in western political thought from Plato and Aristotle through Rousseau and Mill to Rawls and Nozick. Special attention will be paid to recent work in moral psychology (by Gilligan and others) on the relationship between justice and caring.

[361 Metaphysics and Epistemology
Fall. 4 credits.
Not offered 1990–91.]

[363 Topics in the Philosophy of Religion
4 credits. Not offered 1990–91.]

369 Limiting War: The Morality of Modern State Violence (also Government 469)
Fall. 4 credits.
T R 2:55–4:10. H. Shue.
Modern states employ or threaten violence not only through conventional war but in various other forms including "low-intensity warfare," chemical and biological warfare, terrorism, and nuclear deterrence. This course critically examines the best arguments about limiting or prohibiting various contemporary means and methods of fighting one's enemies, arguments with conclusions ranging from pacificism to "realism." Have traditional doctrines about just war been overtaken by 20th-century events and technologies, or is it still possible to provide a reasonable justification for limiting war? If so, how? Special emphasis is given to moral issues about nuclear weapons. Readings include *Just and Unjust Wars*, by Walzer, and *Nuclear Deterrence, Morality and Realism*, by Finnis, Boyle, and Grisez, and *Nuclear Deterrence and Moral Restraint* by Shue.

381 Philosophy of Science: Knowledge and Objectivity
Fall. 4 credits.
M 7–9:30 p.m. R. N. Boyd.
An examination of central epistemological and metaphysical issues raised by scientific theorizing: the nature of evidence; scientific objectivity; the nature of theories, models, and paradigms; and the character of scientific revolutions. In addition to the contemporary literature in the philosophy of science, readings are also drawn from the history of science and from the works of classical modern philosophers such as Locke, Hume, and Descartes.

[382 Philosophy and Psychology
4 credits. Not offered 1990–91.]

383 Philosophy of Choice and Decision
Spring. 4 credits.
T R 2:55–4:10. M. Crimmins.
Philosophical issues about rational decision, probability, and inductive reasoning, including Bayesian models of chance, choice and learning, and paradoxes of choice, induction, and cooperation. Some prior familiarity with the mathematics of probability is recommended, but not required.

384 Philosophy of Physics
Spring. 4 credits.
M W F 10:10. J. Jarrett.
An introduction to issues arising in a philosophical examination of modern physical science. Relevant aspects of classical statistical mechanics, relativity theory, and quantum mechanics will be considered in connection with such topics as microphysical indeterminateness, probabilistic laws, causality, the direction of time, action-at-a-distance, and scientific explanation.

[387 Philosophy of Mathematics
4 credits. Not offered 1990–91.]

[388 Social Theory
4 credits. Not offered 1990–91.]

[389 Philosophy of Science: Evidence and Explanation
4 credits. Not offered 1990–91.]

390 Informal Study
Fall or spring. Credit to be arranged.
Staff.
To be taken only in exceptional circumstances. Must be arranged by the student with his or her adviser and the faculty member who has agreed to direct the study.

Advanced Courses and Seminars

These courses are offered primarily for majors and graduate students.

[395 Majors Seminar
4 credits. Not offered 1990–91.]

410 Medieval Latin Philosophical Texts
Variable credit. Fall and spring. Prerequisites: knowledge of Latin and permission of instructor.
Hours to be arranged. N. Kretzmann.
Reading medieval philosophical texts in the original Latin.

[411 Greek Philosophical Texts (also Classics 311)
Not offered 1990–91.]

412 Medieval Philosophy
Fall. 4 credits.
T 4:15–6:15. N. Kretzmann.
Topic for 1990–91: Aquinas's Philosophy of Mind

[413 Topics in Ancient Philosophy
4 credits. Not offered 1990–91.]

[414 German Philosophy after Kant
4 credits. Not offered 1990–91.]

416 Modern Philosophy
Fall.
T R 10:10–11:25. E. Vailati.
Topic for 1990–91: Selected topics in Leibniz and related seventeenth-century figures. Readings may include the Leibniz-Clarke debate and other writings of Samuel Clarke, as well as selected issues in Leibniz.

[431 Deductive Logic
4 credits. Not offered 1990–91.]

[433 Philosophy of Logic
4 credits. Not offered 1990–91.]

436 Intensional Logic (also Mathematics 483)
Spring. 4 credits. Prerequisites: Philosophy 231 or equivalent or any math or computer science logic course or permission of the instructor. Philosophy 331 or its equivalent is recommended, but not required.
M W F 11:15. H. Hodes.
The abstract concept of consequence; sentential and first-order predicate modal logics and their relationship to classical and intuitionistic logics; several conditional logics; and (time permitting) other related topics.

[437 Problems in the Philosophy of Language
4 credits. Not offered 1990–91.]

441 Contemporary Ethical Theory
Spring. 4 credits.
W 4:15–6:15. R. Miller.
Topic for 1990–91: The pursuit of objectivity in contemporary meta-ethics and political philosophy.

442 Ethics and the Philosophy of Mind
Fall. 4 credits.
T R 1:25–2:40. M. Wachsberg.
A study of the relationship between views about the nature of persons (via a discussion of personal identity), the rationality of self-interest, and the appropriate province of ethics.

[443 Topics in Aesthetics
4 credits. Not offered 1990–91.]

444 Contemporary Legal Theory (also Law 710)
Spring. 4 credits.
T 4:15–6:15. D. Lyons.
This seminar will consider problems and theories of legal interpretation, especially of statutes and written constitutions. Topics include the role of original intent and of political morality in judicial reasoning.

[446 Topics in Social and Political Philosophy
4 credits. Not offered 1989–90.]

[461 Metaphysics
Spring. 4 credits. Not offered 1990–91.]

481 Problems in the Philosophy of Science
Spring. 4 credits.
M 7:00–9:30 p.m. R. Boyd.
Topic for 1990–91: To be announced.

490 Special Studies in Philosophy
Fall or spring. 4 credits. Open only to honors students in their senior year.
Staff.

611 Ancient Philosophy
Fall. 4 credits.
Fall: W 4:15–6:15, J. Whiting.
Topics for 1990–91: Aristotle: Individuals and Kinds. We will discuss the roles played by kinds and individuals in Aristotle's metaphysics, epistemology, natural philosophy (including biology and psychology), and ethics (including perhaps his politics). Some attention will be paid to recent discussions of these issues by authors such as Strawson and Wiggins.

[612 Medieval Philosophy
4 credits. Not offered 1990–91.]

[613 Modern Philosophers
4 credits. Not offered 1990–91.]

[619 History of Philosophy
4 credits. Not offered 1990–91.]

[631 Logic
4 credits. Not offered 1990–91.]

633 Philosophy of Language (also Linguistics 700)
Fall. 4 credits.
M 4:15–6:15. M. Crimmins, F. Landman, S. McConnell-Ginet.
Semantic, pragmatic, metaphysical, and logical issues surrounding vagueness. Topics will include Sorites paradoxes, supervaluation, degrees of truth, and the place of vagueness in the relations among mind, meaning, conversation, and the world.

[641 Ethics and Value Theory
4 credits. Not offered 1990–91.]

661 Theory of Knowledge
Spring. 4 credits.
R 4:15–6:15. C. Ginet.
Topic for 1990–91: *A priori* knowledge.

[662 Philosophy of Mind/The Emotions
4 credits. Not offered 1990–91.]

663 Philosophy of Religion
Spring. 4 credits.
M 4:15–6:15. N. Kretzmann.
Topic for 1990–91: Rationality and religion.

[664 Metaphysics
Fall. 4 credits.
R 4:15–6:15. S. Shoemaker.
Topic for 1990–91: Self-knowledge and consciousness.

[665 Metaphysics
4 credits. Not offered 1990–91.]

[681 Philosophy of Science
4 credits. Not offered 1990–91.]

[682 Philosophy of Social Science
4 credits. Not offered 1990–91.]

700 Informal Study
Fall or spring. Credit to be arranged.
Staff.
To be taken by graduate students only in exceptional circumstances and by arrangement made by the student with his or her Special Committee and the faculty member who has agreed to direct the study.

773 Proseminar in Cognitive Studies (also Cognitive Studies 773, Linguistics 773, and Computer Science 773)
Fall and spring. 2 credits.
R 1:25–2:40. Staff (taught from Cornell's Cognitive Studies Program, representing the fields of computer science, linguistics, psychology, and philosophy).
This is the first term of a year-long lecture-and-discussion course that is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its representation, acquisition, and use. Topics may include the psychology of perception and cognition; the philosophy of mind, language, and knowledge; the phonology, syntax, and semantics of natural language; computational approaches to natural language processing, vision and reasoning; parrallel distributed processing, and neuropsychology.

Related Courses in Other Departments

Classics 468 Augustine's Confessions
Fall.

Mathematics 481 Mathematical Logic
Fall.

Society for the Humanities 420 Mass Culture, Ideology and Philosophy
Spring.

PHYSICS

D. B. Fitchen, chair and director of undergraduate studies (109 Clark Hall, 255-6016); J. P. Alexander, V. Ambegaokar, N. W. Ashcroft, K. Berkelman, D. G. Cassel, G. V. Chester, B. Cooper, R. M. Cotts, P. Drell, V. Elser, M. E. Fisher, C. P. Franck, R. Galik, B. Gittelman, K. Gottfried, B. Greene, L. N. Hand, D. L. Hartill, C. L. Henley, W. Ho, D. F. Holcomb, M. P. Kalos, T. Kinoshita, A. LeClair, D. M. Lee, G. P. Lepage, R. M. Littauer, N. D. Mermin, N. Mistry, J. Orear, J. M. Parpia, R. O. Pohl, J. D. Reppy, R. C. Richardson, D. L. Rubin, E. E. Salpeter, J. P. Sethna, S. L. Shapiro, R. H. Siemann, A. J. Sievers, E. Siggia, R. H. Silsbee, P. C. Stein, S. L. Stone, R. M. Talman, M. P. Teter, S. A. Teukolsky, R. Thorne, M. Tigner, H. Tye, T-M. Yan, D. R. Yennie

The Department of Physics offers a full range of university-level work in physics, from general education courses for nonscientists to Ph.D.-level independent research. Major research facilities are operated by two component organizations, the Laboratory of Atomic and Solid State Physics (LASSP) and the Laboratory of Nuclear Studies (LNS). LASSP carries out extensive research efforts in condensed-matter physics and in low-temperature physics. LNS operates a major high-energy particle physics research facility at Wilson Laboratory, the Cornell electron-positron storage ring, called CESR. Theoretical work is carried out in many fields of physics, including astrophysics. There is a full schedule of weekly research-oriented seminars and colloquia. Junior and senior students will find many opportunities for research participation and summer jobs.

Three introductory physics sequences are open to freshmen: 101–102, 112–213–214–315, and 207–208. In addition, there is a cluster of general-education courses, Physics 200 through 206. Physics 101–102, a self-paced autotutorial course, is designed for students who do not intend to take further physics courses and who do not have preparation in calculus. Physics 112 and 207 both require calculus (Mathematics 191 or 111), and additional mathematics is required for subsequent courses in sequence. Physics 101–102 or 207–208 may be taken as terminal physics courses. The three- (or four-) term sequence 112–213–214–315 or its honors version, 116–217–218–315, is recommended for engineers and physics majors.

Courses beyond the introductory level that might be of interest to nonmajors include. Physics 315, Phenomena of Microphysics; Physics 330, Modern Experimental Optics; and Physics 360, Electronic Circuits.

Advanced placement and credit are offered as outlined in "Advanced Placement of Freshmen," or students may consult Professor Cotts, 522 Clark Hall. Transfer students requesting credit for physics courses taken at another college should consult the department office.

The Major

Various options permit the student to concentrate heavily on physics or to take less physics and pursue an accompanying constellation of courses in a related area. Those desiring a physics concentration as preparation for professional or graduate work should complete Physics 112–213–214 or 116–217–218, and, if possible, 315 by the end of the sophomore year. A basic preparation for a less intensive physics program may include Physics 112–213–214 or 207–208–214. In either case, it is necessary to complete a concurrent sequence of mathematics courses.

Mathematics 191–192–293–294 are usually recommended, except for students especially interested in continuing the study of mathematics, for whom Mathematics 111–122–221–222 (or equivalent) may be preferred.

Prospective majors are urged to make an early appointment at the physics office for advice in planning their programs. Acceptance into the major is normally granted after completion of a year of physics and mathematics at Cornell with grades of B– or better. The student should propose a tentative plan for completing his or her graduation requirements as well as those for the major. The plan may change from time to time, but it must be approved by the major adviser. The major requirements have two components—a core and a concentration. Core requirements for the major include:

1) Physics 112–213–214 or 116–217–218 or 207–208–214.
2) an intermediate physics course in each of four areas: (a) mechanics—Physics 318 or 431, (b) electricity and magnetism—Physics 325 or 432, (c) modern physics—Physics 315 or 443, and (d) laboratory physics—Physics 310 (when not taken as substitute for laboratory work in 214 or 218), 330, 360, or 410.

Mathematics courses prerequisite for these physics courses are also necessary. The choice of core is influenced by the intended concentration. For a concentration in physics, Physics 116–217–218 (or 112–213–214), 315, 318, 325, and any 300-level laboratory course is appropriate, while for concentrations outside physics, part (2) of the core might consist of, for example, Physics 315, 360, 431, 432.

The concentration reflects the student's interest in some area related to physics; the array of courses must have internal coherence and be approved by the major adviser. The concentration must include at least 15 credits, with at least 8 credits in courses numbered above 300. Students have chosen to concentrate in such topics as physics, biophysics, chemical physics, astrophysics; geophysics; natural sciences; history and philosophy of science; computational physics; or physics with economics or business. A combined biology-chemistry concentration is recommended for premedical students or those who wish to prepare for work in biophysics. The concentration in natural science is particularly appropriate for teacher preparation.

The concentration in physics is recommended as preparation for professional or graduate work in physics or a closely related discipline. Twelve of the 15 concentration credits must be selected from physics courses numbered above 300 (in addition to those selected for part (2) of the core); Physics 410 must be included within those 12. The following courses are strongly recommended: Physics 341, 443; Mathematics 421, 422, and 423; and at least one of Physics 444, 454, Applied and Engineering Physics 401, 434, Astronomy 431, 432, or Geological Sciences 388.

Foreign language requirement. Students interested in eventual graduate work in physics are advised to meet this requirement with French, German, or Russian.

Honors. A student may be granted honors in physics upon the recommendation of the Physics Advisers Committee of the physics faculty.

Double majors. Double majors with physics are possible and not at all uncommon. However, if a student plans to complete a major in physics as well as majors in one or more other subjects, then the set of courses used to satisfy the physics major must be completely different from the set or sets used to satisfy the other major(s).

Distribution Requirement

The requirement in physical sciences is met by any two sequential courses such as Physics 101–102 or 207–208 or 112–213 or any combination of the first term of one sequence and the second term of another. It is also met by any two general education courses from the group 200–206 or by a combination of 101 or 112 or 207 with one from the group 200–206.

Courses with Overlapping Content

Because the department offers several courses with overlapping content, students should select courses carefully to meet the needs of their academic programs and to ensure credit for each course they take. Listed below are groups of courses with similar content. In general, students may receive credit for only one of the courses in each group.

Physics 101, 112, and 207
Physics 102 and 208
Physics 112, 116, and 207
Physics 208, 213, and 217

Course Prerequisites

Prerequisites are specified in physics course descriptions to illustrate the materials that students should have mastered. Students who wish to plan programs different from those suggested by the prerequisite ordering are urged to discuss their preparation and background with a physics adviser or with the instructor in the course. In many cases an appropriate individual program can be worked out without exact adherence to the stated prerequisites.

Courses

101–102 General Physics
101, fall; 102, spring (101–102 also normally offered in summer). 4 credits each term. Prerequisites: three years of high school mathematics, including some trigonometry. Prerequisite for Physics 102: Physics 101 or 112 or 207. Includes more modern physics and less mathematical analysis than Physics 207–208 but more mathematics than 200–206. (Students planning to major in a physical science should elect Physics 207–208 or 112–213–214.) A mostly self-paced, mastery-oriented autotutorial format; students work in a learning center at hours of their choice. Repeated tests on each unit are given until mastery is demonstrated.

One opening lecture 7:30 p.m., R Aug. 30 or M Sept. 3 (fall); M Jan. 21 (spring). D. B. Fitchen, B. Richardson.

Basic principles treated quantitatively but without calculus. Major topics for 101: kinematics; gravitational and electric forces and fields; momentum, angular momentum, energy; thermal physics, fluid mechanics; sound waves. For 102: electricity and magnetism, optics, relativity; quantum physics, particle structure of matter. Laboratory emphasizes instrumentation, measurement, and interpretation of data. Text: *Principles of Physics*, by Frank J. Blatt.

112 Physics I: Mechanics and Heat
Fall or spring (normally also offered in summer). 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisite: coregistration in Mathematics 192 (or 194 or 112), or substantial previous contact with introductory calculus combined with coregistration in Mathematics 191 or 111.

Lecs M W F 10:10 or 12:20; 2 recs each week; six 3-hr. labs. Evening exams: fall, Sept. 27, Oct. 30, Nov. 29; spring, Feb. 14, Mar. 14, Apr. 16. Fall, M. Tigner; spring, R. Littauer.

Mechanics of particles: kinematics, dynamics, conservation laws, central force fields, periodic motion. Mechanics of many-particle systems: center of mass, rotational mechanics of a rigid body, static equilibrium. Introduction to thermodynamics. At the level of *Fundamentals of Physics*, extended version, by Halliday and Resnick.

116 Physics I: Mechanics and Heat
Fall or spring. 4 credits. A more analytic version of Physics 112, intended for students who will be comfortable with a deeper, somewhat more abstract approach. (Intended mainly but not exclusively for prospective physics majors.) Prerequisites: a good secondary school physics course and familiarity with basic calculus. Corrective transfers between Physics 116 and Physics 112 (in either direction) are encouraged during the first few weeks of instruction.

Lecs, M W F 10:10; 2 recs each week; one 3-hr. lab alternate weeks. Evening exams may be scheduled. Fall, D. G. Cassel; spring, B. Gittelman.

A more rigorous version of Physics 112, covering similar topics at the level of An Introduction to Mechanics, by Kleppner and Kolenkow.

200 Art, Isotopes, and Analysis (also Material Science and Engineering 285)
Spring. 3 credits.

Lec M W F 11:15–12:05. J. W. Mayer (MS&E), S. Taft (Art), D. Eddy (Univ. Libraries).

This course will be based primarily on the analysis of paintings and rare books and the physical concepts underlying modern analytical techniques. Each week a work of art will be described to include the historical and technical aspects of its creation and its modern analysis. Visual, infrared, and X-ray examination provide insight into the physical properties. Pigments are identified by the radiation emitted in electronic transitions. The ratio of isotopes can be used to identify the geographical origin of a particular pigment as well as to date the pigment. Examples will also be given of authentification and conservation.

201 Why the Sky Is Blue: Aspects of the Physical World
Fall. 3 credits.

Lec, T R 2:55–4:10; rec, W 3:35–4:25. A. Sadoff.

This is a descriptive physics course aimed specifically at the non–science student. There is an emphasis on the ideas of modern physics where the approach is both historical and thematic. The methodology of science and the nature of evidence is emphasized. An overriding theme is the character of physical laws as shown through the great principles of symmetry and conservation. While there are a few computational problems assigned, the purpose is to help students to understand the concepts rather than to master problem-solving techniques.

203 The Physics of Space Exploration and of Astronomy
Spring. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but will use high school mathematics.

Lec, M W F 2:30; disc, W 3:35. E. E. Salpeter.

The principles of physics (plus simple mathematics) are applied to gain knowledge about planets, stars, galaxies, and the universe.

204 Physics of Musical Sound
Spring. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but will use high school algebra.

Lec, M W F 2:30; disc, T 3:35. E. Cassel.

Many features of the production, propagation, and perception of musical sound may be understood in terms of important concepts in physics. Topics covered will include the mechanism of tone production in musical instruments, distinctions in tone quality, musical scales and tuning, basic principles of room acoustics and reproduction of sound, and some aspects of the mechanism of hearing. There will be some lab activities using computers to sample the frequency spectrum of various sounds and wave forms and to generate very simple sounds. Familiarity with computers is not expected. At the level of *The Science of Sound*, by T. D. Rossing.

[205 Reasoning about Luck
Fall. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but will use high school algebra. Not offered 1990–91.

Lecs, M W F 2:30; 5. 1-hr. labs to be arranged. V. Ambegaokar.

An attempt to explain how and when natural scientists can cope rationally with chance. The first part of the course deals in a constructive way with the basic ideas of probability theory and explains why it is that in large systems likely events can become overwhelmingly likely. An introduction to mechanics and to heat as probabilistic mechanics follows. In this way, interested students are given a nontrivial understanding of the second law of thermodynamics, that putative bridge between C. P. Snow's two cultures. Another physical theory, quantum mechanics, in which chance occurs—though in a somewhat mysterious way—is touched on. Approximately five self-paced laboratory experiments will be included.]

[206 War and Peace in the Nuclear Age
Spring. 4 credits. Intended for nonscientists; does not serve as a prerequisite to further science courses. Assumes no scientific background but will use high school mathematics. Not offered 1990–91.

Lecs, T R 12:20–1:35; 1 rec each week. P. Stein.

This course is intended for any student who wishes to understand the following: the developments in 20th-century physics that culminated in the development of the "atomic" bomb; the principles, types, and effects of nuclear weapons; existing and proposed arsenals and delivery systems; the evolution and present state of the nuclear military strategy of the nuclear powers; and the history of, and current issues in, nuclear arms-control negotiations. The course will also examine important concepts involved in military strategy and arms control. Some attention will also be given to the moral and ethical questions involved. Assignments emphasize development of quantitative reasoning skills as well as knowledgeability about technical aspects of the subject matter.]

207–208 Fundamentals of Physics
207, fall; 208, spring. 4 credits each term. Prerequisites for Physics 207: high school physics plus coregistration in Mathematics 112 or 192, or substantial previous contact with introductory calculus, combined with coregistration in a math course approved by instructor. Prerequisites for Physics 208:

Physics 207 (or 112 or 101) and at least coregistration in Mathematics 192 or 112. Physics 207–208 is a two-semester introduction to physics intended for students majoring in a physical science, mathematics, or an analytically oriented biological science.

Lecs, M W F 9:05 or 11:15; 2 recs each week; one 3-hr. lab alternate weeks. Evening exams: fall, Oct. 16, Nov. 15; spring, Feb. 28, Apr. 11. Fall, P. Stein; spring, R. O. Pohl.

207: mechanics, Newton's laws, conservation laws, waves, and selected topics from gravitation, thermodynamics, fluid mechanics, and acoustics.

208: electricity and magnetism, circuits, and introduction to physical and geometric optics. At the level of *College Physics*, by Tipler.

213 Physics II: Electricity and Magnetism

Fall or spring (also normally offered in summer). 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisites: Physics 112 and coregistration in the continuation of the mathematics sequence required for 112.

Lecs, T R 9:05 or 11:15; 2 recs each week; one 3-hr. lab alternate weeks. Evening exams: fall, Oct. 4, Nov. 8; spring, Feb. 19, Mar. 14, Apr. 16. Fall, R. Galik; spring, J. Orear.

Electrostatics, behavior of matter in electric fields, magnetic fields, Faraday's law, Maxwell's equations, electromagnetic oscillations and waves, relativity. At the level of *Fundamentals of Physics*, extended version, by Halliday and Resnick. Laboratory covers electrical measurements, DC and AC circuits, resonance phenomena.

214 Physics III: Optics, Waves, and Particles

Fall or spring (also normally offered in summer). 3 or 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisites: Physics 213 and coregistration in the continuation of the mathematics sequence required for 112. (Physics 310 may be taken, with permission of the instructor, in place of the Physics 214 lab; credit for 214 is then reduced to 3 credits.)

Lecs, T R 9:05 or 11:15; 2 recs each week; one 3-hr. lab alternate weeks. Evening exams: fall, Oct. 4, Nov. 8; spring, Feb. 19, Mar. 28, Apr. 25. Fall, G. P. Lepage; spring, D. F. Holcomb.

Physics of wave phenomena, electromagnetic waves, interference and diffraction effects, optics, wave properties of particles, introduction to quantum physics. At the level of *Fundamentals of Physics*, extended version, 3rd edition, by Halliday and Resnick, or *Physics for Scientists and Engineers* (with *Modern Physics*), by D. Giancoli.

217 Physics II: Electricity and Magnetism

Fall or spring. 4 credits. Enrollment may be limited. Intended for students who have done very well in Physics 112 or 116 and in mathematics and who desire a more analytic treatment than that of Physics 213. Prospective physics majors are encouraged to select Physics 217. Prerequisites: approval of student's adviser and permission from the instructor. A placement quiz may be given early in the semester, permitting those students who find Physics 217 too abstract or analytical to transfer into Physics 213, which they can do without difficulty at that time. Vector calculus will be taught in this course, but previous contact, especially with the operations grad, div, and curl, is helpful.

Lecs, M W F 10:10, one rec each week; one 3-hr. lab alternate weeks. Evening exams may be scheduled. Fall, R. Lovelace; spring, A. Sievers.

At the level of *Electricity and Magnetism*, by Purcell (Vol. 2, Berkeley Physics Series).

218 Physics III: Optics, Waves, and Particles

Fall or spring. 3 or 4 credits. Enrollment may be limited. A special section of Physics 214. Conditions governing enrollment are similar to those of Physics 217.

Lecs, M W F 11:15, one rec each week; one 3-hr. lab alternate weeks. (Physics 310 may be taken, with permission of the instructor, in place of the regular lab, and credit for 218 is reduced to 3 credits.) Fall, R. C. Richardson; spring, D. L. Rubin.

Topics covered in recent years have included oscillators, mechanical waves, waves at interfaces, standing waves, electromagnetic waves, guided waves, scattering, interference and diffraction, geometric optics, the doppler effect, and an introduction to matter waves. Evening exams may be scheduled. A more rigorous version of Physics 214.

310 Intermediate Experimental Physics

Fall or spring. 3 credits. Enrollment may be limited. Prerequisite: Physics 208 or 213. (May be taken concurrently with Physics 214 or 218 in place of the regular lab work offered in those courses, with permission of student's adviser.)

Labs, T W 1:25–4:25. Fall, E. Cassel; spring, R. Galik.

Students select from a variety of experiments. An individual, independent approach is encouraged. Facilities of the Physics 410 lab are available for some experiments.

315 Phenomena of Microphysics

Fall or spring. 4 credits. Primarily for students of engineering and prospective majors in physics. Prerequisites: Physics 214 and Mathematics 294.

Lecs, M W F 9:05, one rec each week. Fall, V. Elser; spring, J. Alexander.

Introduction to the physics of atoms, solids, nuclei, and elementary particles, emphasizing the description of phenomena using the results of elementary quantum and statistical physics. At the level of *Quantum Physics of Atoms, Molecules, Solids, Nuclei and Particles*, by Eisberg and Resnick.

318 Analytical Mechanics

Spring. 4 credits. Prerequisites: Physics 208 or 214 plus one of Mathematics 421, 422 or 423, or permission of instructor. Intended for physics majors concentrating in physics. Similar material is covered in Physics 431 at a less demanding analytical level. (Applied and Engineering Physics 333 is approximately equivalent to Physics 318.)

Lecs, M W F 10:10, F 2:30. J. Sethna.

Newtonian mechanics of particles and systems of particles, including rigid bodies; oscillating systems; gravitation and planetary motion; moving coordinate systems; Euler's equations; Lagrange's equations; Hamilton's equations; normal modes and small vibrations. At the level of *Classical Mechanics*, by Goldstein.

325 Electricity and Magnetism

Fall. 4 credits. Prerequisites: Physics 214 plus coregistration in one of Mathematics 421, 422, or 423, or permission of instructor. Intended for physics majors concentrating in physics. Similar material is covered in Physics 432 at a less demanding analytical level.

Lecs, M W F 11:15, F 2:30. S. A. Teukolsky.

Electrostatics: electric charge and fields, potential, multipoles, conductors, Laplace equation and formal solutions, field energy, dielectric materials, polarization. Magnetostatics: currents, magnetic fields and vector potential, dipoles, magnetic materials, field energy. Maxwell's equations. Special relativity. At the level of *Introduction to Electro-dynamics*, by Griffiths.

326 Electromagnetic Waves and Physical Optics

Spring. 4 credits. Prerequisite: Physics 325.

Lecs, M W F 11:15, R 2:30. L. N. Hand.

Electrodynamics: applications of Maxwell's equations, propagation in various media, radiation, relativistic electrodynamics, transmission lines and wave guides, interference and diffraction phenomena. At the level of *Classical Electromagnetic Radiation*, by Marion and Heald.

330 Modern Experimental Optics

Fall or spring. 4 credits. Enrollment limited. Prerequisite: Physics 214 or equivalent.

Lec, M 2:30; lab, T R 1:25–4:15. Fall, R. Silsbee; spring, D. M. Lee.

A practical laboratory course in basic and modern optics. Students spend two-thirds of the course experimenting with the physics of basic optical phenomena: interference, diffraction, coherence, polarization, and image formation. The last part of the course involves a choice among experiments on lasers and applications of lasers, light pulses and optical communication, and holography. The course also serves as an introduction to the use of optical equipment and techniques that are employed in current research in the fields of biology, chemistry, physics, and astronomy.

341 Thermodynamics and Statistical Physics

Fall. 4 credits. Prerequisites: Physics 214 and Mathematics 294.

Lecs, T R 9:05–9:55, F 10:10–11, T 2:30. J. M. Parpia.

Statistical physics, developing both thermodynamics and statistical mechanics simultaneously. Concepts of temperature, laws of thermodynamics, entropy, thermodynamic relations, free energy. Applications to phase equilibrium, multicomponent systems, chemical reactions, and thermodynamic cycles. Application of statistical mechanics to physical systems; introduction to treatment of Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac statistics with applications. Elementary transport theory. At the level of *Fundamentals of Statistical and Thermal Physics*, by Reif, or *Thermal Physics*, by Morse.

360 Electronic Circuits (also Applied and Engineering Physics 363)
Fall or spring. 4 credits. Prerequisite: Physics 208 or 213 or permission of instructor. No previous experience with electronic circuits is assumed; however, the course moves through the introductory topics (DC and AC circuits, basic circuit elements) rather quickly. Students wishing a more complete background might consider taking Electrical Engineering 210 before Physics 360. Fall term is usually less crowded.
Lec, M 2:30–4:25; labs, T R or W F 1:25–4:25. Fall, E. Kirkland; spring, R. Thorne.
An experimental survey of some devices and circuits in two general areas: analog and digital electronics. In analog circuits, the major emphasis is on operational amplifiers and bipolar transistors, and their applications. Simple filters, diodes, and field-effect transistors are covered briefly. In digital circuits, some time is spent on combinatorial logic devices. This experience is then applied to problems in programming and interfacing a simple microcomputer.

400 Informal Advanced Laboratory
Fall or spring; (may also be offered during summer). Variable credit. Prerequisites: two years of physics and permission of instructor.
Lab, see Physics 410.
Experiments of widely varying difficulty in one or more areas, as listed under Physics 410, may be done to fill the student's special requirements.

410 Advanced Experimental Physics
Fall or spring. 4 credits. Limited to seniors except by special permission. Prerequisites: Physics 214 (or 310 or 360) plus 318 and 325, or permission of instructor.
Lec, M 2:30–4:25; labs, T W 1:25–4:25. Fall, R. Siemann; spring, D. L. Hartill.
Selected topics in experimental concepts and techniques. About seventy different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, nuclear physics. The student performs three to six diverse experiments, depending on difficulty, selected to meet individual needs and interests. Independent work is stressed.

431–432 Introductory Theoretical Physics I and II
431, fall; 432, spring. 4 credits each term. Prerequisites: Physics 431: Physics 207–208 or equivalent and Mathematics 294 or equivalent. Physics 432: Physics 431 or equivalent. (Mathematics 421 is recommended.) Primarily for physics majors with concentrations outside physics and for graduate students in a science other than physics (such as chemistry, engineering, biology, geology). Physics 318 and 325 cover similar material at a higher analytical level and are intended for physics majors concentrating in physics.
Lecs, M W F 10:10 and F 1:25. Fall, D. M. Lee; spring, R. M. Cotts.
431: Mechanics. Includes Newtonian mechanics, Lagrange's and Hamilton's equations, central forces, rigid-body motion, and small oscillations. At the level of *Mechanics*, by Symon. 432: Electricity and magnetism. Includes electrostatics, magnetostatics, boundary value problems, dielectric and magnetic media. Maxwell's equations and electromagnetic waves, introduction to special relativity. At the level of Introduction to Electrodynamics, by Griffiths.

443 Introductory Quantum Mechanics
Fall. 4 credits. Prerequisites: Physics 318 and 325, or 431–432; Physics 315 and Mathematics 421; or permission of instructor.
Lecs, M W F 9:05, F 2:30. Evening exams may be scheduled. A. J. Sievers.
Introduction to concepts and techniques of quantum mechanics, at the level of *Introduction to Quantum Mechanics*, by Dicke and Wittke.

444 Nuclear and High-Energy Particle Physics
Spring. 4 credits. Prerequisite: Physics 443 or permission of instructor.
Lecs, M W F 9:05, F 1:25. P. Drell.
Behavior of high-energy particles and radiation; elementary particles; basic properties of accelerators and detectors; general symmetries and conservation laws. At the level of *Concepts of Particle Physics*, by Gottfried and Weisskopf.

454 Introductory Solid-State Physics
Fall or spring. 4 credits. Prerequisite: Physics 443 or Chemistry 793, or permission of instructor.
